Director AIIMS

7. People who have low immunity have mucormycosis and candida infection. Mucormycosis infection can enter in nose, brain, lungs and in gestural tracks.
8. Mucormycosis infection is in soil, environment and it is not a communicable disease.
9. 90 -95 % patients who have Mucormycosis fungal infection have diabetes and are using steroids.
10. Hygiene is important for persons who have diabetes.
11. Symptoms of Mucormycosis are having a Covid, headache, nose crusting and bleeding, under-eye swelling, face sensation.
12. Fungal infection should be identified by name rather than by color.
13. Most of the people are in stress due to the pandemic, we must all come together to support everyone as a society and as individuals.
14. Young adults are facing damages- general gap in education, stress and mental issues in children and adults, smartphones dependence and addiction, challenges in schooling especially in rural India. All of us should come together and address these issues and form help groups in societies and schools.
15. If a person has Covid symptoms for 4-12 weeks, then it is called post acute Covid syndrome and if a person has Covid symptoms for more than 12 weeks, then it is called post Covid syndrome or long Covid.

16. Multi disciplinary post Covid clinics should be developed.

17. In rural and semi – urban areas, Covid cases are increasing. For this, proper diagnosis and management guidelines and training should be followed. Treatment strategy should be charted; proper consultation by doctors using tele-consultation should be followed.
