Geetika
President of India
Dr. A. P. J. Abdul Kalam

Prime Minister
Dr. Manmohan Singh

MINISTRY OF EXTERNAL AFFAIRS
External Affairs Minister
Shri Pranab Mukherjee¹

Minister of State
Shri E. Ahamed

Minister of State
Shri Anand Sharma

Foreign Secretary
Shri Shivshankar Menon²

Secretary (East)
Shri N. Ravi³

Secretary (West)
Shri Nalin Surie⁴

Dean, Foreign Service Institute
Shri Surendra Kumar⁵

Additional Secretaries
Shri K. C. Singh
Shri Ajai Choudhary
Shri Sharat Sabharwal
Shri Vivek Katju
Shri Arif S. Khan
Shri Dinesh K. Jain
Shri R. B. Mardhekar
Shri B. A. Roy

Official Spokesperson
Shri Navtej Singh Sarna

Joint Secretary (Public Diplomacy)
Shri Amit Dasgupta⁶

¹. He assumed charge of his office on October 25.
². He took charge on October 1 on retirement of Shri Shyam Saran.
³. He succeeded Shri Rajiv Sikri.
⁴. He succeeded Mrs. Shashi Tripathi.
⁵. He took over from Shri Atish Sinha who retired on November 30.
⁶. He took over from Shri Sunil Lal.
PREFACE

The series India’s Foreign Relations was launched in March 2005 with the publication of the volume for the year 2004. In 2006 two volumes covering the period 2005 and 2003 appeared. The present volume is therefore fourth in the series. Substantial work on the volume for 2002 has been done. It should appear hopefully in the next few months.

2. The parameters of Indian foreign policy were spelt out by the External Affairs Minister Mr. Pranab Mukherjee in his year-end dinner speech on December 7 to the diplomatic community in New Delhi. He gave prime importance to the “economic success story” of India sustaining which “will obviously also have foreign policy dimensions” for the future, requiring “deeper engagement with the outside world by way of increased access to international markets, sources of energy, advanced technologies and foreign investment.” In order to maintain leverages for an independent foreign policy, India’s world-view has always been and continues to be a “multi-polar” one and today, as Mr. Mukherjee put it “the bandwidth of our political engagement and economic and technical cooperation with the rest of the world is wider than ever before.” The across the board strategic partnerships that New Delhi successfully forged with many countries in various parts of the world stands testimony to this. This was supplemented by expanding and deepening engagement with various economic groupings like SAARC, ASEAN, BIMSTEC, IBSA, G-8, G-15, Indian Ocean-RIM and East Asian Community to name just a few.

3. Another dimension of the foreign policy was elucidated by Prime Minister Dr. Manmohan Singh on November 1 in his speech to the Kerala Pradesh Congress Committee in Thriuvanthapuram. He said the nation could not be tied down to the past. It needed flexibility of tactics depending on the changes the world over by “widening our horizon”.

4. The challenge before policy makers in New Delhi today is to create necessary space to exercise freedom to make policy choices in an increasingly interdependent world. This necessarily means evolving
responses to the ever-changing realities in a world full of uncertainties. In this scenario our responses in terms of instruments of policy, tactics and strategy could not be the same in all the circumstances. What is important is that the basic tenets of foreign policy must remain embedded in values, which are universal and true all the time. The debate on the civil nuclear energy testifies to this. New Delhi drew the Laxman Rekha India would not cross to end the nuclear apartheid it suffered for over three decades. To clinch the deal New Delhi did make a paradigm shift, but refused to accept any constriction of its independence of action.

II

5. “Preventing the proliferation of nuclear weapons, other weapons of mass destruction, the means to produce them, and means to deliver them are critical objectives for the United States foreign policy,” declared the preamble to the Henry J. Hyde the United States - India Peaceful Atomic Energy Cooperation Act of 2006 (H.R. 5682) assented to by the US President George W. Bush on December 18. The preamble represented the distance both the US and India (a non-signatory to the Non Proliferation Treaty) had to walk to accommodate each other. One has to remember that an agreement between two sovereign powers is essentially a compromise of their sovereignties. It represents their synergy of interests with different objectives. Hence the necessity for both to walk some distance to meet at a common point. Given their longstanding position, the Indo – U. S civil nuclear energy deal could not have been any different. The distance that the two needed to tread and the point of agreement where the two needed to meet were laid down in the July 18, 2005 Joint Statement between Prime Minister Dr. Manmohan Singh and President George W. Bush.

6. It may be recalled that India had been barred from accessing the nuclear high technology since the 1974 Pokhran nuclear test for double whammy of not only not signing the NPT but also conducting the nuclear test. However in 1974 having conducted the test India did not declare itself a Nuclear Weapon State. Feeling uneasy under the discriminatory regime of the NPT, India in 1998 made no bones about its intentions. India now demanded to be recognized a member of the exclusive nuclear club. In the eyes of non-proliferation lobbyists it committed the “double sin” of conducting
the nuclear tests once again and also declaring itself a nuclear-weapon-state with a nuclear doctrine of its own.

7. While India succeeded in weathering the economic, financial, defence and other sanctions placed on it for this ‘sin’, the civil nuclear programme did feel the pinch of technology-denial-regime. Under the US lead other countries too denied cooperation in this vital area. No country was willing to resume nuclear cooperation unless the US gave the green signal. Washington too was bound by its national laws to bar this technology to any country that did not sign the NPT. Despite this India refused to buckle under the pressure and sign the NPT. The breakthrough that came New Delhi’s way in July 2005 was a breath of fresh air and worth its while if it could end the discriminatory regime. There were hurdles to be crossed. The United States needed to amend its national laws to extend any cooperation in this sensitive field to a non-signatory.

8. India too needed to be a little flexible. In doing so, as pointed out above, India set its *Laxman Rekha*. This was amplified several times by the Prime Minister both in and outside the Parliament. On August 18, 2006 speaking in Parliament Dr. Manmohan Singh assured the country that there was no question of compromising with the national interest. He said “the central imperative in our discussions with the United States on Civil Nuclear Energy Cooperation is to ensure the complete and irreversible removal of existing restrictions imposed on India through iniquitous restrictive trading regimes over the years.” To that end, the Prime Minister declared: “We seek the removal of restrictions on all aspects of cooperation and technology transfers pertaining to civil nuclear energy – ranging from nuclear fuel, nuclear reactors, to reprocessing spent fuel, i.e. all aspects of a complete nuclear fuel cycle.”

III

9. The passage of the Henry J. Hyde Bill and its assent by President Bush marked an important phase not only in the nuclear energy field but also in the relationship between the two countries. In his signing speech President Bush paid a great tribute to India. He described India as a “friend” which had been conducting its civil
nuclear programme in a “safe and responsible” manner for decades. Most critics of the deal lost sight of the fact that to accommodate India, which for decades was accused of violating the NPT, and an outcaste in the nuclear world, it was the USA, which amended its national laws while New Delhi set preconditions that must be met for India to accept the American cooperation and access technology which it needed but was denied all these years. On its part India in a show of accommodation too went some distance to separate its military and civilian nuclear programmes.

10. However, New Delhi still had some concerns needing to be addressed. Dr. Manmohan Singh told President Bush in so many words when the latter telephoned him on December 21. The press release issued by the Prime Minister’s office on the talks between the two leaders made an important statement the significance of which cannot be underestimated. Firstly it spoke of “President Bush’s initiative to amend the US laws to enable bilateral civil nuclear cooperation” and secondly the hope of the two leaders that “remaining concerns will be addressed in the next stage of negotiations.” (Emphasis added) The Congress having finished its task, it was now for President Bush to allay Indian concerns. Keen as he was to clinch the deal, he described some of the “preconditions” set by the Congress for cooperation as only “advisory” and hence not binding on the executive.

IV

11. At home, there were indeed dissenting voices both from the political class and the scientific community. The left parties supporting the government and the main opposition party, the Bharatiya Janata Party (BJP) for their own reasons found themselves on the same side of the spectrum. The Communist Party of India (Marxist) in a statement issued on December 11 said: “The final Act of the U. S. legislation runs contrary to most of the assurances given by the Prime Minister (in parliament). Once again the goalposts have been shifted...under these circumstances, the argument that the country should wait for the bilateral agreement is spacious. Obviously, the U. S. Administration is bound by the provisions of its Act while negotiating this agreement.” The Party therefore suggested to the government not to proceed further with the negotiations. A day earlier the BJP had asked the government to reject the legislation
instead of “accepting the humiliating conditionalities contained in it.” The Party feared that the new Act would cap India’s nuclear-weapon programme. It said that the legislation would prevent India from nuclear testing even of the kind permitted by the Comprehensive Tests Ban Treaty (CTBT) and India’s weapons programme would be subjected to “intrusive” U.S. scrutiny.

12. Leading nuclear scientist who in the past either had presided over the country’s nuclear establishment, or were associated with its development, pleaded that India must not directly or indirectly concede its right to conduct nuclear weapon tests “if found necessary to strengthen our minimum deterrence”. The Scientists felt that new Act went “much beyond the norms of the IAEA and (these) have been unilaterally introduced without the knowledge of the Indian government”. They insisted that some of the provisions of the 2006 Act constituted an intrusion into India’s independent decision making and policy matters and though the Act was about civilian nuclear cooperation it denied India full cooperation in civilian nuclear energy.

13. New Delhi did take note of the divergent views, but remained confident that despite “extraneous and prescriptive provisions” in the Act, its strategic programme would remain outside the purview of the 123 Agreement that India would need to sign with the USA. “We will not allow external scrutiny of or interference with the strategic programme,” declared External Affairs Minister Pranab Mukherjee in Parliament on December 12. Prime Minister Dr. Manmohan Singh in assuring the scientist held the view that the proof of the pudding was in the eating - in the bilateral agreement to be hammered out between New Delhi and Washington, irrespective of the exertions of the US Congress.

14. The Prime Minister had yet another opportunity to defend the government’s position on the new Act when it was debated in the Lok Sabha on December 18. Intervening in the debate he described the Act “an important step leading to the lifting of international restrictions currently applicable to India.” Next day the December 19 it was External Affairs Minister who assured the nation that while sticking to the stand of voluntary moratorium on nuclear testing, India would keep its options open on conducting nuclear tests if the national interests and priority so required. Similarly he said the US legislation could not put a bar on production of fissile material
by India. “In full civil nuclear cooperation there is nothing that bars India from reprocessing the spent fuel. It is going to be a key element in the 123 agreement that will be negotiated with the U. S., and the US Administration has categorically stated that it stands by the July 18, 2005 Joint Statement,” said the External Affairs Minister.

15. President Bush, on the other hand, set the record straight by declaring that much of the restrictive clauses in the Act were either advisory or he intended to treat them as advisory “given the Constitution’s commitment to the Presidency of the authority to conduct the Nation’s foreign affairs...the executive branch shall construe such policy statements as advisory.”

16. The stage is now set for negotiations for the 123 Agreement and as the Prime Minister said the proof of the pudding was in eating, we have now to wait and watch for the pudding to be served!

17. What is the impact of the US legislation? It has been graphically stated by the Prime Minister in the Lok Sabha on December 18:

“...despite the fact that we have a nuclear weapons programme, the US will be willing to cooperate with us in the development of civilian nuclear capacities. That, I think itself is a great advantage. We will not be considered a nuclear weapon State in the sense of the term in which the term is defined in the NPT. Therefore, for all practical purposes we are here and this is a recognition, which comes today totally from the US. It is Russia, France, United Kingdom and many other countries are willing to recognize the reality that India is a nuclear weapon State.”

18. France, itself drawing 75 percent of its energy from the nuclear source, was appreciative of India’s quest for the same for its economic development. It too was attracted by the lucrative Indian market for nuclear power. Once the United States had shown its willingness to accommodate India, France too did not have much difficulty in extending their cooperation. Therefore when President Chirac came calling in February, New Delhi happily found Paris in a receptive mood. The signing of the Memorandum of Understanding for providing “a safe, environmental friendly and
sustainable source of energy” as an engine for growth was a natural corollary. Despite the MOU, France had made it clear to New Delhi, that its cooperation was contingent on final signal from Washington. Therein lies the importance of the U.S. deal. President Chirac's visit was important in that the two countries agreed to expand their area of cooperation in other fields too like, economic, scientific, technological, space, cultural and political.

19. Germany is another country in Europe that New Delhi is keen to deepen its already strengthened ties with. The Prime Minister visited Germany in April to coincide with the opening of Hannover Trade Fair, with India as a partner country. Both Prime Minister Dr. Manmohan Singh and German Chancellor Mrs. Angela Merkel pledged that “building upon the ‘Agenda for Indo – German Partnership in the 21st Century, which both the countries adopted in the year 2000, Germany and India will deepen their strategic partnership based on shared values and basic common interests.”

20. With Russia India has particularly a buoyant relationship. Both the Russian Prime Minister and Foreign Minister visited New Delhi in March and November respectively. Dr. Manmohan Singh was in Russia in July for the G-8 Conference. It was a good opportunity for the two leaders to renew their personal contacts. Earlier in March President Putin and Dr. Manmohan Singh talked on the telephone for almost twenty minutes and reviewed their multi-faced cooperation since their last meeting in December 2005. Moscow showed its solidarity with New Delhi coming to its rescue, as the supplies of nuclear fuel for Tarapur Atomic Power Plant seemed running out in March. The remarks of External Affairs Minister soon after assuming charge of the Ministry of External Affairs and while greeting the Russian Foreign Minister in New Delhi on November 16 are significant:

“The strategic partnership between India and Russia is based on trust, confidence and the abiding convergence of our national interests....The Government of India is committed to further strengthening the strategic and time-tested partnership with the Russian Federation. We believe that strong relations between India and Russia have been a factor in promoting peace, security and stability, and global efforts against terrorism and narco-trafficking.”
VI

21. East Asia constitutes an important element in the ‘Look-East’ policy of New Delhi. A vibrant relationship is emerging with the countries in the region particularly Japan and China. Strategic partnership at the highest level with both the countries has been the hallmark of this relationship. After the successful visit of Chinese Premier Wen Jiabao to India in 2005, the visit by the Chinese President Hu Jintao in November 2006 provided another “opportunity to add greater content and meaning to the partnership.” This was reflected in the “ten-pronged strategy” embedded in the Joint Declaration issued during the visit of Hu Jintao. The Declaration rejected the idea that India and China were rivals or competitors. On the contrary the Declaration agreed:

“Both countries are seeking to avail themselves of historic opportunities for development. Each side welcomes and takes a positive view of the development of the other, and considers the development of either side as a positive contribution to peace, stability and prosperity of Asia and the world. Both sides hold the view that there exist bright prospects for their common development, that they are not rivals or competitors but are partners for mutual benefit. They agree that there is enough space for them to grow together, achieve a higher scale of development, and play their respective roles in the region and beyond, while remaining sensitive to each other’s concerns and aspirations. Strategic partnership between the two countries with a similar worldview is consistent with their roles as two major developing countries. With the growing participation and role of the two countries in all key issues in today’s globalising world, their partnership is vital for international efforts to deal with global challenges and threats. As two major countries in the emerging multi-polar global order, the simultaneous development of India and China will have a positive influence on the future international system.”

22. The groundwork for the visit had been prepared much in advance by the visit to Beijing of the Defence Minister Pranab Mukherjee in June. Significantly on return from Beijing the Defence Minister told a press conference in New Delhi on June 13 that “the possibility of an armed conflict with China had receded thanks to several Confidence Building Measures (CBMs) being implemented by both
the countries to improve defence relations and eliminate tension on the border”. He described the defence cooperation agreement with Beijing, which he signed during his visit, as another CBM that would add to the sense of security of the two countries. This enabled him to declare: “Neither do we consider them a threat to us nor do they consider us a threat to them. There is enough space for both to grow in their own areas.” Asked if India and China could jostle for supremacy in future, Mr. Mukherjee said the strategic space was not limited. “It is also not correct to say that the entire space is occupied by China.”

23. There was a change of guard in Tokyo. Mr. Shinzo Abe had taken over as the new Prime Minister replacing Junichiro Koizumi. The latter had visited New Delhi in 2005 when it was decided “to reinforce the strategic focus of the Global Partnership between India and Japan and launch an Eight-fold Initiative in order to realize its full potential.” In the current year too there were regular contacts between the two countries. In January the Japanese Foreign Minister visited New Delhi and in May the Defence Minister Pranab Mukherjee went to Tokyo. The two countries recognized that the two were “partners in peace, with a deep interest in promoting the security, stability and prosperity in Asia and in the world at large as well as in tackling regional and global security challenges.” After the Defence Minister’s discussions with his counterpart the two Defence Ministers “reaffirmed their commitment to implement fully the decisions taken by the Prime Ministers to further develop the dialogue and exchanges between the two countries in the security and defence fields, proceeding from the broader perspective of the Global Partnership and building on strategic convergences.” In November there were consultations between the Foreign Offices of India and Japan. The high point of all these contacts was the visit by Prime Minister Dr. Manmohan Singh to Tokyo in December. In the Joint Statement issued during the visit the two Prime Ministers declared:

“Given their shared determination to raise bilateral relations to a higher level, the two leaders decide to establish a Strategic and Global Partnership between India and Japan. This will impart stronger political, economic and strategic dimensions to bilateral relations, serve long-term interests of both countries, enhance all-round cooperation and contribute to
greater regional peace and stability. The Strategic and Global Partnership will involve closer political and diplomatic coordination on bilateral, regional, multilateral and global issues, comprehensive economic engagement, stronger defence relations, greater technological cooperation as well as working towards a quantum increase in cultural ties, educational linkages and people-to-people contacts. This partnership will enable both countries to harness the vast potential of bilateral relations, drawing upon complementarities and each other's intrinsic strengths, and also work together to address regional and global challenges.”

VII

24. The composite dialogue with Pakistan to resolve outstanding issues between the two countries started in 2004 was unfortunately disrupted in July, mercifully temporarily. The investigations in the bomb blasts on the Mumbai trains pointed the needle of suspicion towards Pakistan. New Delhi found it abhorring that while talking peace the Pakistani state agencies or elements supported by them should be perpetrating violence on innocent citizens of India! The meeting between Prime Minister Dr. Manmohan Singh and President Musharraf in Havana on the sidelines of the NAM Summit helped to rescue the peace process. The two leaders expressed their desire “of carrying forward the dialogue process” as also their determination to implement the various joint statements on the need to prevent terrorism. Strongly condemning all acts of terrorism they agreed, “that terrorism is a scourge that needs to be effectively dealt with.” They decided, “to put in place an India-Pakistan anti-terrorism institutional mechanism to identify and implement counter-terrorism initiatives and investigations.” The Foreign Secretary-level talks that followed in November gave concrete shape to this mechanism. One only hopes that it will bear fruitful results and the innocent people would no longer be made victims of senseless acts of terrorism.

25. Earlier in the year on March 24, inaugurating the historic Amritsar – Nankana Sahib bus service Prime Minister in a major initiative proposed to Pakistan:

“instead of looking at each other as adversaries, we must have
the courage to see each other as supporting the other for the realization of a better tomorrow for all the people of India and Pakistan. I have a vision that the peace making process must ultimately culminate in our two countries entering into a Treaty of Peace, Security and Friendship to give meaning and substance to our quest for shared goals. I make this offer to the people of Pakistan on this historic occasion. I am sure the leadership of Pakistan will reciprocate.”

26. Though Pakistan did not formally pick up the offer, Pakistani Foreign Minister Kasuri on 25 March welcomed its positive tone. But as is Pakistan’s wont, linked the offer with the Kashmir issue. Lack of response from Pakistan did not discourage the Prime Minister. He repeated the offer once again at Amritsar on December 20. He reminded Pakistan that if the two countries made an approach with “an open and friendly mind” then “all pending issues” could be resolved through dialogue. Suggesting that the two countries needed to put the past behind them, and think about their “collective destiny” it would lead to a better future for their peoples. Repeating his offer made earlier in that city itself, he said:

“I too have a vision regarding India and Pakistan. I earnestly hope that the relations between the two countries become so friendly and we generate such an atmosphere of trust between each other that the two nations would be able to agree on a Treaty of Peace, Security and Friendship…I am sure we can overcome all hurdles on our path and realize such a treaty. This will become the instrument for releasing our collective destiny and the basis for enduring peace and prosperity in the region.”

27. In April 2007 India is hosting the SAARC Summit and as the host country it is the privilege of its External Affairs Minister to visit the capitals of the member countries and personally extend invitations. This gave the External Affairs Minister an opportunity to visit Islamabad. While extending the invitation for the SAARC Summit, he too conducted substantive bilateral discussions with the Pakistani leaders. The year 2007 started for the India – Pakistan relations on a positive note.

28. In Nepal, the King who had tied himself in knots the previous year
came to grief for his failure to respond to the wishes of his people. India’s reasoning with him to listen to the voice of his people and respond to it had little impact on him. Finally the deafening shrill turned into a major tide that practically swept him away. The Maoists who had spearheaded the violent movement against the monarchy for many years now made a common cause with the other political forces in the country, pledged to end the violence, successfully worked out a *modus vivendi* to reestablish a people’s government fully representative and sovereign. The dream of the Nepalese since the fifties for an elected Constituent Assembly to frame a Constitution is realized. In the not too distant a future the elections for such an Assembly will take place. In the process the people of Nepal gave ample proof of their maturity to decide their destiny themselves. New Delhi welcomed the flowering of democracy in its neighbourhood and saluted the people of Nepal for their sagacity and wisdom.

29. The events in Sri Lanka caused a lot of concern in New Delhi. India as in the past remained committed to the territorial integrity and sovereignty of Sri Lanka. It however earnestly hoped and encouraged a negotiated political settlement that would take into account the aspirations of its Tamil minority. India too expressed to the Sri Lankan leadership its deep concern on the renewed violence that had disrupted the peaceful tenor of life and brought endless misery to the civilian population particularly in the Eastern Province.

VIII

30. Reform of the United Nations remained high on the Indian agenda as also securing a seat on the horse-shoe table. The re-tabling of G-4 draft resolution at the beginning of the year itself (January 5) was intended to “instill positive dynamics into the process of Security Council reforms which had been emphasized in the Outcome Document of the World Summit held in September 2005.” The candidature of Shashi Tharoor for the post of the UN Secretary General, even if unsuccessful, was a notice to the world that New Delhi intended to play a wider role at this forum.

31. To add buoyancy to its economic relations, India remained committed to multilateral and regional economic groupings. Heavy domestic schedule did not prevent the Prime Minister to personally
participate in many of such gatherings. The G-8 at St. Petersburg in July was an opportunity to interact with the world leaders on economic and other issues. Not long thereafter in September the Prime Minister traveled to Havana for the NAM Summit. Before Havana, Brazil hosted him and the South African President for the first ever Summit of the three countries from three continents, which emerged as the IBSA Forum for South-South cooperation. Thereafter, the Prime Minister journeyed to Helsinki for the India – European Union Summit. Before the close of the year 2006 the Prime Minister was almost ready to leave for the Philippines for India – ASEAN and India – East Asia Summits, when the same were postponed for unforeseen weather conditions in that country.

IX

32. India had the honour to host the King of Saudi Arabia both for bilateral visit and also as the Chief Guest at the celebrations of its National Day on January 26. The importance of Saudi Arabia to India and the world was underlined by the Prime Minister in his banquet speech when he described the Kingdom as “constituting an integral part of India’s extended neighbourhood, a region of critical importance to the entire world in political, strategic and economic terms.” The King did India and the Prime Minister a singular honour by personally signing with him the Joint Declaration, something he did not do ever before.

33. Another important visitor from West Asia was the Amir of the State of Kuwait. His visit stressed the synergy of interest between the two countries as producer and consumer of oil. The Joint Statement issued on the occasion stressing the “complementarity of interests between the two countries said: “They (the two countries) intended to develop and expand cooperation between their respective oil companies for encouraging, promoting and establishing a long-term relationship in the supply of crude oil and petroleum products, upstream and downstream joint ventures, refineries, petrochemical industries and marketing both in Kuwait and India and internationally...”

34. The Israeli attack on Lebanon in “its extended neighbourhood” in retaliation for the abduction of two Israeli soldiers by Hezbollah
caused India deep concern. India did not condone the abduction of the Israeli soldiers but felt the Israeli retaliation was excessive and disproportionate that had caused havoc to the civilians’ lives and properties. To mitigate the suffering of the people and in a show of solidarity with them, New Delhi decided to contribute Rs.1000 million for humanitarian and relief efforts. The Indian Parliament unanimously adopted a Resolution calling upon an immediate and unconditional ceasefire. India too organized the evacuation of its entrapped citizens living in that country.

35. India demonstrated its long term commitment to the rebuilding of Afghanistan by extending assistance of another US $ 50 million in addition to US $ 600 million already provided for projects in all parts of Afghanistan. In November India hosted a Regional Economic Cooperation Conference on Afghanistan in New Delhi. It brought together all the important players in the post-war reconstruction of Afghanistan on a single platform. The major players were G-8 countries, neighbouring countries, and the other important donors to Afghanistan Reconstruction Programme, as well as major international organizations. The first such conference was held in Kabul in December last year. It may be recalled that last year India had successfully supported Afghanistan's bid to join the SAARC and India would welcome its participation for the first time when the SAARC Summit is held in New Delhi in April 2007.

36. India and Iran have enjoyed civilizational relations for centuries. However, India had to cast a vote against Iran at the IAEA in view of Iran’s insistence on reprocessing and enrichment of uranium against its commitment assumed under the NPT. The Indian policy towards Iran in this regard was amplified on February 17 by Prime Minister in Parliament. India while upholding Iran’s sovereign right to develop nuclear energy for peaceful uses, called upon Iran to cooperate with the IAEA in honouring safeguards which it had undertaken as a signatory to the NPT and stop reprocessing and enrichment of uranium, which Iran insisted it would not give up. Similarly in December when the UNSC unanimously imposed sanctions on Iran, India while saying that it was studying the implications of the resolution, had its reservation and insisted “all possible efforts should be made to address the Iranian nuclear issue by peaceful means through dialogue and negotiations and that the IAEA should play a central role in resolving the outstanding
issues."

37. Central Asia too remained under Indian radar. In April the Prime Minister Dr. Manmohan Singh paid a visit to Uzbekistan and in August the President of Tajikistan visited India. The first meeting of the Turkmenistan – India Inter-Governmental Commission on Trade, Economic, Scientific and Technological Cooperation was held in Ashgabat in October. These contacts enabled India to strengthen its ties with the Central Asian region.

38. In the vast network of international relations, Africa formed an important link. When the Heads of African Government met in the AU Summit in Banjul, India sent an official delegation led by Mrs. Shashi Tripathi, Secretary (West) in the Ministry to liaise with the African leaders and also to present the candidature of Shashri Tharoor for the post of UN Secretary General. In October at the invitation of the Government of India a 12-member high-level delegation from Common Market for Eastern and Southern Africa (COMESA) visited India. Significantly COMESA, which in the past had linkages with the developed countries to help it achieve its goals of development through economic cooperation, had shown some dissatisfaction at the conditionalities imposed on it and now identified India as its largest partner. COMESA with 405 million people, encompassing 20 countries stretching from Egypt and Libya to Zambia, to Mauritius and Seychelles is the single largest economic grouping in Africa. India hopes that the new initiative would help in forging stronger economic links with an important region of Africa.

39. Another grouping of African countries with which India has developed an equally closer cooperation is South Africa Development Community (SADC). India – SADC Forum was launched in Namibia in April and is a framework for promoting technical cooperation in all fields of economic activity. The Forum meeting in April identified priority areas of cooperation like agriculture, small and medium industries, entrepreneurial development, health, human resource development, water resources, and information technology.

40. A Techno-Economic Approach for Africa – India Movement, TEAM
–9 was set up between India and eight West African countries in March 2004 to accelerate economic, social and cultural development of the member countries through transfer of technology, know-how and knowledge management involving governments, experts and entrepreneurs. Minister of State Anand Sharma met the Team – 9 member countries at Accra in May to take stock of the various projects that were under execution under the credit provided by India.

41. The first ever high-level delegation from ECOWAS, which included four ministers and Executive Secretary of ECOWAS visited New Delhi in April. India has the largest line of credits with ECOWAS countries amounting to 500 million US dollars and during the visit of this delegation; India committed another 250 million US dollars line of credit for the ECOWAS Investment Bank.

42. In the course of 2006 there were several other ministerial visits to and from Africa. To cap it all, there was a visit by Prime Minister to South Africa in October, which also coincided with the 137th birthday of Mahatma Gandhi. In the Tshwane declaration issued on October 2, President Mbeki and Prime Minister Manmohan Singh noted “the strategic partnership between South Africa and India was guided by the common vision of global order marked by peace, security and equity. To tackle these multiple challenges, they reaffirmed their commitment to enhance their cooperation bilaterally as well as multilaterally, to build a better, safer and more prosperous world for present and succeeding generations.”

43. At the G-8 Summit India presented a Non-paper underlining its close relations with Africa. India described its relationship with Africa as not one of donor-recipient but of partnership for mutual development. Its Technical Cooperation programme with Africa is almost four decades old and provides a wide range of training facilities and project expertise to African countries. The Indian approach focused on strengthening ‘South-South’ linkages and promoting self-reliance through transfer of technologies appropriate to the needs of our African partners. In monetary terms India has spent over a billion dollars on its cooperation programmes with Africa and continues to provide training annually to almost 1000 officials in various-capacity building programmes. This is apart from the over 15,000 African students who joint Indian universities and colleges every year.
It may be recalled that in September 2004 during the visit of President Dr. A. P. J. Abdul Kalam to Africa, India had announced its willingness to share the benefits of satellite-based technologies with the counties of Africa. Since then the Indian Space Research Organization has developed an ambitious plan to connect the 53 countries of Africa through a network that uses satellite, fiber optic and wireless links. India in partnership with African Union and individual countries of Africa would be establishing a network that links learning centers, universities, and hospitals in every African country with counterpart institutions in India that have a proven expertise in these fields. Already in October 2005 African Union and India have signed the Memorandum of Understanding for the project. The project execution is presently underway.

XI

Foreign relation today is a complex subject of study unlike in the past when the diplomats interacted on predictable lines in a rather limited sphere of political relations. Protocol dominated the proceedings. Today an extra dose of alcohol may have got mixed up with protocol; but technology has bridged the gap of time and distance. It has brought the nations closer to each other as never before. Media has facilitated diplomatic exchanges. Newspapers are the sounding boards making formal exchange of communications redundant. Trade barriers are vanishing. Competition is the mantra, free trade the dharma and multilateralism the altar of the globalised world. Investments and modern technology are the catalysts for change and the world is indeed changing faster than most of us can keep pace with. The foreign relations have become energy driven since economic development cannot take place without it. Energy, whether thermal, gas, hydrocarbon or nuclear, today dominates the foreign policy discourse.

Since the dawn of the 21st century new and diverse challenges face humanity. We find ourselves at the threshold of new opportunities. Political, economic, environmental and demographic challenges impinge on intra-state affairs. As the complexity and intensity of these issues dawn on us, the realization for greater interdependence of peoples and nations requiring collective action
becomes indeed urgent. This has made multilateral approach to problems critical. This has been particularly so in the case of terrorism, which refuses to recognize any national or geographical boundaries and is a real threat to humanity and civilized societies all over the world. The need for every nation, big and small, to join in this war has never been more urgent than today.

47. Other issues of concern to the developing countries such as financial flows, multilateral trading system, external indebtedness etc., are no longer mere debating issues, but the ones which need to be faced squarely by all the countries individually and collectively. Since the development and democracy are mutually reinforcing, the rule of law is relevant for ensuring economic progress and human development, which in turn contributes to the consolidation of peace. Speaking to the National Defence College on November 15 the External Affairs Minister Pranab Mukherjee underlined the various options available in the pursuit of those interests. He said:

“There is a range of foreign policy instruments available today to advance our economic interests – traditional commercial work, negotiation of preferential or free trading areas, active participation in multilateral forums etc. We need to creatively add to this tool-box and in fact retune mindsets so that our entire approach to a bilateral relationship is premised primarily on that relationship’s contribution to our economic well-being.”

48. In this context Mr. Mukherjee clearly focusing on the objectives of India’s foreign policy in perspective for the next decade declared:

“The primary task of Indian foreign policy has to remain the facilitation of India’s development process, leveraging our international partnership to the best possible effect. Our focus in the coming decade should be on promoting trade and investments flows. In assisting the modernization of the infrastructure, in assuring predictable and affordable energy supplies and in securing the widest possible access to technologies.”

49. Six hundred and eight documents in this volume are a testimony to the grueling schedule that the Ministry went through during the year. These have been regionally and chronologically put together
so that a pattern of relationship is discernable. The main documents on civil nuclear energy have been placed under a separate category but the interaction with America comes under the Section Americas: Sub-section - United States of America. The documents of a general nature or those, which cut across many themes, have been placed under this category. In characterizing a document, its dominant undertone has been the primary consideration. It is quite possible that users may find some duplication or they may find a document at a place different from the one they expected it to be. I am sure they would understand such anomalies. Extensive footnotes have been added wherever appropriate either to amplify the context or to supplement the information contained in the document itself. It is my hope this value-addition would be found useful. In reproducing the documents every effort has been made to adhere to the original text in terms of the spellings of proper nouns, and punctuation. For facility of handling, the compendium has been split into two parts, otherwise it is one integrated study.

50. Given the all-embracing nature of external relations compartmentalization is passé. A large number of agreements and other documents on diverse fields/subjects, like health and environment, culture and agriculture, science and technology, trade and finance are entered into, in pursuit of sharing of knowledge and experience among nations. This naturally has added to the volume of documents that are generated. In order to keep the compendium within reasonable limits only foreign policy-related documents have been included here. Since energy and nuclear issues have become major subjects of foreign policy discourse, documents related to them though handled by other Ministries/Departments of the Government of India, have been included here. In the case of neighbouring countries my effort has been to be as comprehensive as possible notwithstanding the nature of the document.

51. Towards the end of the year there was a change of guard at the Ministry of External Affairs. Shri Pranab Mukherjee returned to it after a gap of almost a decade. At the beginning of the year Shri Anand Sharma joined the Ministry as Minister of State replacing Rao Inderjit Singh. Retirement of Foreign Secretary Shyam Saran led to a change at the Secretaries’ level. Shri Shivshankar Menon took over as Foreign Secretary, Shri N. Ravi as Secretary (East) and Shri Nalin Surie as Secretary (West).

52. For many years I have been making extensive use of the facilities

INDIA’S FOREIGN RELATIONS - 2006
SECTION - I
GENERAL
Blank
001. Address by Foreign Secretary Shyam Saran at the Shanghai Institute of International Studies: ‘Present Dimensions of the Indian Foreign Policy’.

Shanghai, January 11, 2006.

President of the Shanghai Institute of International Studies, Prof. Yu Xintian, distinguished scholars, ladies and gentlemen,

I am thankful to Prof. Yu and the Institute for this opportunity to share some thoughts with you on the subject of India’s Foreign Policy. The SIIS is one of the leading think tanks in China. It commands respect among China’s leadership. It has won recognition among scholars of international relations. In India, we value the growing exchanges with you.

As I speak to you, I must also congratulate you as residents of this remarkable city. I am not new to China and feel fortunate to have had the opportunity to see many parts of this great country. Shanghai’s energy to excel and determination to rejuvenate itself throughout history has always been impressive. Its extraordinary transformation into a world-class metropolis is a reflection of its pioneering role in China’s global integration. In many ways, it manifests China’s own amazing accomplishments in achieving economic development and her emergence as a global political and economic power.

The end of the Cold War, the accelerating process of globalization and the emergence of transnational challenges have become the defining features of contemporary international relations. India’s foreign policy has had to adapt to this rapidly changing international environment.

Our foreign policy has also had to contend with remarkable changes within India itself. For more than a decade and a half, India has been engaged in a thoroughgoing reform and liberalization of its economy. Its engagement with the rest of the world has increased dramatically. It has become more than ever important to ensure for India a peaceful and supportive international environment, an environment which contributes to our developmental goals.

While meeting these challenges, India has maintained a remarkable continuity in the fundamental tenets of its policy. The core of this continuity is to ensure autonomy in our decision making. It is to ensure independence of thought and action. This was and remains the essence of our adherence
to the principle of Non-Alignment. It is also the basis of our commitment to
the Panchsheel, or the Five Principles of Peaceful Co-existence, which
India and China jointly advocated in the early 1950s, and still believe to be
relevant in contemporary international relations. There are other key
elements of continuity as well. These include maintenance of friendly
relations with all countries, resolution of conflicts through peaceful means
and equity in the conduct of international relations.

These basic principles are reflected in the Common Minimum
Programme of the ruling UPA Government. There is a solemn commitment
to pursue an independent foreign policy, promote multi-polarity in world
relations and oppose unilateralism.

Ladies and gentlemen, in pursuing her national interests and in
seeking an appropriate role in the global political and economic order, India
has consciously promoted multipolarity in international relations. The
corollary to this approach is to strengthen multilateral institutions and
mechanisms. We believe that such an approach is indispensable in
addressing global challenges, such as terrorism, proliferation of weapons
of mass destruction, pandemics like HIV/AIDS or avian flu, and drug-
trafficking. Such an approach is also helpful in pooling together the scientific
and technical achievements and collective wisdom of peoples around the
world in overcoming the scourge of poverty, disease and the environmental
degradation of our planet. No one country or even a group of countries,
however rich and powerful, can hope to tackle these challenges on their
own.

This brings me to the need to evolve a new paradigm of cooperation
relevant to the emerging multi-polar world in which global threats demand
global responses. India has actively pursued the strengthening of multilateral
institutions, in particular the United Nations. We are committed to the
comprehensive reform of the United Nations, including its Security Council,
so that the concerns and aspirations of the majority of the UN membership
are adequately reflected and multilateralism becomes an effective tool for
addressing global challenges.

It is obvious that in any reform of the United Nations, the restructuring
of its Security Council must be a priority. India believes that the Security
Council must, in its composition, reflect the contemporary geo-political
realities and not those of 1945. Its actions must be representative, legitimate
and effective and its methods of work and decision-making processes more
democratic, transparent and responsive. We believe that India, with its
large population, dynamic economy, long history of contribution to international peacekeeping and other regional and international causes, deserves to be a permanent member of the UN Security Council. At the same time, we also realize that there is resistance to change among several powerful countries. However, this is the first time in many years that a certain momentum has been built up for a comprehensive reform of the UN, which should not be allowed to wither away. Here, I would wish to articulate our expectation that China will respond positively to our quest for Permanent Membership of the UN Security Council, consistent with our strategic partnership.

A basic tenet of India’s foreign policy since Independence has been the pursuit of global nuclear disarmament. We believe that general and complete disarmament, including nuclear disarmament must remain on the international agenda. It must be a key objective of the United Nations. India’s status as a Nuclear Weapon State does not diminish its commitment to the objective of a nuclear weapon free world. Aspiring for a non-violent world order, through global, verifiable and non-discriminatory nuclear disarmament continues to be an important plank of our nuclear policy, which is characterized by restraint, responsibility, transparency, predictability and a defensive orientation. As a responsible nuclear power with impeccable credentials on non-proliferation, we have earned increasing international recognition as a partner against proliferation. We hope to work more closely with our Chinese friends on this front, too.

Ladies and gentlemen, although the subject today deals with India’s Foreign Policy as a whole, I would like to focus particularly on Asia, where the interests of both India and China intersect. It is said that the logic of geography is unrelenting. Proximity is the most difficult and testing among diplomatic challenges a country faces. We have, therefore, committed ourselves to giving the highest priority to closer political, economic and other ties with our neighbours in South Asia. We have a vision of South Asia, unshackled from historical divisions and bound together in collective pursuit of peace and prosperity. We remain convinced that, on the foundations of its ancient civilisational and commercial interlinkages, South Asia can work together to emerge as a major powerhouse of economic creativity and enterprise. For that to happen, it is essential that we unlock the potential of South Asia by dismantling the existing barriers that restrict the movement of people, goods and investment within and across the region. It is with this perspective that we have extended our hand of friendship and co-operation to all our neighbours and proactively addressed whatever
differences we may have, including with Pakistan. We look at the SAARC process as a stimulus to strengthen cross-border economic linkages, through initiatives such as South Asian Free Trade Agreement, by drawing upon the complementarities among different parts of our region. We are encouraged by a growing perception among our neighbours in South Asia that a prosperous and economically vibrant India is an asset and opportunity for them. We encourage them to take advantage of India’s strengths and reap both economic and political benefits as a result, since it is our belief that India’s national security interests are better served if our neighbours evolve as viable states with moderate and stable political and social environment and robust economies.

We regard the concept of neighborhood as one of widening concentric circles, around a central axis of historical and cultural commonalities. In this, we see India’s destiny interlinked with that of Asia. From this point of view, developing relations with Asian countries is one of our priorities, while pursuing a cooperative architecture of pan-Asian regionalism is a key area of focus of our foreign policy. Geography imparts a unique position to India in the geopolitics of the Asian continent, with our footprint reaching well beyond South Asia and our interests straddling across different sub-categories of Asia – be it East Asia, West Asia, Central Asia, South Asia or South East Asia. To those who harbour any skepticism about this fact, it would suffice to remind that we share one of the longest land borders in the world with China, that Central Asia verges on our northern frontiers, that we have land and maritime borders with three South East Asian countries, that our Andaman and Nicobar Islands are just over a hundred kilometres from Indonesia, and that our exclusive economic zone spans waters from the Persian Gulf to the Straits of Malacca. It is this geopolitical reality and our conviction that enhanced regional cooperation is mutually advantageous, which sustain our enthusiasm to participate in endeavours for regional integration, ranging from South Asian Association of Regional Cooperation to East Asia Summit and Shanghai Cooperation Organisation.

We believe that in our march towards economic progress, Asia in general and East Asia in particular, has been a natural partner. A common thread joins us. We stand to share the opportunities thrown open by the region’s increasing economic integration, just as we face the common threats of proliferation of weapons of mass destruction, terrorism, energy shortage, piracy and others. The Tsunami disaster has also brought home the point, in a tragic way, of how much we share our destiny in the region.
It was in this context that more than a decade ago, we launched the “Look East” policy, which is now a vital part of India’s foreign policy. More than an external economic policy or a political slogan, the “Look East” policy was a strategic shift in India’s vision of the world and her place in the evolving global economy. It was also a manifestation of our belief that developments in East Asia are of direct consequence to India’s security and development. We are therefore actively engaged in creating a bond of friendship and cooperation with East Asia that has a strong economic foundation and a cooperative paradigm of positive inter-connectedness of security interests.

Ladies and gentlemen, our relationship with China is a key component of our “Look East” policy. There is a strong consensus in India on improving and developing our relations with China. Together with China, we have taken a number of positive measures to improve the quality of our relations across a wide range of areas, without allowing the existing differences to affect the overall development of our ties. Despite our differences on the boundary issue, peace and tranquility has been maintained in the India-China border areas, which is by no means a minor achievement. We have an active defence exchange programme and an elaborate matrix of confidence building measures that have helped promote greater trust between our two armed forces. We have a range of dialogue mechanisms through which we are increasingly able to understand and appreciate each other’s point of view and address outstanding issues.

There are many who look at India-China relations with the old mindset of “balance of power” or “conflict of interests” and see Asia as a theatre of competition between these two countries. Such theories are outdated in today’s fast-emerging dynamics of Asia’s quest for peace and prosperity and its interconnectedness. So are perceptions in some quarters that India and China seek to contain each other. To the protagonists of such theories, I would only like to say that India and China, as two continental-size economies and political entities, are too big to contain each other or be contained by any other country.

Today India and China are engaged in a positive way to expand their commonalities with extensive dealings in bilateral, regional and multilateral forums. Indeed, the determination of our two countries to qualitatively elevate our ties by establishing a “strategic and cooperative partnership for peace and prosperity” reflects our shared conviction that India-China relations have now acquired a long-term, global and strategic
character and hence, must be treated as such. Our rapidly growing trade and economic ties are a testimony that we are not just passively bound by our common neighbourhood, but are constantly interacting through a positive and meaningful agenda of collaboration. That from a meager few hundred million dollars in the beginning of nineteen-nineties, our trade was expected to surpass US$18 billion last year should only underline the enormous potential for mutual reward that lies in store if our two countries cooperate. We are determined to take this process further ahead.

The simultaneous emergence of India and China as Asian and global powers in fact makes it imperative for them to be sensitive to each other’s interests and aspirations. The prevailing global paradigm of cooperation among major powers also demands from the two countries that they work together to mutually support their rightful place in the comity of nations. We in India believe that there is enough space and opportunity in Asia and beyond for the two countries to grow.

With regard to the resolution of the boundary question, we are committed to carrying forward the process of exploring a political settlement through the mechanism of Special Representatives. We acknowledge the complexity of this longstanding issue but remain confident that a mutually acceptable solution can be reached if both sides show willingness to take bold and pragmatic decisions, accommodating each other’s vital interests. As we move forward through negotiations, it is important for us to look at the boundary question from the long-term and strategic perspective of India-China relations, rather than as a mere territorial issue. There is a historic opportunity in front of us to settle this outstanding issue that we should not miss.

Ladies and gentlemen, if we are looking at Asia in the coming years, there is no doubt about a major realignment of forces taking place in our continent. Besides the emergence of India and China as two economic powerhouses in this region, there is Japan, the second largest economy in the world, which will retain an influential role in Asia’s political and economic future, and with whom our relations are developing on the foundations of “global partnership” with a strong economic and strategic thrust. With ASEAN as well, our partnership is steadily expanding and deepening. We believe that the ASEAN holds the potential to become the fulcrum of economic integration in our region.

The future of Asia is in reality the sum of the success of each of these components and the strength of their inter-linkages. The key to
ensuring long-term security and stable equilibrium in Asia lies in the collective ability of Asian countries to build mutual economic stakes in one another. It is with this conviction that we espouse a vision of an Asian Economic Community. It can be a neighbourhood of peace and shared prosperity in which people, goods, services and ideas can travel with ease across borders. It may perhaps take the form of a dynamic, open and inclusive Pan-Asian Free Trade Area that could offer a third pole of the global economy after the European Union and NAFTA and would, in all certainty, open up new growth avenues for our economies. This will not be easy, but India is willing to associate with other like-minded countries to make it happen. The recently concluded East Asia Summit has laid the foundations for a cooperative architecture in Asia on an unprecedented scale and we hope, will potentially launch the process towards the possible creation of an East Asian Community. We would be happy to work closely with China towards progressive realization of such an East Asian Community and eventually, a larger Asian Economic Community.

Much has been said in recent months about India’s relations with the United States. It is true that this relationship has acquired remarkable maturity and dynamism in recent years. A number of independent developments, some of which I have already noted, have created the climate for this transformation, including the end of the Cold War, India’s emergence as a dynamic economic force and an objective assessment of the strategic implications of a world dominated by knowledge-driven societies. During the visit of Prime Minister Dr Manmohan Singh to the US in July last year, both sides agreed that India-US relations are moving beyond a bilateral partnership towards a global partnership, which is anchored not only on common values but also common interests. The visit served to highlight the strategic dimension of India’s relationship with the US and underlined our common interest in combating terrorism, proliferation of weapons of mass destruction and enhancing global peace. There has been a convergence of views on strategic and security issues and on opportunities that exist for the India-US cooperation in defence, science and technology, health, trade, space, energy and environment. There is also a growing US recognition of India’s central and enhanced role in international institutions and processes. US’s economic and political stakes in the growth of the Indian economy and its integration with the global market have provided impetus to the India-US cooperation in a way that meaningfully addresses constraints on India’s growth, including the deficits of energy and infrastructure.
India has also embarked on strengthening her multi-faceted relationship with Russia, with whom her traditional strategic partnership has been renewed. Recent high-level visits, including that of President Putin to India and the visits of our President and Prime Minister to Moscow within the last a little over one year, have added great impetus to this process. We are also encouraged by the emerging contours of the trilateral cooperation between China, Russia and India.

We have also moved forward in rejuvenating our relations with the European Union through our new “strategic partnership”. There is a growing recognition of India as an indispensable partner within the EU. Indeed, the EU is as reflective as India is of a multi-lingual, multi-religious and multi-cultural society. Our shared values and beliefs in democracy, human rights, pluralism, independent media, and rule of law make India and the EU natural partners as well as factors of stability in the present world order.

Ladies and gentlemen, India remains committed to pursuing an independent foreign policy that best serves her national interests and accords with her expected role in the emerging global political and economic order. This policy seeks to promote multipolarity in international relations and to strengthen forces of multilateralism that help protect the interests of the developing countries and reinforce geo-strategic stability in the region and the world at large. To this end, we have sought to build on our traditional links with Africa and to cultivate stronger bonds with the Latin American countries. We believe that as two largest developing countries, India and China can together lend greater voice to the aspirations of the developing world and help the developing countries harness the positive forces of economic globalization. We should continue to work towards shaping a coalition of the developing world.

Ladies and gentlemen, today India is on the cutting edge of economic, technological and developmental transformation of significant dimensions. She is regarded as a factor of stability, a model of secularism and plurality and as an economic power that is destined to play a greater role in international affairs. In keeping with this changing image of India, we have adopted a foreign policy, which has a clear focus, a sense of maturity and responsibility, and a vision to make India strong and prosperous in the 21st century. As we do so, we remain steadfast to the core ideals of India’s foreign policy, which were laid down by our first Prime Minister Jawaharlal Nehru and which have guided us since our Independence. At the same time, we also remain vigilant to the new demands and compulsions imposed upon us by a rapidly transforming world around us. We are confident of our capacity and capability as a nation.
to respond successfully to these newly emerging challenges and opportunities. We also remain confident that India would continue its journey towards a destiny that was eloquently articulated by Pandit Nehru in 1947, a destiny in which India “attains her rightful place in the world and makes her full and willing contribution to the promotion of world peace and welfare of mankind”. Thank you.

Question and Answer Session following the Speech

Prof. Yang Jiemian, Vice President of SIIS: Thank you very much Secretary Saran, for your very all round and very stimulating, very thought provoking speech. And now, the floor is open. And please give me a signal so you can be called upon. Before you are asking questions, please keep in mind, keep your comments or questions as short and terse as possible. Now the floor is open.

Prof. Zhang Duijing, European Department, SIIS. My question is you have just had the second China-India Strategic Dialogue with your Chinese counterpart in Beijing and I would like to ask you what is your comment on the outcome of the dialogue. Do you think the dialogue has been institutionalized? And also what role this dialogue can play in our bilateral relations? We, China and India, also have now Special Representatives’ talks on the boundary issue. Putting all of them together, what do you perceive are the prospects of our bilateral relations in the years to come? Thank you.

Foreign Secretary: Thank you very much. The Strategic Dialogue between India and China already is institutionalized. It is to take place on an annual basis. And as you may be aware, the first round of the Strategic Dialogue took place in New Delhi last year, also in January, and this time, in Beijing, was the second round of this dialogue. It has been agreed between our two countries that it has to be an annual feature in terms of our interaction. Now as far as the outcome of the dialogue is concerned, this particular round was very important because it is the first round to take place after India and China declared their intention to establish a strategic and cooperative partnership for peace and prosperity. As you know, this declaration was adopted during the visit of Premier Wen Jiabao to India in April 2005. So one important objective of this dialogue was to explore between our two countries what would be the nature of the strategic partnership between our two countries, what would be the content of that strategic partnership. India and China are the two largest developing countries in the world, the two countries which are developing the fastest,
as also two of the most important countries in Asia. Therefore, in that context, we agreed that our strategic partnership takes on a special character because of these reasons. We have agreed that as two of the most important developing countries, there are a number of global issues which cannot be resolved unless India and China participate. For example, if you are talking about environmental degradation, if you are talking about how to tackle global pandemics, like HIV/AIDS, or avian flu, if you are talking about aspects such as non-proliferation, all these are areas where unless India and China, as the two largest developing countries, are also part of the dialogue it is very difficult to see how these problems can be resolved.

Therefore, it was agreed that India and China, should work together in contributing to the solutions of some of the major global challenges of our times. The other aspect that we discussed was the role that India and China can play together in safeguarding, and not only safeguarding, but also in promoting the interests of developing countries as a whole, because developing countries look to India and China as, in a sense, champions of their cause. So if India and China can join hands together perhaps they can do a much better job of safeguarding the interests of developing countries as a whole. For example, this is already happening within the World Trade Organisation - on many trade issues, we have already worked together. So we agreed that we should intensify this. Similarly, if we are talking about India and China being Asian countries, then there is a certain contribution that we can together make to the peace and prosperity of Asia. And in this context, what I said in my speech to you that neither country looks upon the other as a competitor or as a rival. We believe that there is enough space in Asia and the world for both the emergence of India as well as the emergence of China. And that we can together contribute to the further development of Asia. In that context, we agreed that we should work together, for example, in the creation of an East Asian economic community, and perhaps even a larger Asian community. So, as you can see, there is a very rich agenda, as far as our strategic partnership is concerned. This will be what will occupy us in the next several years. You asked what would be the outlook for India-China relations. It is in this context, that we say that India-China relations have acquired a certain maturity and a certain long term character. Thank you.

Prof. Shen Ding Li, Professor in Fudan University & Vice Chairman of China Association of South Asian Studies: I couldn’t agree more on your points. In particular, India and China are working together to build the Asian community. I dream to have an Asian Union in this century
for the next 95 years to work out and our two countries deserve to be the co-leader. Then my question is, a strategic partnership is a concept. Unless we could fill the vacuum to substantiate the concept, it would remain a concept and not a substantive cooperation. The strategic cooperation is in working with India on India’s quest for a permanent seat at the UN Security Council. This should define the watershed of the strategic partnership, in my view. My question is do you urge or hope that China would meet India’s expectations to respond positively. The question is has India been satisfied with the current Chinese response? How India would encourage China to respond more positively, to be a true strategic partner? Thank you.

**Foreign Secretary:** Well, let me begin by saying that both India and China have agreed that United Nations needs comprehensive reforms. There is no difference of opinion on that. Both India and China also agree that there is what we call a democracy deficit in the United Nations. Particularly, as far as the representation of developing countries is concerned. As far as India’s own candidature for the UN Security Council is concerned, I think we are satisfied with the statement made by Premier Wen Jiabao when he was in India, where he assured in a Press Conference that China will never be an obstacle to India becoming a permanent member of the UN Security Council. Now, we greatly value China’s statement of support. But this is a complicated exercise. And it is something which will require a considerable amount of hard work on our part. We are engaged in that very hard work. And we believe that we have currently the support of the majority of the countries of the United Nations. What we are looking at is how do we bring about a mechanism through which the expansion of the Security Council takes place. Our preferred mechanism is that of the G-4 framework resolution. China does not agree with that because perhaps China has some reservations about some of the candidates for permanent membership. Well, that is something that we will have to discuss further and work out. But as far as support for India’s candidature is concerned, I think it would be fair to say that China has displayed a positive attitude.

**Prof. Xiao Yiqun, SIIS:** Your Excellency, India has been quite active in its diplomatic moves over the years, including its participation in Shanghai Cooperative Organisation as an observer and also a member of East Asia Summit, going much more beyond the sub-continent and Indian Ocean and showing a new aspect of India’s diplomacy. We appreciate very much India’s efforts to join regional integration but I think we hope to know much more about India’s policies, the substance of India’s policy. So just like Prime Minister Singh has described the role of India in Asia-Pacific region
as balancing force when he was in Kuala Lumpur, could you please further elaborate to this point. What does he mean by this balance? What does India really want to balance or in what way and does that point to the economic area or what else? Thank you very much.

**Foreign Secretary:** I think, first of all, before you nurse any suspicions, let me say that India is not trying to balance China. (Laughter). I think what Prime Minister Singh was trying to say, and what we have been saying for some time, is that for India, we have an interest in seeing a more multi-polar world emerge. That is, if there are more centres of economic activity, if there are more centres of political influence, if the world order or the regional order becomes more diversified, we believe, the greater the chances of maintaining peace and stability. And therefore, if in the coming years, India, like China, can make a contribution towards the economic dynamism of Asia, if we can make any contribution towards the political stability of the continent, we believe that this would be a very positive role that India can play. I don’t think one should read anything beyond that in Prime Minister Singh’s statement.

**Prof. Pan Guang, Shanghai Academy of Social Sciences (SAAS) and Director, Institute of Eurasia Studies:** Thank you Mr. Secretary for your presentation. My short question, as you know, your Minister of Energy arrived in Beijing, maybe today. I just want to ask you to make some introduction or comments on the energy cooperation between China and India and also the very sensitive project, gas project, from Iran to Pakistan to India. Thank you.

**Foreign Secretary:** Well, you know India and China are the two fastest growing economies. We are now not only important producers of energy, but we have become very large consumers of energy. And if the present trends continue, then it is quite possible that energy will become a constraint on our growth. Not only a constraint on the growth of India and China, but will have a global impact also. Because, energy resources today are finite, and therefore, if there is a very large demand push from India and China, it only stands to reason that prices of energy, globally, will go up. Therefore, I think, it is very important for India and China to be working together, both as producers of energy as well as consumers of energy. Now the good thing that has happened is that in some cases, India and China are already working together and collaborating together in developing some new resources in Africa, for example, and in other places in the world. And I think, this trend is only going to increase. But, it requires that our
exploration companies and our oil companies must get to know each other better, they must learn to work with each other more closely, and what has been happening in the past two years is precisely that - that the range of contacts between our petroleum and our gas establishments has increased quite considerably. And it is in this context, that the visit of our Minister for Petroleum and Natural Gas to China has acquired a certain importance.

But I will go beyond this and say that currently in India, we are looking at a whole range of energy issues. We are looking at how to develop, for example, nuclear energy as an alternative source of energy. We are looking at developing our hydropower resources. Thermal energy or coal based energy is probably going to remain the main source of energy for India for quite some time, because that is the most plentiful source of energy in India. I think, if I am not mistaken, the same is the case with China. But this has environmental dimensions. So we are very actively engaged in doing research, for example, in clean coal technologies. We have collaboration in this respect with some other countries like the United States of America, and with the European Union. We are also looking at certain non-traditional sources of energy. For example, there is a big movement in India for bio-fuels or plant-based fuels. So, if we want to really look at our energy requirements for the next ten-twenty years, then not only do we need to focus on finding new sources of oil and gas, but we need to also look at many other sources of energy. Now in this, I think, perhaps India and China are lagging a little behind. For example, India has an energy dialogue with United States covering the whole range of energy issues. We have an energy panel with the European Union, and we have again a whole range of issues being discussed. I think, we need something similar also between India and China. One good thing that has happened is that India and China will be also working together in the context of the ITER project, which is the fusion energy project, which has a great promise for the future. And in this respect, we are grateful to China for having supported our membership of the ITER project.

Prof. Dui Hang, SIIS: Mr. Secretary, we have heard your wonderful speech on Indian Foreign Policy and it is encouraging to see fast developing and fully confident India that has been rising rapidly. India’s foreign policy has been expanding. In this regard my question is, in what way you would like to describe the nature of India’s foreign policy? Is non-alignment still its fundamental characteristic or India keeps that as a part but has transformed guideline according to the rapid changing environment? How would you assess the status quo and prospects of Non-Aligned Movement in today’s world? Thank you.
Foreign Secretary: I would begin by clarifying that the Non-Aligned Movement is not the same thing as non-alignment policy. India’s adherence to the policy of non-alignment is something which continues, although unfortunately, the Non-Aligned Movement has lost a great deal of its strength over the last 15-20 years. Now for us, the essence of non-alignment was a policy of independence. That is, judging each case on its own merit, not being influenced by the viewpoint of any other, and in the last analysis, basing our actions on our own national interests. Now these are very fundamental issues and they are not likely to change over a period of time. Does this mean that policy of non-alignment is rigid? Certainly not. Because as the environment around us changes, we have to make adjustments in our policies. And India has made adjustments in her policies. But I think what is a remarkable feature of India’s foreign policy is that despite many of these changes, there is a certain continuity in the way we have interacted with the rest of the world. Those fundamental tenets have not changed. I was telling my friends in Beijing that today we are establishing a new strategic and cooperative partnership between India and China. I drew attention to the fact that when India and China jointly espoused the Five Principles of Peaceful Co-existence, it was in a sense like a strategic partnership between India and China in the 1950s. So, even at that time, there was a very strong recognition of the need for India and China to work together.

Prof. Hu Zhou, Ph.D. Researcher, Fudan University: It is my great honour to be here to listen to your wonderful speech. My question is concerned with the issue of energy. I read some news and articles about your Government’s consideration to build a gas pipeline starting from Iran passing through Pakistan and reaching New Delhi. But Iran now is considered a rogue State by the US Government. And the US Government hasn’t lifted the sanction against Iran yet. Are you satisfied with your Government’s plan to build such an energy pipeline? I was wondering if India builds such relationship with Iran, what sort of influence this might have on current Indo-US relations? This is my first question. Second is why your government is strengthening relations with US? Is the US planning to provide nuclear energy technology to your country but not provide such sort of technology to China? I think the strength of Indo-US relations is aimed at containing China. This is my question. Thank you.

Foreign Secretary: Well, the first part of your question first. I am sorry somebody had asked me about India-Iran-Pakistan pipeline, but I omitted to comment on that. As far as this pipeline project is concerned, we have said on a number of occasions that our decision to go ahead or
not go ahead will be based on the economic viability of this project. If it is an economically viable project, given the energy requirements that India has, we see no reason why we should not go ahead with this project. As far as our relations with Iran are concerned, these relations are very important to India. We have a very long-standing historical and cultural relationship with Iran. This goes back many thousands of years. It is not of recent standing. Iran is one of most important sources of energy for India. About 30% of our oil comes from Iran. Iran is also a country which is located in the very strategic Gulf area where today about 3.5 million Indian citizens are living and working. So anything which happens in the Gulf directly impacts on the welfare of these Indian citizens. Today Iran is also important to us as a transit country for Central Asia. Since we are not able to transit through Pakistan to Afghanistan or to Central Asia which is a natural route, it is through Iran that much of trade with Central Asia takes place. So, if you look at all these aspects, you will see that there is every reason for us to have very good relations with Iran. As far as the United States’ relationship with Iran is concerned, I think it not necessary for us to follow the compulsions or the view of the United States of America in every relationship that we have. The other issue about the India-US relations. Well I think you should put this relationship in some perspective. If you look today, at say India-US trade, it is probably 1/10th of China-US trade. We have a very long way to go until we come even to your level. If you are talking about investment, US investment in China is several times more than the US investment in India and if you are looking at high-technology trade, despite the restrictions that you may be talking about, last year, if my figures are correct, India-US high-technology trade was just a little over a hundred-million dollars while it was nearly a billion dollars with regard to China. So for you to feel that somehow there is something very strange happening between India and the US, I don’t think that has any basis.

**Prof. Chen Dongxiao, SIIS.** Mr. Saran, I enjoyed your presentation very much. I particularly noticed that in your speech you mentioned that India has a vision of South Asia unshackled from historical divisions and bound together in collective pursuit of peace and prosperity. On one hand, as a Chinese scholar we have noticed that some improvement as well as a relaxing development in the regional situation on the sub-continent. But on the other, as we all know that the root cause for all those problems is very difficult to disappear overnight. And so, my question is, in this respect, can you share with us some of your views on the regional situation, say India-Pakistan relationship? What is your view of your interaction with Bangladesh, and what is your view on Nepal’s internal situation? Thank you.
Foreign Secretary: Well, you know, there has been certainly an improvement of relations between India and Pakistan over the past couple of years. If you compare the relationship that existed between India and Pakistan before January 2004 and today, there is a very remarkable change. Just in terms of the number of people who are traveling back and forth across the borders - today the Indian Mission in Islamabad issues something like 11,000 visas per month for Pakistanis traveling to India. Despite the fact that Pakistan has put many restrictions on trade with India, trade between India and Pakistan has been increasing. We have also increased our interactions over a number of other areas. You have seen that we have opened several new bus services across the border, and across the Line of Control.

On February 1, we will have a train link, new train link, between the two countries. So all in all, there is considerable amount of positive development taking place in the relationship. In 2004, President Musharraf made a commitment to our then Prime Minister that no part of the territory under the control of Pakistan would be used for any terrorist activity against India. Now, what has happened is that there have been some ups and downs in level of activity of terrorist groups or jehadi groups from Pakistan operating on the Indian side. But we cannot say that there has been a pattern of decline in this activity. And in the recent past, in fact there has been even an increase in such activity. Our plea to our Pakistani friends has been that our ability, as Indians, to carry forward this dialogue or to carry forward this peace process with Pakistan is dependant upon our ability to carry our people with us. Unless there is public opinion behind such a policy, we may not be able to carry forward this policy. Every time there is a terrorist incident in India, every time innocent women and children die, public opinion starts becoming negative. You might have read that sometime back in a very crowded market place in Delhi, there was bomb blast which killed about 50 people, ordinary shoppers, men, women and children. I would say to you that instead of 50 people, if 500 people had died, I think no government in India could carry forward the peace process. And those who have been implicated in these bomb blasts have their links with terrorist groups which are freely operating in Pakistan. So Pakistan has to make a choice. In today’s world, terrorism has no place.

With regard to Bangladesh, we are facing a similar problem, because there is a rise of religious extremism in Bangladesh. And you might have seen that some time ago these groups tried to display their strength by having bomb blasts in virtually all the districts, different districts of
Bangladesh. Now this is where I think the policy that we have tried to adopt towards our neighbours is to convey that terrorism is not just a threat to India, but also a threat to stability of those countries as well. Secondly, we also have tried to convey the view that a prosperous India, an India which is growing can be a great asset to our neighbours. So they should look at India as an opportunity, not as a threat.

Prof. Ma Ying, SIIS: Your Excellency, I enjoyed your presentation which reminded me of the time we visited your country. You mentioned India’s relations with Asia in your speech. And we know that India has adopted a “Look East” policy since the early 1990s and has made much progress over the years, and is especially evident in India’s participation in many activities in South-East Asia and West Pacific. To my understanding, India’s first and foremost goal of this policy aims at economic engagement. In the meantime, I have also noticed that many Indian officials and officers constantly talk about India’s interest in security areas and the regime in this region. In fact, India sent its fleet to South-East Asia and South China Sea and very recently India invited some of the South-East Asian countries to an eight-country joint military exercise held in the Andaman Sea. My question is that, whether India has a security concern in this part of the world. What is the nature of India’s concern, if any? And also what is the real interest India has to defend in this region? Thank you very much.

Foreign Secretary: I think I mentioned in my address that if you look at the geographical location of India, it, in a sense straddles sea-routes both towards the east and towards the west. I also mentioned the fact that if you look at India’s exclusive economic zones, it covers both up to the Persian Gulf and to the Malacca Straits. I also pointed out that the last island in the Indian chain, the Andaman and Nicobar chain is only about 100 km from the first island of Indonesian chain. Now it should stand to reason, given such a large exclusive economic zone that we have certain very important assets in terms of off-shore oil assets, particularly, in the Arabian Sea. We are also currently making explorations in the eastern part, in the Bay of Bengal. If you look at the reliance on the trade routes both east and west, it is only natural that India would be developing a capability in order to be able to safeguard these assets and these routes. This should not be regarded as being directed against this or that country. Secondly, as far as these exercises are concerned, I think these are very friendly exercises, which enables us to have personal contacts with the security officials of a large number of our neighbouring countries. This way
you avoid misunderstanding, you avoid any kind of misperception, because, you have that personal association.

You understand what precisely is the nature of the strategy that India is following. And let me also stress in this regard that we have found these exercises extremely useful in terms of developing a very cooperative kind of relationship. It is very good, for example, that we have also been having similar kind of exercises with China. Also as far as this particular part of the world is concerned, as you know in the South China Sea or in the southern part of the Bay of Bengal we have been facing a lot of problem of piracy. The phenomenon of piracy has become more and more difficult to deal with. Recently, we have signed an agreement with a number of Asia-Pacific countries, precisely in order to deal with... cooperatively deal with the problem of piracy. The other aspect is, of course, how to deal with the problem of natural disasters, like the Tsunami. Now I think the fact that India was able to use its naval capabilities in order to assist some of the countries in the region, like Sri Lanka and Maldives, is a positive thing. It should not be looked upon as a negative development. So, as far as India’s strategy is concerned, it is entirely defensive in nature and it is to really safeguard our own vital interests.

Prof. Ren Xiang: Mr. Secretary, my question is related to South Asian Association of Regional Cooperation. Now China has become an observer in SAARC. In what aspects do you think, China might be able to contribute to SAARC and in addition to China’s relations with individual South Asian States? And what role do you think China can play in the multilateral process if there is any in South Asia? Thank you.

Foreign Secretary: Well, we have welcomed China having become an observer with the SAARC and in fact there are a number of areas where China can contribute. The South Asian countries themselves have identified a number of areas. These areas relate to, for example, how to deal with the challenges of environment. We have a number of projects that we are doing in the health sector. We are doing projects in the agricultural sector. We are looking at how to improve the communication network throughout the region. So, there are a number of regional projects which are on the agenda and frankly, it is for China to select which particular area it would like to work together with the Association. Part of the problem that we are facing is that South Asian countries themselves do not have many collaborative projects. The Association has been in existence for the last 20 years and India has pointed out on a number of occasions that in these 20 years we have not done even one single collaborative project. So, there is also the reality that
unless South Asian countries themselves decide to work together and come up with collaborative projects, the possibility of very close cooperation with countries outside the region may not be that big.

**Prof. Jiang Qun, Department of American Studies, SIIS.** Thank you Mr. Secretary. You just mentioned energy issue and India-US relations, but its not enough for me (laughs). So, my question is, US President will visit India soon and possibly this visit is seen as a historic one as far as the India-US relations are concerned. We have also noticed that Prime Minister Singh’s visit to Washington last July resulted in a civil nuclear deal and following that the US raised a request that India separate civil nuclear programme from military one. My question is, in your view, what is the real motive behind the US demand. And what worries US might have for implementing this deal?

**Foreign Secretary:** Perhaps you could tell me what your worries are. (Laughter). Since you said that you are not satisfied with what I said before. What is it that you were not satisfied with?

**Prof. Jiang Qun:** (Laughs) I am not an expert, so that is my question for you. (Laughter).

**Foreign Secretary:** Let me try and put India-US relations in some perspective. You see, over a very long period of time, since the 1950s itself, India refused to be in this or that camp. India said that it would follow a non-alignment policy. At that time, if you remember there was a very famous Secretary of State of United States, Dallas, who said “You know, there is no third way. You either have to be with us or you have to be against us”. Pandit Nehru at that time said, “Well, I do not wish to be a part of this or that alliance. I want to be independent.” Again over a period of time or because of certain international situations, India developed a very close relationship with the then Soviet Union. The Soviet Union contributed a great deal to India’s economic development over a certain period of time. In a sense, India developed a certain strategic relationship with the Soviet Union.

So, over a long period of time, although India was seen as a democracy, like the United States of America, but the United States had always a sense that we were somehow on the wrong side of the fence, not on the American side of the fence. So, despite the many other relations that have developed very closely between India and the US, particularly, people to people relations, or relations amongst our academic communities or relations between our civil societies; as far as the perception of the United States’ administration was concerned, India was not quite seen on the side of western democracy.
Since the end of the Cold War, this particular perspective has changed. The United States is no longer looking at the world from the perspective of the Cold War, because the Cold War is over. And therefore, many of the commonalities which exist between India and the US have now come to the surface. I think the United States is seeing that India’s political system is very similar to the States. There is a very vibrant democracy in India. The United States is beginning to appreciate that at least since 1990 there has been a very major change in India’s economic policy. That Indian economy has become much more open. This openness of the Indian economy has created many opportunities for the United States as well. Another very important factor is the emergence of India as a knowledge power because of its IT industry. This more than anything else has perhaps changed the perspective of the United States in looking at India, because India is seen as a country which has a very strong knowledge base, which is very closely connected to the United States, because we also have, as you know, something like 2.5 million Indians who are in the United States and are very highly qualified professionals.

So there are a number of reasons why the US’ view about India has been changing. And let me be very frank, as far as India’s economic growth is concerned, as we move to a higher and higher level of development, our need for higher technology increases. As our economy matures, we will need more investment, we will need more sophisticated technology. And I think China will not disagree that the United States of America remains the premier source, one of the most important sources of high technology. So there is certain logic to the relationship that is emerging between India and the United States. But let me once again say that this should not be seen as a relationship which is developing at somebody else’s expense. As I pointed out earlier, your engagement with the United States of America in all these areas is far greater than that of India. We have a very long way to go to come to the level at which you are with United States. With regard to the civil nuclear energy cooperation agreement, the background to this really is what I had mentioned earlier, the energy challenge which India is facing. If India is to ensure that energy does not become a constraint on our growth, then we have to look for different alternative sources of energy. Now, why is nuclear energy important is because, over the years, India has built up a very complete, comprehensive infrastructure in nuclear industry. We have today, perhaps, one of the most sophisticated nuclear industries in the world. Much of this has been developed indigenously because we have faced a lot of sanctions over a long period of time. But if
we are looking at the future, nuclear energy offers a very important source of energy for India’s developmental needs.

Now, the United States of America is saying that we accept that India requires new sources of energy and the policy that has been followed over the last, maybe more than thirty years, is a policy that has not really achieved whatever objectives it had. If the objective of those policies, since 1974 was to somehow or the other restrict India’s nuclear industry or to restrict India’s development in the scientific and technical field, it has not succeeded. So what is the point in having those kinds of policies. On the other hand, if India is going to have access to international cooperation in nuclear energy, the advantage for India is that it will have faster growth. The advantage for the rest of the world is that they would have a certain partnership, a certain stake in India’s development. That is the logic to the civil nuclear energy agreement. The civil nuclear energy agreement has not been concluded. There are many pitfalls before we get to that point. But we are certainly working on it.

Prof. Wang Dehua, Shanghai Academy of Social Sciences (SASS), Institute of South Asia and Central Asia Studies: As I was coming here, Prof. Tan Chung told me that he is a friend of yours. He sent an email to me, asking me to convey his regards to you. He said that he is writing a book about ‘Himalayan gap and understanding’. My question to you is how to let the Chinese people and the Indian people know each other better and overcome all the gaps? I found that the Indian friends coined new words “Chindia” for China and India. What is your comment on it?

Foreign Secretary: Well, I could not agree more than that. You know, India and China need to get to know each other and particularly the younger generation needs to get to know each other. When Premier Wen Jiabao came to Delhi it was agreed that during this year, which is the India-China Friendship Year, we will have an exchange of youth between the two countries. We will be inviting a few hundred Chinese youths to come to India and vice versa. But the India-China Friendship Year also has a number of other events that are planned in the nature of exchange of cultural troupes, scholars, holding seminars and workshops, promoting scholarship on India in China, etc. So there are a number of activities that we are looking at in this Friendship Year. I think the only way that we can address this deficit in terms of information about each other is by encouraging as many exchanges as we can. And I think in that context, I am very thankful to Madame Yu here for having arranged this interaction. I hope I have been able to create
a little more understanding than there has been before about India's foreign policy. I am told that in 2004, the number of visas issued for visits from China to India was about 26,000 and in 2005 they reached 33,000. So this is a very encouraging trend and we would certainly like to take this forward.

**Prof. Lu Gang, SIIS:** The first informal meeting of the Foreign Ministers of China, India and Russia was held in Russian Far East on June last June leading to lots of reports and analysis of prospects of what is known as a new type of China-India-Russia relations. Some have gone very far as to describe the trilateral relations as a sort of a new alignment vis-à-vis unilateralism. My question is, what term would you like to use to describe the nature of the trilateral relations. In what factor do you think the three sides are likely to develop cooperation best? Should the three sides establish a long-term perspective for the future of trilateral relations? If so, what it would be?

**Foreign Secretary:** Well, I would be very reluctant to describe it as anything other than what it says, which is trilateral cooperation. I see no reason why we should try to read into it something more than it is. We certainly do not see a trilateral cooperation amongst the three countries as directed against any third country. And I think it is not in the interest of either India or China or for that matter Russia to try and suggest that is some kind of a counterbalance to some other country or a group of countries. There are a number of areas where the three countries can work together

---

1. It was the first stand-alone meeting of the three ministers held at Vladivostok on June 2, 2005. There were three meetings before this which were held on the sidelines of the UN General Assembly sessions in 2002 and 2003 and one in Almaty in 2004 on the sidelines of the Conference for Confidence Building Measures in Asia. One of the decisions taken at the Vladivostok meeting was that to increase business contacts between the three countries, a trilateral business meeting would be held in New Delhi before the end of March 2006. In the Joint Declaration issued at the end of the Summit meeting between Russian President Putin and Chinese President Hu Jintao in Beijing on March 21-22 a call was made by the two leaders to set up an institutional framework between China, Russia and India for trilateral cooperation. The Declaration said: “The two sides favour an early establishment of a mechanism of trilateral cooperation in the Russia - China – India format in the belief that this will contribute to a fuller realization of their potentials for economic development and will strengthen international efforts to stand up to new threats and challenges.” During the visit of Hu Jiantao to New Delhi in November the concept of trilateral cooperation found expression in the Joint Declaration issued on November 21. It said: “The two sides positively assess the trilateral dialogue mechanism among India, China and Russia and agree that exchanges and cooperation under it should be further substantiated.”
and in fact, they have identified those areas. For example, we have identified energy as an extremely important area where the three countries need to cooperate together. We have drawn attention to the fact that despite the three countries enjoying very good political relations — for example, today China and Russia enjoy very good political relations, Russia and India have all along, in fact, enjoyed very good political relations, and India-China relations have improved dramatically over the past few years — if we look at the economic relationship between these three countries, it is very far away from the potential. So, currently what we are trying to do is to see how we can focus attention on developing our economic and trade relations. So, in March this year, at the end of March, we are planning the first trilateral business summit of the three countries in New Delhi, in order to bring in the business communities of the three countries closer together. Is there a possibility of our also cooperating on some international issues? I think that is open. For example, we would certainly be very happy to cooperate with our partners in China and Russia on issues like terrorism. That is a very important issue for us and I know that it is a very important issue for Russia. I think that it is also an issue for China. So, if that is an area where we would like to work together, I think the willingness would be there. If we wish to work together on issues such as improving the transport connectivity amongst the three countries, yes, I think there would be a lot we could do together. So, I think the agenda can be a very substantive agenda for cooperation amongst the three countries. But certainly, India would not like this to be seen as some kind of emerging alliance amongst three countries which is directed against somebody else.

**Prof. Ye Qing, SIIS:** In your speech you mentioned about the unique location of India in Asia and you talked about India’s external relations with South Asia, Japan etc., but what you had neglected is West Asia, I mean Middle East. I have noticed that new change has taken place in India’s Middle East policies. For example, Iran is quite frustrated after India turned against it in IAEA’s voting last year. Could you please give me some clue about the new re-orientation of India’s Middle East policy?

**Foreign Secretary:** Well, I am sorry that I neglected to touch upon India’s relations with the Gulf. But I think if I started covering every aspect of our relationship, I don’t think Madam Yu would be going home this evening. Certainly our relations with the Gulf are, in fact, of longer standing than perhaps, in a sense, our ‘Look East’ policy. I mean, there was a need for a ‘Look East’ policy but there has not been a need felt for a “Look West” policy, because that policy has always been there. I just mentioned to you
that there are 3.5 million Indians who are living and working in the Gulf and that itself is a major aspect of our concern as far as this region is concerned. You may have also seen reports that in 2004 there were three Indian citizens who were taken hostages in Iraq. We spent about a month of very difficult negotiations in trying to get them out. So, there are very close interests with the Gulf and these interests are not only economic because the Gulf is the major source of our energy but also again very long-standing historical and cultural links with each one of these countries in the Gulf.

We attach a great deal of importance to our relationship and there have been some significant development taking place. For example, with the Gulf Cooperation Council, we have already established some kind of an economic framework. There is an economic and industrial cooperation group convened by the apex Chambers of Commerce, at which there is Ministerial level participation, which is to meet every two years. That has been very important. Very soon, we will be receiving in India the new Saudi King and this will be the first time after many years that such a visit is taking place and reflects greater engagement that India is having with the countries of this region. We have appointed a Special Envoy for West Asia, who has considerable amount of experience of this region and he has been paying a number of visits to the countries of the region and that has improved our engagements with these countries. We are using our strengths in the areas, for example, the IT in order to contribute to the economic development of some of the Gulf countries and that has been greatly appreciated. So, there has been an all round upgradation of our relations with virtually all the Gulf countries. And as far as Iran is concerned, whatever may have been Iran’s disappointment with regard to the vote in the IAEA, neither Iran nor India believes that this has in any way diminished the importance that both of us have attached to relations between the two countries.

Prof. Zhang, SASS: I noted in your address that you said India have sought to cultivate stronger bonds with Latin American countries. Would you like to tell us about some activities of India in Latin America and India’s Latin American policy?

Foreign Secretary: There has been a perception in India in the past couple of years that the Indian foreign policy has not paid much attention to our relationship with the Latin American countries. For many years, our relationship was mostly with very key South American countries like Brazil or Argentina, to some extent with Venezuela but as far as much of the rest of Latin America was concerned, we did not really have much of contact
with them, partly because of the distance, partly because the communication between the two sides were not very easy. Now, that is what has been changing over the last couple of years. What has led to this is, well, partly economic. Because as India has become more and more of a global economy, as it is looking for trading opportunities, looking for investment opportunities in more and more areas, Latin America is now coming on the radar screen. So, this is more like a natural process that is taking place. The other very important aspect is energy and there for example, we are developing very close relations with Venezuela because Venezuela is a very important oil country.

And we are also looking for exploration possibilities in Southern America. We have also with respect to some of the smaller countries, a very large economic and technical cooperation programme. This technical and economic cooperation goes back to 1964, where we have been sharing our experience in development, in small scale industry, and now for example, in IT or in management which are the areas of strength of India. We have been sharing this with a number of developing countries but not so much with the developing countries in Latin America. Now, for example, in the last couple of years, we have started doing that. We are working together with some of the smaller Latin American countries for developing their IT parks and IT networks. This is emerging as a new area. We are receiving many more Latin American students as well as technical personnel. We are also cooperating with Latin American countries for political reasons as well. For example, for support for our Permanent Membership of the UN Security Council, we have to mobilize as much support as we can and Latin America is a very important constituency. We have been doing a lot of work there as well for that reason.
MINISTER OF STATE FOR EXTERNAL AFFAIRS (SHRI ANAND SHARMA): I am grateful, of course, to the Congress President Mrs. Gandhi and the Prime Minister for having reposed their trust in me.

As I assume charge, I am conscious of the responsibility and the expectations. It is a challenging assignment and it shall be my endeavour to work to the best of my ability. I am fortunate that we have an able Foreign Secretary, Secretaries in the Ministry, who will be able to advise me and support me in discharging my responsibility.

My only priority would be to ensure that whatever task has been assigned is done well. I would like to serve my country and its people with humility.

QUESTION: Do you agree there are quite a few challenges of which you have been made aware. External Affairs is such a Department where challenges arise from the beginning.

Minister of State for External Affairs: There is no field where there are no challenges. The life itself is like facing a challenge; we have to find solutions to the problems. I believe in resolution of the problems. I have no doubt that given our efficient Foreign Secretary and his team, we shall find solutions to the problems. There is nothing to worry about.

QUESTION: The biggest problem is that there is no External Affairs Minister. The other issue is America-Iran nuclear stand-off. You don’t need particular briefing since as Spokesperson you have been taking positions....

MINISTER OF STATE FOR EXTERNAL AFFAIRS: I do not want to comment on it now. The two are separate issues. With America our relations are as between nations. Both are sovereign nations. Both have important position in the world. America accepts India’s role. We have been accepted as a responsible nuclear power. I do not see any problem in this as you seem to suggest.

QUESTION: In relation to Iran...

MINISTER OF STATE FOR EXTERNAL AFFAIRS: India’s potion has been quite clear and we are not deviating from that position. It has
been our endeavour to find a way out. India has been in touch with the other countries like E-U-3 – We have been in touch with Russia too. WE have ideas: I would not like to say anything on this for the time being. It is our desire to find a solution which is generally acceptable and satisfying to all.

**QUESTION:** *Now about your partners and allies....*

**MINISTER OF STATE FOR EXTERNAL AFFAIRS:** I do not want to say anything more. When there is a coalition government, others can have a different point of view. That too will be resolved in national interest, in India’s interest, and in accordance with our independent foreign policy through discussions. It has happened in the past and will happen in the future too.

**QUESTION:** *(Inaudible)*...

**MINISTER OF STATE FOR EXTERNAL AFFAIRS:** The Government of India's position has been very clear and consistent. Unnecessarily some confusion has been created in the past. Whatever decisions are taken by the Government are in conformity with our stated foreign policy and also in the interest of India and the world. We had meaningfully engaged last time also with the EU-3. We had been talking to Russia and other countries involved to find a resolution of this issue. We are fully confident that eventually there will be a resolution of this too.

**QUESTION:** With the threats from the Left, you are in the hot seat. You will have to do a lot of fire-fighting.

**MINISTER OF STATE FOR EXTERNAL AFFAIRS:** There is no question of hot seat. I was in a hot seat earlier too. But let me tell you there is no threat from the Left. Yes they have their perception, and we will talk to them.

**QUESTION:** Is not that tight rope walking?

**MINISTER OF STATE FOR EXTERNAL AFFAIRS:** Managing a coalition and diplomacy, both are tight-rope walking. We will do it. We will have the cooperation and understanding, I am sure, of the Left and coalition partners. It is only by talking to our other allies that we make them understand what are the requirements and what view we have.

**QUESTION:** Is the anxiety rising as February 2 approaches?
Opening statement by Prime Minister Dr. Manmohan Singh at National Press Conference.

New Delhi, February 1, 2006.

“I am delighted to be here with you today. I have been meeting many of you from time to time and I have had the pleasure of interacting with our media in different parts of the country. However, it is over a year since I have been able to find the time to address a National Press Conference. This intervening period has been a truly remarkable period in terms of the level of activity of the Union Government. The UPA Government has been able to fulfill almost all the important promises we had made to the people through the National Common Minimum Programme. We had presented a Report to the People at the end of our first year in office, and second Report has also been prepared by my office and is being circulated to you.

Our Government has also improved the national security environment at home. We have brought peace and security to the North-eastern region, to Jammu and Kashmir and to various troubled regions. We are talking to all sections of people outside the mainstream of political life with a view to bringing them around to a peaceful resolution of problems. We have done this without compromising our national interests. We will continue to fight all anti-national and disruptive forces. We will defeat terrorism. As I have said so often, the people of India have time and again shown that political power in our country flows only from the ballot box, and not from the barrel of a gun! I do recognize that naxalism is a problem in many parts of the country. While violence is to be condemned and will be faced boldly by our police forces, we will also address the root causes of this alienation – chronic poverty, illiteracy and landlessness.
Our Government has also taken important steps to make the world adopt a more friendly approach to us. We have been able to improve our relations with many of our neighbours, including our biggest neighbour, China. We are pursuing a composite dialogue with Pakistan with the understanding that in South Asia we have not just a shared past, but a shared future and a shared destiny. The development and well-being of all our neighbours is in our interests.

We have taken major initiatives to integrate our economy with that of East Asia, South-East Asia, South Asia and West Asia. The countries to our East have once again embraced us and invited us into a new Asian Community. I would regard this as an important and successful outcome of the “Look East Policy” first launched by the Congress Government in 1992. The recent landmark visit of His Majesty King Abdullah Bin Abdul Aziz Al-Saud of Saudi Arabia, the first time in fifty years, witnessed history being made. The Delhi Declaration jointly signed by His Majesty and myself opens a new chapter in our civilisational relationship.

We have also improved our relations with all major powers, especially the United States, European Union, Russia and Japan, with whom we have entered into new strategic partnerships. In the next few weeks I will be receiving the Presidents of France and the United States and I am looking forward to these visits. I believe India will benefit greatly from the many new initiatives our Government has taken in the field of foreign policy and national security.

Finally, I must draw attention to the fact that the economy is on the move. All our macro-economic indicators are robust and point to another year of over 7.0% growth. Our Government is committed to an inclusive growth process and to the reform of governance in all its dimensions. We are committed to unleashing the creative energy of our people and to making India an active participant in the global economy.

Thank you”.

* * * * *

Answering a number of questions on ties with the United States in the context of the civilian nuclear agreement and the Iran issue, he said India’s stand would be based on an assessment of “what shall be in our national interest.” India-U.S. relationship had not become hostage to the
July 2005 civilian nuclear agreement because it was “not a one-shot relationship.” India was now an “honoured dialogue partner” for the international community and this indicated the “winds of change” in its global standing.

On the nuclear front, he said: “We are seeking a new brave world order,” which would “cease to discriminate against” India.

Denying that there had been any deviation from his Government’s commitment to follow an independent foreign policy, Prime Minister Manmohan Singh said that he was committed to promoting India’s “enlightened national interest.” This would be done by strengthening relations with all parts of the world.

Asked what India’s stand would be at the February 2 meeting of the International Atomic Energy Agency, he said he still believed the Iran nuclear issue was “a matter that should be resolved through diplomacy and dialogue.” As a signatory to the Nuclear Non-proliferation Treaty, Iran “is entitled to all the rights that go with its membership and also has a responsibility to fulfil its obligations.”

Referring implicitly to the moves under way to refer Iran to the U.N. Security Council, the Prime Minister said that India would very much like to see the issue settled within the confines of the IAEA. “Efforts are on in Vienna to evolve a broad-based consensus. Let us hope these efforts succeed.”

On the Indo-U.S. agreement on civil nuclear cooperation, he denied New Delhi was under any pressure to reach an understanding with Washington on the separation of its nuclear facilities before President George W. Bush’s visit to India in early March. “There are no deadlines as such,” he said. “I’m not fixing a deadline. There are negotiations. What time they will take I cannot predict.” He did stress, however, that India’s emerging partnership with the United States covered a wide range of issues and was not a “one-shot relationship based only on nuclear cooperation.”

At the same time, India needed civilian nuclear cooperation and his Government was committed to working with the U.S. and the Nuclear Suppliers Group to ensure that the discrimination the country had been facing since 1974 — in terms of being denied access to nuclear infrastructure and fuel — was ended.
In response to a question, Dr. Singh denied that the Government was lacking a clear policy on Jammu and Kashmir in contrast to Pakistan President Pervez Musharraf’s penchant for “out of the box” thinking. There were two aspects to the problem, one internal and the other external.

The internal aspect was to “create an environment where all people of the State feel a sense of belonging and participation.” In this regard, he said he had held talks with those sections not satisfied with the status quo, such as the Hurriyat, Sajjad Lone and Yasin Malik. This process would continue.

As for the external aspect involving Pakistan, Dr. Singh said his Government was committed to finding “pragmatic, practical solutions” to all outstanding issues, including the problem of Pakistan. He stressed that he did not have a mandate to negotiate away any territory but subject to this, solutions could be found.

004. Interview of Minister of State Anand Sharma to the Weekly India Today and TV Channel Headlines Today.

New Delhi, February 10, 2006.

RAJ CHENGAPPA (MANAGING EDITOR, INDIA TODAY): Welcome to the India Today interview.

MINISTER OF STATE FOR EXTERNAL AFFAIRS (SHRI ANAND SHARMA): Thank you.

RAJ CHENGAPPA: You are sitting on a hot seat now.

MINISTER OF STATE FOR EXTERNAL AFFAIRS: It is a challenging assignment and an honour to serve the country.

RAJ CHENGAPPA: You have got a major Presidential visit coming up, of the United States President.

MINISTER OF STATE FOR EXTERNAL AFFAIRS: We have President Chirac of France coming and then President Bush of the United States.
RAJ CHENGAPPA: We will talk about President Bush’s visit first because there has been so much controversy over the nuclear deal. Do you think things would be ironed out before President Bush comes down?

MINISTER OF STATE FOR EXTERNAL AFFAIRS: First of all, there is a lot of misunderstanding and ill-informed speculation about the nuclear deal. The July 18 agreement clearly defines the parameters as to what has to be done by the USA and what has to be done by India. What is integral is the reciprocity, which the Prime Minister had explained very clearly. So, certain steps that they are to take, the amendments of their laws that has to be done by the US Congress, and what has to be done at our end is also defined very clearly in the July 18 agreement. So, I do not know where the confusion is coming. We have seen newspaper reports of the last few days. Perhaps what has been overlooked is that there is a Joint Working Group headed by Foreign Secretary Shyam Saran on the Indian side and by Under Secretary Nicholas Burn on the US side. They are working out the modalities, the details. So, there should not be any confusion. That is why I said that it is due to lack of information that much speculation is going on.

SAURABH SHUKLA (ASSOCIATE EDITOR, INDIA TODAY): What about your Left allies? There are problems with them. They are protesting against the visit. They are saying that in a way the Government is tantamounting to selling out to the US. What about that?

MINISTER OF STATE FOR EXTERNAL AFFAIRS: First of all we reject completely any insinuation that there is a sellout. It is a Congress-led UPA Government, inheritor of a very rich and proud legacy. Nobody can even remotely suggest that this Government can compromise with India’s self-respect, India’s interest - both national interest and strategic interest. There is no compromise whatsoever. I do not know why such insinuations have been made. This is most unfortunate. When it comes to the Left, we value their support to the coalition Government but there would be areas of disagreements, there would be areas where the perceptions differ. That is why we have a Coordination Committee. We sit together and we talk.

SAURABH SHUKLA: Do you think that this is embarrassing to the Government as a whole because the country’s image is suffering, because there are a lot of commitments that you have made and you are not able to fulfill them because of pressure coming from your own allies?

MINISTER OF STATE FOR EXTERNAL AFFAIRS: Whatever commitment Prime Minister Dr. Manmohan Singhji and the UPA
Government have made will be fulfilled. We are not backing away from the commitments. The commitments have been made after very careful consideration and keeping in view national interest and national honour.

RAJ CHENGAPPA: The crux is of course the nuclear deal. We have heard the Chairman of the Atomic Energy Commission talk about his concerns that some of the units, the fast breeder reactors are being pushed into the civilian side, that the goalposts are changing, as he calls it. Is that happening? Why do we have within the Government certain dissent or dissidence happening?

MINISTER OF STATE FOR EXTERNAL AFFAIRS: An opinion has been expressed let me put it this way. First when the Joint Working Group is set up, that in itself is a statement that there are differences of perception. The US has one perception; India has its own perception. When the Joint Working Group meets they try to work towards a common meeting ground. It is a meeting of minds and a general agreement which would be within the framework of the July 18 agreement. Having said that let me also point out that the Joint Working Group headed by the Foreign Secretary also includes the Deputy National Security Advisor. There are two top nuclear scientists from the Atomic Energy Commission – Grover and Raghuraman. We also have the concerned Divisions come in including the UN Division. So, it is clear that the nuclear establishment’s views are also taken on board and very seriously so. Whatever would be done would be without diluting in any manner India’s own interest. The bottom line is that there shall not be any dilution or giving up of our right and also our nuclear deterrent.

RAJ CHENGAPPA: So, do you think an agreement could happen? You are confident of that?

MINISTER OF STATE FOR EXTERNAL AFFAIRS: The two sides are talking and we are working towards that. We remain hopeful but this Government has not given any assurances or capping, which was done earlier by the previous Government. The NSA of the previous Government, Mr. Brajesh Mishra, has recently gone on record to say that they had agreed that two reactors which were already there including the BARC in Trombay and all future reactors, they were willing to put under the IAEA safeguards. This Government has not given any such commitments. We have not said that we will not develop future facilities or the fissile material. We have not said so. So, why is the criticism? Who has compromised India’s interest? I am surprised. It was the vision of Pandit Jawaharlal Nehru and Dr. Homi
Bhabha, and later on what Shrimati Gandhi as Prime Minister did when we talk of Pokharan-I. So, the Government proudly claims that legacy of Nehru and Bhabha. How can that compromise ever be there?

**SAURABH SHUKLA:** Are you saying that it is NDA which went for a sellout? That is what you are trying to say.

**MINISTER OF STATE FOR EXTERNAL AFFAIRS:** I am not saying sellout. But they gave these commitments. These are not my words. Mr. Brajesh Mishra himself has gone on record. We were not aware, the country was not aware, at that time. The Parliament was never informed at that time what was done. But after the July 18 agreement, this Government has had substantive discussions both in Lok Sabha and Rajya Sabha. The Prime Minister of the country has answered to the debate. It would be in larger interest both for the political leadership of the parties, even those who have some reservations and their skeptics, to wait for the final agreement. It would be not proper and not fair to hurl charges and accusations of sellout and all, which are not there at all.

**RAJ CHENGAPPA:** Let us move to another area, this is as vital for India’s foreign policy, which is Pakistan. After a flurry of peace measures, there suddenly seems to be a slow down. President Musharraf has been complaining that he has made these proposals and no one is answering from the Indian side. What is the position?

**MINISTER OF STATE FOR EXTERNAL AFFAIRS:** I think the Indian position has been very clear. We have always supported a dialogue with Pakistan and the Confidence Building Measures which were initiated to a large extent by India. As you would see, there was much criticism, again I will say motivated because of political considerations, that this Government is going soft. This Government has made certain gestures towards Pakistan. Pakistan has also agreed to some of the measures like we have a movement of the people. We have resumed the cultural exchanges. There is a Government-to-Government dialogue going on and there is a Track-II and Track-III which is going on. The Parliamentarians’ visits are being exchanged. They are in touch with each other. There are various other forums, social forums. Writers and others, I will say, strategic thinkers were interacting with each other. When we talk of over five decades of distrust and conflict, it cannot disappear overnight. What is required is a focus and patience. Pakistan also has to take certain steps, especially with regard to dismantling the infrastructure of terrorist training and also cross border terrorism. This is one issue which we have repeatedly raised. The Prime
Minister and this Government have gone on record to say that there shall not be any compromise on that. That is where they also have to deliver. These are not hollow words. We have delivered on what we have said. If there is any specific area which President Musharraf has then I am sure those issues will come up when the leadership meets again, when the two delegations meet again.

SAURABH SHUKLA: There is a sense that our neighbourhood policy has not really worked well. We have had problems. Nepal policy has gone for a toss. The King promised democracy but nothing has happened. Bangladesh is a problem we have. With China the border talks have not gone on as well as we would have liked. What is really happening?

MINISTER OF STATE FOR EXTERNAL AFFAIRS: I think this is a misconception. India has tried its best. We must not forget that each neighbour is distinct. They are separate nation states. They have their own internal dynamics and problems also. In the case of Nepal the problem is more internal. It was a sad development that democracy was dispensed with and the Government had to step in to take over. So, India has been urging the restoration of democracy. We are engaging both the King and the Administration in a dialogue.

In the case of Pakistan the CBMs and the progress which we have made are there for anyone to see. India had initiated the process. We have the bus services on. The rail link is being restored. Khokrapar-Munabao rail service is going to start soon. When earthquake devastated Kashmir, especially there was more damage on Pakistan side, India was one of the first countries to respond not only by giving relief and all kind of support which was accepted by them, we also ordered five checkpoints on the border. We facilitated movement of the people across the LoC. The rest you can say that we only hope that the things will proceed in the right direction, Pakistan also what they have said, they will fulfill their part.

Bangladesh has been having some problems. You cannot link it to India. As far as India is concerned, we are committed to the principles of SAARC, to the overall economic development of the entire region. That is why certain proposals have been put forward and we hope that all the member countries of SAARC do respond to that. So, we cannot say that there is failure of our policy. If there is threat of fundamentalism in Bangladesh, or whatever has happened in Nepal whether the Maoists issue and the King’s stepping in, you cannot say that Indian Government or the UPA Government is responsible and it is a failure of our policy.
SAURABH SHUKLA: What I am saying is, do you really need a change of policy?

MINISTER OF STATE FOR EXTERNAL AFFAIRS: I think we have a credible policy. When we talk of policies, you cannot anticipate every development in the other countries. So, you have to respond accordingly and the responses have been appropriate and correct.

RAJ CHENGAPPA: Let us stay with Pakistan for a while. Here is President Musharraf saying that he has sent proposals on Kashmir and there has been no response. It is a bit like ‘apply-apply and no reply’ from India.

MINISTER OF STATE FOR EXTERNAL AFFAIRS: I do not know what proposals they are making.

RAJ CHENGAPPA: Especially on Kashmir. He has talked of self-governance in certain regions.

MINISTER OF STATE FOR EXTERNAL AFFAIRS: We do have it.

RAJ CHENGAPPA: He says there is no official response from India.

MINISTER OF STATE FOR EXTERNAL AFFAIRS: We have self-governance there in the sense that we have a Constitution, we have a duly elected popular Government there. When we talk of Kashmir, we wish that there is a duly elected popular Government in the Pakistan-occupied Kashmir also. He has to do something in Kashmir which is with them. Nobody can deny, whether in Pakistan or internationally, that we did not have fair elections and we do not have a representative Government. So, we do have it.

SAURABH SHUKLA: With China the border talks are scheduled maybe next month. Tell me why is that there is so little progress? We have not gone on to the brass tacks yet.

MINISTER OF STATE FOR EXTERNAL AFFAIRS: It is a huge border. When we talk of this dispute from 1965 to now, it is 45 years. After Prime Minister Rajiv Gandhi’s visit the new chapter has started. The Chinese premier also visited India. The Working Group is there and they are talking, and progress is there. There has been much progress made already. I think that this is being overlooked. When we talk of Sikkim, the acceptance and the forward movement in other areas you know that there is …

RAJ CHENGAPPA: President Kalam has sort of recently said that the wounds of the 1962 war have healed. Much of the world of course
continues to look at it as India versus China rather than India and China. Do you think we are rivals?

MINISTER OF STATE FOR EXTERNAL AFFAIRS: I do not think that we are rivals. We value our relationship with China. There is a history of our relationship. But China is a close neighbour, the biggest neighbour. China is developing at a very fast pace: so is India. The world is talking of both India and China. There was a time when the world was talking only of China. Now they are talking of both the countries. We are also growing at a very fast pace. There would be areas of synergy and there would be areas of competition also which is perfectly legitimate. That would happen in any two major countries of the region. But when we talk of competition, that anyway does not mean conflict. You have Indian companies going into China, investing in China in a big way. There is two-way trade which is growing very rapidly.

SAURABH SHUKLA: What about the UN Security Council? Let us talk about that. There was a sense six months back that we are nearly getting there. But now Japan, the major ally of yours in G-4, has deserted you. What is the sense that you have. Do you think we will ever get there in the Security Council or not?

MINISTER OF STATE FOR EXTERNAL AFFAIRS: We are determined to get there. It is a rightful claim of India. The UN Security Council, as constituted at present, is not representative of the global reality. It has inadequate representation of Asia. There is no representation of Latin America and Africa. So, it has to be expanded. We were right in moving a G-4 resolution. Brazil is a big country in Latin America which is with us. Germany has been with India and so was Japan. There has been some change in the situation but we are so far continuing with our move and that Resolution. Let us see, let us hope that there is a better realization and greater measure of support. But no country, even the P-5, is denying India’s legitimate claim. Let us see when we get there and how we get there

SAURABH SHUKLA: Not everybody is supporting.

MINISTER OF STATE FOR EXTERNAL AFFAIRS: You cannot expect unanimity. There would be countries which will have reservation. Sometimes these are regional considerations which would happen. For no country I think there has been unanimity.

RAJ CHENGAPPA: The key is American support. President Bush
is coming here. They made no commitment last time when Prime Minister Manmohan Singh visited the US. Are you going to push for it this time?

MINISTER OF STATE FOR EXTERNAL AFFAIRS: I do not think it is a question of pushing. We have made our position very clear. The Prime Minister in his address to the US Congress also made it very clear. Whatever contours are defined, or you can say the factors, for inclusion of a country in the UN Security Council - India is a large country, the largest democracy, it is a growing economic power, it has an impeccable record when it comes to its adherence to all the international treaties and covenants, and its own contribution to the UN and the UN peacekeeping - whatever criteria is defined, India will walk in, I have no doubt. But we cannot set a timeframe to it.

SAURABH SHUKLA: Let me take you back to the domestic issues. This Iran issue created such a lot of controversy. The US Ambassador made certain remarks. Obviously your allies made certain statements. Do you think that some of your allies are actually using to push their own domestic agenda or their own domestic politics to influence your own foreign policy?

MINISTER OF STATE FOR EXTERNAL AFFAIRS: I think domestic agendas must not influence foreign policies as well as those decisions which are well considered, well thought of. When the Government of India, this Government, takes a position, each issue is judged on merit. It is an independent decision. Let us not forget that the P-5 had also concurred for reporting. India had earlier also meaningfully engaged the EU-3 and Russia. This time also. Last time we succeeded, we and the EU-3 and all of us put together, to ensure that the matter remained within the domain of the IAEA. Now there are certain new developments which have taken place since then. Let us see what happens, what follow-up action is taken until March. India cannot take a view in isolation when we are saying that we have a larger global role. You are just referring to the Security Council permanent membership. India has to accordingly see what is happening, any country for that matter. When we are talking of certain rights under international treaties, then there are certain international obligations, and commitments also which have to be borne in mind. So, India’s stand has been consistent and clear on these issues. We did not sign the NPT. That was a principled decision which we took. Now we are living in different times and a different world.

RAJ CHENGAPPA: Thank you.
005. Address by Minister of State Anand Sharma at the inauguration of the Second Asia Pacific Model UN Conference.

New Delhi, February 10, 2006.

Shri I.K. Gujral, Former Prime Minister of India, Shri Subodh Kant Sahay, Minister of Food Processing & Industries, Shri Ram Niwas Mirdha, Chairman, Indian Federation of United Nations Associations, Mr Kim Hak-Su, Executive Secretary of ESCAP, Mr Gregory Kovirzhenko, Chairman, World Federation of United Nations Associations, Ms. Shalini Dewan, Director, UN Information Centre, Members of IFUNA, Distinguished Delegates and Invitees,

It gives me great pleasure to attend the Inaugural Session of the Second Asia Pacific Model UN Conference in New Delhi. This large participation of national UN associations is an eloquent testimony to our collective faith in the ability of the UN system to address the challenges and meet the objectives of our global community. As a founding member of the UN and a firm believer in its Purposes and Principles, India has contributed significantly to the furtherance and implementation of the UN's noble ideals, which run parallel to our civilizational ethos.

At the outset of a new millennium, we envisage not only new and varied challenges but also opportunities for the global community. Political, economic, social, environmental and demographic challenges are impinging on intra-state as indeed inter-state affairs. The complexity and the intensity of these issues dawns on us the realization for greater interdependence of peoples and nations requiring collective actions. Thus the need and relevance of the UN today is greater, not lesser, even though many question the effectiveness of multilateralism today for influencing policies.

Mr. Chairman,

I am happy to note that the theme of this Conference are the Millennium Development Goals, which were adopted at the Millennium Summit of our Heads of State and Government in a collective pledge to ensure a better future for mankind. There is optimism and hope that enhanced economic and technological growth will enable a frontal attack on global poverty, ignorance and disease and that benefits would percolate to the common man. However, six years after the Millennium Declaration, we are still far from registering significant progress and need to redouble
our efforts to achieve the goals and targets that we had set for ourselves in the coming decade.

Mr. Chairman,

The 2005 World Summit recognised the need for continued efforts in a global compact for the realisation of the Millennium Development Goals. In particular, the World Summit stressed the development dimensions of the Doha round of trade negotiations as well as raising investment and savings rates through meeting the ODA target and using innovative sources of financing. We need to strengthen the momentum generated by the Summit towards promoting international cooperation for development and positioning the discourse on development at the center of the global economic agenda.

Mr. Chairman,

The developing countries constitute the vast majority of the UN membership. It is important for them that the UN helps them resolve their development problems as they deem appropriate, including by addressing the systemic issues that are at the root of numerous problems they face. Presently, much of the discussions at the UN are primarily confined to addressing governance issues at the national level. The main economic issues of concern to developing countries such as financial flows, the multilateral trading system, external indebtedness, etc. are no longer debated and agreed upon within the United Nations, as used to be the case earlier. This needs to be urgently rectified.

Mr. Chairman,

The World Summit underscored the importance of bringing back global economic issues on the agenda of the United Nations to assess and promote a long-term policy framework and provide political direction on international economic issues. The UN must play an important role in promoting coherence among financial, monetary and trade policies, transfer of resources and of technologies, etc. The importance of “enhancing the voice and participation” of developing countries in the decision making processes in global trade, financial and monetary institutions can hardly be overstated. The ECOSOC needs to be strengthened and be made more effective in order to identify and make policy recommendations that ensure that policies are supportive of development and that multilateral institutions do not work at cross purposes.
Mr. Chairman,

The follow-up of the World Summit must ensure that the fundamental objective of rapid economic growth of the developing countries, enabling them to reach the MDG targets, reduce poverty and increase employment, is kept in view. Monitoring the progress made in the implementation of MDG-8 by developed countries has to be an integral part of the monitoring of MDGs as a whole. At present, the UN is largely engaged in discussing internal economic and social issues while placing much emphasis on provision of technical assistance. We would welcome, through the UN system, the mobilisation of greater resources for development and the emergence of a coalition that would take initiatives in areas of interest to developing countries.

Mr. Chairman,

India is home to every sixth person in the world. We are acutely aware of our responsibility to meet the Millennium Development Goals (MDGs), as our contribution to attaining global benchmarks. We have made considerable progress in poverty reduction and are making determined efforts to achieve the targets we have set for ourselves in the social sectors. The National Common Minimum Programme of our Government has laid particular emphasis on health, education, shelter, infrastructure and employment, especially in the rural areas. We have launched “Bharat Nirman”, a programme of unprecedented magnitude, for developing infrastructure in rural India. We aim to provide connectivity for all of India’s six hundred thousand villages through roads, electricity and telecommunication. The Tenth Five Year development Plan, which is currently under implementation, provides for sustained access of potable water for all villages in India. The next Plan will complete the target of providing shelter for all. We have equally ambitious programmes for universal elementary education and improvement of health in rural areas. To ensure a minimum level of employment for everyone in rural areas, we have prepared the National Rural Employment Guarantee Act, which we hope will transform rural India.

Mr. Chairman,

Our experience in India and elsewhere has shown that democracy and development are complementary and mutually reinforcing. The principles of democracy and the rule of law are equally relevant for ensuring economic progress and human development, which contribute to the consolidation of peace. Our abiding commitment to democracy is amply
reflected in our support to the UN Democracy Fund, which was set up at the last UNGA. We hope the UN Democracy Fund will help nations to build and strengthen democratic institutions and practices to realize the fruits of globalization for the betterment of their people.

We believe that the management of global interdependence also requires strong international institutions and a rule-based multilateral system. Nations’ faith in the UN system will be strengthened when it reflects their aspirations and acts to address their concerns. This brings to centre-stage the reform of the UN and the need to tackle the democracy deficit in its structure and decision making process.

Mr. Chairman,

As we mark the 60th Anniversary of the UN, there is a unique opportunity for its comprehensive reform and to strengthen multilateralism with the UN at its centre. It is important that the United Nations is reflective of contemporary global realities and is equipped to respond effectively to the needs, requirements and concerns of the developing countries, which constitute the vast majority of its membership. In this context, the reform and expansion of the Security Council and inclusion of developing countries as permanent members in an expanded Council can no longer be postponed.

Mr. Chairman,

Several threats and challenges face us today. Some are self evident, such as terrorism, conflict and the threat of a link between terrorism and proliferation of weapons of mass destruction. Poverty, hunger, disease and deprivation, are still pervasive in large parts of the world. We need to carefully consider systemic ways and means to address each of these, while being mindful that failure to address the challenges of underdevelopment effectively could exacerbate all other threats. In the age of globalisation, we must ensure that its benefits permeate the globe and that the most vulnerable and those in the greatest need do not face any adverse consequences. More-so we also need to bridge the digital divide as also the gap between the rich and poor countries which is growing though the net reverse flow of wealth from the South to the North despite pledges from developed states of greater aid to developing countries.

Mr. Chairman,

Six years ago, the adoption of the Millennium Declaration affirmed our united readiness to confront and overcome the challenges of the 21st
Century. We have achieved some progress, but much remains to be done. It is time for us to renew our commitment to MDGs and collectively translate them into reality with a greater sense of urgency. We owe this to future generations.

Mr. Chairman,

Today’s world is an interdependent one in which no nation can prosper in isolation. An international environment supportive to our collective needs and security is an imperative. We must, therefore, strive for a reinvigorated UN for the common benefit of all of us.

I wish all the participants a fulfilling and enriching experience in India and the Conference much success. Thank you.
006. **Welcome Speech by Minister of State Anand Sharma at the Foundation Stone laying ceremony of Jawaharlal Nehru Bhavan to house the Ministry of External Affairs.**

**New Delhi, February 14, 2006.**

1. It is a great honour and privilege for me to welcome you all at the Foundation Stone laying ceremony of Jawaharlal Nehru Bhavan that will serve as the headquarters of the Ministry of External Affairs. I would like to express, in particular, my gratitude to the Hon'ble Prime Minister for his having very kindly agreed to lay the Foundation Stone of this building.

2. This occasion is a very special one for all of us in the Ministry of External Affairs for a variety of reasons. It signifies the fulfillment of the long felt need to have an independent building for the Ministry of External Affairs that would suit its growing functional requirements. I understand that this has been a long cherished dream of each and everyone in the Ministry. It gives me great happiness to note that this dream is being realized at a time when this Ministry is fortunate and blessed to have Hon'ble Prime Minister himself at the helm of external affairs.

3. The construction of Jawaharlal Nehru Bhavan is being taken up at a juncture when India is acquiring an ever growing profile in a fast evolving international scenario. These developments have opened up new opportunities and generated new challenges for our diplomacy. We have seized these opportunities and faced the new challenges admirably well because of the robust foundations of our Foreign Policy. We owe an eternal debt of gratitude to the builder of modern India, Pandit Jawaharlal Nehru, for the sound principles enunciated by him that have underpinned the conduct of our foreign relations since our independence. Nehru has left his lasting imprint on every walk of life in India and much of the progress we see today owes its origins to the visionary steps taken by him. However, the range of his vision and actions went far beyond the shores of India and he would always be remembered as one of the great world statesmen. He made an unparalleled contribution to the shaping of the post Colonial era world order. He was quick to recognize the dangers of cold war politics and gave a lead to the newly independent countries in steering clear of it. In the euphoria of India’s growing
stature, let us not forget that it was Jawaharlal Nehru who gave India an independent voice and its due place in the international domain. He strove tirelessly to promote world peace and freedom for subjugated peoples around the globe. At a time when India is winning accolades as the largest democracy of the world, let us recall Nehru’s singular contribution to the nurturing of democratic institutions. As you are all aware, Jawaharlal Nehru not only laid the foundation of India’s foreign policy but also personally guided it for a number of years after independence. His guiding principles have remained the cornerstone of our Foreign Policy regardless of the complexion of the Government in power.

4. The naming of this building after Jawaharlal Nehru is but a humble tribute to his remarkable contribution in the shaping of modern India and in the service of humanity at large.

5. Jawaharlal Nehru Bhavan will be a functional and state-of-the-art building which would bring together the various units of the Ministry of External Affairs that are currently located in different premises. It will be in perfect structural harmony with its environs and will match the grandeur of the National Museum, the National Archives and the Indira Gandhi National Centre for Arts located in its vicinity. It will contain all the essential features of a modern Foreign Office such as three distinct zones for Ministers and senior officials, offices of various Divisions and public dealing areas as well as elegant meeting rooms, a press briefing hall, a reception hall and library capable of holding around 50,000 books. We would like it to be a fitting window of modern India to the world. I am grateful to the Ministry of Urban Development, the CPWD and other concerned agencies that are helping us in the building of Jawaharlal Nehru Bhavan.

6. Even as my colleagues and I in the Ministry of External Affairs rejoice this important milestone in the life of the Ministry, we rededicate ourselves to the ideals and policies of Jawaharlal Nehru. We also pledge to continue working resolutely in the service of the nation under the able guidance of Hon’ble Prime Minister.
Speech by Prime Minister Dr. Manmohan Singh at the Foundation Stone laying ceremony of Jawaharlal Nehru Bhavan to house the Ministry of External Affairs.

New Delhi, February 14, 2006.

Ladies and Gentlemen, I am indeed deeply honoured to be associated with this ceremony to lay the foundation stone of Jawaharlal Nehru Bhavan. This building, I believe, will become another great landmark in these historic and beautiful environs. It is befitting and natural that we name the building that will house our foreign office after Pandit Jawaharlal Nehru. With his immense pride in India’s great heritage and abiding faith in our country’s capacity to march forth to a bright future, Panditji came to symbolize the hopes and aspirations of a free India in a brave new world. He was truly the architect of modern India and laid the foundation of a democratic, secular and pluralistic polity. The institutional and policy foundations laid by him have come to underpin India’s rapid ascent on the global political and economic scene.

Panditji dreamed big for India and worked tirelessly to realize those dreams. His leadership of India and his boundless love for India and its people, however, did not confine him within the frontiers of our country. His gigantic personality and the breadth of his vision had a far bigger canvas. He was the architect of free India’s Foreign Policy. Within six days of his taking the reins of the Interim Government in September 1946, he pledged, in the course of a radio broadcast, that India would work for one world in which there was free cooperation of free peoples and no class or group exploited another.

Addressing the Constituent Assembly on the night of August 14, 1947, when his thoughts were focused predominantly on India and her future, Panditji’s commitment to humanity at large came out clearly when he said that his dreams are not just “for India, but they are also for the world. All the nations and peoples are too closely knit together today for any one of them to imagine that it can live apart”. He went on to add, “Peace has been said to be indivisible; so is freedom, so is prosperity now, and so also is disaster in this One World that can no longer be split into isolated fragments.” This thought encapsulates movingly, the impulse that drives our work. No better vision for the world has been conceived till today.
Panditji’s great quality was that his idealism and vision were rooted in the hard, and often harsh, reality of an unequal world. He recognized that a newly democratic India must take difficult decisions to regain its glory and to ensure the well-being and prosperity of our people. He told the Constituent Assembly in December 1947, and I quote, “Talking about foreign policies, the House must remember that these are not just empty struggles on a chess board. Behind them lie all manner of things. Ultimately, foreign policy is the outcome of economic policy.”

Along with all the great leaders of our freedom struggle Panditji also saw an intrinsic link between our foreign policy and the economic aspirations of our people. A free India had to also be a prosperous India. This vision has informed our foreign policy and must continue to do so. Every democratically elected Government has to be mindful of the well-being of its people. The foreign policy we pursue abroad must reflect our national priorities and concerns. There cannot be a disconnect between domestic capabilities, national aspirations and our external policies. Our foreign policy must help create an international environment conducive to India’s rapid social and economic development.

Our civilisation has had a message for the world that informs our foreign policy vision. That has been a message of unity in diversity, of pluralism, of inclusiveness and secularism. The idea of “Vasudhaiva Kutumbakam” - The Whole World is One Family. A policy that combines these universal values with national interest is what Panditji visualized and shaped. For it was our national interest to seek space in the world to facilitate our development.

But our nationalism was not based on narrow chauvinism or aggressive jingoism. At the time of our Independence, the world had just rid itself of one manifestation of such negative nationalism when it defeated fascism. Our nationalism was elevated by larger universal principles as well as an abiding commitment to the well-being of our people. That is precisely why it was an enlightened nationalism.

Similarly, Panditji’s idea of “non-alignment” was also based on the principle that we were not aligned with anyone against anyone, but only with our values and national interest. Non-alignment was neither an empty slogan nor a pretext to shirk the responsibility to define our own world-view based on national interest. Indeed, non-alignment was an expression of our enlightened national interest and continues to be so even today.
We have worked hard to create the space needed to have the freedom to make policy choices in an increasingly inter-dependent world that we live in. The means we adopt to pursue our enduring objectives of peace, national security and development will, of course, change from time to time. They will have to be evolved in response to the changing realities of an ever-changing world. While the instruments of our policy and the tactics and strategy we adopt may change with time, the values in which they are embedded are universal and remain true for all time.

Our diplomats are called upon to steer the course of India’s foreign relations in an extremely complex global scenario. In recent years, we have witnessed a much sharper consonance between our foreign and domestic policies. The Indian economy has taken on an outward orientation as a result of the reform policies that were initiated in the early 90s. Our growth rates have been increasing and we seek to sustain annual growth rates of between 8 -10 per cent in the future. These demands have created new challenges for our foreign policy in terms of seeking access to markets, sources of energy and investment and advanced technologies. These challenges have also led India towards new thrusts in our foreign policy and there are new directions in our policies towards our major economic partners, towards our wider Asian neighbourhood and towards other developing countries.

We face a turbulent neighbourhood. It is our foremost challenge to create a stable and cooperative atmosphere in our region that will allow us to concentrate our energies on tackling the problems at home and in our region. Peace, prosperity and stability in South Asia is a top priority concern of our external policies. The destiny of all countries of the region is closely interlinked.

I do believe that the External Affairs Ministry has risen to the occasion to face many challenges and seize new opportunities. I compliment our diplomats for their good work and urge them to show creativity and enterprise in dealing with a rapidly changing world. We must, however, invest more in our capabilities and in our institutions to sharpen the edge of our diplomacy. In the fast evolving international arena of today, introspection and adaptation has to be a continuous process. The business of diplomacy increasingly requires engagement with the diplomacy of business. Given India’s rising demand for energy, the uncertainty of supply of hydro-carbons and concerns about global warming, issues relating to energy security have important implications for the conduct of our foreign policy.
Equally important is the need for more representative and effective international institutions that reflect contemporary realities, in view of the growing interdependence of all nations. At the same time, the turbulence that now characterizes much of the Islamic world also merits deeper analysis. This also applies to the rise of China as a major global power. There is much that we can learn from China’s most impressive economic development. We have to grasp the implications of the knowledge revolution through which science and technology have emerged as major determinants of the power and wealth of nations. Our diplomats must have a deep understanding of the factors which contribute to the rise and fall of nations and of civilizations. I have no doubt that each and everyone in the Ministry is alive to these issues.

I am glad that the Jawaharlal Nehru Bhavan will be a modern, state-of-the-art building and one in complete harmony with its environment. I am certain that the modern facilities being incorporated in this building will be of tremendous assistance to the Ministry of External Affairs in the discharge of its onerous responsibilities. I hope that the C.P.W.D., which is executing this project, will prove its 150 years of engineering excellence by completing the building in time and fully in keeping with the needs of a modern Foreign Office.

Thank you and let me felicitate you all on finding a home of your own.
008. Speech by Prime Minister Dr. Manmohan Singh releasing the first issue of the Indian Foreign Affairs Journal of the Association of Indian Diplomats.

New Delhi, February 15, 2006.

I am delighted to release the first copy of the Indian Foreign Affairs Journal. I compliment the Association of Indian Diplomats for this initiative. I sincerely hope that your journal will be an important platform for free and informed discussion on foreign policy and international affairs.

I have always believed that one of our greatest civilizational strengths is that public policy is shaped by a broad consensus, based on a rich and healthy tradition of open debate and public discussion. This has lent a measure of democratic predictability and resilience to our policies. I recall, for example, that the reorientation of our economy in 1991 came after an informed debate of nearly a decade on our economic policy. Such public discussion prepared the domestic ground for the transition that followed. It was as a result of this broad based consensus that there has been continuity in our economic policy since 1991, despite many changes in Government. Such has also been the case with our foreign policy.

In this context, it is instructive to recall that even before independence, our political and intellectual leaders extensively debated the contours of the foreign policy of an independent India. As I said yesterday, Panditji elaborated his vision of foreign policy within hours after he took charge as the head of the Interim Government. He could do so not only because of his own well-considered views on the matter, but also because he knew his views reflected a consensus within the Congress Party and the nation.

I do not suggest that such a consensus has precluded differences of opinion on foreign policy within our society. Over the past five decades of independence, there have been divergences and debates on many elements of our foreign policy. Within Parliament and outside, among commentators and our press, the burning issues of the day have always been debated and contested hotly. However, what has remained constant has been a basic understanding across the political spectrum on core elements of our foreign policy. This has contributed to building a broad mainstream consensus on vital issues of the day, on matters pertaining to our region and beyond. This has helped our leadership take positions based consistently on our national interest and in line with public opinion.
Consequently, the philosophy of “non-alignment” was based on the principle that we were aligned only with our values and our enlightened national interests; we were not aligned with anyone, or against anyone. The underlying philosophy was that issues would be judged on merits rather than in a mechanical or deterministic manner. Non-alignment was therefore always an expression of our enlightened national interest and I dare say, will remain so.

**Ladies and Gentlemen,**

Over the past five decades and more, we have strived to create the necessary space to exercise our freedom to make policy choices in an increasingly interdependent world. The means we adopt to pursue our enduring objectives of peace, national security and economic development will of course change from time to time. They must evolve in response to the changing realities of an ever changing world. While the instruments of policy and the tactics and strategy we adopt may change with time, the values in which they are embedded are universal and will remain true for all time.

In this context, let me once again recall Panditji’s famous statement that international relations are not merely a game of chess. Speaking in December 1947 in the Constituent Assembly, Panditji said, “Talking about foreign policies, the House must remember that these are not just empty struggles on a chess board. Behind them lie all manner of things. Ultimately, foreign policy is the outcome of economic policy.”

Thus the bottom line for our nation and our people is and will remain, addressing the challenge of development. We seek higher economic growth; growth that is equitable and efficient. We seek new opportunities, new employment and new markets. We seek new skills and technologies. As we strive to realize our due place in the comity of Nations, any policy must stand the test of one simple question: how will it affect our quest for development and our need to provide a secure environment for government to deliver to our people. For this, it goes without saying that the realization of our goal lies in widening, deepening and expanding our interaction with all our economic partners, with all our neighbours, with all Major Powers. As a confident nation, we will interact with the world as a confident equal partner, seeking mutuality of benefit for all.

I therefore suggest that yours is a forum that can be used to reinforce this sense of self confidence among opinion makers in our society. True
confidence comes from wisdom, while ignorance and limited knowledge make us tentative or foolhardy. As Tennyson said, knowledge comes, but wisdom lingers. As a means of spreading wisdom, your journal can play an important role by promoting a responsible, informed and intelligent debate on the issues confronting our nation and our world today. This is the need of the hour.

Therefore, let me once again welcome the publication of this new journal. In conclusion, I urge you to open your pages to young and energetic minds. Yours is an association of the best minds of our foreign policy establishment. You have a wealth of experience and the wisdom of age on your side. You can offer a perspective to younger scholars. You should encourage them to think out of the box, to find new and alternate approaches to chart a pathway to the future. While we must be guided by the experiences of the past, we need not be constrained by it. We must have an informed view of future possibilities and have the wisdom to prepare for all eventualities. In this noble effort, yours must be a prominent voice of alternate views, moderation and sobriety.

I wish you success in all your endeavours.

Thank you.
New Delhi, February 23, 2006.

Mr. Deputy-Speaker, Sir, there has been considerable comment in the debate in this House on our foreign policy orientation. I have had several opportunities in the last one year to speak at length on many of these issues. I urge hon. Members to appreciate the fact that by and large we have had a national consensus on our foreign policy orientation, and that has given us great strength in dealing with the world. I sincerely urge all our political parties to respect this tradition, so that the hands of the Government are strengthened in dealing with the world. … (Interruptions)

Sir, I have had the opportunity recently of articulating my vision of foreign policy, when I laid the foundation stone of the Jawaharlal Nehru Bhawan. Panditji’s vision of India was deeply embedded in our civilisational inheritance. Our civilisation has a message for the world that informs our foreign policy vision, and it has been a message of unity in diversity of pluralism, inclusiveness, and secularism. … (Interruptions)

Sir, we have worked hard to create the space needed to have the freedom to make policy choices in an increasingly inter-dependent world. The means we adopt to pursue our enduring objectives of peace, national security and development will, of course, change from time to time. They will have to be evolved in response to the changing reality of an ever-changing world. While the instruments of our policy, and the tactics and strategy we adopt may change with time, the values in which they are embedded are universal and will remain true for all time.

Sir, this House has my solemn assurance that in pursuing our foreign policy; in ensuring our national security; and in promoting our economic development, our Government will always have the nation’s interest uppermost in our mind. I do believe we have the trust and confidence of the people of India.

The world today views India with great regard and respect. This is because the people of our country have demonstrated to the world that they are second to none. Our civilisational inheritance, our pluralism, our culture of tolerance and inclusiveness are the envy of many nations. No Indian need feel any sense of inferiority or insecurity in today’s world. India
stands tall and we stand proud as an open society and an open economy. I am sure hon. Members rejoice in this sense of self-confidence of our people.… (Interruptions)

This sense of national pride was reinvigorated during the recent visits of His Majesty the King of Saudi Arabia and the President of France when they both paid tribute to our civilisational inheritance and our emerging economic strength. It is with this sense of self-confidence that we now look forward to the visit of the President of the United States.

Mr. Deputy-Speaker, Sir, I would like to assure the House once again that I will take a closer look at all the suggestions made during the debate and ensure that our Government is alive to the concerns of Parliament. I thank all hon. Members who participated in the debate.… (Interruptions)

I would like this Motion of Thanks on the President’s Address to be passed unanimously.
010. Interview of Minister of State Anand Sharma with the *Financial Mail* of South Africa.

April 7, 2006.

[India's minister of state for external affairs and spokesman for the ruling Congress Party, Anand Sharma, visited SA last week en route to Brazil for a meeting of the India, Brazil, SA (IBSA) forum. Amarnath Singh spoke to him.]

Have trade and investment between SA and India lived up to expectations?

When India broke off all ties with apartheid SA in 1947, 5% of our exports went to SA and 1% of our imports came from here. Over the past year, the growth of trade both ways has been spectacular, rising by almost 75% to R15bn. I believe this surge can be sustained as both our economies grow rapidly. Some of the largest companies in India have established themselves here. I am pleased that SA companies are exploring the Indian market; they will be welcome there.

How do the two governments intend to grow their relationship and improve business conditions?

The political relationship is as strong as it has ever been. We are committed to the strategic partnership which President Mbeki has set out to forge. SA and India work closely together. The climate for trade and investment is attractive in both countries.

What concrete outcomes do you hope to see from the Ibsa initiative, and when?

Ibsa has taken off and reached cruising altitude faster than many expected. It started off as a dialogue forum, where three rapidly growing democracies could learn from each other while showing the world that democracy and development went hand in hand. We were an important caucus in critical international negotiations. We have also broadened the scope of Ibsa with programmes of co-operation in several sectors. Here, it will take time to get concrete outcomes. For instance, Ibsa scientists are working together on a number of cutting-edge technologies. We have a trilateral civil aviation agreement, and are working towards an Ibsa preferential trade area. These are catalysts that will make closer co-operation feasible.
Is India losing out to China in trade and influence in Africa?

Our trade is in fact growing briskly. We do not see ourselves as competing with China or with anyone else for influence in Africa. Our friends in Africa know that Africa has always been a priority in our foreign policy. Africa has pride of place in our technical co-operation programme; we have trained tens of thousands of Africans. We have committed US$200m to Nepad and $500m to a group of eight West African countries, above what we give bilaterally. From Katanga onwards, India has sent its armed forces to every UN peacekeeping operation in Africa. And, finally, we think that it is only through democracy that you can have development with social justice. We hear from our interlocutors in Africa that this gives them a powerful example to cite when voices are heard that more authoritarian forms of governance lead to quicker development.

Does India share concerns over Iran’s nuclear programme?

Iran is a signatory to the nonproliferation treaty (NPT), as India is not, and countries that have signed the NPT as non-nuclear weapon states have voluntarily agreed not to acquire or develop nuclear weapons. Any country that has acceded to a treaty must abide by its terms. We believe this matter should be brought to a quick resolution without the use of coercive measures, but, as a close friend, we also urge Iran to co-operate with the International Atomic Energy Agency (IAEA).

Will India accede to a separation of its civilian and military nuclear programmes?

Under the terms of our agreement with the US, we already have and our plan is in the public domain. The choice of what is civilian and what is military is one that India has made. We have designated 65% of our reactors as civilian, and will put them in perpetuity under safeguards that will be negotiated with the IAEA. In return, we expect that members of the Nuclear Suppliers Group will provide India with the technology, equipment and nuclear fuel to urgently meet our energy needs. Our need for energy is rising fast as our economy grows at over 8%. Present estimates are that we will need to add about 10 000 MW of extra power each year for the next 10 years. If we relied primarily on fossil fuels for this, the impact on the environment would be huge. Nuclear power offers us a clean alternative.
Does India intend to sign the NPT?

No. The NPT accepts five countries as nuclear weapon states. India is not among them, but we are a nuclear weapon state. For us to accede to the NPT under its terms would be as odd as our joining the Law of the Sea as a land-locked country. We cannot pretend to be what we are not. But, even without signing the NPT, India does not proliferate.

Will India’s closer ties with the US affect its relations with Pakistan?

We do not see the one having an impact on the other. Our composite dialogue with Pakistan continues, trade is growing, as is contact - and cricket - between our people. These are happy developments and we will build on them. But this is predicated on a climate of peace; we have told Pakistan that we are prepared to negotiate on all issues with them, but the use of violence or terrorism as an instrument of policy must be renounced. The US and indeed all other countries agree with us on this.
New Delhi, May 20, 2006.

H.E. The Ambassador of Saudi Arabia, Chairman and Members of Haj Committee of India, Hon’ble Members of Parliament, Chairmen and Members of the State Haj Committees, Distinguished Religious Scholars, Members of the Media, Brothers & Sisters,

I consider it my great privilege to welcome you all to the All India Annual Conference for Haj 2006-II. I am proud to be associated with Haj arrangements of the Indian pilgrims for over a decade including in the last two years as Minister of State for External Affairs, in-charge for Haj matters. It is a matter of added satisfaction that today’s All India Annual Haj Conference is taking place well in time and would provide useful guidance for Haj 2006-II.

The Annual Haj Conference is indeed an institutionalized platform for all stakeholders in Haj such as the political leadership, the Haj Committees, the Government departments, the Airlines representatives, Parliamentarians and learned men of religion to air their views through transparent discussions, exchange opinions and brainstorm on the Haj arrangements. The inputs and the insights provided by the Haj Conferences held in the past have enabled the Government to streamline the official framework entrusted with the Haj management and improve it in a systematic manner through administrative and legislative measures. Our Haj arrangements are acknowledged as one of the best in the world and appreciated by the Saudi authorities. Government is always sensitive to the needs of the Hajis and will continue to streamline and improve the arrangements further. The Government and the Haj Committee of India continuously strive to improve the accommodation arrangements for pilgrims in Saudi Arabia, their air transport to and from India and services and other facilities for them to make their pilgrimage comfortable and successful.

With this aim in view, a composite delegation of senior officials from the Ministry of External Affairs, the Ministry of Civil Aviation and Air India alongwith the Chairman and Members of Haj Committee of India, had visited Saudi Arabia on April 9-10 this year and had held extensive discussions with Saudi Arabian authorities and Saudi Arabian Airlines about various issues concerning our pilgrims. The delegation reviewed arrangements made during Haj 2006 and discussed plans for Haj 2006-II. This included
means to find better accommodations at affordable costs in Saudi Arabia for the pilgrims during Haj 2006-II. After detailed discussions and keeping in view the fact that Saudi authorities have enhanced space norm per pilgrim from 3 meters to 3.5 meters since Haj 2006, and, as several buildings in Makka region have been demolished resulting in shortage of accommodations, parameters and rates were finalized, with some increase in categories I and II. No increase in rates has been stipulated in Category III and Azizia categories. A new category in “Sheesha” has been identified at the same rates as category III earlier.

As welfare and well-being of Haj pilgrims has always been a matter of utmost concern to the Government, I would urge the Haj Committee of India, the State Haj Committees, our Missions in Saudi Arabia and all concerned with Haj affairs to give high priority for the orientation of the prospective Haj pilgrims so that their pilgrimage is both proper and satisfying. The Government would continue to deploy administrative, para-medical and medical personnel to look after and assist the Indian pilgrims during their stay in Saudi Arabia. The deputationists will be chosen carefully to give representation to various regional and linguistic backgrounds. During Haj 2006, 182 Khadimmul Hujjaj were deputed as against 70 during Haj 2005. Various State Governments will be deputing Khadimul Hujjaj to provide additional support during Haj 2006-II also. During Haj 2006, State Haj Committees were allowed to depute one Khadim-ul-Hujjaj for every 300 pilgrims instead of 500 as in the past. I would request all States to kindly send the requisite numbers this year to Saudi Arabia. In addition, the Consulate General of India in Jeddah will be arranging the services of local volunteers from the Indian community to assist and help our pilgrims. There has been extensive use of Information Technology in Haj Management. There is computerization of pilgrim location and movement including of all those performing Haj through the private tour operators. The website of the Indian Consulate General in Jeddah, provides the whereabouts of all the pilgrims and their relatives in India can communicate with them during their stay in Saudi Arabia.

I am glad to inform you all that for Haj 2006, around 147,000 Indian pilgrims performed Haj of which some 100,000 went through the Haj Committee of India and about 47,000 through the Private Tour Operators. This was an all time record. We hope that in Haj 2006-II also we shall be able to send a similar number of pilgrims.

The accommodation arrangements for Haj 2006-II are being taken in hand in the right earnest. Arrangements have been made to send Building
Selection Teams (BSTs) from various States during the period May 27 to September 9, 2006. As per past practice, the work of Building Selection Teams will be monitored by the Building Selection Committees (BSCs) who are members of the Haj Committee of India.

I am planning to visit Saudi Arabia soon to hold discussions with the Saudi Haj Minister, Dr. Foad bin Abdul Salam Al Farsi on the arrangements for Haj 2006-II. Based on our past experience, we shall flag our requirements and concerns regarding the needs of our pilgrims. We shall also be signing the Haj 2006-II Agreement with the Saudi authorities. Hopefully, towards the end of 2006, I shall try to make another visit to Jeddah, Makkah and Madina for personally inspecting the various arrangements made for our pilgrims.

As regards air transport, officials of the Ministry of Civil Aviation and Air India, who were also members of the Composite delegation, which visited Saudi Arabia, had preliminary discussions with the Saudi Arabian Airlines on April 10, 2006. Air India/Indian Airlines and Saudi Arabian Airlines will jointly organize the air transport of our pilgrims between India and the Kingdom.

During Haj 2005, we had achieved a major milestone as the opportunity for the Haj Committee pilgrims to land in Medina directly from India was made available. This has been greatly appreciated by the pilgrims and has also resulted in saving of some expenditure and facilitating better movement of pilgrims. Under this arrangement, some Indian pilgrims should be able to arrive in Medina directly from India during Haj 2006-II also. Proposal to add Bhopal or Indore, Jodhpur and Varanasi as additional embarkation points is also under consideration.

Being aware of the problems faced by the pilgrims going through the Private Tour Operators (PTOs) and taking note of the concerns of the Saudi Arabian authorities' with respect to Haj arrangements by PTOs, the Government started the registration of PTOs from Haj 2003 onwards. This will continue for Haj 2006-II also. This has yielded positive results as the number of cases of pilgrims remaining unattended in Saudi Arabia has considerably declined. We will continue to strengthen the regulatory framework to ensure that these pilgrims are also able to perform a proper and satisfying Haj.

On their part, the Government and the Haj Committee of India constantly strive to make Haj as comfortable and affordable. While all possible measures are taken to cater to the diverse requirements of all our
Haj pilgrims, considering the magnitude of the logistics of movement, accommodation and air transport, it is not always easy to satisfy all the pilgrims. I would, therefore, request the pilgrims to show patience and understanding. I appreciate that most of the pilgrims have been cooperative and appreciative of the government authorities. As improvement in Haj Management is a continuous process, I, on behalf of Government of India, would like to assure you that we would consider all suggestions that would emerge from the deliberations of this Conference to bring further improvement in Haj management.

May I take this opportunity to mention that the new Haj Committee Act 2002, which repealed the old law of 1959, provides for a more representative and broad-based character to the Haj Committee, envisages better financial accountability, provides for Parliamentary scrutiny and sets out clearly the responsibilities of the various organs concerned with Haj management. The new Haj Act confers statutory recognition to State Haj Committees. Six Members of the Central Haj Committee are to be elected from the six zones through the State Haj Committees. However, it is a matter of great concern that some of the States have still not constituted their Haj Committees in accordance with the new Act. May I request that those States who have so far not constituted their State Haj Committees in pursuance of the new Act, may please do so expeditiously so that the task of holding Zonal Elections can be undertaken without delay.

Before concluding, may I make two suggestions before this conference for its kind consideration. (i) suitable arrangements should be made so as to ensure that the pilgrims who have gone through the Haj Committee of India during the last five years do not avail of its facilities again. (ii) Pilgrims who had applied for pilgrimage in Haj 2006 but could not go due to paucity of seats, may be given priority during Haj 2006-II.

I wish to convey my grateful thanks to all of you for attending this conference. I assure you that we shall consider all suggestions that will emerge from the deliberations of this conference today to further improve the Haj management.

I thank you all for your gracious presence and extend my best wishes for a very successful All India Haj Conference. I personally thank H.E. The Ambassador of Saudi Arabia for attending the conference.

Thank you, Jai Hind.
Foreign Secretary: Madame Shaumian, Distinguished guests, Ladies and Gentlemen!

I consider it to be a very great privilege to have this opportunity to very informally interact with such a distinguished audience particularly people who are well known experts in their respective fields. This institution has a very prestigious history - history of very close connections with India. It is our hope that these links between the Institute and India will further strengthen in the days to come, because I think we are living in a period when India-Russia relations have become even more important and the need for understanding among countries of Asia and of course Russia - we consider Russia as part of Asia as well, has become very important.

I thought what I could do is to sketch out how India looks at the world today and its own place in the emerging world order and then perhaps I would answer your questions to the best of my ability.

The way India sees the international landscape both today and in the foreseeable future, we believe that it is going to be influenced by a constellation of major powers, among them the United States, the European Union, China, Russia and of course, we count India as well. Perhaps, we could even add countries like Japan or countries like Brazil from Latin America but essentially these are the major powers that would have an impact on the manner in which the emerging world order evolves in the coming years. This is, of course, because of the political, military, economic power, that these countries are likely to possess, but also because the capabilities that they bring in order to deal with the whole series of global and regional issues and also in dealing with crisis situations.

It is our sense that while tensions may emerge among these major powers over various issues, but the process of globalization and economic interdependence among the major powers has now reached a point where concepts such as containment, which you are particularly aware of from
the days of the Cold War, now have very little relevance. What we are likely to see, are in fact, coalitions put together among some of the major powers in order to deal with issues where there are shared interests, even though there may be differences in approaches. So while there may be tensions which may develop over certain issues but the fact of interdependence puts a limit beyond which these tensions cannot escalate.

We are looking at an emergence of a global order which would be dominated by these major powers but there would not be any kind of major confrontation or major conflict amongst these powers.

In this kind of a global landscape what is India's objective? If you look at our foreign policy objective since the time of our independence, it is essentially to expand India's strategic space. Now when we say expanding our strategic space what does it really mean? What it means in practice is to increase the autonomy of decision making of India on issues which are of importance to us. If you look at India's policy of non-alignment, essentially this is the motivation behind it. Non-alignment is the ability to judge issues, to act on issues on the basis of one's own judgment, on the basis of what our first Prime Minister Nehru used to say, "enlightened self interest".

In the emerging global order - the political order or the economic order - what it really means is that India does not wish to be just a passive kind of a reactor to the rules which are being made by others but rather would also like to be one of the powers which are contributing to the shape of a global order which emerges and shape it in a manner that enables India to pursue its vital interests. In terms of diplomacy, what this translates into is a policy of intensifying engagement with virtually all the major powers, while still retaining a certain room for maneuver for India. It also encompasses the policy of nurturing and increasing activism among our traditional constituencies, constituencies which India has in the developing world. For example, currently you will see that there is a major focus of India on its relationship with Africa, because we see that as a very important component of increasing India's role in the global order.

If you look at various components of our foreign policy in the recent past, you will see that there have been significant developments. For example, there is a transformation of India-US relations. We have set up a strategic partnership with the European Union and we today have an across the board engagement with China, with whom also we have what we call a strategic and cooperative partnership. There is a revitalization of our
relations with Russia taking place after a certain dip and with the passing away of the old Soviet Union. There is today also new energy in our relationship with Japan. You might have read recently that our Defence Minister was in Japan. There is today a very dynamic security component to our relationship with Japan. So as you can see there is an across the board upgrading of our relationship with virtually all the major powers - all the major actors - today.

The other feature of the emerging international landscape as we see it is the growing salience of what we call cross-cutting or trans-national issues. What are these issues? Issues like, for example, energy security, environment, non-proliferation of weapons of mass destruction, pandemics like avian flu or HIV/AIDS and of course, for us and I think for Russia, too, an extremely important international issue - the problem of terrorism. It is obvious to us that to deal successfully with any of these trans-national or cross-cutting issues, no single country, no matter how powerful, can hope to deal with them successfully if it is to deal with them unilaterally. No single country can really afford to go it alone while dealing with these issues. It is also clear that the role of large, populous and rapidly growing countries like, for example, India and China but also countries like say Brazil or South Africa would be indispensable in dealing with these cross cutting issues. Take the issue of energy, for example. If countries like say India and China are going to continue to grow at the rate of say 8% or 10% per annum for the next 15 or 20 years, then you are looking at a very large demand for energy resources. Neither India nor China would like energy to become a constraint on our growth, but at the same time our demand for energy resources will also have big impact on the global energy situation, not only on the global energy situation, but depending upon the energy mix which India and China adopt, there would also be consequences for the global environment.

Thus, if you are looking at how to successfully deal with some of these major international issues, it is quite apparent that unless you have a very active and positive role of countries like India and China it would be very difficult to deal with these global issues. I think it is the recognition of this which has led to the virtual institutionalization of the concept of outreach countries. We earlier had the G-7, and then Russia joined and it became the G-8. This year Russia, for the first time is going to host the G-8 summit in St. Petersburg. For the last several years, the concept of outreach countries has developed, including China, India, Brazil, South Africa and now Mexico as well. This has become institutionalized. These five countries
will again be present at St. Petersburg and some of the important issues which will be discussed at the St. Petersburg summit would include energy security, education, as well as dealing with, for example, infectious diseases like Avian flu and HIV/AIDS.

You can see that there is recognition already in the world that in order to deal with these kinds of cross-cutting issues it is important to have coalitions of important countries and all major partners working together. When we are looking at the international landscape, as it would evolve in the next say 15 or 20 years, it is apparent to us that increasingly we will be facing precisely these kind of global issues. There will be fewer and fewer issues which are amenable to being dealt by one single country or a small group of countries.

When we see these kinds of challenges it is quite clear to us that we would need to have multilateral as well as broadly participative processes in order to deal with these issues. And this is what India has been advocating. It is also something which is important in dealing with for example, regional armed conflicts. You have seen the experience for example, of Iraq where the reliance on multilateral approaches may have been more successful in dealing with this very difficult regional conflict. At the centre of this multilateralism, of course, is the United Nations - the only truly multilateral institution that is available to us. And along with multilateral institutions you must have multilateral approaches i.e. there should be a greater reliance on multilateral mechanisms.

The United Nations has a structure which is completely outdated in terms of the emerging global landscape. It has a post-1945 structure which is outdated and not in tune with or reflective of the current global landscape and the landscape that is emerging. So unless we have the reform of United Nations not just in terms of its administrative efficiency, but also in terms of reflection of the current realities of global politics, we do not believe that it can function as a truly multilateral institution. In that respect, as you know, we have called for the restructuring of the UN Security Council and we believe that countries like India should be permanent members of the Security Council. In this respect we are very grateful to Russia for having unreservedly extended its support to India.

I will briefly talk about India's own rising profile because, in a sense, over the past few years, India's profile in global politics has acquired greater salience. India's global profile or its emergence as an increasingly indispensable partner in dealing with various global issues is really the
result of a sustained economic reform programme in the country and its accelerating growth over the past 10 to 15 years. India's Prime Minister Dr. Manmohan Singh is the person who was the architect of reforms in the early 1990s. In essence, we consider India's destiny as being part and parcel of the rapidly globalizing world rather than as a largely self-sufficient and relatively closed economy. This is a major change in our way of thinking. The fact that India is a stable democracy has greatly helped. It was not easy to arrive at a consensus on economic reform, but now there is no resistance in India in embracing globalization, although there is and there will continue to be debates about the scope of these reforms and the pace of globalization. In fact, today we believe that India is proof that if you take a longer term perspective, then development and democracy are not antithetical. This reinforces a powerful message to the world. There was a time when it was considered that some kind of autocratic or authoritarian political order was necessary in order to bring about economic development. I think India's experience has proved that in the long run, a stable and steady growth is possible - not only possible, but perhaps is better delivered with a democratic form of Government.

There are other strengths too that India demonstrates. The advantage, for example, for India is its demographic profile. We see that large parts of the developed world are faced with aging populations and the proportion of working population is shrinking. The demographic profile of India is such that we have a young population - more than 50% of the population is below 25 years of age and even if you look at the next 15 to 20 years we find that India's demographic profile will remain very favorable in terms of the youth component of population. And, besides, there has been a prolific expansion of our highly qualified manpower base. India today is producing a couple of hundred thousand engineers, technologists and graduates who are joining the work force and that in itself is a very important resource.

When we see the emerging world say 20 years from now or 30 years from now, what is society going to look like? We believe that society is increasingly going to be knowledge based. The main resource of development will be knowledge. It will be more and more a technology driven society. If that is the kind of society that is emerging then we believe that India is very well placed because of the factors that I just mentioned. If you take, for example, the excellence that India has achieved in information technology, it is a pointer to what kind of resources we would have in the future.
The other point that I would like to make is that we are awaiting a future which is going to be even more globalized than today. We know that there is resistance to globalization in certain parts of the world. In India too there is a debate on the pace and scope of globalization but there is also recognition that globalization is here to stay - that it is a process that cannot be stopped. It cannot be reversed. If we are going to be more and more integrated into the global economy then it is also clear to us that the basis for that globalization strategy must begin at home, and to make success of the process, also important would be regional integration in South Asia and in our expanded neighbourhood including South-East Asia, Gulf countries and increasingly the Central Asian region. So, unless we can do a better job of integrating our own region and making it an integrated economic community and unless we are able to successfully integrate India into a larger Asian economy, we may not be able to do a very good job or have a successful strategy for integrating India into the emerging global economy. If you analyze India's policies over the past 10 years or so you will see that there has been a very strong drive for India to lead the process of integration in South Asia itself.

As you remember, former Prime Minister of India Mr. Vajpayee put forward a concept of South Asian Economic Community - having a single currency, having no transportation barriers at all, no trade barriers at all, within South Asia. That has been a kind of guiding star in terms of our South Asia policy. Obviously we are not able to do this in a short time frame. There are also very real political divisions among the countries of South Asia but we have tried to put in place the building blocks. For example, we have had a very successful free trade agreement with Sri Lanka - successful enough for us to move on to a concept of a Comprehensive Economic Partnership with Sri Lanka. We already have a free trade system with Nepal and we have excellent cooperation between India and Bhutan. India is today the largest consumer of energy which is produced in hydroelectric power projects in Bhutan; with the result that Bhutan is probably the richest country per capita in South Asia. What we are trying to demonstrate is that the very dynamism of the Indian economy, the very prosperity which is being generated by the Indian economy is an asset for our neighbors as well. We are trying to give a stake in our prosperity to each of our neighbors. And we believe that if we are able to create a virtual economic community in our region, it would also have a very beneficial impact in terms of healing the political divisions in South Asia.

If you go further, you may see that India has, over the past few years
been following a consistent policy of increasing its engagement with South East Asia. It began with a dialogue partnership with ASEAN, then it became a summit partnership and now recently India has also joined the East Asia Summit. Our Prime Minister put forward at the last East Asia Summit, his vision of an Asian economic community where there would be no trade barriers, there would be free movement of peoples, of ideas and of goods and services. That is another example of how we are going to build regional economic integration in order to do a successful job of integrating globally. This is the "Look East Policy" of India.

On the Western side, we have very much increased our economic engagement with the Gulf countries. Today we are also talking about a possible Free Trade agreement with the Gulf Cooperation Council. And, of course, Central Asia, which is critically important to Russia as well, is also emerging as a significant area of engagement for India's foreign policy. This is the very reason why, for example, we have been very much interested in the Shanghai Cooperation Organization (SCO). We are now an Observer in the SCO and we see this as a vehicle for bringing about the kind of economic integration with the region that we have been thinking about. There are also other mechanisms that I would just like to mention in passing here, the trilateral cooperation between Russia, China and India. Although it is still at an initial stage, it is already being looked upon as a mechanism of great promise for the future.

Before I conclude, I would just like to say a few words about our relationship with China because I think when we are looking particularly at the Asian situation, almost immediately the question arises, what is the future of India-China relations. There is one theory that with both India and China growing very rapidly, it is inevitable that there will be competition for markets, there will be competition for resources and there will be also inevitably, a rivalry between these two rising powers in Asia. That is one way of looking at it. In fact, as far as India is concerned, and we believe this is a view shared by the Chinese leadership as well, on balance, there is convergence between the two sides. There are expanding complementarities between the two countries rather than inevitable rivalry or conflict. We believe the rapidly expanding economy of Asia as well as the world as a whole, offer enough space for both India and China to grow together. Both countries can actually contribute in the prosperity and stability of Asia.

If you look at past history - you know cultures of Asia - the prosperity of Asia was very much linked to the tremendous dynamism both of India as
well as China. We believe, in a sense, we can recapture that spirit. We believe that the models of development which India and China have adopted in fact make their economies at this stage at least, far more complementary. If you look at India's strategy of development, it is much more service-based, it is more, as I said, knowledge-based. Today, in India, despite the fact that we are a developing country, more than 50% of our national income is contributed by services. When you look at China, its great strength is its manufacturing sector. What is also happening is that India is using its IT strength to raise the productivity of its manufacturing sector. China on the other hand is trying to catch up on the services side, on the knowledge side, because it finds that merely being strong in manufacturing, being just the workshop of the world is not enough in terms of sustained prosperity for the future.

So over a period of time, the two economies, the two models may converge. At this particular point of time, there is in fact quite a high level of complementarity between the two economies. For example, there is a great interest in China about Indian software and India is very much interested in the success that China has achieved in hardware. On the last few occasions when Chinese leaders have visited India, they have first gone to Bangalore before they came to Delhi because of this great interest in India's information technology progress. We believe there is a complementarity and this has resulted in a very rapid growth of bilateral trade between the two countries. It is already at the level of US $18 billion and if the current trade growth rate is sustained, then it is estimated that over a period of may be 5 years or so, China may even become the largest trade partner for India. That is the rate at which the economic linkages are growing. And there is also a lot of cross investment taking place between the two countries. There are Indian companies investing in China and there are Chinese companies investing in India. This particular trend is also growing.

It is true that there will be areas where there will be difference of approaches between India and China and there may be areas there will be some competition. For example, in terms of search for energy resources there may be some areas of competition, but in other areas India and China are actually working together to avoid competition. You take Syria for example - it was a joint venture between an Indian company and a Chinese company which bid for exploration of oil and gas resources in Syria. There is also a sense in India and China that our interests are better served if we worked together rather than compete with one another. This is not to say,
there is no competition, but, on balance, there is a convergence between the two countries. This is the more important trend.

In conclusion, I would just like to summarize: we may continue to see, unfortunately, the continuance of regional armed conflicts, we may see some exacerbation of global challenges such as terrorism, but we do not really see the prospects of major confrontation or conflict among the major powers. And this suits us fine because one of the very important objectives of our foreign policy is how to ensure a peaceful and supportive regional as well as global environment to enable us to really achieve the objectives of our economic development - that is, bringing about higher living standards for our peoples and ensuring that poverty is eliminated from our country. This requires, over an extended period of time, a regional and a global environment which is essentially peaceful and not only peaceful but supportive of India's objectives. We believe that this particular objective of India's foreign policy is in fact achievable.

As I mentioned in this context, we attach great priority to India-Russia relations. Russia is important as it is both an European power as well as an Asian power. Especially in the last few years we have seen a Russia which, in a sense, is reasserting itself - a Russia which is beginning to regain some of the confidence that it had perhaps lost after the break up of the Soviet Union. We believe that the emergence of Russia as once again, a very major and critical power in the world, will contribute to a more balanced international environment that we are talking about. And in this context, India-Russia relations acquire a new kind of strategic dimension.

Thank you, very much.

**Question and Answer Session:**

**Question:** Some of the UN based decisions do not favour certain countries. Should not there be some mechanism to protect the less developed countries? (Full question not audible).

**Foreign Secretary:** Well, you are quite right that while globalisation has winners it also leaves behind losers. This is not only true in terms of the international situation. I think it is true even within countries. For example, in India there are industries and sections of our economy which have gained greatly from the process of globalization, but there are also other parts of India's economy which are being left behind and are not able to share in the fruits of globalization. One of the major challenges that we have in our
domestic politics is to ensure that those who are being left behind are, in a way, helped to come up so that they too can benefit from globalisation. I think it is the same case internationally. The logic is the same in that those countries which are not fully geared to take advantage of globalisation, the international community as a whole has a responsibility to make that happen. This is where multilateralism comes in. If you look at the stand India has taken, not only India, but other important developing countries like say Brazil or South Africa, we have taken the position that in order to be successful the new WTO round must take development as its center-piece. It is not just enough to talk about the global market. In order to make it an even playing field you need to have non-reciprocal advantages for the developing countries. That is our approach. I think if you look at the manner in which the G-77 operates, it is precisely on this same principle. This element continues to be a very important component of India's foreign policy. More directly, I have mentioned in the beginning that, India has, for example, today a much more active strategy for Africa. In dealing with Africa what we are trying to do is to leverage our strengths; our strengths in IT, communications, education and particularly technical education, to raise capacities amongst the African countries. This has been very much welcomed. By the way, it is not something which is being done as charity by India, but we find it creates opportunities, economic opportunities for India. So this approach works to the advantage of both sides.

**Question:** When we are looking at multilateral institutions what we find is that, over the years, the role of the United Nations and its special agencies have undergone a change. Why?

**Foreign Secretary:** If you look at these institutions, working in the 60s and 70s even I would say, part of 80s, they were very much structured to serve the interests of the majority. So if you look at the debates in the United Nations, if nothing else, a very strong public opinion on behalf of the developing countries was very much evident. If you consider the activities of specialized agencies for example WTO, IAEA or the Labour Organization, their real objectives were to help developing countries. Developing countries had a sense of ownership of these institutions because they were in the majority in these multilateral institutions. Then what has happened since the 80s is that for developing countries, the role of these organizations has undergone a change. They are now being looked at more as regulatory bodies, bodies which penalize. They have almost taken on the role of a policeman; most I think evident is the role of the IAEA. The International Atomic Energy Agency was set up to promote nuclear energy for
development of developing countries. Today it has become essentially a regulatory and a punitive body.

If you look at some of the other institutions also, a similar kind of situation has developed. Part of it is because the regular budget of the United Nations and its specialized agencies is no longer able to finance anything more than their administrative expenses. So it becomes donor driven. None of the activities can be carried out unless the richer countries give money to carry out a particular activity. This begins to determine the priority of the international institutions. Unless we are able to change the situation, unless you are able to change the political balance in the international institutions you will not be able to bring development back to the centre of the multilateral institutions, and that is essentially the objective we have within the UN and other similar multilateral institutions - precisely to bring about that change.

**Question:** India-US nuclear deal? How do you assess it? What stand will India take if Iran does not abide by the UN resolutions? (Full question not audible.)

**Foreign Secretary:** As far as the India-US nuclear deal is concerned, let me try to give you a very brief background to it because I think you should understand the nature of the particular deal. The India-US deal is not an arms control measure. It is a measure for the promotion of energy security. As I mentioned, India like China and some other countries, is facing an energy challenge. If India and China are growing at the rate of 8-10% per annum over the next 15 to 20 years, you are looking at a very tight energy market situation - much tighter than what you have today. Already energy prices are very high. Now India has come to the conclusion that unless we diversify our energy mix we will not be able to meet this energy challenge.

One major component of this would be nuclear energy. That makes sense for India because we have, for over the years, developed a very comprehensive nuclear industry. Russia is very familiar with the capabilities of our nuclear industry because you are also one of our partners. So it makes sense for India to go in for a major expansion of its nuclear energy industry. Now, we can do it on our own and by 2020, maybe we can reach a target of 20,000 MW, but that is still a drop in the ocean in terms of the needs that we have. If we had, instead of the technology denial regimes which are constructed around us, a supportive and cooperative international environment, then, instead of 20,000 MW we could reach 60,000 MW. We
can buy 4 more Kudankulam type of reactors from Russia and make it 40,000 MW in one go. This is really the key. In order to bring about a different kind of energy mix which is not only good for India but good for the world, something has to change. Now in changing this, what about India's non-proliferation record? India is not a member of NPT but was one of the original sponsors of the non-proliferation treaty. We did not sign the NPT not because we wanted to proliferate, but because we did not agree to its discriminating nature. It is not because India was against non-proliferation. If you look at India's record right through the last 50 years, has India ever been guilty of any kind of proliferation? Has any leakage of technology taken place from India to any third country? Never.

So whatever we have developed ourselves, or whatever we have received from any third country, we have never been guilty of any kind of proliferation. While India is technically not a part of the NPT, but I think India's record in terms of non-proliferation is very clear. What have we said to the United States and to our partners in the NSG, the Nuclear Suppliers' Group, is that we cannot have any limitation on our strategic programme, on our nuclear weapons programme, because that has a security dimension. There are two kinds of assurances we are, however, ready to give. One set of assurances is that whatever we receive through international cooperation will not be diverted to our strategic programme; that we should not expect that you should help our strategic programme. Second is that whatever we receive as international cooperation is not diverted to third countries. So we are ready to give these assurances. When we are taking about the deal, those are the assurances we are working on. There is a compelling case for an India-specific exception being made because of its record and because of the energy imperative. The question is - is it better for you to have India which has such a large nuclear programme, which has today a whole range of sensitive technologies and will have more of these technologies as it develops in the future, in the international mainstream or would you prefer that we remain outside the mainstream? I would think, if you are really being rational and not theological about it, it is better to have India in the mainstream rather than outside. That is the case. As regards Iran, I may say that right from the beginning, India has favoured solution of this issue through discussion within IAEA. Iran is a country with which India has had long-standing civilizational links. Iran is the only transit route for our access to Afghanistan and Central Asia. Iran is geographically close to India and is India's major energy partner. Any approach based on sanctions or threat of use of force or use of force will have disastrous consequences both in the region and globally.
Question: India-Nepal relations? (Full question not audible).

Foreign Secretary: With Nepal, we already have a free trade regime. It is a non reciprocal regime because we are permitting free entry for all Nepalese goods to India but Nepal is able to impose some tariffs on Indian goods going to Nepal. This is because of the difference in the level of development between the two countries. Nepalese goods are allowed free entry into India and that has been very helpful to the Nepalese economy. But in the context of the current crisis in Nepal, there are several things we have to do. We have to put together a fairly generous economic and financial package in line with Nepal's own priorities and requirements to help the government stabilize because they have lost out in terms of revenues for the last few years when Nepal underwent disruptions in its industrial and trade activities, because of insurgency and political turmoil there. So in the initial phase, this government will need a fairly strong injection of urgent financial assistance in order to stabilize.

One of the things that we will be doing is to offer assistance to them when their ministerial team comes to India in a few days. We will be working out with them some urgent assistance that would be made immediately. In the longer term there are many things that India and Nepal can do together. As I mentioned to you our experience with Bhutan, we already have a very major hydroelectric power project which is supplying about 330MW electricity to India and currently we are working on a much larger project which will be commissioned in September this year. With these two projects together, the per capita income of Bhutan will go up to about 1300 to 1400 US dollars. Nepal by contrast has much higher hydroelectric power potential than Bhutan does; in fact about 3 times that of Bhutan. Nepal also has the advantage that most of the possible power projects are much closer to the consuming centres in India. The whole of the northern India belt is very close to Nepal. If Nepal were to develop some of the hydroelectric power sources in the near future, it would completely change the economic prospects for Nepal. From being one of the poorest countries, it has the potential of becoming one of the richest countries in South Asia. So it is a question of how we politically create an environment for this kind of long-term economic cooperation between the two countries. There are other areas as well. Because Nepal is a country with free access, Indian tourists constitute the largest component of tourists visiting Nepal. The tourism industry therefore can also be developed much further, based on the Indian market. These are the areas in which Nepal and India can work together and this would really change the economic picture of the country.
Question: Youth of the two countries can play a good role in the further development of India-Russia relations. There are many young Russian people who are learning Hindi. What can be done by the youth to promote Indo-Russian cooperation?

Foreign Secretary: First of all I compliment you on your very good Hindi. There is no doubt that mutual learning of Hindi and Russian languages in each others' countries would promote deeper bilateral understanding. Our excellent relations with Russia are not only between the two Governments but also between the peoples of our two countries. I believe this should be further encouraged.
I thank the government of Singapore for the warm hospitality extended to us and the organisers for making excellent arrangements for the Dialogue. Though I had the intention of joining the Dialogue on the previous two occasions, but because of some domestic reasons I could not do so. I am glad to have the opportunity of participating in the Fifth Shangri-La Dialogue. On this occasion, our mind goes to the suffering people of Indonesia of the latest earthquake. When I heard of the crisis, I was in Tokyo and I sent a message of condolence to my Indonesian counterpart. India along with the other countries has extended a hand of cooperation to provide relief and succour to the hapless victims of the earthquake.

I have been asked by the organizers of the increasingly popular Shangri-La Dialogue to speak to you today as a representative of India – one of the rising global players. While in general I will talk about “Growing India and its impact on regional and world matters”. I am also taking the liberty to briefly review our fast evolving ties with Northeast Asia, ASEAN and Singapore and end the address with a few words on maritime security. I felt I should begin with a brief overview of India’s well-known defence and security policy goals.

INDIA’S DEFENCE POLICY GOALS

Protecting and safeguarding India’s territorial integrity and sovereignty undoubtedly lies at the core of India’s defence policy. It is India’s national mission to promote rapid economic and social development for the vast majority of its people. Our defence and security policy is dovetailed to this supreme goal to ensure a peaceful and secure internal and external environment, in which it can be pursued. India has always been actively promoting and sustaining durable peace in the immediate neighbourhood, including the Indian Ocean Region. Premised on the twin policies of no extra-territorial ambition and no export of ideology, India seeks the peaceful resolution of all disputes.

As Defence Minister of India, it is my responsibility to ensure that our defence forces are adequately equipped to safeguard against any aggression. This established doctrine has led India over the last few decades
to create defence industrial and technological capabilities to equip our armed forces, and we strive continuously to build upon such capacities. That in turn has led India to augment its industrial and technological resources through collaboration where necessary, in recent years, both through public-private partnership and with dependable foreign partners.

India’s desire for peace and the use of diplomatic means for resolution of all disputes is unwavering. However, as a large and vibrant democracy with a diverse social, religious and economic background of its peoples, the country finds that its peaceful stance has to be backed by a credible and stable military deterrent with necessary command and control structures. This includes a nuclear doctrine of credible minimum deterrence. Ingredients of this doctrine are, ‘no first use’, non-use against non-nuclear weapons states, and voluntary moratorium on further tests. This defence preparedness is not at the cost of developmental expenditure. Hence, India’s defence expenditure remains modest at less than 2.5% of GDP and in per capita terms among the lowest.

Given the global challenges and dangers posed by international terrorism, proliferation of weapons of mass destruction and related technologies, piracy on the high seas, trafficking of arms and drugs and the increasing levels of violence resorted to by non-state actors, requires us to operate a modern defence intelligence gathering and sharing system. Global challenges have to be met head on globally. This belief leads India to actively work with friendly countries in regional and global security tasks, UN peacekeeping and peace building, counter-terrorism, non-proliferation and arms control.

INDIA’S ROLE IN ASIA AND THE WORLD

As the largest and most populous continent, Asia hosts nearly 60% of the global population and about 25% of the global GDP; three declared nuclear weapons states and a couple of others tacitly acknowledged so; two of the largest standing armies in the world, non-Asian navies operating freely in Asian waters and a large number of missile producing and exporting countries. If expanded to the Asia-Pacific region then this huge Asian entity combines with the large north and south American economies and the vast military might and influence of the United States.

Where does India stand in this impressive array? A lumbering elephant or an emerging giant – perhaps a bit of both. With its economy growing at over 8% per annum last year and set to rise further in the coming
years, India’s one billion people are increasingly a driver of regional and global growth and prosperity. Software, manufacturing, agriculture, nuclear energy, space, disaster management, maritime affairs, entertainment and culture are areas in which India’s role is becoming increasingly vital for the region and the world. While the country will still need more time of continuing high growth and a sustainable and balanced development strategy to overcome the problems of poverty, uneven development, infrastructural and institutional deficiencies, it is proactively addressing all these issues. India is a unique case where development, industrialization and democracy have gone hand in hand.

The distinguished Chinese leader Deng Xiaoping had told the charismatic Indian Prime Minister Rajiv Gandhi almost 20 years ago, that there could be no Asia-Pacific century or Asian century without India and China forming crucial elements of such an architecture. India is one of the important legs of the Asian juggernaut along with China, Japan and Indonesia. In the Asia-Pacific region, India’s growing ties with the United States and other countries in North and South America brings with it a commensurate role in the region.

Asia’s emergence is no longer a grand hypothesis. Its growth credentials are increasingly in the realm of reality. Notably, Asia currently contributes about 25% of global GDP, which is expected to rise to 57% by 2025. Asian countries are among the fastest developing economies in the world. Intra-Asian trade in 2002 was US $ 3587 billion- about a quarter of world trade.

India’s role is crucial for ensuring and maintaining long-term peace, stable balance of power, economic growth and security in Asia. It is a core state whose role is crucial for the economic well-being, institution building, collective and cooperative security, economic integration and trade expansion and political and civilisational dialogue, essential for a growing Asia. It straddles the land and maritime spaces between East and West, and provides potential energy and trade corridors to Central Asia and the Indian Ocean region. Responding to the challenges of globalization is one of the key issues faced by all nations today. As a pluralistic, democratic and English speaking society, India is well placed to respond.

Those of our neighbours like Sri Lanka and Bhutan, who have chosen to leverage India’s engine of growth have benefited significantly. Those who have held back have done so to their detriment. Regional growth has significant security implications because prosperity and pluralism are today
key pillars for global security. East Asian development took place in three phases – Japan initially, the Republic of Korea and Taiwan later and now China. Southeast Asia has also made remarkable progress. In our quest for an Asian century, can South Asia afford to lag far behind? This obviously calls for a regional and global effort to facilitate the South Asian region to catch up. India is making every effort in that direction mainly through the vehicle of the South Asian Association for Regional Cooperation (SAARC). We call upon our SAARC dialogue partners and others to encourage and facilitate this process.

India’s ties with Southeast Asia, Japan, Korea, China and Australia is creating a more stable strategic environment and enhancing independence and institution building in Asia. Coupled with the simultaneous improvement in strategic ties with the United States, the European Union and Russia, this is enabling India for the first time in its diplomatic history to forge significant strategic ties with both West and East Asia. India’s rapid economic and social development and growing confidence in responding to the challenges of globalization is already leading to the restoration of our historical connectivity with Southeast Asia as also West Asia.

The emergence of India as a global player will have a far reaching impact on the international economy, politics and security. In each of these areas, India is poised to play an increasingly larger role and the existing global institutions in their reform process would need to accommodate India’s capabilities and political-intellectual contributions.

As a founding member of the United Nations, India has been firmly committed to the principles and purposes of the United Nations and has consistently and significantly contributed to all aspects of its functioning. India has a long and illustrious history as one of the longest serving and largest troop contributors to the UN peacekeeping operations. India has also played a great role in seeking to address the deficiencies, inequities and problems in the existing global institutional arrangements. As we observe the 60th Anniversary of the United Nations, there is unanimity among the member states that the United Nations is in need of urgent and comprehensive reform, in order to deal with myriad challenges of today’s world more effectively. We believe that the reform and expansion of the United Nations Security Council, in both permanent and non-permanent categories, is central to the process of UN reform. The representation of developing countries from Africa, Asia and other regions, as permanent members of the Security Council is essential in this context. In this
framework, India is pursuing its candidature for permanent membership of the Security Council.

**EAST ASIA SUMMIT, TIES WITH NORTH-EAST ASIA AND ASEAN**

India is glad that the East Asia Summit (EAS) has been initiated and would in the coming years lead to cooperation among the members to create an East Asian Community, which as our Prime Minister has mentioned could be the harbinger of an eventually enlarged Asian community or union. As a member of the EAS, India fully supports and looks forward to constructive cooperation with others in the group to create the framework for greater regional integration and cooperation. We believe such a development would have a positive impact on Asian stability, economic growth and peace.

China is India’s largest neighbour and therefore developing friendly cooperation with China is one of the priorities of our foreign policy. With frequent high-level exchanges including, my just concluded visit to China, the process of building trust and understanding has gained momentum and our relations have diversified across a wide range of areas. Our ties with China have reached a certain degree of maturity where we are determined to build upon our existing commonalities and identify newer areas of mutually beneficial cooperation. At the same time we are striving to address our differences in a proactive and purposive manner, without allowing them to affect the comprehensive development of our relationship.

Our ties with Japan are also expanding rapidly and not just in the economic and investment sphere. Japan, of course plays a major role in our development programmes through the Overseas Development Agency (ODA). In recent years we have stepped up our defence and security ties, based on the view that all countries and regions need to cooperate actively in order to tackle effectively the evolving global challenges. I have also recently concluded a visit to Japan where I had the opportunity to discuss in detail all these issues with my counterpart and some of his senior Cabinet colleagues. Not long ago, India’s Minister of State for Defence visited the Republic of Korea and Mongolia where our defence ties are also in the process of being upgraded.

India’s trade, security and energy ties with East Asia and the Pacific region is set to grow rapidly in the coming years. Southeast Asia and China are already two of our largest trading partners in this region, and Korea and Japan among the leading investors in our country. These ties will grow
many-fold in the coming years and would need sustained political, economic and security dialogue mechanisms for institutionalized support. The EAS, ARF and BIMSTEC and emerging strategic partnerships are elements of India’s engagement with East and Southeast Asia, the core of its “Look East Policy”.

INDIA-SINGAPORE RELATIONS

As the host country to the ever-growing Shangri-La Dialogue, it would be remiss of me not to say a few words about India’s dynamic ties with Singapore. It is emerging as a hub for India’s expanding economic, political and security ties with East Asia. Singapore is today an important investment and trading partner, and also provides the base for other East Asian countries to invest in India. It is our hope that the full implementation of the Comprehensive Economic Cooperation Agreement (CECA) signed with Singapore in 2005 - the first of its kind for India - will further generate economic integration between India and Singapore, and provide the base for new and wider opportunities for trade, investment, energy and defence ties with all of ASEAN. New areas of defence cooperation, including joint training facilities are emerging and supplementing existing cooperation between India and Singapore in the naval, maritime and counter-terrorism spheres.

MARITIME SECURITY

While in Singapore and at a security conference of this stature, the dimension of maritime security looms large on our radar screens. Singapore stands at the crossroads of one of the most important waterways of the world, the Strait of Malacca. More than fifty percent of India’s maritime trade passes through these waters. Other Asia-Pacific countries like Japan, China and the ROK are even more dependant on the safe and secure passage of their sea trade through the Strait. In recent years, piracy has been a major challenge in this region and we can only hope that maritime terrorism does not follow closely behind.

There is a need to increase and strengthen regional cooperation to enhance maritime security. India has been working with countries in the region, both bilaterally and multilaterally through forums such as ARF to further strengthen cooperation. We believe that through the coordination of our individual efforts, the security of the sea lanes will be enhanced. Otherwise, as we have seen in the USS Cole bombing incident and recent attacks faced by the Sri Lankan Navy vessels, a small dhow or boat can unobtrusively collide with a larger vessel causing considerable loss of lives and equipment.
India welcomes the three-nation initiative on monitoring shipping through *Compulsory Pilotage* project of Indonesia, Malaysia and Singapore. Subject to the desire of the littoral states, as a major user-state, India would be willing to assist the project in whatever capacity is deemed suitable. India has developed capabilities in various aspects of maritime security and would be most willing to share its expertise with countries of the region. India is taking steps to join the Container Security Initiative and has identified the Nava Sheva port for purposes of executing this initiative. The Indian Navy has initiated several maritime security and capacity building measures such as countering piracy by joint exercises (specifically with Indonesia), returned the Allondra Rainbow ship to the Japanese authorities from pirates and participated in Tsunami relief measures in 2004-2005 in Sri Lanka, Indonesia and Maldives. The establishment of a Regional Marine Training Centre has been discussed at the ARF Workshop and the ARF Senior Officers Meeting. We believe that such a Centre would go a long way in establishing common understanding and common procedures. India would be happy to be associated with this initiative. Consistent with their global strategic partnership and the new framework for our defence relationship, India and the United States have committed themselves to comprehensive cooperation in ensuring a secure maritime domain. Similar initiatives have been taken with other maritime partners.

Before I close my address today, I would like to sum up the tangible global trends at the beginning of the 21\textsuperscript{st} century. Barring a few exceptions, nation-states today are in what we might term “political and economic credit” environment in their relations with each other, i.e., generally a positive and mutually beneficial state of political and economic affairs. Unfortunately, this healthy and positive atmosphere is marred by what one might call a worldwide “security deficit”, whereby no country is free from the tension and conflict arising from the scourge of international terrorism, proliferation of weapons of mass destruction and their related technologies, trafficking of arms, drugs and humans and the growing tendency among non-state actors to take the law into their own hands. I would like this gathering of ministers, officials, researchers and scholars responsible for defence and national security of the countries of the Asia-Pacific region, to ponder deeply what more can be done, individually by each country and collectively as a region.
014. Interview of Minister of State Anand Sharma with the daily *Deccan Herald*.

June 11, 2006.

Deccan Herald: There is a general perception that India has shed its traditional role as a leader of the developing world, now that it is beginning to get into big league in international diplomacy. How do you look at this perception?

ANAND SHARMA: The perception is not correct. It is based on uninformed inputs. India has fully energised its relations with our traditional friends in the developing world, especially in Africa and Latin America. During the last four months, we have institutionalised India’s partnership with all major sub-regional groups of Africa and Latin America. On our initiative, we had meeting with Team-9, Southern African Development Community (SADC), Economic Community of West African States (ECOWAS), and Common Market for Eastern and Southern Africa (COMESA). We have committed close to US $1 billion in socio-economic developmental assistance in Africa. In the last four months’ alone, we have received here Foreign Ministers from 25 African and Latin American countries. I can also say with confidence that our abiding commitment to NAM was acknowledged even as recently as a few days ago when I attended the pre-summit NAM Ministerial meeting in Kuala Lumpur.

DH: But isn’t it a fact that last year we could not mobilise the support of African countries for the G-4 (India, Germany, Japan and Brazil) resolution in the General Assembly on UN Security Council expansion?

ANAND SHARMA: That is not correct. The impression that we could not garner support among African countries is based on wrong premises. We were in constant touch with AU members. Unfortunately, there are internal dynamics in the AU.

They could not bring out an internal consensus on the nature of the Security Council expansion. We have since engaged a large number of African countries. I myself have visited Africa thrice since I took charge four months ago. We hope that the forthcoming AU summit in Banjul (Gambia) on July 1-2 will reach a consensus on the Security Council expansion.

DH: Perhaps, for more than a decade, no Indian Prime Minister has undertaken a bilateral visit to any African country. What does that suggest? Relative neglect of the continent?
ANAND SHARMA: As I have said we are intensifying our engagement with Africa. This year South Africa will celebrate the completion of 100 years of Gandhiji’s satyagraha launched in that country.

There is a proposal for the Prime Minister to visit South Africa to take part in functions to mark the historic occasion. Besides this, we are also working on proposals for Prime Ministerial visits to some other African countries. You will see our engagement with Africa gaining further momentum in the coming months.

DH: At a wider level, haven’t we also lost to some extent our traditional leadership position in the NAM that brings together developing countries from all continents?

ANAND SHARMA: Look, there is neither any deviation nor dilution of our traditional foreign policy. True, we are engaging major powers in all regions of the world to build strategic partnerships with them. That can be only expected as our foreign policy initiatives are primarily guided by our objective of promoting India’s national interests and our long-term objectives. But I can tell you from my recent interactions at the NAM foreign ministers meeting that we continue to be important in NAM. We are involved in every critical NAM fora.

DH: Did you take up our case for Security Council membership in the NAM meeting?

ANAND SHARMA: UN Security Council reform agenda was one of the core subjects of discussion in Kuala Lumpur. UN reforms, democratisation of the world body’s various institutions will prominently figure at the NAM summit at Havana in mid-September. Our Prime Minister will attend the Havana summit.

We hope the summit outcome would create a favourable atmosphere for this year’s General Assembly session which will start soon after the summit.

DH: Will the G-4 be relevant for pushing the Security Council expansion issue again since Japan had distanced itself a bit late last year?

ANAND SHARMA: G-4 is till relevant. Japan has come back to its ambit.
Excerpts from the Speech by Prime Minister Dr. Manmohan Singh on the Independence Day from the Red Fort.

Delhi, August 15, 2006.

My dear countrymen, brothers, sisters, and dear children My greetings to all of you on this day, the anniversary of our Independence.

1. Today is a very auspicious day for our country. Today we enter the 60th year of our Independence. Today we re-dedicate ourselves to the progress and prosperity of our nation. To the welfare of all our people. To the unity and integrity of our country.

* * * * *

28. Our other concern is national security. India is facing two major threats to its internal security. Terrorism and Naxalism. Just over a month ago, Mumbai witnessed the most inhuman terrorist attack in the recent past, killing and injuring hundreds of innocent citizens. The entire nation was pained by this suffering. Mumbai demonstrated its courage and patience and showed its resolve not to be cowed down by these incidents.

29. I had said in Mumbai then that it cannot be business as usual for any of us. Terrorists want to undermine our growing economic strength; destroy our unity; and provoke communal incidents. We cannot allow this to happen. Our strength lies in our unity. We will not allow the secular fabric of our country to be broken.

30. I give my assurance to every citizen that we will do our utmost to preserve our unity and integrity, to make our country safe and secure for every citizen. We will modernize, strengthen and properly equip our security forces and our intelligence agencies. We will leave no stone unturned in ensuring that terrorist elements in India are neutralized and smashed. Let those who want to hurt us by inflicting a thousand cuts remember – no one can break our will, or unity. No one can make India kneel.

31. While terrorism has been raising its ugly head time and again, we have also seen peace having its victories. The people of Jammu and Kashmir continue to face the wrath of terrorism. But they have
also seen new rays of hope for peace and progress. New links of connectivity have brought people on both sides of the Line of Control closer – Srinagar to Muzaffarabad, Poonch to Rawalkot. Through the Round Table Conferences, we have started a dialogue with all political groups and parties of Jammu and Kashmir. We are jointly exploring new pathways to build a better tomorrow for its people – a tomorrow where they can live in peace and dignity, free from fear, want and exploitation.

* * * *

35. Every Indian wants to live in a neighbourhood of peace, stability and prosperity. People in our neighbouring countries share the same aspirations. South Asia is a common cultural and economic unit. Our past and destinies are inter-linked. India, as the largest country in the region, is ready to give our neighbours a stake in our own prosperity and share the fruits of our growth with them. However, the dream of a South Asian community, where borders have ceased to matter and there is an unhindered flow of goods and peoples, culture and ideas, can hardly be realized if terrorist violence and the politics of hate and confrontation continue to cast a dark shadow.

36. We are prepared to work together with all our neighbours to usher in an era of peace and prosperity for our peoples. We have taken several initiatives in this regard, in particular with Pakistan. To be successful, these initiatives need an atmosphere of peace. It is obvious that unless Pakistan takes concrete steps to implement the solemn assurances it has given to prevent cross-border terrorism against India from any territory within its control, public opinion in India, which has supported the peace process, will be undermined. All countries in our region must recognize that terrorism anywhere is a threat to peace and prosperity everywhere. It must be confronted with our united efforts. There is a large constituency for peace and shared prosperity among our people and we must work together to build on that.

37. In the past two years, we have succeeded in creating an international environment which supports our development aspirations. Our relations with the United States of America, Russia, China, Japan, and the European Union, have never been better and with Russia, we have further strengthened our time-tested partnership. In South-East Asia, India has been welcomed into the East Asian Summit.
There has been a significant expansion of both our political and economic links with countries of the Gulf and the Arab world. The continents of Africa and Latin America are now the new areas of focus for our diplomacy and India’s engagement has become truly global. We are recognized for the scale of our achievements since Independence and the world wants India to progress.

38. India is a young nation. India is a nation of young people. Our youth are ready to work hard for a bright future. Our former Prime Minister, Shri Rajiv Gandhi, was greatly concerned about the prospects for our youth and took many steps for ensuring a bright future for them.

* * * * *

F F F F F
016. Media Briefing by Prime Minister Dr. Manmohan Singh on board the Special Flight enroute to Brasilia.

September 11, 2006.

Q1. On the impact of terrorism on Indo-Pak relations

PM. Our position is quite clear. Terrorism today constitutes a threat for both countries. And therefore I believe consistent with the January 2004 statement, consistent with the September 2004 joint statement, consistent with the April 2005 statement that I and President Musharraf signed, it is incumbent on us to work together in a manner that inspires confidence that both of us are very serious about tackling the menace of terrorism. That's the minimum I feel our two governments, our two systems should commit to achieve.

Q2. Structure or agenda for meeting with President Musharraf

PM. We will be discussing all aspects of the relationship between our two countries. India is not afraid of any discussion.

Q3. Trust Pakistan

PM. There is a problem of trust deficit between our two countries. And we have to take that on board. We have to take adequate precautions and General Musharraf, he is the President of Pakistan and we have to deal with whoever is in power in Pakistan. And I have always said that the destinies of the two countries are very strongly inter-linked and full development potential of the sub-continent cannot be realized unless there is reconciliation between India and Pakistan.

Q4. On Disarmament at NAM summit

PM. As far as India is concerned, despite that fact that India is a nuclear weapon state, our commitment to disarmament remains strong. And that's our civilizational heritage. From Gandhiji, Jawaharlal Nehru to Rajiv Gandhi made concrete proposals for disarmament at UN General Assembly. And we will update these ideas and present it to the General Assembly this year. So there should not be any doubt that we are fully in support of any initiative which will help to promote universal nuclear disarmament. But one has to be realistic enough to recognize that this is not going to happen overnight. So any NAM initiative would have our support.
Q5. On Venezuela and Guatemala for non permanent membership of the UN Security Council.

PM. We have not taken any decision. I have asked our permanent representative at the UN to find out what are the prospects of various countries. We will take a decision well in time.

Q6. On Malegaon and Mumbai blasts

PM. We have to work harder. I called the Chief Minister’s meeting to discuss what needs to be done to strengthen our intelligence system, to promote greater co-ordination between states and between Centre and states. All these things, I think require a structured approach.

Q7. On Malegaon blasts- ruling out involvement of Right wing terror outfits

PM. It would be inappropriate for us to rule out anything or rule in anything. I think there should be a fair investigation which inspires confidence and brings out the truth and nothing but the truth without anything pre-conceived notion. That has to be the objective.

Q8. On NAM, India being isolated

PM. There is no question of India being isolated. Our stand is fully in conformity with what our founding fathers of the Republic would have liked us to do it. Non-alignment is a state of mind with the ability to exercise an independent judgement on all issues, I think in that sense, non-alignment continues to have its relevance.

I don’t buy this argument that most members of NAM do not want relations with United States. And we are not seeking good relations with United States at the cost of other countries. Our desire to normalize and expand relations with the US in no way contradicts or in no way runs counter to the interest of other countries.

Q9. On Malegaon blasts

PM. I have said this that we have to strengthen our intelligence set-up. Once events take place, we have to strengthen our investigative methodology. There is a problem. I do not deny that. We are doing the best we can. But there is considerable scope for improvement particularly in strengthening our intelligence gathering at the grass-root level, strengthening coordination amongst states and strengthening coordination between centre and the states.
Q10. On meeting Musharraf in Havana

PM. I will share with General Musharraf our perceptions of what’s the role of external elements in promoting terrorism in our country. We will have an exchange of views on all issues particularly the commitment of Pakistan to not to allow Pakistan territory and that includes parts of Jammu & Kashmir which is in their occupation to mount terrorist attacks against India.

Q11. On India’s air-strike capability being compromised.

PM. I don’t think it is compromised but certainly I think we have to keep our powder dry. We have to take note of the fact of what is happening in our neighbourhood. All these things have to be kept in mind.

Q12. Cooperation with developing as well as developed countries.

PM. Well, as have-nots of the world, we have to toss all the balls. I’ve always said that foreign policy is essentially a device to widen our development options. The foremost problem before our country is to get rid of chronic poverty, ignorance and disease which still afflict millions of people. We need a strong economy. We need a fast growing economy. We need a pattern of growth which creates a lot more jobs. Whether it’s improving relations with the US or improving relations with China or choosing the potential of cooperation with other developing countries whether in Africa or in Latin America, I think it fits into the over-all picture of making use of all opportunities to expand our economic and other multi-faceted contacts with other countries.

PM. Yes I’ve said there is a need for a full-time foreign minister and hopefully when I go back there should be a foreign minister in place. I’ll be back on the 18th and I think soon thereafter.

Q14. On Cabinet re-shuffle.

PM. You asked a question about the foreign office. As of now I am thinking of only having a foreign minister.

Q15. On cooperation with Brazil.

PM. Brazil has always fascinated me personally – there are people like Celso Furtado, the great Brazilian economist. Brazil is now in a state of development where there are many complimentaries between Brazil and
India. I do believe our trade is expanding fairly fast. Brazil is an agricultural superpower. We can learn a great deal from the way their universities function, the way agricultural research function. Brazil has done remarkably well in energy security, they have offered us participation in exploration and development of their oil-fields. And also the ethanol initiative - Brazil has become nearly self-sufficient in its energy requirement. There is considerable scope for participation in the science & technology, in energy, agricultural technique and agricultural research, in all these fields we can learn a lot at the same time I think Similarly, Brazil can learn a lot from our development experiences.

Q16. On football coaches from Brazil

PM. Brazil’s credentials as a football power are well-known. Mr Priyaranjan Dashmunshi has asked me to raise this matter with the government of Brazil even though this does not happen to be a subject between two governments.

Q17. Football and sports links.

PM. We must promote increased interaction with other countries. That also applies to the field of sports also. If we are going to have the Asian Games, if we are aspiring to have the Olympics in our country we must improve our capabilities in sports. If cooperation with other countries includes getting help - some coaches from other countries, I don’t see anything wrong in that.

Q18. On NAM bi-laterals

PM. Various meetings are being lined-up. And you will know on due course.

Q19. On Indo-Pak talks no progress has been made.

PM. I don’t see from recent meetings that’s correct. I think we have moved very considerably over the last two years. Transportation routes have been opened up not only between the two parts of Jammu & Kashmir but also between our Punjab and their Punjab. Amritsar and Nankana Sahib, Munnabao and Kokrapar. Also two years ago, you could not say we would allow Hurriyat people travel freely wherever they wanted to go. They have been going on all directions. It’s an unprecedented development. People of both countries including the two-parts of Jammu & Kashmir are meeting frequently to discuss possibilities of cooperation. So I don’t know if it’s
correct to say that no progress has been made. We have been discussing various issues at part of the composite dialogue. We can and we should move forward. But this terrorism will surely act as a damper. I have said more than once that I can’t carry the Indian public opinion with me if terrorist acts continue to plague our polity. Whatever, be the cause of that puts a damper on Indo-Pak relations. Whether in Mumbai or elsewhere if these events take place that certainly vitiates the climate.

Q20. Terrorism and peace moves, how do you reconcile both?

PM. As far as India’s concerned, I think, we’ve given them substantial amount of evidence. But as far as the past is concerned, Pakistan sponsored terrorism has certainly been a fact of life. And the fact that Prime Minister Vajpayee and President Musharraf signed the joint statement in 2004 was in a way a tacit recognition of the ground realities and their solemn agreement to move forward in the reverse direction. But it is also true that incidents take place in Pakistan also. That Pakistan is also a victim of terrorism. These groups, whether it’s Lakhsar-e-Toiba or Jaish-e-Mohammad, they can act autonomously also. But our experience has always been in the past there has been, I would not use strong words, but our worry has been that Pakistan government has not done enough to control these elements.

PM. I think what we want is an inclusive growth not only domestically, but also an inclusive globalization where the benefits of the tremendous advances in science and technology lead to the improvement of the human condition all-round. It’s certainly possible as never before in human history to abolish poverty, ignorance and disease; the means exist, the technology exists. What is missing is the social engineering. And it’s a task for the world statesmen. We have a global economy of sorts but we lack a global polity, a stable global polity. We need to democratize the structures of governance at the international level so that concerted efforts can be made to make the process of globalization as inclusive as it should be.

Q22. Cooperation with Cuba

PM. I think we can learn a great deal from Cuba (and China as well). Universal literacy, their health-care standards. And these are areas we need to improve our own performance and we have a great deal to learn from other developing countries.
Q23. Democracy in Pakistan

PM. The general belief is democracy is good for Indian people and is good for the people of the world. But what system prevails in Pakistan is for the people of the Pakistan to decide.

Q24. On Lankan ethnic issue

PM. We are in contact with the Sri Lankan government. We are also in contact with the facilitators-the Norwegians. And our effort is to ensure that the ceasefire holds and that both parties are scrupulously committed to preserving the ceasefire. I think that’s an essential pre-requisite before we can move forward to a durable solution.
017. Press Conference of Prime Minister Dr. Manmohan Singh on board the Special Flight en route from Havana to Frankfurt.

September 17, 2006.

Q1. On meeting with Cuban President Fidel Castro

PM. I had a memorable meeting with President Fidel Castro. I spent about 40 minutes with him. And we covered a whole range of issues from the future of the international financial system, the future role of NAM, India’s development prospects, how we were dealing with our population problem, food problem and energy problem. So that’s a meeting I will always remember forever. I felt I was in the presence of one of the greatest men of our times. He recalled his affection for Jawaharlal Nehru and Indira Gandhi, on the whole it was a most satisfying meeting. I had gone there only to greet him but he engaged me in intense discussion, asking searching questions on India’s economic problems, our food problems, our energy situation and how we ought to conserve energy, what Cuba is planning to do to conserve energy. What Cuba has done to promote human development with emphasis on health and education.

Q2. On Fidel Castro’s health

PM. He was weak, but he was sitting and for 40 minutes was engaged in a very intense dialogue- showed no signs of tiredness. And at the end which he said if the NAM meeting had been held two days later he would have been able to preside over it.

Q3. On condemning USA

PM. We did not go into any condemnation of anybody, but he did say that the world’s financial system is faced with many uncertainties with countries like the United States absorbing the bulk of the world’s savings. So he said, there were risks about the future of such a system.

Q4. On Pakistan’s trust deficit

PM. It is not a one day process, as I have always said we cannot choose our neighbours, we can choose our friends, we have to do business with our neighbours. General Musharraf, he is the ruler of Pakistan and therefore, we have to learn to deal with him. I have said it once before also in all these matters there is such a thing as trust and verify. We have now
agreed on a new mechanism to deal with terrorism. I think the explicit mention that both of our countries condemn this scourge that we will work together. I do think it is a new beginning. I hope it works, but if it does not work, then also we have to deal with the consequences.

**Q5.** On mechanism to tackle terror

**PM.** I look upon this mechanism which has yet to be worked out. This mechanism that we are put it place must be credible, must inspire confidence in both our countries and therefore, we will have to look at the mechanics of the move with due care.

**Q6.** Motivation for decision?

**PM.** Well it is quite obvious to Pakistan that things can not be business as usual if terrorism is not under control- or if the government of Pakistan is seen not to be willing to work with us to control terrorism. I think that’s a the commitment I welcome and as explicitly as it could be stated it is a reiterated in the statement that we have issued. General Musharraf has assured me that Pakistan has no hand in perpetuating this He did not go into the past. He said whatever has happened in the past, let’s work together in the future and I believe, this is the best that we could get in the circumstances.

**Q7.** Paradigm shift ?

**PM.** Well, I am not going into the causes of it. All that I am saying is that there is an explicit commitment on the part of Pakistan to say that they will work with us to do all that is in their control to control this scourge.

**Q8.** US role in agreement.

**PM.** There was no question about the US .... All countries in the world would like neighbours to work with each other. President Castro also asked me how are our relations with Pakistan and I did mention to him that we had a very good meeting, we had problems in the past and that these terrorist elements are not under control. We had discussed these matters. He then asked me questions about the about the rehabilitation in the wake of the earthquake, what we had done what hey had done to help Pakistan. I totally deny any insinuation that whatever we have with Pakistan is at the behest of US or any other country, it is in protection of our own sovereign national interest.

**Q9.** J&K CM’s statement.
PM. Well, I have not seen what the J&K chief minister has said. Therefore, I am not able to comment constructively on what he has said.

Q10. After Cuban visit do you think you have done enough for the Aam Admi in India.

PM. Let me say, we should be doing a lot more. I have already said that our attention to social sector development is not as strong as it should be. There is a big backlog of illiteracy, there is a big backlog of improving health standards of our people, infant mortality rates, life expectation at birth in our country should be better than what they are now. I am conscious of the distance that we have to travel on these points.

Q11. On Jammu & Kashmir

PM. We have had a very sincere frank and sincere discussion on all issues. As you know, President Musharraf recalled what I had stated that borders can not be redrawn. And his statement that they cannot accept the Line-of-Control as a permanent solution. We both agreed that we have to find via-media to reconcile these two positions. And I do believe that we should work in all sincerity to think out of the box to deal with this situation. We have committed ourselves to work sincerely to find credible solutions to all outstanding issues and that includes the Jammu & Kashmir issue.

Well, Siachen & Sir Creek were mentiond in statement of April last year. They have been again mentioned – so that is part of our commitment.

Q12. If any more terrorist attacks take place again in India.....

PM. Let us not deal with an hypothetical question. I can not say for example that we have bought forever security for our country. Life is much more complicated than to be put in black and white. All I can say is we have made an advance. Let us give it a trial. Let us approach our taste of reconciliation between India, Pakistan with all the sincerity that we can bring to bear this task.

Q13. last meeting with Mushrraf.

PM. Let me say our last meeting was very tense, it was in the background of what Pakistan had stated in the General Assembly. They talked of self determination and then we were naturally very angry. I said since we are—It is unfortunate that meeting did not produce solid results. This time, my meeting with him was very frank, very cordial, there was no tension and I was very pleased with the outcome.
**Q14.** Terror structure in Pakistan

**PM.** We will discuss all these issues. Let’s not jump the cue, let this mechanism be in place, we will explore all the ways with which we can rid the sub-continent of the scourge of terrorism.

**Q15.** Inaudible….

**PM.** Extremism of all sorts can hurt modern polities. Tolerance and peaceful coexistence are part of our civilizational heritage. Whether it is Hindu fundamentalism or any fundamentalism of other religious group, it certainly makes the task more difficult than would be otherwise.

**Q16.** On President Chavez reference to South – South commission report.

**PM.** He did refer to the report that I was a party to and said he was in jail and had read it from cover to cover. He said the time had come to do another report. That report was written in 1990. Times have changed and therefore there are opportunities to re-look at the options. And we as nations and as countries of the South and countries of the Non Aligned do believe that the Non Aligned Movement needs a revision and a new sense of direction.

**Q17.** Shift in stand?

**PM.** There is no shift in our stand. We are worried about cross border terrorism. But its no use condemning that and doing nothing. Where ever opportunities exist to cooperative action to tackle this problem, to save human lives, we should toss all the balls that we can in quest of a safe and secure life for our citizens.

**Q18.** Extradition.

**PM.** All relevant issues should be discussed in this forum. I cannot say that I have discussed what will be the outcome. This is an optimism which we must make use of constructively as much as we can. And as for the outcome we have to wait for it.

**Q19.** NAM revitalization.

**PM.** The world is yearning for a new road map to deal with its problems. I mentioned to you on my outward journey that at the end of the cold war – there was euphoria in all the developed countries as if capitalism had proved
triumphant and that we were at the end of history. I think that confidence today no longer prevails in most parts of the developed world. There is a sense of insecurity, there is a sense that the world is drifting apart, and that if these tendencies are not corrected, not reversed they threaten to destroy our civilization. So I do believe as I said in my speech to the NAM this is a unique time for men and women of goodwill, understanding and commitment to the ideal of one world and the common destiny-of the entire human race to sit together to find new pathways to bring about peace and harmony on our planet. And I do believe India has a role to play.

**Q20. Meetings with Iran president and Venezuelan president**

**PM.** Our bi-lateral relations with these countries. We also discussed international relations and with the President of Venezuela I had a very good discussion on how to promote cooperation in the field of energy. And those prospects if realized can add to our energy security in a big way.

With the President of Iran, I said Iran is our neighbour. We have centuries old ties of civilization, culture with Iran. There has been some misunderstanding over this one particular vote. But I reiterated that that’s a thing of the past. And I reiterated to the President that we recognize that Iran as a member of the NPT and must have all the rights for peaceful uses of nuclear energy and all the obligations. And if there are any doubts in the minds of the international community, those doubts should be resolved through constructive dialogue, discussion rather than through any exercise of any degree of coercion. The President agreed that our two countries must work together to strengthen our relationship in every possible way. Reference was made to the Iran-Pakistan-India pipeline. Experts are looking at the feasibility of this pipeline and once that report is ready, we will re-look at what can be done.

**Q21. Mohabat Zindabad says Musharraf.**

**PM.** I have said I am very pleased with the outcome with the meeting with General Musharraf.

**Q22. On Shashri Tharoor’s candidature**

**PM.** Wherever I got an opportunity, I raised this issue with heads of state and heads of government that we have an outstanding candidate in Dr. Shashi Tharoor for the post of Secretary General of United Nations. And you would have noticed that contrary to what some people have been writing in our country- he is running very strong. In the last straw poll that
was conducted he came number two. It is a difficult task. For the first time I think we have dared, we have told the world that we are ready to assume our role in the management of international polity. It is not going to materialize in one day. I recognize that there are difficulties—but I remain hopeful that Sashi Tharoor will give a very good account of himself in this task that he is engaged in.

Q23. Visit to Pakistan Foreign Secretary level talks

PM. I have said that I will be very happy to go to Pakistan at an appropriate time, dates will have to be fixed through diplomatic channels and we must also have solid work to accomplish. That invitation has been there and I have accepted it.

And as far as the foreign secretary we have a new foreign secretary—an outstanding civil servant—let him settle down and then he will get in touch with his counterpart.
018. Speech of Defence Minister Pranab Mukherjee at Harvard University on global terrorism.

September 26, 2006.

I am honoured to be amongst this distinguished gathering at America’s oldest and most prestigious university, and to share some thoughts with you on India’s strategic environment and perspectives. Harvard is a great centre of global intellectual discourse; it has given great personalities and great ideas; great citizens, great teachers and six Presidents to the United States of America. What better place, therefore, could we have to reflect on this important theme!

We live in a time of monumental changes in international affairs. Our strategic environment is in a constant flux. The era of cold war has come to an end. The Soviet Union has disintegrated and the socialist world stands transformed. A new Russia, along with a series of new countries, has emerged in the former socialist space. India, China, and several other medium powers are rapidly growing in capabilities and global influence. Globalization is underway in every continent, knitting together industries and economies across nations and creating a radically different order. The rise of religious fundamentalism and terrorism is today one of the gravest security challenges to states, economies, peoples and democratic polities. It has been starkly etched in our memory by the recent Bombay blasts, the London, Madrid and Bali bombings, and, of course, the traumatic terrorist attacks on the United States five years ago.

There have been huge gains from globalization, information revolution, and steady democratization through the latter half of the 20th century. At the same time there are also enormous pressures on states, both from within and without, because of the simultaneous pulls of these forces. The nature of threats and security discourse are, as a result, radically changing; nontraditional security issues are occupying increasingly greater space in policy formulation, even as the challenge of securing states and the democratic political order from armed fundamentalist and separatist actors confronts us as never before.

India’s strategic perspectives have been shaped by its long civilizational history, its geography, its culture and geopolitical realities. The country is both a continental and maritime nation with a territory of over 3 million sq kms, a land frontier of 15,000 kms, a coastline of 7,500 kms, and a population of 1.1 billion, the second largest in the world. Its
location at the base of continental Asia and the top of the Indian Ocean gives it a vantage point in relation to both West, Central, continental and South-East Asia, and the littoral States of the Indian Ocean from East Africa to Indonesia. India’s projection into this vast and critically important waterway gives it a major stake in its security and stability.

Traditionally, India has been an open society. It has received and absorbed major influences from outside, like Islam and Christianity, and radiated its composite cultural influences outward. India’s civilization, along with the Arab, Persian and Sinic civilizations, influenced many parts of Asia. India has also been a well-spring of human intellectual and spiritual achievement, and the source of the great religious schools of Hinduism and Buddhism. As I have said earlier to another audience in this country, it is customary to talk of strategic perspectives in terms of ‘hard’ power; however, our strategic perspectives need to be viewed also in terms of India’s ‘soft power’ – those of religion, spirituality, culture and commerce; and in recent times, the political thought and peaceful strategy of Mahatma Gandhi. The coincidence of the commemoration of the 9/11 terrorist attacks in the United States earlier this month with the 100th anniversary of the launching of Gandhi’s non-violent civil disobedience movement in South Africa on September 11, 1906, represented a juxtaposition of diametrically opposing ideologies.

Developments from the 17th century onwards fundamentally altered the traditional orientations and moorings of India’s relations with the outside world. European mercantilism evolved into the maritime domination of the Indian Ocean, changing the very nature of political, trade and cultural ties between India and its regional maritime partners to the east and the west. Further north, in mainland Asia, it introduced relationships of domination and rivalry between imperial powers, where earlier only local powers played out their dynastic destinies. The legacy left behind for independent India was in some ways negative and disruptive.

Several developments in the 20th century, with their roots in imperial history, affected India’s traditional relationships with its neighbourhood. Perhaps the most fateful was the partition of India. Viewed from this perspective, it can be argued that the first half of 20th century was a decided aberration in the evolution of India’s historical and traditional relationship with the outside world. The historical experience of the British East India Company, and imperialism in general, left India suspicious of foreign trade. Following India’s independence, this led to efforts to build a self-reliant and
Indian economy, wary of deeper engagement with the world economy. The model stood us in good stead for a while. It helped set up a robust technical and industrial base. Self-reliance gave us self-confidence. This provided the base for the accelerated growth and increasing globalization of the Indian economy since the early ‘90s when sweeping reforms were adopted by the then Congress Government.

While colonialism disrupted our traditional links, the cold war delayed their restoration. The fall of the Berlin Wall and the end of the cold war has provided an opportunity to recover our traditional, historical linkages that had become weak during the cold war years, and to rediscover our interest in a wider and increasingly integrated global community.

While the growing economic strength of India has attracted worldwide attention, this endeavour is still a work in process. India’s major priority today is economic growth, which is inclusive and benefits all sections of society. For most of its history, India has been an open society and an open economy. This is the path it wishes to pursue in the future. India’s aspiration for continuing economic growth would depend on a secure and stable environment and its own ability to integrate with the global economy.

In the broad context of this nation-building endeavour, let me touch upon some of our principal security challenges.

The first is the challenge of terrorism. India has suffered the most gruesome and repeated acts of terror since the late 1970s – first in Punjab, then in Jammu & Kashmir, and in recent years in many other parts of our country. The Bombay blasts of 1993 were the original act of mass terrorism. India’s places of worship, symbols of its rapid economic growth, its prestigious centres of learning, popular shopping complexes and symbols of its vibrant democracy have all been systematically targeted. While in most parts of the world, terrorism is perpetrated by non state actors, in India it is sponsored and supported by state agencies from a hostile neighbourhood.

Second, since its independence, India has had to fight three wars on its western borders and one in the north. India continues to face a proxy war from across its western border. Its unresolved territorial and boundary issues with neighbours persist.

Third, India has been placed in an arc of proliferation activity running from east to west, which has had an adverse impact on our security situation. The possibility of linkages between proliferation of weapons of mass
destruction and terrorism, which has emerged in recent years, is of great concern for us.

Fourth, the fragile political fabric of states in India’s neighbourhood is a source of continuing anxiety. Pakistan remains a nursery of global terrorism. Post 9/11, Pakistan has reportedly helped the United States to fight terrorism along its western border with Afghanistan. But it has done precious little to dismantle the infrastructure of terrorism on its eastern border with India. Many terrorists roam freely in Pakistan. India has repeatedly stated that, in order to proceed with the ongoing peace-process between the two countries, Pakistan must implement the solemn assurances it has given to stop all cross-border terrorism. This has not yet happened. In this context, we welcome the positive results of the recent summit between Prime Minister, Dr. Manmohan Singh, and President Musharraf in Havana, in particular the decision to set up an institutional mechanism to tackle cross-border terrorism. If Pakistan claims to be a frontline state in the global war against terrorism, then it must do much more to dismantle the infrastructure of terrorism still intact on its soil.

On India’s northern border, Nepal has been ravaged by Maoist insurgency for many years. Mounting religious extremism in Bangladesh, coupled with illegal migrations, are a source of considerable concern for India. In Sri Lanka, the two decade old ethnic strife has grave political, economic and humanitarian ramifications for India. Thus, developments in these states may pose risks to India and undermine the stable and peaceful environment that India seeks for its own economic growth.

Fifth, India sits astride the Indian Ocean. The security of the entire region from East Africa to Southeast Asia is increasingly challenged by the rising incidence of violent conflict, growing fundamentalism and terrorism. It is also affected by trafficking in arms, drugs and human beings as well as piracy. 60,000 ships carry merchandise and energy from the Gulf to East Asia, through the Straits of Malacca, every year. Therefore, maritime security is a major preoccupation for India as it is for other littoral states in the Indian Ocean.

Sixth, with the Indian economy set on a higher growth trajectory, its demand for energy is, and will be, increasing rapidly. In this context, energy security and security of sea lanes of communication, on which India’s trade is dependent, assume significance.

In order to meet the challenges that India faces, it has been focusing on inclusive economic development, strengthening of its defence to deter
aggression; ensuring stability and peace in its neighbourhood; developing friendly and mutually beneficial ties in its extended neighbourhood like West, Central and Southeast Asia; and establishing strategic partnerships with all the major actors in the world, particularly the United States, European Union, Russia, China and Japan. In order to deepen its engagement with Asia-Pacific and ASEAN, it is also pursuing its ‘Look East Policy’.

India seeks a stable and strong neighbourhood. Its vision of South Asia is a peaceful and prosperous region where its neighbours see it as an economic opportunity and a partner in progress.

India’s nuclear deterrence is a measure of self-defence in a hostile and nuclearised environment. Its nuclear doctrine emphasizes no first use, non-use against non-weapon states, voluntary moratorium on testing and a credible minimum deterrence. India has been, and remains, a staunch advocate of nuclear disarmament and it has had an impeccable track record in the area of non-proliferation.

Beyond its immediate neighbourhood, India has been seeking to establish strong strategic partnerships with the major global players. The end of the cold war, and also its bipolar geopolitical architecture, has enabled India to pursue engagement with all great powers, specially with the United States.

China is India’s largest neighbour and developing stable and cooperative relations with it is a high priority for India’s foreign and security policy. With frequent high-level exchanges, including my recent visit to China, the process of building trust and understanding has gained momentum, and our cooperation has diversified across a wide range of areas. Our relations with China have reached a certain degree of maturity. We are both keen to build significant ties and identify newer areas of mutually beneficial cooperation. At the same time, we are striving to address our differences in a proactive and purposive manner, without allowing them to affect the comprehensive development of our relationship. As China grows in power and influence, it will shape our strategic environment in a variety of ways. India’s policymakers understand this reality and would evolve policy options to deal with the emerging situation. We look forward to intensifying the positive aspects in our relations where President Hu Jintao pays a visit to India later this year.

Our ties with Japan are also expanding rapidly. Japan plays a major role in our development programmes through its Overseas Development
Agency. In recent years we have stepped up our defence and security ties, based on the premise that all countries and regions need to cooperate actively in order to tackle effectively the evolving global challenges. I have recently been to Japan, where I had the opportunity to discuss in detail a range of issues with my counterpart and some of his senior Cabinet colleagues.

India has an institutionalised summit level dialogue with ASEAN, with which it has land and maritime boundaries. India’s trade, security and energy ties with East Asia and the Pacific region are set to grow rapidly in the coming years. Southeast Asia and China are already two of our largest trading partners in this region, and South Korea and Japan among the leading investors in our country.

Building strong and cooperative relations with the United States is one of the fundamental goals of India’s current foreign and security policy. The growing warmth between the two countries is based on shared values and common concerns. The US remains the dominant global power and central to peace, prosperity and security of the world. India believes that the emerging ties with the US in trade, investments, technology, defence, energy, nonproliferation, and counter-terrorism would have a major impact not only in the bilateral domain but also in a global perspective. Our partnership will also help shape global norms and institutions that are universally accepted and democratic. Clearly, Indo-US relations are set to emerge as one of the fundamental inter-state ties of the 21st century.

In this context, the decision of President Bush and Prime Minister Dr. Manmohan Singh, to address the shared challenge of energy security by engaging in full civil nuclear energy cooperation, is a welcome departure from the era of technology denial regimes imposed on India. India is now seen as a partner and not as a target of global non-proliferation efforts, precisely because its impeccable record in this regard is now fully acknowledged.

Our traditionally close ties with Russia have withstood the test of time. We greatly value our strategic partnership with that country, based on shared interests, mutual trust and benefit. The strength and stability of our relations are manifested by long standing defence cooperation and common concerns on issues such as international terrorism.

The European Union has emerged as another major global partner with which India has a summit level dialogue, based on strong shared
interests across a range of political, security and economic issues. We look forward to the steady strengthening of our close cooperation with our European partners, including France, Germany and the United Kingdom.

India has been fighting terrorism for many years. This challenge is complex on account of cross-border linkages. However, India rejects any linkage between terrorism and religion. India’s secular Constitution, entitles all its citizens the freedom of religion. Personal laws on marriage and inheritance are based on traditional religious codes. Our Constitution draws a clear line between state and religion. The tradition of religious tolerance and moderation remains strong in Indian society, despite occasional aberrations. In the struggle to contain and eliminate terrorism, India has sought to strike a balance between security imperatives and political measures. The cost to our security forces has been high but the political battle will be won. It is our belief that both in Jammu & Kashmir and in the North-East, stability, peace and reconciliation would be restored in the coming years.

Much will depend on the success of the ongoing peace process with Pakistan and its approach towards support to terrorism and irregular warfare both in India and Afghanistan. International pressure would have to remain on Pakistan to change, and to reform and democratize its polity. This would clearly be among the foremost tasks in international security in the coming years, and an area in which India hopes to work closely with other partners.

India has willingly contributed its naval capabilities to help safeguard the vital sea lines of communications that stretch from the Gulf of Hormuz to the strategic Malacca Straits. Towards this objective, we are actively cooperating with friendly navies in the region. India has backed a major security initiative to monitor shipping, mooted jointly by Indonesia, Singapore and Malaysia to enforce “compulsory pilotage” of the channel against pirates and maritime terror. India, as a major user-state, is willing to assist in the project and share its expertise in maritime security with nations of the region. With more than 50 per cent of India’s maritime trade passing through the channel, security of the Straits is important for us.

India has always sought a nuclear weapon free world and is determined to work with others to achieve the objective of universal and non-discriminatory nuclear disarmament. As this is a long term objective, India is willing to take interim steps to reduce the risks of nuclear weapons. At the current UNGA session, India will present a comprehensive paper on
nuclear disarmament, calling for early multilateral negotiations on a universal and non-discriminatory treaty banning the development, production and use of nuclear weapons, on the model of the Chemical Weapons Convention.

India does not harbour any territorial ambitions. It does not wish to impose any ideology on others, except to advocate peaceful co-existence and tolerance. India’s strong military, its maritime capabilities, and its nuclear deterrent are for self-defence and its highest national priority is rapid economic development. India is an open society and an open economy, and a vibrant democracy that is rapidly integrating with the world. It has the second largest Muslim population in the world that has rejected distorted notions of jehad and begun to embrace modernity like all other sections of Indian society. All the different segments of India’s society remain wedded to the ideals of secularism. India aspires to play an increasingly larger role in ensuring peace and prosperity in its neighbourhood, in a new and resurgent Asia that is likely to eventually emerge as the world’s economic and strategic hub.

Before concluding, I take this opportunity to express my sincere appreciation of the efforts being made by Harvard University to further promote studies on India and thereby contribute to closer understanding and stronger relations between India and the United States of America.
Let me begin by paying tribute to the Jawans and officers who defend our borders. I express to all of you our nation’s gratitude. Since I spoke to you a year ago, the armed forces helped to evacuate stranded Indians from Lebanon, and undertook flood relief operations in Gujarat, Maharashtra, Madhya Pradesh, Rajasthan, Chhattisgarh, and Jammu & Kashmir thus amply vindicating the trust our nation has reposed in our gallant armed forces.

When I spoke to you last year, I discussed the role of the armed forces in India’s task of modernization. Our security policy in the emerging global order is a reflection of our national purpose and of our search for peace and security within which to strengthen India economically, socially and technologically. Developing adequate defence capability and science and technology to meet all the contemporary challenges to our security is critical in this effort. And also to develop strategic partnerships, which enlarge our policy choices and improve our development prospects. It is this wider context and higher sense of purpose, which must guide our day-to-day decisions.

We are today in a situation where the pursuit of national interest requires the use of an integrated approach combining political, economic, military and other levers of both soft and hard power.

In overall terms, we face a world of unprecedented economic opportunities, and, at the same time, unprecedented political dangers. To navigate our way through these, calls for statecraft of the highest order.

Developing a national security strategy today is thus an increasingly complex intellectual challenge. The complexity is increased because we seek our goals in a rapidly transforming international context. The world today is moving towards multi-polarity in economic, cultural and most non-military spheres. Even political power is becoming more diffuse. Larger forces of technology and science are re-ordering the distribution of power in the world. Technology has empowered non-State actors to the point where terrorism is a major trans-border threat in many countries.

Similarly, the spread of science has led to the emergence of weapons
of mass destruction, most recently seen in its manifestation in North Korea, thus changing the regional balance of power and threatening trans-regional consequences. The transformed security challenges now include anarchistic ideologies, communalism of various kinds, threats from pandemics, and terrorism over and above conventional threats.

International terrorism is the principal challenge today to plural and democratic societies. It not only destroys human life and property but also endangers democratic values, social harmony and economic well-being. Terrorists are becoming increasingly sophisticated in the way they deal death and destruction. Our armed forces have to also deal with insurgents in difficult terrain. There is, thus, a necessity for us to upgrade our capabilities, which have traditionally been geared towards conventional threats, as well as our surveillance and interdiction systems.

Internationally, we have taken a firm stand that the fight against terrorism has to be long-term, sustained and comprehensive. It cannot be ad-hoc, selective or compartmentalized in terms of region, religion or organizations. Terrorist networks sustain themselves due to acts of commission or omission by states. Our strategy cannot be restricted only to the perpetrators of terrorist acts but should also seek to modify the behaviour of the states where terrorists find safe haven, sanctuary and material sustenance.

Interdependence between nations has grown exponentially. Ironically, the same communication and information technologies that have made terrorism a global threat have also eliminated borders to international capital and ideas.

Reorienting our strategic thought to deal with this complexity and to ensure our core national interests is a major challenge that faces us all. In concrete terms it must express itself in a re-working of our relations with the major powers and in our immediate neighbourhood.

Essential to our quest for a modern India true to its genius is a peaceful and prosperous periphery. I have often said that the countries of South Asia have a shared destiny. We can, to an extent, help create such thinking by giving our neighbours greater stake in our economic prosperity. We must be willing to make necessary adjustments in our domestic policies to accommodate this.

The fact, however, is that we live in a dangerous and unstable
neighbourhood. Within the sub-continent itself, we face problems of uneven development and its consequences. We cannot afford to see States fail. Political stability and a focus on human development in the region are in our strategic interest.

We have put Pakistan on notice that any democratic government of India would find it difficult to continue on the present path of addressing all outstanding issues unless the Government of Pakistan clearly deal with the issue of terrorism. The India-Pakistan Anti-Terrorism Institutional Mechanism will be a test of Pakistani intentions and capabilities to implement the assurances that they have given us since January 2004. The economic pull on migrants from Bangladesh of the Indian market offers opportunities to our enemies who seek to incite terrorism in India. And yet the overarching imperative for both Bangladesh and India is to find a pattern of cooperative engagement, which can convert recent economic successes to improve welfare for people on both sides of the border. This will change the economic imbalance, which is causing some of the difficulties that we face with Bangladesh.

Sri Lanka has recently seen an escalation of the civil war and there is still no clarity on whether both sides will live up to their professed desire for meaningful negotiations on a federal solution of Sri Lanka’s problems.

With China we have made a good beginning in addressing the border dispute and in creating mutual trust in a peaceful bilateral relationship. RM’s recent visit added another dimension to our multi-sided engagement with China, which is predicated on the recognition that these two rapidly developing and transforming nations need to come to terms with the rise of one another.

A critical aspect of our policy must be the rapid development of infrastructure in our border areas. This is now recognized to have major implications not only for our internal security but also as a force multiplier when it comes to our external security. The role of the military in this crucial area of our policy is central across vast areas of our borders.

India’s transformation over the last few years has also meant that our stakes in the world and our interdependence with the world has increased exponentially.

Our lines of communication which need to be protected are today not just the maritime links that carry our foreign trade and vital imports, but
include our other forms of connectivity with the world. None of this is possible without an active process of security cooperation with like-minded nations and littoral countries.

When we look at our extended neighbourhood we cannot but be struck by the fact that India is the only open pluralistic democratic society and rapidly modernizing market economy between the Mediterranean and the Pacific. This places a special responsibility upon us not only in the defence of our values but also in the search for a peaceful periphery. We have traditionally conceived our security in extending circles of engagement. Today, whether it is West Asia, the Gulf, Central Asia or the Indian Ocean region, there is increasing demand for our political, economic and defence engagement.

We, as the Government, have the will to undertake this new responsibility that devolves upon India. For instance, we need new and creative solutions to the security and development issues that we face in Afghanistan where our efforts to help the Afghan people arouse reactions from the Taliban and their sponsors who are still seeking to put the clock back.

We need to build our nation's capacity to undertake these new responsibilities. The armed forces of India are a major component of that capacity. Given the complex nature of our national security we must ensure a balanced development of our defence capability. Our army, navy and air force are in need of modernization. We need a modernization strategy that enables each of the forces to develop to the level required by the imperatives of our evolving defence doctrine. In pursuing that modernization, we seek the optimal blend of developing and producing indigenously and sourcing from elsewhere.

Our growing economic engagement with the world, especially the region around us, and the requirements of energy security will necessitate strengthening of our naval defence capability. Maritime security is gaining increasing salience in our strategic policy. Equally important is high quality air power so that we can strike with speed and accuracy, when required.

As we look at the components of state power in the 21st Century in terms of our comprehensive national power, we will have to find new and imaginative means of integrating our economic, technological and defence needs. The Defence Ministry has recently taken several steps to do so. One is the introduction of transparency in defence procurement, introducing
the Defence Procurement Procedures of 2006. The other is to address long-term proposals from an indigenous viewpoint, thereby giving a fillip to Indian industry.

The third is the new Defence Offset Policy for procurements. Transparency in procurement is a desirable objective both from the viewpoint of good governance and national security. Reports critical of such processes can demoralise the services, where they are untrue, and must be directly addressed, where they are true.

I appreciate the steps being taken to promote ‘jointness’ in thinking, jointness in planning and jointness in action. This assumes even greater relevance as we invest more in our naval and air capabilities and develop a modern and well-equipped navy and air force. The three services must work together to pack punch and ensure maximum impact in action.

The setting up of the Indian National Defence University (INDU) and the Joint Doctrine for the Indian Armed Forces must translate into joint training and into operational level joint doctrines. The INDU must act as a catalyst in promoting strategic policy analysis and planning. It must contribute to the development of long term strategic thinking.

India today is increasingly integrated into the world and has a renewed capability to deal with it. If our economy continues to grow I am confident we can find the means to meet the needs of our armed forces for equipment and other purposes. If our interests have grown so have the means available to us. Internal security is today a larger concern for us than direct external threats. In fact, the most virulent manifestation of the major external threat that we face is in its internal forms, as we saw in Mumbai in July.

The challenge for us is to show the wisdom to deal with this rapidly evolving situation. Our Government will consistently give the armed forces priority attention whether in terms of their equipment or supplies or in terms of service related issues. In conclusion let me, once again, congratulate all of you on your professionalism and dedication on behalf of a grateful and proud nation.
020. Press Conference of Pranab Mukherjee on taking over charge of the Ministry of External Affairs.

New Delhi, October 25, 2006.

EXTERNAL AFFAIRS MINISTER (SHRI PRANAB MUKHERJEE):
I am happy to be back to this room after almost ten and a half years. I left this room in May, 1996. Of course, all of you are aware a lot of stories and speculations were going on, but now it has come to an end.

I am fully aware and conscious of the responsibilities of steering the foreign policy of this great country, particularly at this moment when we are poised for playing a more important role and taking our rightful place in the comity of nations.

What is our objective? After all the foreign policy of a country is the extension of its national interest. Keeping that in view, our objective is to have sustained economic growth in the range of nine to ten per cent during the Eleventh Plan and a higher growth level during the Twelfth Plan on a sustainable basis. For that we require investment, we require technology, access to technology, and we also require – what is most important - to have peace and tranquility in our periphery and desirably all over the world.

Why I say all over the world is because if there be instability in one part of the world - in today’s context when the world is fast emerging as a real global village - it would have its impact on other parts. Therefore, in one word, to achieve our objective of attaining higher growth syndrome we require investment and technology, of course, state of the art. The precondition of attaining this higher growth is peace and stability in the region and in the world. Our foreign policy would be directed to achieve these objectives. Thank you.

QUESTION: I have a question specifically on the problem of terrorism that we have in our country today. A lot of it is rooted in Bangladesh. Bangladesh is fast emerging as the hub of terrorist activities in this region. Do you plan to talk to the Bangladeshi leaders and put some kind of force on them so that they curb and crack down on these elements whose activities are inimical to India’s interest?

MINISTER OF EXTERNAL AFFAIRS: It is not a question of applying force on any country. Every country is a sovereign country. But we have already taken this up with Bangladesh. Apart from taking it up at the officials’
level during the talks between the Defence Secretaries and Foreign Secretaries of the two countries, when Prime Minister Begum Khaleda Zia visited our country last time, we had a detailed discussion. In fact, in the discussion I myself was present. Of course in a different capacity, wearing a different hat, but nonetheless the issue was security and terrorism. We discussed this issue. We suggested to Bangladesh Government that it is in the interest of both the countries that the fundamentalist forces who are indulging in terrorist activities and violence should be curtailed.

**QUESTION:** There have been a lot of comments on whether India has credible evidence or not on the Mumbai bomb blasts vis-à-vis Pakistan and the ISI. What is the real situation vis-à-vis what is happening with Pakistan on this particular event and also generally with relations with Pakistan? What do you think is your view on the reaction this side? …(inaudible)…

**MINISTER OF EXTERNAL AFFAIRS:** My view cannot be separate from the view which we have taken and which we are pursuing already. I am a part of the Government. So far as the evidence is concerned, our law enforcing agencies have gathered certain evidence and we will share that evidence with the Pakistani authorities.

As we cannot alter our neighbour, it is desirable to live with our neighbour in peace and to create a tension-free situation on our borders, amongst our neighbours in the region. Thank you.
Statement by Minister of State E. Ahamed at the General Debate of the Sixth International Conference of New or Restored Democracies.

Doha, October 31, 2006.

Your Excellency Mr. Chairman,
Excellencies and Distinguished Delegates,

At the outset, I would like to congratulate the State of Qatar, on behalf of the people and Government of India, on its assumption of the Chairmanship of the International Conference of New or Restored Democracies. I would also like to express our sincere thanks and appreciation for the warm hospitality extended to me and my delegation by our gracious hosts since our arrival here.

It is a great honour for me to represent my Government at this Conference hosted by Qatar, a country with whom India has traditionally enjoyed warm and friendly relations.

I would also like to compliment Mongolia for its active and fruitful stewardship of the ICNRD during the last three years of its Chairmanship.

Mr. Chairman,

It is important to share experiences on democratization and to identify means by which to promote pluralistic and participatory democracy. In this respect, the significance of this Conference can hardly be overemphasized. The very fact that the participation in ICNRD has grown from 13 countries since the first conference held in Manila in 1988 to well over 100 countries, underscores the importance attached by a growing number of member states to the principles and purposes of the Conference and the success of this initiative.

Mr. Chairman,

As the world’s largest democracy and a country with well-established democratic institutions and practices, it is natural for India to support forums that recognize and seek to promote democratic governance. India is strongly committed to the underlying values and principles inspiring this Conference and it is in this spirit that we participate in fora like the one which brings us together today, or other similar initiatives. As a country with a long history and strong traditions of Parliamentary democracy, it is particularly heartening for India that a Parliamentary Forum is being organized in conjunction with
this Conference. The Hon’ble Deputy Speaker of Lok Sabha is representing our Parliament at that Forum.

Mr. Chairman,

India’s commitment to democratic values and processes predates our independence in 1947. The Father of our Nation, Mahatma Gandhi had called for universal adult franchise as early as 1931, long before India became independent. Our political leadership remained true to this commitment and the Constitution we adopted after Independence enshrined democracy based on free and fair elections and the associated principles including freedom of expression and political activity, tolerance of dissent, protection of human rights and the Rule of Law. The Indian democracy draws its inspiration from India’s civilisational ethos, the hallmarks of which are freedom, tolerance, mutual respect and diversity. Our society today is the culmination of centuries of assimilation of diverse peoples and ethnic groups. All the major religions of the world are represented in India. We have a tremendous diversity of languages, customs and traditions. The founding fathers of our Constitution were fully mindful of this rich civilisational legacy in their endeavours to provide a policy and legal framework for an India which achieved freedom through non-violent means 59 years ago and adopted a democratic polity as a natural choice to meet its tryst with destiny.

The real test of a democracy is not in what is said in the Constitution, but in how it functions on the ground. Free and fair elections are the foundation of a democracy. Over the past six decades, governments in India, at both the national and state level, have regularly sought the mandate of the people through elections. Our elections are conducted under the supervision of a statutory independent Election Commission, which has earned respect for its fairness and transparency, both at home and abroad. The conduct of General Elections in India for electing a new Lower House of Parliament (Lok Sabha) involves management of the largest event in the world. The electorate exceeds 670 million voting in nearly 800,000 polling stations spread across widely varying geographic and climatic zones. Polling stations are located in the snow-clad mountains in the Himalayas, the deserts of the Rajasthan and in sparsely populated islands in the Indian Ocean.

Mr. Chairman,

We believe that democracy based on universal adult suffrage empowers the most humble citizen of our country and give him a sense of dignity. Poverty, illiteracy or socio-economic backwardness does not
hinder the exercise of democracy. Quite the contrary, our experience of more than 50 years of democratic rule demonstrates how democracy is a most powerful tool to successfully overcome the challenge of development. But most of all, democracy alone gives the assurance that the developmental aspirations of the poorest citizens of our society will be taken into consideration. This above all, is the unique strength of a democratic system.

India has demonstrated that stable, long-term growth can be successfully realized alongside a thriving democracy, which leads to significant reduction of poverty and equitable distribution. Indeed, the Indian experience corroborates the inter-linkages and shows that implementation of proactive development policies and economic reforms, when coupled with a liberal democratic polity, leads to overall stability and growth.

Democracy and development are complimentary to, and reinforce each other. Both of them find their genesis in the aspirations of individuals and in the rights they enjoy. History has clearly demonstrated that cases where democracy and development have been divorced from each other have mostly ended unsuccessfully. Wherever they have co-existed, they have flourished in unison, enabling both concepts to take durable roots. Political democracy, in order to consolidate itself, needs to be complemented by economic and social measures that encourage development. The principles of democracy and the rule of law are also equally relevant for ensuring economic progress and human development, and for complete elimination of poverty. Timely achievement of the United Nations Millennium Development Goals (MDGs) is a key step towards meeting the needs of the humankind in the 21st century. This requires determined efforts by all concerned to fulfill their respective obligations.

Mr. Chairman,

Terrorism anywhere threatens peace everywhere. Our problems are global, so must our solutions be. While the promotion of democratic values and institutions cannot always be a complete antidote against the proliferation of terrorist organizations and practices, it is safe to say that the development of stable and consolidated democracies makes a very positive contribution to the medium and long-term strategies in the global efforts to combat the scourge of terrorism. Therefore, democratization is one of the effective ways of addressing the global challenge of terrorism.
Mr. Chairman,

We know from experience that democratic societies, which guarantee individual freedom and tolerance of dissent, provide an environment most conducive to creative endeavour, and the establishment of socially just societies. We, therefore, have an obligation to help other countries that aspire for the fruits of democracy. Democratic societies with established institutions must help those that want to strengthen democratic values and institutions.

Being a developing country with a diverse and heterogeneous polity, India is in a unique position of not only understanding the problems that a developing country taking its first steps towards democracy may face, but of also suggesting a whole range of approaches and solutions based on its own experience. India has been sharing its rich experience, institutional capabilities and training infrastructure with nations that share our values and beliefs and are interested in our assistance.

Mr. Chairman,

We have offered to share our experiences and undertake collaborations with other countries under the auspices of the United Nations Democracy Fund launched during the World Summit in New York in September, 2005. We had strongly supported the creation of this fund to which we have made an initial contribution of US$ 10 million. We are ready to share our experiences and expertise for projects under the UN Democracy Fund, especially in areas such as institutional building, capacity building, awareness creation and leadership development. We shall be glad to develop partnerships with interested countries in the ICN RD in this framework. Considering that some of participants of the ICN RD process are also members of other groupings with which India has an active cooperation such as SAARC, ASEAN, African Union, the Commonwealth and the Community of Democracies, there is considerable potential for us to work together.

Mr. Chairman,

Allow me to conclude my remarks by describing the vision which we have for a better world in the words of a great son of India, Gurudev Rabindranath Tagore and I quote:

“Where the mind is without fear and the head is held high, Where knowledge is free, Where the world has not been broken up into fragments By narrow domestic walls, Where words come out from
the depth of truth Where tireless striving stretches its arms towards perfection, Where the clear stream of reason has not lost its way Into the dreary desert sand of dead habit, Where the mind is led forward by thee Into ever-widening thought and action Into that heaven of freedom, my Father, let my country awake”.

Thank you, Mr. Chairman
I am delighted to be here at your meeting. On behalf of the people and Government of India, and on my own behalf, I extend a warm welcome to you all to this High Level Segment of the 18th Meeting of the Parties to the Montreal Protocol. I hope we are able to provide you a conducive environment for a purposeful and fruitful conference.

India's approach to the challenge of the protection of our environment was shaped by the very wise and perceptive observations of our former Prime Minister, Mrs. Indira Gandhi, who told the United Nations Conference on the Human Environment in 1972 that "poverty was the worst polluter".

In saying so, Prime Minister Indira Gandhi launched a global debate on the relationship between poverty alleviation, economic growth, and environmental conservation. In the years since then, an organized structure of multilateral agreements and institutions for realizing the goal of sustainable development has been developed.

It is this perspective of Indira Gandhi that also defines our own National Environment Policy, which we adopted earlier this year. Our policy says, "while conservation of environmental resources is necessary to secure livelihoods and well-being of all, the most secure basis for conservation is to ensure that people dependant on particular resources obtain better livelihoods from the fact of conservation, than from degradation of the resource".

To liberate people from poverty, to ensure the well being of all citizens, to provide employment for all, and yet pursue a sustainable development path that preserves and protects our common natural heritage - that is the challenge before humanity as a whole.

India has participated in major international events on the environment, since 1972. We have contributed to, and ratified several key multilateral agreements on environmental issues recognizing the trans-boundary and global nature of environmental problems and concerns, and their implications for long-term development. We have also participated in numerous regional and bilateral programmes for environmental cooperation.
Environment is something which unites the entire humankind because the entire humankind faces a single common environment. We also provide assistance to other developing countries, particularly for scientific and technological capacity building. We seek to help other countries meet their commitments under various international and regional environmental treaties.

At the national level too, we have set up an effective regime of policies, regulations, programmes, and scientific capacity for addressing sustainable development issues. Our national regime for sustainable development seems to have had a positive impact on our development process. Consider the fact that while in industrialized countries, key environmental parameters reversed their decline at per-capita incomes of $6,000-8,000 in Purchasing Power Parity terms, in India, this decline has been reversed at a per-capita income of $2,000 in Purchasing Power Parity terms. This is by no means a mean achievement.

The depletion of the Ozone Layer has emerged as a significant global environmental concern in the last few decades. In 1985, the Vienna Convention established mechanisms for international cooperation in research into the Ozone Layer and the effects of Ozone Depleting Substances (ODSs). Thereafter, the Montreal Protocol on Substances that Deplete the Ozone Layer was agreed upon on 16th September 1987. It was a binding multilateral treaty to protect the ozone layer by reducing to predetermined levels, global emissions of Ozone Depleting Substances. However, ratification by developing countries did not proceed rapidly, until the Protocol was amended in London in 1990.

We believe that the Protocol is successful in implementing a global phase-out plan for Ozone Depleting Substances. By and large, the national action plans and phase-out schedules have been adhered to. India has fulfilled, without exception, all our obligations under the Protocol. Indeed, we have done so in the case of all other multilateral environmental agreements we are party to. This has been done within the timetable laid down and, in some aspects, before the promised schedule. What are the reasons for our success in this arena? What lessons does our experience hold for the design of other multilateral agreements on the global environment? First, the treaty was preceded by strong scientific consensus about the causes of the problem; clarity about responsibility for the problem; the availability of mitigation technologies at reasonable cost; and, fairly accurate knowledge about the extent of resources needed to address the
problem. Second, and this is the key shift that occurred in the London amendment, the eventual entitlements to Ozone Depleting Substances on a per capita basis between developed and developing countries are identical.

Third, there are explicit financial arrangements set out, for meeting the incremental costs of changes in technology in, and transfer of technology to, the developing countries. These contributions are generally in line with the Principle of "common but differentiated responsibility and respective capabilities", and contributions from developed countries are voluntary. However, in terms of the realization of broader goals of sustainable development in developing countries, which must be a principal objective of multilateral environmental agreements, the Protocol could have done better. I say this because technology transfer has not occurred to any significant extent.

I am not referring to the simple sale of capital equipment embodying the technology, and related training in operations. Rather, I am talking about the development of capacity in developing countries to manufacture and further develop capital equipment they require. A provision in the Protocol that enables the use of trade restrictions to ensure compliance is also a source of concern. While fulfillment of commitments in multilateral environmental agreements by all Parties must certainly be ensured, the use of trade restrictions is in my view, not advisable. Such restrictions may adversely impact economic growth prospects and poverty alleviation efforts. We need to be more creative and less adversarial in our approach to compliance. Let us not seek trade advantages through the instrument of environmental treaties. This would nullify gains for developing countries accomplished after strenuous negotiations in the World Trade Organisation regime.

Let us not trim the flow of multilateral and bilateral resources for poverty alleviation to accomplish unrelated environmental objectives. Let us, instead, ensure that the financial and technological resources needed to accomplish agreed environmental objectives, consistent with growth and poverty alleviation strategies, are indeed additional. And that they are administered efficiently through dedicated and well tried out mechanisms. I urge you to approach the global environmental agenda keeping in mind these lessons. India is a multi-cultural, multi-religious, multi-lingual and multi-ethnic nation, a country of over a billion people seeking their salvation within the framework of an open society and an open economy committed
to respect for all fundamental human rights and also committed to the rule of law.

The success of our experiment in nation building within the framework of a democratic polity, I believe, is vital to the future of mankind. If we are able to eliminate poverty, provide gainful employment to all and do this while protecting the environment, we would have shown a new path to sustainable development. It is therefore, imperative that we make the process of economic development more inclusive, make processes of globalisation more inclusive and make our societies and polities more inclusive. In doing so we can, I daresay, ensure that the harmony between man and nature is sustained for all times.

I do hope that the key Principles of sustainable development that inform the negotiations of the Meeting of Parties recognize the vital importance to humankind of finding a consensual means to address our common problems. I started by saying that the environmental concerns unite the entire humankind. I wish you all success in your deliberations, which have a vital bearing on the future evolution of humankind in this 21st century that we are going through.
023. Interview of External Affairs Minister Pranab Mukherjee to the TV channel CNN-IBN.

New Delhi, November 2, 2006.

Karan Thapar: Hello and welcome to Devil's Advocate. As attention starts to focus on India's relationship with China and United States, those are the two key issues I shall raise today in an exclusive interview with External Affairs Minister Pranab Mukherjee.

Mr Mukherjee, let's start with the Chinese President's visit to India, which has just been concluded. The joint declaration says, "International civilian nuclear cooperation should be advanced through innovative and forward-looking approaches while safeguarding the effectiveness of international non-proliferation principles." Do you interpret that as an endorsement of the Indo-US nuclear deal?

Pranab Mukherjee: No. After all we are also for non-proliferation. At the same time, what is being done with India, especially with regard to the Indo-US nuclear deal, they are giving a special treatment to India because of India's track record related to non-proliferation.

Karan Thapar: So, you're saying that China has not endorsed it?

Pranab Mukherjee: No. China has endorsed it. I am just explaining the 'innovative' word.

Karan Thapar: So, when officials of your ministry have given an assessment to The Hindu, as they did on Friday, to say that China will not come in the way of any decisions of the Nuclear Suppliers Group to lift restrictions on international civilian nuclear cooperation with India," you agree with that agreement?

Pranab Mukherjee: I hope so.

Karan Thapar: When you say hope so, is there some doubt? Is there some uncertainty?

Pranab Mukherjee: No. There is no uncertainty. I hope that they will not come in the way.

Karan Thapar: So you're con... Pranab Mukherjee: We shall have to recognise the fact that different countries have different relationships with different countries, keeping in view their own perspectives. Relationship of
one country need not stand in the relationship of the other country. Therefore, we shall have to keep that fact always in view while assessing the relationship between two countries.

Karan Thapar: Very interesting. Most people will interpret that to mean that if China does give Pakistan a nuclear deal similar to the Indo-US nuclear deal, India will have no objection?

Pranab Mukherjee: It's not a question of my objection or non-object. It's a question of what happens in the ground reality. Therefore, we shall have to keep in view... For instance, Pakistan is being supplied with sophisticated weapons by the USA over a long period of time. India is getting military hardware from Russia. But that didn't not stand in the way of building up closer relationships with each other.

Karan Thapar: I think your point is perfectly clear. I won't push you further. People will interpret it as they want. Indian newspapers have reported that in his one-to-one conversation with Prime Minister Manmohan Singh, President Hu Jintao indicated that China would accept and even support India's claim to a permanent seat in the United Nations Security Council. Can you confirm that such an indication was given by the Chinese President?

Pranab Mukherjee: Look, the talk was one-to-one. Therefore, you cannot accept what appears in the newspapers. Because none of these two, who had one-to-one talks, said anything about whether China will support or China will not support India's candidature to a permanent membership in the Security Council.

Karan Thapar: So the newspaper reports are purely speculative?" They're not based on fact?

Pranab Mukherjee: Of course.

Karan Thapar: Of course?

Pranab Mukherjee: Of course, speculative.

Karan Thapar: They are not based on fact?

Pranab Mukherjee: Of course speculative, and if it is speculative, it cannot be based on fact.

Karan Thapar: How would you sum up the visit that just ended? Would you say that it was a success? Confident that China will not come in the way?
**Pranab Mukherjee** : Why are you playing with words? In diplomacy, we don't play with words. What we say is we wait till the official outcome comes.

**Karan Thapar** : But you are confident?

**Pranab Mukherjee** : I am confident.

**Karan Thapar** : There is a lot of speculation that China might end up offering a similar nuclear deal to Pakistan. So far in the newspapers, there is no mention of it. But if it were to have been offered quietly and not made public, would you be concerned?

**Pranab Mukherjee** : We shall have to recognise the fact that different countries have different relationships with different countries, keeping in view their own perspectives. Relationship of one country need not stand in the relationship of the other country. Therefore, we shall have to keep that fact always in view while assessing the relationship between two countries.

**Karan Thapar** : Very interesting. Most people will interpret that to mean that if China does give Pakistan a nuclear deal similar to the Indo-US nuclear deal, India will have no objection?

**Pranab Mukherjee** : It's not a question of my objection or non-objection. It's a question of what happens in the ground reality. Therefore, we shall have to keep in view... For instance, Pakistan is being supplied with sophisticated weapons by the USA over a long period of time. India is getting military hardware from Russia. But that didn't stand in the way of building up closer relationships with each other.

**Karan Thapar** : I think your point is perfectly clear. I won't push you further. People will interpret it as they want. Indian newspapers have reported that in his one-to-one conversation with Prime Minister Manmohan Singh, President Hu Jintao indicated that China would accept and even support India's claim to a permanent seat in the United Nations Security Council. Can you confirm that such an indication was given by the Chinese President?

**Pranab Mukherjee** : Look, the talk was one-to-one. Therefore, you cannot accept what appears in the newspapers. Because none of these two, who had one-to-one talks, said anything about whether China will support or China will not support India's candidature to a permanent membership in the Security Council.
Karan Thapar: So the newspaper reports are purely speculative? They're not based on fact?

Pranab Mukherjee: Of course.

Karan Thapar: Of course?

Pranab Mukherjee: Of course, speculative.

Karan Thapar: They are not based on fact?

Pranab Mukherjee: Of course speculative, and if it is speculative, it cannot be based on fact.

Karan Thapar: How would you sum up the visit that just ended? Would you say that it was a success?

Pranab Mukherjee: It was a reasonably satisfactory meeting. I must say that after 10 years, the Chinese President visited India. We have achieved certain positive achievements. For instance, the bilateral trade. The target has been fixed to reach $40 billion by 2010. It has been recognised, and repeatedly the Chinese President referred in his public utterances that India-China friendship and close relationship is essential for global stabilisation and regional stabilisation.

Karan Thapar: In which case, why do you call it only reasonably satisfactory? Why that qualifying adjective?

Pranab Mukherjee: I think 'reasonably satisfactory' is quite a good word.

Karan Thapar: All right. Many people would say that sounds like half-satisfactory.

Pranab Mukherjee: No. Full satisfaction.

Karan Thapar: But you still call it reasonable?

Pranab Mukherjee: Reasonable, because satisfaction can't be unreasonable.

Karan Thapar: Let's move beyond relationships and let's talk about China's role in the region as a whole. In the last 10-15 years, China has been building a string of what they call 'Pearls'. These are basically military and naval facilities, which they have built in the Cocoa Islands, Burma,
Bangladesh, Pakistan, Sri Lanka, Seychelles and Mauritius. In addition, China repeatedly talks about Indian Ocean as its next frontier. And then on top of all of this, China has perhaps as many as 5,00,000 troops in Tibet, which is perhaps one Chinese soldier for every 15 Tibetans. It has 14 airfields, 10 missile bases and a growing stockpile of nuclear weapons. How do you view all of that?

Pranab Mukherjee : What should I view about it? Every country is entitled to prepare its defence preparedness as per its own threat percept.

Karan Thapar : Can I interrupt?

Pranab Mukherjee : No. As I am entitled to prepare myself to secure and my defence preparedness should be up to the mark to meet my requirement of my own threat perception. Similarly, any other country will have its own threat perception.

Karan Thapar : What threat perception requires China to set up naval and military bases in the Cocoa Island, in Seychelles, Mauritius, in Sri Lanka?

Pranab Mukherjee : That is for them to decide, not for you and me.

Karan Thapar : Let me quote you M K Rasgotra, the Convenor of your government's National Security Advisory Board. Speaking to CNBC this week on Monday, he said: "The effect of this is that it generates in any thinking Indian the feeling of being encircled" and then he added, "This string of 'Pearls', is heavy to wear." Do you agree with him?

Pranab Mukherjee : First of all, let me not comment on what somebody else has stated. The relationship between India and China is important to me and we ought to build on this relationship. We have to advance it. We have to progress further. I'm not entering into an academic debate about the defence preparedness of China vis-à-vis India's defence preparedness.

Karan Thapar : Your predecessors in this office, and particularly your predecessors in your last office as Defence Minister, were particularly worried about China's military planning and strategy in the Asian area. Are you worried?

Pranab Mukherjee : So what? I'm not worried because I'm quite confident that I will be able to defend myself.
Karan Thapar: It's also been said that parallel with China's military developments are political developments. It has extremely close connections with Burma, Bangladesh, Nepal, Pakistan and Sri Lanka, the Maldives and of course Pakistan. Vikram Sood, a former head of RAW, has written in The Hindustan Times this week, "The game to restrict India to the Asian subcontinent remains Chinese policy. Do you agree with this?

Pranab Mukherjee: I do not believe in their containment policy. We have gone one step beyond that. We have invited China to be the observer of SAARC, which they were not earlier. This is an indication of enlargement of cooperation, not a policy of containment of anybody.

Karan Thapar: So you don't think China intends strategically, tactically to contain India?

Pranab Mukherjee: What China intends, what China thinks will surely be taken into account in my strategic consideration. But surely, it's not for academic debate.

Karan Thapar: You say that you have taken this into account for strategic considerations, but a whole lot of strategic experts, including former foreign secretaries, former Army Chiefs...

Pranab Mukherjee: I'm sorry, they are all formers

Karan Thapar: But only formers can speak. Present ones can't speak.

Pranab Mukherjee: Yes. That's why you cannot expect me to speak. Only formers can speak. Present incumbent cannot speak.

Karan Thapar: Let me put to you the nub of the point they make. They say that in its relationship with China, India ends up being defensive, India ends up being reactive. Instead, India needs to be more assertive.

Pranab Mukherjee: I don't agree with that.

Karan Thapar: Let me give you an example. In the joint declaration, India has reiterated its acceptance of Tibet as an integral part of China. But in the same joint declaration, there is no reiteration of Chinese acceptance of Sikkim as an integral part of India. Why is that reciprocity missing?

Pranab Mukherjee: It is not necessary. Because, last time we had this.
**Karan Thapar**: But if it's necessary for India to reiterate its stand on Tibet, why is it not necessary vice-versa for China to do so on Sikkim?

**Pranab Mukherjee**: Because of obvious reasons, for the presence of the Dalai Lama here.

**Karan Thapar**: But there is an equally obvious reason that China has disregarded India's ownership and control of Sikkim and disputed it. Chinese maps until recently, in fact, showed it as an independent country.

**Pranab Mukherjee**: No. That was the position they had from 1974 till 2005. That's nothing new. In 2005, during the visit of the Chinese Prime Minister, officially it was recognised as an integral part of India.

**Karan Thapar**: Do you not think that in the context of the comment made by the Chinese Ambassador, just before the arrival of the Chinese President, staking China's claim, reiterating China's claim to the whole of Arunachal Pradesh that it might have been wise of India to be a bit more assertive in the joint declaration and request China to reiterate certain points?

**Pranab Mukherjee**: I told you that whatever was considered to be necessary to be put in joint declaration has been put. So far as the question of Arunachal is concerned, just yesterday, I replied exhaustively on the floor of Lok Sabha.

**Karan Thapar**: Did the Arunachal question come up in any official conversation that the Chinese President had either with the Government or with the Prime Minister?

**Pranab Mukherjee**: In what context?

**Karan Thapar**: In the context of the Prime Minister saying that we have objections or reservations about your Ambassador's statement?

**Pranab Mukherjee**: The Prime Minister did not mention it, (but) it has been referred to adequately. So far as the question of border is concerned, we have a regular institutional mechanism, which was set up by the previous NDA government. They have had eight rounds of talks. In the joint declaration, it has been mentioned that they will further carry on their activity to resolve the border issue.

**Karan Thapar**: So, critics who point out that India is very sensitive and attentive to Chinese sensitivities, but in response China is not...
Pranab Mukherjee: I don't agree.

Karan Thapar: You don't agree? You're happy with the relationship?

Pranab Mukherjee: Of course, and I want to improve it.

Karan Thapar: You don't accept people who say that when it comes to the strategic dimension, India sometimes behaves as if it is intimidated by China?

Pranab Mukherjee: No.

Karan Thapar: Let's talk about the Indo-US nuclear deal. There are perhaps six, may be eight, clauses common to either one or either of the versions passed by the US House of Congress which India has concerns with. How confident are you that they can either be removed or ameliorated to suit India's interest?

Pranab Mukherjee: We shall have to wait till the reconciliation conference takes place. Unless the reconciliation conference takes place and the final version of the legislation is available, it would be premature to make any comment on it.

Karan Thapar: I agree with you. But the problem is that some of the clauses that India has objections to are common to both versions of the Bill. I'm talking about clauses to do with nuclear testing, to do with the NSG and to do with the consequences of things like relations with Iran. Now given that they are common to both versions and that both versions were passed with majority over 80 per cent, can they be removed at reconciliation?

Pranab Mukherjee: There will be certain provisions which are binding on the administration. There will be certain provisions, which are not binding on the administration. Therefore, we shall have to take into account the totality of the legislation and the administrative response to it. So far as we are concerned, we have made our position quite clear that it must fit into the parameters set in the July 18 statement and the March 2006 separation statement. Therefore, so far as we are concerned, when the final version of the legislation comes, we shall have to see whether it is meeting our requirement or not.

Karan Thapar: Except for the fact that if there are clauses that are common to both Bills, in reconciliation, they cannot be removed because both Houses have agreed to them and agreed with 80 per cent majorities.
**Pranab Mukherjee**: Majority doesn’t have much impact so far as the approval is concerned. I’m not going into that aspect. Nor is it my job to analyse what will be the problems with the US administration with regard to the legislation, which the US administration is to implement. I’m only concerned whether the legislation is meeting my requirement or not.

**Karan Thapar**: Analysts point out and in fact officials of your own ministry would readily agree that India’s biggest problem doesn’t lie in either in the Senate version or the House version, it in fact lies in the nature of US policy. The problem is that US policy bars to all countries sales of enrichment reprocessing and heavy water technology. More importantly, it bars to all countries the right to reprocess spent fuel of US origin. Can you find a way around those bars in policy? That’s the real challenge.

**Pranab Mukherjee**: We have stated what we can accept. The agreement that was signed between the Prime Minister and President in July 2005 and the separation plan, which we have placed before the Parliament, there we have strictly laid down the parametres. We have repeatedly told the US administration, the PM also spoke to President Bush, I spoke to Secretary Rice and we all made it very clear that it is acceptable to India only if it fits into the parameters prescribed in these two statements.

**Karan Thapar**: Except for a small simple fact. The Indian Prime Minister on August 17 made it crystal clear that India wants the full civilian nuclear cycle, including technologies for enrichment reprocessing and heavy water production. US policy bars that. On August 17, therefore, India’s position and US policy have been in apparent conflict.

**Pranab Mukherjee**: Why should we bother about apparent conflict? What we should bother about is what is going to be the ground reality.

**Karan Thapar**: You are hoping that the US would give you a waiver on policy, which they have done for very few countries?

**Pranab Mukherjee**: I’m afraid if they did not want to do it (grant a waiver to US policies), then there was no point in making this exercise at all. Everybody knows what is their policy and when the United States of America agreed and when the US establishment went all out to see that the Bill gets the Congressional approval, there are reasons behind that. Our position is also known to them. They are fully aware of their own legal positions, their policies. We need not preach to them their policies.
Karan Thapar: Let me take up the waiver that is most important. I'm not talking about the waiver on sales. I'm talking about the waiver on the right to reprocess.

Pranab Mukherjee: We are just placing the cart before the horse. We need to wait for the final version of the Bill. How the establishment responds to the Act passed by the Congress and Senate.

Karan Thapar: Minister, I'm not talking about the issue that arises from the Bill, because the Bill can only give you a waiver on US law. I'm talking about your need for a waiver of US policy and it's US policy that bars sales of technology and it's US policy that bars right to reprocess fuel.

Pranab Mukherjee: I'm afraid, Mr Thapar, these policies existed before these negotiations started. These policies have not suddenly cropped up after July 18, 2005 and March 2006. Therefore, when these talks are going on, both sides know what is their policy. We know what is their policy. They know what are our parameters and what we require.

Karan Thapar: How confident are you that when the 1-2-3 agreement is signed -- I am not talking about the Bill going through Congress - that there will be no clauses there that India finds objectionable: be they to do with nuclear testing or be they to do with the right to reprocess spent fuel?

Pranab Mukherjee: My position is very simple. What is acceptable to me within the parameters, which I have laid down, which are clearly known to US establishment, everything will have to fall within those parameters.

Karan Thapar: We have to wait and see whether it does. But that smile on your face suggests that perhaps it might. Thank you very much for talking to Devil's Advocate.

Pranab Mukherjee: Thank you
024. Address by Prime Minister Dr. Manmohan Singh at the Silver Jubilee Conference of the Indian Council for Research in International Economic Relations.

New Delhi, November 6, 2006.

I am truly delighted to be here at the Silver Jubilee function of ICRIER. This is for me a home coming of sorts because I had the privilege of being associated with ICRIER’s creation as a founder-member of the General Body. I would like to begin by paying my tribute to the memory of Shri K B Lall, ICRIER’s founder and builder. Till his very end, he took keen interest in ICRIER’s work and even after he had ceased to be the Chairman of Board of Governors, would often visit the library and participate in seminars.

Shri K B Lall was a fine representative of a generation of visionary civil servants that India was fortunate to have in the early years after our Independence. They worked with the political leadership to create and sustain great institutions. It is significant that ICRIER was conceived of in the early 1980s, when Smt Indira Gandhi was the Prime Minister. There was already a realization that we had to pay greater attention to our economic relations with the outside world. Many of you will recall that in the late 1970s the Government had constituted several committees of experts to re-examine many aspects of our industrial and trade policies. Some of the distinguished personalities who authored these reports are present and I mention in particular, the name of Dr. Vijay Kelkar. This was also the time when China had initiated its Four Modernisations campaign and was becoming more open to the outside world.

Shri K B Lall was convinced that India had to make the transition from being an excessively inward-oriented economy to becoming a more outward-oriented one. This required preparation and changes in domestic policy. This would require Indian firms to become more competitive. The founders of ICRIER chose to build this institution to study all these issues and guide policy. It was only appropriate that ICRIER was initially housed in the building of India International Centre.

I do believe that ICRIER, under a succession of dedicated chairpersons and directors, has lived up to the expectations of its founders. In this context, I would like to record with deep appreciation the outstanding contributions made by Shri R.N. Malhotra, who was succeeded by Dr IG Patel as Chairman of the Board of Governors, and Dr. Isher Ahluwalia in
her many capacities of association with ICRIER in the transformation of this think tank as a leading forward looking institution on international economic relations. ICRIER’s research work has covered many issues pertaining to trade policy, industrial policy, exchange rate and balance of payments management, the international financial system, capital flows, migration and labour policies, and in all these areas, ICRIER has made a profound impact on contemporary thinking on these issues. I do think that ICRIER must continue with its focus and emerge as one of the foremost think tanks not only in India but in the world as a whole.

I have often said in recent months that I do believe that there are today no binding external constraints on India’s economic growth. Most constraints we face are inherently internal. This does not mean that external developments or trends may not re-emerge as constraints on our growth processes. Nor does it mean that we have taken full advantage of all the opportunities that are available to us. What it means is that the global environment is more benign today for India’s development than at any other time in recent history. However, we must remain prepared at all times to deal with any external challenges to our development process, develop the necessary analytical tools to forecast and anticipate global trends and their implications for us and design policy response systems which are rapid but flexible enough for our needs. This requires, among other things, a continuous study of the global economic scenario and a contextualisation of this for our policy design purposes. This should be in my view the focus of ICRIER’s work.

At the present time there is a great deal of optimism about India not only in seminar halls but also in board-rooms across the world. This optimism needs to be sustained and converted to tangible decisions that benefit our economy. For this, there is much we need to do at home. While the focus of Government’s policies will remain on domestic economic issues, institutes like ICRIER must continue to scan global economic developments and explore new opportunities so that our development goals are effectively met. ICRIER must chart for itself a clear research agenda that enables it to become the first stop and the last word on India’s relations with the evolving global economy.

In addition to developing expertise on multilateral negotiations, particularly in the context of WTO, ICRIER must also create internal expertise on our understanding of the regional economies, especially regions that matter to us. We need more expertise in India on what is
happening in our own neighbourhood in South Asia. Considering the rise of China on the global economic scenario, there must be a sharper focus on development trends in China and their implications for our development. ICRIER should consider acquiring a deeper understanding of China which would be of immense value to our economic planners, diplomats and the polity at large. And in this context, I listened with interest and approval the steps that ICRIER is taking to study developments in China.

We also need expertise on economic trends in East and South-east Asia, West and Central Asia, Africa, Latin America, Europe and North America. An issue that could come up in the near future is that of India’s membership of the Asia Pacific Economic Cooperation. As APEC is set to invite new members, we need to study the costs and benefits of APEC membership. We need to look at the effects of a pan Asian Economic Community or a Pan-Asian Free Trade Area. We need to examine the effects of the large number of Free Trade Agreements we are entering or planning to enter into. We also need a better understanding of the geopolitical dynamics which are giving rise to a new range of economic relationships. Their costs and benefits need to be compared to those of a simpler multilateral system. ICRIER can guide policy makers in government with informed analysis.

An area of trade which is relatively less researched and understood is trade in services, particularly financial services. Much of the literature and data on external economic relations remains largely focused on merchandise trade. In popular discourse, we often refer to India performing below its potential in merchandise trade. However, the situation is quite different in services trade, including trade in labour services. The study of services trade is still in its infancy and much more needs to be done, particularly in India, on this important area. In the last decade, services trade and inward remittances have not only outperformed merchandise trade but have kept our balance of payments in a comfortable zone. We cannot therefore under estimate the importance of this for our macro-economic management.

We need to know the extent to which principles that drive liberalization in goods trade apply to services trade particularly trade in financial services. We need to have a deeper knowledge of our relative strengths in many services such as entertainment, business services, retailing, finance and banking, construction, education and health. What should our policies be and what international regimes should we seek to promote in order to benefit
our interests in the global service economy? We need to have a better understanding of this whole complex area, particularly in view of its employment potential and our inherent strengths in some areas of services.

As the Indian economy modernizes and grows we should expect a reverse migration of talent, especially from within the diaspora. What I would call a “reverse brain drain” is in the making. How can we encourage this? What domestic policy changes should we make to encourage this? What are the likely implications for various sectors and regions of such a ‘reverse brain drain’. These and similar other questions must engage the attention of ICRIER’s researchers.

An area which is of increasing importance is trade in natural resources, particularly energy. India is not well endowed with natural resources on a per capita basis. We have to be therefore a major trading nation to overcome this natural resource constraint. However, trade in natural resources and energy is not governed entirely on a pattern similar to industrial goods. It is more complex and is closely dependent on geopolitical relationships. We need to study far more deeply the characteristics driving trade in natural resources particularly the energy resources; the impact of international economic relationships on this trade; the perceived drive by some countries for securing sources of energy and minerals in third countries and the implications of this for free markets in these goods; and, policy guidance for our own planners and diplomats to secure our own economic future in this vital area.

With the opening up of the economy to capital flows from abroad, new issues arise regarding the optimum course for macro-economic policies, particularly of fiscal and monetary policies, for a viable internal and external balance. We need to have a better understanding of the safe limits for capital flows from abroad. With a more open capital account, the management of the exchange rate also raises several new issues. Overall, the behaviour of international financial markets merits in-depth analysis.

Analysis of competitiveness has been a traditional research area in ICRIER. As global economic inter-relationships change rapidly, we need to improve our understanding of competitiveness in various sectors including the industrial organization, the progress of technology and the structures that are needed for a more integrated world. At the same time, technology is rapidly changing past modes of production, marketing, financing and service delivery with enormous implications for the growth of Indian firms. This needs greater analysis too.
I also believe that a think tank must engage public opinion at home and abroad and shape thinking on issues of interest to our country. For example, I have not seen adequately informed discussion at home on the pros and cons of the recent restructuring of voting rights within the IMF. Nor on the Asian Monetary Union that is being discussed in some circles. Nor even more importantly, on India’s place in the new evolving global order.

Think tanks like ICRIER must participate actively in the public debate on India’s place in the world and the consequences of increased global inter-dependence. I am often disappointed by the lack of adequate appreciation in our country, including among our political leaders, of the changing nature of our relationship with the world, and indeed with the region around us. Very often, we adopt political postures that are based in the past, indeed in the distant past and are out of line with our current interests as an increasingly globalised and globally integrated economy. India, I sincerely believe, is destined to be more globally engaged. We are destined to be more integrated with our own region. Even today, our energy security is closely inter-twined with our political relationship with a wide range of countries around the globe. Our food security, our technological security, indeed our national security, are closely linked to developments around the world.

However, one feels at times that there is inadequate recognition at home about the increasing inter-dependence between India and the world, and the consequences thereof for our domestic policies. Think tanks like ICRIER must therefore invest in informing and shaping public opinion and policy making in all these vital aspects.

It is this challenge that ICRIER should take up as it prepares for its next twenty-five years. I once again compliment all those who have been associated with ICRIER’s growth and development. You have served the country with great distinction in these twenty-five years but I venture to think that the best is yet to come. With these words, I wish you all many more years of productive and creative research in the service of our people.

New Delhi, November 7, 2006.

Mr. Chairman (Shri N.K. Singhji),
Dr. Isher Ahluwaliaji,
Ladies and gentlemen,

At the outset, I would like to congratulate ICRIER on its 25th anniversary and commend the excellent work that has been done by this organisation in contributing to the economic developmental processes in India. I am happy to be a part of these anniversary celebrations.

Many of us will recall the global excitement of the mid-1990s, when the technology boom was driving the global economy. The economic decline that followed - from the East Asian financial crisis to the downturn in technology stocks - had a greatly sobering effect on the global economy.

Today, that sense of excitement is back, particularly for us in India. Yet, this time around the sense of exhilaration is different. That is because there has been a maturing of the global economy - there is a sense of steadiness and stability, but yet there is also dynamism in the global economy. The global economy is indeed well poised for growth. With this as the overall backdrop, the economic growth registered by India does not really come as a surprise.

For India, these are undeniably momentous times — as our brisk march forward into the 21st century depicts. As we stepped into the 21st century, the Indian economy registered a growth rate of about six percent. In the more recent past it has been about eight percent. Double-digit growth rate, which every economy aspires to achieve, is no longer in the sphere of conjecture in India; it is very much in the realm of possibility. There is cause for optimism on various accounts that are indicative of our general economic well-being — the Sensex has crossed the 13,000 mark, exports have crossed the US$100 billion mark and has been accompanied by a 25 percent surge in exports, and there are rising foreign exchange reserves. It is not only government that is showing optimism on this account, the same is
true of the economic pundits, national and international, as well as international economic investors. Forecasts by Goldman Sachs and Morgan Stanley are universally known and are only two of the several that have been made, which predict and project the promise of a significant growth scenario for India.

India’s role in the global economy is defined by who we are. A nation of one billion people, where the principles of democracy form its core values, where free enterprise has free reign, where the rule of law is firmly rooted and an economy that has registered a sustained growth only matched by a few other countries.

In short, India’s political stability together with reform in the economic sector, in particular the financial sector, has been the driver of India’s economic development. But it would be remiss of me not to mention and acknowledge the commendable role of India’s corporate sector - India’s domestic entrepreneur who has proven his competitiveness in the international arena.

To understand India’s role in the global economy, it is essential to have a sense of the state of the global economy. While the state of the global economy at the turn of the century did raise some concerns, global growth rates have been quite steady in the past four years or so, at over four percent per annum. While large fiscal deficits continues to be an international phenomenon that raises concerns worldwide, there are also issues that are particular to a region or to a country that needs to be monitored carefully.

While geographic borders define nation states, economic borders are becoming increasingly seamless. The global economy is today a function of increasing cross-fertilisation. An idea germinating in one country is incubated in another and finds application in a third. Real-time globalisation is in effect. The global economy is increasingly defined by freer and substantive movement of ideas and capital and this movement is facilitated by the technology revolution, in particular information technology.

For a developing country like India, as is true for many other developing countries, perhaps the greatest challenge is to deal with the phenomena of globalisation. How does a developing country derive the maximum benefits of globalisation, and yet insulate the economy from the risks that are quite inherent to globalisation? It is also necessary to be cautious that in this delicate process, there is no backlash against
globalisation. In short, management of the process is a quintessential requirement. While the debate on the subject will continue, it is also a reality that India is inexorably engaged in this process of globalisation.

The role of India in the global economy is of no mean significance. In the ultimate analysis, this will only be enhanced as India’s middle-class grows. Much has been said on the subject of India’s middle class, and the growth of its purchasing power. The certainty of the potential that the growth of this sector of India’s population presents is unquestionable.

Mr. Chairman,

Ladies and gentlemen,

It is essential for me to be able to define our objectives so that India can achieve its full potential. What is it that the government will have to do to ensure that our dreams of achieving growth rates that will propel us to those magic numbers that are being forecast?

First and foremost, the infrastructure deficit in the country will need to be addressed. For India to maintain its momentum of economic growth, it needs better infrastructure, including highways, ports and airports, railways and most of all urban infrastructure that meet world-class standards. There is an urgent need for aggressive investment to improve the country’s infrastructure through higher levels of FDI. Here, public-private partnership can come together to play a critical role in the development of India’s economy. The government is fully engaged in this process. And my Ministry will be engaged in this closely to explore new avenues to harness FDI for infrastructure into India.

Secondly, India’s population potential is tremendous. We are a young country, with 50 percent of the population below the age of 25 years. To ensure that young India is not disadvantaged by globalisation, education is of critical importance. Access to education is essential. While government has taken several measures through policy and legislative frameworks, there is need for all of us to work together for ensuring and enhancing quality education for all Indians.

Thirdly, it is a combination of the population and excellent education facilities that provides the distinctive human resource of India. India’s competitive advantage has been on account of the highly skilled manpower that India has been able to produce. This has indeed been a matter of
great pride. We must be able to harness the full potential by investing in R&D, and providing more opportunities for innovations and technology development. Greater participation of the private sector in this area can provide adequate impetus to this area is the necessity of our times.

Fourth, energy security is of vital importance for India’s burgeoning economy. New and innovative methods of addressing the energy deficit in the global economy are a crucial need of the hour. While diversification of energy sources domestically will need to be accelerated on the one hand, diversification of energy sources internationally will also need to be intensified.

Fifth, greater global economic integration. India has for many years recognised the fact that its economic growth is closely linked to the economic progress of other countries. Measures have therefore been taken to strengthen the inter-linkages with other economies, institutionally. We have been very supportive of initiatives to strengthen SAFTA, BIMSTEC, and economic links with the ASEAN. This is in the neighbourhood of India. At the same time, efforts continue to strengthen linkages with our traditional partners in other countries in Europe, in Asia and in America. New initiatives in the Latin American continent and in Africa in recent times are also aimed at greater global integration.

Sixth, India has played a very significant role in the multilateral economic processes. We have worked closely with like-minded countries in the WTO, and in other economic fora so that the multilateral framework of economic cooperation can be harnessed for the benefit of India, and for other developing countries. Reform of the international financial architecture, viz. the multilateral economic institutions has also been an area of priority for us. Unfortunately, the international community has not been able to come together and develop a common approach to deal with issues that affect us all. India would need to continue to work with its partners to achieve its objectives in this important endeavour.

As I participate in this discussion and share with you my thoughts of India and the global economy, I am reminded of the importance of organisations such as ICRIER, which can play such a vital role in generating debate and discussion and in the opinion making on issues which are critical for taking the economic development of India forward. It is imperative to turn the many challenges and constraints that face us into opportunities for investment and growth. India’s renowned economists, so many of whom
are represented in ICRIER and in this Conference, must dwell on the manner by which this can be done most effectively and quickly.

I would like to thank ICRIER for giving me this opportunity to participate in these discussions. I wish the organisation all success in the future, under the dynamic leadership of Dr. Isher Ahluwalia.

Thank you.

026. Speech by External Affairs Minister Pranab Mukherjee at the ground breaking ceremony of Jawaharlal Nehru Bhavan.

New Delhi, November 14, 2006.

Foreign Secretary,

Director General, CPWD,

Distinguished guests,

Ladies & Gentlemen,

1. I am delighted to be associated with the ground-breaking ceremony of Jawaharlal Nehru Bhavan. This building, I am sure, will become another great landmark in these historic and beautiful surroundings. We were privileged to have Prime Minister here in February this year to lay the foundation stone of this building. Within the short period since then, the Ministry of External Affairs has completed various mandatory requirements and I am glad that construction is commencing today.

2. Today, the nation is also celebrating the birth anniversary of a great son of India – Pandit Jawaharlal Nehru. Panditji was not only the architect of our democratic, secular and pluralistic polity. He was also a true internationalist and one of the greatest statesmen of his time. With his unbounded pride in India’s great heritage, and abiding faith in its capacity to forge ahead towards a bright future, Panditji
became the very symbol of the hopes and aspirations of free India. As India’s first External Affairs Minister, Panditji crafted, articulated and personally represented independent India’s foreign policy in a particularly complicated international context marked by the end of the Second World War and the onset of the Cold War. The institutional and policy foundations laid by him then have come to underpin India’s rapid rise on the global scene. All of India owes a great debt to him and it is, therefore, entirely appropriate that this building, which will house our Foreign Office, has been named after the person who exercised the greatest influence over the formation of independent India’s foreign policy.

3. Panditji worked tirelessly for India’s progress. However, his love for India and its people did not confine him within the country. His colossal personality and the range of his vision went far beyond the shores of India. Even as he addressed the Constituent Assembly on the night of August 14, 1947, when momentous events were taking place within India, his commitment to humanity at large came out clearly when he observed that his dreams were not just for India, but also for the world. He said, “All the nations and peoples are too closely knit together today for any one of them to imagine that it can live apart”. Panditji went on to add, “Peace has been said to be indivisible; so is freedom, so is prosperity now, and so also is disaster in this One World that can no longer be split into isolated fragments”. No better vision for the world has been conceived till today.

4. This project is being undertaken at a juncture when India is assuming a new leadership role on the world stage. These are times of new opportunities as well as new challenges for our diplomacy. Our diplomats are required to play an increasingly active role not only to build and nurture fruitful external linkages to sustain the rapid growth of our economy, but also to make certain that India assumes its due place in the global order. The economic aspects of our diplomacy are becoming ever more important. India’s growing economy necessitates increasing access to markets, sources of energy and investment and advanced technologies. In the domain of external publicity, we need to put an end to such stereotypes about India as have continued to exist and project the true image of a modern and technologically advanced nation. We need to harness the limitless potential of large communities of Indians and Persons of Indian Origin around the globe. Above all, we remain committed to Panditji’s ideal
of a peaceful world in which all nations – big and small – can live in harmony and work together for the progress and prosperity of their peoples. I have no doubt that our diplomats are fully capable of seizing the emerging opportunities and facing the new challenges thrown up by the ever-evolving international scenario. However, we should not rest on our laurels. Change and adaptation in keeping with the evolving situation should be a continuous process.

5. The year 2006 has been a busy year in terms of MEA’s construction projects. I am told that in August this year, my colleague, Shri Anand Sharma, laid the Foundation Stone of the Chanakyapuri Residential Complex for officers of the Ministry. Construction has already commenced on that project and today we mark the commencement of construction of Jawaharlal Nehru Bhavan.

6. I am particularly pleased that the planning of this building has been done with great care to incorporate state-of-the-art features. I am sure that these will be of tremendous help to the Ministry of External Affairs in its functioning in the coming years. I hope that the CPWD, which is executing this project, will prove its 150 years of engineering excellence by completing this project in time and by ensuring that it is indeed a landmark building.

7. I know that this ceremony would have given great joy to the man after whom it is named. Many of us are familiar with the keen interest Panditji took in selecting not only the human talent for a nascent foreign service but also the buildings that would help serve India’s cause overseas. Indeed, we owe some of our most outstanding chanceries and residences abroad to Panditji’s keen eye and taste in real estate. As my colleagues and I in the Ministry of External Affairs celebrate this important milestone in the life of the Ministry, we rededicate ourselves to the lofty ideals of Jawaharlal Nehru and pledge to do our best in the service of the nation.

Thank you.
027. Speech by External Affairs Minister Pranab Mukherjee at the National Defence College: “Indian Foreign Policy: A Road Map for the Decade Ahead”.

New Delhi, November 15, 2006.

1. I am delighted to be among you again and share a few thoughts on the roadmap for India’s foreign policy in the years ahead. India’s Foreign Policy is a product of its history, geopolitical setting and the needs and aspirations of its people as distilled by its democratic institutions. This policy is inspired by the vision of our founding fathers, in particular Pandit Nehru, and is nourished by a tradition of continuity and consensus.

2. What would be the shape of India’s Foreign Policy ten years from now? How would it contribute to the well-being of the citizens of India and indeed to peace and prosperity in the wider world? Allow me to hazard a few lines of reasoning.

3. India is set resolutely on a path of economic growth of at least 8% per annum. In a decade from now India is slated to be the 3rd largest economy in the world with a significant portion of the world’s output in key areas such as Information and Communication Technologies, biotechnology and pharmaceuticals, automotive manufacturing and light engineering. Given current trends, Indian companies would have spread themselves further afield and become important players in the global supply chain. Human resource is our most vital asset. Indian professionals and workers will play a key role in the economic resurgence of India and would emerge, with the Indian diaspora, as significant contributors to the reassertion of India’s economic weight.

4. Ladies and Gentlemen, I foresee Indian Foreign Policy playing a major role in this economic renaissance. There is a range of foreign policy instruments available today to advance our economic interests – traditional commercial work, negotiation of preferential or free trading areas, active participation in multilateral forums etc. We need to creatively add to this tool box and in fact retune mindsets so that our entire approach to a bilateral relationship is premised primarily on that relationship’s contribution to our economic well-being. It would be my endeavour to boost both the resources – human and financial – as well as the synergies required to face the challenges of the
coming decade. To list only a few, these include a significant 
upgrading of our economic relationship with South East Asia, East 
Asia, Latin America and Africa, building new investment driven 
partnerships with the US and EU and nurturing a web of cooperative 
energy security networks in Asia and with new suppliers in West 
Africa, Central Asia and Latin America.

5 The primary task of Indian foreign policy has to remain the facilitation 
of India’s developmental processes, leveraging our international 
partnerships to the best possible effect. Our focus in the coming 
decade should be on promoting trade and investment flows, in 
assisting the modernization of the infrastructure, in assuring 
predictable and affordable energy supplies and in securing the widest 
possible access to technologies.

6 Traditionally threats to India’s security have largely come overland 
from the North and the West and from the waters in the South and 
the West. In future the importance of the East in our security calculus 
is slated to rise. Maritime security, WMD proliferation, energy security 
and terrorism are important and emerging issues with a bearing on 
the security of the region. We have to promote an environment of 
peace and security in the region and beyond, which indeed is a pre-
requisite for development.

7 The other major theme for India Foreign Policy1 a decade hence has 
to be a significantly different set of relationships in the neighbourhood. 
A major power has hardly ever emerged - or sustained itself - on the 
world scene from amidst a conflict-ridden and impoverished 
neighbourhood. The street on which we have to build our future home 
has to reflect our values and our aspirations, in particular our desire 
for a peaceful and prosperous future. India, as the largest country in

1. Giving a broad thinking on Indian Foreign Policy Prime Minister told the special convention 
of the Kerala Pradesh Congress Committee in Thiruvanthapuram on November 1, that 
the nation could not be tied down to the past. It needed flexibility of tactics depending on 
the changes the world over. There was a bid to create confusion that the government 
was deviating from the foreign policy laid down by Jawaharlal Nehru, Indira Gandhi and 
Rajiv Gandhi. “In terms of basic objectives there is no change. What we are trying to do 
is not a deviation but an attempt to widen our horizon.” The country has made efforts to 
 improve relations with US, Russia and China. In the case of Pakistan, steps have been 
taken to improve relations with it despite difficulties arising out of its support to terrorist 
activities. “We need peace in our neighbourhood and to share prosperity with them. An 
international environment would provide the opportunity for us to develop,” he said.
South Asia with land and sea borders with all its neighbours in the South Asian Association for Regional Cooperation (SAARC), and indeed as the eldest ‘sister’ in South Asia, has to assume greater responsibility for the region’s challenges. I want India’s Foreign Policy to pay particular attention to each and every one of our bilateral relationships in the neighbourhood from Myanmar to Afghanistan and provide them with depth and diversity of mutually beneficial interaction. We need to work on innovative use of development assistance, India’s growing economic and S&T capabilities as well as our soft power to advance this goal.

8. India’s neighbours can and should share in our drive for prosperity. Obviously, as sovereign states, these are choices that they have to make. But from our side, we are clear that stronger cooperation offers immense benefits to all parties. Already, we can contrast the results of those of our neighbours who see in India’s growth an opportunity to advance their interests, and others who are less perceptive or farsighted. Bhutan, for example, has significantly raised its per capita income as a result of its energy exports to India. Sri Lanka has drawn full value from its importance to the logistics of Indian trade. Both Maldives and Sri Lanka are benefiting from Indian tourism. So too is Mauritius, which also serves as an investment route into India. Citizens of Nepal have long sought employment opportunities in India, a trend that will only become stronger. More recently, China has discovered the advantages of trading with India, and our bilateral trade is growing at an astonishing 60% plus per annum. With Thailand, India has concluded an FTA and with Myanmar, we are exploring new opportunities in energy and infrastructure. Afghanistan has benefited from the participation of Indian companies in its reconstruction and economic revival. As the European example has demonstrated, a modernization of the infrastructure in the Indian sub-continent that will promote freer flow of goods and services can transform the region conceptually. In more ways than simply economic, the future of the Indian sub-continent depends on whether this open-mindedness prevails over the more traditional mindsets. On its part, India has extended its hand in all directions and is willing to go the extra mile for a better future.

9. The coming decade is crucial for India-Pakistan relations, which even today are at a cross-roads. It is not possible for us to change borders, but we can surely reduce the salience of borders in our relationship.
We have endeavoured to do precisely that with a series of initiatives that promote people-to-people relations. In the process, what has emerged is the deep yearning amongst ordinary people for peace and normalcy. Sustaining and expanding this process would be one of the important challenges of India’s foreign policy. But this can happen only when diplomacy is allowed to function without interruption. If, on the other hand, terrorism is perceived and practiced as an instrument of statecraft, then the most imaginative diplomacy will founder on lack of domestic support.

10. A focus on the neighbourhood does not imply a parochial or near-sighted approach to world affairs. India’s foreign policy today looks at India’s environment in expanding circles of engagement starting with the immediate neighbourhood of Southern Asia and moving on to and beyond the extended neighbourhood of West Asia, Central Asia, South East Asia and the Indian Ocean Region. This is reflected in our political, economic and defence engagement with these regions particularly after the end of the Cold War and the beginning of the economic reforms process in India. This intensified engagement is the beginning of the reassertion of India’s historically benign and stabilizing role in these regions premised on the commerce of ideas and goods.

11. India’s relations with the major powers - United States, European Union, Russia, China and Japan as well as the emerging powers of Latin America and Africa have undergone a major makeover in the past decade and a half. The bandwidth of engagement with these powers is wider than ever. India’s Foreign Policy would need to actively promote the building of a qualitatively different relationship with the major powers in the decade ahead thus contributing positively to our political, economic and security objectives.

12. The exponential and qualitative change in India-US relations has rightly attracted global attention. The India-US civil nuclear agreement symbolizes not only a maturing of our bilateral relations but also a clear recognition of the responsible record of India as a state possessing advanced nuclear technologies. Our cooperation on matters impinging on regional and international security is a reflection and recognition of our capabilities and our role in fostering peace and security. In the future I expect the relationship to build more on the convergence of values and interests between India and the US
and to add a bigger economic element to our cooperation. As India grows and integrates with the global economy, there is bound to be more demand for US goods, technology and services and at the same time greater penetration of the vast US market by Indian companies. There is another evolving significant factor of complementarities in human resources. All these have the potential to unleash a much broader and deeper strategic engagement between the two countries.

India’s strategic partnership with Russia has had to weather the difficulties thrown up after the disintegration of the Soviet Union. Developments in the post-Cold War period have imposed different sets of constraints but have also offered newer options for both India and Russia. For India, Russia is a partner in our fight against global terrorism, an ally in the field of civil nuclear, space and defence technologies and a key player in our quest for energy sufficiency.

13. India and Europe share values of democracy, pluralism, human rights and respect for rule of law with similar institutions such as a free press and an independent judiciary. India is now one of EU’s six strategic partners and the EU remains India’s largest export destination and one of the largest sources of foreign investment into India. Our strategic partnership is based on mutual interest and the great potential both sides see for enhanced cooperation, including in tackling global problems such as terrorism and environmental degradation. Our multi-faceted links with Europe also reflect a desire for a more effective multilateral approach in meeting global political and economic challenges.

14. Ladies and Gentlemen, India’s civilizational, religious and cultural links with East and South East Asia can be traced back many millennia. India has been the source of many ideas both spiritual and material that have rippled across the East. India has also acted as firewall on destabilizing influences. Our recent intensified engagement is the beginning of the reassertion of India’s historically benign and stabilizing role in these regions premised on the commerce of ideas and goods. Japan, South Korea, China and Singapore are strategic markets for our goods and services and important sources of investments and technology. Indian companies have long had a presence in ASEAN. Now they are venturing farther and investing in China, Japan and Australia.
15. India’s “Look East” policy was more than an economic imperative. It was a significant shift in India’s vision of the world and her place in the emerging post-Cold War global scenario. In the years to come it will be our endeavour to strengthen political, physical and economic connectivity between India and East Asia and broaden the underpinnings of our quest for peace and prosperity.

16. The India-China relationship is bound to be one of the most important bilateral relationships in the coming decade simply by the sheer weight of demographic and economic numbers. How we manage this relationship will have a tremendous impact on peace and stability in the regional and increasingly the global context. India-China relations have traditionally been viewed through the prism of ‘balance of power’ or ‘conflict of interests’ with Asia as the theatre of competition. This theory has become outdated in today’s interconnected and interdependent world. It is increasingly recognized that there is enough space and opportunity for both to grow. Both countries have taken a number of initiatives to improve bilateral relations across a range of areas, without allowing existing differences to affect the overall development of their ties. China is set to emerge as India’s leading trading partner in the future and both countries, which face many common challenges, are exploring cooperative approaches to a range of issues including terrorism and protection of the environment.

17. We attach great importance to close, cooperative and friendly relations with Japan, the second largest economy in the World, and the other major pillar in Asia of our foreign policy. India’s ‘global partnership’ with Japan reflects our common search for geopolitical, strategic and economic options in a rapidly changing world. In the next decade this relationship is set to become one of the most important factors in India’s foreign policy matrix.

18. India’s foreign policy has always had a strong element of developing country solidarity and south-south cooperation. From the early days of our independence we have worked with countries in Africa, Asia and Latin America to further the interests of developing countries. In recent years these ties have been bolstered by transcontinental links such as India-Brazil and South Africa Initiative or IBSA. We are also adding important elements to our traditional ties with the countries of the Persian Gulf region by leveraging economic opportunities and the
shifting geopolitical landscape of the region. It is notable that the King of Saudi Arabia visited India after fifty years.

19. Ladies and gentlemen, I have given you an overview of our emerging relations. In the coming decade, India’s foreign policy would have to contend with intensified engagement with not only the major powers but also emerging power centers as well as our immediate and extended neighbourhood. Demographic trends, policy choices and India’s inherent societal strengths have come together to put India among the key players of this century. While we still have many challenges in addressing the basic needs of our people, the world’s perception of India, its capacities and its strengths has changed irreversibly. This is both a challenge and an opportunity for our foreign policy. We have to act, and more quickly than before, from a platform of increased self-assurance and responsibility to ensure that India continues to enjoy a peaceful and supportive environment for pursuing her development goals as well as to ensure that the world’s expectations of India are met and we are able to contribute, as our forefathers have always wanted, to the fashioning of a better world based on universal human values. Thank you.
Distinguished Ladies and Gentlemen,

I am happy to be back here at this forum once again. I notice that there is an integral link between the theme of your summit last year, viz., “Building a Better Future”, and the theme this year. However, I submit to you that we in India wish to `build a better future’ for ourselves, not because of a desire to be a `global superpower’; but because we want to live in peace and with dignity; in good health and gainfully employed; creating an environment conducive to the full expression of our creativity and enterprise.

Ladies and Gentlemen,

At the outset, I would like to examine the concept of a global superpower itself. In the 21st century, I see the benefits of science and technology reaching almost all corners of the world, removing the age old scourges of poverty, ignorance and disease. As prosperity spreads, as people and communities get increasingly empowered to manage the affairs of their nations, as the economic and technological gap between nations of the world narrows, as trade and capital flows grow to a magnitude unimaginable today, as nations become more interdependent, the notions of power and a “superpower” as we understand these today will have to undergo a change. We will possibly move to a world where nations act together in concert to address the major concerns of the times – global environmental hazards, sustainability of global consumption, global energy security, global health risks and global threats to security. New global institutions will have to emerge to manage these collective international responses and we will need to move to a far more rule based and equitable management of international affairs.

In this rule based world – just as in the rule based polity we have internally – power as traditionally understood may become less relevant in international affairs and the concept of a super power as we generally understand it, even less so. Given this emerging scenario, our goal should be to ensure a prosperous, secure and dignified future for our people and to participate actively in contributing to the evolution of a just world order. Size does give us a certain weight in global affairs and this will get
recognized across the world. We will be seen a growth engine. But, this has to be tempered by the realization that the ultimate goal is to work for rule based rather than power based relationships.

Further, such an approach is in line with our history, culture and civilization. For centuries, we have lived in peace with the world around us, traveling to distant lands as traders, teachers and scholars. Rarely has the world seen armies sailing out of India as conquerors. The Indian influence across much of Asia has been one of culture, language, religion, ideas and values, not of bloody conquest. We have always been respected for our traditional export knowledge! Does that not also make India a “global superpower”, though not in the traditional sense! Can this not be the power we seek in the next century?

Ladies and Gentlemen,

Sir Winston Churchill had once said that the “empires of the future will be the empires of the mind.” This statement not only recognizes the importance of knowledge in determining the destinies of nations, it also subtly hints that the intellectual, cultural, social, economic and political empowerment of individuals is the basis on which the modern world will be constructed. This should be the goal we should work for. And I am confident that we are capable of meeting it.

When we analyse our history of the 18th and 19th centuries, we see that it was our neglect of modern science and technology and our inability to harness it for growth that made us miss the industrial revolution that swept the world then. India and China, which together accounted for half the world GDP and whose people were among the most prosperous, fell behind Europe and ended up at the bottom of global prosperity tables.

We are once again at an inflexion point in world history. Once again, advances in science and technology, particularly in IT and connectivity, are making enormous changes in the way we organize our lives, our industries, our economies and our institutions. This is throwing up immense opportunities for those who are skilled, creative, and enterprising. If we have to realize our destiny and once again be counted among the great nations of the world, we have to ensure that we do not miss this new wave of industrialisation.

The challenge before us is to use modern science and technology to ride this wave. We need to equip and empower our people to take advantage of the opportunities that are rapidly arising across the world. We need to
have a skilled, confident, healthy workforce. We need to have dynamic, creative, enterprising firms which are capable of meeting global challenges. We need to build institutions which are robust, which inspire confidence and which can enforce the rule of law in a fair manner. We need a polity which is inclusive, equitable, caring and just. We need a social order which every citizen owns and is proud of. These are goals which will take us to our destiny.

**Ladies and Gentlemen,**

The goals I have listed are not new. Nor are they easy to fulfill. We have a huge challenge in education in ensuring that millions of our children complete basic schooling. We need to build far more universities, colleges, technical and professional institutions so that our youth have the basic skill set to participate in the dynamism being shown by our economy. We have to educate the girl child and empower our women and all weaker sections of society through education. For doing all this, we have to widen access to education, make it more equitable and relevant, and ensure that excellence is rewarded. The education system must promote rational thinking and a scientific temper. This is the surest way of unleashing the full potential of all our people. We cannot afford to be a nation, half of whose citizens are marginalized and outside the pale of a modern economy.

The other challenge is in health. The consequences of ill health and disease are adverse on all age groups – children, the productive workforce and the aged. We need a health system which caters to the diverse needs of all these groups. Our people must be assured of quality healthcare at an affordable cost. We need a health system which reduces the infant mortality rate, the maternal mortality rate, controls epidemics, provides basic health care. We are still at an early stage in evolving large scale systemic solutions to our health problems. We need to accelerate our efforts.

As our economy grows, we need to look at the energy needs of our country. We need to look into the future, forecast our energy consumption patterns, study alternatives that are available and take steps to ensure that energy availability is not a constraint on our prospects. Energy security will be a continuing effort both in the domestic sphere and the international sphere.

**Ladies and Gentlemen,**

If we have to equip ourselves to ride this new wave of industrialization, we need huge investments – both public and private. This can be done
only in the framework of a rapidly growing economy. We have been able to sustain high rates of economic growth averaging over 8% in the last three years. This is the result of a whole range of policies we have put in place. We are targeting growth rates of 10% in the next Five Year Plan. It is only through such growth can we generate the tax resources which can then finance the huge expenditures that are needed in education and health. Therefore, we need to ensure that we have an economic environment which is conducive to growth, an environment with moderate tax rates but high levels of compliance.

Growth is raising other concerns. We are seeing a widening of the urban-rural gap and inter-regional disparities. The income ratio between urban and rural India has risen from 1:2 at the time of Independence to 1:4 today. Is it going to widen further? Can we allow such a trend to persist without its ill effects on our society and polity? This is a matter of deep concern. Another dimension of growth is the widening gap between states and regions. We are a common market in many ways. Internationally, common markets enable convergence in prosperity. We are seeing the reverse happening in our country. There is an increasing disconnect between backward regions and the rest of the country. Is this a consequence of low urbanization? Or poor industrialization? Or poor institutional capacities? The consequences of this trend are going to be extremely adverse. We need to urgently arrest this trend as well. Less developed regions must catch up with the more developed regions. We need sharply focused policies to reduce disparities, take people out of agriculture and increase agricultural productivity. Bharat Nirman and rural infrastructure, which are priority areas for our government, attempt to redress this imbalance. We need to collectively think as a nation to ensure equity in growth – equity across regions, states, sections of society and gender. We cannot walk boldly into the future with only one half of our nation shining.

This means that growth cannot be an end in itself. It must translate into meaningful outcomes in the lives of individuals. At the same time, the protection of environment and control of the degradation of our land, water and air will also need to be attended to. I am not sure whether we can aspire to achieve consumption standards of developed countries. This ambition will place unsustainable pressure on our environment and the essential life support system of our planet. Our aim must be to pursue a sustainable development path through which we can eliminate the differences in important indices of human development between us and developed countries over a reasonable time period. This is my view of what catching up should mean.
Ladies and Gentlemen,

While focusing on economic growth and equity, we often tend to ignore the importance of institutions. Effective, efficient, just institutions are integral to any modern polity. They make it more inclusive, capable of handling contrary pulls and pressures. They enforce the rule of law in an unbiased manner, inspire confidence in the ‘fairness’ of the system and make the polity stable and robust. They deliver essential public services. They form the basis of a market economy and any social safety net.

I am concerned whether we are doing enough to reform our institutions. Our administration, judiciary, legislature and institutions of local government need to be revitalized and made more accountable and effective. We have to do more to eliminate corruption in public life and in government. Are we debating enough on the management of politics in our country, taking into account the wide differences in caste, creed, and language. Are we debating and working on the modernization of the Indian state? Are our urban bodies and panchayats capable of handling the immense workload that will be expected of them in the decades to come? Have we done enough to tap into the immense creative potential of decentralized governance with more powers to raise resources and more accountable systems of governance?

In the answers to these lies the answer to our original question of realizing our destiny. Our political discourse and the attention of media, are not adequately seized of these challenges. To unleash our full potential we need a politics of constructive engagement. We need forward-looking political leadership at all levels of our polity. We need a basic political consensus on some of the difficult things that governments must do to create an environment conducive to sustainable development. If we don’t think into the future, if we don’t think big, if we don’t think anew, if we cannot, and will not, learn from the experience of the world, we will not be forgiven by future generations.

We have to have the courage and the vision to take calculated risks that expand the horizons of development and knowledge. We must be willing to benchmark ourselves against the best in the world, in whatever we do, and see how we can bridge the gap. Many Indians have done this. Many young students, professionals and entrepreneurs have shown the courage to test their skills in the global market. They have done India proud. This is not enough. As a nation we must be willing to benchmark our effort against the best in the world in whatever we do, in every walk of life, to bridge the gap between performance and potential.
In the foreseeable future more than half our population will be less than 25 years of age. Adequately empowered, this vast army of young men and women can fuel the engines of growth and redistribution. Our Government has kept its focus sharply on these objectives. In the past two years the economy is once again on the move. We have been able to step up the rates of saving and investment. But what we have been able to achieve is just the beginning of a long process.

**Ladies and Gentlemen,**

It is also imperative that we become more engaged with our own neighbourhood. We must create and sustain mutually beneficial relations with all our neighbours and with all the Great Nations of the world. I believe the people of South Asia have a shared destiny, just as we have a shared past. We must learn to live with each other, respecting the inherent diversity of our region, and work together in improving the lives of our people. The strengthening of democracy in our region will, I am convinced, restore to South Asia as a whole a unique place, and a place of great importance, in the community of nations. The countries of our region can and must help each other grapple with the challenge of change and the challenges of our times.

I am sure you are all waiting to hear President Hamid Karzai, for whom I have the highest regard. I am greatly inspired by the heroic attempt of the Afghan people to carve out a new place for themselves in the modern world. President Karzai has set his eyes on re-building Afghanistan into a strong, democratic nation.

I hope your conference helps us understand better how we can grapple with the challenge of building a better future for our people so that we can help build a better India, a stronger India, a more open and dynamic India, and an inclusive India.

Thank you.
Q. What are your priorities as External Affairs Minister?

Foreign policy has continuity. At the same time, we have to grapple with problems as they arise. If you look at our immediate neighbourhood, you will find that some sort of [democratic] arrangements are being made in Nepal; in Bangladesh elections are going to be held.

Talks between the Sri Lankan Government and the Liberation Tigers of Tamil (LTTE) are going on. But, everywhere, there are some problems — attempts are being made to resolve those issues. With Pakistan, we have resumed our composite dialogue.

The Chinese President [Hu Jintao] is coming and it is a major visit. After 10 years, a Chinese President is visiting India.

We have to address problems in our near and extended neighbourhood. In Afghanistan, there are problems — there are problems in Iran. So, we have to respond to the issues that are emerging. With our friends like the United States, a civilian nuclear cooperation Bill has been passed by the Senate, but the reconciliation is yet to take place.

Q. The Government and you, personally, have been quite guarded in welcoming the passage of the Senate Bill. Is it because India has known concerns about a ban on reprocessing of imported spent fuel and on transfer of nuclear technology in the text of the Bill?

The U.S. administration is aware of the fact that the Bill should be as close as possible to the parameters laid down in the July 18, 2005, joint statement and March 2006 separation plan presented in Parliament. That is the commitment, which has been made to Parliament.

Thereafter, Prime Minister [Manmohan Singh] while replying to a debate in Parliament also spelt out the parameters within which the [U.S.] legislation should be framed. Now, we shall have to look at the various provisions of the Bill and analyse its implications. But, before that we’ll have to see the final shape of the Bill.

The House [of Representatives] has passed a legislation, Senate
has passed a legislation. There are divergences of view: these are to be reconciled ... then only the final shape of the Bill will become known. All of us are working on placing the cart before the horse.

**Q.** As External Affairs Minister of a rising India, don’t you resent the American Senate’s efforts to bind us on Iran despite the fact that we have cast two votes against Tehran at the International Atomic Energy Agency (IAEA)?

Look, legislatures have their own way of functioning. We are concerned with the diplomatic relationship, not observations in the legislature — but how the [U.S.] administration responds and reacts to it.

If you look at the debate in the Indian Parliament, with respect to certain countries, what type of phraseology is used? The kind of phraseology used is known to us and to others [outside the country] as well. But they do not respond to it.

Let us understand and appreciate that various organs of the government have different roles to play.

**Q.** With respect to the Iran-Pakistan-India gas pipeline, it appears that the Government has painted itself into an either-or situation — the civilian nuclear deal with the U.S. or the gas pipeline with Iran. Don’t you think that our diplomacy should be deft enough to do both?

We have never said one will cancel the other. We have never said that.

**Q.** So, we can do both?

Of course. That’s why we are having discussions.

**Q.** You are confident we’ll move ahead on the Iran pipeline?

I think so.

**Q.** We now have a trilateral framework for cooperation with China and Russia — we’ve had meetings at the level of the Foreign Ministers and heads of government of the three countries. Obviously, this is a powerful forum. Do you feel there’s some kind of reluctance on the part of the three countries to take positions on key global issues such as, say, Palestine?

Trilateral arrangement is there to share opinions and to share with each other perceptions on different international issues. This is a mechanism
for consultation. When Russian Foreign Minister Sergei Lavrov was here, we had a discussion — he’s also interested in resuming the Foreign Minister-level talks. And, we’ll try to find out from our Chinese friends when they will be in a position to give us a date [for the trilateral meeting] and then we’ll resume these talks.

But, it is not desirable and we cannot make any comment that on one particular issue what would be our view unless it is discussed and there is a joint formulation.

Q. Of late, there’s a perception that India after its May 1998 nuclear tests, is interested in joining the big boys’ nuclear club and our commitment to disarmament, articulated by successive Congress Prime Ministers, has been diluted.

No, it has not been diluted; we are committed to non-proliferation and disarmament. What Rajiv Gandhi said at the special session of the United Nations on disarmament [June 9, 1988] is the guiding principle of our foreign policy.

He told the world that we would not graduate ourselves from the threshold level — that was our position then, before 1998. We want that those who have nuclear weapons should stop proliferation — vertically, horizontally — reduce stockpiles and have a time-bound action plan [for disarmament]. And that [commitment] stands.

In between, of course, we have gone for the [May 1998 nuclear] explosions. There have been developments and that cannot be erased. It has already taken place — but even in that context we are serious and we are engaging ourselves. In this United Nations session, we are going to move a resolution to this effect [for time-bound disarmament].

Q. How do you see the long-term trajectory of our relationship with Pakistan?

We are neighbours; you cannot alter your neighbours. The option before you is: either you live with your neighbour under constant tension or you try to defuse the tension and live in peace. We want to live in peace.

Q. What are your expectations from the joint anti-terror mechanism agreed to with Pakistan?

Let us see. The proof of the pudding is in the eating. How it [the mechanism] operates, how it functions. We have established it with hope
and expectations that it will be effective and delivers the goods. Let us see.

Q. Leading members of the Communist Party of Nepal (Maoist) are in Delhi. Is there any possibility of you or other members of the Government meeting them?

No. That is a matter to be dealt with the Nepalese Seven Party Alliance. We want the peace talks to succeed and the Maoists should join the mainstream of Nepal politics and make their own contribution to strengthening democracy there.

Q. Since they are in town ...

It's not a question of who is in town or who is not in town. It's a question of certain basic principles.

Q. There are Maoist leaders who remain in Indian jails. Will they be released?

These are matters to be decided by the courts, not by the executive.

Q. In Sri Lanka, what can India do to help the peace process along?

We do not want to involve ourselves directly. But, we are trying to suggest to the Sri Lankan Government and those who are taking the initiative [like the Norwegians] that the peace process should be expedited. There should be dialogue.

You know our stated position. We want that legitimate aspirations of the ethnic groups must be fulfilled within the framework of the Sri Lankan Constitution without affecting the territorial integrity of Sri Lanka.

Violence is not the answer — the answer lies in carrying on negotiations, however tortuous and difficult they may be.

Q. I’m aware that the LTTE is a banned organisation in India. But is there any way we can influence the LTTE to see reason and negotiate seriously with the Sri Lankan Government?

We do not have any discussions [with the LTTE]. It is a banned organisation.

Q. How is your job different now from the time you were External Affairs Minister last time (February 1995 to May 1996)?
A lot of changes have taken place. In the last 10 years, India’s position has become stronger. India has emerged as a strong economic power. Now, everybody recognises that India’s economy is going to be powerful. Keeping that in view, India’s stature has also increased substantially.

Q. Does that make your job easier or more difficult?

Of course, it will be more difficult. There are more responsibilities, more expectations from India.
030. Speech by External Affairs Minister Pranab Mukherjee at the Annual Diplomatic Dinner hosted by the Heads of Diplomatic Missions based in New Delhi.

New Delhi, December 7, 2006.

The Dean of the Diplomatic Corps, Ambassador Dago Tshering, Excellencies, Ladies and Gentlemen,

I am delighted to find myself amongst all of you so soon after the round of informal lunches that we had last month shortly after I took over as the Minister of External Affairs. I had said on those occasions that I saw them as only the beginning of an intense engagement with members of this august grouping. I would, therefore, like to place on record my deep appreciation to the Dean and all the resident Heads of Mission in New Delhi for inviting me this evening and providing me the opportunity to again share some thoughts with you about the tasks and challenges facing India, especially at a time when the country is assuming a more demanding role on the world stage.

Allow me to highlight briefly five major themes of some salience.

First, it goes without saying that India’s external policy has to be fully in consonance with the remarkable changes taking place within the country. As you would have observed yourselves, the big story coming out of India is clearly the economic one. With the launching of economic reforms since the 1990s, the Indian economy has registered consistently high growth rates. The 9.2% growth witnessed in the last quarter of this financial year is the latest in this series of developments. I recall that the subject of a major business conference in India some years ago was: “Is 8% growth possible?” That question, one might say, has been answered. Our planners today are looking at a sustained growth rate that will approach and stay in the double digits over the next 15 years. It is only growth of this quantum that will enable us to create jobs, provide better basic services to the population and, most importantly, strike a decisive blow against rural and urban poverty in the country.

Sustaining this growth will obviously also have foreign policy dimensions. It will require deeper engagement with the outside world by way of increased access to international markets, sources of energy, advanced technologies and foreign investment. There would,
accordingly, be much greater focus on economic diplomacy in the pursuit of our economic interests. In view of this, the impasse at the Doha round of trade negotiations is a matter of the utmost concern. Orderly governance and conduct of global trade is a global public good and India will, therefore, continue to play its role in efforts to find an end to the impasse.

It is clear that the Doha outcome must expand trade opportunities for all; but it must also achieve development objectives and safeguard crucial developing country interests such as livelihood security, which are the avowed objectives of the Round. For its part, India also intends to expand and deepen its engagement with various economic groupings such as ASEAN, Mekong-Ganga Cooperation, BIMSTEC, IBSA, G-15, Indian Ocean Rim and the East Asian Community. In fact, early next week, I look forward to participating in the ASEAN-India Foreign Ministers’ meetings, as well as some East Asia Summit related meetings, in order to carry forward the process of our engagement with one of the fastest growing regions in our neighbourhood.

The second point I want to make is that India’s worldview is a multipolar one. Today, the bandwidth of our political engagement and economic and technical cooperation with the rest of the world is wider than ever before. Proceeding on the assumption that major powers today have greater incentives to cooperate rather than to compete, India has embarked on forging strategic partnerships with all major powers of the world. We have entered into strategic partnerships with the United States, Russia, Japan and the European Union and are pursuing strategic cooperation with China. Through the IBSA forum, India is engaged with two leading emerging economies, Brazil and South Africa. We have also devoted a lot of our attention to ASEAN, as well as countries of West Asia, Africa and Latin America.

Our own immediate neighbourhood, naturally, remains an area of the highest priority for us. With our immediate neighbours, we are bound together by history, culture and ethnic ties, and the destinies of our peoples are closely intertwined. As we strive to build strong and enduring partnerships with all our neighbours, our endeavour has been to work together with these countries to create a space of prosperity and shared values based on economic integration, enhanced trade and investment linkages, stronger political and
cultural ties and promotion of sustainable social and economic development. We are deeply interested in pursing regional and cross-border cooperation and in ensuring smooth functioning and secure frontiers.

It is an article of faith for us that South Asian region should have much closer economic integration. As the host of the next SAARC Summit in April 2007, we hope to carry forward this process. For improving connectivity in the region, we have offered transit facilities on reciprocal basis to all countries in the region, including greater air connectivity through a virtual open skies arrangement. Through a strengthened SAARC process, we hope to usher in a phase marked by strong economic growth. It is our hope, however, that one of the key steps in this process, namely, the full implementation of SAFTA, will be realized soon as this will provide a major boost to regional economic cooperation.

While speaking of India’s engagement with the world, mention also has to be made of the crucial issue of UN reforms, particularly the expansion of the Security Council, and the inclusion of India as a permanent member. Enough has been said already about the need for reform of the UN so that it is more reflective of current day realities rather than the aftermath of a more than half a century old conflict. A strengthened, more democratic UN is a basic necessity of the new global order.

My third point is that global challenges facing humanity today require global responses. For countries to pursue segmented approaches to these challenges is to pursue fool’s gold. This is true of the most pressing problems of the day, such as the scourge of international terrorism, the proliferation of weapons of mass destruction and related technologies, trafficking of arms and drugs, the increasing levels of violence and destruction perpetrated by non-state actors, pandemics and natural disasters, climate change and environmental degradation. We need coordinated transnational action to respond to these challenges. For India especially, violence and terrorism with cross-border inspiration, links and material sustenance constitute a major external security challenge. This and other similar global challenges will play a greater role in our security calculus. India will continue to work actively with friendly countries in strengthening regional and global security, participate in UN peacekeeping missions.
and take necessary measures with regard to counter-terrorism and non-proliferation. Behind this is the recognition that peace and security are critical ingredients for the economic development that remains our primary goal. Through Your Excellencies present here tonight, I wish to reiterate the need for all our countries to increase our cooperation in the areas I have mentioned.

The fourth point I wish to make to you is that, in the comity of nations, India is a factor for stability. We present a model that, with all its imperfections, values and cherishes its governing framework of pluralistic democracy, secularism and the harmonious co-existence of a multiplicity of faiths, customs, ethnicities and languages. It is also a model that does not seek to export any ideologies. It is on this foundation that we are trying to build the India of tomorrow. Today, India is among the youngest countries in the world. In our endeavour to strengthen economic, commercial and investment linkages with the outside world, we offer opportunities that potential partners abroad could take advantage of. The areas are familiar to you – Information and Communication Technologies, pharmaceuticals, biotechnology, automotive manufacturing and knowledge-based industries.

In addition to a large market, a burgeoning middle class of over 300 million people and a relatively young self-confident population, India also has a sizable resource of scientific and technical manpower. While Indian companies are beginning to spread their wings by investing and trading far and wide, more foreign companies should start seriously looking at India for business opportunities as a manufacturing hub, a base for sophisticated R&D and for forging joint ventures. Infrastructure development and modernization in the country, which is a high priority for us, is yet another area of mutually beneficial partnership. The 7 million outbound Indian tourist market should be of wider interest outside since, with increasing prosperity, this figure is only likely to go in one direction – upwards. Facilitation of the movement of people for these activities is naturally important and, since I have a captive audience here tonight, let me state that easing the visa process for Indian entrepreneurs and professionals will go a long way in enhancing of business ties with India.

Finally, a point about process. Notwithstanding the multiple voices that you no doubt hear across the political spectrum in our democratic system, which is not only the biggest but also among the most vibrant,
it is quite evident that there is a broad national consensus on the core elements of our foreign policy. That various foreign policy issues have to sometimes run the gauntlet of intense debate in the parliamentary forums of the country is one of the inherent strengths of the process and ensures that the country’s policies enjoy the broad backing that is required if they are to be pursued successfully. While pragmatism is an abiding feature of this process, there is no bar for proactive and path breaking approaches to be pursued by our policymakers.

**Excellencies, Ladies and Gentlemen**

I am not revealing any secrets to you when I tell you that making a dinnertime speech is a task fraught with a certain amount of risk. One needs to be sure that one has made one’s point, but also that the evening is not unmade, as happened with the speaker who, puzzled at the length of his speech, was gently informed by his assistant that he had read all three copies of the speech!

So, not desiring to stand any further between you and the rest of the evening’s proceedings, let me just thank you all for this opportunity of meeting you under one roof. I hope we will continue with this happy tradition of regular interaction among us. I also wish all of you a very happy, fruitful and enjoyable innings in India.

Thank you, Ladies and Gentlemen.
031. Remarks of Prime Minister Dr. Manmohan Singh at the London School of Economics Asia Forum.

New Delhi, December 7, 2006.

I am delighted to be here today to open a conference in memory of a very dear friend Dr. I.G. Patel. My wife and I have fond memories of a lifetime of friendship with "IG", as we all knew him, and his charming wife Bibi.

I first met IG in 1954 before I went to Cambridge. He had just returned from the IMF and taken over as Deputy Economic Adviser to the Ministry of Finance. He gave me some sound advice for deriving the best possible benefit of my stay at Cambridge. This was the beginning of an association which lasted for over 50 years. When I returned home in 1957 after completing my studies at Cambridge, I was offered a job in the Ministry of Finance. However, I was under an obligation to return to my university in Punjab since I was in England on a scholarship given by that university and which required me to return home and teach at that university. So I could not join the government then. In 1962, when I was at Oxford, I.G. again invited me to join the Ministry of Finance. On this occasion too, I was unable to join the staff of the Ministry of Finance. It was more than a decade later that I finally did join the Government of India.

As Economic Adviser to the then Ministry of Commerce, I had frequent interaction with I.G. Patel who was then Secretary, Economic Affairs in the Ministry of Finance. In 1972, I moved to the Ministry of Finance as Chief Economic Adviser. That position gave me an opportunity to work very closely with I.G. Later on when I was Secretary, Economic Affairs and I.G. returned to India, after a tenure with the UNDP, as Governor of the Reserve Bank of India, I worked very closely with him in formulating India's macro economic policies. Because of his profound wisdom, knowledge and experience, I.G. was the natural leader of economists working in the Government. I, for one, learnt a great deal from him. In many ways, he was for me a friend, philosopher and guide.

The 1950s and the Sixties were a unique period in our developmental history. There was great interaction between officials in government and scholars in the universities, both scholars from India and from abroad. We had, I recall, several distinguished economists like Nicholas Kaldor, Joan Robinson, Milton Friedman, John Kenneth Galbraith, I.M.D. Little, W.B. Reddaway and Daniel Thorner who spent some time at our Planning
Commission. There was always a two-way flow of talent between institutions like the Delhi School of Economics and the Indian Statistical Institute and the various ministries of our government. This interaction enriched the quality of academic research, making it more policy-oriented, and also contributed, I believe, to creative thinking within government. It has become fashionable of late to deride everything that was done in the realm of economic policy in those days. There are critics both on the Left and the Right.

However, to be fair and honest, one must recognize that the early years after India’s Independence were truly exciting times in India. Under the inspiring leadership of Jawaharlal Nehru, a new generation of our countrymen tried to write on a blank slate and create a new nation State. The Indian economists were active participants in the national debate to build a new India free from the fear of want and exploitation. There was much experimentation, since there were no known methodologies available for the construction of a new post-colonial nation. The political and intellectual atmosphere was charged with intense debate and discussion. Bold visions of a brave new world were being created on paper. IG was one of the many idealistic young economists who chose to participate in that great adventure of nation building. Under the leadership of men like Dr. V.K.R.V. Rao, Sir Chintamani Deshmukh, Prof. P.C. Mahalanobis and Prof. J.J. Anjaria, a new generation of brilliant economists that included K.N. Raj, I.G. Patel, Pitambar Pant, S.R. Sen, V.K. Ramaswami and many others joined government. Economists, scientists, scholars from various disciplines, worked closely with civil servants and political leaders to chart a new course for the Indian economy.

Men like IG, who preferred a career in government to a career in academia, provided that crucial link. It was both an intellectual link and a warm personal link. I confess I miss that environment today. I do hope we can somehow re-create it and facilitate greater lateral mobility, in and out of government, and a freer flow of ideas so that both policy and research are enriched through this process. In paying tribute to IG, I must also pay tribute to the London School of Economics and Political Science. LSE has always had a strong India link. Some of LSE’s faculty, like Vera Anstey and Harold Laski, were extremely close to India and to Indians. Professor Laski had great many followers even among our political leaders at the time. Many of his students, like P.N. Haksar and our former President K.R. Narayanan, had distinguished careers in our government. Often their appointment to government service was based on a mere note of
recommendation from Professor Laski to Jawaharlal Nehru! Even before Independence, LSE contributed several distinguished economists to India, like Dr. J.J. Anjaria. In the early years after Independence there was a flood of them who returned home from LSE to participate in the great saga of national development.

The most prominent of them was K.N. Raj, who was recruited by Jawaharlal Nehru to help draft the First Five Year Plan at the tender age, I believe, of 27! What I have always appreciated about LSE is the emphasis on inter-disciplinary approaches in its academic programmes. LSE took a holistic view of social sciences and of development. Its faculty appreciated the links between economics, politics, sociology, anthropology and law in the development process. In more recent decades we see excessive specialization in social sciences, and economists fancy themselves to be social engineers and technocrats. But we must never forget that economics began, after all, as political economy. Economic policy making has always involved political choices since it has political consequences. IG belonged to a generation that recognized this ground reality.

He knew that the choices our economists were recommending for adoption by our country had to be marketed in the political marketplace of a functioning democracy. It was not enough that these choices were rational, or that their costs and benefits could be measured. It was not enough that the arguments were intellectually consistent or were mathematically tested. In a democracy such choices had to be also politically defendable and acceptable. It was a tribute to the holistic education that IG received at Cambridge that he was not only a good Economic Advisor, a good Finance Secretary, a good Central Bank Governor but also a good administrator who excelled in his understanding of the political economy of development.

In the past century LSE has contributed a great deal to the economics of development, especially in Asia. I am, therefore, pleased that you have today an LSE Asia Forum. Just as LSE focused its intellectual resources on the development challenges facing the post-colonial developing world, it must now study in depth the growth dynamics in Asia and its implications for the world economy and polity at large. The most important development, I believe, of the 21st century will be the rise of Asia. China has already trebled its share of world GDP over the past two decades and India has doubled it. Both these giant economies of Asia are bound to gain a considerable part of their share of world GDP that they had lost during the two centuries of European colonialism. While Japan will continue to be at the top in the foreseeable future, the newly industrializing economies of
East and South East Asia will, I believe, grow even if not at rates we witnessed in the past two decades. Taken together, the rise of these Asian economies will alter the balance of income distribution at the global level. This need not worry the West, since a dynamic Asia can power global growth and provide new opportunities for growth for Europe as well as for North America.

But, it is essential that the West should come to terms with the consequences of the rise of Asia. In the long run of history, nations rise and fall. This in itself is not a new phenomenon. Regrettably, though, the record of history is found wanting as far as the ability of nations to deal with such ebbs and flows of history is concerned. One of the re-assuring aspects of the on-going growth process is that it is more orderly. Just as the world accommodated the rejuvenation of Europe in the post-War world, it must now accommodate the rise of new Asian economies in the years that lie ahead. What this means is that we need global institutions and new global "rules of the game" that can facilitate the peaceful rise of new nations in Asia. It also means that existing global institutions and frameworks of cooperation must evolve and change to accommodate this new reality.

This is as true for the reform and revitalization of the United Nations and the restructuring of the United Nations Security Council, as it is true for the management of multilateral trading system, or for the protection of global environment or for the security of world energy supplies. Western academic institutions played a leading role in shaping intellectual thinking after the Second World War to facilitate peaceful post-war reconstruction and development of Europe and of Japan. Once again institutions like the LSE must ponder over how the world can now accommodate the growth aspirations of the developing world so that the rise of Asia is peaceful. We often say that globalization is a reality that we must contend with. We also say that globalization offers opportunities as much as it poses challenges. That people and nations must learn to deal with both. But, there are still many unsettled questions pertaining to globalization. Even the discipline of economics has not addressed the phenomenon in a holistic manner. For example, while there is enormous, and quite longstanding literature on the benefits of free trade in goods and free flow of capital, the literature and policy on the free movement of people remains scanty and patchy. There are questions pertaining to the globalization of lifestyles, and its consequences for consumption, and their impact on the world environment. Is growth sustainable if development in the developing world merely mirrors the experience of the developed? It is not just that Third World households
may not be able to afford western consumption standards, our planet would
not be able to do so.

If every consumer in India and in China, totaling up to almost 3 billion,
want to live like people in San Francisco, Stockholm or Singapore, can
they afford to? Can nature afford it? If not, how do we alter lifestyles and
consumption patterns so that the growth process is sustainable in a more
globalized world? I believe, a new generation of economists and social
scientists have to once again write and draw on blank slates, like IG's
generation did. There are, I believe, no textbook solutions. There are no
pet answers, no clever models. The rise of Asia, and of the developing
world in general, presents us with new challenges - new intellectual
challenges, new technological challenges, new organizational and political
challenges. I hope your forum, and forums like yours, will be able to inspire
younger scholars to address these questions and seek answers. For the
need of the hour is to do so. I wish your conference all success.
INDIA’S FOREIGN RELATIONS - 2006
SECTION - II
MULTILATERAL CONFERENCES
032. Speech by Minister of State E. Ahamed for the Valedictory Function of the Programme for ASEAN Diplomats.

New Delhi, September 21, 2006.

Dean, Foreign Service Institute, Your Excellencies, Ambassadors, High Commissioners, Participants of the ASEAN Diplomats Programme, Ladies and Gentlemen,

1. I am pleased to be with you this evening for the Valedictory Function of the Programme for ASEAN Diplomats. The participation of 24 diplomats from the 10 member countries of the ASEAN has imparted to this programme a unique flavor that truly reflects the friendly relations and bonds of mutual understanding between member countries of the ASEAN and India.

2. India’s Foreign Policy has always had a pronounced emphasis on relations with ASEAN countries. With a view to impart a new direction and momentum to this rapidly expanding relationship, India had consciously embarked on the now well known “Look East Policy”, at about the same time as the programme of economic liberalization in India. Over the last 15 years since the commencement of this policy, we have been cooperating actively with ASEAN, in the initiative for ASEAN integration. At the Fourth India-ASEAN Summit, held in December last year, our Prime Minister offered assistance to Cambodia, Laos, Mayanmar and Vietnam in setting up Centres for English Language Training and establishing a satellite-based tele-medicine and tele-education network. Many members of the ASEAN countries are also members of the BIMSTEC and the Mekong-Ganga Co-operation Initiative. More than 500 training slots, under Indian Technical and Economic Cooperation Programme (ITEC), about 20% of the total, have been earmarked for ASEAN. This reflects the importance accorded by India to its relations with members of ASEAN countries. The Professional Course which you have completed is in its own way a concrete expression of our policy.

3. Our bilateral cooperation finds expression in immediate past. For example, despite being affected itself by the Tsunami disaster, India
was among the first countries to respond to the international relief efforts which severely affected many ASEAN countries. In the last forty-five years, more than 75,000 Indian personnel have participated in peacekeeping missions in different parts of the world, including in Cambodia during 1991-94 under the auspices of United Nations.

4. I am aware that some countries of ASEAN see themselves as Pacific Rim Countries. Yet, the fact that they are among the most important countries on the littoral of Indian Ocean, is of special significance and importance for us in India. I was in Tehran earlier this year for the 6th Meeting of the Council of Ministers of the Indian Ocean Rim Association for Regional Cooperation. The significance of this Association can be gauged by the fact that the Indian Ocean sustains the maritime lifeline of over 50% of world trade. At the meeting, I expressed our readiness to share the experience gained in Mitigation of Natural Disasters and provide training for capacity building. I also stressed the importance of increased cultural interaction and tourism flows. As a strong economic unit, ASEAN countries have a special role in the IOR-ARC process. I would say that, with our own capabilities strengthened, we have been able to provide renewed impulse and added substance to the ‘Look East Dimension’ of our external relations. The role we see for ourselves is that of a partner in capacity building and sharing experience in the context of ASEAN.

5. Globalisation, the dominant theme of our times, poses its own questions and issues. Some of these would have been flagged and discussed in your programme. As diplomats, you undoubtedly have a privileged and wider view of the global stage. What is clear is that challenges thrown up by processes that are global will require collective responses. Therefore, foreign policies in our region will need to be managed in a way that the pursuit of self-interest of nations does not jeopardize the greater harmony of world relations. An environment of security, predictability and peace is essential for business to flourish and development to take place. Enhancing cooperation in the field of security is critical to our larger efforts aimed at building lasting economic ties.

6. Today, the principal threats to peace and stability in the world are not from wars between nations but from transnational terrorism. That is why, as we jointly work towards intensification of our economic
and other ties, India and ASEAN should not lose sight of the overarching importance of working purposefully and in cooperation to combat the menace of terrorism. The Joint Declaration on Cooperation in Combating International Terrorism and other Transnational Crimes that India and ASEAN have signed is reflective of our determination to effectively combat this menace.

7. In today’s globalising world, economic cooperation is at the heart of relations between countries. It is the foundation on which the entire edifice of relations has to be built. India looks forward to a comprehensive engagement with all ASEAN countries. We would like to share our strengths for the development of the region and for mutual benefit.

8. We share unique cultural bonds with each of the countries of the ASEAN region. These bonds are far too many to be recounted here. I am told that during the course of this programme, you have been able to travel to Bodh Gaya, the birth place of Lord Buddha and also to Kolkata and Bhubaneswar, located on the coast of the Bay of Bengal, our primary interface with the countries of the ASEAN region. You would no doubt have had an occasion to see for yourself many aspects of our shared cultural heritage reflected in social practices and religious beliefs. A substantive section of people in the ASEAN countries and in India want governments to build on our shared heritage. This includes multitudes of people of Indian origin who have settled in ASEAN countries over the last one thousand years. The Governments in ASEAN region and in India have a shared responsibility to ensure peace and harmony across our region, carry forward and build a fruitful scientific, technological and economical partnership, which the people of our countries desire. I am sure that this programme has offered you opportunities to go deep into the challenges and opportunities that the new millennium offers to the new generation of diplomats in ASEAN and in India.

9. One of the objectives of the Programme for ASEAN Diplomats was to acquaint participants with various facets of India – our polity, economy, society, history, culture and of course, our foreign policy. Perhaps, four weeks is hardly enough to understand a country, especially a country like India. However, I hope you have, at the end of your stay, an appreciation of our rich past and equally of the direction in which we are moving.
10. I would like to congratulate the diplomats from the ASEAN countries for successfully participating in the course. I hope you found the programme useful and enjoyed your stay in India. I wish you success in your endeavors. I also take this opportunity to convey through you our greetings and good wishes to your respective countries and people.

11. Let me conclude by pointing out that in most team sports like football, hockey and cricket, popular in our part of the world, a team comprises 11 players. India is delighted to complete the team of ASEAN 10. If you fancy the game of football or hockey, consider us as the goal keeper, a keeper of our shared cultural heritage and a preserver of peace and tranquility in our region. If you fancy cricket, consider us as an opener, a country which wants to open a long innings of prosperity, peace and tranquility in our region, in the new millennium. Thank you.
BIMSTEC

New Delhi, May 5, 2006.

The Second Meeting of the BIMSTEC Joint Working Group on Counter Terrorism and Transnational Crime (JWG-CTTC) was held in New Delhi on May 04-05, 2006. It would be recalled that the first BIMSTEC Summit held in Bangkok on July 31, 2004 had decided to set up a Joint Working Group to strengthen joint efforts on counter terrorism and transnational crime, and the first meeting of the Joint Working Group on Counter Terrorism and Transnational Crime was held in New Delhi on December 9-10, 2004.

The Second Meeting of the Joint Working Group reviewed the Reports of the meetings of its four sub-groups on Legal and Law Enforcement Issues, Intelligence Sharing, Combating Financing of Terrorism and Illicit Trafficking in Narcotic Drugs, Psychotropic Substances and Precursor Chemicals. The Meeting decided on ways and means to further streamline the functioning of these four Sub-Groups. It also agreed upon concrete steps to strengthen cooperation among the BIMSTEC countries to make these Sub-Groups more vibrant and effective.

The Meeting was chaired by Mr. Rajiv Sikri, Secretary [East], Ministry of External Affairs, Government of India, who also led the Indian delegation. Other delegations to the Meeting were led by Mr. Anwarul Karim, Joint Secretary, Ministry of Home Affairs, Bangladesh; Mr. Tharchean, Senior Legal Officer/Under Secretary, Bureau of Law and Order, Ministry of Home and Cultural Affairs, Bhutan; Brig. Gen. Phone Swe, Deputy Minister, Ministry of Home Affairs, Myanmar; Mr. Deepak Kumar Shrestha, Counsellor of Royal Nepalese Embassy, New Delhi; Mr. Karunatilaka Amunugama, Additional Secretary, Ministry of Foreign Affairs, Sri Lanka; General Winai Phattiyakul, Secretary General, Office of the National Security Council, Thailand.

It was agreed that the next Meeting of the Joint Working Group will be held in Myanmar in December 2006.

034. Media Briefing on the BIMSTEC Ministerial Meeting held in New Delhi.

New Delhi, August 9, 2006.

Official Spokesperson (Navtej Sarna): Good Evening. I thought we should brief you on the just concluded BIMSTEC Ministerial Meeting in New Delhi. I also have with me Mr. Bishnoi, Joint Secretary (Multilateral Economic Relations) who can answer your more technical questions if you have them.

The Ministerial meeting itself was a one-day affair which took place today but was preceded yesterday by the Senior Officials meeting. The Indian delegation at the Senior Officials meeting was led by Shri Rajiv Sikri, Secretary(East). The Ministerial delegation was led by Shri E. Ahamed, Minster of state for External Affairs. We have a Joint Ministerial Declaration that has come out of the meeting and we will make that available on the website.

I would like to highlight some of the points of focus of the Declaration. Essentially, the Ministers decided to enhance cooperation in certain identified areas which are of mutual interest for the people of this region that BIMSTEC covers. In trade and investment, the decision was that the FTA should be concluded before the next summit. The next summit is to be held in February, 2007 in India. Second issue is transport and communication, because connectivity, particularly multi-modal connectivity, is a very big thing within BIMSTEC. On tourism, I can tell you, that it was decided to establish a BIMSTEC Tourism Information Centre in India as well as a BIMSTEC Tourism Fund.

Similarly, in energy cooperation which is another area of interest, it was decided that there should be a BIMSTEC energy centre in India and a technology transfer exchange facility for enhancing cooperation in technology exchange, scientific research, R&D etc. in the area of culture, there are several commonalities in this area within BIMSTEC. It was decided that a BIMSTEC cultural, industries commission and observatory should be set up in Bhutan. Counter-terrorism and transnational crime is another very important aspect and an aspect on which considerable cooperation is taking place even currently. There is a Joint Working Group on Counterterrorism and transnational crimes which has already held two meetings and it also has sub-groups which have been meeting. The third meeting of this group is to be held in December in Myanmar. Similarly, the
Ministers recognized that BIMSTEC Centre for Weather and Climate would be another important milestone for cooperation in handling environmental challenges, weather prediction etc. India also offered, as part of the people to people contact which is again of importance to us, to hold a BIMSTEC Film Festival likely towards the end of the year.

These are some of the areas. There are some others you will find in the Ministerial Declaration on which there was focus during the discussions. As I told you, the next summit i.e. the Second BIMSTEC Summit is to be held in India on February 8, 2007. it will be preceded by the Ministerial meeting which will be the tenth Ministerial meeting.

The BIMSTEC ministers collectively called on the Prime Minister today. Thereafter the Prime Minister hosted all of them for lunch. During the discussions over lunch the Prime Minister made several points. For instance, the Ministers should do all they can to convert BIMSTEC into an innovative and forward looking organisation which aims at realizing the vision of the founders of BIMSTEC. This vision should be translated into concrete areas of work. One of the major concrete areas would of course, would be the FTA and it was underlined that we should move as quickly as we can towards that. Prime Minister also pointed out that BIMSTEC also offers an historic opportunity of linking South Asia with South-East Asia. In fact not only that, BIMSTEC can be the building block for the larger East Asian community.

There were some bilateral meetings at the level of Minister of State. For instance, the Sri Lankan Foreign Minister and Minister of State for External Affairs, Shri E. Ahamed met yesterday. During this meeting, MOS reiterated that military solution is not possible in Sri Lanka and hoped that the Sri Lankan government would move very quickly towards negotiations with LTTE. The Sri Lankan Foreign Minister on his part said that war is not an option for his Government and they are keen to start negotiations. But according to him, the LTTE is providing to be intransigent. Also, there was bilateral meeting with Shri E. Ahamed for the Foreign Minister of Thailand and Shri E. Ahamed hosted a dinner yesterday in the honour of the Thai Minister. During this meeting they discussed a wide range of issues including exchange of high-level visits, bilateral cooperation in defence and security, counterterrorism, energy security, cooperation in renewable energy sources, BIMSTEC issues, civil aviation issues, enhancement of air links, improvement of connectivity between India and Thailand as well as the progress of bilateral FTA negotiations between the two countries.
**Question:** Are Nepal and Bhutan members?

**Official Spokesperson:** Yes, they are.

**Question:** Can you give us the new name of BIMSTEC?

**Mr. Bishnoi:** Bay of Bengal Initiative for Multisectoral Technical and Economic Cooperation.

**Question:** Can you give us an idea on FTA negotiations? What are the problem areas?

**Mr. Bishnoi:** The time line set for the framework agreement to begin implementation of the fast track was 1st July, 2006. So the time line has indeed been passed. The areas for which the agreement has still to be arrived are those relating to rules of origin and product-specific rules. FTA negotiations by their very nature are difficult. However, in the BIMSTEC FTA negotiations, all delegations see light at the end of the tunnel. It does not seem as if the problems are insurmountable. What would be required is to be speed up and have more meetings, to have meetings at various levels. The goal post is the second Summit to finalise the FTA.

**Question:** When you talk of counter-terrorism, you say there are bilateral problems that come in between, what are they?

**Official Spokesperson:** Countries may have bilateral problems but when these issues are discussed on a regional or multilateral basis, the essential prerequisite is that you do not get into discussing bilateral issues. What you do discuss are across the board strategies which will help you in countering this scourge to which most countries are victims. For instance, there are issues of exchange of information, intelligence sharing, legal and law-enforcement issues. I am not speaking specifically but, generally there are situations of putting in place a legal infrastructure Mutual Legal Assistance Treaties, Extradition Treaties etc. So these are all issues which cut across bilateral issues which essentially strengthen the entire region to counter terrorism and drug trafficking.

**Question:** You mentioned energy cooperation.

**Mr. Bishnoi:** Energy is definitely one of the most active areas and the activity was started when the First BIMSTEC Energy Ministers Conference held in October last year. They have also adopted a plan of action which involves a number of workshops, seminars in different years.
Those are all being held. One of the important decisions taken by the Energy Ministers Conference was to look at the question of grid connectivity. So there have been a couple on meetings on this subject. That is the aim that was decided upon by the Energy Ministers Conference. Given that so much is happening in this sector, it was desired by all member countries to cooperate in this area. A view was also taken that a BIMSTEC energy center should be set up which would act like a kind of Secretariat for cooperation in this sector. It would also provide training and exchange of experiences. The Memorandum of association of the energy sector has more or less finalized and we are getting into a situation of finding suitable land and putting up the physical premises and so on.

**Question:** What is the current volume of trade within the BIMSTEC countries? What are the targets FTA would envisage in terms of trade?

**Mr. Bishnoi:** I do not have the exact figures, but I can say that intra-BIMSTEC trade is fairly low. The reasons are primarily that of connectivity, transport and infrastructure and these are some issues that we seek to focus on. There are no targets as such at the moment, it would probably be done when the FTA is in place.

**Question:** Are there any specific projects BIMSTEC countries are considering in the area of connectivity?

**Mr. Bishnoi:** There was a decision taken last year in December to have ADB do a study of how to remove transport and connectivity bottlenecks within the BIMSTEC region. The terms of reference of the study have been agreed upon and it will soon be initiated.

New Delhi, August 9, 2006.

(The Ninth BIMSTEC Ministerial Meeting was held in New Delhi, India on 9 August, 2006.

The meeting was attended by H.E. Mr. M. Morshed Khan, MP, Minister of Foreign Affairs of the People’s Republic of Bangladesh, H.E. Lyonpo Khandu Wangchuk, Minister of Foreign Affairs of the Kingdom of Bhutan, H.E. Mr. E. Ahamed, Minister of State for External Affairs of the Republic of India, H.E. Mr. U. Nyan Win, Minister for Foreign Affairs of the Union of Myanmar, H.E. Dr. Ram Sharan Mahat, Finance Minister of Nepal, H.E. Mr. Mangala Samaraweera, Minister of Foreign Affairs of the Democratic Socialist Republic of Sri Lanka and H.E. Dr. Kantathi Suphamongkhon, Minister of Foreign Affairs of the Kingdom of Thailand.

H.E. Mr. E. Ahamed, Minister of State for External Affairs of India was elected Chairman by acclamation upon the proposal of the outgoing Chairman H.E. Mr. M. Morshed Khan, MP, Minister of Foreign Affairs of Bangladesh.

The meeting approved the Report of the Eleventh meeting of the Senior Officials held on 8 August, 2006 preceding the Ministerial Meeting. The Meeting also heard Statements by the Leaders of all the Delegations.)

At the conclusion of the Meeting the Heads of Delegation issued the following Joint Statement:

We, the Heads of Delegation of the Ninth BIMSTEC Ministerial Meeting, having gathered in New Delhi on 9th August, 2006 reiterated our commitment to the founding objectives and principles of BIMSTEC to accelerate economic and social growth in the region and noted with satisfaction the progress made since we last met.

We agreed to enhance cooperation in the following areas:

Trade and Investment

Affirming the importance of the Free Trade Area which will increase trade and investment, enhance competitiveness and promote socio-economic development, we urged that the negotiations on trade in goods under the FTA be concluded before the next Summit. We welcomed the
outcome of the meeting of the Trade Negotiating Committee held in Colombo in July 2006. We underlined the importance of regular Senior Trade/Economic Officials Meetings as well as the meetings of the Trade/Economic Ministers. We suggested that consideration be given to the early convening of the next round of these meetings. We also emphasized the importance of an early decision on the recommendations of the Task Force that has been mandated to examine the restructuring of the trade and investment sector.

We noted with satisfaction the meeting in Nepal of the Expert Group on the BIMSTEC Business Travel Card and agreed to further consider measures to facilitate business travel in the BIMSTEC region.

**Transport and Communication**

Recognizing that different modes of transport linkages are imperative for achieving connectivity amongst member countries to promote the movement of goods and people, we took note of the study to be conducted by ADB on BIMSTEC transport infrastructure and logistics. In this context, we underlined the need for ADB to work closely with governments of BIMSTEC member countries. We noted the various activities initiated in this sector, including capacity building through training programmes. We emphasized the need for more vigorous efforts for cooperation in the area of infrastructure including communication and port linkages.

**Tourism**

To enhance tourism in the region we underlined the need to move forward with a concrete Plan of Action based on decisions arrived at by the First Round Table and Workshop of Tourism Ministers and Travel and Tourism Industry Representatives held in Kolkata in February 2005, including establishment of a BIMSTEC Tourism Information Centre and BIMSTEC Tourism Fund. The Second Round Table and Workshop to be held in Nepal in August 2006 would review the progress made in this sector and provide impetus to our cooperation.

We also agreed that tourism should be promoted both within and from outside the region and that a concept of combined BIMSTEC destinations should be developed.

**Energy Cooperation**

We welcomed the decision to establish the BIMSTEC Energy Centre in India that would act as a focal point for strengthening cooperation in the
energy sector through sharing of experience and capacity building. We agreed to intensify our cooperation so that tangible outcomes can be achieved by the 2nd BIMSTEC Summit.

We emphasized the importance of sharing experiences and strengthening cooperation amongst member countries in the fields of grid connectivity, gas pipelines, hydro power, renewable sources of energy, energy efficiency, access to energy in all areas and energy sector reforms, restructuring, regulations and best practices.

**Technology**

We underlined the need to enhance cooperation in advanced areas of fundamental scientific research. We agreed that exchange of expertise in software and hardware development, as well as joint R&D in this field should be further promoted. We also encourage technology transfer and exchange of experience and data on Geographical Information System (GIS).

We welcomed the proposal to set up a Technology Transfer Exchange Facility. It was agreed that a concept paper would be circulated among member countries prior to an Experts Group Meeting.

**Fisheries**

We reiterated our commitment to step up our cooperation, including with our private sectors, to ensure the sustainable use of marine resources through effective conservation and management of the resources in the Bay of Bengal in accordance with international law.

We welcomed Thailand’s offer to organize a workshop on Fisheries Cooperation in BIMSTEC in late 2006 to discuss the direction of future cooperation in this sector as well as details of the proposed joint survey under the Ecosystem-based Fisheries Management in the Bay of Bengal project.

**Poverty Alleviation**

We welcomed Nepal’s offer to be the Lead country for Poverty Alleviation and also Bangladesh’s offer to host the First Ministerial Meeting on Poverty Alleviation.

We welcomed Thailand’s offer to share its experiences in combating poverty through various domestic policies based, in particular, on the philosophy of “Sufficiency Economy” which has proven to be a successful model for sustainable alternative development in Thailand.
Culture
We welcomed and accepted the offer of Bhutan to be the lead country. We welcomed the Paro Initiative and the Plan of Action adopted at the First BIMSTEC Ministerial Meeting on Culture. We also welcomed the proposal for the establishment of BIMSTEC Cultural Industries Commission and Observatory in Bhutan and directed that this be considered expeditiously at the expert level. We welcomed the offer of India to host the first meeting of the Expert Group to study this proposal.

We welcomed the offer of Bangladesh to host the Second Ministerial Meeting on Culture and the BIMSTEC Cultural Festival in April 2007.

Agriculture
We welcomed and accepted the offer of Myanmar to be the lead country. We look forward to identification of cooperative activities in Agriculture Sector. We welcomed Thailand’s initiative to host a workshop on Agricultural cooperation in BIMSTEC in August 2006, which would provide an opportunity for the members to define the scope and direction of their cooperation.

We agreed to cooperate in R&D in alternative energy crops so as to promote cost effective bio-fuel production at the community level.

Counter-Terrorism & Trans National Crimes
We emphasized the importance of the work done by the Joint Working Group on Counter-Terrorism & Trans National Crimes including the work of the sub groups under the Joint Working Group in the areas of combating the financing of terrorism, intelligence sharing, legal and law enforcement issues and prevention of drug trafficking, and encouraged the Joint Working Group to continue its active work that could lead to reaching concrete areas of agreement and cooperation in this important sector. We approved the report of the 2nd meeting of the Joint Working Group on Counter-Terrorism and Trans National Crimes held in New Delhi on 4-5 May 2006, and welcomed that the 3rd meeting of the Joint Working Group would take place in Myanmar in December 2006.

Environment & Disaster Management
We welcomed and accepted India’s offer to be the lead country. We appreciated the progress under the sector including the decision to establish the BIMSTEC Centre for Weather and Climate and various training
programmes and workshops in the area of remote sensing for environment and disaster management applications.

The establishment of the BIMSTEC Centre for Weather and Climate would be an important milestone towards improving weather observation and prediction techniques, with the intent of reducing the loss of lives and property, caused by weather and climate related natural disasters in the BIMSTEC region. We advised our officials to finalize modalities for the Centre before the 2nd BIMSTEC Summit.

We agreed to strengthen our emergency preparedness for natural disasters, especially through early warning systems. To this effect, we encourage networking between the BIMSTEC Centre for Weather and Climate and other existing regional institutions, such as the Asian Disaster Preparedness Centre (ADPC) and the SAARC Meteorological Research Centre.

We welcomed the offer of India to organize a workshop on cooperation in the area of remote sensing for environment and disaster management applications.

Public Health

We welcomed and accepted the offer of Thailand to be the Lead country and welcomed Thailand’s offer to host a meeting on traditional medicines.

We agreed that intensified cooperation in this sector should also include prevention and control of infectious diseases, such as avian influenza, HIV/AIDS, polio, kala azar, malaria, TB and dengue fever. We noted with appreciation the scholarships offered by India in traditional systems of medicine and by Thailand for training programmes in public health.

People to People Contacts

We welcomed the offer of Thailand to be the lead country and the initiatives taken by Thailand in promoting people to people contacts, including its plans to organize for member countries a visit to Royal projects in northern Thailand. We underlined the need for all member countries to identify and initiate activities in this sector. We welcomed India’s offer to organize the First BIMSTEC Film Festival.

BIMSTEC Website

We noted that work had been initiated for the maintenance of the
Website by the National Chamber of Commerce of Sri Lanka and the uploading of suitable material under the supervision of BWG.

We agreed that a monthly newsletter would be published on the BIMSTEC website by the BWG. We welcomed Sri Lanka’s offer to explore the possibility of developing an intra-BIMSTEC network accessible only to authorized officials.

**BIMSTEC Secretariat**

We reiterated the need to establish a permanent BIMSTEC Secretariat and appreciated the work done by the First Inter-Governmental Experts Group Meeting and directed that the Experts Group further deliberate on the issue and submit, through the SOM, concrete recommendations to the Tenth Ministerial Meeting. We also appreciated the work of the BIMSTEC Centre in providing support for BIMSTEC activities through the BWG, as an interim arrangement pending the establishment of a permanent Secretariat. We also thanked Thailand for its continued financial support for the BIMSTEC Centre until June 2007.

**Second BIMSTEC Summit**

We noted with satisfaction BIMSTEC’s achievements thus far and reaffirmed our commitment to further strengthening our partnership within the BIMSTEC framework. We expressed confidence that the Second BIMSTEC Summit to be hosted by India and proposed to be held on February 8, 2007 would carry forward our cooperative endeavours with renewed energy. The Second BIMSTEC Summit would commemorate the 10th anniversary year of the establishment of BIMSTEC and would provide an opportunity for our leaders to assess and review the progress made. Deliberations at the Summit would provide guidance on the future direction of cooperation and assist in shaping the vision for BIMSTEC to enable the region to achieve its full potential.

**10th Ministerial Meeting**

The 10th BIMSTEC Ministerial Meeting will be held in India.
C.I.C.A

036. Statement by Special Envoy of Prime Minister Murli Deora at Second Summit of the Conference on Interaction and Confidence Building Measures in Asia (CICA).

Almaty, June 17, 2006.

Your Excellency President Nursultan Abishevich Nazarbayev, Excellencies, Ladies and Gentlemen, it is my privilege to be present at such a distinguished gathering for the Second Summit of Conference on Interaction and Confidence Building Measures in Asia. I bring you the warm greetings of my Prime Minister Dr. Manmohan Singh and his best wishes for the success of this Summit. India attaches high importance to CICA. Prime Minister would have liked to be present today but has regretted that due to other urgent engagements he could not come.

We warmly welcome the two new members to the CICA family, Thailand and Republic of Korea, who have joined us since the last CICA Summit. India has traditionally warm and friendly relations with both of them.

Mr. President, I cannot but recall your address to the 47th Session UNGA in 1992, where you proposed the idea of CICA process and said “A journey of a thousand steps starts with the first step. It is by no means necessary to move towards a unified Asian structure and collective security in all these types of interaction at once”. Today, as we gather for the second summit, we can proudly say that we have accomplished the initial steps. We have agreed to travel side by side, at a pace agreeable to all in our journey to promote peace and prosperity in Asia. India has had the privilege to be associated with CICA since its very inception and has extended its whole hearted support.

When one is in the land of Abai, the great Kazakh nationalist, philosopher and poet, it is natural to recollect one of his couplets which goes:

Rises the Sun and sets the Sun
time is always on the run
concept comes after concept
like the wind caught by none!
It is only through farsighted wisdom that a concept can be nurtured and developed into a tangible form. I congratulate you, Mr. President, therefore for your vision and statesmanship in launching and steering the CICA process. Let me also take this opportunity to thank you for the very generous and warm hospitality accorded to me and the members of my delegation by the friendly people of Kazakhstan.

India has always believed that CICA can help contribute to the development of a cooperative and pluralistic security order in Asia, based on mutual understanding, trust and sovereign equality. Since achieving independence in 1947, India has been at the forefront of initiatives to foster greater cooperation between the countries of Asia. The 1954 Panchsheel Principles and the 1955 Bandung Conference were important milestones in this process. We note that the Panchsheel Principles are identical to the CICA Declaration of Principles adopted by us in 1999. Asia presents a diverse picture which requires a unique Asian framework. Replication of models, perhaps successful elsewhere, may not necessarily be suitable for us. India has therefore always emphasized that CICA has to evolve its own approach, rooted in the realities of Asia. In CICA, we have recognized this diversity and the consequent need therefore to move ahead gradually, building upon the basis of consensus and voluntary participation. We have pledged to work together to build a cooperative architecture by enlarging the areas of common advantage and convergence. We believe that CICA should above all focus on and take collective steps to further economic cooperation and greater social and cultural interaction among the member states.

Mr. President, together we have a significant share of natural resources, global energy reserves and trade, but we also have to face the fact that a large number of our people are still afflicted by poverty and lack of development. Closer bilateral and regional economic cooperation among the CICA members can act as a powerful catalyst for both development and prosperity of our peoples as well as for resolution of difficult problems left over from history.

Mr. President, the process of globalization has led to emergence of new security threats and challenges. These include international terrorism and transnational crimes, including trafficking in drugs, arms smuggling, cyber crimes, international economic crimes and money laundering. At the Almaty Summit in 2002, we had adopted the Declaration on Eliminating Terrorism and Promoting Dialogue among Civilizations. We had collectively
decided then that the fight against terrorism had to be global comprehensive and sustained and not selective or discriminatory. Today, we see a re-emergence of forces, which spawned the culture of terrorism in our region. It is necessary for us to redouble our efforts to root out this menace to our common peace and security with single-minded focus. No cause, however noble, can justify killing of innocent men, women and children through acts of terrorism. We should commit ourselves to zero tolerance for terrorism.

The CICA Catalogue of Confidence Building Measures, which we adopted two years ago, elaborates a broad framework of confidence building measures in the economic, social and humanitarian dimensions as well for fighting against the new challenges such as terrorism and transnational crimes. Let us today set ourselves the task that we would try and encourage elaboration and implementation of these CBMs on the basis of principles enshrined in the Catalogue. Based on the collective experience gained in this endeavour, we could consider further steps for the evolution of CICA. Such an approach would be consistent with your very wise words Mr. President at the 1992 UN General Assembly, which gave birth to the CICA process.

I would conclude by assuring you of India’s constant support and cooperation as we all move together towards our common destination of peace and prosperity for our peoples.
COMMONWEALTH

037. Excerpts from the Statement of Defence Minister Pranab Mukherjee at the meeting of Commonwealth Foreign Ministers.

I thank Your Excellency for giving us an overview of the status of Commonwealth Action Programme for Digital Divide (CAPDD) which has recently been renamed as the Commonwealth Connects Programme (CCP).

Bridging the digital divide among different countries as also within them, is a major challenge of globalization in the modern world. India is one of the countries which has made rapid strides in the area of information and communication technology. Concomitant with our ongoing efforts to ensure that the benefits of the progress made in the ICT sector reach all sections of our society, India has been in the forefront of taking initiatives to promote cooperation among developing countries in this crucial area. India’s pan-Africa E-network is a good example in this context.

India is strongly committed to CAPDD adopted at the last CHOGM in Malta in November, 2005, and had announced a commitment of one million Euros for this programme. We have designated a senior official to represent our Government on the Steering Committee and have already disbursed the first tranche amounting to Euro 175,000; an equal amount would be released before the end of the current financial year. We shall continue our efforts not only to meaningfully contribute to the implementation of this programme, but also to learn from the experiences of others.

I am glad to convey that our Prime Minister has, in principle, agreed to inaugurate the International Partnership Summit of the Commonwealth Connects Programme proposed to be held in New Delhi, preferably in the first quarter of 2007.

I have the further pleasure to announce that in addition to our existing commitments, India is willing to provide up to five experts for periods up to six months for assisting other Commonwealth countries in developing ICT capacity and strategies.

We are also ready to provide between 50-70 training slots for capacity
building in reputed institutions in India to fellow developing countries in the Commonwealth, through the Commonwealth Secretariat, in some other selected areas. These slots are in addition to the existing courses offered bilaterally to several countries in the Commonwealth under our ITEC programme.
G-8 SUMMIT

038. Special Media Briefing by Foreign Secretary Shyam Saran on the visit of Prime Minister Dr. Manmohan Singh to St. Petersburg for G-8 Summit.

New Delhi, July 15, 2006.

OFFICIAL SPOKESPERSON (SHRI NAVTEJ SARNA): Good afternoon everybody. Thank you for turning up on a Saturday afternoon for this special briefing by the Foreign Secretary on Prime Minister’s visit to St. Petersburg for the G-8 Summit. The visit begins tomorrow.

I would request the Foreign Secretary to say a few words and then we will take questions. Thank you.

FOREIGN SECRETARY (SHRI SHYAM SARAN): Thank you very much. Let me add my word of apologies for dragging you out on a Saturday afternoon. I thought before Prime Minister leaves for St. Petersburg tomorrow morning I would just give you a background of the preparations for the G-8 Summit and the kind of issues that are likely to be addressed at the Summit. Also, we would be briefing you about some of the positions that India has taken on the points that we would be discussing at St. Petersburg.

Let me begin by saying that it has now become something of a tradition that when the G-8 annual Summits take place, India along with some of the other important developing countries is also invited for what has become known as Outreach Session. Just as we had, these countries participated at the Gleneagles Summit last year. Many of you would be aware that the countries which were invited were India, China, Brazil, South Africa and Mexico. It is the same group of countries who have been invited for the St. Petersburg Summit. But, there will also be Congo which is representing the African Union because Africa-related issues could also be a major theme of the Summit.

You might have seen reports that for the G-8, this particular Summit is to address mainly issues relating to energy security, the global infectious diseases, global health problems, as well as education-related problems. In addition, since Africa was a major theme at the Gleneagles Summit, this time there would also be a focus on Africa, in particular what progress has been made on the implementation of some of the recommendations which were made at the last Summit.
In addition, there will be discussion on issues of global security. Terrorism would certainly be an important element. There would also be a focus on world trade, in particular the follow up to the Ministerial Meeting which was held in Geneva which as you know was not a very resounding success. So, this is a gathering where some of the international trade related issues relating to the Doha Round would also be discussed. So, as you can see, there is a fairly important agenda, a very wide-ranging agenda.

On each of these issues the developing countries, the Outreach countries, would have in fact quite a great deal to say. What we have done is, as we did for Gleneagles, there are certain papers which India itself has circulated on different issues. The Outreach countries have also been meeting amongst themselves and they have harmonized their position on several of these important issues. This will form the input also for the G-8 Summit.

Prime Minister would be reaching tomorrow evening. Our plan is to have a meeting of the Outreach countries soon thereafter in the evening itself tomorrow. Thereafter, the next day virtually the entire forenoon including lunch would really be the Outreach Session where the G-8 Heads of State and Government would have a chance to interact in a very informal, in a very free atmosphere with each other at the Outreach Session. And the discussions on these various topics will continue over lunch and then the Summit would be over.

Now you may ask what really would be the expectations that we would have from the Summit. Of course, for us a very important area of focus is terrorism. This has acquired a very, I would say, topical dimension because of the events which have taken place in the last few days, the tragic terrorist bombing incidents in Mumbai and before that in Srinagar. So, terrorism is going to be, from our point of view, a very important issue that would be addressed at the G-8 Summit. We have been receiving messages of very strong support and solidarity from a very large number of countries including all the G-8 Heads of State and Government. Certainly our expectation would be that the G-8 will come out with a very strong statement on terrorism, the need for us to unitedly deal with the scourge of terrorism and the ideology of extremism and violence. So, for us that would be certainly a very important element.

As far as some of the other issues are concerned, as I mentioned to you, we have a great stake in the success of the Doha Round. We have a very strong commitment to a rule-based, multilateral, equitable world trading regime and a trading regime which takes development as its centerpiece.
It must provide for differentiated treatment of developed and developing countries. This is not really happening.

On major issues, for example on agriculture, we still do not have a spirit of flexibility among some major developed countries on the reduction of agricultural subsidies. There still does not seem to be a sensitivity to the requirements of the large developing countries who have vulnerable rural populations. There is the phenomena of subsistence agriculture. There is need for safeguards for the interests of these populations. So, from our point of view there are a number of issues of this kind which need to be addressed.

On the side of services we have certain strengths. We would certainly like a more liberal regime for the movement of professionals which again is hampered by a number of restrictions. So, there will be a number of issues that will need to be addressed. We would certainly take these up in a fairly strong manner at the Summit.

Then we come to the major issues that have already been put forward by Russia sometime ago, energy security. In fact from the point of view of Russia as well as from the point of view of other G-8 partners, energy security has become a very important overriding concern. As you now see, just on the eve of the Summit oil prices are hitting about 78 dollars per barrel. So, it has really concentrated the minds as it were on the importance of energy security, how do we deal with these kind of fluctuations, this kind of volatility in the energy market?

In terms of our strategy, we have always said that from the point of view of the developing countries our perspective is somewhat different. Our perspective is that for our development we need to increase energy consumption. It is not a matter of capping energy consumption or trying to reduce energy consumption. From our perspective, if we are to overcome the constraints on our development, we need to increase our energy consumption. How do we ensure that in this kind of an environment of volatility and an environment of rising energy prices? For long-term strategy we ourselves have committed India and we have advocated that we should diversify the energy mix. Our dependence upon fossil fuels should reduce. Over a period of time we should move to renewables and that we should have a large menu of energy resources that we should be able to draw upon. Of course, there are issues of energy efficiency, the balance between energy consumption and environmental protection. All these issues get interlinked. Of course, to some extent these issues were already addressed.
at the Gleneagles Summit last year. But there would be a much more focused discussion at this Summit.

As I mentioned to you, we have also presented our own perspective on issues like education. Russia has come up with proposals for focusing attention on technical education, vocational education, generating employment through this kind of education, making education much more relevant to the requirements of our time. We certainly subscribe to that notion. We ourselves have suggested that in terms of meeting our goals for “Education for All” there have to be much more dedicated resources provided for education.

There is the issue of pandemics which will come under health. There again the need for us to have a global response, a global strategy particularly in terms of early warning systems, in terms of surveillance mechanisms to detect in a timely manner the emergence of this kind of infectious diseases, and some kind of a quick response mechanism, these are the kind of things which we would be looking at under the health item.

Africa – on our side we have indicated that we have already in place a very very elaborate programme of cooperation with African countries. You are aware of projects like the pan-African e-network. We also have programmes in Western Africa, the TEAM-9 initiative. There are a number of things which are happening between India and Africa which we have already given in the shape of a paper to the G-8. So, this is one area where India has already done quite a bit.

I think with regard to the elements that we would be taking up at the Summit itself I would confine myself to these issues.

We also look forward to the opportunity for the Prime Minister to have a number of bilateral meetings with several of the important Heads of State and Government who would be present there. As you know, the President of the United States, President of China, the British Prime Minister, the German Chancellor, the Japanese Prime Minister, they would all be present at St. Petersburg. There would certainly be opportunities for the Prime Minister to have exchange of views with them not only on the issues that are in front of the Summit but also on a number of bilateral issues. Thank you very much and I would be happy to take questions.

**QUESTION:** To what extent will Prime Minister be seeking greater pressure from the international community at the G-8 on President Musharraf to contain the terror network within Pakistan?
FOREIGN SECRETARY: I think the need for there to be a serious effort on the part of the international community to deal with the challenge of terrorism is self-evident. Prime Minister would certainly be making a very strong pitch at the G-8 for a united response. This is something which is not only a matter which affects India: it is a matter which affects the region, it affects us globally. You have seen the networks which have come to our attention whether you look at the London bombings, or what has been happening in other parts of the world. It is quite apparent that these are all interlinked. Therefore, you cannot have a segmented response to terrorism. I think the message which should come out from the G-8 is that the world accepts that there cannot be a segmented response to terrorism and that unless we are ready to work together and really look this problem in the face we do not really succeed.

QUESTION: Is a trilateral meeting with India, Russia and China also scheduled?

FOREIGN SECRETARY: There has been a proposal made by Russia for a trilateral meeting of the Prime Minister of India, Presidents of China and Russia but it has not yet been scheduled. So, we are waiting for a word from our hosts as to if and when this meeting would be held. Of course, we would welcome an opportunity for such a meeting.

QUESTION: You mentioned making pitch for a united response. What would that united response look like? What are you looking for from the international community specifically?

FOREIGN SECRETARY: Number one, there must be a very unambiguous expression from the international community that such acts of terrorism are totally unacceptable. If there is, as people say, zero tolerance for terrorism as far as the international community is concerned, then when something like this happens, that zero tolerance should be very clearly and unambiguously demonstrated. Secondly, we have said this before, it appears that as far as terrorist groups are concerned they seem to have much better international cooperation amongst themselves rather than the countries who are facing them. We need to have a network amongst ourselves to deal with such a global phenomenon.

There has to be greater information exchange. There has to be greater cooperation as far as intelligence is concerned. There should be a readiness to deal with each of these kind of phenomena without some kind of, as I said, segmentation that fighting terrorism in one part of the world is perhaps
much more important than it is in the other because that is really failing to look at the phenomenon itself because it is global. If you have to defeat it, then you must fight it wherever it occurs. That is what we are trying to put across. It is not just an India-Pakistan problem. I think unless there is a recognition that this is not just an India-Pakistan problem but this is a wider regional and global problem, it would be very difficult to confront it.

**QUESTION:** Are you somewhat disappointed that western nations have not condemned the Mumbai blasts as they should have? Are you planning to share any evidence with Pakistan on the Mumbai blasts?

**FOREIGN SECRETARY:** The first question, I think there have been a number of very strong statements by Heads of State and Government of western countries. So, to say that there has not been a good enough response from our point of view would not be correct. In fact we have received very strong messages of solidarity and support.

As far as sharing information with Pakistan is concerned, we have a mechanism through which we are supposed to exchange information. It is for our agencies to decide what they wish to communicate through those channels.

**QUESTION:** In the bilateral meeting with President Bush, would terrorism be a topic on the agenda? Is a bilateral meeting scheduled between India and Pakistan?

**FOREIGN SECRETARY:** Pakistan is not represented at St. Petersburg. With regard to the meeting with President Bush, I think it is for the two leaders to really decide what they want to talk about. But certainly for us a major item of concern would be terrorism. Certainly. But there are a number of issues on the bilateral agenda as well that the two leaders would be talking about. I am certain they will review the progress of the very wide-ranging agenda on cooperation that we have drawn up together between the two countries. I am sure they would like to know and like to assess how far we have made progress and what needs to be done in the future.

**QUESTION:** Sir, you said that there has been ambiguous response as far as terrorism is concerned. Do you feel that because of the ambiguous response the first casualty often is the on-going peace process between the countries? Here I am hinting at India and Pakistan. This type of lack of seriousness is to be perceived between the two countries as far as terrorism is concerned. Do you feel that the first casualty will be peace process between India and Pakistan?
FOREIGN SECRETARY: You see I am not predicting that the peace process will become the casualty. What I want to say is that the international context in which this meeting is taking place, the issue of terrorism has become an important topical issue; particularly when there has been only recently the bomb blasts in Mumbai. It has to be seen how it is connected with international terrorism – the bomb blasts in London, the bomb blasts in Madrid, you would have observed that the international reporting on this issue, the world media perceives some connection that the blasts that have taken place here have some linkages with similar blasts in other places. Where are its roots; it is also been seen. The leaders of all the big countries have issued highly condemnatory statements. Along with that we also want that there should be a coordinated global response. If there is a united response from the G-8 then the international terrorism will not be tolerated. This type of violence will not be tolerated. This will help other countries to work in coordination with a country like India to defeat terrorism; this will have a great impact.

QUESTION: Are you hoping that the G-8 leaders will name Pakistan? Otherwise, on terrorism do you want Pakistan to be named?

FOREIGN SECRETARY: We are not in the business of telling G-8 who they should name and who they should not. I think I have said enough that there is a certain urgency and there is a certain need for there to be an unambiguous, united, international response to terrorism, not just linked to this event but to see how this is interconnected with, as a global phenomenon and needs (a global response) just as there are other global issues which require global response. We are talking about energy security which requires a global response, we are talking about pandemics which requires global response. These are cross-cutting issues. These are transnational issues. We are saying, so is terrorism. So, just as you need a global response to other such issues, we need to get together and also deal with this. And wherever it occurs, it needs to be fought.

QUESTION: Which are the bilateral meetings that have been confirmed as of now which the Prime Minister will be having?

FOREIGN SECRETARY: In this kind of meetings it is always a little difficult to say in advance what these bilateral meetings would be. But I think it would be fair to say that Prime Minister would have an opportunity to meet almost all of the important leaders who are going to be represented at the Summit. There have been some requests from other countries who
are attending and there have been some requests from us. We are in the process now, our Mission in Moscow and our Consulate in St. Petersburg are right now in the process of going to tie up the loose ends and to schedule the various meetings taking into account the amount of time that Prime Minister has because Prime Minister would be having a very brief stay in St. Petersburg.

**QUESTION:** The NDA Government had said that it will have zero tolerance against terrorism. What is your Government’s stand? Do you adhere to that policy? Do you think that the threshold has been crossed with the 7/11 Mumbai blasts?

**FOREIGN SECRETARY:** Number one, why are you making a distinction between me and the previous Government?

I think we have had zero tolerance for terrorism across several Governments. It is not something that is a Government-specific response. We have all along stated that we are very much committed to pursuing a policy of peace and friendship with Pakistan. We ourselves have taken the initiative to put in place a very large number of confidence-building measures. If you look at Kashmir specific confidence-building measures, virtually each and every one of them has come from India. If you look at some of the other confidence-building measures which have been put in place most of them are again at the initiative of India. So, I do not think that anybody can have a doubt in terms of India’s commitment to taking this peace process, taking the dialogue process forward. But we have reminded again and again that our ability to take the peace process forward is very much integrally linked to the implementation of the commitments, very solemn commitments, unambiguous commitments, which are enshrined in the Joint Statement of January 6, 2004 in which Pakistan committed itself not to permit any part of the territory under its control to be used for cross-border terrorism against India.

Each time there have been incidents which have taken place, we have pointed out that our ability – in any democracy – to take this process is dependent upon our ability to have public opinion behind us. We must have the people of India behind us when we take this peace process forward. Every time something like this happens, it undermines public confidence. It undermines public opinion. Negative public opinion is created. Anger is generated. So, obviously, whether we like it or not, this becomes a question mark over the process. And what has happened recently is
really a playing out of what we have been saying again and again. If you ask me what is really the threshold, it is very difficult to predict what the threshold would be. But I think it would be fair to say that as a result of these terrible terrorist incidents it is becoming difficult to take this process forward.

**QUESTION:** My questions are related to Iran and Iranian Foreign Minister’s visit to India. Yesterday, in a lecture you stated that while Iran voted against India on NPT several times which was not acceptable to India, India did not say anything against Iran? …now when the Iranian Foreign Minister is coming to India, is India going to somehow remove that doubt between the two countries and try to heal the wounds? What are you going to specifically discuss with the Iranian Foreign Minister when he comes here? Day before yesterday the Iranian Oil Minister has rejected the pricing structure of Pakistan and India as far as the pipeline is concerned. He said that Iran cannot accept that pricing structure. What specifically are you going to discuss with the Iranian Foreign Minister on pipeline issue?

**FOREIGN SECRETARY:** I think I will leave it to the Iranian Foreign Minister to decide what he wishes to talk about. But we are very clear as to what our policy towards Iran is, and I think I have spelt out in great detail for you. If you keep insisting on finding negative elements in our relationship, I cannot help it. But I said very clearly that India places great value on what it regards as its civilisational ties with Iran. I do not think there should be any doubt about that. We have also stated in very clear terms that Iran is and will remain a very important energy partner for India. Iran is also very important to us in terms of our relationship with Central Asia, in relation with Afghanistan. So, if you are looking at the kind of relationship we already have with Iran, frankly I think the agenda for our meeting with Minister Mottaki could be a very substantial one.

As far as the pipeline is concerned, the negotiations are going on. I am certain that there will have to be further rounds of talks about issue like pricing issues, like security issues, like quantities. Let the people who are handling this negotiate the deal in the best manner possible. Eventually we will have to come to a deal which takes into account the interests of Iran and taken into account the interests of India and Pakistan. We cannot have something which is one at the expense of the other. We have also said I think time and again that India’s position concerning this particular project will be based on the economic viability of the project but, of course, taking into account the very privileged relationship that we have with Iran.
We would hope that Iran in turn when it deals with this issue, will also take into account this privileged relationship.

**QUESTION:** You said in G-8 a number of issues will be discussed: would the uncertain situation in Iraq will also be discussed? There is a report today that five Indian have been abducted there. Do you have any information on that?

**FOREIGN SECRETARY:** As I said, at the G-8 Summit there shall be discussion on the agenda items. Along with that it is natural that when so many world leaders get together, there shall be discussion on other issues as well. Problem are arising in the Middle East. There are the issues of Lebanon and Palestine which will be discussed. There is the issue of Iran which the P-5 +1 are taking to the Security Council; perhaps this shall be discussed too. There are similar other issues too which perhaps could come up for discussion. In between the issue of Iraq could also come up; and in the “Out-reach” meeting if this is raised, it could also be discussed but specifically this is not on the agenda.

The report you have referred to, we have seen it; but we have no confirmation of it yet. Whatever efforts we have made to get the information, we have received no confirmation.

**QUESTION:** British Prime Minister Tony Blair spoke about G-8 converting itself into G-13. What is India’s response to that? What kind of role you visualize for India in the expanded G-8?

**FOREIGN SECRETARY:** We will leave it to the G-8 to decide whether it wants to convert itself to G-13. But I would like to certainly make the point that as far as certain global cross-cutting issues are concerned, the world already recognizes that it would be very difficult to resolve these problems and deal with these global challenges unless you have countries like India and, of course, countries like China and some of the other important developing countries like South Africa, Brazil also part and parcel of that global dialogue.

**QUESTION:** There is still some confusion as to whether the Foreign Secretary level talks between India and Pakistan will be held? What is the position?

**FOREIGN SECRETARY:** I do not know why there is confusion because what had been decided was that at the end of the Composite
Dialogue level various rounds on the various items of the Composite Dialogue there would be a meeting of the Foreign Secretaries, there would be a meeting of the Foreign Ministers, and there would be a meeting of the Joint Commission. What has not been determined certainly from our side are possible dates for these meetings. We will take a decision on this at an appropriate time.

**QUESTION:** In your presentation you have mentioned about harmonization of issues among the outreach nations. Could you elaborate on that? To what extent this harmonization plan goes and which are the issues on which a joint kind of position will be taken?

**FOREIGN SECRETARY:** What we have tried to do is to give inputs from our side on each of these agenda items. At I mentioned to you, we have had meetings amongst the five outreach countries themselves and we have found that in fact on almost all these issues we have a very convergent position. For example trade. As you know, we have a very carefully crafted, united kind of strategy by the developing countries. These are the major developing countries who are in the forefront in any case. So, we have set out positions concerning, for example, how to treat agricultural subsidies, the whole issue of non-agricultural market access. We have looked at the issue of safeguards particularly for developing countries, those who have large rural populations. So, on a number of these trade related issues we have certain common position and this has been communicated as a G-5 or as an outreach country position as an input for the G-8 and an opportunity to have a very free-wheeling exchange of view on some of these issues will, of course, take place when the Outreach Session takes place.

Then on energy security, again as far as the developing countries are concerned - and these five countries are concerned – our views are virtually the same because there is obviously going to be an impact on our development if we are going to face an environment of rising prices of energy which we are already facing. It is no longer something which is in the future. This is something the future has come today. So, how do we craft a strategy which takes into account our own specific developmental needs but put in the larger global context. We certainly believe that there should be a balancing of the interests of producers, of consumers, of transit countries. We certainly believe that we must have a strategy of diversification of energy supplies, that in long term we need to move away from fossil fuels to renewables. If we are going to move for clean energy
and clean development mechanisms, then the financial burden of this should not have to be borne by the developing countries themselves. There must be some kind of financing mechanism so that our requirements in terms of adopting these new technologies can be taken care of. So, on these elements there is a harmonized position.

On health, of course, the key issue for us is how do we have affordable treatment, affordable drugs available to enable developing countries, particularly the more poorer countries, to confront global challenges of, for example, HIV-AIDS. There we believe that developing countries themselves have certain strengths that they can bring to the table. Look at India's own pharmaceuticals industry. We are the fourth largest pharmaceuticals industry in the world. We are a very large producer of retroviral drugs at very affordable prices. So, we believe that if we have agreed that this is a global challenge which needs to be confronted with all the instruments which are available to us, then we need to look at how we can draw upon the strengths of some of the developing countries themselves in order to confront them. So, we also offer as developing countries what we can do in order to contribute to these efforts. It is not only that we are recipients, we are also partners in this effort.

On education, we have pointed out that in many areas of education, particularly technical education, centers of excellence are available in our own countries. And we have on our own in fact been offering these educational opportunities to many of our brothers and sisters in the other developing countries. So, if there is a global response required, then perhaps you should take into account the assets which are also available in developing countries themselves. Then you can craft a global response. These are some of the ideas which are incorporated in the inputs that we have provided to the G-8.

**QUESTION:** Will there be any meeting amongst India, Brazil and South Africa on the issue of permanent membership in Security Council?

**FOREIGN SECRETARY:** We do not have a separate meeting which has been planned. But I have no doubt that when the Prime Minister would be meeting some of the leaders on a bilateral basis this would perhaps come up also as a topic of conversation. As you know, what is happening now in New York is that a strong recommendation has been made that there should be a discussion in the General Assembly about the reform of the United Nations, the implementation of the Millennium Goals, and in particular the reform of the Security Council because everyone agrees
that expansion of the Security Council both in the permanent as well as in the non-permanent categories is inescapable. So we need to keep attention focused on that even though we may not have made much progress in terms of this reform being implemented but it should not fall off the international agenda. So, the G-4 along with other developing countries are working to see that this remains very much a focus of the global agenda. Thank you very much.
039. Statement of Prime Minister on departure for Outreach Session of the G-8 Summit at St. Petersburg.

New Delhi, July 16, 2006.

I am visiting St. Petersburg to participate in the Outreach Session of the G-8 Summit which will be held tomorrow. We welcome the initiative of President Vladimir Putin, the Host of the G-8 Summit to extend an invitation to India. Brazil, China, Mexico, South Africa, Congo and Kazakhstan will also participate in the Outreach Session. The main issues on the Agenda include global energy security, education and fight against infectious diseases – all issues of vital importance to the global community.

It is our expectation that the St. Petersburg Summit will also provide a useful opportunity for discussions between the industrialised countries and major emerging economies of the world on issues such as security, world trade, terrorism and globalisation.

Terrorism is a scourge that continues to afflict different parts of the world. The tragic human cost that this entails was brought forth once again by the recent attacks in Mumbai and Srinagar.

We will impress upon the leaders gathered at the G-8 Summit that the international community must adopt an approach of zero-tolerance for terrorism anywhere. The international community must isolate and condemn terrorists wherever they attack, whatever their cause and whichever country or group provides them sustenance and support.

During my stay in St. Petersburg, I look forward to meeting world leaders present there: including President Putin of Russia, President Bush of the United States, President Hu Jintao of China, President Lula da Silva of Brazil, Chancellor Merkel of Germany and Prime Minister Koizumi of Japan. I will also participate in the first trilateral meeting at the Summit level with the Presidents of Russia and China, which will take place in St. Petersburg.
040. Position Paper on Declaration by the Heads of State and/or Government of Brazil, China, India, Mexico, South Africa at the St. Petersburg G-8 Summit.

St. Petersburg, July 16, 2006.

Introduction

1. Global challenges today in the areas of energy security, education and infectious diseases can only be adequately dealt with through intensified international coordination and cooperation. In this regard we reiterate our proposal, made last year in Gleneagles, for a new paradigm for international cooperation, focused on the achievement of concrete and properly assessed results, taking fully into account the perspective and needs of developing countries. The increased participation of developing countries in the decision-making processes of the United Nations system and other international organizations, is essential to ensure more balanced and legitimate results.

2. In addition to the three topics to be examined at the Summit (energy security, education and infectious diseases), we also wish to call attention to the importance of mobilising financial resources for development, through innovative mechanisms supplementing the commitments made at the United Nations International Conference on Financing for Development. ODA We reaffirm the importance of concluding negotiations on the Doha Development Agenda in 2006, as an important outcome in enabling developing countries to benefit more fully from international trade.

3. In addressing the issues brought to the attention of the G-8, we emphasize the need to follow-up on the work programme on Africa launched at Gleneagles. As we focus on the issues before the Summit, we agree on the need to look carefully at the special needs of Africa.

4. We recognize that Africa is going through a period of renewed hope, based on its leaders’s vision of promoting further regional integration with the goal of ensuring the socio-economic development of the continent. The resolution of violent conflicts which for decades have thwarted African potential is crucial. We stress the need to address the root causes of instability which are closely linked to poverty, social inequality and exclusion.
5. The international community should continue to co-operate with the African countries in their quest for peace, development and social justice. A true partnership must be established bearing in mind the views and needs of African countries and people. South-South co-operation is of particular value in that regard.

Energy Security

6. Energy security constitutes a vital and strategic issue for producing and consuming countries alike. Affordable and reliable energy resources are basic requirements for sound economic and social development as well as world peace and stability. The international community must endeavor to put in place fair and equitable conditions for the long-term sustainability and predictability of energy supplies, at reasonable, competitive prices. Energy security can be enhanced by exploiting locally available resources in a sustainable manner. Development of all feasible hydropower potential in an optimal manner needs to be accelerated.

7. We express concern at the negative impact of soaring energy prices on our development efforts in recent years. We favour the establishment of an international energy order that is fair, equitable, secure and stable, to the benefit of the entire international community. We support an inclusive dialogue on energy, capable of creating a political environment conducive to the peaceful settlement of disputes through consultation. This dialogue should involve exporters and consumers and the International Energy Forum. In this regard we welcome the initiative taken to hold two Round Tables in New Delhi, in January and November last year, which brought together principal Asian consumers with important regional producers.

8. Global and regional integration is a fundamental dimension of the debate on energy security. We stress the importance of more compatible and balanced regulatory frameworks both at the regional and global levels. Expanding regional cooperation can facilitate faster development of energy resources by sharing best practices and promoting regional trade in energy.

9. We emphasize the significance of technological cooperation in energy research and development to augment and diversify the energy supply by developing more efficient, affordable and cost effective energy technologies, including fossil fuel technologies and renewable energy technologies aiming at energy production and
consumption, and thereby leading to greater efficiency. We call for improved access to these technologies and pledge to work with developed and developing countries in sharing knowledge and expertise for development of such technologies. In this context we also emphasize the need to develop new forms of cooperation in nuclear energy.

10. Diversification is a central element in any definition of energy security. We encourage the development and use of alternative sources of energy to enhance sustainability. New forms of energy that are clean, safe and economically efficient should be fully explored. In this regard, ethanol, biodiesel and other bio-fuels - can play a greater role in the diversification of the global energy mix, as well as in reducing emissions of greenhouse gases from anthropogenic sources.

11. Energy security is not an end in itself. We must look beyond energy security towards broader development objectives in order to ensure successful synergies among energy security, development and the environment. As our economies develop, our energy consumption will inevitably grow, which in turn will require individual and collective efforts to ensure economic and environmental sustainability.

Education

12. We call upon the international community and G-8 members, as well as UNESCO and all International agencies to strengthen cooperation towards the achievement of the Millennium Development Goals and the Dakar Goals. In this context we welcome and support the development of UNESCO Global Action Plan to achieve core “Education for All” goals and recognise the importance of the Monterrey Declaration of the E-9 countries.

13. We recognize the need for the education system to instill respect for diversity in terms of race, culture and religion. Governments have a primary role to play in ensuring a conducive environment and improving cooperation in this regard.

14. We encourage the sharing of good practices, both between countries of the North and the South and among developing countries, for accelerating progress towards EFA. The use of Information and Communication Technologies has proved essential towards improvement of educational systems. We urge developed countries
to share their expertise and transfer technologies and resources, thereby enabling developing countries to employ more advanced technologies.

15. We welcome the development of mechanisms such as debt cancellation, debt reconstruction and debt swaps. International initiatives such as the Fast Track Initiative and the International Funding Facility have wide political support and have demonstrated their utility. However, donor countries need to step up their assistance with a view to consolidating long term and predictable financial support.

**Infectious diseases**

16. Infectious and chronic diseases are a common enemy of mankind. We stress the urgency of dealing with infectious diseases by addressing them as a strategic issue, affecting both economic growth and social stability worldwide. Through a global partnership, we must strive to make a decisive contribution to international efforts to prevent and treat infectious diseases.

17. While communicable diseases pose a particular challenge in developing countries, the increasing importance of chronic diseases needs to be recognized. Further attention is required to monitor and contain human influenza and other vaccine preventable diseases.

18. Infectious diseases such as HIV/AIDS, tuberculosis, malaria, and avian influenza, pose daunting challenges that must be tackled through more efficient cooperation and greater financial resources as mentioned in the Millenium Development Goals. No nation is invulnerable and no disease can be effectively controlled without international cooperation. A comprehensive response is necessary to end the unacceptable scale of mortality, which is particularly high in developing countries.

19. We reiterate the need to reduce major trade barriers to facilitate access to new affordable quality vaccines, medicines, diagnostics and technology aimed at preventing and controlling infectious diseases. The flexibilities contained in the WTO Agreement on Trade-Related Aspects of Intellectual Property Rights and recognised by the Doha Ministerial Declaration on TRIPS and Public Health should be fully used to protect public health.
20. An effective global response requires a global monitoring system that can help to prevent, identify and control the spread of infectious diseases. We encourage G-8 countries to help setting up a platform for sharing and exchanging information and best practices on the prevention and control of infectious diseases. We urge the Leaders of the G8 to collaborate with developing countries in improving capacity as regards health services, and access to treatment and research, with special focus on Africa.

21. We welcome the Political Declaration adopted by the 2006 High Level Meeting on HIV/AIDS “Uniting the World Against AIDS”. We reaffirm our commitment towards the goal of universal access to comprehensive prevention programmes, treatment, care and support for persons affected by HIV/AIDS by 2010.

22. We express our support for and urge donor countries to maintain, and if possible increase, funding in a sustained and timely manner to benefit initiatives such as the Global Fund to Fight AIDS, Tuberculosis and Malaria, the Global Fund to combat Polio and the Global Outbreak Alert and Response Network that are helping to fight, prevent and control other infectious diseases. We welcome the proposal for the establishment of an international drug purchase facility, to be known as UNITAID, which represents an effort to raise additional funds through innovative means. Efforts have to take into consideration that, while fighting infectious diseases, it is important to give special attention to vulnerable groups in order to target the disease through intensive actions, for example: TB with AIDS, TB/AIDS with Injecting Drug Users, TB/AIDS with Poverty.

23. We stress the need for adequate mechanisms through which developing countries, in particular least developed countries, can receive support from international organizations and financing sources in order to: strengthen their epidemiologic surveillance systems; build human resources and provide training; produce vaccines, medicines and inputs necessary to control infectious diseases and guarantee their availability.

Trade and the Doha Agenda for Development

24. We are committed to strengthening the multilateral trading system and view with great concern trends towards raising protectionism in developing ed countries. The World Trade Organization is the sole
forum for global trade rule-making and liberalization. The majority of WTO members are developing countries and their interests must be at the heart of the current round of trade negotiations. The Doha Round is the best chance we have to open world markets, level the playing field, share wealth and create jobs. This is a Development Round and it must create new opportunities for the developing world.

25. Poverty alleviation and development promotion are not only ethical and economic imperatives, they are also essential for a stable world economy. All nations, especially the poorest ones, must benefit from the opportunities created by international trade. A significant substantial reduction of agricultural subsidies and improved market access for agricultural and other products will increase the competitiveness and improve living standards of developing countries.

26. Subsidies, high tariffs, tariff peaks and tariff escalation in developed countries and other trade barriers in developed countries generate distortions in the world agricultural market that affect the lives livelihood and survival needs of millions of people around the world, particularly in poor countries heavily dependent on agriculture. The elimination of such practices must not be deferred indefinitely. The international community is increasingly aware of the fact that agricultural subsidies in developed countries are not only immoral but often illegal. By keeping these privileges for themselves, rich countries are exporting more poverty to already poor countries. In addition to the elimination of export subsidies, it is necessary urgent for developed members to undertake serious effective commitments in both domestic support and market access to unblock the round. In the negotiations, the issue of recently acceeded developing members should be addressed properly and effectively.

27. Deadlines have been set and repeatedly missed. Some offers on the table have fallen short of the level of ambition and of the principle of proportionality found in the Doha mandate. A consensus can be reached only if development is made the kernel of the negotiating Round and the principle of special and differential treatment incorporated integrally in all aspects.

28. Believing that concessions made by developing countries will magically unblock negotiations is an illusion. In order for the Round to live up to its development goals, developed countries must assume
their responsibility in moving the process forward. The key to the end of distortions lies in the hands of those who distort. The world’s poor must stand as the main beneficiaries of a fair, balanced and comprehensive outcome. Our vision of a final deal is one where rich countries will make larger concessions, developing countries will also contribute with important efforts and the least developed will not be expected to make concessions. In addition, developed members should implement duty free and quota free treatment to least developed members as early as possible.

29. A number of pressing issues need to be addressed in the coming weeks. Time is running out. The engagement of world leaders is urgently required to break the deadlock. New impetus must be given to the negotiations. A fresh impetus needs to be given to the negotiations that are underway in all areas. All parties must show a readiness to look beyond their narrow interests. Parties must work together to ensure that international trade will be based on open, equitable and non-discriminatory rules. We urge leaders attending the summit to strive for a high level of ambition, with equitable results, and rise to the challenge of ensuring a speedy and successful conclusion of the Doha Round in 2006. We urge leaders attending the Summit to strive for a high level of ambition, with fair and equitable results of the Doha Round in 2006, which meet the development imperatives of the developing countries.

Mobilisation of Financial Resources

30. The Millennium Summit represents the culmination of a historical process seeking to locate the fight against poverty as a key priority in the international agenda. Building upon the spirit of the Millennium Declaration, the International Conference on Financing for Development, held in Monterrey in 2002, brought focus to the timely implementation of the Millennium Development Goals (MDGs) which is of paramount importance to achieve stability, security and world peace.

31. As a result of the commitments undertaken by the international community in the Monterrey Consensus, progress has been registered in moving towards the achievement of the Millennium Development Goals, particularly in matters such as: i) debt elimination for a relevant number of highly indebted poor countries; ii) increase of ODA flows; and iii) a higher and better coordination among
economic multilateral institutions in order to achieve the MDGs.

32. Additional efforts are necessary if we are to comply with the MDGs within the deadlines originally agreed upon in 2000. The Action against Hunger and Poverty initiative, launched by the Heads of State and Government of Brazil, Chile and France and supported by a significant number of countries, identified and agreed to develop possible innovative mechanisms to finance development. With the aim of advancing further, the Paris Conference on Innovative Financing for Development, held last March, examined different options for new and innovative financing mechanisms. These mechanisms should be geared to mobilise public, private, domestic and external sources in order to increase and supplement the ones identified in the Monterrey Consensus.

33. The timely and successful fulfilment of the MDGs constitutes the starting point for the definition of long-term development strategies capable of resulting in the permanent elimination of hunger and poverty. Reaching the goal of 0.7% of GNP for ODA is a real and urgent need.

34. Further steps towards international agreements on financing for development, should take into account criteria different from those related exclusively to total GDP, given that in the developing countries which do not belong to the HIPC initiative, poverty and hunger often continue to afflict large segments of the population. At the same time, it is understood that special efforts must be directed towards the least developed countries.

35. The need to intensify efforts to raise additional financial resources for development is relevant to the debate on the issues placed before the G-8 Saint Petersburg Summit. In order to win the fight against hunger and poverty, infectious diseases and inadequate education, we must assume our shared responsibility in the search for mechanisms capable of channelling the necessary resources to fulfil common development objectives.

St. Petersburg, July 16, 2006.

1. India, and other developing countries, face formidable challenges in meeting their energy needs. India needs to sustain 8-10% economic growth to eradicate poverty and to meet its economic and social development goals. To deliver a sustained growth of 8% through 2031, India would – in the very least – need to increase its primary energy supply by 3 to 4 times and electricity supply by 5 to 7 times of today’s consumption. This is despite the fact that India’s energy intensity of growth is about half of what it used to be in the early seventies and is continuously declining. Currently, India consumes 0.19 kilogram of oil equivalent per dollar of GDP expressed in purchasing power parity terms. This is equal to the energy intensity of the OECD and better than the world average of 0.21.

2. India’s energy security, at its broadest level, has to do with meeting the lifeline energy needs of its population. Per capita energy consumption in India is only one-fifth of that in OECD countries. For electricity, the proportion is skewed even further, with per capita consumption being only one-twentieth of the OECD figures. The realization of India’s development goals cannot be possible without a significant increase in energy consumption. While India is committed to the path of sustainable development and follows environment friendly policies in its own interest, it cannot accept any commitment that limits the growth of its energy consumption or to any particular pattern of energy use.

3. Energy security is a global challenge and calls for concerted global action. National efforts to achieve energy security, without the benefit of international cooperation, can only yield limited results. The St. Petersburg G-8 Summit and the meeting with outreach countries provides a useful opportunity for Governments to commit themselves to stabilization of energy markets, use and development of renewable sources of energy and ensuring the environmental sustainability of energy development.
An environmentally friendly approach

4. Lowering energy intensity of GDP growth through higher energy efficiency can be a central element of an environmentally friendly approach for sustainable development. Effecting energy efficiency amounts to creating a virtual source of untapped energy. Efficiency can be increased in energy extraction, energy conversion, energy transportation, as well as in energy consumption. Further, the same level of service can be provided by alternative means requiring less energy. While there is on-going work on energy efficiency in both developed and developing countries, there would be merit in networking the main centres of R&D.

5. A diversification of the global energy mix, in the medium to long-term, to increase the share of renewables would also be an environmentally friendly approach for achieving energy security. Renewable energy sources are often available locally, making it possible to supply energy earlier than in a centralized system. Grid connected renewables, on the other hand, improve the quality of supply and provide system benefits by generating energy at the ends of the grids where otherwise supply may be lax. Cooperative international action can go a long way in addressing the high development cost presently associated with renewables.

6. From the point of view of India and other developing countries, it is also important that the international community fully abandons its reservations relating to hydro-power. Developing countries have significant potential for hydro-power which is a renewable and relatively clean source of energy. There is a need for the international community to direct its efforts to find sustainable and viable solutions to issues posed by large hydro-power projects while addressing their potential.

Stability of Energy Markets

7. Stable and reasonable oil and gas prices are in the interests of producers and consumers alike. Stability is necessary to ensure that growth prospects of consuming countries are not hampered and, on the other hand, that investment in producing countries is promoted.

8. Predictability is a key element for stability, security and sustainability of the global oil and gas economy. In this context, it is important to enhance transparency of and access to all relevant data relating to reserves, demand, supply and investment.
9. Mutual cross investment to reinforce mutual trade in oil and gas and associated downstream industry would also promote stability in the oil and gas economy. Joint investments by producing and consuming countries should be considered in infrastructure for exploration, production and transportation, as well as in refineries, gas processing plants, power generation stations and petrochemical units. Initiatives to improve the investment climate would be particularly useful.

Additional Supply Routes for Oil and Gas

10. The development of gas and oil interconnections through LNG and through transnational oil and gas pipelines would promote greater integration of energy markets. Since pipelines run across borders, there is a need for countries to work together to secure funding, to agree on routes and to set equitable transportation tariffs. It would be useful, in this context, to initiate studies on various alternative linkages between producing and consuming countries, by land and by sea.

Regional Markets for Petroleum Products

11. The Asian continent roughly accounts for half of global oil production. Asia also accounts for a major share of incremental global oil demand growth and will soon emerge as the largest energy consuming region in the world. An enhancement of cooperation in the Asian oil and gas economy, within the framework of global cooperation, would promote stability, security and sustainability of the hydrocarbon economy.

12. There is presently no well-developed oil products market in Asia. Buyers, therefore, cannot hedge risks and sellers get less for their products than they would elsewhere, because of relatively inefficient and volatile markets.

13. The creation of a regional market in Asia for petrochemical products should be explored. The market should have the backing of key buyers and sellers and have the financial sophistication to enable risk hedging.

Nuclear Energy

14. India has accorded prominent place to developing nuclear energy for meeting its energy needs. As a safe and sustainable source of energy, nuclear energy will remain an indispensable component of our energy mix. India has developed a comprehensive indigenous capability covering all aspects of nuclear fuel cycle from mining to
waste disposal. India is also implementing plans to increase the share of nuclear energy. The pace of this programme can be hastened with greater international cooperation.

15. Full international civilian nuclear cooperation with India can contribute to our efforts for promoting nuclear power and will help in enhancing energy security both for us as well as for world at large. This will also go a long way in ameliorating concerns related to global climate change and ease pressure on the limited global reserves of fossil fuels. Thus it would be in the interest of the international community as well to take necessary steps to enable full civilian nuclear cooperation with India.

16. India understands fully that the international cooperation in this sector can begin only when the international regimes have been adjusted and when the international community is assured that such cooperation will be used only for civilian and peaceful purposes. As regards the latter, India is committed to providing this assurance and has already taken steps on this count.

17. The G-8 and the outreach countries participating in the St. Petersburg Summit can make a significant contribution by supporting the adjustment of international regimes to enable full civilian nuclear cooperation with India.

Knowledge Networking

18. A network could be established between institutions of developed and developing countries that are engaged in R&D in energy efficiency, clean technologies and renewable sources of energy. The model that could be followed is of the Consultative Group of International Agricultural Research that brings together 15 international agricultural research centres for mobilizing science for the promotion of agricultural growth.

19. Collaborative R&D work done through the network could be made available to developing countries free of charge. The G-8 can indicate their support for such a network at the St. Petersburg Summit by an announcement of seed funding.
042. Indian Non Paper on “International Cooperation for fight against Infectious Diseases” at the St. Petersburg G-8 Summit.

St. Petersburg, July 16, 2006.

1. The fight against infectious diseases — both the known, old ones and the new, emerging ones — represents a formidable challenge to the international community. Globalisation, urbanisation and increased international travel have added to the potential for the rapid spread of infections. Infectious diseases are particularly challenging for developing countries as they divert resources from the core issues of poverty eradication and social and economic development. It is also true that poverty and underdevelopment are themselves major contributors to emerging and re-emerging infections.

2. The focus on the fight against infectious diseases is commendable as no disease can be effectively controlled without international cooperation. For such cooperation to succeed, it is necessary that there be adequate attention on the needs of developing countries.

Capacity building

3. Disease-specific assistance can, by itself, not provide a sustainable shield against re-emergence of infectious diseases. It is important to also address the basic capacity constraints of the health sector in developing countries. There is a need to improve capabilities to absorb resources and for the effective delivery of services. Country level surveillance of important communicable diseases also needs to be strengthened.

Networking and strengthening of surveillance

4. Inter-country networks can help in addressing cross-border and transnational health issues. At a regional level, such networks could be used for:

   • Linking of country level surveillance systems
   • Sharing of information, experiences and best practices
   • Sharing of technical guidelines, operating manuals and standard treatment protocols/regimens
- Linking of laboratories with a focus on quality assurance, bio-safety and bio-security
- Outbreak investigation and management

**Triangular cooperation**

5. The experiences of developing countries are likely to be more relevant to other developing countries. The support provided by such countries would also be more cost-effective. Countries like India can, with financial support by developed countries, cooperate with other developing countries in strengthening disease surveillance, training in field epidemiology, training of rapid response teams etc.

**Joint stockpiling of drugs for avian flu**

6. Access to known antiretroviral drugs for H5N1 is hampered by capacity limitations and prohibitive costs. The work done by WHO is useful. It, however, needs to be further strengthened to deal with the panic that can be caused by the very real threat of an avian influenza pandemic.

**Access to drugs**

7. Major barriers, including those relating to pricing, tariffs and trade and regulatory policies need to be addressed to facilitate affordable access to new vaccines, medicines, diagnostics and technology for preventing and controlling infectious diseases. The flexibilities contained in the WTO Agreement on Trade Related Aspects of Intellectual Property Rights need to be used fully to achieve price reduction and enhanced access to treatment by patients in developing countries.

**Creation of capacity in the veterinary sector**

8. The role of zoonotic diseases needs more attention by the international community. The outbreak of avian influenza has highlighted the need to address animal health surveillance and the strengthening of veterinary capacities. However, animal health is a relatively under-funded sector in most developing countries and needs to be strengthened through international co-operation.
043. Indian Non Paper on “India’s Partnership with Africa” at the St. Petersburg G-8 Summit.

St. Petersburg, July 16, 2006.

1. India’s relations with Africa are built on the strong political foundation of the past. We were close partners with Africa in the fight against colonialism and apartheid. The goodwill of the past is evident in the close relationship that India has today with the countries of the African continent.

2. India is today looking at the more contemporary challenges of economic and social development in its relationship with Africa. The relationship is not one of donor-recipient but of partnership for mutual benefit.

Technical assistance

3. The Indian Technical and Economic Cooperation Programme (ITEC) is almost four decades old. It has enabled us to share a wide range of training facilities and project expertise with our friends from Africa. India’s development experience has a special relevance for African requirements. Over the last five decades, through an incremental process of trial and error, we have forged a development paradigm that – within the context of a diverse, pluralistic democracy – is truly unique. Our approach has focused on strengthening ‘South-South’ linkages and promoting self-reliance through transfer of technologies appropriate to the needs of our partners. In monetary terms, we have spent over a billion dollars on our cooperation programmes with Africa and continue to provide training annually to almost 1,000 officials in various capacity-building programmes. This is apart from the over 15,000 African students who join Indian Colleges and Universities every year.

Lines of credit

4. We recognize that technical assistance alone is not enough. The process of economic development also requires access to low cost capital. We are not a rich country in terms of per capita income but the accumulation of a relatively comfortable level of foreign currency reserves has enabled us to offer concessional lines of credit. Taken together with our lines of credit to individual countries, our offers of $ 200 million for the New Partnership for Africa’s Development
(NEPAD) and $ 500 million for Team 9 [Techno-Economic Approach for African Movement – an initiative that brings together India and 9 countries of West and Central Africa] add up to almost $ 1 billion. This is being used as a catalyst to build genuine, productive and sizeable partnerships in sectors like railways, construction, electrification, irrigation, food-processing, agricultural machinery and cotton spinning.

**Pan-African Satellite-based connectivity:**

5. Our scientists have placed us in a leadership position in a wide range of satellite-based technologies, Our communication, educational, remote sensing and meteorological satellites are enabling us to bring the benefits of tele-medicine, tele-education, resource mapping and weather forecasting to some of the remotest parts of our country. During the visit of our President to Africa in September, 2004, we announced our willingness to share the benefits of these technologies with our friends in Africa. The Indian Space Research Organisation has developed an ambitious plan to connect the 53 countries of Africa through a network that uses satellite, fiber optic and wireless links. We would, in partnership with the African Union and individual countries of Africa, be establishing a network that links learning centers, Universities and hospitals in every country of Africa with counterpart institutions in India that have a proven expertise in these fields. After many rounds of extensive discussions, the Government of India and the African Union signed the MOU for the project on October 27, 2005. Project execution is presently underway.

**Projects:**

6. India provides assistance for project related activities, such as feasibility studies and consultancy services, apart from actual project implementation. The assistance provided is comprehensive and includes training as well as deputation of Indian experts. India has contributed to a very large number of projects in Africa. An illustrative list of projects established with Indian assistance is as follows:

- Lilongwe Water Supply System in Malawi
- Ebene Cyber City Project in Mauritius
- Kofi Annan IT Centre for Excellence in Ghana
- Entrepreneurship Development Centre in Senegal - Nigeria Machine Tools in Nigeria
Peace-Keeping Operations:

7. We fully recognize the importance of a stable polity as a pre-requisite for economic progress. The legacy of longstanding conflicts has left its scars on many parts of Africa. We hope that the vision and determination of the African Union and of Africa’s contemporary leaders will soon make such conflicts a thing of the past. From our side, we will continue to support peace-keeping efforts wherever required. We have done so from the time of the conflict in Biafra. In more recent times, the contribution of our troops has been widely recognized in Ethiopia, Somalia, Sierra Leone and Eritrea. Even now we have over 3500 soldiers in the Democratic Republic of Congo and and over 1500 Indian soldiers on the Ethiopia-Eritrea border. Our defence personnel have not only worked with troops from other nations to bring peace but have also distinguished themselves for the exemplary fashion in which they have contributed humanitarian assistance and participated in development activities in the areas where they have been deployed.
The World Conference on Education held in Jontein, Thailand, in March 1990, sharply increased focus on action required to ensure that all children, young people and adults receive education that would enable them to exploit their talents, improve their lives and develop as complete human beings. This led to heightened realization that investments in education, besides being important from the point of view of social welfare, also yield economic results.

The World Education Forum held in Dakar, Senegal in April 2000 committed participating countries to the achievement of Education for All goals and targets, including ensuring free and compulsory primary education by 2015. The Dakar Framework of Action is a collective commitment for action based on the willingness of the international community to mobilize resources needed to provide effective support to national efforts. Donor countries also agreed that no country seriously committed to the Dakar goals would be thwarted in their achievement by a lack of resources.

There is a need for renewed commitment by donor countries to make available the resources required for the attainment of the Dakar goals. Additional financial resources are also needed to enable developing countries to access new critical technologies and innovations. The St. Petersburg Summit provides a useful occasion for the G-8 to reaffirm that no country would be impeded in the achievement of the Dakar goals by lack of financial and technical resources.

Developing countries like India can share their experiences in areas such as distance education and in-service teacher training. They can also provide technical support in areas such as planning and management in basic education, curriculum development, measuring learning achievement and implementing literacy and non-formal education policies.
5. The experiences of developing countries are likely to be more relevant to other developing countries. Support provided by them would also be more cost effective. There would, therefore, be a case for support by donor countries of such South-South cooperation.

6. The Indian Technical and Economic Cooperation (ITEC) programme provides a vehicle to donor countries to support South-South cooperation in the area of technical training. Since 1964, technical assistance worth US$ 2.5 billion has been channelised through this programme to developing countries. As many as 206 short-term/long-term training courses are offered every year in a wide variety of subjects in more than 45 institutions. Annually, more than 3,500 scholarships are offered to 156 ITEC partner countries. Apart from the ITEC programme, India also provides around 1500 scholarships through TCS Colombo Plan; Indian Council of Cultural Relations (for degree courses); and the Foreign Service Institute.

Recognition of Qualifications

7. Globalisation means not only an accelerated global flow of goods, but also of services and ideas. The youth in developing countries have acquired globally valued skills in various professions. An enhancement in their mobility across international borders can be a stimulus for the growth of their economies as well as those of receiving countries.

8. The lack of recognition of academic and professional qualifications is a significant impediment to mobility of service providers and a non-tariff barrier for trade in services. There is merit in convening an International Conference in pursuance to the UNESCO’s guidelines in the matter of Quality Provision in Cross Border High Education. Such a conference would address issues relating to quality assurance, accreditation, recognition of qualifications and would encourage recognition or equivalence of qualifications based on national procedures and criteria.
045. Statement adopted by the G-8, the leaders of Brazil, China, India, Mexico, South Africa, Chairman of the Council of the Heads of State of the CIS, Chairman of the African Union and the Heads of the International Organizations on the Bomb Blasts in Mumbai on July 11, 2006.

St. Petersburg, July 17, 2006.

We are outraged by the barbaric terrorist acts, carried out on 11 July 2006 in Mumbai and other parts of India. We stand in solidarity with the Government and the people of India and express our deepest condolences to the victims and their families.

We are determined to continue the fight against terrorism by all legitimate means. We express our readiness to undertake all necessary measures to bring to justice perpetrators, organizers, sponsors of these and other terrorist acts, and those who incited the perpetrators to commit them. We shall do it in accordance with our obligations under international law, in particular international human rights law, refugee law and humanitarian law.

We are united with India in our resolve to intensify efforts to fight terrorism which constitutes a threat to each of our country, as well as to international peace and security.
046. Press Briefing by Foreign Secretary Shyam Saran after the G-8 Summit and the Outreach Meeting.

St. Petersburg, July 17, 2006.

OFFICIAL SPOKESMAN (SHRI NAVTEJ SARNA): Good evening ladies and gentlemen and welcome to this briefing by India’s Foreign Secretary Mr. Shyam Saran. We also have with us India’s Ambassador to Moscow Mr. K. Sibal. Foreign Secretary Mr. Shyam Saran will first address the press and then we will have the rest of the briefing including questions. I must say that because of lack of interpreter facility here the briefing will only be in English.

FOREIGN SECRETARY (MR. SHYAM SARAN): Thank you very much. Well, it has been a rather long day with lots of meetings. But I thought let me first begin by giving you a sense of the Outreach Meeting which was the main event today. It was from 10 to 12 in the Conference Hall and then the discussions continued informally over lunch. Altogether the interaction was for about a little over four and a half hours.

As far as we are concerned, a very major issue that was taken up at the Outreach Meeting was the issue of terrorism. It is seen in the context of the challenges of globalization. Here, Prime Minister in his intervention stated that world economies are being integrated at a very rapid rate, that globalization is an irreversible process, and in a certain sense the global economy has also already become quite integrated. But he pointed out to the fact that while this integration has taken place of the global economy, or at least it has reached a fair degree of integration, the mechanisms for managing this globalization in all its forms, or the management of globalization leaves a great deal to be desired. Therefore, what we need is a global mechanism by which large sections of population are not left behind, while the integration of economies is taking place, the distribution of wealth, the distribution of the benefits of globalization. These are management issues which need to be addressed very urgently.

He also pointed out that with the globalization of economy there are many other things which have become globalized. For example, terrorism. There is organized crime, there is drug-trafficking. These are in a sense certain negative aspects of globalization. It is in this context that he made a reference to the recent very reprehensible acts of terrorism which took place in Srinagar and in Mumbai. He said it was a very ghastly tragedy. He
also thanked all the Heads of State and Government present for the solidarity and the support that they had extended to India, the condemnation that the international community has made, unreserved condemnation, of this act of terrorism. There is a conviction that the perpetrators of these crimes must be brought to justice.

He described to the leaders his visit to Mumbai, the terrible tragedy of seeing people who had been very badly injured during these blasts, people who had lost their limbs. He said that there is really no cause which is important enough or which is so overriding that it justifies the murder of innocent men, women and children. He requested the Heads of State and Government present that a very strong message should go out from this meeting that there would be zero tolerance for terrorism.

You would have seen that as a result of that very strong statement made by our Prime Minister and the very strong request that he made to the assembled Heads of State and Government, which included not just the G-8 but also the Outreach countries - the UN Secretary-General was also present, some of the Heads of the International Organisations were also present at this meeting - they all very readily agreed to issue a strong statement on the issue of terrorism relating specifically to the incidents which have taken place in India.

So, from the point of view of India this is a very important gain for us, a diplomatic gain for us. Of course, we will continue to fight terrorism in India but having this unequivocal support from the international community, a very very clear message coming out that acts of terrorism will not be tolerated, that those who are sponsoring such terrorism also need to be brought to justice, this is the message and it is very very clear. So, from our point of view it is a very important gain.

I would also like to touch upon some of the other important issues that were taken up during this meeting. As you know, the meeting had two or three very important themes. One theme was energy security. If you had had a look at the G-8 statement on energy security, if you have also had a look at the position paper which was presented by the Outreach countries to the Russian host, if you have also had a chance to see the position paper that India itself has presented to the G-8 partners, you will see that several of the themes that we have attached importance to have found resonance in the G-8 statement.

What the Prime Minister in his intervention drew attention to was the
fact that energy security cannot be built upon the perpetuation of poverty. This is something which is very important for people to understand because for most of our developing countries we are at such a low level of energy consumption compared to the developed countries that our problem really is how to find affordable sources of energy in order to make certain that the energy does not become a limitation upon our prospects. So, he was very very clear in his presentation that while references are being made to India and China, two very large developing countries, rapidly developing countries, whose energy requirements are increasing, as if that was a problem for the global economy, even though these two countries are growing very rapidly but in terms of their energy consumption as part and parcel of the global consumption in fact it is still very small. If you look at the per capita consumption of energy, that fraction is even smaller. Therefore, there has to be a very clear acceptance or an acknowledgement that for the developing countries energy security means giving greater access to energy supplies, affordable energy supplies.

In this context Prime Minister also referred to the need for a strategy for diversification of energy supplies. There has to be a long term shift away from reliance on fossil fuels to other alternative sources of energy. In this context he referred to the fact that for India nuclear energy is certainly a source of energy which we regard as relatively clean, it is an energy source which is economical and of course India has infrastructure already in place which enables us to expand this industry.

He also pointed out that if we are looking really at the future where we need not only plentiful supplies of energy but we also need clean energy, then countries like India and other countries who are trying to develop nuclear energy as the alternative source of energy need to have access to international cooperation. In this context he also made an appeal that international guidelines, international rules need to be adjusted in order to enable countries like India to have access to nuclear technology and equipment. On the energy side, in the discussions there was also a reference to the development of alternative fuels like bio-diesel, bio-fuel, also new sources of energy like hydrogen fuel, and it was agreed by all those who were present that there needs to be an international effort and international network of research and development to enable such new sources of energy to be developed. In this, of course, Prime Minister also indicated that India would be very happy to take part and contribute to this development.
There was also discussion about the other two issues - education as well as infectious diseases. I think you have found in the statement of the G-8 a reflection of some of the ideas which were put forward by us. On the education side there is a reference to trilateral cooperation in the sense of South-South, South-South cooperation being encouraged by and to some extent being financed by the developed countries because there are countries like India which have a fairly good infrastructure of education as well as training. This could be put at the disposal of other developing countries. So, that idea has been incorporated. There is also a reference to the importance of mutual recognition of academic degrees and diplomas which is also another idea which we have put forward in our paper.

As far as infectious diseases are concerned, recognition of the great importance of global cooperation in dealing with global diseases and pandemics like avian flue or HIV-AIDS and the resurgence of some of the old infectious diseases like TB, malaria, is something which was discussed to some extent during the Outreach Meeting. I would say that there was a general acceptance of the need for us to work together. On this there was not much difference of opinion.

If there was some difference of opinion, it was when we started discussing the global economy in terms of the trade regime and that is the importance of ensuring the success of the Doha Round. This is a very topical issue. As you know, once again the important Trade Ministers will be meeting, I think, tonight and tomorrow in Geneva to try and see whether some progress can be made on the pending issues. But as would be expected, even though WTO issues were not really specifically on the agenda or certainly not a major theme on the agenda, this was certainly something which occupied quite a bit of time during the discussions.

Here, Prime Minister Dr. Manmohan Singh pointed out that as a developing country India has a very vital stake in the success of the Doha Round. Vital stake because for the poorer countries, for the developing countries, a rule-based international trading regime, a multilateral trading system, perhaps is far more important than it is for influential, affluent developed countries. We need rules much more than stronger economies do and that is quite self-evident. But he said that in ensuring the success of the Doha Round all the participants have to be faithful to the mandate of the Doha Round. The mandate of the Doha Round is to take development as its centre point as the most important dimension of this Round is the promotion of development, development of developing countries. He said
that perhaps that in all the noise at the end of the negotiation, perhaps this aspect of the Round has been really lost sight of.

While expressing his willingness to display flexibility in the coming negotiations, he pointed out nevertheless that the concept of special and differential treatment of developing countries is something which must be conceded and must be respected. He pointed out that, for example, in the time when we had the GATT, the predecessor of the WTO, a lot of … was faced to the interest of developing countries. Then we had the Millennium Summit. We all swore by the need to fulfill our commitments with regard to the Millennium Development Goals. But what we really have to recognize is that at the end of the day if we really wish to encourage development, if we are really serious about development in the developing countries, then it is really trade, not aid, which is important. Unless developing countries are given a fair deal in terms of the new trading regime which is emerging, development goals cannot be met. In this context there was some discussions about the impact on developing countries particularly of the very precipitous rise in oil prices and the need to ensure that there are mechanisms which to some extent can shield the developing countries from the impact of rising oil prices.

There was of course lot of arguments amongst the different participants as to who was being flexible and who was not being flexible. But at the end of the debate it was agreed that all of us need to send our negotiators back to the table with very clear political direction that this doubt must not stay. Everyone agreed that the cost of failure of this Round would be far too great and the consequences would be negative for the development. Very important gains had already been made during the negotiations stage of the negotiations, even those gains would be in jeopardy if we were not able to come to a successful conclusion.

That is really as far as the Outreach Meeting is concerned. Prime Minister had meetings this morning with President Bush, with Chancellor Merkel of Germany. Later in the afternoon there were meetings with the President of Kazakhstan and the Prime Minister of Japan. With President Bush, as you would imagine, the main focus was on terrorism. President Bush, right at the outset of the meeting conveyed his very strong condemnation of the terrorist incidents which have taken place in Srinagar and Mumbai. He expressed complete solidarity of the United States of America with India in dealing with the phenomenon of terrorism. The major point was that terrorism is something which must be fought wherever it
occurs. He also mentioned to the Prime Minister that the United States of America had very readily agreed that there should be a strong statement which should emanate from this summit with regard to terrorism. He pointed out that the G-8 statement itself has a very long section on terrorism. Of course, that is not specific to India but expressing the determination of the G-8 to confront the forces of violence and terrorism.

There was some discussion, as you would expect, on the Indo-US nuclear deal. What President Bush conveyed to Prime Minister was that he was very optimistic that this deal would go through the Congress. He did acknowledge that India had several concerns with respect to the wording of both the House Bill as well as the Senate Bill. But he conveyed at the same time that the United States of America will ensure that the commitments which are expected of India, the undertakings which are expected from India, will not go beyond the understanding which had been reached in the July 18 Joint Statement and later in the Separation Plan which was presented to the Indian Parliament. So, it is a very clear message that there will be no shifting of goalposts. He expected that the finalization of the Bill will probably take place in the next few weeks.

Then there was a discussion about the WTO. President Bush again expressed some frustration at the lack of progress in the WTO Round. He conveyed to Prime Minister that the United States of America had already made considerable amount of concessions, was prepared to show even greater flexibility but would not be able to do this on its own. There was a requirement that other partners too show some flexibility. But he expressed his very strong commitment to ensuring the success of the WTO Round.

There was a review of other aspects of our bilateral relations. Satisfaction was expressed over the progress that we have made in the implementation of, for example, the knowledge initiative on agriculture, the setting up of the Binational Science Commission. As you are aware, on our side it is the Minister of Science and Technology who is the co-chair, on the American side it is the Science Advisor to the President. The Commission is now going to really work out the plan for very very broad ranging scientific and technical cooperation between the two countries.

There was a discussion about the economic and business relations between the two countries. Again there was satisfaction over rather rapid growth in trade between the two countries. Perhaps you know that today India is the fastest growing export market for the United States of America.
The recommendations of the Economic Forum were referred to. Both leaders said that they hope that the forthcoming investment summit - which is going to be held in India sometime later towards the end of the year - would be a great success and would lead to far greater American investment in India.

Prime Minister also took advantage of the meeting to also bring to the attention of President Bush the candidature of Shashi Tharoor who is our candidate for the post of Secretary General of the United Nations. President Bush said that this would certainly be given his careful consideration.

With Chancellor Merkel, again the main topic was terrorism. The Chancellor, also like President Bush, condemned the recent incidents in India, the deaths which had occurred and the injuries which had occurred to innocent men, women and children in Mumbai. She recalled the very successful visit the Prime Minister had made to Germany earlier and how the visit had really given a tremendous impetus to economic and business cooperation between the two countries. There was a commitment to giving further attention to raising the economic profile in our relations. In fact, in the last several months there have been some major German investments in India and this was welcome.

Chancellor Merkel also briefed Prime Minister on the Iran nuclear issue pointing out that the European Union, or rather the P-5 plus One, had in fact presented a very positive package to Iran in dealing with the nuclear issue and there was a certain disappointment that Iran had not yet come back with a well considered and positive response. She also made reference to the current situation in West Asia, the spread of violence to Lebanon and how this could have a very disastrous impact on the entire region as also its economic impact in terms of even higher oil prices. She emphasized the very urgent need to deal with this situation.

She spent some time on discussing WTO related issues. Here again there was a stress by both the leaders on the importance of ensuring a successful conclusion to the Doha Round and the need for flexibility on the part of all the participants.

On UN reform, as you know both India and Germany are part of the G-4 initiative for reform of the Security Council. We had a brief review of where we stand. Both leaders agreed that even though not much progress had been made so far in getting the Framework Resolutions to the United
Nations General Assembly but it was very important that while we are looking at other aspects of UN reform that we should not lose sight of the temporal importance of Security Council reform and in particular ensuring that there is expansion both in the permanent as well as in the non-permanent category of members. We welcome the fact that there would soon be a debate in the United Nations General Assembly on UN reform and there would be a specific review of where we are as far as Security Council reform is concerned. Here again Prime Minister did refer to the candidature of Mr. Shashi Tharoor for the UN Secretary-General’s post and the Chancellor said that she would certainly consider it.

Now, the meeting with the Prime Minister of Japan - apart from the exchange that they had on the same issue of terrorism in more or less the same terms as with the other two leaders, there was, as you know, a Joint Study Group set up between the two countries to look at how we could promote our economic and business relations. The Joint Study Group’s report is now ready. This was presented to both the Prime Ministers at the meeting that took place this afternoon.

The Joint Study Group among other things made a strong recommendation for establishing a comprehensive economic partnership between the two countries. It would cover not only trade but it would cover investment promotion, it would cover services, technology. So, it is a very important document and a recommendation has been made that perhaps inter-Governmental negotiations should begin on setting up of this partnership. What the two leaders agreed was that these recommendations were very useful, they were very valuable and both Governments would very seriously examine them.

The Prime Minister of Japan briefed our Prime Minister on the situation on the Korean peninsula. He referred to the very serious and adverse situation having been created by the missile tests carried out by the DPRK recently, and his satisfaction that the international community had joined together in the Security Council to unanimously have a resolution condemning the tests and asking the DPRK to come back to the negotiating table. His own expectation was that the DPRK would hopefully sooner rather than later return to the six-party talks and that this would perhaps lead to an improvement in the situation.

There was a reference to nuclear issue with the Prime Minister mentioning the importance of nuclear energy for India and requesting the support of the Nuclear Suppliers Group. The Prime Minister of Japan, while
reiterating Japan’s long held positions on nuclear disarmament, on nonproliferation, said that he recognized the importance of the energy requirements of India. Prime Minister also by the way pointed out to him that on issues of nuclear disarmament and nonproliferation there was really no difference between the positions taken by Japan and India, that India had consistently advocated the total elimination of all weapons of mass destruction including nuclear weapons and that there was no change in this position of India, we still stood for complete nuclear disarmament. As far as our record on nuclear nonproliferation is concerned, this has been impeccable and our adherence to the non-use, nonproliferation is something which is now internationally acknowledged.

The Prime Minister of Japan also welcomed the forthcoming visit of our Prime Minister to Japan around December this year. This would be an occasion to further strengthen the relations between our two countries.

A meeting with the President of Kazakhstan where the focus, as you would expect was mainly on energy cooperation between the two countries. Here of course the President of Kazakhstan extended an open invitation to Indian companies to promote further business in the energy sector, (and said) that Kazakhstan would welcome that. He also mentioned the many opportunities that exist in Kazakhstan for the other areas of cooperation, for example, in the real estate sector, in pharmaceuticals, in the IT sector. The Kazakh Government has set up an IT park and has invited Indian companies to take part. Some Indian companies are already present in Kazakhstan.

Prime Minister also mentioned our interest in the CICA process which had been initiated by Kazakhstan. The confidence building measures in the Asian region is something that we attach a great deal of importance to. There was also a brief discussion on the Shanghai Cooperation Organisation. President Nazarbayev said that he welcomed India’s participation in the Shanghai Cooperation Organisation and would welcome our full membership of the Shanghai Cooperation Organisation.

Then the last of the bilateral meetings was with President Putin of Russia. Prime Minister congratulated President Putin on the very successful stewardship of the G-8 Summit as well as the Outreach Meeting this morning. He said that we had managed to cover a very large number of global issues. There was mainly a discussion and a review of our bilateral cooperation in different fields. There was satisfaction expressed that in
this very wide-ranging cooperation that we have, there has been considerable progress. Prime Minister said that we in India were very much looking forward to welcoming President Putin to India. As you know, he has been invited as our Chief Guest for the next Republic Day in January 2007. Before that there will be occasion to cover several areas of cooperation between our two countries.

There was a general recognition that while political relations between our two countries are very close and have become even closer, that we have a strategic partnership, but perhaps the economic and trade leg of that strategic partnership is perhaps the weakest element and we need to do much more in order to promote business between the two countries. As you know, we have a target of ten billion US dollars by 2010. Both leaders expressed their keenness to make every effort possible to reach this target.

FOREIGN SECRETARY: Would the Ambassador like to add something?

INDIAN AMBASSADOR IN RUSSIA (MR. KANWAL SIBAL): Nothing very much except that the substantive meeting lasted about 45 minutes and the bilateral agenda was covered in considerable detail by both sides ... and economic power. President Putin noted that we had set up a Trade and Investment Forum at the level of a Trade Minister and we had also set up a Joint Study Group on the pattern that we have set up with Japan, Singapore and other countries to examine the feasibility of a comprehensive economic partnership with Russia. He hoped that this particular Joint Study Group as well as the Trade and Investment Forum would yield positive results.

He noted also that Indian business sector had begun, Indian companies had begun, to look at investment in Russia in a significant way and the companies ... visit and Prime Minister’s full support from the Russian Government.

Energy cooperation between India and Russia, as you know, is becoming a central theme of our relationship on the economic front. President Putin noted that Sakhalin-I had been very successful. Our Prime Minister hoped that in the years ahead India would have similar opportunities in the oil and gas sectors. The Prime Minister made an important proposal to President Putin, which the Russian side said that they will consider, to set up a Joint Energy Forum in which the whole gamut of energy issues would be discussed because as you know Russia has great strength in
hydro power, oil and gas, nuclear energy as well as coal gasification technology. So, with Russia we can have (cooperation across) a very broad spectrum and a good relationship. The Prime Minister took the initiative to set up this forum so that a holistic view could be taken on the subject.

On the defence side which is ... of our relationship, it was noted that we had just taken a decision to place an order for three new frigates on Russia. It is a substantial order worth over 1.4 billion dollars plus some other orders on the defence side which we have placed or which would come in the course of the months ahead testifying to the very robust relationship that we continue to have with Russia in the defence sector. In this regard I think a project which is worth mentioning is the multi-role transport aircraft which is an aircraft which our defence forces need urgently. This will be a joint venture between India and Russia where both sides will contribute 50 per cent equity and develop an aircraft suited for Russian and Indian needs which would be used both by the Indian armed forces as well as the Russian armed forces. So, there has been a substantive meeting on the sidelines of the Summit.

FOREIGN SECRETARY: Lastly we come to the trilateral meeting which took place among Prime Minister of India and the President of China and President of Russia this afternoon. This is the first time that the three countries - who have of course been engaged in this trilateral cooperation earlier – have met at the summit level. So, it has a significance of its own. As you are aware, it started off with the Foreign Ministers of the three countries essentially meeting on the sidelines of the United Nations General Assembly. The first stand alone meeting of the three Foreign Ministers was held in Vladivostok and it was also agreed that the next such meeting would be hosted by India. We have plans in fact to hold that meeting sometime later this year.

This was an initiative taken by the President of Russia. This was welcomed by the other two leaders who spoke at this meeting. What they all agreed was that the three countries share a certain common neighbourhood, that the three countries have rather convergent views on several global issues. For example, it was mentioned by all three that we have a strong interest in the emergence of a multipolar world, we have a strong interest in promotion of multilateralism. On issues of, for example, energy security, or on other important regional and global issues, we in fact quite frequently work together in both regional and international fora, so that we enjoy very good relations bilaterally. India-China relations are
improving rapidly, the relations of course between India and Russia are very close, the relations between China and Russia are developing very well. The economic linkages amongst the three countries are also developing. So, there is a very good basis for us to really look at ways and means how we can advance our cooperation on a trilateral basis.

A reference was made that in pursuing trilateral cooperation on issues on which we have convergent views, this is not something which should be taken as directed against any other country, that the focus of our cooperation would be on issues of mutual interest. For example, relating to terrorism, relating to drug-trafficking, relating to the issues of crime - these are the sort of issues that we could look at. There was also a recognition of the fact that because of the rapid economic development of India, China and also the economic revival of Russia, there is a certain shift in the centre of gravity of economic development towards Asia-Pacific. And, perhaps Asia-Pacific therefore needs deeper engagement among the countries of the region. These three rather important countries, large economies in this region, there was great benefit in the three countries engaging with each other much more intensively and having a much more regular exchange of views on these matters of both regional as well as international concern.

So, no specific decisions were taken but Prime Minister pointed out that we had invited the Foreign Ministers to meet later in India, that we had also agreed at an earlier meeting that there would be a business summit, the first ever business summit amongst the three countries. This would also be hosted by India. It was agreed that many of these items of cooperation or exchange of views on different issues would be pursued by the Foreign Minister, and that they would really focus on what are the specific requirements which may be required in order to give substance to our desire for cooperation.

A very friendly meeting, a confirmation that we have strong and convergent views on number of international issues and that we believe that we need to work together in order to advance our respective interests in all these different areas. Thank you very much.

INDIAN AMBASSADOR IN RUSSIA: One additional point is that Russia has expressed interest in also developing cooperation within the BRIC Forum. This is something which the Russian Trade Minister and the Indian Trade Minister had discussed a few months ago and this idea had been picked up and encouragement was given to having a quadrilateral
cooperation which will include these three countries but will also include Brazil in the format of BRIC countries.

**QUESTION:** What are the concerns regarding Indo-US nuclear deal that have been conveyed to the US?

**FOREIGN SECRETARY:** I do no think there is any secrecy about our concerns. What we have pointed out is that it is extremely important that the Bill should be in consonance with the goal of full civilian nuclear cooperation which the two sides have agreed upon, and that the cooperation that we are envisaging should be on terms and conditions which do not go beyond the reciprocal undertakings which have been spelt out in the Joint Statement as well as in the Separation Plan. Obviously at the level of the two leaders you would not expect that they would get into negotiating mode about specific items. But I think what Prime Minister did was to point out that there are certain elements in the Bill, both the House Bill as well as the Senate Bill, which appear to go beyond precisely those reciprocal commitments. For example, we have been talking about the scope of cooperation. If there is a limitation or any kind of restriction, for example, on reprocessing and on enrichment technologies, then would this not violate our understanding that there would be full civil nuclear energy cooperation.

**QUESTION:** ...(Inaudible, on India’s specific concerns on the Bills passed by the US Congress on Indo-US civil nuclear cooperation)...

**FOREIGN SECRETARY:** That will be .... Then there are references to the Safeguards Agreements between India and the IAEA which do not seem to recognize that these Safeguards Agreements could be India specific because we are not a non-nuclear weapon state. There are references to end-use verification procedures which to us appear to be going beyond the need for these safeguards. If we are going to have India-specific safeguards, you do not need another layer of verification procedures. So, there are a number of issues of this kind which we have spelt out for our American interlocutors. I was myself in Paris a few days back. I had detailed discussion with my American counterpart. So, the United States’ leadership is very well aware of our concerns and the need to ensure that we stay within the parameters of the July 18 Joint Statement and the Separation Plan. As I mentioned to you, President Bush said that he understood our concern and that there was no intention on the part of the United States to go beyond what is spelt out in the Joint Statement.
QUESTION: ...(Inaudible)...

FOREIGN SECRETARY: The President explained that in Congressional legislation there is a part which is really a binding part of the Bill and there are a number of other elements which are non-binding in character but which respect the sense of the Congress. These are individual Congressmen who believe that their specific concern must be reflected in the Bill in order to give support to that. This is the explanation which President Bush gave at the meeting. As I said, the President mentioned that our concerns were well understood, that the Bill had not yet been finalized and I think it is fair to wait and see what the final shape of the Bill would be before we come to any conclusion.

QUESTION: ...(Inaudible, on the meeting between the leaders of India, China and Russia and India’s membership of Shanghai Cooperation Organization)...

FOREIGN SECRETARY: As far as the first point that you raised, the trilateral mechanism is not a dispute settlement mechanism. So, your assumption that some bilateral disputes would also be on the agenda of the trilateral meetings - nothing could be further from the truth. What the three leaders recognized was that in terms of certain regional issues as well as global issues, these three countries have remarkably convergent views. For example, with regard to as I mentioned democratization of the international system whether it is the political system in the form of the United Nations, whether it is the economic system in terms of what we are trying to achieve through the WTO Round, in terms of those broad areas of convergence there is a basis on which the three countries can advance their cooperation. There may be areas where the three countries have divergent views. But there are a number of areas in which they do have convergent views. Therefore, on those areas the three countries stand certainly for cooperation. That is the importance of this meeting. It is not to deal with any kind of bilateral disputes between the respective countries.

As far as the Shanghai Cooperation Organisation is concerned, we have not raised the issue of our membership with Russia or China. I think the Shanghai Cooperation Organisation admitted India as well as a couple of other countries as observers and they have indicated that the question of expansion of membership is something that will be considered at a later date. So, we are not envisaging an immediate decision with regard to membership. So, we will wait and see when the members of the Shanghai
Cooperation Organisation decide to expand the membership. We will see what decision they take. But I was referring to the fact that as far as President Nazarbayev is concerned; he conveyed to us that he would welcome India being a full member of the Shanghai Cooperation Organisation.

**QUESTION:** ...(Inaudible, on terrorism and trilateral meeting)...

**FOREIGN SECRETARY:** We did not go into specifics. But certainly in the conversations which took place around the table, terrorism and drug trafficking were identified as areas where the three countries have common interest, and that there should be a strong cooperation amongst us to deal with terrorism. For example, Russia made reference to the fact that in United Nations they had initiated the unanimous resolution on nuclear terrorism. There was also a reference made to our own initiative for the international convention on counter terrorism. So there are these areas where in fact we are already working together and perhaps we need to strengthen our cooperation.

**QUESTION:** ...(Inaudible)...

**FOREIGN SECRETARY:** Bilaterally this issue was not raised but during the meeting of the five Outreach countries Prime Minister did refer to the importance of nuclear energy as a source of energy for us and mentioned the fact that we would like there to be support for an alteration in the international guidelines permitting full civilian nuclear energy cooperation between India and the international community and international partners. So, this was something which was mentioned as a general point by Prime Minister to all the participants at the Outreach Meeting. I mentioned to you also that this did come up during the discussions at the Outreach Meeting itself this morning. But at the trilateral meeting the specific subject of nuclear energy was not brought up.

**QUESTION:** ...(Inaudible, on whether India, China and Russia were planning joint military exercises)...

**FOREIGN SECRETARY:** No, there is no proposal for joint military exercises among the three countries. I would like to emphasise that as far as we are concerned the focus of trilateral cooperation is really economic and the focus of trilateral cooperation is really on how we can work together on global issues whether these are economic issues, whether they are global issues like terrorism or drug-trafficking.

**QUESTION:** ...(Inaudible)
FOREIGN SECRETARY: There was no decision to invite Brazil to join the trilateral format. But as you know there are number of issues on which the four countries are working together and this was a general wish of all these leaders present that we should further promote such cooperation.

047. Statement by Prime Minister Dr. Manmohan Singh on return to New Delhi after G-8 Summit meeting at St. Petersburg.

New Delhi, July 18, 2006.

I speak to you after a very intensive round of meetings over the last two days. I would again like to thank President Putin for having taken the initiative to invite India, Brazil, China, Mexico, South Africa and Congo for discussions with the G-8 on some very crucial issues. The Outreach Session of the G-8 Summit embodied the spirit of close international cooperation in its approaches to the pressing problems of energy security, education and infectious diseases, terrorism and the special challenges facing Africa.

The G-8 and Outreach countries expressed outrage at the barbaric terrorists attacks of July 11 in Mumbai and Srinagar and expressed solidarity with India. They expressed their readiness to undertake all necessary measures to bring to justice the perpetrators, organizers, sponsors of these and other terrorist acts and those who incite terrorists to commit them. We are greatly encouraged by this unified expression and support of solidarity by all major countries of the world.

The Outreach Session of the St. Petersburg Summit also allowed the G-8 and the Outreach countries to share views on global energy security, education and the fight against infectious diseases. I believe that our views and perspectives on these important issues made significant contributions to the discussions. I appreciate that the documents adopted by G-8 reflect a willingness to work in partnership with developing countries. I find their willingness to explore trilateral cooperation in the field of education to be particularly useful. We exchanged views on world trade.
The G-8 has called for concrete endeavour to conclude the Doha negotiations. We are willing to join them in such an effort, but progress will only be possible if negotiations take fully into account the development concerns of the developing countries.

In my bilateral meeting with President Lula Da Silva of Brazil we agreed that the transformation in our bilateral relations that commenced during his visit to India in January 2004 must be continued. We shared perspectives on energy issues including alternative fuel sources including ethanol and bio-diesel. I said that I was looking forward to visiting Brazil for a bilateral visit, followed by the IBSA Summit in September this year.

In my meeting with President George Bush yesterday we reviewed developments in bilateral relations since the landmark visit of the President to India earlier this year. President Bush again condemned the blasts in Mumbai and Srinagar and we discussed ways to end the menace of terrorism. With regard to civil nuclear cooperation President Bush expressed optimism on successfully carrying the process forward to an early conclusion and also expressed understanding at some of the concerns on the proposed legislations that I conveyed. We agreed to take effective steps to expand on the collaboration in areas such as science and technology, education, agriculture, trade and industrial cooperation.

In my meeting with Chancellor Merkel of Germany, we discussed several current international problems including the situation in the Middle East and the impasse in the Doha Round.

I had the opportunity to discuss some issues pertaining to India’s energy sector and to personally extend an invitation to H.E. President Nazarbayev of Kazakhstan to visit India. We discussed potential for business to business cooperation, in particular in the IT sector.

Japanese PM Koizumi and I reviewed recent developments in our bilateral relations. A copy of the Joint Study Group report on enhancing economic cooperation was handed over to both of us. Both of us expressed satisfaction that the Joint Study Group had completed its work in a timely manner. We agreed to examine the recommendations expeditiously. I conveyed appreciation to PM Koizumi for his contribution to the recent positive momentum in our relations; the railway sector in particular has benefited from this.

I also had the opportunity of jointly meeting with the Presidents of
China and Russia. The simultaneous emergence of India, China and Russia as important economies of the Asian region is one of the remarkable developments of the 21st century. In their past meetings the three countries have identified six key areas for closer economic cooperation which includes energy, civil aviation, biotechnology, information technology, pharmaceuticals, and financial services. I underscored the importance of moving ahead rapidly on developing concrete projects of cooperation.

The special relationship India enjoys with the Russian Federation really requires no further characterization. President Putin has agreed to be the Chief Guest of our Republic Day celebrations in January 2007. We both agreed that there is a strong agenda of bilateral cooperation projects that needs to be completed before the forthcoming visit of President Putin.

I took up with all the Heads I met, the candidature of Mr. Shashi Tharoor for UN Secretary-General. He has very strong credentials for the post and I urged my interlocutors to give him their full support, in the forthcoming election process.
IBSA

1. The Minister of State for External Affairs of India, H. E. Mr. Anand Sharma, the Minister of External Relations of Brazil, H. E. Mr. Celso Amorim, and the Minister of Foreign Affairs of South Africa, H. E. Dr. Nkosazana Dlamini-Zuma, met in Rio de Janeiro on 30 March 2006 for the Third Meeting of the Trilateral Commission of the IBSA Dialogue Forum.

2. The Ministers discussed a wide range of critical global issues and reconfirmed their shared vision and determination to play a constructive role in international affairs and to maintain friendly relations with all countries. They reaffirmed the IBSA Dialogue Forum as an important mechanism for political consultation and co-ordination as well as for strengthening cooperation in sectoral areas and to improve economic relations among India, Brazil and South Africa.

3. They confirmed their support for a strong multilateral system as a means towards addressing issues of global concern, in particular the pre-eminent role of the United Nations in the maintenance of international peace and security and the promotion of sustainable development.

MILLENNIUM REVIEW SUMMIT

4. The Ministers recognized the successful conclusion of the Millennium Review Summit, which took place in September 2005. The Ministers expressed their hope that the UN reform processes continue to reflect a balance between development and security concerns and, in this regard, reiterated their perception that development matters remain an indispensable foundation for a new collective security system.

5. They reaffirmed their commitment to the goal of developing countries successfully achieving, at the minimum, the Millennium Development Goals (MDGs) as a core strategy in the international fight against underdevelopment, hunger and poverty. They reiterated their support
for the Action against Hunger and Poverty initiative and, in particular, the Declaration issued by the promoters of the initiative on the occasion of the UN Millennium Review Summit. They reconfirmed the importance of obtaining new and additional financial and other resources for fighting poverty and financing development.

6. Within the framework of the Monterrey consensus, the Ministers acknowledged that the MDGs will not be achieved without also resorting to additional and innovative sources of financing for development. The Ministers confirmed their willingness to support and promote innovative financing mechanisms and in this regard reiterated their intention to take active part in the work by the Leading Group on Solidarity Levies, created at the Ministerial Conference on Innovative Financing, held in Paris in February/March 2006.

UNITED NATIONS INSTITUTIONAL REFORM

7. The Ministers reiterated their continued support for the reform of the United Nations to make it more democratic and responsive to the priorities of its Member States, particularly those of developing countries that constitute the vast majority of its membership. In that regard, they welcomed the decisions taken in the September Summit in New York in 2005 and expressed their full support for the implementation of those decisions as contained in the “Summit Outcome Document”.

8. The Ministers emphasised that the Security Council must, in its composition, represent contemporary realities and not those of 1945. Keeping in view that the decisions of the Security Council should serve the interests of the larger United Nations Membership, they emphasised the need for the urgent reform of the Security Council that would include its expansion in both categories of membership, permanent and non-permanent, in order to render it more democratic, legitimate, representative and responsive. Towards this end, the representation of developing countries from Africa, Asia and Latin America, as permanent members of the Security Council, is essential. The IBSA countries agreed to continue to exchange views on this issue, which they feel is central to the process of the reform of the United Nations, and work towards this common purpose in the coming months, with the view to achieving concrete results by the end of the 60th General Assembly.
9. They welcomed the creation of the Peacebuilding Commission as an important intergovernmental advisory body through which international community could provide long term support to countries emerging from conflict, including capacity-building efforts. IBSA countries reiterated their commitment towards working for an early operationalisation of the Peacebuilding Commission.

10. They voiced their full support for the capable manner in which the United Nations Secretary-General, Mr. Kofi Annan, has been conducting the work of the organisation, and expressed confidence in his efforts to enhance the UN’s role in international relations.

11. They recommitted their respective delegations to the UN and its specialised agencies, as well as other multilateral bodies, to remain in close contact with each other and to consult on all issues of significance.

SOUTH-SOUTH COOPERATION

12. The Ministers reaffirmed that South-South cooperation is an essential and fundamental component of international cooperation for development, and stressed their support for mainstreaming of South-South cooperation and of the pursuit of the development of Technical Cooperation amongst Developing Countries (TCDC) to its full potential. In this regard, they recommitted themselves to work together for the enhancement of South-South cooperation and emphasized the establishment of the IBSA Fund as an example of cooperation among three developing countries for the benefit of the neediest nations of the South.

13. They noted with satisfaction the adoption of the Doha Plan of Action at the South Summit, held in Doha, between 12 and 16 June 2005. They emphasized the importance of strengthening South-South cooperation in order to promote growth and development.

THE NEW PARTNERSHIP FOR AFRICA’S DEVELOPMENT (NEPAD)

14. The Ministers reaffirmed their support for the socio-economic development programme of the African Union and committed the IBSA partnership to seeking practical and concrete measures to be pursued in support of the implementation of NEPAD. The three countries share a common experience in the struggle against poverty and underdevelopment, as well as complementary levels of
development. There was therefore much to gain from sharing information and best practices in dealing with common challenges and in identifying areas of common concern, need and benefit.

SOUTH AMERICAN INTEGRATION

15. The Ministers welcomed the consolidation of the South American Community of Nations, which held its first Presidential Meeting in Brasilia, on 30 September, 2005, and recognized it as a major achievement in the process of strengthening the political coordination and economic, commercial and infrastructural integration among South American countries.

TERRORISM

16. The Ministers reaffirmed that international terrorism constitutes one of the most serious threats to peace and security and that acts of terrorism were criminal and unjustifiable whatever the considerations or factors that might be invoked to justify them. The Ministers emphasised the need for concerted and co-ordinated action by the international community, with the ultimate objective of eradicating terrorism in all its forms and manifestations.

17. They reaffirmed their full support for the implementation of all the measures to combat terrorism outlined in relevant UN Security Council Resolutions. They welcomed the Council’s efforts to increase cooperation and coordination in the fight against terrorism and called on the international community to work together in a spirit of cooperation and tolerance to eliminate terrorism. Recalling that the Outcome Document of the World Summit 2005 had called upon the member states to conclude a comprehensive convention on international terrorism during the current Session of the UN General Assembly, the Ministers stressed the importance of finalising the convention on international terrorism and called upon all States to cooperate in resolving the outstanding issues with the objective of an expeditious conclusion of negotiations and the adoption of this Convention.

18. They emphasised that international cooperation to combat terrorism should be conducted in conformity with the principles of the United Nations Charter, international law and relevant international conventions, including international human rights, humanitarian and refugee instruments.
DISARMAMENT, NON-PROLIFERATION AND ARMS CONTROL

19. The Ministers reaffirmed the view that the primary focus on human development, the fight against poverty, and measures to promote a better quality of life, should underpin and provide for greater guarantees for international peace and stability. The three Ministers took stock of the global security situation concerning disarmament and non-proliferation, and expressed their concern over the lack of progress in multilateral fora related to the field, and voiced their hope that the international community will show the necessary resolve and political will to reinforce the international disarmament and non-proliferation regime by means of multilaterally-negotiated, transparent, balanced and effective measures.

20. The Ministers expressed their conviction that multilateral institutions set up under multilateral disarmament agreements should remain the primary institutions and mechanisms, in the international community’s endeavour to achieve common objectives in the area of disarmament and non-proliferation.

21. They took note of the positive continuing cooperation among their countries at the IAEA and other fora, with a view to ensuring the unimpeded growth and development of the peaceful use of atomic energy, through the supply of technology, equipment and material, under appropriate safeguards, and reaffirmed their will to intensify such cooperation. In this regard, the Ministers called for a peaceful resolution of the Iranian nuclear programme within the context of the IAEA.

22. They highlighted that nuclear energy can play an important role in meeting growing global energy requirements while at the same time addressing concerns related to global warming. In this regard they agreed to consider further enhancing international civilian nuclear cooperation, with countries who share the objectives of non-proliferation and have contributed to them, as well as having concluded appropriate safeguard agreements with IAEA.

23. The Ministers expressed concern over the continuing impasse in the Conference on Disarmament and called upon member states to intensify efforts to reach an agreement on a programme of work. In this context, they reiterated that the Five Ambassadors proposal as revised in 2003 still remained a viable basis for a programme of work.
24. They also expressed their commitment to the universalization of the Convention for the Prohibition of Chemical Weapons and Biological Weapons Convention (BWC), as well as to the goal of ensuring its balanced, transparent and effective implementation.

25. They also agreed on the pressing need to adopt measures aimed at strengthening the Convention for the Prohibition of Biological and Toxin Weapons, in order to consolidate its role as a key disarmament instrument of the international disarmament and non-proliferation regime, and expressed their will to intensify the cooperation and consultations in relation to the Convention, in particular in the context of its 6th Review Conference, scheduled for November-December 2006.

26. They recalled the importance of cooperative and effective international action against the illicit trade in small arms, light weapons and ammunition, and the need for the 2006 Review Conference of the United Nations Programme of Action to Prevent, Combat and Eradicate the Illicit Trade in Small Arms and Light Weapons in All Its Aspects (UN-PoA), adopted at the Conference on the Illicit Trade of Small Arms and Light Weapons in All Its Aspects.

SITUATION IN THE MIDDLE EAST

27. The Ministers welcomed the holding of transparent and free parliamentary elections in the Palestinian territories on 25 January 2006 and of general elections in Israel this very week. They welcomed the strengthening of the democratic process in Palestine and the peaceful nature of the polling. They expressed the hope that the newly formed government in Palestine and the newly formed government in Israel will continue to pursue peaceful negotiations as laid down by the Road Map for Peace and to abstain from taking any action or measure which might put in jeopardy the peace process in the region leading to the establishment of a viable, sovereign, independent State of Palestine living side by side in peaceful coexistence with the State of Israel.

INTERNATIONAL TRADE

28. Considering the results of the 6th WTO Ministerial Conference, held in Hong Kong, in December 2005, the Ministers emphasized the necessity of renewed political commitment to advance negotiations so that the Hong Kong deadlines are met.
29. As agriculture is central to development and the Doha Round, the Ministers expressed their conviction that Hong Kong consolidated the G-20 as an element of systemic relevance in WTO Agriculture negotiations.

30. The Ministers emphasised the need to consolidate unity on the development content of the Round. This is supported by increased activity, in the form of consultations, held in Geneva by Indian, Brazilian and South African delegations, in order to co-ordinate positions and strengthen Non-Agricultural Market Access (NAMA), as well as the establishment of the NAMA -11 whose two main principles are supporting flexibilities for developing countries and balance between NAMA and other areas under negotiation.

31. They recognized the importance of incorporating the development dimension in international discussions concerning intellectual property, as a means to preserve the policy space that countries enjoy in ensuring access to knowledge, health, culture and a sustainable environment. In this context, they welcomed the launching of a “Development Agenda in the World Intellectual Property Organization” and reaffirmed their hope that the aforementioned Organization incorporates effectively the development dimension in all its bodies.

32. The Ministers took note of the broader objectives of the European Union proposed Registration, Evaluation and Authorization of Chemicals (REACH) Legislation, in respect of the protection of human health and the environment. The Ministers reiterated their support for the commitments made on chemical safety at the World Summit on Sustainable Development (WSSD) in 2002.

33. The ministers expressed their concern for the unintended consequences that REACH will have on developing economies exporting to the EU. Such consequences will negatively affect the attainment of development goals in the South, including the MDGs. The Ministers recognised the efforts, commitments and determination of leaders of developing economies to effectively address the challenges of poverty, underdevelopment, marginalisation social exclusion and economic disparities.

34. The Ministers urged the EU to give due consideration to the grave consequences for developing economies should REACH be adopted in its current form. The Ministers urged the EU to ensure that REACH
will not become a Technical Barrier to Trade (TBT). The high costs for compliance, the possibilities for substituting commodities and the lack of technological and human resource capacity to comply may render the EU markets inaccessible for exports from developing countries. The Ministers expressed their desire that REACH should be consistent with the WTO laws and provide for adequate flexibility to developing countries.

35. The Ministers undertook to work together and jointly to address the challenges posed by REACH. The Ministers resolved to make all efforts to cooperate in coordinated manner regarding REACH.

INTERNATIONAL FINANCIAL SYSTEM

36. The Ministers underlined the convergence of views regarding the need for enhancing the governance of the international financial system and, in this respect, reiterated their commitment to coordinate efforts on this issue. They further stressed that progress in this field will lead to improvements in crisis prevention and the increase of resources to finance development.

SUSTAINABLE DEVELOPMENT

37. The Ministers reaffirmed the validity of the principles contained in the Rio Declaration, particularly on common but differentiated responsibilities, the Programme of Action contained in Agenda 21, and the Plan of Implementation of the World Summit on Sustainable Development (WSSD) held in Johannesburg. IBSA would continue its efforts to mobilise new and additional financial resources and the transfer of environmentally-sound technologies within an agreed time-frame in order to implement the outcomes of these conferences.

38. They stressed that an international environment supportive of development would be critical to this process. They also called for a specific focus on capacity-building as well as on the transfer of financial resources and technology to developing countries.

39. They noted with appreciation the stage of the TRIPS Council negotiations on the relationship between the TRIPS Agreement and the Convention on Biological Diversity and reaffirmed the urgent need that Members reach a prompt solution for the problem raised by the granting of intellectual property rights concerning or making use of genetic resources and/or associated traditional knowledge without compliance of relevant provisions of the Convention on Biological
Diversity. In this respect, they underscored the wide support for the proposal of amending TRIPS with a view to require intellectual property applications to disclose the country of origin of the subject matter as well as the compliance with the requirements of fair and equitable benefit-sharing and prior informed consent, in accordance with the legislation of the country of origin.

40. They expressed, in this context, their positive expectations about the results of the VIII Conference of the Parties of the Convention on Biological Diversity (COP-8/CBD), which is being held in Curitiba, Brazil (March, 20th-31st). They concurred on that COP-8 constitutes an opportunity to advance the effective implementation of CBD.

41. They also called for expediting negotiation and conclusion of the international regime on access and benefit sharing, as an instrument for protecting intellectual property rights concerning traditional and indigenous knowledge. India, Brazil and South Africa, as the founding members of the Group of Like-Minded Megadiverse Countries, agreed to strengthen cooperation and co-ordination, with an emphasis on multilateral negotiations and in fostering activities related to South-South Cooperation.

42. They recalled that Brazil, India and South Africa will jointly participate in the Capacity Building Committee of the Group on Earth Observation (GEO), an intergovernmental partnership entrusted with implementing the Global Earth Observation System of Systems (GEOSS). The participation in the Capacity Building Committee provides a unique opportunity for the three countries to cooperate in enhancing the capabilities of developing countries, especially less developed ones, in the use, analysis, interpretation and modelling of Earth Observation data, for applications in the nine societal benefit areas of GEOSS, which comprise Agriculture, Health, Disasters, Water, Ecosystems, Climate, Meteorology, Energy and Biodiversity.

CLIMATE CHANGE

43. The Ministers expressed their satisfaction with the results of the Montreal meetings (COP-11, COP/MOP-1), particularly with the adoption of the Marrakech Accords and the establishment of the Ad-hoc Working Group on Further Commitments for Annex 1 Parties under the Kyoto Protocol to consider such commitments for the period beyond 2012. They further urged developed countries to meet their own commitments and undertakings under the Protocol not only in
terms of complying with current targets for Greenhouse Gases (GHG) emission reduction, but also in terms of their commitment in respect of technology transfer, capacity building and financial support to developing countries. They also welcomed the dialogue on long term co-operative action to address climate change by enhancing implementation of the Convention.

44. They also agreed on the need for continued consultations within IBSA Forum on the environment and climate change issues.

**IBSA FACILITY FUND FOR ALLEVIATION OF POVERTY AND HUNGER**

45. The Ministers reiterated the fundamental character of the IBSA Fund as a means to disseminate the best practices in the alleviation of poverty and hunger. They emphasized the importance of the participation of institutions of IBSA countries (Governmental and Non-Governmental) in the projects financed by the Fund and recommended that the UNDP, as administrator of the Fund, find means to make that participation possible.

46. The Ministers received the report of the visit of the Technical Monitoring Committee (TMC) to Guinea Bissau and accepted the recommendations made by the TMC, especially concerning the management of the project, and urged the UNDP Office in Bissau to work more closely with the UNDP Special Unit for South-South Cooperation in New York, the Coordinator of the project and the Guinean Bissau national authorities. They accepted the Committee’s recommendation that an additional agreement be signed with UNDP in order to clarify rights and obligations of both parties.

47. The Ministers reiterated their commitment to move forward with other projects in the scope of the Fund. They welcomed the finalisation of the concept paper of the project on waste collection in Haiti (Carrefour Feuille) and called upon speedy appointment of a project coordinator so that the project can be implemented as soon as possible. They underlined the importance of making progresses in the drawing up of the projects benefiting Palestine and Laos.

48. The IBSA countries recommitted themselves to allocate at least US$ 1 million a year to the Fund.

**IBSA SECTORAL COOPERATION**

49. The Ministers reviewed the work of the sectoral working groups and adopted their reports.
50. Reference was made to the two Workshops on Information Society and E-Government, held in South Africa and India, and to the commitment of the three delegations to actively participate in the last event of the series, to take place in Brazil, in June 2006.

51. The Ministers welcomed the agreement reached by the Working Group on the Information Society, on the content of the “IBSA Framework for Cooperation on Information Society”, setting up the basis and defining modes of cooperation in the fields of Information Society and Communication Technologies, and took note with satisfaction of the Joint Action Program for 2006-2007, prescribing specific initiatives in all fields of cooperation covered by the Framework. The Ministers also welcomed the development of the IBSA website (www.ibsa-trilateral.org), maintained by South Africa, and invite the various working groups of the IBSA Forum to provide content and make full use of this channel of communication.

52. The Ministers recognized with pleasure the high level of coordination between the three delegations during the second phase of the World Summit on the Information Society (WSIS), held in Tunis, in November 2005, and its preparatory works. In this regard, the three countries reiterated their commitment to keep working together during the WSIS follow-up process, as well as in other international fora related to the issue, to promote the use of Information and Communication Technologies as a tool for development and to build multilateral, democratic and transparent global Internet governance mechanisms.

53. The Ministers decided to formalise the establishment of an additional sectoral working group on Social Issues, as a follow-up to the International Seminar on Economic Development and Social Equity, held in Rio de Janeiro, on 3rd and 4th August, 2005. They also expressed their intention of establishing as soon as possible a working group on Public Administration.

54. The member countries reiterated their commitment to further promote the production and use of Biofuels as environmentally friendly and sustainable fuels which promote socio-economic development, taking into consideration their global importance. Progress is being made, on exchange of information on Renewable Energy and the Biofuels value chain.
55. More emphasis will be placed on exchange of information into the areas of energy efficiency and conservation, and hydrogen energy. India will host the second technical meeting of the Energy Working Group, to which other stakeholders including private sector players may be invited for the enhancement of implementation of IBSA initiatives.

56. The Ministers agreed on the importance of new initiatives aimed at strengthening economic and trade relations among developing countries, as a means to generate business opportunities and contribute to an international trade scenario more suitable to their development projects. In that regard, they took note with great satisfaction that Mercosul will be proposing to SACU and India the creation of a Working Group to explore the modalities of a Trilateral Free Trade Agreement (T-FTA) among them. They underlined the significance of this exercise and expressed their full support to the initiative.

57. Further the Ministers supported the initiative of a renewable source of energy seminar and the proposals to assist Small, Medium and Micro Enterprises through the proposed study on how to make business in the IBSA countries, and the proposals on sharing of experiences and training opportunities.

58. The Ministers also laid emphasis on the need to conclude the bilateral customs cooperation agreements expeditiously.

59. The member countries decided that, in taking forward the renewed approach to IBSA deliverables, South Africa should host a meeting on civil aviation and maritime transport in April 2006. This meeting will focus on the finalization of the trilateral on maritime transport agreement and also review implementation of air transport agreement. It should be noted, in addition, that during the present meeting of the working group in Rio, which also included the presence of representatives of Air India, VARIG and SAA, tremendous progress has been made and concrete projects have been identified for cooperation. To this end cooperation will be fostered in areas of airlink expansions, training and knowledge sharing in airports and airspace management, port management, operational and infrastructural systems, including capacity building in shipbuilding, environmental management and navigational systems.

60. The development of transshipment facilities will also be made a
priority in order to support the IBSA trade strategy which advocates for the creation of South-South shipping highway that integrate subregional connection between MERCOSUL, SACU and Indian regions.

61. The Ministers noted progress on the establishment of a framework to strengthen cooperation in the field of agriculture. Specific areas of cooperation that have been identified are: research and capacity building, agricultural trade, rural development and poverty alleviation, and other allied areas as may be agreed.

62. Following the successful meeting of the health working group held in Brazil from 6th to 10th February 2006 in which broad areas of cooperation were discussed, the South African Minister of Health invited her counterparts for a meeting in March 2006. However, this meeting will now take place on the margins of the WHO meeting in Geneva, in May 2006.

IBSA TRADE AND INVESTMENT FORUM

63. The Ministers noted with satisfaction the results of the Trade and Investment Forum. The forum was divided into four panels: a) Trilateral trade analysis; b) implementation of the preferential trade agreements between Mercosul, India and Southern African Customs Union (SACU); c) challenges to the growth of the trilateral trade (barriers, logistics and financing); and d) organization of the trilateral business meeting on the occasion of the IBSA Meeting of Heads of Government and State in September 2006. The delegations of India, Brazil and South Africa presented data and facts concerning trade issues that thrusted fruitful discussions among the businessmen attending the meeting.

64. It was presented an evaluation of the current aspects of the negotiations involving Mercosul, Sacu and India. All delegations concluded that there must be an expansion on acting positions to fit the ever growing market of the three countries. The importance of solid links between the three countries was mentioned several times and also the necessity of a stronger South-South union. The possible substitution of imports from northern countries by imports from southern countries was considered a possible solution to enforce this new commercial agreement.

65. Brazilian businessmen pointed out that among the main barriers to
be eliminated to foster trilateral trade are: a) logistics, b) customs procedures, c) lack of information and d) distances. The logistic problem was tackled by the suggestion of a study (previously discussed in the IBSA work group for trade and investment (on march 28th) to further address the issue. The private sector also emphasized the necessity of creating flights uniting Brazil-South Africa-India. The measure would help to narrow the distances both physical and cultural between IBSA partners.

66. In what concerns customs procedures, it was suggested more cooperation in the area by the specific government institutions, in order to simplify many of the regulations and turn the customs process into a more unified process.

67. The study suggested in the work group of trade and investment, as well as the magazine “Brazil Brand of Excellence”, the Brazilian website “Brazil Trade Net” and the creation of the IBSA site, were solutions proposed to help ease the gap of information, and bring businessmen from the three countries closer.

68. A great deal of possible solutions were suggested to help strengthen the IBSA economic area: more aggressive free trade agreements, closer relations between businesses and industries from the three countries, enhancing contact between the automobile industries of IBSA.

69. Some sectors were also given special attention: the renewable energy sector and ethanol industry. The WG on trade and investment decided to create a seminar that will happen in South Africa before the Summit in September.

70. The meeting was praised and considered by the attendants as highly productive. It is expected new steps towards a more united and stronger IBSA by all.

71. The Ministers of India and South Africa confirmed the participation of Prime Minister Singh and President Mbeki in the IBSA Summit to be convened by Brazil on 13th September 2006.

72. The Ministers welcomed the announcement by Brazil of the II Conference of Intellectuals from the Africa and the Diaspora, which will take place in Salvador, on 12th-14th July 2006. Representatives from India will also be extended an invitation to attend this meeting as observers.
The Ministers of India and South Africa expressed their deep gratitude to the Minister of Foreign Affairs of Brazil for convening the Third Meeting of the Trilateral Commission.

The Ministers agreed that the next meeting will be hosted by India in the first quarter of 2007.

OFFICIAL SPOKESMAN (SHRI NAVTEJ SARNA): Good evening everybody. We are very glad to have the Foreign Secretary here to brief you on Prime Minister’s visit to Brazil and then to Cuba.

FOREIGN SECRETARY (SHRI SHYAM SARAN): Thank you very much. I would like to wish all of you a very pleasant afternoon.

The Prime Minister will be visiting both Brasilia as well as Havana, Cuba for three different sets of meetings. The first is an official bilateral visit to Brazil at the invitation of President Lula of Brazil on the 12th of September.

On the 13th, there will be a summit meeting of IBSA countries - that is, India, Brazil and South Africa. This, as you know, has emerged as a very important grouping of these three major developing countries which spans three continents - the continents of Asia, Africa and Latin America. Finally, on September 15-16, the Prime Minister would be in Havana to attend the Non-Aligned Summit which is being held there.

Let me start with the bilateral visit to Brazil. Brazil, as you know, is an extremely important country. It is the largest country in Latin America. It has a population of about 186 million. It has a GDP of nearly 800 plus billion dollars. Today it has become one of the most dynamic economies in the world. It is a flourishing democracy. Over the recent years, we have established a very close partnership with Brazil. Our trade currently is about

049. Special Media Briefing by Foreign Secretary Shyam Saran on the visit of Prime Minister Dr. Manmohan Singh to Brazil and Cuba.

New Delhi, September 8, 2006.

OFFICIAL SPOKESMAN (SHRI NAVTEJ SARNA): Good evening everybody. We are very glad to have the Foreign Secretary here to brief you on Prime Minister’s visit to Brazil and then to Cuba.

FOREIGN SECRETARY (SHRI SHYAM SARAN): Thank you very much. I would like to wish all of you a very pleasant afternoon.

The Prime Minister will be visiting both Brasilia as well as Havana, Cuba for three different sets of meetings. The first is an official bilateral visit to Brazil at the invitation of President Lula of Brazil on the 12th of September.

On the 13th, there will be a summit meeting of IBSA countries - that is, India, Brazil and South Africa. This, as you know, has emerged as a very important grouping of these three major developing countries which spans three continents - the continents of Asia, Africa and Latin America. Finally, on September 15-16, the Prime Minister would be in Havana to attend the Non-Aligned Summit which is being held there.

Let me start with the bilateral visit to Brazil. Brazil, as you know, is an extremely important country. It is the largest country in Latin America. It has a population of about 186 million. It has a GDP of nearly 800 plus billion dollars. Today it has become one of the most dynamic economies in the world. It is a flourishing democracy. Over the recent years, we have established a very close partnership with Brazil. Our trade currently is about
2.3 billion US dollars. Our exports to Brazil are already 1.5 billion US dollars. So, as you can see, it is a very important economic partner for India.

In addition to that what is also very important is the kind of cross-investment which is taking place between the two countries. The ONGC Videsh Limited has already invested about half a billion dollars in an offshore petroleum exploration project. Petrobras, which is the Brazilian counterpart of ONGC, is looking at investing in a very major offshore field in India. It has, in fact, almost decided to make that investment. We have a number of our pharmaceutical companies which are already very well based in Brazil and, in fact, are using Brazil as a very convenient platform for accessing other Latin American countries.

We also have with Brazil a lot of cooperation in various fields. One of the very important initiatives which Brazil has taken is based on the great success that it has achieved in the use of ethanol as an alternative to petroleum for its energy requirements. India has already conveyed to Brazil our intention to join the International Ethanol Initiative which Brazil is going to be launching.

Brazil has recently emerged as a very important country in commercial agriculture because it has a very large amount of fertile land available. Only six per cent or so of its arable land is actually under cultivation today. So, there is a vast potential. So, we are looking at the possibilities of a much closer cooperation in terms of commercial agriculture with Brazil.

Brazil has also made some very significant advances in the field of aviation. Maybe you are all familiar with the well known Embraer jet aircraft. So, we are looking at that emerging as an important area of joint collaboration between our two countries. So, as you can see, there is already a strong economic and trade partnership between the two countries, and we believe that there is a tremendous potential for us to take this partnership to a much higher level.

Politically, Brazil being, as I said the most important country in Latin America and also a very important partner in this IBSA grouping, has also traditionally been very much on the same side as India when it comes to important international security related issues. India and Brazil have been partners in the global effort in the field of disarmament. We have worked together very closely on these issues. We are on the same side when it comes to global trade negotiations. In fact, in the current Doha Round we have cooperated very closely together championing the cause of developing
countries. This partnership is only going to increase further in the years to come. Also very important, as you know, Brazil is also part of the G-4 grouping - the G-4 countries who are leading the movement for reform of the UN Security Council who are contenders for permanent membership of the Security Council. So, when it comes to issues of UN reform, in particular UN Security Council reform, again India and Brazil are very closely associated with each other.

This visit is really the first visit by an Indian Prime Minister in 38 years. The last visit was 38 years ago by Mrs. Gandhi. So, a visit from India has been really due for sometime. President Lula had been on a visit to India as the Chief Guest at the Republic Day in 2004. So, this is a very welcome opportunity to reinforce the political relationship between our two countries.

Let me then move on to IBSA. The IBSA grouping was established about three years ago with India, South Africa and Brazil. But this is the first summit which is being held of the three countries. We have, of course, met on the margins of the UNGA both in 2003 and 2005. In a sense, this is the first summit of the three countries. I think it reflects the very rapid growth in the partnership amongst the three countries and their own perception that this grouping has in a sense come of age and has a major contribution to make to the interests of the three countries, and a recognition that as three of the most important developing countries spanning really the three continents, there is a certain role that can be played by these countries in South-South cooperation, in also amongst themselves by pooling their very considerable scientific and technological resources together, their very considerable economic resources together, harmonizing their positions in international fora, whether they be political fora, or economic fora. From that point of view, upgrading this relationship to the summit level, all the three countries believe, is a very timely development.

There will be, of course, a meeting of the three Heads of State and Government. There is also a business component. There are CEO delegations from the three countries who would also be interacting on the margins of the summit because we do believe that the economic partnership that we are talking about needs to be buttressed by much greater interaction amongst our private sectors.

The agenda is really quite broad. The declaration, for example, that we are working on will be looking at a number of regional issues. We will
be looking at a number of international issues, global issues. We will be looking at some of the specific areas in which the three countries could be working together. What I would like to do here is to give you just a sense of the kind of things that we will be focusing on.

On the political side, certainly the reform of the United Nations is a very important element and we will be talking about the UN Security Council reform. Certainly from our point of view the issue of international terrorism is going to be a major theme during the summit. Both Brazil and South Africa had expressed their outrage at the Mumbai blasts and are very much conscious of the need for there to be an international effort, a global effort, to confront the problem of terrorism. So, this is one very important theme. We would also be touching upon issues like human rights. We will be talking about the situation in West Asia, particularly the recent events in Lebanon.

On the economic side there will be a focus on issues such as the Doha Round and what kind of outcome we expect from Doha Round. All three countries have been emphasizing that development needs to be at the centre of these negotiations, that this should be able to create a truly multilateral, a non-discriminatory, rule-based international trading system.

We would also, in the Declaration, be talking about the peaceful uses of nuclear energy which is an important area for us. There will be a reflection of the belief of all three countries that we need to develop the peaceful uses of nuclear energy as a contribution to energy security. By the way, we will also be, in the Declaration, focusing attention on the issue of disarmament because there is a belief amongst all the three countries that somehow the issue of disarmament, in particular the issue of nuclear disarmament, appears to have fallen off the global agenda. This is something that we would like to bring back into global focus once again. So, there will be a reflection of that conviction in the Joint Declaration.

We would, of course, be talking about a number of things that we can do together in the trilateral framework. We are looking at what are the kind of barriers which are there to really energizing the trade relationship amongst the three countries. Almost immediately what comes to mind is the transportation linkages because unless you have efficient shipping services linking the three countries, unless you have air services serving the three countries, it is difficult to see how we can really realize the full potential of our economic partnership. So, this is one area which we are going to be focusing attention on.
With regard to trade itself, there is the regional trade grouping MERCOSUR. You have the Southern African Customs Union of which South Africa is a member. So, we are looking at a trilateral trade grouping in which India would be really setting up a kind of a preferential trading area with MERCOSUR as well as Southern African Customs Union. We are going to have a Joint Study Group which would be looking at the possibility of really setting up a free trade regime amongst the three partners. That is something which will lead, hopefully, to very specific recommendations that can be considered by the three Governments.

As I mentioned to you, one of the very major areas of concern for us is energy and the need for us to work together on energy security. Here, whether it is in terms of exploration of and the exploitation of conventional sources of energy, certainly oil and gas, we are also looking at non-conventional resources of energy. In that connection I mentioned to you the Brazilian advances in things like bio-fuels, particularly ethanol. This is one of the areas where we would be working together.

In some of the other areas we are looking at how we can bring together our considerable scientific and technical resources of the countries. We have very well-established science and technological research networks, very good infrastructure. So, we are looking at how we can bring this together in order to deal with certain common problems. These relate particularly to, for example, public health issues like tackling global HIV AIDS, also malaria and tuberculosis which has seen resurgence in recent years. This is another area.

We have also a trilateral project for poverty alleviation currently in Guinea Bissau. We are looking at how we can expand this South-South cooperation for development of third-world countries, particularly countries in Africa. This is one area where we feel that as three major developing countries we can contribute to the development of the third-world countries. So, these are some of the important areas.

Now let me give you just a sense of the bilateral agreements and the trilateral agreements which are going to be concluded. With respect to the India-Brazil bilateral relationship, there will be an agreement on scientific and technological cooperation between the two countries. We are looking at an air services agreement, precisely what I mentioned to you the need to have better air services between the two countries. We are also looking at an MoU between the Bureau of Indian Standards and its Brazilian
counterpart which is known by its acronym ABNT. There is going to be an MoU on cooperation in the field of human settlements, which is really between our Ministries of Urban Development and Poverty Alleviation and the Brazilian Ministry of Housing. This is essentially to really exchange our experiences in terms of low-cost housing and in terms of development of real estate.

There will be an MoU for the conduct of Weeks of Indian Culture in Brazil and then corresponding Weeks of Brazilian Culture in India. There will be an MoU on Plant Health Cooperation between the two countries. The MoU between the BMEL and a Brazilian company for manufacture of railway wagons is something which is in the works. There will also be an MoU between the ONGC Videsh Limited (OVL) and Petrobras of Brazil for much more expanded cooperation between our two oil majors. These are the bilateral agreements with Brazil.

Under IBSA, we are looking at an MoU on trilateral cooperation in agriculture and allied fields. There will be an MoU on India-Brazil-South Africa Dialogue Forum. This forum will be specifically looking at the development of bio-fuels. There will be a trilateral agreement on maritime shipping and maritime transport related matters and a framework for cooperation on information society, essentially in the IT field. Finally there will be an action plan on trade facilitations for standards, technical regulations and conformity assessment. This is essentially for trade promotion. So, as you can see, there are a number of both bilateral as well as trilateral documents which will be concluded during the visit.

This is as far as the bilateral visit and trilateral IBSA summit is concerned. Would you like me to stop here and perhaps take some question from you before I move on to the Non-Aligned Summit?

QUESTION: Today, the Indian Express has published a report on what Mr. Jairam Ramesh has said on IBSA. Would you like to comment on that?

According to the Indian Express story Minister of State in the Ministry of Commerce and Industry Jairam Ramesh gave an interview in August to a visiting Brazilian journalist Patricia Campos Mello representing the influential paper Estado do Sao Paulo and reportedly said: “The idea that India and Brazil are natural allies is a little naïve... we are competitors, we are competing in (the) manufacturing sector... we have contrary interest in agriculture (Brazil is on the rise and India on the defensive) and in services, we want an opening much faster than Brazilians... IBSA will be a powerful bloc in South-South cooperation with echoes of ‘non-alignment’ in earlier times but from the economic point of view, IBSA is little fictitious.”
FOREIGN SECRETARY: I do not know what Mr. Jairam Ramesh has said. I have seen the newspaper report. As I mentioned, the IBSA forum is only about three years old. Our sense is that we have already, in those three years, achieved a considerable degree of progress, whether it is in terms of promotion of trade, in terms of promotion of investment. I have spelt out for you a number of areas where cooperation amongst the three countries can really have a lot of potential. Energy security, our cooperation in the health sector, cooperation in the IT sector, these are already proven fields for cooperation. We will also be undertaking a joint study to look at the feasibility of further development including, as I mentioned to you, the possible establishment of a free trade regime amongst India, MERCOSUR and SACU. Let us wait and see. In terms of the complementarities amongst the three economies, which I think has been referred to in this report that you are talking about, our sense is that there is already some proven complementarity from the experience that we have had so far. And we have a sense that the study that is going to be undertaken is probably going to be able to identify many other areas of complementarities amongst the three economies. Let me say that we are quite optimistic in terms of the prospects for cooperation amongst the three countries.

QUESTION: I have two questions. Did the Brazilian Government express its displeasure over the reported remarks of the Minister of State for Commerce Mr. Jairam Ramesh? And, are you going to ask them for their support in the NSG?

FOREIGN SECRETARY: To answer your first question, yes, certain interest was expressed in the reports which have appeared as to what these reported remarks imply. We on our part have conveyed the assurance that we attach great value both to our bilateral relationship with Brazil as well as to the prospects for cooperation on a trilateral basis in IBSA. With regard to the question on NSG, as you know Brazil is the current Chairman of the NSG and we have been in close touch with them on the adjustment of the NSG guidelines to enable nuclear energy cooperation with India. Our sense is that Brazil has played and will continue to play a helpful role.

QUESTION: Talking about South Africa, has South Africa indicated its willingness to back India at the NSG?

FOREIGN SECRETARY: This matter was raised by Minister of State Shri Anand Sharma when he visited South Africa. He had also taken up this matter at the highest level with President Mbeki. There again, our sense is that South Africa would be supportive of India.
QUESTION: Are we looking at sporting ties with Brazil in football?

FOREIGN SECRETARY: We have a recommendation from no less a person than Minister Priya Ranjan Dasmunsiji that we should look at the possibility of cooperation in terms of soccer training, football training, from Brazil. I can assure you that this will be one of the important issues which will come up in the meeting that our Prime Minister will have with the Brazilian President.

QUESTION: On the issue of trade, do you have any comparative trade figures for Brazil, India and South Africa?

FOREIGN SECRETARY: I think I gave you the figures. With Brazil trade has increased from about 500 million dollars in the year 2000 to 2.3 billion dollars in 2005. With regard to South Africa, the figure is 1.7 billion dollars in 2001 which grew to 4.035 billion dollars in 2005.

QUESTION: Can you just come again on the Ethanol Initiative?

FOREIGN SECRETARY: Brazil is a leader in the use of ethanol in place of gasoline and this has been a great success story. Now especially with petroleum prices rising, the use of ethanol has become even more attractive than before. So, the Ethanol Initiative essentially is a recommendation that it should be made mandatory that 10 per cent of all transportation requirement should be met by the use of ethanol, or at least that should be the target. While this is being done by Brazil on a national basis, and it is something which has been also encouraged in several other countries, what Brazil is now proposing is that in view of the rising oil prices and the energy challenge which many developing countries are facing, we should be looking at an international effort to promote the use of ethanol. As I mentioned, we have supported this initiative and have agreed to be a part of this initiative.

QUESTION: Is the Indian Government or some Indian companies going to buy land in Brazil and manufacture ethanol? Is there some proposal like that?

FOREIGN SECRETARY: I do not think we have gone to that extent of specificity. As I mentioned, there is quite a large amount of arable land which is available in Brazil and there are prospects for commercial farming. This is something which even our own private sector is already looking at. So, it is possible that this could be one area where we could collaborate together.
QUESTION: On this NSG issue, what is our take on Brazil’s stand? Is it amenable to India?

FOREIGN SECRETARY: I have mentioned, our sense is that the general attitude appears to be that while there are concerns with respect to nonproliferation, taking into account the excellent relations that these countries have with India, taking into account the impeccable record that we have with respect to nonproliferation, the adjustment of the NSG guidelines is something which many of our friendly countries will not stand in the way of.

Let us come to the Non-Aligned Summit. The Ministerial Meeting will be held on the 13th and 14th of September followed by the summit meeting on the 15th and 16th of September. There will be an inaugural event which would take place on the 15th of September and then the plenary debate will continue. The theme which has been chosen for this particular summit is “Purposes and Principles and the Role of the Non-Aligned Movement in the Present International Juncture”. That is the theme that the Heads of State and Government will be focusing attention on.

There has been a lot of talk as to whether the Non-Aligned Movement is still relevant in global affairs, is there any possibility of the Non-Aligned Movement being revitalized to once again play an important role in international affairs, does Non-Aligned Movement have any meaning in today’s world. I think what we have to recognize is that this movement, including as it does virtually all the major developed countries from across the globe, has a certain relevance, if for nothing else just for that. You do not have today a forum which is as representative of the developing world as the Non-Aligned Movement.

India, as one of the founder members of the Non-Aligned Movement, certainly believes that it continues to have relevance. That does not mean that that particular relevance or the role of Non-Aligned Movement could have in international affairs is actually being performed. We certainly believe that there is a great deal that needs to be done in order to energise the movement, in order to enable the movement to really play a role not only in terms of the major political issues facing the international community but also in terms of very major economic and social issues facing the world today. Our sense is that globalization, which is a fact of life, has brought about benefits to developing countries. It has opened up many possibilities
for much higher growth amongst developing countries. But there is no doubt that in terms of the benefits it is an uneven picture. There are countries which have gained from this process of globalization: there are countries which have been left behind in this process of globalization. I think one of the challenges, therefore, is how we make the process of globalization something which in terms of its benefits is much more inclusive in character. I think that is one area in which the non-Aligned Movement may certainly play an important role.

Another aspect that we are looking at is that today somehow or the other we are entering into what looks like another era of a global divide where people have started talking about the reality of clash of civilizations, people are talking about there being a kind of a confrontation with Islam. We as a plural democracy ourselves, we as a multi-ethnic, multi-religious country ourselves, believe that really what we should be talking about today is really a confluence of civilizations rather than a clash of civilization. I think there is a great responsibility amongst countries like India and certainly Non-Aligned Movement we feel as a grouping which really encompasses every religion that is known to mankind, every ethnic group that exists on this planet. If we have such a grouping, can we not utilize this great asset that we have in order to promote that sense of confluence, a sense of understanding? So, even during its early part of its existence the Non-Aligned Movement projected itself, found a role as a bridge in the global divide of that age where there was an East-West divide. Can we today find also a similar kind of a bridging role with regard to another divide which seems to be emerging and which needs to be prevented?

So, if the Non-Aligned Movement is a grouping of countries which coexist together, which have learned to work together despite the fact that they represent different religions, different ethnic groups, I think a very strong message can come from this movement in terms of preventing that global divide and promoting a sense of coexistence, a sense of mutual tolerance and trust amongst our different countries. So, we believe there is a role that Non-Aligned Movement can play.

The other aspect is that Non-Aligned Movement, right from the inception, has always been preoccupied with the theme of development because after all we are all developing countries. How to utilize the strength of numbers that we have, the great influence that we have precisely because of the fact that we come from across the globe - Latin America, Africa, Asia, as also from Europe? How do we ensure that we can pool our strength
together and the collective influence that we can bring to bear to try and resolve some of the major global issues of our time?

When we have talked about globalization we have all along been saying that today there are issues which are not amenable to national solutions; there are issues which are not amenable to regional solutions. If we are talking about terrorism; if we are talking about the challenge of energy security or the related issue of environment, the safeguarding of our global environment; if we are talking about global public health issues; if we want to succeed in overcoming any of these major challenges that are facing us; there is no doubt that unless you can have a global effort, unless you can bring the majority of countries together on one platform, how do we resolve these problems?

The question is whether or not the Non-Aligned Movement and the members of the Non-Aligned Movement see their destiny, see their future in being able to work together, in recognizing that there are these global challenges. Can the Non-Aligned Movement today in a sense reinvent itself really as a movement to promote solutions to these very important contemporary challenges that we are facing? What I can tell you is that certainly the effort on the part of the Indian delegation, certainly the effort on the part of the Indian Prime Minister will be to try and project that kind of a new contemporary vision for the Non-Aligned Movement when he is there in Havana.

We would certainly like to avoid a situation where we merely have a declaration which is a collection of various paragraphs which are given by different countries or groups of countries on issues of interest to them. That is one way of coming out with a declaration. Yes, we understand that there are regional issues which are very important to the countries concerned and they are very important globally. For example, what happens in West Asia is of concern not only to countries in that region, but also to the rest of the world as well. Having said that, I think it is important that we take advantage of the collective strength of the movement.

So, if there is a message which comes out on say issues like the importance of disarmament, as I mentioned to you in the IBSA context; bringing nuclear disarmament to the top of the global security agenda; making sure that all our countries from across the globe really have a common stand with regard to terrorism or with regard to say the Doha Round, on international trade and economic issues; this could undoubtedly
make a very big difference in terms of the outcome of our effort. So, that will be really the effort that will be certainly made by us.

Amongst the themes that we are looking at, in the final document we have been discussing UN reform, terrorism, regional issues like Afghanistan, West Asian issue including both Lebanon and Palestine. Then we are looking at economic and social issues. These include, of course, the aspect of South-South cooperation, our role in the World Trade Organisation, what we can do together to deal with HIV AIDS and environment. We are talking about working together on issues such as what we can do to network the considerable resources, research resources, which are available amongst our developing countries for agriculture or industry. These are some of the issues that we will be focusing on during the summit and these will find reflection in the final document.

It is a historic summit because we return to Cuba which is one of the major NAM countries and one of the founder countries. President Castro was also the Chairman of the Non-Aligned Movement from 1980 to 1983. You will recall that the 1983 summit was held in New Delhi when India received the mantle from Cuba for chairing the Non-Aligned Movement. So, we go back after 26 years to Cuba. So, it is going to be a very historic occasion. We certainly hope that this will be a historic occasion not only in mere symbolic terms but really in transforming the role of the Non-Aligned Movement as far as the current international situation is concerned.

Thank you very much.

QUESTION: I want to ask you about the India-Pakistan meeting. When is that supposed to take place? What are the chances of it happening?

FOREIGN SECRETARY: There would likely be a meeting between President Musharraf and Prime Minister Dr. Manmohan Singh. It will be on one of the two days of the summit. I think the summit is on the 15th and 16th. So, it will be on one of those days.

QUESTION: What are the signals that you are getting from the Pakistani side? What are the chances of going ahead with the peace process?

FOREIGN SECRETARY: I would not like to prejudge the dialogue which Prime Minister and President Musharraf would be having. But I think it would be fair to say that both the leaders are very conscious of the importance of India-Pakistan relations. Both are leaders who are committed
to taking forward the dialogue process, taking forward the peace process. At the same time there is recognition that unless the issue of terrorism is addressed and addressed in a substantive way, it is difficult to ensure the success of this process. So, I believe that it is in that spirit that the two leaders will be meeting and talking to each other.

QUESTION: Does India intend to play some sort of a moderator role given the strong possibility that there will be anti-US rhetoric coming out of NAM? How do you feel about that?

FOREIGN SECRETARY: It is not just India, it is a matter of, as I said, the collective voice of the Non-Aligned Movement. If the Non-Aligned Movement has had an impact on the international public opinion, that impact has been not by making strident statements, not by just indulging in condemnatory language but in being able to identify what the problems and what the challenges are and, much more important, offering solutions. So, our efforts would be that the message which should be coming out of the Non-Aligned summit should be a constructive one, should be one which seeks to unite rather than seeks to divide. I think that is where our strength lies.

QUESTION: Is there going to be a G-15 meeting on the sidelines of this summit in Havana?

FOREIGN SECRETARY: I believe that is being planned on the 14th. But I am not certain that the Prime Minister would be able to attend that meeting. But there will be an Indian presence. Let us see what emerges out of that. I think Algeria is chairing that meeting.

QUESTION: If I can take you back to what you said, you said that unless the issue of terrorism is addressed and addressed substantively, it will be difficult to carry forward the dialogue process. The question is, what exactly do you mean by that? Does it mean that the Foreign Secretary level talks which had to be postponed on the 22nd of July will not be announced until Pakistan addresses our concerns? What exactly do you have in mind when you say ‘addressing our concerns’?

FOREIGN SECRETARY: I think I have been fairly clear in what I mean. Let me just correct you that there were no dates for the Foreign Secretary level talks which were then postponed. What happened was that no dates were in fact given for this Foreign Secretary level talks. So, what we really have to do is to set up a date for the Foreign Secretary level
talks. Let me also remind you that other aspects of interaction between India and Pakistan like the technical level meetings are in place as scheduled. None of those have been interrupted. So, essentially it is that dates for the Foreign Secretary level talks as part of the Composite Dialogue have not yet been finalized. Yes, if the results of the summit meeting between the Prime Minister and President Musharraf are satisfactory, and we see that there is willingness on the part of Pakistan to work together with India to deal with what Pakistan itself says the shared challenge, shared threat. If it is a shared threat, then India and Pakistan should be seen as working together to eliminate that threat. I do not think it is necessary for me to spell out what are those specific steps which could be taken. I think both India and Pakistan know what needs to be done.

**QUESTION:** Will there be any other significant bilateral meetings with the Prime Minister at Havana? Will President Castro be in a position to inaugurate the summit?

**FOREIGN SECRETARY:** I do not have any confirmation with regard to President Castro’s presence. The latest indication is that he would probably be there for the inaugural ceremony but that remains to be seen. Yes, of course, Prime Minister will be meeting several other Heads of State and Government in Havana. But I do not have a ready list at the moment because these meetings are still in the process of being scheduled.

**QUESTION:** The fifth anniversary of 9/11 is on Monday. Can you tell us what impact does it have on India and what it means for India five years after?

**FOREIGN SECRETARY:** I think we have pointed out a number of times that we have been dealing with the issue of terrorism for a much longer time much before 9/11. Our struggle against terrorism is certainly not just five years old. But what 9/11 did do was to bring the global dimension of this problem out into the open, that this is not only India’s struggle but what India has been dealing with is part and parcel of a global struggle. What is important is that today there is a recognition that this is not a challenge, no matter how powerful a country there may be, which can be faced by using national means and there is need for cooperation amongst all the countries in the world. We have also pointed out that if you look at the recent incidents that have taken place, these in fact bring home to us the fact that there is a network which - you call it Al Qaeda, or you call it Taliban, or you call it Lashkar-e-Tayyaba, or you call it Al-Badr, or you call it Harkat-ul-Mujahideen, you may refer to it by various names - is part
and parcel of the same network. So, any attempt to try and deal with one aspect or one manifestation of that problem and ignoring the other manifestations of that problem is simply not going to work. What we are seeing happen today is precisely that. If the fifth anniversary of 9/11 enables us to move from that global recognition that this is a problem that faces all of us, to a global action amongst all the major countries to deal with the problem in its entirety, the problem in all its manifestations, if we are able to graduate to that level of cooperation, I think it would be a very fitting way to commemorate this anniversary.

**QUESTION:** How do you view the compromise reached between the Pakistani Army and Taliban in Waziristan area?

**FOREIGN SECRETARY:** Frankly speaking, I have no details of what precisely this deal is. From what I understand, the Pakistani Army would move out from these tribal areas and the job of policing these tribal areas will once again be of the tribes themselves with some kind of an understanding between the two sides. Well, we will wait and see how this will work. You have seen that there are assessments that this may mean that the Taliban may have a free run in those areas. If that is the consequence of this deal, then, of course, it is rather ominous. If as is being argued by people who support it that this will lead to a better management of this border between Southern Afghanistan and Pakistan, it could be a good thing. But I think the jury is still out. We will have to wait and see. Thank you very much.
050. Statement of Prime Minister before his departure for First IBSA Summit.

New Delhi, September 10, 2006.

I will be visiting Brasilia at the invitation of President Luiz Inacio Lula da Silva. The bilateral visit to Brazil on September 12 will be followed by the India-Brazil-South Africa (IBSA) Summit where President Mbeki of South Africa will also be participating.

I expect that my visit to Brazil will consolidate an extremely positive trend in our bilateral relations with that great country which we consider as one of our main partners in Latin America. I hope to discuss a wide range of issues including adding content to our political and economic interactions and cooperation in defence, agriculture and energy security. Brazil and India already enjoy an excellent tradition of cooperation in international fora.

IBSA has already emerged as a shining example of South-South Cooperation. The first IBSA Summit will provide a useful opportunity to review the progress that has been made over the last 3 years since IBSA was first established. Our discussions are expected to focus on issues of global concern including energy security, international terrorism and the challenges of sustainable and equitable development. An IBSA Business Summit will add a new dimension to our interactions.

We have enjoyed close, friendly and historic relations with Cuba. I am looking forward to participating in the 14th NAM Summit Conference being held in Havana. As a founding member of this great Movement, India will play its part in helping NAM to revitalize itself so as to pursue the shared interests of its member states in a transformed world. Mutual support and solidarity among NAM members is of prime importance as we confront several common challenges such as making globalization more inclusive, the scourge of terrorism and addressing widespread hunger, poverty and disease. We will rededicate the Non-Aligned Movement to the universal causes of peace, disarmament and the progress and prosperity of all human kind.

During my stay in Havana, I look forward to fruitful interactions with a number of leaders from the developing world.
051. Statement by Prime Minister Dr. Manmohan Singh at Plenary Session of the First IBSA Summit.

Your Excellency President Luiz Inacio Lula da Silva, Your Excellency, President Thabo Mbeki, Distinguished delegates,

It is always a pleasure and privilege to be with friends. We are, indeed, fortunate to count Brazil and South Africa among our closest friends. I am, therefore, personally very happy to be here today with the Presidents of both countries for the first IBSA Summit.

We thank you President Lula for hosting us in this enchanting green landscaped city of Brasilia. We also thank you for your gracious hospitality and for the excellent arrangements that have been made for our meetings.

The holding of this historic Summit confirms the success of our three year-old experiment and that there is, indeed, a shared vision that unites our three countries committed to to sustained and sustainable development in the framework of a democratic polity.

The idea of IBSA is without precedent. Three countries, from three different continents, coming together to consult and coordinate on global issues of common concern. They are also collaborating in ways that strengthen their respective national efforts to address the formidable developmental challenges that we all face.

Despite the geographical distances that separate our countries, there is much that we have in common. All three of us belong to the developing world. We are pluralistic and multi-cultural societies. We are the largest democracies respectively on each of our continents and these values bind us in a unique way. Our three countries are committed to economic growth, with social equity and inclusion. We also accept the responsibilities that come with the role that is expected of us by the international community in this increasingly inter-dependent world that we live in. It is these commonalities that provide the basis and the foundation for the success of our innovative venture.

The utility that IBSA brings to the world community is evident in the leadership that our three countries have provided to the G-20 in WTO trade negotiations. While success still eludes us in the Doha Round, we can
derive satisfaction from the role that we have played in facilitating coalition building on difficult trade matters.

The Joint Declaration that will be issued at the end of the Summit is an impressive document that reflects our common vision on a wide range of political and economic, regional and global issues of common interest. It is a bold and comprehensive agenda of cooperation and if implemented in earnest will propel this grouping of ours to a position where its voice will be heard and heard effectively in international affairs. It will also develop the kind of institutional and business linkages in important sectors of our cooperation such as energy, sustainable development, trade, transportation and science & technology that will impart new momentum and substance to our trilateral cooperation. On Nuclear Energy, I appreciate the fact that IBSA has lent its support for forward looking approaches to enhance international civilian nuclear cooperation.

We have, very correctly, decided that the benefits of our trilateral cooperation should not be limited to our three countries. The IBSA Facility for Alleviation of Poverty and Hunger is a pioneering initiative for South-South cooperation. It is unique for three major developing countries to come together and establish replicable and scaleable projects in other developing countries.

The success of IBSA can demonstrate, perhaps more vividly than through any other measure, the feasibility of the South-South cooperation that goes beyond the conventional areas of training and exchange of experts.

We should expand the idea of IBSA from a project of three Governments to one involving more intensively the peoples and the civil societies of our three countries. This would require a greater emphasis on people-to-people contact, on cultural and educational exchanges and on the promotion of trade and tourism amongst our three countries.

For this vision to be converted to reality, we need to address the critical question of connectivity. The growth of trade, and of people-to-people contact, can reach its full potential only if the movement of goods and people across our three countries is further facilitated. We have an MOU on Air Services, and an Agreement on Maritime Transportation has also been concluded. These agreements need to be operationalized. We also need to consider ways by which the linkages amongst our three countries can lead to India becoming a hub to Asia, Brazil an entry point to Latin America and South Africa a springboard for Africa.
In conclusion, I would like to say for all three of our countries that there is value in investing in IBSA, and that it is a vision we must pledge together to realize. Let us do what President Kubitschek, who was responsible for the construction of this beautiful capital city of Brasilia, had said “50 years of progress in five”.

F F F F F
052. Opening Statement by Prime Minister Dr. Manmohan Singh at the Joint Press Meeting at the First IBSA Summit.

Brasilia, September 13, 2006.

It is a privilege for me to have participated in the 1st IBSA Summit. The privilege is further deepened by the fact that I did so in the august company of two of the leading statesmen of our time – President Lula of Brazil and President Mbeki of South Africa.

It was just over three years ago that IBSA was founded in this city itself. It has since then, recorded significant achievements. Reaching across geographical distance, our partnership illustrates the global village in which we live together today.

The Summit provided a useful opportunity to review the cooperation that has taken place in the IBSA framework. We also had constructive discussions on issues of global concern. There is, I am pleased to say, a great deal of commonality in our perspectives.

The Joint Declaration that will be issued today is an impressive document that reflects our common vision on a wide range of political and economic, regional and global issues of common interest. We have all pledged to work earnestly to implement this bold and comprehensive agenda of cooperation. It is a matter of satisfaction for India that the Joint Declaration reflects the importance that the IBSA countries attach to increasing international civilian nuclear cooperation through forward looking approaches.

As IBSA evolves, it will acquire new dimensions. It would be our endeavour to see that it moves from being a project of three Governments to one that actively involves the peoples of our three countries. I am happy that a successful Business Summit was held yesterday.

I use this opportunity to thank President Lula for the gracious hospitality that he has accorded to me and my delegation. I also compliment him for taking the initiative to convene this Summit.
Joint Communique issued at the end of the First Summit Meeting of the leaders of India, Brazil and South Africa (IBSA).

Brasilia, September 13, 2006.

1. The Prime Minister of India, H.E. Manmohan Singh, the President of Brazil, H.E. Luiz Inácio Lula da Silva, and the President of South Africa, H.E. Thabo Mbeki, met in Brasília on 13 September 2006, for the historic 1st Summit Meeting of the India-Brazil-South Africa Dialogue Forum (IBSA). They expressed their deep appreciation with the consolidation of the IBSA Dialogue Forum.

2. The three leaders reaffirmed their commitment to the promotion of peace, security and sustainable economic and social development in the world and in their respective regions. They reaffirmed their commitment to multilateralism and the pre-eminent role of the United Nations. They also discussed the reform of the United Nations and of the United Nations Security Council and the successful conclusion of the Doha Round in the WTO, with the development dimension at the core of its outcome.

3. The Heads of State and Government reiterated their support for the comprehensive reform of the United Nations and welcomed the creation of the Peacebuilding Commission and the Human Rights Council. They reaffirmed the need for a decision regarding the expansion of the Security Council in both its permanent and non-permanent categories, so as to reflect contemporary realities and make it more democratic, legitimate, representative and responsive. They reaffirmed their commitment to continue to jointly pursue a decision on Security Council expansion on an urgent basis.

4. The Heads of State and Government unequivocally condemned terrorism in all its forms and manifestations. They stressed that there can be no justification, whatsoever, for any act of terrorism. They shared the view that the international community must further intensify efforts and cooperation to fight this scourge. They called upon all member states to seriously work towards an expeditious finalization of the text for a comprehensive convention on international terrorism.

5. The Presidents of Brazil and South Africa also expressed their outrage at the barbaric terrorist attacks, carried out on 11 July 2006.
in Mumbai and other parts of India. They called upon the international community to undertake all necessary measures to bring to justice perpetrators, collaborators and sponsors of these and other acts of terrorism, as well as those who incite the perpetrators to commit them.

6. The Heads of State and Government reiterated their strong commitment to the Action Against Hunger and Poverty Initiative and, in particular, the Millennium Declaration and the 2005 World Summit Outcome. They noted with satisfaction the progress towards creating an International Drug Purchasing Facility to respond to the challenges of AIDS, malaria and tuberculosis.

7. They also committed themselves to further enhancing trilateral cooperation in the field of HIV/AIDS, Malaria and Tuberculosis and to explore the possibilities of concluding a trilateral instrument for collaboration among all three countries for research and development of HIV/AIDS, Malaria and Tuberculosis diagnostic tools, drugs and vaccines. This would pool the significant capabilities that exist in the IBSA countries.

8. India, Brazil and South Africa, elected to the newly formed Human Rights Council, share common visions regarding the promotion and protection of human rights. The three countries share a common vision to reaffirm the universality, indivisibility, interdependence and interrelatedness of all human rights and fundamental freedoms, including the realization and operationalization of the Right to Development and the special protection of rights of vulnerable groups.

9. India, Brazil and South Africa share similar views regarding the importance of achieving sustainable development, particularly through the eradication of poverty, the promotion of economic growth and the protection of the environment. They urge the donor countries to meet their Official Development Assistance targets and to mobilize new and additional financial resources.

10. The Prime Minister of India and the Presidents of Brazil and South Africa took stock of the global security situation concerning disarmament and non-proliferation of Weapons of Mass Destruction (WMD). The leaders reiterated their commitment to the goal of complete elimination of nuclear weapons. They emphasized the necessity to start negotiations on a phased programme for the complete elimination of nuclear weapons in a comprehensive, non-discriminatory and verifiable manner with a specified framework of time.
11. The Heads of State and Government reaffirmed the inalienable right of all States to the peaceful application of nuclear energy, consistent with their international legal obligations. They agreed to explore approaches to cooperation in the peaceful uses of nuclear energy under appropriate IAEA safeguards. They further agreed that international civilian nuclear cooperation, under appropriate IAEA safeguards, amongst countries committed to nuclear disarmament and non-proliferation objectives could be enhanced through acceptable forward-looking approaches, consistent with their respective national and international obligations.

12. The Heads of State and Government deeply regretted that the WTO's Doha Development Agenda negotiations have been suspended. Failure to conclude the negotiations in accordance with the mandate will deprive developing countries of fair and equitable conditions for fully realizing their Right to Development. Distortions affecting agricultural trade and production should be expeditiously eliminated and agriculture should be fully incorporated into the rules of the multilateral trading system. They called upon countries that have not yet done so to substantially and effectively reduce their expenditures on agricultural subsidies. India, Brazil and South Africa shall spare no effort to resume the suspended negotiations.

13. The Heads of State and Government reiterated their commitment towards a fairer global trading system, to the benefit of developing countries. In this respect, and taking into account the spirit of the Brasilia Declaration, they welcomed the progress achieved so far in the São Paulo Round of the Global System of Trade Preferences among Developing Countries (GSTP).

14. The Prime Minister of India, the President of Brazil and the President of South Africa reviewed initiatives for trilateral sectoral cooperation. They expressed deep satisfaction with new, concrete results achieved during the 1st IBSA Summit in the areas of Energy, Agriculture, Transportation, Trade, Science and Technology and Information Society. They decided to further explore additional opportunities for trilateral cooperation.

1. A Paper by the UNCTAD titled “IBSA: An Emerging Trinity in the new Geography of International Trade” suggested that there has been a quantitative leap in intra-IBSA trade, which is particularly dramatic between India and Brazil and India and South Africa. The Paper further says that the “growing dynamo role (of IBSA partnership) in intra-regional and inter-regional South-South trade in general augurs well for IBSA trade and
The Heads of State and Government expressed their deep satisfaction with the signing, during the 1st IBSA Summit, of the IBSA Action Plan on Trade Facilitation for Standards, Technical Regulations and Conformity Assessment.

They expressed their full support and commitment to the expeditious establishment of the Working Group to focus on the modalities for the envisaged India-Mercosur-SACU Trilateral Free Trade Area.

They reaffirmed, in parallel, the importance of ongoing India-Mercosur and Mercosur-SACU negotiations with a view to broadening and deepening existing Tariff Preference Agreements.

The three countries expressed their satisfaction with the presence of important and high level business delegations from India, Brazil and South Africa at the “India, Brazil and South Africa Business Summit”, organized by the Brazilian Confederation of National Industry (CNI) with the support of ASSOCHAM, CII and FICCI from economic cooperation and for each country using the other partner as a gateway for intensifying inter-continental trade and investment links”. From a mere $200 million in 1998 and $800 in 2002, Indo-Brazil trade reached $2.5 billion in 2005 and is expected to be $3 billion in 2006. India-South Africa trade similarly has grown to $4 billion in 2005. South Africa-Brazil trade stood at 1.5 billion in 2004. These trends indicate that IBSA was already close to the $10 billion target set for 2007. These numbers did not fully reflect trade in service or the quantum of trade between them through third countries, nor they factor in the major FDI proposals and joint ventures on the anvil or even in some cases the services trade that is taking place, the paper added. India-Brazil-South Africa Trilateral Cooperation Forum (IBSA) has been described a unique initiative undertaken in the area of South-South economic cooperation. What set it apart was that a “ginger group” of three large, economically well-endowed and dynamic countries, from three developing continents were attempting to strengthen trade, investment, transfer of technology and economic cooperation among themselves. Brazil has become the largest economy in Latin America, with significant global trade presence. India, fourth largest economy in PPP (purchasing power parity) terms and second most populous country, has witnessed impressive economic and trade growth rates in the last few years. South Africa is the largest economy and trading power in Africa, accounting for biggest share of total African trade with the world, according to UNCTAD. “In 2005, IBSA countries are among the top 15 developing countries, in terms of total trade. Their growing significance in international trade is shown by the way India has doubled its global trade share (both exports and imports) from 0.8% in 2000 to 1.6% in 2005, amounting to total trade of $306 billion. Similarly, South Africa’s trade grew to $102 billion and Brazil’s trade reached $193 billion. The value of Brazil’s exports to other IBSA countries increased by 99% over the 1994-2004 decade. The corresponding figures for India and South Africa are 559% and 123% respectively. This implies that the value of trade among IBSA’s countries more than tripled from 1994 to 2004. IBSA countries can reinforce the economic strength of each other by creating a market of 1.2 billion people, 1.8 trillion dollars of GDP and foreign trade of nearly 600 billion dollars. IBSA partnership is also of immense strategic value for multilateral negotiations and shaping their respective roles in global economic governance”, the paper added.
India, and BUSA, from South Africa. Furthermore, the Heads of State and Government held a meeting with business delegations from the three countries and had a fruitful exchange of views on perspectives and challenges for the expansion of trade among the IBSA countries.

19. The Heads of State and Government expressed deep appreciation for the signature, during the IBSA Summit, of a Memorandum of Understanding on Biofuels, with the decision to create a Trilateral Task Force on Biofuels to work on concrete areas of common interest.

20. The Prime Minister of India and the President of South Africa praised the Ethanol international initiative launched by Brazil and agreed on the need to work together to promote and enhance the use of ethanol and biodiesel.

21. The Heads of State and Government agreed that the Memorandum of Understanding on Trilateral Cooperation in Agriculture and Allied Fields, signed during the IBSA Summit, will be an important instrument to promote socio-economic development and South-South cooperation.

22. The Heads of State and Government welcomed the signing of the IBSA Trilateral Agreement Concerning Merchant Shipping and Other Maritime Transport Related Matters.

23. They also emphasized the importance of implementing the Memorandum of Understanding on Civil Aviation as soon as possible, through the establishment of regular air services linking India, Brazil and South Africa. They encouraged airlines from the three countries to continue working towards this goal.

24. The Heads of State and Government expressed their satisfaction with the signing of an IBSA Framework of Cooperation on Information Society, which provides the basis for future trilateral work aiming at reducing the digital divide in their societies.

25. The Heads of State and Government emphasized the fact that the IBSA Facility Fund constitutes a pioneer and unique initiative of South-South cooperation. In this regard, they expressed their satisfaction with the initiatives in Guinea-Bissau and Haiti. The Prime Minister of India and the Presidents of Brazil and South Africa underscored their countries’ commitment to allocate at least US$ 1 million a year to the IBSA Facility Fund. IBSA members encourage
developing countries, particularly the Least Developing Countries, to submit projects to the IBSA Fund.

26. The Heads of State and Government expressed their satisfaction that the 4th Meeting of the Trilateral Commission would be hosted by India, in the first quarter of 2007. In addition, they considered the possibility of holding the 2nd Summit of the IBSA Dialogue Forum, in South Africa, on a date to be set through diplomatic channels.
054. Remarks of Prime Minister Dr. Manmohan Singh at the meeting of the Heads of State/Government with CEOs from India, Brazil and South Africa.

Brasilia, September 13, 2006.

Your Excellency, President Luiz Inacio Lula da Silva, Your Excellency, President Thabo Mbeki, Distinguished Chief Executive Officers and Captains of Industry from India, Brazil and South Africa, Ladies and Gentlemen,

It was just over three years ago that our three democracies, open economies seeking to build inclusive societies, decided to come together, linking three great continents. Reaching across geographical distances, our partnership illustrates the global village in which we live together today. The success of our experiment to pursue development within the framework of an open economy and an open society is vital to the well being and empowerment of millions and millions of people in Asia, Africa and Latin America.

We are heartened by the cooperation that has developed in the IBSA framework over the last three years. It is India’s firm belief that IBSA needs to be more than a project of three Governments. We are, therefore, pleased with the success of the Business Event that was held yesterday in which representatives of the business communities of all three countries participated.

The advantages of such trilateral cooperation are plainly evident when one considers, for example, the area of energy security. In IBSA, we are fortunate to have a veritable pool of expertise, wisdom and experience. Brazil is a world leader in the use of ethanol. South Africa has coal gasification technology and a well-developed synthetic fuel industry. India, on the other hand, has expertise in wind and solar energy. IBSA can be effective in utilizing our respective competitive strengths in these alternative energy technologies.

The increase in intra IBSA trade over the last three years is a matter of considerable satisfaction. We need to pursue with determination the target of US $ 10 billion in intra-IBSA trade that was set in the New Delhi Plan of Action adopted in March 2004. We are in discussion regarding a possible trade arrangement that would link India with MERCOSUR and the Southern African Customs Union. We expect this would create a large
and expanding economic space that would allow the utilization of synergies in trade and technology. Besides trade liberalization, we also plan to institute arrangements that would address issues relating to the facilitation of trade in goods, services and of investments. As a start, we propose to establish an IBSA mechanism for exchange of information and of experiences on regulatory issues and for the organization of sector-specific workshops and seminars on technical regulations and conformity assessment procedures. We would also examine the possibilities of harmonizing standards.

We recognize that transportation links are critical and the challenge lies in operationalizing framework agreements in transport connectivity signed by the three countries. Trade and tourism remain much below potential because of problems of connectivity. On the other hand, for connectivity to be established, there is a requirement of a minimum demand base. There would be a willingness on our part to take bold decisions that have, as their basis, our common faith in the future of IBSA.

I am very happy to have had this opportunity to meet the representatives of the business communities of the three countries in the distinguished presence of the Presidents of Brazil and South Africa. In each of our countries, business and government must work together to fully exploit the potential of IBSA. And I have no doubt that there is immense potential in unexplored areas in diverse fields of social and economic activity. Governments can at best work towards facilitating this. The gathering of leaders of business and trade is an expression of our joint commitment to make IBSA a win-win experience for all of us. Promoting greater understanding of each other and fostering the habit of working together regionally, multilaterally and in the context of our three countries is essential in this regard. This Meeting today is, therefore, an important part of the IBSA Summit and we look forward to hearing what the captains of our business community have to say.
NAM

055. Intervention by Minister of State Anand Sharma at the General Debate of the Ministerial Meeting of the Coordinating Bureau of the Non-Aligned Movement.

Putrajaya (Malaysia), May 29, 2006.

India’s former Prime Minister, Mrs. Indira Gandhi, when addressing the NAM Summit in New Delhi in 1983 called the Non-Aligned Movement “the largest peace movement in the world”. It has waged the greatest peaceful struggles in world history. It does not need to be taught about human rights. The greatest assertion of the rights and dignity of man were the successful anti-colonial and anti-apartheid struggles. Without these, neither humanism nor human rights would have a universal character. To have relevance, the movement must remain in the forefront of this struggle, emphasizing the comprehensive and integral nature of human rights. For individual and social well-being, civil and political as well as economic and social rights are equally important. The Working Group on the Right to development that met in Geneva earlier this year has made important progress in examining MDG-8 as well as the Bretton Woods Institutions and WTO from the perspective of the Right to Development. We would consider moving in the direction of a legal instrument for making this right a reality. We hear of mainstreaming human rights in economic development. It is equally important to mainstream economic development in human rights.

By definition, to be non-aligned meant to be radical. It was a movement of those who did not accept an international system based on the East-West conflict. The Non-Aligned were non-conformists. Each of them was also not content with some kind of dominion status or limited local self government: they wanted complete independence. These were the two reasons why they did not align themselves with either side. Their shared struggle, hopes, developmental concerns and common history cemented their unity; solidarity was also an instrument of self definition. Today when East-West conflict gives place sometimes to East-West collusion, it is both more difficult but also more important to be united in order to be both non-conformist and independent. Therefore, for the movement to recover its former élan, it is necessary to avoid issues of bilateral conflict or deep division and concentrate on issues where there is a broadly common concern and a broadly common purpose. South-South Cooperation in economics, science and technology (and India is sincerely
doing what it can to the full extent of its capacity) can be seen in this context as the economic and scientific infrastructure of this common purpose.

The Cartagena principles of decision making provide ample scope for moving forward: “consensus, while signifying substantial agreement, does not require or imply unanimity”. At the same time, we should bear in mind that the Cartagena document notes that consensus “pre-supposes understanding of and respect for different points of view, including disagreement and implies mutual accommodation on the basis of which agreement can emerge by a sincere process of adjustment among member nations in the true spirit of non-alignment.” On some kind of support for the Chair, we would favour a group of all the former Chairs which could be a kind of informal bureau of the movement. Of course, we are ready to consider any bilateral assistance which the incoming Chair may require. Our approach has to be not exclusionary but inclusive.

Above all, as a great thinker knew, we have to both analyze and interpret our situation and change it. It is only through such action that the Non-Aligned Movement can be revitalized and can thereby contribute in practice to a more just international order. One of the greatest intellectuals of Latin America, Carlos Fuentes, in a recent book has described the present globalized world succinctly as characterized by “deeply scarred national sovereignties, obliteration of international order” and the “disintegration of international law”. This is sometimes perceived both in the United Nations and in international monetary and trade institutions. Hence the need for a genuine, broad based and truly democratic reform of the UN. Members of the Non-Aligned Movement therefore have to be vigilant and act with speed, solidarity and strength to ensure that getting rid of duplication and redundancy does not mean getting rid of complementarities or of those mandates that are crucial for the political concerns and developmental needs of our Member States; that getting rid of inefficiency in management does not mean prolonging and reinforcing unilateralism; that better decision making does not mean more disempowerment; that GA revitalization does not mean leaving UN Security Council encroachment unchallenged and untouched; that the role of the General Assembly in the selection of the next Secretary General must be respected; that UN Security Council reform does not remain in the realm of words but actually changes the correlation of forces and transforms the working methods of the Security Council.

In the case of globalization, the main challenge before the Movement is to ensure that globalization is a force for modernization, technological
progress, economic growth and poverty reduction and not a contributor to speculation, unemployment, poverty and generally the erosion of social capital. Therefore, our member countries have to recover and safeguard policy space. For this, the reform of Bretton Woods Institutions and the WTO are crucial. This is a political task requiring the solidarity in action of the Non-Aligned Movement. To begin with, in the United Nations, it is necessary to ensure that these concerns find unambiguous expression in the Resolution on Development. There is no factual basis for the claims of those who say that we should leave trade to the expertise of the WTO negotiations and financial and monetary matters to the expertise of the Bretton Woods Institutions: the WTO is in a complete impasse; the IMF in its own reports say that its advice on the liberalization of capital markets was hasty and on the East Asian financial crisis somewhat mistaken; the World Bank in its recent report on Lessons of Economic Growth in 1990s similarly admits that advice was often unsound. Therefore, clearly the development resolution has to send a clear political message. This should be first step of the United Nations recovering its central place in the economic agenda which it had in the 1970s.

Terrorism is one of the greatest scourges of our times. Terrorism distorts and negates fundamental principles of international relations by violence and coercion. There is a need for terrorism to be accorded high priority on the international agenda and for the members of the Movement to be at the forefront of combating this menace. We should equip ourselves to better address this threat. The Movement should ensure that terrorism is not condoned or justified on any ground whatsoever: political, religious, ethnic or any other. It should be recognized that terrorism is a fundamental and gross violation of human rights, in particular the most fundamental right the right to life. We should also ensure that the global fight against terrorism is not restricted to a group or a region and that it is comprehensive and sustained. The fight must be directed not only against the terrorists, but also against those who sponsor, abet or support them. We cannot complain about the UN Security Council’s legislative role unless we are able to move forward on a multilaterally negotiated Convention.

NAM was founded in 1961, but the seeds of the Movement were sown as far back in 1946 by Pandit Jawaharlal Nehru, the first Prime Minister of India, when he stated,

“We propose, as far as possible, to keep away from the power politics of groups, aligned against one another, which have led in
the past two world wars and which may again lead to disasters on an even vaster scale. We seek no domination over others and we claim no privileged position over other people. But we do claim equal and honourable treatment for our people wherever they may go, and we cannot accept any discrimination against them. We believe that peace and freedom are indivisible and the denial of freedom anywhere must endanger freedom elsewhere and lead to conflict and war”.

This message remains equally valid today. Thank you, Mr. Chairman.
056. Press Release of the Ministry of External Affairs on the formation of Special Committee of Non Aligned Movement on Economic and Social Issues.

New Delhi, July 19, 2006.

1. A Special Committee to deliberate on how to bring the focus of the Non Aligned Movement (NAM) on economic and social issues relevant to the developing countries as well as South-South Cooperation has been set up. The Committee shall be headed by Dr. Arjun K. Sengupta, Chairman, National Commission for Enterprises in the Unorganized Sector & Member of Parliament, Rajya Sabha. The members of the Special Committee are: Shri C. R. Gharekhan, Former Permanent Representative to UN and Special Envoy on Middle East Peace Process; Dr. Devaki Jain, Former Member, South Commission; Dr. Rajiv Kumar, Director, International Council for Research in International Economic Relations (ICRIER); Dr. Nagesh Kumar, Director General, Research and Information System for Developing Countries (RIS); Shri S. N. Menon, Secretary, Ministry of Commerce and Industry; Prof. Abhijit Sen, Member, Planning Commission and Shri Parthasarthi Shome, Adviser to Finance Minister, Ministry of Finance. The Committee is likely to submit its report to the government before end August 2006.

2. As one of the founder members, India continues to be actively involved in NAM, which provides a valuable forum for developing countries to articulate their views on a wide range of issues in a collective manner, and to find ways and means to further strengthen their cooperation.

3. The NAM is the largest grouping of developing countries outside the United Nations. With rapid changes in the international environment, there has been a growing realization among the member countries of the NAM to revitalize the Movement, making it a more effective voice of the developing countries. In this context, it is important to strengthen economic cooperation within NAM and also to pursue interests of its member countries by agreeing on common positions in the global arena.
057. Special Media Briefing by Foreign Secretary on the Visit of Prime Minister Dr. Manmohan Singh to Brazil and Cuba

New Delhi, September 8, 2006.

Please See Document No. 049
058. Statement by Prime Minister Dr. Manmohan Singh at The XIVth Summit of The Non-Aligned Movement.

Havana, September 15, 2006.

Your Excellency Mr. Chairman, Excellencies, Ladies and Gentlemen,

I would like to congratulate Cuba on its assumption of the Chair of NAM. We wish President Fidel Castro a speedy recovery, good health and a long life.

We would also like to compliment Prime Minister Badawi for his skilful stewardship of our movement.

Mr. Chairman, our beloved Prime Minister, Jawaharlal Nehru, one of the architects of this Movement, said, “Non-alignment is freedom of action which is a part of independence.” He wanted us to judge issues “in full freedom and without any pre-conceived partisan bias.” This vision must continue to shape our perspectives in the years ahead.

Mr. Chairman, we live in an increasingly interdependent world. The challenge ahead is to promote a balanced and equitable management of this interdependence of nations. As globalization progresses, national and regional boundaries are becoming less and less relevant. Our problems are global, so must our solutions be.

The United Nations played a creative and a critical leadership role in shaping the international agenda in the past. It has to do so again. Reforming the UN and revitalizing the UN General Assembly is a pressing imperative. The developing world must find its due representation among the permanent members of the UN Security Council. We must join hands with other like minded countries to promote democratization of processes of global governance, ushering in a new global polity, based on the rule of law, reason and equity.

We, the members of the Non-Aligned Movement constitute more than half of the membership of the United Nations. Our collective strength is unmatched, and we must now unite behind a common and fundamentally new vision of “inclusive globalization”.

In economic affairs, the biblical saying “to him that hath shall be given” has wide applicability. Globalisation must be accompanied by a more balanced and equitable distribution of its benefits. Otherwise the global response to challenges will remain uneven and partial at best.
As non-aligned countries, we led the struggle against attempts to divide the world into ideologically irreconciliable blocs. We espoused peaceful co-existence and the higher cause of humanity beyond racial divisions. Today, we again confront the danger of the world being split along an artificially created cultural and religious divide.

The Non-Aligned Movement, encompassing as it does, every religion professed by mankind, every ethnic group and ideological persuasion, is uniquely placed today, once again, to play the role of a bridge of understanding. Our cooperative world view is in itself a rejection of the notion of a “clash of civilizations”. Rather, our message to the world should be that it is possible to work for a “confluence of civilizations”.

If NAM is to be relevant in today’s circumstances, it cannot afford to equivocate on the subject of terrorism. A message must emanate from us that we are united in our desire to fight and eliminate the scourge of terrorism. We cannot allow the forces of intolerance and extremism to distract the world’s attention from the vital concerns of our people – the problems of poverty, ignorance and disease.

Mr. Chairman, the emerging fault lines of the new ideological divide are nowhere more apparent today than in West Asia. We have just been witness to a tragic and pointless war in Lebanon. It has only sharpened the sense of alienation and resentment, brutalizing a country that had just begun to reclaim its heritage of inter-ethnic and inter-religious harmony after years of conflict.

I would recommend that we constitute a suitable high level group for West Asia. The group could undertake a sustained mission to promote understanding in the region and assist in the implementation of the agreed roadmap towards a comprehensive peace. The international community must address more fully its responsibility to resolve this issue and bring to an end once and for all the long years of suffering of the Palestinian people.

In 1988 Prime Minister Rajiv Gandhi had presented to the UN General Assembly a detailed and credible Action Plan for Nuclear Disarmament. I believe the time has come for NAM to once again assume an active and leading role in advocating nuclear disarmament. India has prepared a Working Paper on Nuclear Disarmament which will be circulated as a document at the UNGA Session this year. We would invite fellow members of NAM to join us in our efforts to achieve universal nuclear disarmament and a world free of all nuclear weapons.
Mr. Chairman, at the First World Summit on the Environment, Prime Minister Indira Gandhi declared, “there is no first, second or third world; we are all part of One World”. The Non-Aligned Movement should take the lead in articulating a “new paradigm of energy security”, that addresses the needs of all peoples and of our planet.

India proposes the establishment of a NAM Working Group on Energy Security to draw up a NAM Action Plan for Energy Security to address the energy challenges of the future. India would be prepared to coordinate such a group.

Mr. Chairman, African countries form the largest single grouping in NAM as well as in the U.N.G.A. The future of our planet is inextricably linked to the destiny of Africa. I believe this is an opportune time for us to take a major NAM initiative on Africa.

The NAM initiative would focus on human resource and agricultural development. It would involve setting up of a mechanism, in cooperation with the African Union, to pool our assets for investment in the future of Africa. We would be prepared to work together with other interested NAM countries on elaborating the NAM Initiative on Africa.

Mr. Chairman, if we wish to revitalize the Non-Aligned Movement the collective message of our Summit must be seen as being central to the success of global efforts to deal with urgent transnational issues – be it terrorism, pandemics, energy security or the environment. As a group we have rejected extremes. We must spread the message of Gandhiji, the apostle of peace. Our voice must then be one of moderation, harmony and reason. If such is the voice of more than half of the people of the world, it will prevail. And, it will guide the destiny of our planet.
SHANGHAI COOPERATION ORGANIZATION

Shanghai, June 15, 2006.

Your Excellency President Hu Jintao, Distinguished Heads of State of Members and Observers of the Shanghai Cooperation Organisation, Distinguished representatives of Observer countries and organisations, Mr Executive Secretary of SCO, Excellencies and Distinguished invitees.

I am honoured to be here to participate in this august gathering of world leaders. I convey the greetings of the people of India to all of you.

I also take this opportunity to felicitate SCO on this special and momentous occasion when the Shanghai Cooperation Organisation is celebrating the 5th anniversary of its establishment and the Shanghai process is commemorating its 10th anniversary.

We in India have observed with keen interest the growth in stature of the SCO during this relatively brief period. We are confident about SCO’s future and see it as an organization which would stand for peace and stability in our region including countering terrorism, as well the needs of greater economic cooperation and cultural exchanges amongst our countries. Excellencies,

As an Observer, India is keen to associate itself fully with the activities of the Organization as we are of the view that we would mutually benefit and enrich ourselves by such association. We share the main SCO objectives which are to combat all forms of intolerance, extremism and fundamentalism in our region.

India as a victim of terrorism appreciates SCO’s firm stand against terrorism and commits itself to working closely with all SCO countries in countering these threats and challenges to peace and stability.

The rapid economic progress in many of the SCO member and observer countries in the recent past has made the world take notice of the potential of Asia. At the same time, we have to recognize that there are disparities of growth and development in our region.
We believe that an important challenge before the SCO countries is to see how economic growth and development can be more widely spread in the region to bring greater prosperity for the people and usher in peace and stability in the region.

India has a unique developmental experience that we are happy to share with our friends. Many of SCO’s objectives seeking greater economic exchanges could be substantively realized with the participation of all countries in the region. While most of us in the SCO share a common legacy of cultural, historical and ethnic contacts, all of us share a common destiny in this increasingly small and globalised world.

Thus there is great responsibility on all of us to collectively cooperate and help fulfil the aspirations of SCO member countries and observers which represent almost half the world’s population and a significant part of its area.

Mr Chairman, For the last year or so, ever since our involvement with the SCO, we have consistently expressed our interest in working together for greater intra-SCO trade, development of banking and financial services including robust capital markets in our countries, involving ourselves in the SCO Business Council and SCO Development Fund and participation in SCO projects. We feel that transportation networks and transit facilities are a vital area for SCO’s consideration as some SCO countries are landlocked. We have to work together to see that products from these countries reach world markets at a cost efficient basis.

Energy security is another area where cooperation is needed, as SCO member and observer countries are the major producers and consumers of energy in the world.

Last, but not the least, we are keen to promote people-to-people contacts and a greater cultural dialogue and interaction amongst our countries. We are happy that later today we would all get an opportunity to enjoy dance and musical manifestations of SCO countries including a classical portrayal of Indian culture. We have to work closely to ensure such initiatives are well appreciated by our peoples who would then realise the benefits of SCO cooperation.

Mr Chairman, We believe that the Shanghai Cooperation Organization is actively considering the ways and means of involving
Observer countries in its activities. We are confident that the final SCO document regarding participation of Observer states would provide them opportunities to make substantive contributions to the development and activities of the SCO.

Before concluding, I would like to express my gratitude and appreciation towards the city of Shanghai and the people and Government of People’s Republic of China for hosting the Summit meeting and their kind hospitality. I would also like to reiterate that India looks forward to being a substantive and active SCO partner. Thank you.
INDIA’S FOREIGN RELATIONS - 2006
SECTION - III
(ii) CIVIL NUCLEAR ENERGY DEBATE
APPENDICES
APPENDIX - 1

White House Response to critics on India Civil Nuclear Cooperation.

Washington (D.C), March 8, 2006.

CRITICS: The U.S.-India civil nuclear cooperation deal will accelerate the nuclear arms race in South Asia.

COUNTERPOINT: This is an historic agreement that brings India into the nonproliferation mainstream and addresses its growing energy needs through increased use of nuclear energy in cooperation with the international community. The United States has no intention of aiding India’s nuclear weapons program. India’s plan to separate its civilian and military nuclear facilities and programs will allow other nations to cooperate with India’s civilian facilities to expand energy production. Those facilities will be under International Atomic Energy Agency (IAEA) safeguards to prevent diversion of technology and materials to India’s military program. Greater use of nuclear reactors to produce energy for the Indian people will not undermine regional security or stability.

CRITICS: Doesn’t this initiative effectively recognize India as a nuclear weapons state?

COUNTERPOINT: No, the United States has not recognized India as a nuclear weapons state. The 1968 Nuclear Nonproliferation Treaty (NPT) defines a nuclear weapons state as “one which has manufactured and exploded a nuclear weapon or other nuclear explosive device prior to January 1, 1967.” (The United States, UK, France, Russia, and China exploded nuclear devices prior to that date.) India does not meet this definition, and we do not seek to amend the Treaty.

CRITICS: Only 14 of India’s 22 nuclear power reactors will be safeguarded under its separation plan, and India’s two developmental fast breeder reactors will remain unsafeguarded. With these facilities, India can produce enough nuclear weapons to significantly expand its current arsenal.

COUNTERPOINT: The understanding we have reached with India will significantly increase the number of Indian nuclear reactors under IAEA safeguards, as well as bring associated facilities under safeguards. At present, only four of India’s nuclear power reactors are under safeguards.
Under its civil-military separation plan, India has agreed to place the majority of its existing nuclear power reactors and those under construction under safeguards and to place the other associated upstream and downstream facilities that support those reactors under safeguards. Furthermore, India has committed to place all future civilian power and fast breeder reactors under safeguards.

This agreement is good for American security because it will bring India’s civilian nuclear program into the international nonproliferation mainstream. The agreement also is good for the American economy because it will help meet India’s surging energy needs - and that will lessen India’s growing demand for other energy supplies and help restrain energy prices for American consumers.

**CRITICS:** Doesn’t this initiative create a double standard and won’t it encourage rogue nations like North Korea and Iran to continue to pursue nuclear weapons programs?

**COUNTERPOINT:** It is not credible to compare the rogue regimes of North Korea and Iran to India. Unlike Iran or North Korea, India has been a peaceful and vibrant democracy with a strong nuclear nonproliferation record.

Under this initiative, India - which has never been a party to the NPT - has agreed to take a series of steps that will bring it into the international nonproliferation mainstream.

Iran and North Korea are very different cases. They signed and ratified the NPT and gave lip service to adhering to their international obligations. Through their covert actions, however, they broke the very nonproliferation commitments they claimed to follow. Additionally, both regimes have isolated themselves from the international community and are state sponsors of terrorism.

India, on the other hand, has agreed to take steps that will bring it into the nonproliferation mainstream, including:

- Placing its civilian nuclear facilities under IAEA safeguards and monitoring;
- Signing and implementing the Additional Protocol, which allows more extensive inspections by the IAEA;
- Ensuring that its nuclear materials and technologies are secured and prevented from diversion, including its recent passage of a law to create a robust national export control system;
Refraining from transfers of enrichment and reprocessing technologies to states that do not already possess them and supporting efforts to limit their spread;

Working to conclude a Fissile Material Cutoff Treaty;

Continuing its moratorium on nuclear testing; and

Adhering to the Missile Technology Control Regime (MTCR) and the Nuclear Suppliers Group (NSG) guidelines.

**CRITICS:** This initiative will weaken or unravel the global nonproliferation regime. Creating an exception for India will lead Pakistan and Israel, who are also outside the NPT regime, to insist on a similar deal or cause other nations to withdraw from the Treaty.

**COUNTERPOINT:** India has stood outside the global nonproliferation regime for the last 30 years. Through this initiative, India will enter the international nonproliferation mainstream, thereby strengthening the regime that continues to play a vital role in enhancing international security and stability.

All nations that are party to the NPT are permitted full access to nuclear technology for peaceful purposes but are prohibited from pursuing or possessing nuclear weapons (except for the five recognized nuclear weapons states). We do not expect nations to withdraw from the NPT. Any move to withdraw from the NPT would clearly signal a nation’s intent to pursue nuclear weapons and would result in the loss of access to nuclear technology for peaceful purposes.

Pakistan and India are different countries with different needs and different histories. Our relationship with Pakistan, which has Major Non-NATO Ally status, follows a separate path that reflects our countries’ strong commitment to maintaining close ties and cooperation, including in the War on Terror. However, Pakistan does not have the same nonproliferation record as India, nor the same energy needs. We do not intend to pursue a similar civil nuclear cooperation initiative with Pakistan.

The status of Israel is not comparable to that of India. Israel has not declared itself to be a nuclear power, nor articulated such extraordinary energy needs. As for other Middle Eastern countries, we expect all NPT parties to live up to their treaty obligations.
APPENDIX - 2

HENRY J. HYDE UNITED STATES - INDIA PEACEFUL ATOMIC ENERGY COOPERATION ACT OF 2006 ______, 2006.—

Ordered to be printed

Mr. Hyde, from the Committee of Conference, submitted the following Conference Report:

[To accompany H.R. 5682]

The Committee of Conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 5682), to exempt from certain requirements of the Atomic Energy Act of 1954 a proposed nuclear agreement for cooperation with India, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendment of the Senate and agree to the same with an amendment as follows:

In lieu of the matter proposed to be inserted by the Senate amendment, insert the following:

And the Senate agree to the same.

TITLE I—UNITED STATES AND INDIA NUCLEAR COOPERATION

SEC. 101. SHORT TITLE.

This title may be cited as the “Henry J. Hyde United States-India Peaceful Atomic Energy Cooperation Act of 2006”.

SEC. 102. SENSE OF CONGRESS.

It is the sense of Congress that—

(1) preventing the proliferation of nuclear weapons, other weapons of mass destruction, the means to produce them, and the means to deliver them are critical objectives for United States foreign policy;

(2) sustaining the Nuclear Non-Proliferation Treaty (NPT) and
strengthening its implementation, particularly its verification and compliance, is the keystone of United States nonproliferation policy;

(3) the NPT has been a significant success in preventing the acquisition of nuclear weapons capabilities and maintaining a stable international security situation;

(4) countries that have never become a party to the NPT and remain outside that treaty’s legal regime pose a potential challenge to the achievement of the overall goals of global nonproliferation, because those countries have not undertaken the NPT obligation to prohibit the spread of nuclear weapons capabilities;

(5) it is in the interest of the United States to the fullest extent possible to ensure that those countries that are not States Party to the NPT are responsible in the disposition of any nuclear technology they develop;

(6) it is in the interest of the United States to enter into an agreement for nuclear cooperation arranged pursuant to section 123 of the Atomic Energy Act of 1954 (42 U.S.C. 2153) with a country that has never been a State Party to the NPT if—

(A) the country has demonstrated responsible behavior with respect to the nonproliferation of technology related to nuclear weapons and the means to deliver them;

(B) the country has a functioning and uninterrupted democratic system of government, has a foreign policy that is congruent to that of the United States, and is working with the United States on key foreign policy initiatives related to nonproliferation;

(C) such cooperation induces the country to promulgate and implement substantially improved protections against the proliferation of technology related to nuclear weapons and the means to deliver them, and to refrain from actions that would further the development of its nuclear weapons program; and

(D) such cooperation will induce the country to give greater political and material support to the achievement of United States global and regional nonproliferation objectives, especially with
respect to dissuading, isolating, and, if necessary, sanctioning and containing states that sponsor terrorism and terrorist groups that are seeking to acquire a nuclear weapons capability or other weapons of mass destruction capability and the means to deliver such weapons;

(7) the United States should continue its policy of engagement, collaboration, and exchanges with and between India and Pakistan;

(8) strong bilateral relations with India are in the national interest of the United States;

(9) the United States and India share common democratic values and the potential for increasing and sustained economic engagement;

(10) commerce in civil nuclear energy with India by the United States and other countries has the potential to benefit the people of all countries;

(11) such commerce also represents a significant change in United States policy regarding commerce with countries that are not States Party to the NPT, which remains the foundation of the international nonproliferation regime;

(12) any commerce in civil nuclear energy with India by the United States and other countries must be achieved in a manner that minimizes the risk of nuclear proliferation or regional arms races and maximizes India’s adherence to international non-proliferation regimes, including, in particular, the guidelines of the Nuclear Suppliers Group (NSG); and

(13) the United States should not seek to facilitate or encourage the continuation of nuclear exports to India by any other party if such exports are terminated under United States law.

SEC. 103. STATEMENTS OF POLICY

(a) IN GENERAL.—The following shall be the policies of the United States:

(1) Oppose the development of a capability to produce nuclear weapons by any non-nuclear weapon state, within or outside of the NPT.

(2) Encourage States Party to the NPT to interpret the right to “develop
research, production and use of nuclear energy for peaceful purposes”, as set forth in Article IV of the NPT, as being a right that applies only to the extent that it is consistent with the object and purpose of the NPT to prevent the spread of nuclear weapons and nuclear weapons capabilities, including by refraining from all nuclear cooperation with any State Party that the International Atomic Energy Agency (IAEA) determines is not in full compliance with its NPT obligations, including its safeguards obligations.

(3) Act in a manner fully consistent with the Guidelines for Nuclear Transfers and the Guidelines for Transfers of Nuclear-Related Dual-Use Equipment, Materials, Software and Related Technology developed by the NSG, and decisions related to the those guidelines, and the rules and practices regarding NSG decision-making.

(4) Strengthen the NSG guidelines and decisions concerning consultation by members regarding violations of supplier and recipient understandings. by instituting the practice of a timely and coordinated response by NSG members to all such violations, including termination of nuclear transfers to an involved recipient, that discourages individual NSG members from continuing cooperation with such recipient until such time as a consensus regarding a coordinated response has been achieved.

(5) Given the special sensitivity of equipment and technologies related to the enrichment of uranium, the reprocessing of spent nuclear fuel, and the production of heavy water, work with members of the NSG, individually and collectively, to further restrict the transfers of such equipment and technologies, including to India.

(6) Seek to prevent the transfer to a country of nuclear equipment, materials, or technology from other participating governments in the NSG or from any other source if nuclear transfers to that country are suspended or terminated pursuant to this title, the Atomic Energy Act of 1954 (42 U.S.C. 2011 et seq.), or any other United States law.

(b) WITH RESPECT TO SOUTH ASIA.—The following shall be the policies of the United States with respect to South Asia:

(1) Achieve, at the earliest possible date, a moratorium on the production of fissile material for nuclear explosive purposes by India, Pakistan, and the People’s Republic of China.
(2) Achieve, at the earliest possible date, the conclusion and implementation of a treaty banning the production of fissile material for nuclear weapons to which both the United States and India become parties.

(3) Secure India’s—

(A) full participation in the Proliferation Security Initiative;

(B) formal commitment to the Statement of Interdiction Principles of such Initiative;

(C) public announcement of its decision to conform its export control laws, regulations, and policies with the Australia Group and with the Guidelines, Procedures, Criteria, and Control Lists of the Wassenaar Arrangement;

(D) demonstration of satisfactory progress toward implementing the decision described in subparagraph (C); and

(E) ratification of or accession to the Convention on Supplementary Compensation for Nuclear Damage, done at Vienna on September 12, 1997.

(4) Secure India’s full and active participation in United States efforts to dissuade, isolate, and, if necessary, sanction and contain Iran for its efforts to acquire weapons of mass destruction, including a nuclear weapons capability and the capability to enrich uranium or reprocess nuclear fuel, and the means to deliver weapons of mass destruction.

(5) Seek to halt the increase of nuclear weapon arsenals in South Asia and to promote their reduction and eventual elimination.

(6) Ensure that spent fuel generated in India’s civilian nuclear power reactors is not transferred to the United States except pursuant to the Congressional review procedures required under section 131(f) of the Atomic Energy Act of 1954 (42 U.S.C. 2160(f)).

(7) Pending implementation of the multilateral moratorium described in paragraph (1) or the treaty described in paragraph (2), encourage India not to increase its production of fissile material at unsafeguarded nuclear facilities.

(8) Ensure that any safeguards agreement or Additional Protocol to
which India is a party with the IAEA can reliably safeguard any export or reexport to India of any nuclear materials and equipment.

(9) Ensure that the text and implementation of any agreement for cooperation with India arranged pursuant to section 123 of the Atomic Energy Act of 1954 (42 U.S.C. 2153) meet the requirements set forth in subsections a.(1) and a.(3) through a.(9) of such section.

(10) Any nuclear power reactor fuel reserve provided to the Government of India for use in safeguarded civilian nuclear facilities should be commensurate with reasonable reactor operating requirements.

SEC. 104. WAIVER AUTHORITY AND CONGRESSIONAL APPROVAL.

(a) IN GENERAL.—If the President makes the determination described in subsection (b), the President may—

(1) exempt a proposed agreement for cooperation with India arranged pursuant to section 123 of the Atomic Energy Act of 1954 (42 U.S.C. 2153) from the requirement of subsection a.(2) of such section;

(2) waive the application of section 128 of the Atomic Energy Act of 1954 (42 U.S.C. 2157) with respect to exports to India; and

(3) waive with respect to India the application of—

(A) section 129 a.(1)(D) of the Atomic Energy Act of 1954 (42 U.S.C. 2158(a)(1)(D)); and

(B) section 129 of such Act (42 U.S.C. 2158) regarding any actions that occurred before July 18, 2005.

(b) DETERMINATION BY THE PRESIDENT.—The determination referred to in subsection (a) is a determination by the President that the following actions have occurred:

(1) India has provided the United States and the IAEA with a credible plan to separate civil and military nuclear facilities, materials, and programs, and has filed a declaration regarding its civil facilities and materials with the IAEA.

(2) India and the IAEA have concluded all legal steps required prior to signature by the parties of an agreement requiring the application of IAEA safeguards in perpetuity in accordance with IAEA standards,
principles, and practices (including IAEA Board of Governors Document GOV/1621 (1973)) to India’s civil nuclear facilities, materials, and programs as declared in the plan described in paragraph (1), including materials used in or produced through the use of India’s civil nuclear facilities.

(3) India and the IAEA are making substantial progress toward concluding an Additional Protocol consistent with IAEA principles, practices, and policies that would apply to India’s civil nuclear program.

(4) India is working actively with the United States for the early conclusion of a multilateral treaty on the cessation of the production of fissile materials for use in nuclear weapons or other nuclear explosive devices.

(5) India is working with and supporting United States and international efforts to prevent the spread of enrichment and reprocessing technology to any state that does not already possess full-scale, functioning enrichment or reprocessing plants.

(6) India is taking the necessary steps to secure nuclear and other sensitive materials and technology, including through—

(A) the enactment and effective enforcement of comprehensive export control legislation and regulations;

(B) harmonization of its export control laws, regulations, policies, and practices with the guidelines and practices of the Missile Technology Control Regime (MTCR) and the NSG; and

(C) adherence to the MTCR and the NSG in accordance with the procedures of those regimes for unilateral adherence.

(7) The NSG has decided by consensus to permit supply to India of nuclear items covered by the guidelines of the NSG.

(c) SUBMISSION TO CONGRESS.—

(1) IN GENERAL.—The President shall submit to the appropriate congressional committees the determination made pursuant to subsection (b), together with a report detailing the basis for the determination.
(2) **INFORMATION TO BE INCLUDED.**—To the fullest extent available to the United States, the report referred to in paragraph (1) shall include the following information:

(A) A summary of the plan provided by India to the United States and the IAEA to separate India’s civil and military nuclear facilities, materials, and programs, and the declaration made by India to the IAEA identifying India’s civil facilities to be placed under IAEA safeguards, including an analysis of the credibility of such plan and declaration, together with copies of the plan and declaration.

(B) A summary of the agreement that has been entered into between India and the IAEA requiring the application of safeguards in accordance with IAEA practices to India’s civil nuclear facilities as declared in the plan described in subparagraph (A), together with a copy of the agreement, and a description of the progress toward its full implementation.

(C) A summary of the progress made toward conclusion and implementation of an Additional Protocol between India and the IAEA, including a description of the scope of such Additional Protocol.

(D) A description of the steps that India is taking to work with the United States for the conclusion of a multilateral treaty banning the production of fissile material for nuclear weapons, including a description of the steps that the United States has taken and will take to encourage India to identify and declare a date by which India would be willing to stop production of fissile material for nuclear weapons unilaterally or pursuant to a multilateral moratorium or treaty.

(E) A description of the steps India is taking to prevent the spread of nuclear-related technology, including enrichment and reprocessing technology or materials that can be used to acquire a nuclear weapons capability, as well as the support that India is providing to the United States to further United States objectives to restrict the spread of such technology.

(F) A description of the steps that India is taking to secure materials and technology applicable for the development,
acquisition, or manufacture of weapons of mass destruction and the means to deliver such weapons through the application of comprehensive export control legislation and regulations, and through harmonization with and adherence to MTCR, NSG, Australia Group, and Wassenaar Arrangement guidelines, compliance with United Nations Security Council Resolution 1540, and participation in the Proliferation Security Initiative.

(G) A description and assessment of the specific measures that India has taken to fully and actively participate in United States and international efforts to dissuade, isolate, and, if necessary, sanction and contain Iran for its efforts to acquire weapons of mass destruction, including a nuclear weapons capability and the capability to enrich uranium or reprocess nuclear fuel and the means to deliver weapons of mass destruction.

(H) A description of the decision of the NSG relating to nuclear cooperation with India, including whether nuclear cooperation by the United States under an agreement for cooperation arranged pursuant to section 123 of the Atomic Energy Act of 1954 (42 U.S.C. 2153) is consistent with the decision, practices, and policies of the NSG.

(I) A description of the scope of peaceful cooperation envisioned by the United States and India that will be implemented under the agreement for nuclear cooperation, include whether such cooperation will include the provision of enrichment and reprocessing technology.

(J) A description of the steps taken to ensure that proposed United States civil nuclear cooperation with India will not in any way assist India’s nuclear weapons program.

(d) RESTRICTIONS ON NUCLEAR TRANSFERS.—

(1) IN GENERAL.—Pursuant to the obligations of the United States under Article I of the NPT, nothing in this title constitutes authority to carry out any civil nuclear cooperation between the United States and a country that is not a nuclear-weapon State Party to the NPT that would in any way assist, encourage, or induce that country to manufacture or otherwise acquire nuclear weapons or nuclear
explosive devices.

(2) **NSG TRANSFER GUIDELINES.**—Notwithstanding the entry into force of an agreement for cooperation with India arranged pursuant to section 123 of the Atomic Energy Act of 1954 (42 U.S.C. 2153) and pursuant to this title, no item subject to such agreement or subject to the transfer guidelines of the NSG, or to NSG decisions related thereto, may be transferred to India if such transfer would be inconsistent with the transfer guidelines of the NSG in effect on the date of the transfer.

(3) **TERMINATION OF NUCLEAR TRANSFERS TO INDIA.**—

(A) **IN GENERAL.**—Notwithstanding the entry into force of an agreement for cooperation with India arranged pursuant to section 123 of the Atomic Energy Act of 1954 (42 U.S.C. 2153) and pursuant to this title, and except as provided under subparagraph (B), exports of nuclear and nuclear-related material, equipment, or technology to India shall be terminated if there is any materially significant transfer by an Indian person of—

(i) nuclear or nuclear-related material, equipment, or technology that is not consistent with NSG guidelines or decisions, or

(ii) ballistic missiles or missile-related equipment or technology that is not consistent with MTCR guidelines, unless the President determines that cessation of such exports would be seriously prejudicial to the achievement of United States nonproliferation objectives or otherwise jeopardize the common defense and security.

(B) **EXCEPTION.**—The President may choose not to terminate exports of nuclear and nuclear-related material, equipment, and technology to India under subparagraph (A) if—

(i) the transfer covered under such subparagraph was made without the knowledge of the Government of India;

(ii) at the time of the transfer, either the Government of India did not own, control, or direct the Indian person that made the transfer or the Indian person that made the transfer is a natural person who acted without the knowledge of any entity described in subparagraph (B) or (C) of section 110(5); and
(iii) the President certifies to the appropriate congressional committees that the Government of India has taken or is taking appropriate judicial or other enforcement actions against the Indian person with respect to such transfer.

(4) EXPORTS, REEXPORTS, TRANSFERS, AND RETRANSFERS TO INDIA RELATED TO ENRICHMENT, REPROCESSING, AND HEAVY WATER PRODUCTION.

(A) IN GENERAL.—

(i) NUCLEAR REGULATORY COMMISSION.— The Nuclear Regulatory Commission may only issue licenses for the export or reexport to India of any equipment, components, or materials related to the enrichment of uranium, the reprocessing of spent nuclear fuel, or the production of heavy water if the requirements of subparagraph (B) are met.

(ii) SECRETARY OF ENERGY.—The Secretary of Energy may only issue authorizations for the transfer or retransfer to India of any equipment, materials, or technology related to the enrichment of uranium, the reprocessing of spent nuclear fuel, or the production of heavy water (including under the terms of a subsequent arrangement under section 131 of the Atomic Energy Act of 1954 (42 U.S.C. 2160)) if the requirements of subparagraph (B) are met.

(B) REQUIREMENTS FOR APPROVALS.— Exports, reexports, transfers, and retransfers referred to in subparagraph (A) may only be approved if—

(i) the end user—

(I) is a multinational facility participating in an IAEA-approved program to provide alternatives to national fuel cycle capabilities; or

(II) is a facility participating in, and the export, reexport, transfer, or retransfer is associated with, a bilateral or multinational program to develop a proliferation-resistant fuel cycle;

(ii) appropriate measures are in place at any facility referred to in clause (i) to ensure that no sensitive nuclear technology, as
defined in section 4(5) of the Nuclear Nonproliferation Act of 1978 (22 U.S.C. 3203(5)), will be diverted to any person, site, facility, location, or program not under IAEA safeguards; and

(iii) the President determines that the export, reexport, transfer, or retransfer will not assist in the manufacture or acquisition of nuclear explosive devices or the production of fissile material for military purposes.

(5) NUCLEAR EXPORT ACCOUNTABILITY PROGRAM.—

(A) IN GENERAL.—The President shall ensure that all appropriate measures are taken to maintain accountability with respect to nuclear materials, equipment, and technology sold, leased, exported, or reexported to India so as to ensure—

(i) full implementation of the protections required under section 123a.(1) of the Atomic Energy Act of 1954 (42 U.S.C. 2153(a)(1)); and

(ii) United States compliance with Article I of the NPT.

(B) MEASURES.—The measures taken pursuant to subparagraph (A) shall include the following:

(i) Obtaining and implementing assurances and conditions pursuant to the export licensing authorities of the Nuclear Regulatory Commission and the Department of Commerce and the authorizing authorities of the Department of Energy, including, as appropriate, conditions regarding end-use monitoring.

(ii) A detailed system of reporting and accounting for technology transfers, including any retransfers in India, authorized by the Department of Energy pursuant to section 57b. of the Atomic Energy Act of 1954 (42 U.S.C. 2077(b)). Such system shall be capable of providing assurances that—

(I) the identified recipients of the nuclear technology are authorized to receive the nuclear technology;

(II) the nuclear technology identified for transfer will be used only for peaceful safeguarded nuclear activities and will not be used for any military or nuclear explosive purpose; and

(III) the nuclear technology identified for transfer will not be
retransferred without the prior consent of the United States, and facilities, equipment, or materials derived through the use of transferred technology will not be transferred without the prior consent of the United States.

(iii) In the event the IAEA is unable to implement safeguards as required by an agreement for cooperation arranged pursuant to section 123 of the Atomic Energy Act of 1954 (42 U.S.C. 2153), appropriate assurance that arrangements will be put in place expeditiously that are consistent with the requirements of section 123 a.(1) of such Act (42 U.S.C. 2153(a)(1)) regarding the maintenance of safeguards as set forth in the agreement regardless of whether the agreement is terminated or suspended for any reason.

(C) IMPLEMENTATION.—The measures described in subparagraph (B) shall be implemented to provide reasonable assurances that the recipient is complying with the relevant requirements, terms, and conditions of any licenses issued by the United States regarding such exports, including those relating to the use, retransfer, safe handling, secure transit, and storage of such exports.

(e) JOINT RESOLUTION OF APPROVAL REQUIREMENT.—

Section 123 d. of the Atomic Energy Act of 1954 (42 U.S.C. 2153(d)) is amended in the second proviso by inserting after “that subsection” the following: “, or an agreement exempted pursuant to section 104(a)(1) of the Henry J. Hyde United States-India Peaceful Atomic Energy Cooperation Act of 2006,”.

(f) SUNSET.—The authority provided under sub- section (a)(1) to exempt an agreement shall terminate upon the enactment of a joint resolution under section 123 d. of the Atomic Energy Act of 1954 (42 U.S.C. 2153(d)) approving such an agreement.

(g) REPORTING TO CONGRESS.—

(1) INFORMATION ON NUCLEAR ACTIVITIES OF INDIA.—The President shall keep the appropriate congressional committees fully and currently informed of the facts and implications of any significant nuclear activities of India, including—

(A) any material noncompliance on the part of the Government of India with—
(i) the nonproliferation commitments undertaken in the Joint Statement of July 18, 2005, between the President of the United States and the Prime Minister of India;

(ii) the separation plan presented in the national parliament of India on March 7, 2006, and in greater detail on May 11, 2006;

(iii) a safeguards agreement between the Government of India and the IAEA;

(iv) an Additional Protocol between the Government of India and the IAEA;

(v) an agreement for cooperation between the Government of India and the United States Government arranged pursuant to section 123 of the Atomic Energy Act of 1954 (42 U.S.C. 2153) or any subsequent arrangement under section 131 of such Act (42 U.S.C. 2160);

(vi) the terms and conditions of any approved licenses regarding the export or reexport of nuclear material or dual-use material, equipment, or technology; and

(vii) United States laws and regulations regarding such licenses;

(B) the construction of a nuclear facility in India after the date of the enactment of this title;

(C) significant changes in the production by India of nuclear weapons or in the types or amounts of fissile material produced; and

(D) changes in the purpose or operational status of any unsafeguarded nuclear fuel cycle activities in India.

(2) IMPLEMENTATION AND COMPLIANCE REPORT. —Not later than 180 days after the date on which an agreement for cooperation with India arranged pursuant to section 123 of the Atomic Energy Act of 1954 (42 U.S.C. 2153) enters into force, and annually thereafter, the President shall submit to the appropriate congressional committees a report including—

(A) a description of any additional nuclear facilities and nuclear materials that the Government of India has placed or intends to place under IAEA safeguards;
(B) a comprehensive listing of—

(i) all licenses that have been approved by the Nuclear Regulatory Commission and the Secretary of Energy for exports and reexports to India under parts 110 and 810 of title 10, Code of Federal Regulations;

(ii) any licenses approved by the Department of Commerce for the export or reexport to India of commodities, related technology, and software which are controlled for nuclear nonproliferation reasons on the Nuclear Referral List of the Commerce Control List maintained under part 774 of title 15, Code of Federal Regulation, or any successor regulation;

(iii) any other United States authorizations for the export or reexport to India of nuclear materials and equipment; and

(iv) with respect to each such license or other form of authorization described in clauses (i), (ii), and (iii)—

(I) the number or other identifying information of each license or authorization;

(II) the name or names of the authorized end user or end users;

(III) the name of the site, facility, or location in India to which the export or reexport was made;

(IV) the terms and conditions included on such licenses and authorizations;

(V) any post-shipment verification procedures that will be applied to such exports or reexports; and

(VI) the term of validity of each such license or authorization;

(C) a description of any significant nuclear commerce between India and other countries, including any such trade that—

(i) is not consistent with applicable guidelines or decisions of the NSG; or

(ii) would not meet the standards applied to exports or reexports of such material, equipment, or technology of United States origin;
(D) either—

(i) an assessment that India is in full compliance with the commitments and obligations contained in the agreements and other documents referenced in clauses (i) through (vi) of paragraph (1)(A); or

(ii) an identification and analysis of all compliance issues arising with regard to the adherence by India to its commitments and obligations, including—

(I) the measures the United States Government has taken to remedy or otherwise respond to such compliance issues;

(II) the responses of the Government of India to such measures;

(III) the measures the United States Government plans to take to this end in the coming year; and

(IV) an assessment of the implications of any continued noncompliance, including whether nuclear commerce with India remains in the national security interest of the United States;

(E) (i) an assessment of whether India is fully and actively participating in United States and international efforts to dissuade, isolate, and, if necessary, sanction and contain Iran for its efforts to acquire weapons of mass destruction, including a nuclear weapons capability (including the capability to enrich uranium or reprocess nuclear fuel), and the means to deliver weapons of mass destruction, including a description of the specific measures that India has taken in this regard; and

(ii) if India is not assessed to be fully and actively participating in such efforts, a description of—

(I) the measures the United States Government has taken to secure India’s full and active participation in such efforts;

(II) the responses of the Government of India to such measures; and

(III) the measures the United States Government plans to take in the coming year to secure India’s full and active participation;
an analysis of whether United States civil nuclear cooperation with India is in any way assisting India's nuclear weapons program, including through—

(i) the use of any United States equipment, technology, or nuclear material by India in an unsafeguarded nuclear facility or nuclear-weapons related complex;

(ii) the replication and subsequent use of any United States technology by India in an unsafeguarded nuclear facility or unsafeguarded nuclear weapons-related complex, or for any activity related to the research, development, testing, or manufacture of nuclear explosive devices; and

(iii) the provision of nuclear fuel in such a manner as to facilitate the increased production by India of highly enriched uranium or plutonium in unsafeguarded nuclear facilities;

A detailed description of—

(i) United States efforts to promote national or regional progress by India and Pakistan in disclosing, securing, limiting, and reducing their fissile material stock-piles, including stockpiles for military purposes, pending creation of a worldwide fissile material cut-off regime, including the institution of a Fissile Material Cut-off Treaty;

(ii) the responses of India and Pakistan to such efforts; and

(iii) assistance that the United States is providing, or would be able to provide, to India and Pakistan to promote the objectives in clause (i), consistent with its obligations under international law and existing agreements;

An estimate of—

(i) the amount of uranium mined and milled in India during the previous year;

(ii) the amount of such uranium that has likely been used or allocated for the production of nuclear explosive devices; and

(iii) the rate of production in India of—
(I) fissile material for nuclear explosive devices; and

(II) nuclear explosive devices;

(I) an estimate of the amount of electricity India’s nuclear reactors produced for civil purposes during the previous year and the proportion of such production that can be attributed to India’s declared civil reactors;

(J) an analysis as to whether imported uranium has affected the rate of production in India of nuclear explosive devices;

(K) a detailed description of efforts and progress made toward the achievement of India’s—

(i) full participation in the Proliferation Security Initiative;

(ii) formal commitment to the Statement of Interdiction Principles of such Initiative;

(iii) public announcement of its decision to conform its export control laws, regulations, and policies with the Australia Group and with the Guidelines, Procedures, Criteria, and Controls List of the Wassenaar Arrangement; and

(iv) effective implementation of the decision described in clause (iii); and

(L) the disposal during the previous year of spent nuclear fuel from India’s civilian nuclear program, and any plans or activities relating to future disposal of such spent nuclear fuel.

(3) SUBMITTAL WITH OTHER ANNUAL REPORTS.—

(A) REPORT ON PROLIFERATION PREVENTION.—

Each annual report submitted under paragraph (2) after the initial report may be submitted together with the annual report on proliferation prevention required under section 601(a) of the Nuclear Non-Proliferation Act of 1978 (22 U.S.C. 3281(a)).

(B) REPORT ON PROGRESS TOWARD REGIONAL NONPROLIFERATION.—

The information required to be submitted under paragraph (2)(F)
after the initial report may be submitted together with the annual report on progress to-ward regional nonproliferation required under section 620F(c) of the Foreign Assistance Act of 1961 (22 U.S.C. 2376(c)).

(4) **FORM.**—Each report submitted under this subsection shall be submitted in unclassified form, but may contain a classified annex.

**SEC. 105. UNITED STATES COMPLIANCE WITH ITS NUCLEAR NONPROLIFERATION TREATY OBLIGATIONS.**

Nothing in this title constitutes authority for any action in violation of an obligation of the United States under the NPT.

**SEC. 106. INOPERABILITY OF DETERMINATION AND WAIVERS.**

A determination and any waiver under section 104 shall cease to be effective if the President determines that India has detonated a nuclear explosive device after the date of the enactment of this title.

**SEC. 107. MTCR ADHERENT STATUS.**

Congress finds that India is not an MTCR adherent for the purposes of section 73 of the Arms Export Control Act (22 U.S.C. 2797b).

**SEC. 108. TECHNICAL AMENDMENT.**

Section 1112(c)(4) of the Arms Control and Nonproliferation Act of 1999 (title XI of the Admiral James W. Nance and Meg Donovan Foreign Relations Authorization Act, Fiscal Years 2000 and 2001 (as enacted into law by section 1000(a)(7) of Public Law 106–113 and contained in appendix G of that Act; 113 Stat. 1501A–486)) is amended—

(1) in subparagraph (B), by striking “and” after the semicolon at the end;

(2) by redesignating subparagraph (C) as sub- paragraph (D); and

(3) by inserting after subparagraph (B) the following new subparagraph: “(C) so much of the reports required under section 104 of the Henry J. Hyde United States-India Peaceful Atomic Energy Cooperation Act of 2006 as relates to verification or compliance matters; and”.
SEC. 109. UNITED STATES-INDIA SCIENTIFIC COOPERATIVE NUCLEAR NONPROLIFERATION PROGRAM.

(a) ESTABLISHMENT.— The Secretary of Energy, acting through the Administrator of the National Nuclear Security Administration, is authorized to establish a cooperative nuclear nonproliferation program to pursue jointly with scientists from the United States and India a program to further common nuclear nonproliferation goals, including scientific research and development efforts, with an emphasis on nuclear safeguards (in this section referred to as “the program”).

(b) CONSULTATION.— The program shall be carried out in consultation with the Secretary of State and the Secretary of Defense.

(c) NATIONAL ACADEMIES RECOMMENDATIONS.—

(1) IN GENERAL.— The Secretary of Energy shall enter into an agreement with the National Academies to develop recommendations for the implementation of the program.

(2) RECOMMENDATIONS.— The agreement entered into under paragraph (1) shall provide for the preparation by qualified individuals with relevant expertise and knowledge and the communication to the Secretary of Energy each fiscal year of—

(A) recommendations for research and related programs designed to overcome existing technological barriers to nuclear nonproliferation; and

(B) an assessment of whether activities and programs funded under this section are achieving the goals of the activities and programs.

(3) PUBLIC AVAILABILITY.— The recommendations and assessments prepared under this sub-section shall be made publicly available.

(d) CONSISTENCY WITH NUCLEAR NON-PROLIFERATION TREATY.— All United States activities related to the program shall be consistent with United States obligations under the Nuclear Non-Proliferation Treaty.

(e) AUTHORIZATION OF APPROPRIATIONS.— There are authorized to be appropriated such sums as may be necessary to carry out this section for each of fiscal years 2007 through 2011.
SEC. 110. DEFINITIONS

In this title:

(1) The term “Additional Protocol” means a protocol additional to a safeguards agreement with the IAEA, as negotiated between a country and the IAEA based on a Model Additional Protocol as set forth in IAEA information circular (INFCIRC) 540.

(2) The term “appropriate congressional committees” means the Committee on Foreign Relations of the Senate and the Committee on International Relations of the House of Representatives.

(3) The term “dual-use material, equipment, or technology” means material, equipment, or technology that may be used in nuclear or non-nuclear applications.

(4) The term “IAEA safeguards” has the meaning given the term in section 830(3) of the Nuclear Proliferation Prevention Act of 1994 (22 U.S.C. 6305(3)).

(5) The term “Indian person” means—
   (A) a natural person that is a citizen of India or is subject to the jurisdiction of the Government of India;
   (B) a corporation, business association, partnership, society, trust, or any other non-governmental entity, organization, or group, that is organized under the laws of India or has its principal place of business in India; and
   (C) any Indian governmental entity, including any governmental entity operating as a business enterprise.

(6) The terms “Missile Technology Control Regime”, “MTCR”, and “MTCR adherent” have the meanings given the terms in section 74 of the Arms Export Control Act (22 U.S.C. 2797c).

(7) The term “nuclear materials and equipment” means source material, special nuclear material, production and utilization facilities and any components thereof, and any other items or materials that are determined to have significance for nuclear explosive purposes pursuant to subsection 109 b. of the Atomic Energy Act of 1954 (42 U.S.C. 2139(b)).

(8) The terms “Nuclear Non-Proliferation Treaty” and “NPT” mean

(9) The terms “Nuclear Suppliers Group” and “NSG” refer to a group, which met initially in 1975 and has met at least annually since 1992, of Participating Governments that have promulgated and agreed to adhere to Guidelines for Nuclear Transfers (currently IAEA INFCIRC/254/Rev.8/Part 1) and Guidelines for Transfers of Nuclear-Related Dual-Use Equipment, Materials, Software, and Related Technology (currently IAEA INFCIRC/254/Rev.7/Part 2).

(10) The terms “nuclear weapon” and “nuclear explosive device” mean any device designed to produce an instantaneous release of an amount of nuclear energy from special nuclear material that is greater than the amount of energy that would be released from the detonation of one point of trinitro-toluene (TNT).

(11) The term “process” includes the term “reprocess”.

(12) The terms “reprocessing” and “reprocess” refer to the separation of irradiated nuclear materials and fission products from spent nuclear fuel.

(13) The term “sensitive nuclear technology” means any information, including information incorporated in a production or utilization facility or important component part thereof, that is not available to the public and which is important to the design, construction, fabrication, operation, or maintenance of a uranium enrichment or nuclear fuel reprocessing facility or a facility for the production of heavy water.

(14) The term “source material” has the meaning given the term in section 11 z. of the Atomic Energy Act of 1954 (42 U.S.C. 2014(z)).

(15) The term “special nuclear material” has the meaning given the term in section 11 aa. of the Atomic Energy Act of 1954 (42 U.S.C. 2014(aa)).

(16) The term “un-safeguarded nuclear fuel-cycle activity” means research on, or development, design, manufacture, construction, operation, or maintenance of—

(A) any existing or future reactor, critical facility, conversion plant, fabrication plant, reprocessing plant, plant for the separation of
isotopes of source or special fissionable material, or separate storage installation with respect to which there is no obligation to accept IAEA safeguards at the relevant reactor, facility, plant, or installation that contains source or special fissionable material; or

(B) any existing or future heavy water production plant with respect to which there is no obligation to accept IAEA safeguards on any nuclear material produced by or used in connection with any heavy water produced therefrom.

______________________________________________

JOINT EXPLANATORY STATEMENT OF THE COMMITTEE OF CONFERENCE

The managers on the part of the House and the Senate at the conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 5682) to provide procedures and conditions by which an agreement for peaceful nuclear cooperation between the United States of America and India may be considered by the Congress, and to implement the obligations of the United States under the Additional Protocol to its Safeguards Agreement with the International Atomic Energy Agency (IAEA), and for other purposes, submit the following joint statement in the House and the Senate in explanation of the effect of the action agreed upon by the managers and recommended in the accompanying conference report.

BACKGROUND AND NEED FOR THE LEGISLATION

With the fading of the Cold War’s global divisions and the rise of new challenges such as globalization and trans-national terrorism, there is increasing recognition in both the United States and in India that significant benefits may be obtained from closer cooperation across a broad spectrum of activities and policies. These range from shared strategic interests, such as enhanced stability and security in South Asia and the international system as a whole, to more specific priorities, including greater effectiveness in combating the AIDS epidemic, combating terrorism, and preventing the proliferation of weapons of mass destruction, among others.
To that end, on July 18, 2005, President Bush and Indian Prime Minister Manmohan Singh issued a joint statement announcing a ‘global partnership’ between the two countries. The Joint Statement covered a range of issues and common interests, including the re-establishment of civil nuclear commerce between the United States and India.

In the Joint Statement, India committed to placing more of its civil nuclear facilities under International Atomic Energy Agency (IAEA) safeguards in perpetuity, signing and adhering to an Additional Protocol with respect to civilian nuclear facilities, working with the United States for the conclusion of a multilateral Fissile Material Cutoff Treaty, refraining from transfer of enrichment and reprocessing technologies to states that do not have them and supporting international efforts to limit their spread, ensuring that the necessary steps have been taken to secure nuclear materials and technology through comprehensive export control legislation and through harmonization and adherence to Missile Technology Control Regime (MTCR) and Nuclear Suppliers Group (NSG) guidelines, and continuing its moratorium on further nuclear testing. For the United States, President Bush committed that he would “work to achieve full civil nuclear energy cooperation with India as it realizes its goals of promoting nuclear power and achieving energy security” and to “seek agreement from Congress to adjust U.S. laws and policies” to permit that cooperation. President Bush also promised to “work with friends and allies to adjust international regimes to enable full civil nuclear energy cooperation and trade with India, including but not limited to expeditious consideration of fuel supplies for safeguarded nuclear reactors at Tarapur.”

The Administration’s proposed legislation envisioned Congress granting the President the authority to waive certain provisions of the Atomic Energy Act of 1954 (AEA) that contain restrictions on cooperation that the Administration deemed to be impediments to conducting civil nuclear cooperation with India. Section 123 a.(2) of the AEA requires that a non-nuclear weapon state have IAEA safeguards on all nuclear material in all peaceful nuclear activities in that state, under its jurisdiction, or carried out under its control anywhere (commonly referred to as “full-scope safeguards”) as a condition of continued United States nuclear supply and approval for new nuclear cooperation agreements, a requirement that India does not meet and, as a state with nuclear weapons, would be unlikely to meet for the foreseeable future. Section 128 requires a non-nuclear weapon state (under the NPT, which recognizes only five “Nuclear Weapon States” – Russia, France, China, the United Kingdom, and the United States) to
have full-scope safeguards as a prerequisite for receiving U.S. civil nuclear exports. Finally, Section 129 requires the termination of nuclear exports if a non-nuclear weapon state has, among other things, tested nuclear weapons after 1978, which India did in 1998. There are waivers available to the President for these provisions in existing law. But the standard for such waivers is very high.

In addition, international civil nuclear commerce is restricted pursuant to the Guidelines for Nuclear Transfers of the Nuclear Suppliers Group. NSG Guidelines permit such trade with countries only when the receiving State has brought into force an agreement with the IAEA requiring the application of safeguards on all source and special fissionable material in its current and future peaceful activities.

The Administration’s proposed legislation would have given the President the authority to permanently waive these provisions for India, subject to the President’s determination that India had achieved certain benchmarks, such as engaging in negotiations with the IAEA on a safeguards agreement and that the NSG has agreed to provide an exemption for India to allow its participating states to export civil nuclear materials, equipment, and technology to India.

Under existing law, a nuclear cooperation agreement with a country that does have full-scope safeguards and that satisfies other criteria under 123 a. of the AEA would come into force 90 days after its submission for congressional review unless a resolution of disapproval were passed in both Houses. In practice, it is very difficult to secure passage of such resolutions because a veto by the President of the joint resolution would require a two-thirds vote in both Houses to override.

By contrast, nuclear cooperation agreements with countries, such as India, that do not satisfy all the conditions of 123a, such as full-scope safeguards, can come into effect only if both Houses of Congress pass a joint resolution of approval within 90 days. If either chamber does not approve the resolution, the agreement does not enter into force.

The Administration’s legislative proposal sought to avoid this latter procedure by providing for a process of congressional consideration of a 123 agreement with India such as that reserved for countries that do have full-scope safeguards. In that event, a nuclear cooperation agreement with India would come into force automatically unless both Houses of Congress passed a joint resolution of disapproval. In effect, the Administration’s
proposal would have given it excessive latitude in negotiating a nuclear cooperation agreement with India, leaving Congress with little ability to influence the terms of that agreement, regardless of any concerns it might have.

Both the House International Relations Committee and the Senate Foreign Relations Committee rejected this approach, believing that the Administration’s proposal did not provide for appropriate congressional oversight over what was, by any measure, an unprecedented nuclear cooperative relationship with India. Both committees were troubled by the lack of consultation by the Administration with Congress before the July 18, 2005 Joint Statement and the March 2006 U.S.-India Declaration (in which the terms by which India would separate its civil and military nuclear facilities and further commitments by the United States were announced).

Consequently, both committees introduced legislation that, while informed by the Administration’s proposal, reverts to existing procedures laid out in the AEA for approval of 123 agreements that do not meet the criteria of section 123 a. The Conference agreement grants the President the ability to waive the aforementioned sections of the AEA for a future U.S.-India agreement for civil nuclear cooperation.

However, any such agreement cannot enter into force until it has been submitted to the Congress, along with a completed IAEA-India safeguards agreement and other documents and Presidential determinations such as a Nuclear Proliferation Assessment (required by the AEA and by this legislation, as detailed the section-by-section review of this report), and approved by both Houses according to the existing procedures of Section 130(i) of the AEA. Furthermore, the Administration’s ability to waive existing provisions of section 129 of the AEA, which mandates the termination of U.S. civil nuclear exports to a country if that country tests a nuclear explosive device, terminates or abrogates IAEA safeguards, materially violates an IAEA safeguards agreement, or engages in other activities related to nuclear proliferation, is limited to any such activities India engaged in prior to July 18, 2005. Any such future activity by India would invoke Section 129, subject to the waiver provisions already available to the President in existing law. Thus, the Conference agreement provides that for other conduct that, under section 129, would result in termination of cooperation, that section would continue to apply. If India were to terminate or abrogate IAEA safeguards (129(1)(B)), materially violate IAEA safeguards (129(1)(C)), violate an agreement for cooperation
with the United States (129(2)(A)), encourage a non-nuclear weapon state to engage in proliferation activities involving source and special nuclear material (129(2)(B)), or engage in unauthorized proliferation of reprocessing technology (129(2)(C)), the Conference agreement would terminate cooperation. The Administration’s bill would have made section 129 inapplicable to such future actions on the part of India.

As further clarified in the section-by-section analysis included in this report, the conferees believe that there should be no ambiguity regarding the legal and policy consequences of any future Indian test of a nuclear explosive device. In that event, the President must terminate all export and reexport of U.S.-origin nuclear materials, nuclear equipment, and sensitive nuclear technology to India. The conferees expect the President to make full and immediate use of U.S. rights to demand the return of all nuclear-related items, materials, and sensitive nuclear technology that have been exported or reexported to India if India were to test or detonate, or otherwise cause the test or detonation of, a nuclear explosive device for any reason, including such instances in which India describes its actions as being “for peaceful purposes.” This legal condition is further strengthened in the Conference agreement beyond section 129 of the AEA by a provision that the waiver authority in this legislation terminates with any Indian test. The conferees believe that termination would include the suspension and revocation of any current or pending export or reexport licenses, and that the return of U.S.-origin items and materials should extend to any special nuclear material produced by India through the use of any nuclear materials, equipment, or sensitive nuclear technology exported or reexported to India by the United States.

The prohibition concerning a recipient country not engaging in activities involving source or special nuclear material under Section 129 are permanently waived for India, as India will undoubtedly continue to produce fissile material, until such time after it is able to fulfill its commitment in the July 18, 2005, Joint Statement to work with the United States toward conclusion of a future Fissile Material Cut-off Treaty.

H.R. 5682 reflects the widely held view in both the House and the Senate that peaceful nuclear cooperation with India can serve multiple U.S. foreign policy and national security objectives, but that this must be secured in a manner that minimizes potential risks to the global nonproliferation regime. Among the most important considerations are ensuring that NSG guidelines and consensus decision-making are upheld
and that a U.S. nuclear cooperation agreement and subsequent U.S. nuclear exports are consistent with the decisions, policies, and guidelines of the NSG. The conferees note that the converse is equally important, namely that the United States must ensure that any decision that the NSG makes regarding granting an exemption for nuclear commerce does not disadvantage U.S. industry by setting less strict conditions for countries trading with India than those embodied in the conditions and requirements of this Act. Since the NSG operates by consensus, the United States possesses the necessary leverage to ensure a favorable outcome, and the conference agreement reflects this view.

The bill requires, as a condition for the President to exercise his waiver authority, that the NSG agree by consensus to an exception to its guidelines specifically for India and that no U.S. exports may be transferred to India that do not comport with NSG guidelines and decisions. Equally important is the need to ensure that U.S. cooperation does not assist the Indian nuclear weapons program, directly or indirectly, in order to avoid contributing to a nuclear arms race in South Asia and in accordance with U.S. obligations under the NPT.

As in the Administration’s proposed legislation, H.R. 5682 requires the President to determine that India is upholding its July 18, 2005, commitments as a prerequisite for using his waiver authority. The conferees believe that India’s continued implementation of those commitments is central to the integrity of our bilateral relationship. Therefore, the bill contains reporting requirements and a provision that calls for termination of exports in the event of violations of certain commitments. In addition, the bill seeks to uphold existing statutory congressional oversight of U.S. nuclear cooperation and exports. At a time when many countries are considering nuclear energy as a viable and desirable alternative to carbon-based energy sources, careful oversight of its expansion is crucial.

The establishment of a “global partnership” with India is among the most important strategic diplomatic initiatives undertaken by this Administration. This partnership, along with the extensive set of cooperative agreements that accompany it, embraces a long-term outlook that seeks to strengthen U.S. foreign policy and enhance global stability.

The House International Relations Committee and the Senate Foreign Relations Committee studied carefully the implications of the proposed agreement for nonproliferation policy. Both committees were
concerned about the precedent this exception for India could establish and worked to ensure that this agreement does not undercut U.S. compliance with its responsibilities under the NPT. As a result of these efforts, each committee’s bill was approved overwhelmingly by its respective chamber.

The conferees believe that the conference agreement achieves a proper balance among competing priorities and concerns and will help solidify New Delhi’s commitments to implement strong export controls, separate its civilian nuclear infrastructure from its weapons program, and place additional civilian facilities under IAEA safeguards. An agreement for peaceful nuclear cooperation with India approved by Congress according to the procedures and conditions of this conference report would be a powerful incentive for India to cooperate more closely with the United States in stopping proliferation and to abstain from further nuclear weapons tests.

The Administration’s decision to establish an increasingly close relationship with this country of enormous potential, and its declaration that the U.S. welcomes India’s advancement as a major economic and political player on the world stage represents a new and significant strategic opportunity to advance U.S. goals. Given that India already possesses a vibrant democracy, a rapidly growing economy, and a well-educated middle class greater than the entire U.S. population, it can serve as an engine of global economic growth. Its increasing economic, military, and political power may also contribute significantly to promoting stability in South Asia and other regions.

India has the potential to become a valued partner in countering the rise of extremism around the world as both countries can cooperate to promote religious pluralism, tolerance, and democratic freedoms. As a country with well-entrenched democratic traditions and the world’s second largest Muslim population, India can set an example of a multi-religious and multi-cultural democracy in an otherwise volatile region.

The conferees believe that the conference agreement will help solidify India’s commitments to implement strong export controls, separate its civilian nuclear infrastructure from its weapons program, and place additional civilian facilities under IAEA safeguards. An agreement for peaceful nuclear cooperation with India approved by Congress according to the procedures and conditions of this conference report would be a powerful incentive for India to cooperate closely with the United States in halting proliferation and abstaining from additional tests of nuclear weapons.
The conferees, along with both Houses, place great emphasis on their expectation that India’s full cooperation with efforts by the U.S. and the international community to prevent Iran from acquiring the capability to produce nuclear weapons will be forthcoming.

India is already assuming a more prominent role in world affairs. Its votes in the IAEA Board of Governors in September 2005 and February 2006 regarding Iran's likely efforts to acquire a nuclear weapons capability are evidence that the Government of India is able and willing to adopt a more constructive role on international non-proliferation issues. The Conferees believe the true test of the wisdom of this legislation, which will be the effectiveness of India’s new commitments and obligations regarding nuclear nonproliferation, can be judged only over time. India is determined to secure a more prominent role in global affairs. This agreement will provide it with enhanced incentives to use its rapidly expanding influence to promote regional and international stability and global economic progress.

SECTION-BY-SECTION ANALYSIS AND DISCUSSION

Title I—UNITED STATES AND INDIA NUCLEAR COOPERATION.

Section 101. Short Title.

Section 101 states that this title may be cited as the “Henry J. Hyde United States India Peaceful Atomic Energy Cooperation Act of 2006”.

Section 102. Sense of Congress.

Section 102 combines provisions relating to the Sense of Congress in the House bill and in the Senate amendment. It expresses the Sense of Congress regarding the nuclear non-proliferation regime and the principles that should guide the United States in entering into an agreement on nuclear cooperation with a country that has never been a State Party to the Nuclear Non-Proliferation Treaty (NPT). Paragraph (1) states that preventing the proliferation of nuclear weapons, other weapons of mass destruction (WMD), and the means to deliver these are critical objectives for United States foreign policy.

Paragraph (2) states that sustaining the NPT and strengthening its implementation is the keystone of United States non-proliferation policy.

Paragraph (3) states that the NPT has been a significant success in preventing the spread of nuclear weapons capabilities to other countries and in maintaining a stable international security situation.
Paragraph (4) states that countries that have never become a party to the NPT and remain outside that treaty's legal regime pose a potential challenge to the achievement of the overall goals of global nonproliferation because those countries have not undertaken the NPT's international obligation to prohibit the spread of dangerous nuclear technologies.

Paragraph (5) states that it is in the interest of the United States to ensure to the fullest extent possible that those countries that are not States Party to the NPT act responsibly in the disposition of any nuclear technology they develop.

Paragraph (6) states that it is in the interest of the United States to cooperate with a country that has never signed the NPT with respect to civilian nuclear technology if that country meets certain criteria. These criteria include demonstrating responsible behavior with respect to the nonproliferation of nuclear weapons technology and the means to deliver these weapons; the country has a functioning and uninterrupted democratic system of government, has a foreign policy that is congruent with that of the United States, and is working with the United States in key foreign policy initiatives related to non-proliferation; such cooperation induces the country to promulgate and implement substantially improved protections against the proliferation of technology related to nuclear weapons and the means to deliver them and also to refrain from actions that would further the development of its nuclear weapons program; and that such cooperation will induce the country to give greater political and material support to the achievement of U.S. global and regional nonproliferation objectives, especially with respect to dissuading, isolating, and, if necessary, sanctioning and containing states that sponsor terrorism and terrorist groups and that are seeking to acquire a nuclear weapons capability or other WMD capability and the means to deliver such weapons.

Paragraph (7) states that the United States should continue its policy of engagement, collaboration, and exchanges with and between India and Pakistan.

Paragraph (8) states that strong bilateral relations with India are in the national interest of the United States.

Paragraph (9) states that the United States and India share common democratic values and the potential for increasing and sustained economic engagement.
Paragraph (10) states that commerce in civil nuclear energy with India by the United States and other countries has the potential to benefit the people of all countries.

Paragraph (11) states that civil nuclear commerce with India represents a significant change in U.S. policy toward countries not parties to the NPT and stresses that the NPT remains the foundation of the international non-proliferation regime.

Paragraph (12) states that any commerce in civil nuclear energy with India by the United States and other countries must be achieved in a manner that minimizes the risk of nuclear proliferation or regional arms races and maximizes India’s adherence to international nonproliferation regimes, including, in particular, the guidelines of the Nuclear Suppliers Group.

Paragraph (13) states that the United States should not seek to facilitate or encourage the continuation of nuclear exports to India by any other party if such exports are terminated under United States law.

**Section 103. Statements of Policy.**

Section 103 contains provisions from the House bill and from the Senate amendment and sets forth two sets of policies of the United States: those general in nature and those specific to South Asia.

Subsection (a) states that it shall be the policy of the United States to:

1. Oppose the development of a capability to produce nuclear weapons by any non-nuclear weapon state, within or outside of the NPT;

2. Encourage States Party to the NPT to interpret the right to “develop research, production and use of nuclear energy for peaceful purposes”, as set forth in Article IV of the NPT, as being a right that applies only to the extent that it is consistent with the purpose of the NPT to prevent the spread of nuclear weapons and nuclear weapons capability, including by refraining from all nuclear cooperation with any State Party that the IAEA determines is not in full compliance with its NPT obligations, including its safeguards obligations;

3. Act in a manner fully consistent with the NSG guidelines concerning nuclear transfers and transfers of nuclear-related dual-use items;
4. Strengthen the NSG guidelines and decisions concerning consultation by members regarding violations of supplier and recipient understandings by instituting the practice of a timely and coordinated response by NSG members to all such violations, including termination of all nuclear transfers to an involved recipient, that discourages individual NSG members from continuing cooperation with such recipient until such time as a consensus regarding a coordinated response has been achieved;

5. Given the special sensitivity of equipment and technologies related to the enrichment of uranium, the reprocessing of spent nuclear fuel, and the production of heavy water, work with members of the NSG, individually and collectively, to further restrict the transfers of such equipment and technologies, including to India; and

6. Seek to prevent the transfer to a country of nuclear equipment, materials, or technology from other participating governments in the NSG or from any other source if nuclear transfers to that country are suspended or terminated pursuant to this title, the Atomic Energy Act of 1954 (42 U.S.C. 2011 et seq.), or any other United States law.

Regarding the second statement, the conferees note that the NPT was conceived for the specific and overriding purpose of preventing the proliferation of nuclear weapons and nuclear explosive devices, as stated in the Preamble and its first three Articles. All provisions of the NPT must be interpreted within the context of preventing the proliferation of nuclear weapons and nuclear explosive devices; and Article IV conditions a country’s “inalienable right to develop research, production and use of nuclear energy for peaceful purposes without discrimination” on that country’s conformity with Articles I, II, and III, which obligate each non-nuclear weapon State Party “not to manufacture or otherwise acquire nuclear weapons or other nuclear explosive devices; and not to seek or receive any assistance in the manufacture of nuclear weapons or other nuclear explosive devices.”

The conferees believe that, because the processes of enriching uranium or separating plutonium for peaceful or military purposes are essentially identical, they inherently pose an enhanced risk of proliferation, even under strict international safeguards. Rights under Article IV of the NPT must be properly understood and exercised only insofar as they are consistent with preventing the proliferation of nuclear weapons. Therefore,
the world must not accept a claim by a non-nuclear weapon state of a right to develop or possess a complete nuclear fuel cycle if that country has not provided convincing evidence that its nuclear activities are fully safeguarded from contributing to a nuclear weapons capability.

Regarding the third and fourth statements, the Nuclear Suppliers Group, although not a formal organization that can issue legally-binding directives, is nonetheless one of the most effective elements of the nuclear non-proliferation regime. For a generation, U.S. Presidents have forged in this forum an important international consensus on the need to prevent nuclear proliferation by controlling the export of sensitive nuclear material, equipment and technology. The conferees believe strongly that no bilateral objective, even the important objective of a new relationship with India, should be allowed to undermine the NSG’s effectiveness. The United States must continue to abide by the NSG Guidelines, which it has worked so diligently to achieve.

Equally, the United States must maintain the consensus decision mechanism of the NSG, and not look for any way around that requirement. The conferees believe that the effectiveness of the NSG rests upon its consensus decision-making, resulting in unified policies and enhanced compliance with those policies. The conferees are mindful that a country outside the regime that seeks an exception from NSG guidelines could agree to stringent safeguards with some NSG members, but later import only from other NSG members that did not impose such requirements. To preclude such a scenario, the conferees urge the Executive branch to persuade other NSG members to act in concert in terms of the timing, scope, and safeguarding of nuclear supply to all countries, including India. In particular, the conferees intend that the United States seek agreement among NSG members that violations by one country of an agreement with any NSG member should result in joint action by all members, including, as appropriate, the termination of nuclear exports. In addition, the conferees intend that the Administration work with individual states to encourage them to refrain from sensitive exports.

Regarding the sixth statement, if U.S. exports to a country were to be suspended or terminated pursuant to U.S. law, it will be U.S. policy to seek to prevent the transfer to such country of nuclear equipment, material or technology from other sources. This concern could arise if, for example, there were a nuclear test explosion, termination or abrogation of IAEA safeguards, material violation of IAEA safeguards or an agreement of
cooperation with the United States, assistance or encouragement of a non-nuclear weapon state in nuclear-weapons related activities or reprocessing-related activities, or (in India’s case) failure to uphold its July 18, 2005, Joint Statement commitments. In such a circumstance, the conferees expect the United States to encourage other supplier countries not to undermine U.S. sanctions.

On March 6, 2006, the Indian Prime Minister told the Indian Parliament that the U.S. Government had said that if a disruption of fuel supplies to India occurs, the U.S. would, with India, jointly convene a group of friendly supplier countries, such as Russia, France and the United Kingdom, to pursue such measures as would restore fuel supply to India. The conferees understand and expect that such assurance of supply arrangements that the U.S. is party to will be concerned only with disruption of supply of fuel due to market failures or similar reasons, and not due to Indian actions that are inconsistent with the July 18, 2005, commitments, such as a nuclear explosive test.

Subsection (b) states that, with respect to South Asia, it shall be U.S. policy to:

1. Achieve, at the earliest possible date, a moratorium on the production of fissile material for nuclear explosive purposes by India, Pakistan, and the People’s Republic of China;

2. Achieve, at the earliest possible date, the conclusion and implementation of a treaty banning the production of fissile material for nuclear weapons to which both the United States and India become parties;

3. Secure India’s full participation in the Proliferation Security Initiative (PSI), formal commitment to the PSI’s Statement of Interdiction Principles, public announcement of its decision to conform its export control laws, regulations, and policies with the Australia Group and with the Guidelines, Procedures, Criteria, and Control Lists of the Wassenaar Arrangement, and demonstration of satisfactory progress toward implementing this decision; and ratification of or accession to the Convention on Supplementary Compensation for Nuclear Damage;

4. Secure India’s full and active participation in U.S. efforts to dissuade, isolate, and, if necessary, sanction and contain Iran for its efforts to
acquire WMDs, including a nuclear weapons capability and the capability to enrich uranium or reprocess nuclear fuel and the means to deliver WMDs;

5. Seek to halt the increase of nuclear weapon arsenals in South Asia and to promote their reduction and eventual elimination;

6. Ensure that spent fuel generated in India's civilian nuclear power reactors is not transferred to the United States except under procedures required under section 131 f. of the Atomic Energy Act of 1954;

7. Pending implementation of the multilateral moratorium or treaty described in paragraphs (1) and (2), encourage India not to increase its production of fissile material at unsafeguarded nuclear facilities;

8. Ensure that any safeguards agreement or Additional Protocol to which India is a party with the IAEA can reliably safeguard any export or reexport to India of nuclear materials and equipment;

9. Ensure that the text and implementation of any agreement for cooperation with India meet the requirements set forth in subsections a.(1) and a.(3) through a.(9) of section 123 of the Atomic Energy Act of 1954 (42 U.S.C. 2153); and

10. Ensure that any nuclear power reactor fuel reserve provided to the Government of India for use in safeguarded civilian nuclear facilities should be commensurate with reasonable reactor operating requirements.

The conferees believe that a U.S.-India nuclear cooperation agreement will mark an important and positive turning point in the U.S.-India relationship. This does not mean, however, that the United States should sacrifice its long-standing objectives for non-proliferation in South Asia. This subsection states that U.S. policy must be to continue to support a fissile material moratorium in South Asia and a halt to the increase in nuclear arsenals in the region, which would bring great benefits to India and its neighbors. The United States must also continue to work for a broader fissile material production halt, whether through Fissile Material Cut-off Treaty negotiations or, for example, through an agreement reached by all the countries that have fissile material for nuclear weapons purposes.

The conferees believe also that India has a significant role to play in
preventing the proliferation of dangerous nuclear technologies to other countries and that India must be a part of the international effort to prevent Iran from acquiring weapons of mass destruction, especially nuclear weapons. The conferees fully expect and look forward to the day when India joins the world community in conforming to the full range of nonproliferation and export control regimes. In the July 18, 2005, Joint Statement, India committed to accept the “same responsibilities and practices and acquire the same benefits and advantages as other leading countries with advanced nuclear technology, such as the United States.” India’s welcome steps regarding nuclear and missile-related export controls are important progress in this regard, but the other leading countries with advanced nuclear technology will expect India to join them also in stemming the flow of items that can contribute to chemical and biological weapons programs and of destabilizing types or amounts of certain conventional weapons. India’s participation in the Proliferation Security Initiative would also be of great benefit to the world and to the region.

It is also vital that India hasten the day when it can halt the production of fissile material for weapons, as four of the five nuclear weapon states under the NPT have openly done. The conferees understand that India cannot do this alone, and therefore urge the Executive branch to pursue a joint moratorium by India, Pakistan and China, as well as a multilateral treaty banning the production of fissile material for nuclear weapons.

The conferees believe it is critical to secure India’s full participation in U.S. efforts to prevent Iran from acquiring nuclear weapons, a position held by many members of both houses of Congress. The conferees express their appreciation for India’s favorable votes on this issue in the IAEA Board of Governors and its statements that Iran should indeed cooperate with the IAEA and refrain from developing nuclear weapons.

They understand also that India has long-standing ties with Iran. Precisely because India has those ties, it can and must play a prominent and positive role in convincing Iran that the path of cooperation and of nuclear development with international assurances, but without an indigenous full fuel cycle, is far preferable to the path of obduracy and isolation in order to develop uranium enrichment and plutonium production capabilities.

The United States has an obligation under Article I of the NPT not to “in any way assist, encourage, or induce a non-nuclear weapon state to
manufacture or otherwise acquire nuclear weapons.” Many nonproliferation experts have noted the need to avoid a nuclear arms race in South Asia, as well as to ensure that U.S. assistance does not encourage India to increase its production of fissile material at unsafeguarded nuclear facilities. The conferees understand that U.S. peaceful nuclear cooperation with India will not be intended to inhibit India’s nuclear weapons program. At the same time, however, such cooperation must be conducted in a manner that does not assist that program. That is why the conferees stress the need for effective safeguards on nuclear-related exports or reexports to India, the need to meet the requirements in sections a.(1) and a.(3) through a.(9) of section 123 of the Atomic Energy Act, and the need for any nuclear fuel reserve provided to the Government of India to be commensurate with reasonable reactor operating requirements, rather than of a size that would enable India to break its commitments or end its moratorium on nuclear testing and maintain its civil nuclear energy production despite unilateral or international sanctions.

Indian officials have publicly stated that under the U.S.-India agreement, India will be able to produce as much fissile material for weapons purposes as it desires. At the same time, however, many experts have said that there is no reason why India would need or want to increase that production significantly. The conferees hope that India will demonstrate restraint and not increase significantly its production of fissile material. If civil nuclear commerce were to be seen, some years from now, as having in fact contributed to India’s nuclear weapons program, there could be severe consequences for nuclear cooperation, for U.S.-Indian relations, and for the world-wide nuclear nonproliferation regime.

India’s March 2006 nuclear facility separation plan stated: “The United States will support an Indian effort to develop a strategic reserve of nuclear fuel to guard against any disruption of supply over the lifetime of India’s reactors.” Congress has not been able to determine precisely what was said on this matter in high-level U.S.-Indian discussions. U.S. officials testified, however, that the United States does not intend to help India build a stockpile of nuclear fuel for the purpose of riding out any sanctions that might be imposed in response to Indian actions such as conducting another nuclear test.

The conferees understand that nuclear reactor facilities commonly have some fresh fuel stored, so as to minimize down time when reactor cores are removed. They endorse the Senate proposal, however, that there
be a clear U.S. policy that any fuel reserve provided to India should be commensurate with normal operating requirements for India's safeguarded reactors.

Section 104. Waiver Authority and Congressional Approval. The conference agreement adopts the framework of the House bill, but adds a number of provisions from the Senate amendment.

Section 104(a) provides the President with authority to exempt an agreement for civil nuclear cooperation with India and nuclear exports to India from certain sections of the Atomic Energy Act of 1954 (AEA) that would otherwise present obstacles to approving and implementing such an agreement. Specifically, the waiver authority applies to sections 123 a.(2), 128, and 129.

Both the House of Representatives and the Senate concurred with the administration regarding the need for relief from the requirement in section 123 a.(2) of the AEA, which would otherwise require that India agree to put all its nuclear facilities under IAEA safeguards. They concluded, in particular, that the Executive branch would be unable to meet the standard in existing law for exempting a U.S.-India agreement from this requirement, namely that failure to make the proposed exception/waiver would be “seriously prejudicial to the achievement of United States nonproliferation objectives or otherwise jeopardize the common defense and security.”

The conferees recommend allowing the President to exempt an agreement with India from the requirement in section 123 a.(2) of the AEA without making this determination. Instead, subsection 104(a) requires that the President make the determination in subsection 104(b). The conferees emphasize their intent, however, that section 123 a.(2) be the only portion of the AEA from which their recommendation provides relief. The Executive branch will still be required to coordinate and submit to Congress a Nuclear Proliferation Assessment Statement under section 123. In addition, an agreement for cooperation with India will still have to meet the requirements of section 123 a.(1) and a.(3) through (9), unless the President can meet the standard quoted above for exempting the agreement from one or more of those requirements.

The conferees recommend subsection 104(e), moreover, which amends section 123 a. of the AEA so as to make clear that an agreement with India for which the President has exercised the waiver provided by subsection 104(a) of this title will be considered under existing AEA
procedures for approval of an agreement for cooperation exempted from one of the requirements of section 123 a. These procedures provide for expedited consideration of a joint resolution of approval of the agreement, but do not permit the agreement to enter into force unless and until a joint resolution of approval is enacted. Parliamentary practice in the two houses of Congress is that the expedited joint resolution will not contain any conditions to their approval of the agreement and will not be subject to amendment. Congress could pass a joint resolution of approval with conditions, but would have to proceed without benefit of the expedited procedures offered by sections 123 and 130 of the AEA.

Section 104(a)(2) provides the President authority to waive section 128 of the AEA with respect to exports to India, without the additional limitations proposed in the House bill.

In addition, this title would allow the President to waive the restrictions of section 129 a.(1)(A) of the AEA for any activity that occurred on or before July 18, 2005, and also to waive the restrictions of section 129 a.(1)(D). This would provide authority to waive a termination of nuclear exports that would otherwise be required because of President Clinton’s determination that India had tested a nuclear explosive device in 1998, while keeping in place the requirement to cut off exports should India test in the future. It would also provide waiver authority for cessation of U.S. nuclear exports to India in the event that the President determines that India has “engaged in activities involving source or special nuclear material and having direct significance for the manufacture or acquisition of nuclear explosive devices, and has failed to take steps which, in the President’s judgment, represent sufficient progress toward terminating such activities.” This waiver will be necessary because India will presumably continue to produce material for its nuclear weapons program, consistent with its separation plan.

Subsection (b) requires the President to make the following determinations:

1) India has provided the United States and the International Atomic Energy Agency with a credible plan to separate civil and military nuclear facilities, materials, and programs, and has filed a declaration regarding its civil facilities and materials with the IAEA;

2) India and the IAEA have concluded all legal steps required prior to signature by the parties of an agreement requiring the application of IAEA safeguards in perpetuity in accordance with IAEA standards,
principles, and practices (including IAEA Board of Governors Document GOV/1621 (1973)) to India’s civil nuclear facilities, materials, and programs as declared in its separation plan, including materials used in or produced through the use of India’s civil nuclear facilities;

3) India and the IAEA are making substantial progress toward concluding an Additional Protocol consistent with IAEA principles, practices, and policies that would apply to India’s civil nuclear program;

4) India is working actively with the United States for the early conclusion of a multilateral treaty on the cessation of the production of fissile materials for use in nuclear weapons or other nuclear explosive devices;

5) India is working with and supporting U.S. and international efforts to prevent the spread of enrichment and reprocessing technology to any state that does not already possess full-scale, functioning enrichment or reprocessing plants;

6) India is taking the necessary steps to secure nuclear and other sensitive materials and technology, including through: the enactment and enforcement of comprehensive export control legislation and regulations; harmonization of its export control laws, regulations, policies, and practices with the policies of the MTCR and the NSG, and adherence to the MTCR and the NSG in accordance with the procedures of those regimes for unilateral adherence;

7) The NSG has decided by consensus to permit supply to India of nuclear items covered by the guidelines of the NSG.

The conferees intend that the need for these determinations will make certain that measures needed to ensure that the agreement can safely come into force are in place, e.g., a safeguards agreement negotiated with the IAEA, and that India has fulfilled key obligations it undertook freely in its July 18, 2005, statement and in subsequent statements. The conferees recognize that a number of these conditions will require considerable expenditure of effort and resources to satisfy, such as the negotiation of an Additional Protocol that must be tailored to India’s unique needs, and for that reason have allowed for significant latitude regarding their completion. But the conferees believe that none of these conditions, either singly or in combination with others, is onerous. In addition, although they
did not impose rigorous measurements or deadlines, the conferees intend that considerable substantive progress on the foregoing measures can be demonstrated, including India’s cooperation with the United States to prevent the spread of enrichment and reprocessing technology and its taking steps to strengthen its export laws and regulations.

The House bill required a determination that India and the IAEA “have concluded” a safeguards agreement, while the Senate version required that the agreement “has entered into force.” The conferees want to ensure that the Congress can have confidence that the text of the safeguards agreement, which will be provided when an agreement with India is submitted to Congress, is what will actually come into effect.

The conferees recognize, however, that there might well be a delay between the approval of a safeguards agreement and the date of its entry into force. They understand also that India may be wary of signing a safeguards agreement with the IAEA before an agreement for cooperation with the United States has been approved.

The conferees recommend that the President be required to determine that India and the IAEA have concluded all legal steps required prior to signature by the parties of a safeguards agreement that conforms to IAEA standards, principles, and practices. They have been assured that signature is the final step in the process of negotiating and approving a safeguards agreement. Normally, safeguards agreements enter into force upon signature. The Executive branch understands that Congress must be confident that the India-IAEA safeguards agreement text it is shown when an agreement for cooperation is submitted is, in fact, what will be signed and come into force. The conferees believe that Congress will be able to rely upon a text that has gone through all legal steps required prior to signature by the parties.

With regard to Indian adherence to the MTCR and the NSG, the conferees understand that there are specific procedures that a country uses to unilaterally adhere to such regimes. The conferees also understand that the Government of India is aware of those procedures.

Paragraph (7) requires a presidential determination that the Nuclear Suppliers Group has decided by consensus to permit supply to India of nuclear items covered by the guidelines of the NSG. The conferees believe that it is vital to maintain the role and effectiveness of the NSG, a position which is consistent with statements by senior Administration officials. This provision ensures that the NSG will change its guidelines, or grant an
exemption from them, only in accordance with its longstanding practice that all such changes require consensus among its participating governments.

Subsection (c) requires the President to submit to the House International Relations Committee and the Senate Foreign Relations Committee the determination described in subsection (b) and a report regarding this determination that includes:

1) summaries and copies of India’s separation plan and of its declaration of which of its civil nuclear facilities will be placed under IAEA safeguards, including an analysis of the credibility of the plan and declaration;

2) a summary of the safeguards agreement between India and the IAEA, including a copy of the agreement and a description of progress toward its full implementation;

3) a summary of the progress made toward concluding and implementing an Additional Protocol between India and the IAEA, including a description of the scope of that Additional Protocol;

4) a description of the steps India is taking to work with the United States for the conclusion of a multilateral treaty banning the production of fissile material for nuclear weapons, including a description of the steps the United States has taken and will take to encourage India to identify and declare a date by which India would be willing to stop production of fissile material for nuclear weapons unilaterally or pursuant to a multilateral moratorium or treaty;

5) a description of the steps India is taking to prevent the spread of nuclear-related technology, including enrichment and reprocessing technology or materials that can be used to acquire nuclear weapons technology, as well as the support that India is providing to the United States to restrict the spread of such technology;

6) a description of the steps that India is taking to secure materials and technology applicable for the development, acquisition, or manufacture of weapons of mass destruction and the means to deliver such weapons through the application of comprehensive export control legislation and regulations, and through harmonization and adherence to MTCR, NSG, Australia Group, and Wassenaar Arrangement guidelines, as well as compliance with United Nations
Security Council Resolution 1540, and participation in the Proliferation Security Initiative;

7) a description and assessment of the specific measures that India has taken to fully and actively participate in United States and international efforts to dissuade, isolate, and, if necessary, sanction and contain Iran for its efforts to acquire weapons of mass destruction, including a nuclear weapons capability and the capability to enrich uranium or reprocess nuclear fuel, and the means to deliver weapons of mass destruction;

8) a description of the NSG decision regarding India, including whether the U.S.-India civil nuclear cooperation agreement is consistent with the decision and with the practices and policies of the NSG;

9) a description of the scope of peaceful cooperation envisioned by the United States and India that will be implemented under the Agreement for Nuclear Cooperation, including whether such cooperation will include the provision of enrichment and reprocessing technology; and

10) a description of the measures the United States will take to prevent the use of any United States equipment, technology, or nuclear material by India in an unsafeguarded nuclear facility or for any activity related to nuclear explosive devices, and ensure that the provision of nuclear reactor fuel does not result in increased production of fissile material in unsafeguarded nuclear facilities.

Since the IAEA Board of Governors resolved that Iran was in noncompliance with its safeguards and NPT obligations in September 2005, diplomatic negotiations to dissuade, sanction and contain the Iranian nuclear program have been largely unsuccessful. It is imperative to obtain the support of key states to develop measures that would enable the world community once again to have confidence in both Iran’s nuclear intentions and the ability to monitor developments. India’s support, as a long-time leader of the Non-Aligned Movement and as a state with military and economic relations with Iran, is particularly important. The conferees believe that India’s full and active participation in U.S. and international efforts to dissuade, sanction, and contain Iran’s nuclear program would greatly benefit both the region and the world, and that the report on its efforts in this regard, required by subparagraph (c)(2)(G) will be of great interest to many Members of Congress.
There has been much concern about the possibility that the provision of nuclear technology and nuclear fuel to India could indirectly assist or encourage India’s nuclear weapons program. To increase confidence that no such developments will take place, the conferees recommend the reporting requirement in subparagraph (c)(2)(J). The report should address the potential replication of U.S.-origin nuclear technology in unsafeguarded nuclear facilities in India, as well as the possible utilization of foreign nuclear fuel supplies in a manner that leads to the increased production of fissile material in India’s unsafeguarded nuclear facilities using domestic uranium reserves. Further, the conferees urge the Administration to encourage India to exercise the utmost restraint with respect to its nuclear weapons program, including with respect to any new reactor that would increase India’s plutonium production capability.

Subsection (d) provides, in part, that:

1) nothing in this title constitutes authority to carry out any civil nuclear cooperation between the U.S. and a country that is not a nuclear-weapon State Party to the NPT that would in any way assist, encourage, or induce that country to manufacture of otherwise acquire nuclear weapons or nuclear explosive devices;

2) no item subject to the transfer guidelines of the NSG may be transferred to India if such transfer would be inconsistent with the guidelines in effect on the date of the transfer; and

3) exports of nuclear and nuclear-related material, equipment, or technology to India shall be terminated if India makes any materially significant transfer of nuclear or nuclear-related material, equipment, or technology that does not conform to NSG guidelines or ballistic missiles or missile-related equipment or technology that does not conform to MTCR guidelines, unless the President either determines that cessation of such exports would be seriously prejudicial to the achievement of U.S. nonproliferation objectives or otherwise jeopardize the common defense and security; or chooses not to terminate exports because: the transfer was made without the knowledge of the Government of India; at the time of the transfer, either the Government of India did not own, control or direct the Indian person that made the transfer or the Indian person that made the transfer is a natural person who acted without knowledge of any entity described in subparagraph (B) or (C) of section 110(5); and the President certifies to the appropriate congressional committees that the Government
of India has taken or is taking appropriate judicial or other enforcement actions against the entity with respect to such transfer.

As stated above, the conferees believe the NPT is the keystone of U.S. nonproliferation policy and must be sustained and strengthened. The United States has always abided by its obligation under Article I of the NPT to not in any way assist, encourage, or induce non-nuclear weapon states to manufacture or otherwise acquire nuclear weapons or nuclear explosive devices. The Nuclear Nonproliferation Act of 1978 set a standard almost thirty years ago for the United States in its civil nuclear cooperation with non-nuclear weapon states by requiring those states to have full-scope safeguards. In making an exception for a future nuclear cooperation agreement with India in this bill, it is paramount to ensure that nothing in such cooperation would undermine America's commitment to abide by Article I of the NPT. The conferees recommend paragraph 104(d)(1) to underscore this view.

Section 104(d)(2) is one of several provisions in the bill intended to ensure that any civil nuclear cooperation between the United States and India strengthens rather than weakens the global nuclear nonproliferation regime. This provision contributes to the achievement of this objective by prohibiting the transfer to India of any item the transfer of which is subject to (1) a U.S.-India agreement for cooperation, (2) the NSG Guidelines for Nuclear Transfers (INFCIRC/254, Part 1), or (3) the NSG Guidelines for Transfers of Nuclear-Related Dual-Use Equipment, Materials, Software and Related Technology (INFCIRC/254, Part 2), if such transfer would be inconsistent with either of the aforementioned NSG guidelines as in effect on the date of the transfer. No waiver authority is provided to permit transfers to be made notwithstanding this restriction.

This restriction will ensure that U.S.-India nuclear cooperation continues to be carried out in a manner consistent with the transfer guidelines and policies of the NSG. The Administration has expressed confidence that the NSG will adjust its guidelines in order to permit civil nuclear cooperation along the lines contemplated by the July 18, 2005, Joint Statement of President Bush and Prime Minister Singh. Further, Secretary of State Condoleezza Rice has publicly assured Congress, by means of a letter dated June 28, 2006, to Senate Foreign Relations Committee Chairman Richard Lugar, that:

... in carrying out the laws and regulations of the United States
governing the export of nuclear-related items, the United States Government will continue to act in accordance with IAEA INFCIRC/254, as amended, the Guidelines and Annexes of the Nuclear Suppliers Group. The U.S. will also continue to act within the policies and practices of the decisions taken by the Nuclear Suppliers Group with respect to India. We intend to do so notwithstanding any contrary actions by any other participating countries in the Nuclear Suppliers Group.

Section 104(d)(3) reflects the importance the conferees attach to India’s commitments in the July 18, 2005, Joint Statement to secure its nuclear materials and nuclear and missile technology through comprehensive export control legislation and through harmonization and adherence to MTCR and NSG guidelines. These two steps are critical to bringing India closer to the nonproliferation mainstream, one of the benefits attributed to U.S. nuclear cooperation with India by the Administration.

Failure to conform to these nuclear and missile export control guidelines, both in principle and in practice, would represent a failure by India to meet the nonproliferation standards expected of other responsible states.

This provision mandates termination of exports under an agreement for cooperation with India if an Indian person engages in transfers that are not consistent with NSG or MTCR guidelines. The term “Indian person,” which is defined in subsection 110(5), is used in a legal sense, to encompass both individuals and entities of all sorts that are under India’s jurisdiction, as well as governmental entities. The term includes non-Indian nationals, if they are under India’s jurisdiction.

As no export control system is perfect, the conferees recommend that the threshold of violation be one of material significance. This should eliminate any concern that the sale of a “widget” to the wrong country could trigger the sanction in paragraph 104(d)(2).

The conferees recommend granting to the President two separate waiver authorities regarding this sanction. The first could be exercised if the President determines that cessation of such exports would be seriously prejudicial to the achievement of United States nonproliferation objectives or otherwise jeopardize the common defense and security.

The second waiver could be used if the offending transfer was made
without the knowledge of the Government of India, such transfer was made either by an Indian person not owned, controlled, or directed by the Government of India at the time of the transfer, or by an individual who acted alone without the knowledge of the relevant Indian entity, and the President certified to the appropriate congressional committees that the Government of India has taken or is taking appropriate judicial or other enforcement actions against the Indian person with respect to such transfer. The conferees do not intend that an Indian individual working alone for private gain and without the knowledge of the entity for which that individual works would trigger the restrictions in this section. However, if such individual is a senior officer of such entity, the conferees believe that constructive knowledge must be deemed to exist. In a case where it is impossible for the Government of India to bring judicial or other enforcement action against an Indian person because the government cannot exercise jurisdiction over the person or entity, or if the Government of India cannot bring an enforcement action because of its good faith interpretation of applicable law, or for some other reason, the statutory requirement that “appropriate” action be taken to avoid the termination required in subparagraph (A) may be deemed fulfilled. The conferees thus intend not to put an agreement for cooperation with India in jeopardy, but rather to encourage India’s compliance with its commitments and to allow sanctions to be waived if compliance efforts are in train. It is the President’s responsibility, however, to show in his certification to Congress that such circumstances limiting the Government of India’s enforcement actions truly exist, and are not in reality an evasion of the intent of this provision that India exercise true oversight over the persons and entities that operate within its territory or jurisdiction.

The conferees understand that, if necessary, the President could use his waiver authority to give India some time in which to commence appropriate enforcement actions. The conferees intend, however, that any such waiver would be for a limited period and would be withdrawn if the expected enforcement failed to materialize.

Section 104(d)(4) derives from a provision in the Senate bill that prohibited the export and reexport to India of any equipment, materials, or technology related to the enrichment of uranium, the reprocessing of spent nuclear fuel, or the production of heavy water to India, except where the Indian end user is a multinational facility participating in an IAEA-approved program to provide alternatives to national fuel cycle capabilities or a facility participating in a bilateral or multinational program to develop a proliferation
resistant fuel cycle, and where the President determines that the export or reexport will not improve India’s ability to produce nuclear weapons or fissile material for military uses. The conferees recommend the Senate provision with an amendment.

Section 104(d)(4) regulates U.S. cooperation with India in the areas of uranium enrichment, reprocessing of spent fuel and heavy water production. Under the Atomic Energy Act, such cooperation is not restricted, but agreements for cooperation must specify if such cooperation is to take place.

In dealing with such matters as related to India, the conferees have paid particular attention to the general status of such cooperation under U.S. law and with all nations that currently have 123 agreements with the United States, and to the policies of the present Administration. The conferees note that all but one currently active Section 123 agreement (with Australia) specifically prohibit such cooperation. In order to meet the requirement of Section 123 a.(9) of the Atomic Energy Act (that equipment, material, or production or utilization facilities produced as a result of a U.S. nuclear cooperation agreement will be subject to all the other requirements of Section 123 a.), it has been deemed necessary to amend agreements for cooperation, submitting them to Congress for approval. In 1999, when the United States Government opted to expand U.S.-Australian nuclear cooperation to allow for cooperation in the SILEX uranium enrichment process, an amended agreement was submitted to Congress for approval.

The conferees intend that, should any such cooperation with India be contemplated, either the original agreement for cooperation would specify that such cooperation is authorized or a subsequently amended agreement would be submitted to the Congress. In either circumstance, existing congressional prerogatives to review and approve such cooperation would be maintained. The conferees note that the

Administration has already stipulated that “full civil nuclear cooperation,” the term used in the July 18, 2005, Joint Statement between President Bush and Indian Prime Minister Singh, will not include enrichment or reprocessing technology. This is consistent with President Bush’s February 11, 2004, speech at the National Defense University, in which he stated that “enrichment and reprocessing are not necessary for nations seeking to harness nuclear energy for peaceful purposes,” and the fact that, other than in the SILEX arrangement with Australia, the United States
does not currently engage in cooperation regarding enrichment or reprocessing technology with any country.

The conferees recommend an additional provision, not contained in the original Senate bill, that would add a requirement that appropriate measures will be in place to ensure that no sensitive nuclear technology (SNT), as defined in section 4(5) of the Nuclear Nonproliferation Act of 1978 (22 U.S.C. 3203(5)), will be diverted to any person, site, facility, location, or program not under IAEA safeguards.

The conferees believe that this language is necessary to ensure that no SNT related to the enrichment of uranium (which can be used to make highly-enriched uranium for weapons), the reprocessing of spent nuclear fuel (which can provide plutonium for weapons), or the production of heavy water (which is used in reactors that produce weapons-grade plutonium and tritium as a byproduct) is transferred to India, unless under circumstances that provide assurance that this technology would not be diverted to a similar site, facility, location, or program not associated with peaceful nuclear fuel-cycle activities.

India currently produces heavy water, operates heavy-water moderated reactors, reprocesses spent nuclear fuel, and has a limited uranium enrichment capability. Only a portion of India’s facilities will be under IAEA safeguards, and sensitive nuclear technologies will reside in India in both safeguarded and un-safeguarded facilities. The conferees seek to ensure that the United States does not provide, even inadvertently, assistance to India that could further India’s development of these technologies for non-civilian purposes. Such assistance could be viewed as a violation of U.S. obligations under Article I of the NPT.

The conferees intend that no licenses be issued pursuant to Parts 110 and 810 of Title 10 of the Code of Federal Regulations by the Nuclear Regulatory Commission (NRC) and the Secretary of Energy except under the requirements of subparagraph (B) of subsection 104(d)(4). Such a restriction on transfers would also extend to any Department of Energy authority to transfer enrichment, reprocessing, or heavy water production-related technology, not pursuant to a Section 123 agreement.

The conferees note that section 104(d)(4) cannot override the terms of an agreement for cooperation with India arranged pursuant to section 123 of the Atomic Energy Act that may not permit such cooperation and
would thus bar such exports or transfers, and the conferees do not intend to create such authority. They expect that, as in other nuclear cooperation agreements, the Executive branch would submit an amended or new nuclear cooperation agreement to cover enrichment, reprocessing, or heavy water production-related cooperation, should such a change be undertaken in the future with India. Such an agreement would not be pursuant to the terms of this title, and would have to be submitted under the existing exemption authority contained in section 123 of the AEA.

Section 104(d)(5) contains broad requirements for a nuclear export accountability program to be carried out with respect to U.S. exports and re-exports of nuclear materials, equipment, and technology sold, leased, exported, or reexported to India. Such a program can provide increased confidence in India’s separation of its civilian from its military nuclear programs, facilities, materials and personnel, and also would further ensure United States compliance with Article I of the NPT and implementation of section 123 a.(1) of the Atomic Energy Act of 1954. The provision is not intended to reflect poorly on India’s July 18, 2005, Joint Statement commitments and its March and May 2006 separation documents. Rather, the conferees believe that the resulting and regular cooperation between U.S. regulatory agencies, in particular with the NRC, can provide a basis for even greater cooperation between the two nations.

Section 104(d)(5) provides a large degree of flexibility to the President. Clauses (B)(i) and (ii) require sufficient measures to ensure that all the assurances and conditions of any licenses or authorizations issued for exports and reexports to India by the NRC (which are issued under 10 CFR Part 110) and by the Secretary of Energy (which are issued pursuant to 10 CFR Part 810) are being met and complied with in India. Clause (B)(ii) would require that, with respect to any authorizations issued by the Secretary of Energy pursuant to section 57 b. of the Atomic Energy Act of 1954 (42 USC 2077(b)): the identified recipients of the nuclear technology are authorized to receive the nuclear technology; the nuclear technology identified for transfer will be used only for safeguarded nuclear activities and will not be used for any military or nuclear explosive purpose; and the nuclear technology identified for transfer will not be retransferred without the prior consent of the United States, and facilities, equipment, or materials derived through the use of transferred technology will not be transferred without the prior consent of the United States.

Section 104(d)(5)(B)(iii) mandates that, in the event the IAEA is
ununable to implement safeguards as required by an agreement between the United States and India approved pursuant to this title, there be appropriate assurance that arrangements will be put in place expeditiously that are consistent with the requirements of section 123 a.(1) of the Atomic Energy Act of 1954 (42 U.S.C. 2153(a)(1)) regarding the maintenance of safeguards as set forth in the agreement regardless of whether the agreement is terminated or suspended for any reason. Assurances that there will be such “fall-back safeguards,” if needed, are an important feature of agreements for nuclear cooperation; they enable such safeguards to exist more clearly in perpetuity. There is always a possibility that budget or personnel strains in the IAEA will render it unable to fulfill a safeguards mandate. Such strains would likely have nothing to do with India, but would have a major impact on the ability of the United States to assure that U.S. exports were being used responsibly. The conferees intend to assure that the requirements of section 123 a.(1) are fully met; they do not intend to impose a more intrusive regime than arrangements that have been used before in one or more U.S. agreements for cooperation.

Section 104(e) makes a conforming amendment to section 123 d. of the Atomic Energy Act of 1954. The purpose of this provision is to make clear that the U.S.-India agreement on civil nuclear cooperation, even if exempted from subsection a.(2) of section 123, may enter into force only if approved by Congress by a joint resolution of approval, consistent with current law with regard to an agreement that the President exempts from any requirement of subsection a. of section 123. As with any other agreement submitted under section 123 d., the congressional approval procedures under section 130 i. of the Atomic Energy Act would apply.

Section 104(f) provides that the authority under subsection (a)(1) to exempt a U.S.-India agreement on civil nuclear cooperation will terminate if a joint resolution, approved as required under section 123 d. (as amended by subsection (e)), is enacted. The purpose of this provision is to ensure that a future President may not use the authority of this title to exempt a new U.S.-India agreement on civil nuclear cooperation.

**Section 104(g) provides for several reports to Congress.**

Paragraph (1) requires the President to keep the appropriate congressional committees fully and currently informed of the facts and implications of any significant nuclear activities of India. This requirement includes information on any material noncompliance on the part of the Government of India with the nonproliferation commitments undertaken in
the Joint Statement of July 18, 2005, the March 7, 2006, separation plan, the future IAEA-India safeguards agreement and Additional Protocol, a peaceful nuclear cooperation agreement between India and the United States, the terms and conditions of any approved licenses regarding the export or reexport of nuclear material or dual-use material, equipment, or technology, and United States laws and regulations regarding such licenses. This reporting requirement also encompasses information regarding the construction of a nuclear facility in India after the date of the enactment of this title, significant changes in the production by India of nuclear weapons or in the types or amounts of fissile material produced, and changes in the purpose or operational status of any unsafeguarded nuclear fuel cycle activities in India.

The term “fully and currently informed” creates an obligation upon the Executive branch to inform the appropriate committees whenever significant information becomes available, rather than waiting to include it in a regularly scheduled report. This does not mean that the committees can expect daily or weekly briefings; rather, the Executive branch is trusted to use common sense in determining how best to discharge its duty to keep the committees up to date on important information.

Paragraph (2) requires an “Implementation and Compliance Report” by the President to Congress not later than 180 days after the date on which a civil nuclear cooperation agreement between the U.S. and India enters into force and annually thereafter.

This report must include a description of any additional nuclear facilities and nuclear materials that the Government of India has placed or intends to place under IAEA safeguards; a comprehensive listing of all licenses that have been approved by the Nuclear Regulatory Commission and the Secretary of Energy for exports and reexports to India under parts 110 and 810 of title 10, Code of Federal Regulations; any licenses approved by the Department of Commerce for the export or reexport to India of commodities, related technology, and software which are controlled for nuclear nonproliferation reasons on the Nuclear Referral List of the Commerce Control List maintained under part 774 of title 15, Code of Federal Regulation, or any successor regulation; any other United States authorizations for the export or reexport to India of nuclear materials and equipment; and with respect to each such license or other form of authorization as described:
1) the number or other identifying information of each license or authorization;

2) the name or names of the authorized end user or end users;

3) the name of the site, facility, or location in India to which the export or reexport was made;

4) the terms and conditions included on such licenses and authorizations;

5) any postshipment verification procedures that will be applied to such exports or reexports; and

6) the term of validity of each such license or authorization.

This report must also include information regarding any significant nuclear commerce between India and other countries, including any such trade that is not consistent with applicable NSG guidelines or decisions, or would not meet the standards applied to exports or reexports of such material, equipment, or technology of United States origin. In addition, the report must include either an assessment that India is in full compliance with the commitments and obligations contained in the agreements and other documents referenced above; or an identification and analysis of all compliance issues arising with regard to the adherence by India to its commitments and obligations, including 1) the steps the U.S. Government has taken to remedy or otherwise respond to such compliance issues; 2) the responses of the Government of India to such steps; 3) the steps the U.S. Government will take to this end in the coming year; and 4) an assessment of the implications of any continued noncompliance, including whether nuclear commerce with India remains in the national security interest of the United States.

Further, the report must contain an assessment of whether India is fully and actively participating in United States and international efforts to dissuade, isolate, and, if necessary, sanction and contain Iran for its efforts to acquire weapons of mass destruction, including a nuclear weapons capability and the capability to enrich uranium or reprocess nuclear fuel, and the means to deliver weapons of mass destruction, including a description of the specific measures that India has taken in this regard; and if India is not assessed to be fully and actively participating in these efforts, a description of: the measures the United States Government has
taken to secure India’s full and active participation, the responses of the
Government of India to such measures, and the measures the United States
Government plans to take in the coming year to secure India’s full and
active participation.

The report must provide an analysis of whether United States civil
nuclear assistance to India is in any way assisting India’s nuclear weapons
program, including through the use of any U.S. equipment, technology, or
nuclear material by India in an unsafeguarded nuclear facility or nuclear-
weapons related complex; the replication and subsequent use of any U.S.
technology by India in an unsafeguarded nuclear facility or unsafeguarded
nuclear weapons-related complex, or for any activity related to the research,
development, testing, or manufacture of nuclear explosive devices; and
the provision of nuclear fuel in such a manner as to facilitate the increased
production by India of highly-enriched uranium or plutonium in
unsafeguarded nuclear facilities.

A detailed description is also required regarding U.S. efforts to
promote national or regional progress by India and Pakistan in disclosing,
securing, limiting, and reducing their fissile material stockpiles, including
stockpiles for military purposes, pending creation of a world-wide fissile
material cut-off regime, including the institution of a Fissile Material Cut-off
Treaty; the responses of India and Pakistan to such efforts; and assistance
that the United States is providing, or would be able to provide, to India
and Pakistan to promote the aforementioned national and regional progress
by India and Pakistan.

The report must also contain an estimate of the amount of uranium
mined and milled in India during the previous year, the amount of such
uranium that has likely been used or allocated for the production of nuclear
explosive devices, and the rate of production in India of fissile material for
nuclear explosive devices and of nuclear explosive devices, along with an
estimate of the amount of electricity India’s nuclear reactors produced for
civil purposes during the previous year, and the proportion of such
production that can be attributed to India’s declared civil reactors, given
that India’s military reactors produce some electricity for use in the civil
sector. In addition, there must be an analysis as to whether imported
uranium has affected the rate of production in India of nuclear explosive
devices.

The report must also provide a detailed description of efforts and
progress made toward the achievement of India’s full participation in the
Proliferation Security Initiative and formal commitment to the Statement of Interdiction Principles of the PSI; public announcement of its decision to conform its export control laws, regulations, and policies with the Australia Group and with the Guidelines, Procedures, Criteria, and Controls List of the Wassenaar Arrangement; and effective implementation of these decisions.

Finally, this report requires information regarding the disposal during the previous year of spent nuclear fuel from India’s civilian nuclear program, and any plans or activities relating to future disposal of such spent nuclear fuel.

Paragraph (3) allows the President to submit the aforementioned reports under Paragraph (2) with other annual reports. The report shall be unclassified but may contain a classified annex.

Section 105. United States Compliance with its Nuclear Nonproliferation Treaty Obligations.

Sec. 105 states that nothing in this title constitutes authority for any action in violation of an obligation of the United States under the NPT. As stated earlier in this report, the conferees consider the NPT to be the cornerstone of U.S. nuclear nonproliferation policy. They expect the Executive branch to keep its NPT obligations in mind when considering each export or reexport, transfer, or retransfer pursuant to an agreement for cooperation, and especially pursuant to such an agreement with a state that is not a State Party to the NPT.

Section 106. Inoperability of Determination and Waivers.

Sec. 106 states that a determination and any waiver under section 104 shall cease to be effective if the President determines that India has detonated a nuclear explosive device after the date of the enactment of this Act. The conferees intend this section to make absolutely clear a point that already follows from section 129 of the Atomic Energy Act (42 U.S.C. 2158). This title affords no waiver from section 129 for an Indian nuclear detonation after July 18, 2005.

Section 107. MTCR Adherent Status.

Section 107 is included to clarify the status accorded to India. Section 73 of the Arms Export Control Act (AECA) mandates sanctions on transfers of MTCR equipment or technology if the President determines that a foreign
person knowingly exports, transfers, or otherwise engages in the trade of any MTCR equipment or technology that contributes to the acquisition, design, development, or production of missiles in a country that is not an MTCR adherent and would be, if it were United States-origin equipment or technology, subject to the jurisdiction of the United States under the AECA; or if a foreign person conspires to or attempts to engage in such export, transfer, or trade; or if a foreign person facilitates such an export, transfer, or trade by any other person; or if the

President has made a determination with respect to a foreign person under section 11B(b)(1) of the Export Administration Act of 1979 (50 USC App. 2410b(b)(1)).

Section 73 of AECA is, however, inapplicable to MTCR adherents if the export in question is “any export, transfer, or trading activity that is authorized by the laws of an MTCR adherent, if such authorization is not obtained by misrepresentation or fraud” or if the export, transfer, or trade of an item is to an end user in a country that is an MTCR adherent (section 73(b)). Section 73 also provides for the termination of sanctions when an MTCR adherent takes steps toward effective judicial enforcement against persons violating the prohibitions in section 73, if such actions are “comprehensive” and are “performed to the satisfaction of the United States” and the findings of such proceedings are satisfactory to the United States (section 73(c)(1)(A) and (B) and section 73(c)(2)).

Secretary Rice has stated that “India would not be considered an ‘MTCR Adherent’ as defined under Section 73” because:

“India has committed to unilaterally adhere to the Missile Technology Control Regime (MTCR) Guidelines. The missile sanctions law would generally still apply to a ‘unilateral adherent’ to the MTCR.

Unilateral adherence to the MTCR Guidelines means that a country makes a unilateral political commitment to abide by the Guidelines and Annex of the MTCR. In particular, an MTCR unilateral adherent commits to control exports of missile-related equipment and technology according the MTCR Guidelines, including any subsequent changes to the MTCR Guidelines and Annex. Inter alia, this means that MTCR unilateral adherent countries need to have in place laws and regulations that permit them to control the export of MTCR Annex equipment and technology consistent with the MTCR Guidelines.
An ‘MTCR Adherent’ is a specially defined status in terms of Section 73 of the Arms Export Control Act (also referred to as the missile sanctions law). An ‘MTCR Adherent,’ as defined in Section 73 of the missile sanctions law, is a country that ‘participates’ in the MTCR or that, ‘pursuant to an international understanding to which the United States is a party, controls MTCR equipment and technology in accordance with the criteria and standards set forth in the MTCR.’ India’s ‘unilateral adherence’ to the MTCR would not meet this requirement.”

Since India’s unilateral adherence does not qualify it as an MTCR adherent under section 73 of AECA, the conferees included section 107 to clarify this point. While the provision accomplishes this, it is also drafted in such a manner as to permit India, should it so decide in the future, to enjoy the benefits of AECA section 73 by becoming a full adherent to the MTCR. Because the provision states a factual finding by Congress, the provision would no longer have effect if India were to meet the requirements laid out as in Secretary Rice’s statement. Under section 107, however, India’s transfers of missile or missile-related equipment, technology and technical data, remain for now subject to U.S. sanctions if they should violate subsection 73(a) of the AECA.

Section 108. Technical Amendment.

Section 109. United States-India Scientific Cooperative Nuclear Nonproliferation Program.

Section 109 authorizes the Secretary of Energy to establish a cooperative nuclear nonproliferation program to pursue jointly with scientists from the United States and India a program to further common nuclear nonproliferation goals, including scientific research and development efforts, with an emphasis on nuclear safeguards. The conferees believe that there are exciting opportunities for cooperative efforts between U.S. and Indian scientists and engineers in this area, and they hope that the two countries’ civil nuclear power experts, in particular, will share new ideas and best practices for the benefit of all. Section 109 is not intended to create an
obligation for India to meet, but rather to open an avenue for increased cooperation on topics of concern to both countries.

Subsection (c) mandates that the Secretary of Energy enter into an agreement with the National Academies to develop recommendations for the implementation of the cooperative nonproliferation program. The National Academies, which include, inter alia, the National Academy of Sciences, the National Academy of Engineering, and the National Research Council, have a long and distinguished history of cooperation with Indian scientists and are skilled at building bridges to further joint efforts. The conferees encourage the Secretary of Energy to arrange for this National Academies assistance in the coming months, even if funds for the cooperative program cannot be appropriated until fiscal year 2008.

Section 110. Definitions.

Section 110 defines terms used in this Act.

Title II—UNITED STATES ADDITIONAL PROTOCOL IMPLEMENTATION

Title II is a Senate provision, based almost entirely upon S. 2489, the U.S. Additional Protocol Implementation Act, reported by the Senate Committee on Foreign Relations on April 3, 2006, in Senate Report 109-226. It implements the Additional Protocol between the United States and the International Atomic Energy Agency (T. Doc. 107-7), to which the Senate gave advice and consent to ratification on March 31, 2004.

The Senate adopted amendments to the S. 2489 text when it was debated as title II of this bill, and the conferees recommend a small number of further amendments. The conferees hereby incorporate by reference Senate Report 109-226, except where provisions were later amended either in the Senate or by the conferees.

Sections 252 and 253 were modified by the Senate, principally to require that location-specific IAEA environmental sampling not be permitted in the United States under Article 5 of the Additional Protocol unless the President has determined and reported to the appropriate congressional committees with respect to that proposed use of environmental sampling that the proposed use of location-specific environmental sampling is necessary to increase the capability of the IAEA to detect undeclared nuclear activities in a non-nuclear weapon state. The conferees are persuaded that the IAEA is unlikely to propose such sampling, given that
the United States, as a nuclear weapon state, is not barred from using fissile material for military purposes.

The conferees are further persuaded that these sections will not prevent the United States from fulfilling its obligations under the Additional Protocol. This is true even though section 254, also added by the Senate, limits the purposes that may be construed as covered by the phrase “necessary to increase the capability of the IAEA to detect undeclared nuclear activities in a non-nuclear weapon state.”

Subtitle F of title II, Protection of National Security Information and Activities, was added by the Senate. Section 261(a) provides that no current or former Department of Defense or Department of Energy location, site, or facility of direct national security significance shall be declared or be subject to IAEA inspection under the Additional Protocol. Similarly, under section 261(b), no information of direct national security significance regarding such locations, sites, or facilities shall be provided under the Additional Protocol. These requirements parallel statements that Administration officials have made for several years regarding how the Additional Protocol’s national security exemption will be implemented.

Sections 261(c) and 261(d) provide that nothing in this title shall be construed to permit the communication or disclosure to the IAEA or IAEA employees of restricted data controlled by the provisions of the Atomic Energy Act of 1954 or of national security information and other classified information. These provisions parallel an understanding in the resolution of ratification approved by the Senate in 2004 that the Additional Protocol does not require any such disclosure. The conferees note that these provisions do not bar the Executive branch, however, from using any other authority that it may possess to provide classified information to the IAEA.

Section 262(a) provides that no national of a country designated by the Secretary of State under section 620A of the Foreign Assistance Act of 1961 (22 U.S.C. 2371) as a government supporting acts of international terrorism shall be permitted access to the United States to carry out an inspection activity under the Additional Protocol or a related safeguards agreement. Both the Additional Protocol and the underlying U.S.-IAEA safeguards agreement allow the United States to bar individual inspectors from engaging in inspections in the United States, and the United States has routinely exercised that right as appropriate. The conferees know of no occasion on which a national of a state sponsor of terrorism has conducted an IAEA inspection in this country.
Section 262(b) requires that IAEA inspectors be accompanied at all times by U.S. Government personnel when inspecting sites, locations, facilities, or activities in the United States under the Additional Protocol. The conferees understand that this provision will not require any change in current practices.

Section 262(c) provides that the President shall conduct vulnerability, counterintelligence, and related assessments not less than every 5 years to ensure that information of direct national security significance remains protected at all sites, locations, facilities, and activities in the United States that are subject to IAEA inspection under the Additional Protocol. The conferees understand that once this title is enacted, the Executive branch will resume such assessments.

Subtitle G of title II provides for several reports from the Executive branch.

Sections 271 through 273 provide for prior notice of sites, locations, facilities, and activities in the United States to be declared to the IAEA or removed from that status, along with the reasons for those decisions; and certification that the necessary security assessments have been conducted and appropriate measures taken to ensure that information of direct national security significance will not be compromised.

Section 274 provides for reports on: measures that have been or should be taken to achieve the adoption of additional protocols to existing safeguards agreements signed by non-nuclear-weapon States Party; and on assistance that has been provided or should be provided by the United States to the IAEA in order to promote the effective implementation of additional protocols to existing safeguards agreements signed by nonnuclear-weapon States Party and the verification of the compliance of such parties with IAEA obligations, with a plan for providing any needed additional funding. The conferees believe that the safeguards function is a vital element of U.S. nonproliferation policy and urge the Executive branch to maintain robust funding for U.S. assistance to the IAEA, taking into account the continuing need for improved safeguards in countries of concern, the additional safeguards load that the IAEA will have to bear when India begins to engage in large-scale civil nuclear commerce, and the likely advent of additional safeguards requirements as the world moves to increase nuclear power production.

Section 275 provides that the President shall notify Congress of any
APPENDICES

notifications issued by the IAEA to the United States under Article 10 of the Additional Protocol. Article 10 says that the IAEA shall inform the United States of activities carried out under the Additional Protocol, including those in response to questions or inconsistencies the IAEA had brought to the attention of the United States, the results of those IAEA activities, and the conclusions that the IAEA has drawn. Article 10 notifications will take place at least annually.

F F F F F

APPENDIX - 3

1) Full co-operation in civilian nuclear energy has been denied to India:
   a) U.S. unwillingness to co-operate in the areas of spent-fuel reprocessing and uranium enrichment related to the full nuclear fuel cycle.
   b) Denial of the nuclear fuel supply assurances and alternate supply arrangements mutually agreed upon earlier.
   c) Limits co-operation in the GNEP programme. India will not be permitted to join as a technology developer but as a recipient state.

2) India asked to participate in the international effort on nuclear non-proliferation, with a policy congruent to that of United States.

The Hyde Act envisages (Section-109) India to jointly participate with the U.S. in a programme involving the U.S. National Nuclear Security Administration to further nuclear non-proliferation goals. This goes much

¹. After a meeting with Atomic Energy Commission Chairman Anil Kakodkar in Mumbai on December 15, eminent nuclear scientists prepared a note on the Indo-U.S. nuclear deal and made certain recommendations to address their concerns.
beyond the IAEA norms and has been unilaterally introduced apparently without the knowledge of the Indian government. In addition, the U.S. President is required to annually report to the congress whether India is fully and actively participating in U.S. and international efforts to dissuade, isolate and if necessary sanction and contain Iran for its pursuit of indigenous efforts to develop nuclear capabilities. These stipulations in the Act and others pertaining to the Proliferation Security Initiative (PSI), the Wassenaar Arrangement, and the Australia Group etc. are totally outside the scope of the July 18th Agreement and they constitute intrusion into India’s independent decision making and policy matters. India’s adherence to MTCR is also unnecessarily brought in.

3) Impact on our Strategic Defence Programme

In responding to the concerns earlier expressed by us, the Prime Minister stated in the Rajya Sabha on August 17, 2006 that “we are fully conscious of the changing complexity of the international political system. Nuclear weapons are an integral part of our national security and will remain so, pending the elimination of all nuclear weapons and universal non-discriminatory nuclear disarmament. Our freedom of action with regard to our strategic programmes remains unrestricted. The nuclear agreement will not be allowed to be used as a backdoor method of introducing NPT type restrictions on India.” And yet, this Act totally negates the above assurance of the PM.

In view of the uncertain strategic situation around the globe, we are of the view that India must not directly or indirectly concede our right to conduct future nuclear weapon tests, if these are found necessary to strengthen our minimum deterrence. In this regard, the Act makes it explicit that if India conducts such tests, the nuclear cooperation will be terminated and we will be required to return all equipment and materials we might have received under this deal. To avoid any abrupt stoppage of nuclear fuel for reactors which we may import, India and the U.S. had mutually agreed to certain alternative fuel supply options which this Act has totally eliminated out of consideration. Thus, any future nuclear test will automatically result in a heavy economic loss to the country because of the inability to continue the operation of all such imported reactors.

Furthermore, the PM had assured the nation that “India is willing to join any non-discriminatory, multilaterally negotiated and internationally verifiable Fissile Material Cut-off Treaty (FMCT), as and when it is concluded in the Conference on Disarmament.” But, the Act requires the U.S. to
“encourage India to identify and declare a date by which India would be willing to stop production of fissile material for nuclear weapons unilaterally or pursuant to a multilateral moratorium or treaty.”

In his Rajya Sabha address, the PM had said, “Our commitment towards non-discriminatory global nuclear disarmament remains unwavering, in line with the Rajiv Gandhi Action Plan. There is no dilution on this count.” Unfortunately, the Act is totally silent on the U.S. working with India to move towards universal nuclear disarmament, but it eloquently covers all aspects of non-proliferation controls of U.S. priority, into which they want to draw India into committing.

In summary, it is obvious that the Hyde Act still retains many of the objectionable clauses in the earlier House and Senate bills on which the Prime Minister had clearly put forth his objections and clarified the Indian position in both Houses of Parliament. Once this Act is signed into law, all further bilateral agreements with the U.S. will be required to be consistent with this law.

As such, the Government of India may convey these views formally to the U.S. Administration and they should be reflected in the 123 Agreement.

**Signatories:**
Dr. H.N. Sethna, former Chairman, Atomic Energy Commission
Dr. M.R. Srinivasan, former Chairman, Atomic Energy Commission
Dr. P.K. Iyengar, former Chairman, Atomic Energy Commission

Dr. A.N. Prasad, former Director, Bhabha Atomic Research Centre
Dr. Y.S.R. Prasad, former Chairman & Managing Director, Nuclear Power Corporation of India Limited
Dr. Placid Rodriguez, former Director, Indira Gandhi Centre for Atomic Research
APPENDIX - 4

President Signs U.S.-India Peaceful Atomic Energy Cooperation Act.

December 18, 2006.

The President: Thanks for coming. Welcome to the White House. Today, I have the honor of signing a bill that will strengthen the partnership between the world’s two largest democracies. The relationship between the United States and India has never been more vital—and this bill will help us meet the energy and security challenges of the 21st century. I want to thank the Congress for delivering this historic bill to my desk. (Applause.) I’m look forward to signing it. (Laughter.)

The “Henry Hyde United States-India Peaceful Atomic Energy Cooperation Act” passed with strong bipartisan support. It is a fitting tribute to its sponsor and the man whose name it carries. During his 32 years in Congress, Chairman Hyde earned the respect of his colleagues on both sides of the aisle. I appreciate his effective and principled leadership. I wish him all the best in his retirement.

I’m proud to be joined here by Secretary of State Condi Rice. This bill would not have happened without her leadership. (Applause.) I thank very much the members of the Senate and the House who joined us up here, people from both parties who worked hard to get this bill passed: Senator Bill First, and Senator Dick Lugar, and Senator George Allen; Congressman Gary Ackerman, Frank Pallone, Joe Crowley, Thad McCotter. Thank you all for joining us. Thanks for your good work. (Applause.)

I appreciate our Ambassador, David Mulford, and wife Jeannie, for joining us. Thanks for your good work, Ambassador. I’m also proud to be joined by Ambassador Jassal. I want to thank you for coming, Ambassador. I thank the Indian American community leaders who are here today.

The Indian American community was vital to explaining this strategic bill to our fellow citizens. I appreciate so very much your carrying the message not only here at home, but in India. And I want you to know that your voice was very effective, and I welcome it. (Applause.)

The United States and India are natural partners. The rivalries that once kept our nations apart are no more — and today, America and India
are united by deeply held values. India is a democracy that protects rule of law and is accountable to its people. India is an open society that demands freedom of speech and freedom of religion. India is an important ally in the war against extremists and radicals. Like America, India has suffered from terrorist attacks on her own soil. And like America, India is committed to fighting the extremists, defeating their hateful ideology, and advancing the cause of human liberty around the world.

The United States and India are also working together to expand economic opportunities in both our countries. India’s economy has more than doubled in size since 1991— and it is one of the fastest-growing markets for American exports. If you visit India today, you are going to see a lot of people using goods and services made by American companies. And that helps raise the standard of living not only in India, but here at home. Trade is good for both countries, and we’re going to continue to work with India to promote free and fair trade.

In our meetings in Washington and in New Delhi, Prime Minister Singh, for whom I have a lot of respect, we discussed the importance of working together to meet the energy needs of our growing economies. We recognize that energy, clean energy is going to be important to the advancement of our economies. And on my visit to India earlier this year, we concluded an historic agreement that will allow us to share civilian nuclear technology and bring India’s civilian nuclear program under the safeguards of the IAEA. This cooperation will help the people of India produce more of their energy from clean, safe nuclear power, and that, in turn, will help their economy grow. And it’s in our interest that the Indian economy continue to grow. It helps make America more secure.

As part of the agreement, the United States and India have committed to take a series of steps to make nuclear cooperation a reality, and we’re going to fulfill these commitments. The bill I sign today is one of the most important steps, and it’s going to help clear the way for us to move forward with this process.

The bill is going to help us achieve four key goals.

First, the bill will help us strengthen cooperation between India and United States on one of the most important challenges in the 21st century, and that is energy. India is now the world’s fifth largest consumer of energy - and its demand for electricity is expected to double by 2015. The United States has a clear interest in helping India meet this demand with nuclear
energy. By helping India expand its use of safe nuclear energy, this bill lays the foundation for a new strategic partnership between our two nations that will help ease India’s demands for fossil fuels and ease pressure on global markets.

Second, the bill will help promote economic growth. This bill helps open a new important market for American businesses by paving the way for investment in India’s civilian nuclear industry for the first time ever. This new trade will help American companies gain new customers abroad, and create new jobs here at home.

Third, the bill will help make it possible for India to reduce emissions — and improve its environment. Today, India produces nearly 70 percent of its electricity from coal. Burnini coal produces air pollution and greenhouse gases - and as India’s economy has grown emission levels have risen, as well. We must break the cycle, and with nuclear power, we can. We can help India do so, and we can do so here at home by the use of nuclear power.

Nuclear power is the one source of energy that can generate massive amounts of electricity without producing any air pollution or greenhouse gases. And by sharing advanced civilian nuclear technology, we will help our friend, India, meet its growing demand for energy and lower emissions at the same time.

Finally, the bill will help keep America safe by paving the way for India to join the global effort to stop the spread of nuclear weapons. (Applause.) India has conducted its civilian nuclear energy program in a safe and responsible way for decades. Now, in return for access to American technology, India has agreed to open its civilian nuclear power program to international inspection. This is an important achievement for the whole world. After 30 years outside the system, India will now operate its civilian nuclear energy program under internationally accepted guidelines — and the world is going to be safer as a result.

The bill I’m about to sign is evidence of the growing bonds of trust between our two countries. Congress acted quickly and passed it with overwhelming bipartisan support. You know why? Because the American people have come to see India as a friend. (Applause.) And I view the Prime Minister as a trustworthy man and a friend. I appreciate Prime Minister Singh’s leadership on this very important issue. I look forward to continuing to work with him to make civil nuclear cooperation a reality.
And now it is my honor to sign the Henry J. Hyde United States-India Peaceful Atomic Energy Cooperation Act of 2006. (Applause.)

(The Act is signed.) (Applause.)

END 10:56 A.M. EST

APPENDIX - 5

U.S. President’s Statement on H.R. 5682, the “Henry J. Hyde United States-India Peaceful Atomic Energy Cooperation Act of 2006”

Washington (D.C), December 18, 2006

Today I have signed into law H.R. 5682, an Act containing the “Henry J. Hyde United States-India Peaceful Atomic Energy Cooperation Act of 2006.” The Act will strengthen the strategic relationship between the United States and India and deliver valuable benefits to both nations.

Section 103 of the Act purports to establish U.S. policy with respect to various international affairs matters. My approval of the Act does not constitute my adoption of the statements of policy as U.S. foreign policy. Given the Constitution’s commitment to the presidency of the authority to conduct the Nation’s foreign affairs, the executive branch shall construe such policy statements as advisory. Also, if section 104(d)(2) of the Act were construed to prohibit the executive branch from transferring or approving the transfer of an item to India contrary to Nuclear Suppliers Group transfer guidelines that may be in effect at the time of such future transfer, a serious question would exist as to whether the provision unconstitutionally delegated legislative power to an international body. In order to avoid this constitutional question, the executive branch shall construe section 104(d)(2) as advisory. The executive branch will give sections 103 and 104(d)(2) the due weight that comity between the legislative and executive branches should require, to the extent consistent with U.S. foreign policy.

The executive branch shall construe provisions of the Act that mandate, regulate, or prohibit submission of information to the Congress,
an international organization, or the public, such as sections 104, 109, 261, 271, 272, 273, 274, and 275, in a manner consistent with the President’s constitutional authority to protect and control information that could impair foreign relations, national security, the deliberative processes of the Executive, or the performance of the Executive’s constitutional duties.

APPENDIX - 6

Fact Sheet issued by the White House on the “United States-India Peaceful Atomic Energy Cooperation Act”.

Washington (D.C), December 18, 2006

Today, President Bush Signed The United States-India Peaceful Atomic Energy Cooperation Act. This Act will strengthen the partnership between the world’s two largest democracies and help our countries meet the energy and security challenges of the 21st century.

This Act Is An Important Step That Will Help Allow Us To Share Civilian Nuclear Technology And Bring India’s Civilian Nuclear Program Under The Safeguards Of The International Atomic Energy Agency. On his visit to India earlier this year, President Bush reached an historic agreement with Indian Prime Minister Singh, under which the United States and India committed to take a series of steps to make nuclear cooperation a reality. The bill the President signed today is one of the most important of these steps. Nuclear cooperation will help the people of India produce more of their energy from clean, safe civilian nuclear power, help both our economies grow, and make America more secure.

America And India Are United By Deeply Held Values. Our two great democracies are allies in the War on Terror, partners in global trade, and stewards of our environment. India is a democracy that protects the rule of law and is accountable to its people, and an open society that defends freedom of speech and freedom of religion.

The United States And India Are Working Together To Expand Economic Opportunities In Both Our Countries. India’s economy has more than doubled in size since 1991, and it is one of the fastest-
growing markets for American exports. This trade is creating new jobs in America and raising the standard of living for millions throughout India. America will continue to work with India to promote free and fair trade - and fuel economic growth in both countries.

The United States-India Peaceful Atomic Energy Cooperation Act Will Help America Achieve Four Key Goals

1. This Act Will Help Strengthen Cooperation Between India And The United States On Energy, One Of The Most Important Challenges Of The 21st Century. India is now the world’s fifth largest consumer of energy, and its demand for electricity is expected almost to double by 2015. The United States has a clear interest in helping India meet this demand with nuclear energy. By helping India expand its use of safe, clean nuclear energy, this Act lays the foundation for a new strategic partnership between our two nations that will help ease India’s demands for fossil fuels and ease pressure on global markets.

2. This Act Will Help Promote Economic Growth. This Act helps open an important new market for American businesses by paving the way for investment in India’s civilian nuclear industry for the first time. This new trade will help American companies gain new customers abroad and create new jobs here at home.

3. This Act Will Help Make It Possible For India To Reduce Emissions And Improve Its Environment. Today, India produces nearly 70 percent of its electricity from coal. Burning coal produces air pollution and greenhouse gases, but nuclear power can generate massive amounts of electricity without producing any air pollution or greenhouse gases. By sharing advanced civilian nuclear technology, we will help India meet its growing demand for energy and lower emissions at the same time.

4. This Act Will Help Keep America Safe By Paving The Way For India To Join The Global Effort To Stop The Spread Of Nuclear Weapons. India has conducted its civilian nuclear energy program in a safe and responsible way for decades. Now, in return for access to American technology, India has agreed to open its civilian nuclear power program to international inspection. After 30 years outside the system, India will now operate its civilian nuclear energy program under internationally accepted guidelines, and the world will be safer as a result.

(i) CIVIL NUCLEAR ENERGY DEBATE
Blank
060. List of Prescribed Substances under the Atomic Energy Act, 1962 as notified in the Gazette of India part II-Section 3 Sub-Section (ii).

Published on January 20, 2006.

THE SCHEDULE

Category - 0: Nuclear materials, nuclear-related other materials, equipment and technology.

0A : Prescribed Substances

0A1 : Source Material

0A101 : Uranium containing the mixture of isotopes occurring in nature.

0A102 : Uranium depleted in the isotope 235.

0A103 : Thorium.

0A104 : Any of the foregoing in the form of metal, alloy, chemical compound, or concentrate or any substance.

0A105 : Any other material containing one or more of the foregoing.

Prescribed quantitative limits: as given below and in any period of 12 months:

a. : Uranium (containing the mixture of isotopes in nature) exceeding 100 kilograms.

b. : Depleted uranium (uranium depleted in the isotope 235 below that occurring in nature) exceeding 1000 kilograms.

c. : Thorium exceeding 1000 kilograms.

0A2 : Special Fissionable Material

0A201 : Plutonium-239.
Uranium-233.

Uranium enriched in the isotopes 235 or 233.

Neptunium.

Any material containing one or more of the foregoing.

Such other fissionable material determined by the Central Government from time to time, but the term "special fissionable material" does not include source material.

*Note*: Any quantity of special fissionable material is prescribed substance.

*Other Materials*: 'Other Materials' means non-nuclear materials for reactors, nuclear related dual-use materials indicated below and such materials as determined by the Central Government from time to time.

Deuterium, heavy water (deuterium oxide) and any other deuterium compound, in which the ratio of deuterium to hydrogen atoms exceeds 1:5000, in quantities exceeding 5 kilograms of deuterium in one consignment or 25 kilograms of deuterium in any period of 12 months.

Nuclear grade graphite / carbon, having a purity level better than 5 parts per million (ppm) boron equivalent and with a density greater than 1.5 gram/cc in quantities exceeding 30 metric tons in any period of 12 months.

Zirconium with hafnium content of less than 1 part to 500 parts of zirconium by weight (i.e. less than 2000 ppm) in the form of metal, its alloys, compounds, manufactures thereof, waste or scrap of any of the foregoing.

Beryllium, its compounds, alloys and its minerals / concentrates including Beryl but excluding:

a. beryllium windows used for x-ray machines and gamma ray detectors and

b. beryl in the form of emeralds or aquamarines.

Lithium enriched in the Lithium-6 (6Li) isotope to greater than its natural isotopic abundance (i.e. more than 7.5%)
and the products or devices containing enriched lithium such as elemental lithium, alloys, compounds, mixtures containing lithium, manufactures thereof, waste or scrap of any of the foregoing.

0A306: Niobium and Tantalum, their metals, alloys and minerals including columbite and tantalite.

0A307: Titanium alloys having both of the following characteristics:

a. 'Capable of' an ultimate tensile strength of 900 MPa or more at 293 K (200°C); and

b. In the form of tubes or cylindrical solid forms (including forgings) with an outside diameter of more than 75 mm.

Technical note: The phrase 'capable of' encompasses titanium alloys before or after heat treatment.

0A308: Tritium, tritium compounds or mixtures containing tritium in which the ratio of tritium to hydrogen atoms exceeds 1 part in 1000, except when utilized in such quantities and for such purposes as for organic labelled compounds, Gas Filled Light Sources and as Tritiated Water for radiotracer studies.

0A309: Hafnium: Hafnium metal, alloys containing more than 60% hafnium by weight, hafnium compounds containing more than 60% hafnium by weight, manufactures thereof, and waste or scrap of any of the foregoing.

0A310: Radium-226: Radium-226 (226Ra), radium-226 alloys, radium-226 compounds, mixtures containing radium-226, manufactures thereof, and products or devices containing any of the foregoing, except medical applicators and a product or device containing less than 0.37 GBq (10mCi) of Ra-226 in any form.

0A311: Boron: Boron enriched in the Boron-10 (10B) isotope to greater than its natural isotopic abundance as follows: Elemental boron, compounds, mixtures containing boron, manufactures thereof, waste or scrap of any of the foregoing.

0A312: Helium-3: Helium-3 (3He), mixtures containing helium-3,
and products or devices containing any of the foregoing.

Note: A product or device containing less than 1gm of Helium-3 is excluded.

0A313 : Alpha-emitting radionuclides : Alpha-emitting radionuclides having an alpha half-life of 10 days or greater but less than 200 years, in the following forms:

a. : Elemental;
b. : Compounds having a total alpha activity of 37 GBq per kg or greater;
c. : Mixtures having a total alpha activity of 37 GBq per kg or greater;
d. : Products or devices containing any of the foregoing.

Alpha emitters controlled by this item include:

Actinium-225 Actinium-227 Americium-242m
Californium-248 Californium-250 Californium-252
Californium-253 Californium-254 Curium-240
Curium-241 Curium-242 Curium-243
Curium244 Einsteinium-252 Einsteinium-253
Einsteinium-254 Einsteinium-255 Fermium-257
Gadolinium-148 Mendelevium-258 Neptunium-235
Plutonium-236 Plutonium-237 Plutonium-238
Plutonium-241 Polonium-209 Polonium-210
Polonium-208 Radium-223 Thorium-228
Thorium-227 Uranium-230 Uranium-232

0A314 : *Titanium ores and concentrates (Ilmenite, Rutile and Leucoxene)

0A315 : *Zirconium, its alloys and compounds and minerals/ concentrates including zircon

*Note : These items (0A314 and 0A315) shall remain prescribed substances only till such time the Policy on Exploitation of Beach Sand Minerals notified vide Resolution number 8/1(1)/97-PSU/1422 dated the 6th
October, 1998 is adopted/revised/modified by the Ministry of Mines or till the 1st January 2007, whichever occurs earlier and shall cease to be so thereafter.

0B : Prescribed Equipment

0B001 : Nuclear Reactors; associated equipment, components, and systems specially designed, prepared, or adapted or used or intended to be used in such reactors as follows:

a. : Complete nuclear reactors
b. : Nuclear reactor vessels
c. : Nuclear reactor fuel charging and discharging machines
d. : Nuclear reactor control rods and equipment
e. : Nuclear reactor pressure tubes
f. : Zirconium tubes and assemblies of tubes in which hafnium to zirconium ratio is 1:500 or less
g. : Primary coolant pumps
h. : Nuclear reactor internals
i. : Heat exchangers (steam generators) for use in the primary coolant circuit of a nuclear reactor
j. : Neutron detection and measuring instruments for determining neutron flux levels within the core of a nuclear reactor

0B002 : Plants for processing, production, concentration, conversion or recovery of Prescribed Substances (such as uranium, plutonium, thorium, deuterium, heavy water, tritium, lithium); associated equipment, components and systems specially designed, prepared or adapted or used or intended to be used in such plants including but not limited to:

a. : Plants for production or concentration of deuterium, heavy water-
   1. : Water - Hydrogen Sulphide Exchange Towers
   2. : Blowers and Compressors for hydrogen-sulphide gas circulation
3. : Ammonia-Hydrogen Exchange Towers greater than or equal to 35 m in height with diameters of 1.5 m to 2.5 m
4. : Tower Internals and Stage Pumps
5. : Ammonia Crackers with operating pressures greater than or equal to 3 MPa
6. : Infrared Absorption Analyzers capable of 'on-line' hydrogen/deuterium ratio analysis
7. : Catalytic Burners for conversion of enriched deuterium gas into heavy water
8. : Complete heavy water upgrade systems or columns therefore

b. : Plants for the conversion of uranium
c. : Plants for the conversion of plutonium
d. : Tritium facilities or plants, and equipment therefor
e. : Lithium isotope separation facilities or plants, and equipment therefor

0B003 : Plants for reprocessing of irradiated nuclear fuel and equipment, components and systems specially designed, prepared or adapted or used or intended to be used in such plants, including but not limited to:

a. : Irradiated fuel element chopping machines designed for remote operation
b. : Dissolvers capable of withstanding hot and highly corrosive liquid for dissolution of irradiated nuclear fuel and which can be remotely loaded and maintained
c. : Solvent extractors and solvent extraction equipment resistant to the corrosive effect of nitric acid
d. : Chemical holding or storage vessels resistant to the corrosive effect of nitric acid
e. : Industrial equipment including assemblies and components as follows:
1. : High density (lead glass or other) radiation shielding windows

2. : Radiation hardened TV cameras, or lenses therefor

3. : 'Robots' or 'end effectors' specially designed for handling high explosives; and control units therefor

4. : Remote manipulators that can be used to provide remote actions in radiochemical separation operations or hot cells

0B004 : Plants for treatment, handling, storage and transportation of radioactive wastes from nuclear reactors or from plants for processing Source Materials or Special Fissionable Materials or from nuclear reprocessing plants; irradiated nuclear fuel; Special Fissionable Materials, and equipment specially designed, prepared, adapted, or intended to be used therefor.

0B005 : All systems, associated equipment, components for separation or enrichment of isotopes of uranium, plutonium, lithium or boron, other than analytical instruments, specially designed, prepared, adapted, used or intended to be used therefor as follows:

a. : Gas centrifuges and assemblies and components specially designed or prepared for use in gas Centrifuges

b. : Specially designed or prepared auxiliary systems, equipment and components for gas centrifuge enrichment plants

c. : Specially designed or prepared assemblies and components for use in gaseous diffusion enrichment

d. : Specially designed or prepared auxiliary systems, equipment and components for use in gaseous diffusion enrichment

e. : Specially designed or prepared systems, equipment and components for use in aerodynamic enrichment plants

f. : Specially designed or prepared systems, equipment and components for use in chemical exchange or ion exchange enrichment plants.
g. : Specially designed or prepared systems, equipment and components for use in laser-based enrichment plants.

h. : Specially designed or prepared systems, equipment and components for use in plasma separation enrichment plants.

i. : Specially designed or prepared systems, equipment and components for use in electromagnetic enrichment plants.

0B006 : Plants for the fabrication of nuclear reactor fuel elements, and equipment specially designed or prepared therefor including but not limited to:

a. : fully automatic pellet inspection stations specially designed or prepared for checking final dimensions and surface defects of the fuel pellets;

b. : automatic welding machines specially designed or prepared for welding end caps onto the fuel pins (or rods);

c. : automatic test and inspection stations specially designed or prepared for checking the integrity of completed fuel pins (or rods).

Item 'c' typically includes equipment for: 1) x-ray examination of pin (or rod) end cap welds, 2) helium leak detection from pressurized pins (or rods), and 3) gamma-ray scanning of the pins (or rods) to check for correct loading of the fuel pellets inside.

0B007 : Plants or systems for production, handling, storage and transportation of Radioisotopes in quantities exceeding 100 Curies (3.7 X 10 12 Becquerel).

0B008 : Neutron generators including neutron chain reacting assemblies and fusion assemblies of all kinds for producing fissile materials

0C : Technology

Technology and software for the development, production or use of prescribed substances or prescribed equipment specified in 0A or 0B.
061. Gazette Notification issued by the Department of Atomic Energy notifying the Resolution on “Guidelines for Nuclear Transfers (Exports)”.

Mumbai, February 1, 2006.

Under the provisions contained in clause (f) and (g) of Sub-Section (1) of Section 2 and Section 3 of the Atomic Energy Act, 1962 (No.33 of 1962), the Department of Atomic Energy has notified the revised list of ‘Prescribed Substances, Prescribed Equipments and Technology’ vide S.O. No.61(E) dated 20th January, 2006. Further, to regulate the exports of these items the Department of Atomic Energy has formulated a set of ‘Guidelines for Nuclear Transfers (Exports)’.

Export of prescribed substances, prescribed equipment or transfer of related technology to any country will be governed by the following guidelines and export controls shall apply to nuclear transfers to any country.

Notes: Prescribed substance means any substance or material, including any mineral, which the Central Government may, by notification, prescribe being a substance which, in quantity or in concentration or both, in excess of the limits prescribed in this behalf in that notification, is or may be used, for the production or use of atomic energy or research into matters connected therewith. Prescribed substances contain source material, special fissionable material, and non-nuclear materials for nuclear reactor e.g. nuclear grade graphite and heavy water, and also include certain other materials (dual-use materials).

Prescribed equipment means any property which the Central Government may, by notification, prescribe, being a property which in its opinion is specially designed or adapted or which is used or intended to be used for the production or utilisation of any prescribed substance, or for
the production or utilisation of atomic energy, radioactive substances, or radiation, but does not include mining, milling, laboratory and other equipment not so specially designed or adapted and not incorporated in equipment used or intended to be used for any of the purposes aforesaid. Prescribed equipment includes nuclear reactors, fuel reprocessing plants, fuel fabrication plants, uranium enrichment plants, uranium & plutonium conversion facilities, heavy water production plants, and associated equipment specially designed, prepared, adapted or used or intended to be used in such plants / facilities, and also includes nuclear related dual-use equipment and components.

Technology means any information (including information embodied in software) other than information in the public domain, that is capable of being used in –

(i) the development, production or use of any goods or software;

(ii) the development of, or the carrying out of, an industrial or commercial activity or the provision of a service of any kind.

Explanation: When technology is described wholly or partly by reference to the uses to which it (or the goods to which it relates) may be put, it shall include services which are provided or used, or which are capable of being used, in the development, production or use of such technology or goods.

Exporter may refer to the Government of India notification on the prescribed substances and prescribed equipment for details.

A: SPECIFIC GUIDELINES

1. Prohibition of export for development of nuclear explosives
   (a) Export of any prescribed substance, prescribed equipment or related technology, to any country, for the development of nuclear explosive device or use in a nuclear explosive device shall be prohibited.
   
   (b) Export of any prescribed substance, prescribed equipment or related technology shall not be authorized when there is an unacceptable risk of diversion to the development of nuclear explosive device or use in a nuclear explosive device, or to acts of nuclear terrorism.
   
   (c) Transfer of the following items (prescribed substances and prescribed equipment) and related technology shall be authorized
only upon formal governmental assurances from recipients explicitly excluding uses, which would result in any nuclear explosive device.

(i) source material, special fissionable material, nuclear grade graphite and heavy water;

(ii) nuclear reactors, fuel reprocessing plants, fuel fabrication plants, uranium enrichment plants, uranium & plutonium conversion facilities, heavy water production plants, tritium recovery plants and associated equipment specially designed or adapted or used or intended to be used in such plants / facilities.

(For detailed clarification on items indicated in c(i) and c(ii), exporters may refer to Government of India notifications on prescribed substances, prescribed equipment and related technology)

2. Physical protection
   (a) All materials and facilities referred to under paragraph 1(c)(i) and 1(c)(ii) should be placed under effective physical protection to prevent unauthorized use and handling. The levels of physical protection to be ensured in relation to the type of materials, equipment and facilities, shall be as per the recommendations of Government of India or as agreed upon in the international conventions, to which India is a party.

   (b) The implementation of measures of physical protection in the recipient country is the responsibility of the Government of that country. However, the levels of physical protection on which these measures have to be based, shall be the subject of an agreement between the supplier and the recipient.

   (c) In each case special arrangements shall be made for a clear definition of responsibilities for the transport of items referred to under paragraph 1(c)(i) and 1(c)(ii).

3. Safeguards
   (a) IAEA safeguards should be applied to any material or equipment referred to under paragraph 1(c)(i) and 1(c)(ii) or related technology proposed to be exported to any country. Government of India shall authorize export of such items only when the IAEA safeguards arrangements are made or assured by the recipient country.
(b) Transfer of items referred to in paragraph 1(c)(i) and 1(c)(ii) or related technology shall be authorized only when covered by IAEA safeguards as indicated in paragraph 3(a) above with duration and coverage provisions in the agreement as follows:

(i) The duration of the agreement shall be related to the period of actual use of the item in the recipient State; and

(ii) That the provisions for terminating the agreement shall be formulated in such a way that the rights and obligations of the parties continue to apply in connection with supplied source material and special fissionable material and with special fissionable material produced, processed or used in or in connection with supplied source material and special fissionable material, equipment, facilities or non-nuclear material, until such time as the IAEA has terminated the application of safeguards thereto.

4. Government of India reserves the right to apply additional conditions of supply as a matter of national policy.

5. Special controls on sensitive exports

   Government of India shall exercise restraint in the transfer of sensitive facilities, technology and material usable for nuclear weapons or other nuclear explosive devices.

6. Special controls on export of enrichment facilities, equipment and technology

   With regard to a transfer of an enrichment facility, or technology therefor, the recipient nation should agree that neither the transferred facility, nor any facility based on such technology, will be designed or operated for the production of greater than 20% enriched uranium without the consent of the Government of India.

7. Controls on supplied or derived material usable for nuclear weapons or other nuclear explosive devices

   Government of India shall in order to advance the objectives of these guidelines and to provide opportunities further to reduce the risk of proliferation, include, whenever appropriate and practicable, in agreements on supply of source material or special fissionable material or of facilities which produce material usable for nuclear weapons or other nuclear explosive devices, provisions calling for mutual agreement
between the Government of India and the recipient on arrangements for reprocessing, storage, alteration, use, transfer or retransfer of any material usable for nuclear weapons or other nuclear explosive devices involved.

8. **Controls on retransfer**
   
   (a) Government of India shall authorize the transfer of items referred to under paragraph 1(c)(i) and 1(c)(ii) or related technology only upon the recipient’s assurance that in the case of:
   
   (i) retransfer of such items or related technology, or
   
   (ii) transfer of items indicated at 1(c)(i) and 1(c)(ii) derived from facilities or the materials originally transferred by the supplier, or with the help of equipment or technology originally transferred by the supplier; the recipient of the retransfer or transfer will have provided the same assurances as those required by the supplier for the original transfer.

   (b) In addition the consent of the Government of India should be required for:
   
   (i) any retransfer of items referred to under paragraph 1(c)(i) and 1(c)(ii) or related technology.
   
   (ii) any retransfer of enrichment, reprocessing or heavy water production facilities, equipment or related technology, and for any transfer of facilities or equipment of the same type derived from items originally transferred by the supplier; or
   
   (iii) any retransfer of heavy water or material usable for nuclear weapons or other nuclear explosive devices.

   (c) To ensure the consent right as defined under paragraph 8(b), government to government assurances will be required for any relevant original transfer.

9. **Non-proliferation Principle**

   Notwithstanding any other provisions of these Guidelines, Government of India shall authorize transfer of items or related technology identified in the lists only when the Licencing Authority is satisfied that the transfers would not contribute to the development of nuclear weapons or other nuclear explosive devices or be diverted to acts of nuclear terrorism.
B: GENERAL GUIDELINES

1. Export of any prescribed substance, prescribed equipment or related technology shall be permitted only against an export licence issued in this behalf unless export is prohibited. Each and every application shall be scrutinized on case-by-case basis and on the merit of each case. Notwithstanding the specific guidelines as applicable, the general guidelines will be applicable in all the cases and following relevant factors shall be taken into consideration while examining the applications for export licences.

2. Whether the recipient state has a relevant IAEA safeguards agreement in force;

3. Whether the equipment, materials, software, or related technology to be transferred is appropriate for the stated end-use and whether that stated end-use is appropriate for the end-user;

4. Whether the equipment, materials, software, or related technology to be transferred is to be used in research on or development, design, manufacture, construction, operation, or maintenance of any reprocessing or enrichment facility;

5. Whether governmental actions, statements, and policies of the recipient state are supportive of nuclear non-proliferation and whether the recipient state is in compliance with its international obligations in the field of nuclear related activities;

6. Whether the end-user has been engaged in clandestine or illegal procurement activities; and

7. Whether a transfer has not been authorized to the end-user or whether the end-user has diverted for purposes inconsistent with the Guidelines any transfer previously authorized.

8. Whether there is reason to believe that there is a risk of diversion to acts of nuclear terrorism.

C: CONDITIONS FOR TRANSFERS

In the process of determining that the transfer will not pose any unacceptable risk of diversion, exporter should obtain the following from the recipient and furnish the same along with export licence application to the Licencing Authority in the Department of Atomic Energy, Government of India:
Q: Will a nuclear energy cooperation deal be in our pocket by the time French President Jacques Chirac leaves India?

A: Well, we are very keen on closer cooperation with France and we do have a strategic relationship. We have an understanding on the civilian nuclear energy cooperation programme and the talks have progressed well.
Q: Are these talks at the level of the National Security Advisers of the two countries?

A: The NSAs definitely. And the two foreign offices. Surely we want it as a bilateral agreement. That would be a positive step forward in our overall endeavour keeping in view the July 18 agreement reached with the US and the subsequent talks which are going on. Eventually this will help in persuading the Nuclear Suppliers’ Group (NSG) to remove all restrictions and allow India access to nuclear technology. And removal of these restrictions would give India access to all advantages and benefits which advanced nuclear weapon states have.

Q: What kind of restrictions you want to be removed?

A: We have to access fuel. We have to access the latest technology. We have been suffering from nuclear apartheid for the last three and a half decades. When we say advantages and benefits, that would be the same which the advanced nuclear States have. And then also we are conscious that when you have advantages and certain rights, then we will have the same duties and commitments towards safeguards which the nuclear states have.

Q: It is felt the nuclear deal is not going to be inked during the French President’s visit. Your comments?

A: When two countries talk, they do not put a deadline. There is a broader agreement and the July 18 statement which Dr Manmohan Singh and Mr Bush signed received wide support.

Q: What are the bottlenecks in finalising the nitty-gritty of a nuclear deal with France?

A: Eventually even this will be linked to the overall endorsement of the NSG because France is also part of the NSG. We want an agreement with France which is an important P-5 country and a nuclear power.

Q: Coming to the Indo-US nuclear deal and the ongoing separation exercise pertaining to civilian and military nuclear facilities, two specific concerns have been raised: One, that India is throttling its long-term strategic programme on diktats of the US; two, that India will be compromising in a big way the secrecy of the separation exercise as the list would be debated openly by the US Congress. Your comments?
A: The very separation exercise mentioned in the July 18 agreement recognises that India has a strategic nuclear programme. In other words, it gives India a de facto nuclear weapon power status. I can only say what the Prime Minister has gone on record as saying that it will be India’s right to list its facilities as civilian and certain facilities as strategic. That process is on. It is our sovereign right to make that separation. India will not compromise on the further development of its nuclear programme nor would it compromise with its strategic programme. I don’t think that the secrecy of our nuclear programme will be compromised.

Secondly, there is no changing of the goalposts, either by the US or by India. It has to be within the defined parameters and in the spirit of the July 18 agreement. Let me tell you in this context that much of the reports are speculative.

Q: What about the concerns expressed by the Indian atomic establishment about the Indo-US nuclear deal? Are they on board? Is the US shifting its goalposts as alleged by AEC chief Anil Kakodkar?

A: They are very much on board. They were involved, very actively, before the July 18 agreement and they continue to be so. Anybody who talks of India making compromises on its long-term strategic programme is ill-informed. It is not correct.

Whenever the agreement is ready, it has to be to the full satisfaction of the scientific community and the bottomline is that India will not dilute or compromise its nuclear deterrent capacity as well as further development of the strategic programme.

And when we talk of the minimum nuclear deterrent, again we will determine what the minimum nuclear deterrent has to be. Nobody is going to tell us what our minimum nuclear deterrent should be like. We, that is the government, the security establishment and the nuclear establishment will determine what the minimum nuclear deterrent should be.
I rise to inform this august House of the status of discussions with the United States on civil nuclear energy co-operation. Substantive aspects of this are reflected in the Joint Statement of July 18, 2005 that US President Bush and I agreed upon during my visit to Washington DC last year. I would like to use this occasion to outline the context and core elements of the Joint Statement, before detailing the status of the ongoing negotiations.

Hon’ble Members are aware that our effort to reach an understanding with the United States to enable civil nuclear energy cooperation was based on our need to overcome the growing energy deficit that confronts us. As India strives to raise its annual GDP growth rate from the present 7-8% to over 10%, the energy deficit will only worsen. This may not only retard growth, it could also impose an additional burden in terms of the increased cost of importing oil and natural gas, in a scenario of sharply rising hydrocarbon prices. While we have substantial reserves of coal, excessive dependence on coal-based energy has its own implications for our environment. Nuclear technology provides a plentiful and non-polluting source of power to meet our energy needs. However, to increase the share of nuclear power in our energy mix, we need to break out of the confines imposed by inadequate reserves of natural uranium, and by international embargos that have constrained our nuclear programme for over three decades.

Established through the vision of Pandit Jawaharlal Nehru and sustained by the commitment of scientists like Dr. Homi Bhabha, our nuclear programme is truly unique. Its uniqueness lies in the breadth of its overarching vision: of India mastering a three-stage nuclear programme using our vast thorium resources, and mastering more complex processes of the full nuclear fuel cycle. Consequently, our civilian and strategic programmes are deeply intertwined across the expanse of the nuclear fuel cycle. There are hardly any other countries in a similar situation. Over the years, the maturation of our nuclear programme, including the development of world-class thermal power reactors, has made it possible to contemplate some changes. These are worth considering if benefits include gaining unhindered access to nuclear material, equipment, technology and fuel from international sources.
However, international trade in nuclear material, equipment and technologies is largely determined by the Nuclear Suppliers’ Group (NSG)—an informal group of 45 countries. Members include the United States, Russia, France and the United Kingdom. India has been kept out of this informal arrangement and therefore denied access to trade in nuclear materials, equipment and various kinds of technologies.

It was with this perspective that we approached negotiations with the United States on enabling full civilian nuclear energy cooperation with India. The essence of what was agreed in Washington last July was a shared understanding of our growing energy needs. In recognition of our improved ties, the United States committed itself to a series of steps to enable bilateral and international cooperation in nuclear energy. These include adjusting domestic policies, and working with allies to adjust relevant international regimes. There was also a positive mention of possible fuel supply to the first two nuclear power reactors at Tarapur. US support was also indicated for India’s inclusion as a full partner in the International Thermonuclear Experimental Research Project and the Generation IV International Forum.

But more importantly, in the Joint Statement, the United States implicitly acknowledged the existence of our nuclear weapons programme. There was also public recognition that as a responsible State with advanced nuclear technologies, India should acquire the same benefits and advantages as other States which have advanced nuclear technology, such as the United States. The Joint Statement offered the possibility of decades-old restrictions being set aside to create space for India’s emergence as a full member of a new nuclear world order.

On our part, as Hon’ble Members may recall from my suo motu statement on July 29 last year, we committed ourselves to separating the civilian and strategic programme. However this was to be conditional upon, and reciprocal to, the United States fulfilling its side of the understanding. I had stressed that reciprocity was the key and we expected that the steps to be taken by India would be conditional upon and contingent on action taken by the United States. I had emphasized then—and I reiterate today—that no part of this process would affect or compromise our strategic programme.

I now come to the negotiations that have taken place in the past few months. While these have been principally with the US, there have been discussions with other countries like Russia, UK and France as well. At the
political level, I have maintained contact with President Chirac of France, President Putin of Russia, Prime Minister Blair of the UK. I have also raised this subject with the Heads of State/Government of Norway, Republic of Korea, Netherlands, Czech Republic and Ireland - all members of the NSG. I also met President Bush in New York last September and discussed implementation of the July 18 statement. In the same period, several American Congressional leaders and policy-makers have visited India in the past few months, many of whom met me. We have amply clarified our objective in pursuing full civil nuclear energy cooperation for our energy security and to reassure them of India’s impeccable non-proliferation credentials.

At the official level, we have constituted two groups comprising key functionaries concerned with strategic and nuclear matters. They included the Department of Atomic Energy, the Ministry of External Affairs, the Armed Forces and my Office. These two groups were respectively mandated to draw up an acceptable separation plan, and to negotiate on this basis. The directive given to both groups was to ensure that our strategic nuclear programme is not compromised in any way, while striving to enlarge avenues for full civil nuclear energy cooperation with the international community. The negotiations by our officials have been extensive and prolonged. These have focused on four critical elements: the broad contours of a Separation Plan; the list of facilities being classified civilian; the nature of safeguards applied to facilities listed in the civilian domain; and the nature and scope of changes expected in US domestic laws and NSG guidelines to enable full civilian nuclear energy cooperation with India.

Hon’ble Members may be assured that in deciding the contours of a separation plan, we have taken into account our current and future strategic needs and programmes after careful deliberation of all relevant factors, consistent with our Nuclear Doctrine. We are among very few countries to adhere to the doctrine of ‘No first Use’. Our doctrine envisions a credible minimum nuclear deterrent to inflict unacceptable damage on an adversary indulging in a nuclear first strike. The facilities for this, and the required level of comfort in terms of our strategic resilience have thus been our criterion in drawing up a separation plan. Ours is a sacred trust to protect succeeding generations from a nuclear threat and we shall uphold this trust. Hon Members may therefore be assured that in preparing a Separation Plan, there has been no erosion of the integrity of our Nuclear Doctrine, either in terms of current or future capabilities.
The Separation Plan that is being outlined is not only consistent with the imperatives of national security, it also protects our vital research and development interests. We have ensured that our three-stage nuclear programme will not be undermined or hindered by external interference. We will offer to place under safeguards only those facilities that can be identified as civilian without damaging our deterrence potential or restricting our R&D effort, or in any way compromising our autonomy of developing our three stage nuclear programme. In this process, the Department of Atomic Energy has been involved at every stage, and the separation plan has been drawn up with their inputs.

Therefore our proposed Separation Plan entails identifying in phases, a number of our thermal nuclear reactors as civilian facilities to be placed under IAEA safeguards, amounting to roughly 65% of the total installed thermal nuclear power capacity, by the end of the separation plan. A list of some other DAE facilities may be added to the list of facilities within the civilian domain. The Separation Plan will create a clearly defined civilian domain, where IAEA safeguards apply. On our part, we are committed not to divert any nuclear material intended for the civilian domain from designated civilian use or for export to third countries without safeguards.

Mr Speaker Sir, Negotiations are currently at a delicate stage. In our dialogue with our interlocutors, we have judged every proposal made by the US side on merits, but we remain firm in that the decision of what facilities may be identified as civilian will be made by India alone, and not by anyone else.

At the same time, we are not underestimating the difficulties that exist in these negotiations. There are complex issues involved. Several aspects of the nuclear programme lend themselves in the public discussions to differing interpretations, such as the Fast Breeder Programme or our fuel-cycle capabilities such as re-processing and enrichment requirements. The nature and range of strategic facilities that we consider necessarily outside safeguards constitute yet another example. We have however conveyed to our interlocutors that while discussing the Separation Plan, there are details of the nature and content of our strategic requirements that we cannot share. We will not permit information of national security significance to be compromised in the process of negotiation.

It is essential to recall that the July 18 Statement was not about our strategic programme. It was intended to be the means to expand our civilian nuclear energy capacities and thereby to help pave the way for faster
economic progress. In seeking to achieve this objective, we appreciate the need for patience to remove misperceptions that abound. I reiterate that India has an exemplary record on non-proliferation and this will continue to be so. All in all, one major achievement so far is that a change is now discernible in the international system. We believe that when implemented, the understandings reflected in the Joint Statement will give India its due place in the global nuclear order. The existence of our strategic programme is being acknowledged even while we are being invited to become a full partner in international civil nuclear energy cooperation.

I must emphasize that the nation is justly proud of the tremendous work of our nuclear scientists and the Department of Atomic Energy in mastering all the key aspects of the full nuclear fuel cycle, often under difficult circumstances. The tremendous achievements of our scientists in mastering the complete nuclear fuel cycle - the product of their genius and perseverance – will not be frittered away. We will ensure that no impediments are put in the way of our research and development activities. We have made it clear that we cannot accept safeguards on our indigenous Fast Breeder Programme. Our scientists are confident that this technology will mature and that the programme will stabilize and become more robust through the creation of additional capability. This will create greater opportunities for international cooperation in this area as well. An important reason why the US and other countries with advanced nuclear technologies are engaging with India as a valued partner is precisely because of the high respect and admiration our scientists enjoy internationally, and the range and quality of the sophisticated nuclear programme they have managed to create under the most difficult odds. This gives us confidence to engage in these negotiations as an equal partner.

As I said, many aspects of the proposed separation plan are currently under negotiation. It is true that certain assurances in the July 18 Statement remain to be fulfilled – the supply of imported fuel for Tarapur I and II, for one. Some elements, such as US support for India’s participation in the ITER programme, have materialized. The issue of the nature of safeguards to be applied to facilities designated civilian also remains pending resolution. I seek the indulgence of this House not to divulge every single detail of the negotiations at this time. However, this august House can be assured that the limits are determined by our overarching commitment to national security and the related issue of the autonomy of our nuclear programme. Our Government will take no step that could circumscribe or cast a shadow over either.
I am aware that concerns have been raised over information being shared with outsiders, but not with our own citizens. Members may be assured that nothing that could compromise our nuclear deterrent has been shared with anyone. On this aspect there is no reason for concern or doubt.

Mr Speaker Sir, As I said at the outset, our approach is defined by the need to utilize the window of opportunity before us, to find a solution to our energy deficit. We have also been guided by the need to dismantle international restrictions, which, when achieved, could unleash our scientific talent and increase commercial potential in the nuclear and related sectors. The nation will be kept informed, through this august House. Thank you.

064. Suo Motu Statement by Prime Minister Dr. Manmohan Singh on discussions on Civil Nuclear Energy Cooperation with the US: Implementation of India’s Separation Plan.

New Delhi, March 7, 2006.

In my Statement on February 27, 2006, I had provided an assurance that this august House will be informed of developments in our discussions with the United States on separation of our civilian and military nuclear facilities. I now inform this august House of developments since my suo motu statement of 27 February.

The President of the United States, His Excellency Mr. George W. Bush visited India between March 1-3, 2006. His visit provided our two countries an opportunity to review progress made in deepening our strategic partnership since the Joint Statement issued during my visit to Washington last July. Our discussions covered the expansion of our ties in the fields of agriculture, economic and trade cooperation, energy security and clean environment, strengthening innovation and the knowledge economy, issues relating to global safety and security and on deepening democracy. Expanded cooperation in each of these areas will have a significant impact on India’s social and economic development. The full text of the Joint Statement issued during President Bush’s visit is placed on the Table of the House.
I have pleasure in informing the House that during President Bush’s visit, as part of the process of promoting cooperation in civilian nuclear energy, agreement was reached between India and the United States on a Separation Plan. Accordingly, India will identify and separate its civilian and military nuclear facilities and place its civilian nuclear facilities under IAEA safeguards. Sir, I place on the Table of the House the Separation Plan that has been drawn up by India and agreed between India and the United States in implementation of the India-United States Joint Statement of July 18, 2005.

I would like to outline some salient elements of the Separation Plan:

(i) India will identify and offer for IAEA safeguards 14 thermal power reactors between 2006-14. There are 22 thermal power reactors in operation or currently under construction in the country. Fourteen of these will be placed under safeguards by 2014 in a phased manner. This would raise the total installed thermal power capacity in Megawatts under safeguards from 19% at present to 65% by 2014. I wish to emphasize that the choice of specific nuclear reactors and the phases in which they would be placed under safeguards is an Indian decision. We are preparing a list of 14 reactors that would be offered for safeguards between 2006-14.

(ii) We have conveyed that India will not accept safeguards on the Prototype Fast Breeder Reactor (PFBR) and the Fast Breeder Test Reactor (FBTR), both located at Kalpakkam. The Fast Breeder Programme is at the R&D stage. This technology will take time to mature and reach an advanced stage of development. We do not wish to place any encumbrances on our Fast Breeder programme, and this has been fully ensured in the Separation Plan.

(iii) India has decided to place under safeguards all future civilian thermal power reactors and civilian breeder reactors, and the Government of India retains the sole right to determine such reactors as civilian. This means that India will not be constrained in any way in building future nuclear facilities, whether civilian or military, as per our national requirements.

(iv) India has decided to permanently shut down the CIRUS reactor, in 2010. The fuel core of the Apsara reactor was purchased from France, and we are prepared to shift it from its present location and make it available for placing under safeguards in 2010. Both CIRUS and
Apsara are located at the Bhabha Atomic Research Centre. We have decided to take these steps rather than allow intrusive inspections in a nuclear facility of high national security importance. We are determined that such steps will not hinder ongoing Research and Development.

(v) Reprocessing and enrichment capabilities and other facilities associated with the fuel cycle for our strategic programme have been kept out of the Separation Plan.

(vi) One of the major points addressed in the Separation Plan was the need to ensure reliability of fuel supplies, given our unfortunate past experience with regard to interruption in supply of fuel for Tarapur. We have received commitments from the United States for the reliable supply of fuel to India for reactors that will be offered for safeguards. The United States has also reaffirmed its assurance to create the necessary conditions for India to have assured and full access to fuel for such reactors. Under the July 18 Joint Statement, the United States is committed to seeking agreement from its Congress to amend domestic laws and to work with friends and allies to adjust the practices of the Nuclear Suppliers Group to create the necessary conditions for India to obtain full access to the international market for nuclear fuel, including reliable, uninterrupted and continual access to fuel supplies from firms in several nations. This has been reflected in the formal understandings reached during the visit and included in the Separation Plan.

(vii) To further guard against any disruption of fuel supplies for India, the United States is prepared to take other additional steps, such as:

   a) Incorporating assurances regarding fuel supply in a bilateral U.S.-India agreement on peaceful uses of nuclear energy which would be negotiated.

   b) The United States will join India in seeking to negotiate with the IAEA an India-specific fuel supply agreement.

   c) The United States will support an Indian effort to develop a strategic reserve of nuclear fuel to guard against any disruption of supply over the lifetime of India’s reactors.

   d) If despite these arrangements, a disruption of fuel supplies to India occurs, the United States and India would jointly convene
a group of friendly supplier countries to include countries such as Russia, France and the United Kingdom to pursue such measures as would restore fuel supply to India.

In light of the above understandings with the United States, an India-specific safeguards agreement will be negotiated between India and the IAEA. In essence, an India-specific safeguards agreement would provide: on the one hand safeguards against withdrawal of safeguarded nuclear material from civilian use at any time, and on the other permit India to take corrective measures to ensure uninterrupted operation of its civilian nuclear reactors in the event of disruption of foreign fuel supplies. Taking this into account, India will place its civilian nuclear facilities under India-specific safeguards in perpetuity and negotiate an appropriate safeguards agreement to this end with the IAEA. In the terms of the Separation plan, there is hence assurance of uninterrupted supply of fuel to reactors that would be placed under safeguards together with India’s right to take corrective measures in the event fuel supplies are interrupted. The House can rest assured that India retains its sovereign right to take all appropriate measures to fully safeguard its interests.

During my Suo Motu Statements on this subject made on July 29, 2005 and on February 27, 2006, I had given a solemn assurance to this august House and through the Honorable members to the country, that the Separation Plan will not adversely effect our country’s national security. I am in a position to assure the Members that that this is indeed the case. I might mention:

i) that the separation plan will not adversely effect our strategic programme. There will be no capping of our strategic programme, and the separation plan ensures adequacy of fissile material and other inputs to meet the current and future requirements of our strategic programme, based on our assessment of the threat scenarios. No constraint has been placed on our right to construct new facilities for strategic purposes. The integrity of our Nuclear Doctrine and our ability to sustain a Minimum Credible Nuclear Deterrent is adequately protected. Our nuclear policy will continue to be guided by the principles of restraint and responsibility.

ii) The Separation Plan does not come in the way of the integrity of our three stage nuclear programme, including the future use of our thorium reserves. The autonomy of our Research and Development activities in the nuclear field will remain unaffected. The Fast Breeder
Test Reactor and the Prototype Fast Breeder Reactor remain outside safeguards. We have agreed, however, that future civilian Thermal power reactors and civilian Fast Breeder Reactors would be placed under safeguards, but the determination of what is civilian is solely an Indian decision.

As I mentioned in my Statement on February 27, the Separation Plan has been very carefully drawn up after an intensive internal consultation process overseen by my Office. The Department of Atomic Energy and our nuclear scientific community have been associated with the preparation of the Separation Plan. The Chairman of the Atomic Energy Commission and the Principal Scientific Adviser to the Government of India were actively involved closely at every stage. I am in a position to assure the Hon’ble members that we have not permitted information of national security significance to be compromised in any way during the negotiations.

I believe that the significance of the July 18, 2005 Statement is the prospect it offers for ending India’s nuclear isolation. It will open up prospects for cooperation not only with the US but with countries like Russia, France and other countries with advanced nuclear capabilities, including those from the NSG. The scope for cooperation in the energy related research will vastly expand, so will cooperation in nuclear research activities. India will be able to join the international mainstream and occupy its rightful place among the top countries of the nuclear community. There would be a quantum jump in our energy generating capacity with a consequential impact on our GDP growth. It also ensures India’s participation as a full partner in cutting edge multilateral scientific effort in the nuclear field such as ITER and Generation IV Initiative.

Sir, successful implementation of the July 18 Joint Statement requires reciprocal actions by the United States as well as India. Steps to be taken by India will be contingent upon actions taken by the US. For our part, we have prepared a Separation Plan that identifies those civilian facilities that we are willing to offer for safeguards. The United States Government has accepted this Separation Plan. It now intends to approach the US Congress for amending its laws and the Nuclear Suppliers Group for adapting its Guidelines to enable full civilian cooperation between India and the international community. At the appropriate stage, India will approach the IAEA to discuss and fashion an India-specific safeguards agreement, which will reflect the unique character of this arrangement. Since such a safeguards agreement is yet to be negotiated it will be difficult to predict its
content, but I can assure the House that we will not accept any provisions that go beyond the parameters of the July 18, 2005 Statement and the Separation Plan agreed between India and the United States, on March 2, 2006. We are hopeful that this process will move forward in the coming weeks and months.

I would request Hon’ble Members to look at this matter through the larger perspective of energy security. Currently, nuclear energy provides only three per cent of our total energy mix. Rising costs and reliability of imported hydrocarbon supplies constitute a major uncertainty at a time when we are accelerating our growth rate. We must endeavor to expand our capabilities across the entire energy spectrum from clean coal and coal-bed methane, to gas hydrates and wind and solar power. We are actively seeking international partnerships across the board and are members of many international initiatives dedicated to energy. Indeed, at the end of my talks with President Bush, we announced Indian participation in two more programmes: the Future-Gen programme for zero emission thermal power plants and the Integrated Ocean Drilling Programme for gas hydrates.

The House will appreciate that the search for an integrated policy with an appropriate mix of energy supplies is central to the achievement of our broader economic or social objectives. Energy is the lifeblood of our economy. Without sufficient and predictable access, our aspirations in the social sector cannot be realized. Inadequate power has a deleterious effect in building a modern infrastructure. It has a direct impact on the optimal usage of increasingly scarce water resources. Power shortage is thus not just a handicap in one sector but a drag on the entire economy.

I believe that the needs of the people of India must become the central agenda for our international cooperation. It is precisely this approach that has guided our growing partnership with the United States. I would, in particular, draw attention to the launching of the Knowledge Initiative in Agriculture with a three year financial commitment to link our universities and technical institutions and businesses to support agricultural education, research, capacity building, including in the area of bio-technology. Our first Green Revolution benefited in substantial measure from assistance provided by the US. We are hopeful that the Knowledge Initiative on Agriculture will become the harbinger of a second Green Revolution in our country.
Sir, India and the United States have much to gain from this new partnership. This was the main underlying theme of our discussions during the visit of President Bush. The resumption of civilian nuclear energy cooperation would demonstrate that we have entered a new and more positive phase of our ties, so that we can finally put behind us years of troubled relations in the nuclear field. I am confident that this is a worthy objective that will receive the full support of this House.

065. Speech of Minister of State Anand Sharma in the Rajya Sabha on civilian nuclear energy deal with the USA.

New Delhi, March 11, 2006.

Sir. The House is discussing a subject of great import. For the last few months, there has been an intense debate going on in this country, in America, and elsewhere in the world, about the engagement between India and the United States of America, ever since the July 18th Agreement, a statement between President Bush and the Prime Minister, Dr. Manmohan Singh. That statement talked of multi-dimensional cooperation between India and America, and the significant aspects, the features, being cooperation in the civilian nuclear energy field, in science and technology, cooperation between India and the United States of America in space technology, a Knowledge Commission on Agriculture, which was referred to here, and also, the CEO forum, which was set up amongst the leaders of the business community of the two countries.

Sir, this debate results from the *suo motu* statements of the Prime Minister made in both the Houses of Parliament, two statements which the hon. Prime Minister had made, one on the 27th of February, 2005 and the second on the 7th of March, 2005. Twenty-seventh February’s statement was necessitated because, not only was there an on-going speculation, but also a lot of reactions emanating purely from speculative reports, and a campaign was on in the country, the campaign questioning the motives, questioning the intent, and also casting certain doubts, which was leading to misgivings and confusion. I must say, Sir, the statement of the Prime Minister helped in removing those misgivings, dispelled misapprehensions, if any, and this debate will help in a big way in informing our country as to
what this Government is doing, and what is the importance of the initiatives taken and the agreements reached. Sir, we believe in democracy. Parliament is the highest forum of discussion and debate in a democracy, and the Prime Minister had said very categorically that everything will be done in a transparent manner, and the Parliament shall be taken into confidence.

I was listening very intently to my distinguished friend, Shri Nilotpal Basu, for whom I have high regards, and I am sure, he will be joining us soon, and some of the other distinguished colleagues about a Parliamentary Committee to be formed, and this matter to be discussed. I fail to understand, Sir, after two statements in less than 10 days by the Prime Minister of the country, and in less than 10 days, after the visit of the President of the United States of America, after this Agreement has been reached, here, on Saturday, we are discussing this matter in great detail. There cannot be any other way for the Parliament and the people of this country being taken into confidence. The July 18th statement had defined the parameters of the Agreement between the two countries. Implicit in that was the recognition of India as a Nation, State, with advanced nuclear technology. A question has been raised here that we have not been given that recognition, we have not been recognised as a Nuclear State.

Sir, what does the very reference to the Separation Plan ‘that there shall be a separation of the civilian nuclear facilities, the military nuclear facilities and the strategic nuclear assets’ mean? That is an acceptance and acknowledgement. So, it is for all our friends to understand, very clearly, that this recognition, this acceptance was there from July 18 onwards. There were certain reciprocal steps which have been mentioned, and the Agreement which has been reached is in the spirit of that Statement, and also adhering to that reciprocity, there are certain steps which we have to take, and there are certain steps to be taken by the United States of America. If we have to determine a separation between the civilian and the strategic nuclear assets, they have to take this Agreement to the US Congress; they have to amend some laws, which, eventually, will, then, lead to change or amendments of the international laws in the international regimes, giving India access to the Nuclear Suppliers’ Group, and also access to the technology and fuel. This is what India has achieved. Now, for anyone to say that there has been any compromise, any shift, would be a travesty of the truth. India did not start this journey a few months ago, or a few years ago, which has been claimed, very loudly, by our friends, especially in the BJP and the NDA, that was a journey which India began,
the quest soon after India’s independence. The first Prime Minister of this country, Pandit Jawaharlal Nehru, was a great visionary. He could clearly recognise India’s future needs, India’s potential, and, along with Dr. Homi Bhabha, he set this nation on that path. I was saying in the other House a few minutes ago, Sir, that it is important to realise that it was in 1948 that India enacted the Atomic Energy Act, and it has been a long journey. There have been challenges, there have been setbacks, there have been achievements, achievements which have made this country proud, achievements which are there for anyone to see, especially when we realised that our nuclear establishment, our nuclear scientists had worked in a regime which was of denial and discrimination, a regime which had isolated our nuclear establishment; yet, they worked, they mastered the nuclear fuel cycle, they made India nuclear capable, and this country is proud of them. This country acknowledges what they have achieved.

Sir, when we look at the Agreements which have been reached, we have to look at them not from the current perspective, but we have to take a long-term view and the benefits or the advantages which that will bring, especially with regard to India’s energy requirements, generation of nuclear energy. Now, it is a debatable issue, when our friends raised, some friends including Mr. Nilotpal Basu, that, whether India does need nuclear energy and whether that is a right approach, we have failed to meet the targets which we have set for ourselves upon the completion of the Eleventh Plan and the targets which have been set for the year 2020. I would agree with you; we have not been able to achieve the targets. Figures are there for anyone to see, and that is why it is all the more reason that we access this technology, we access the fuel so that the future targets which we have set for ourselves, we will be able to achieve.

Sir, when we talk a subject of this great national import, we have to clearly realise that whatever we say should reflect the broad national interest and national consensus. We must not be swept away by partisan political considerations to level accusations or to question the *bona fides* or the sincerity of a Government and the Prime Minister in reaching certain agreements. Sir, criticism is acceptable, but motivated accusations are not. As I was referring to the journey of this country and its achievements, it was way back in 1974, when India made its first statement by that peaceful but a very loud nuclear blast, the then Prime Minister, Shrimati Indira Gandhi, made it clear that India was committed to peaceful use of nuclear energy. As for a Government, led by a party which has this vision and this
commitment, even to insinuate that India’s sovereign interests would be compromised in any manner would be unfortunate.

Sir, here, whatever is being done through this agreement, as I said, that is not only transparent but also takes care of India’s national interests and security interests. The separation is India’s sovereign determination. We have determined which facility is to be civilian and which facility is to be strategic asset. There was a speculation about the Fast Breeder Reactors and the Prototype Fast Breeder Reactors that all have been kept out. It is the Government of India, the nuclear establishment, which has determined which facility should go where. Yes, there is a talk: Why is there an India-specific arrangement or Safeguards Agreement to be negotiated with the IAEA? It is very clear. India falls in a different category, a unique category of its own. There are signatory countries and non-signatory countries to the NPT. There are weapon States and other signatories to the NPT. India is a non-signatory. That was a conscious decision, a principled decision taken in India’s interest on merit, because India’s leadership felt, and rightly so, that the Nuclear Non-Proliferation Treaty was discriminatory and unequal. When we negotiate we will negotiate with implicit recognition of our needs as a nuclear State which has been responsible, which has impeccable credentials that have been acknowledged on non-proliferation. There again, there is no capping. We have not agreed to cap our programme, to cap the future production of fissile material. There is no prohibition or restraint on India to build future nuclear reactor. It again will be determined by us for future reactors, which one is to be put under civilian and which one is to be put under military.

There has been talk of enlightened national interest which Nilotpal Basuji was mentioning and that it should merge with popular interest. He also commented in great detail on the other aspects of the relations, which I referred to earlier, about agriculture and the Joint Statement on Democracy Initiative Fund. I may just refer to these two aspects for the sake of record.

When we talk of Democracy Initiative it is not again that India is tilting away from its known position. Last year, it was the United Nations which have decided to set up the UN Democracy Fund. India and the United States of America are the two major contributors of that Fund. India’s contribution is the same as that of the United States of America. But if you read the Agreement which has been reached and what was being referred to, there is some misunderstanding about it. That Democracy Fund is under the aegis of the United Nations.
This statement refers to if India and America were to come together to promote democracy. That is on the specific request of the concerned country. It is not that India and the United States of America will go to any country and decide what kind of regime they will have and what kind of democracy or structure they should have. The references which were there to President Bush’s statement and some other US officials with regard to regime change and Iran, the Prime Minister has made it clear in this House that India does not subscribe to that. India take its own decisions; decisions which are in our sovereign interest; decisions which are in conformity with our stated policy positions; decisions which are independent and on a merit of the issue. For anybody to feel that India can be persuaded otherwise or influenced otherwise to take a position which does not take into account our own interests, our security needs and also the sovereignty of 1.1 billion people of this country, that impression is not correct. I can understand there are some deep-rooted suspicions or viewpoints which have been there in this country. We are a democracy. In a democracy, people have every right to their perception, to their viewpoint. Differing viewpoints in a democracy through such discussions and debates, eventually, help in a better understanding and evolving a national consensus which my friend, Shri Nilotpal Basu, was referring to. Yes, his was a very scholarly presentation. He made some very pertinent points. But India has always worked for a consensus. Our presence here and discussing this matter here is indicative or confirmation of this country’s commitment and this Government’s commitment to this Parliamentary institution and also to what we talk of evolving a national consensus in the national interest. So, enlightened national interest does not take us away from what initiatives the Government takes and there should not be any distinction when we talk of enlightened national interest as something which is different from what India has stated throughout.

Sir, there is also a reference about disarmament; that India had made a commitment to disarmament and whether the new arrangements, the new agreements take us away from that commitment and also that India being one of the heroes of the Third World movement, one of the leaders of the Third World movement which Shri Nilotpal Basu again referred to, that the countries look up to India, the countries in Asia, Africa and Latin America, India is mindful of that. India has not done anything which raises any doubts or questions about our commitment to that concept. Yes, India stood for disarmament. It was Shri Rajiv Gandhi who had, as Prime Minister, called for universal disarmament; total disarmament and a plan of action was presented to the United Nations. We remain committed to that. But
our exercising the nuclear option does not mean that we have withdrawn from disarmament commitment. With due respect to my friend, he also said that where is the need of a deterrent; that they have fundamental opposition to it. I fail to understand. This is not recognising the realities of the world in which we live. It is all right for France and the UK and Russia to have deterrents. It is perfectly legitimate for China to have a nuclear deterrent, but it is not in the interest of India to have a deterrent.

NILOTPAL BASU: Sir, I request him to yield for a moment. I was talking of global order, and I have no problem of India coming out of the nuclear isolation. My point was, what is there to celebrate in the co-option of India in this nuclear order which, according to our perception, is something that is discriminate.

SHRI ANAND SHARMA: I think this requires clarification for one reason that India has taken its own sovereign decision. It is not a question of India joining a club. It is a rightful claim of India which has been accepted; it was a rightful claim. And I do remember and recall the words very clearly when he said, “You are in fundamental opposition. The nuclear order came later. The nuclear deterrent issue also came up later.” I have my notes here...(Interruptions)

NILOTPAL BASU: No; no; I am sorry. Sir, you can check the proceedings. I was hearing quietly; I was not objecting. But he has no business in putting words into my mouth. My point is, there is nothing to celebrate this...

MR. DEPUTY CHAIRMAN: Mr. Sharma, please go ahead.

SHRI ANAND SHARMA: Mr. Basu, if you want me to yield again, you are a good friend of mine, I can yield again to you. I will only say one thing. This is exactly what I was referring to. Yes; they are entitled to their viewpoint, entitled to oppose also, but not entitled to question our bona fides, question our integrity, question our patriotism and, again, our commitment to India’s sovereign interests. Let me make it very clear to this House, to the people of this country, that this Government and this party which leads the coalition Government is as concerned and as committed, as any patriotic Indian would be, in safeguarding India’s interests and India’s Independence.

Sir, I will not go into the other details about the Separation Plan which has been tabled in this House. The Separation Plan again is a
document that has been worked out by the negotiators, which included representatives of the nuclear establishment. It is not for the civilians to work out what the Separation Plan was. But if it has the endorsement of the nuclear establishment, I think, we should not doubt that. They know what they are doing. It is to be done in a phased manner. And, by the time we reach that stage, India will be in a position to evaluate how the other countries have adhered to the reciprocity which has been committed to. There is no reason to doubt the complete access to the NSG, and also the technology and fuel for future. Nuclear energy is one area where differing views may be there. But this country will be required to move in that direction and also to ensure that in the 21st century, India is not left behind. By joining others, to be accepted by others as a responsible nation with advanced nuclear technology, where the scientists have not only mastered the fuel cycle but also when we look at the on-going Stage - III, for which thorium will be used, then, one has to say that it is the new nuclear order; which means that you are accepted. Sir, we were isolated. It is not a question of celebration, as you say. But, yes; as a nation, we should feel proud that we have been acknowledged; we have been accepted, and no terms have been dictated to us. It has been our sovereign determination...(Interruptions)

DR. MURLI MANOHAR JOSHI: It has been acknowledged not because of this, but because of the scientific progress...

SHRI ANAND SHARMA: I am not saying that is because of this...(Interruptions) That is what I am saying...

DR. MURLI MANOHAR JOSHI: So it has nothing to do with the document.

SHRI ANAND SHARMA: Mr. Deputy Chairman, Sir, I have just one thing to say about the couple of doubts which have been expressed about the Agriculture Knowledge Commission, issue. I was looking into the papers after what Nilotpal had said on the Agriculture Commission, whether it is in the interests of the country or not and, Sir, this is an agreement only on the setting up of the Agriculture Knowledge Initiative...

SHRI ANAND SHARMA: Sir, if I may say with your permission, just before I conclude, just to refer to this, it is US-India Knowledge Initiative on agriculture, education, teaching, research, services and commercial linkages. Now, what it refers to is about education, about research, about food processing, bio-technology and water management.
SHRI NILOTPAL BASU: Sir, I have an objection. Let him actually authenticate this document and place it on the Table of the House. This was the point I was making earlier also.

SHRI ANAND SHARMA: No, no.

SHRI NILOTPAL BASU: I mean, there is a joint action plan, to which only the members of the Government are privy. (Interruptions) And I think, in that sense, it is an unfair debate.

SHRI ANAND SHARMA: It is not unfair. The reference to the Knowledge Commission is very much there in the Prime Minister’s statement. There is no other detail what the Knowledge Commission says, but... (Interruptions) It is very unfair. I did not expect that from you. I am just trying to be helpful in telling you...

SHRI NILOTPAL BASU: Why are you saying this? Everybody knows that there are separate documents, maybe signed, maybe unsigned. But we are not privy to that. We are saying that on an issue of such national importance, all that material should be available to the House so that every Member could take advantage of that. (Interruptions)

MR. DEPUTY CHAIRMAN: Mr. Prasad, please. (Interruptions) Please conclude.

SHRI ANAND SHARMA: Sir, I will only say one thing. (Interruptions) It is very important that on this issue there is no doubt left about this matter. We are not referring to a document. This Government does not work in an opaque manner. I am only saying that the reference to the Knowledge Commission, a detailed reference, was made in the Joint Statement of July, 18. And this reference to the Agriculture Commission was there... (Interruptions) Sir, this was there, if you go by the records, in July, in the statement which was made earlier. (Interruptions)

SHRI NILOTPAL BASU: No, Sir.

MR. DEPUTY CHAIRMAN: I cannot allow this to go in the House. (Interruptions) Whatever you wanted to say, you have said it. If the Minister wants to say, let him say. There is not question of a debate here between the two of you.

SHRI NILOTPAL BASU: Sir, there is no document with the Government which assigns...
MR. DEPUTY CHAIRMAN: Mr. Nilotpal Basu, you have made your point.

SHRI NILOTPAL BASU: But he is saying that there is no such document.

SHRI ANAND SHARMA: Sir, I have clarified it and whatever misgivings my friend has, those are based on unfounded speculation. It is not correct at all. But, yes, when we talk of Knowledge Commission on Agriculture, it has been...

SHRIMATI BRINDA KARAT: Sir, I need a clarification. Is the hon. Minister saying that there is no representation of Monsanto and Wallmart on the Committee which has been formed?

SHRI ANAND SHARMA: I have not heard of that, Sir.

SHRIMATI BRINDA KARAT: Let him consult his own Agriculture Minister.

MR. DEPUTY CHAIRMAN: That can be a separate issue. We cannot start the debate again. Please conclude.

SHRI ANAND SHARMA: Sir, nothing of the sort... (Interruptions)

SHRI NILOTPAL BASU: Then, unfortunately, as a Minister, he should not say that we are going by speculation. This is a very serious charge.

SHRI ANAND SHARMA: This is not a charge. There is no need to get worked up. You are making so many allegations (Interruptions) I am only saying that this is not the first time. In every statement, the reference has come. There is no further information. What my hon. friends are referring to, no such detail has come to my notice and I am not in a position to confirm what you are saying. So, what is being done... (Interruptions)

SHRI NILOTPAL BASU: Then say that. Don’t say that we are speculating.

SHRI ANAND SHARMA: Sir, with all respect to our friends...(Interruptions)... 

SHRI RAVI SHANKAR PRASAD: Sir, we are only observing.

SHRI NILOTPAL BASU: You will keep on observing. ...(Interruptions)
**MR. DEPUTY CHAIRMAN:** Don’t provoke him.

**SHRI ANAND SHARMA:** Sir, I am only saying that I am here being advised what to say and what not to say. I will say what the Government has to say, what is true, what is in the interest of this country. Finally, I am making it abundantly clear that we believe in transparency and accountability. We understand our responsibility. That is why we are having this debate; that is why we have had not one, two statements by the Prime Minister of this country. Thank you, Sir.

---

**066. Reply by the Prime Minister in the Lok Sabha to the debate on Civil Nuclear Energy Cooperation with the United States.**

**New Delhi, March 11, 2006**

Sir, we are dealing with an issue which is of great importance to the future of our country. I had promised the hon. House that we will come before Parliament, to share with Parliament and through Parliament, with the public opinion at large, the pros and cons of this nuclear and other related issues which figure in the joint statement issued after the visit of President Bush.

Sir, on three occasions, I have made statements in this House as well as in the other House. They were on 29th July last year, 27th February this year and on the 7th March this year. That is a measure of our commitment to a proper accountability and transparency in dealing with a very sensitive and important issue in our country. I have listened carefully to the views of the hon. Members of this august House on discussions with the US on civilian nuclear energy in the larger context of Indo-US relations. I thank the hon. Members for their views on this very important subject.

Sir, one important comment made by Shri C.K. Chandrappan and Shri Rupchand Pal was an expression of fear. Their fear was that, by entering into this arrangement with the United States of America, are we losing a sense of focus and direction in pursuit of an independent foreign policy?

Sir, I have said on more than one occasion that our Foreign Policy which is routed in our civilisational heritage and also in pursuit of our
enlightened national interest is what guides us in dealing with various countries. The United States of America is a global power. Their interests do not all the time converge with India’s interests. But there are opportunities, there are occasions when our interests do converge and I believe that it is the duty of any Government of India to take advantage of all those opportunities which widen the development options that become available to us. That is precisely what we have done in dealing with the United States of America.

I wish to assure the hon. House that while we have been working towards strengthening our relations with the United States of America, we have not forgotten our traditional strategic partners. For example, today our relations with Russia are warmer and stronger than ever before; our relations with France today are stronger and warmer; today our relations with China are stronger and warmer.

Even today while the House is meeting, our two Special Representatives are discussing the issues of boundary settlement. We have used the space that is open to us to increase our engagements with the countries of South-East Asia, with Japan and Korea. That is how it should be.

I can assure this hon. House that pursuit of India’s enlightened national interest is the dominating concern and it is this concern which has guided us in dealing with the United States.

It is certainly true that although an important component of this Agreement with the United States deals with the civilian nuclear energy, there are also other important initiatives listed in the Joint Statement. There is the knowledge initiative in the field of agriculture. What does it involve? It involves the use of technical knowledge, experience and expertise available in the United States of America to upgrade the quality of agricultural research and extension services in our country, particularly through the medium of various agricultural universities and agricultural research institutes. I do not know why there should be any objection to that.

It is a fact that when the first Green Revolution came to our country, it was the work essentially of great American scientists, like Norman Borlaug, which helped us. The United States, particularly the Lagrange colleges of the United States of America played a major role in helping us to set up major agricultural universities and that is how the Green Revolution came about in our country. For the last many years our agricultural productivity
has reached a plateau. We need a second Green Revolution and we need new technologies to upgrade and enhance our agricultural productivity. If there is, in the United States, knowledge which can help us in that process, I do not see any harm in making use of that. Cooperation in science and technology in globalised world is becoming increasingly a necessary tool of widening our development options.

If we are serious about dealing with the productivity stagnation in Indian agriculture, then, I am certainly prepared to look at wherever facilities or technologies exist which can upgrade our technology skills. I do not see we are doing anything which hurts the interests of our country.

Once a reference has been made about the CEOs meeting. It is certainly true that when I met President Bush in July, we had a discussion about increased requirements of India for capital from abroad. He said to me: “Well, we are not in the business of giving aid. But there is a lot of private capital.” I would like the US influence to be so exercised that they do recognise the importance of India as a major recipient of these capital flows. He said: “Maybe, we should set up a small group of five people from the United States, five people from India. Let them work out a strategy which will ensure that the private sector in both the countries would become more aware of the possibilities of mutually beneficial cooperation.” Out of that came a report. That report is now a public document. I have no hesitation, in due course of time, in placing it on the Table of the House.

These are various suggestions. We will examine them. If there is any action which is required to implement any of those suggestions, that action will be taken taking full advantage of the laws, procedures that we have in this country. But I have no hesitation in making that report available to the House and I will do that. Some of those suggestions are like this. For example, there is a suggestion about Mumbai becoming a major international financial centre. I think, I myself, when I was the Governor of the Reserve Bank of India, floated this idea way back in the early 1980s. It has not become a reality. I do believe that there is a lot of merit in that proposal now, particularly when we have removed most of the exchange controls while our requirements of capital are increasing day by day. This is one of the suggestions coming from the CEOs’ group. We will examine them in accordance with our rules, in accordance with our procedure and in accordance with our laws. Therefore, there should be no reason for anyone to doubt that anything will be done at the back of Parliament or that we will do anything which would hurt the interests of the country as a whole.
Mr. Speaker, Sir, I now come to the civilian nuclear energy cooperation. What is the background of what we have done? Our economy is now growing at the rate of 7 to 8 per cent per annum. It is our ambition to ensure that we grow at the rate of 8 to 10 per cent. I do believe that the savings and the investment profile of our country point to 10 per cent growth rate becoming a feasible proposition… (Interruptions) But it is one thing to have savings; it is another to have energy security. I have calculated - and this is corroborated by expert advice - that if our economy grows by one per cent, we need the additional supply of commercial energy of one per cent. If our economy has to grow at the rate of 10 per cent per annum, we need the supply of commercial energy also to increase at 10 per cent per annum.

We are today excessively dependent on import of hydrocarbons from the Middle-East, from West Asia to meet our requirements of commercial energy. We consume normally about 110 million tonnes of oil and we produce no more than 30 million tonnes. This dependence on the outside world is going to increase. There are obvious uncertainties both with regard to supply as well as with regard to prices of hydrocarbons in the world market to which I do not have to go right now.

We have, of course, plentiful reserves of coal but our coal has high ash content and excessive use of coal also runs into the problems of environmental hazards with the growing concerns about Co2 emissions and the global warming concerns that are now on the horizon. In this background, I think it is to our advantage that we should have additional options with regard to meeting our needs of commercial energy. Nuclear energy offers one such option. It increases our elbow room to manage our quest for our energy security. There are problems with regard to increasing energy consumption via the nuclear route. When I was Secretary in the Ministry of Finance some thirty years ago, I was a member of the Atomic Energy Commission. It was at that time the Atomic Energy Commission had set before the country a target of 10,000 megawatts production capacity. We are today in the year 2006. Our installed capacity is probably 3,000 megawatts. This is not because our scientists are not capable. They are exceedingly well-motivated. They operate on the frontiers of knowledge. They have given a very good account of themselves under very difficult conditions of nuclear apartheid and we all feel very proud of their attainment. But, there are certain harsh facts. We have run into problems with regard to the availability of raw materials. We have run into problems because since 1974 the world community, the dominant countries have erected a regime, which restricts our options in meeting the requirements of our atomic energy whether
reactors or fuels by way of inputs. This has hurt our energy programme and that is why in spite of the ambitions that we have had to add to nuclear capacity, we have not been able to do so.

I am not saying that imports are the only route. But, the availability of import, the removal of restrictive international trading regimes, which restricts our options with regard to trade in nuclear materials and nuclear technologies, will certainly increase the maneuverability of our country in meeting the challenge of energy security. That is why when President Bush and I discussed this matter, he told me that this is one area where he recognised India needs a reversal of the attitude of the United States. But, he also said to me that the United States and other members of the Nuclear Suppliers Group are not going to help us to build nuclear bombs. I said that is perfectly reasonable, I do not expect the world to do so. So, that is how this idea of separation of the civilian sector and the strategic sector was evolved. What we have done with the United States, is not an agenda for dealing with strategic cooperation. It is basically a quest to promote cooperation between India and the members of the Nuclear Suppliers Group in meeting India’s requirements of commercial energy.

What I do claim as a plus point for our Government is that while doing this deal to increase our options with regard to meeting all the commercial energy requirements of our country, we have not compromised our autonomy with regard to our strategic programme. This has not been discussed with the United States. We have not agreed to any formula or any proposal which would amount to a cap on our nuclear programme. I have taken full care about it. I had the advice of our atomic scientists and I had the advice of our Armed Forces in working out India’s requirement of what would constitute a critical minimum deterrent. We have made sure that we have taken care of India’s present requirements and future requirements, as far as possible humanly. Therefore, the country should have the assurance that we have not compromised, in any way, when it comes to India’s strategic nuclear programme. We have not accepted a cap on that nuclear programme. That decision will have to be made by the Government of India, taking into account the security concerns of our nation and we are alone competent to judge what is desirable and what is not desirable. This is the essence of the arrangement that we have made with the United States of America.

Sir, several issues have been raised with regard to the nuclear agreement. Shri Kharabela Swain mentioned that we have accepted a cap
on our strategic nuclear capabilities. I have already mentioned that that is not the case. We have been asked if we have ensured availability of sufficient fissile material and other inputs for our strategic programme. Let me reassure this House that the Separation Plan has been drawn up in such a manner that it will not adversely affect our strategic programme. There is no question of India accepting a cap on our deterrent potential. Based on assessment of threat scenario, Government have ensured that there would be adequate availability of fissile material and other inputs to meet both current and future requirements of our strategic programme.

The Separation Plan does not, in any way, undermine the integrity of our Nuclear Doctrine. This Doctrine stipulates a credible minimum deterrent based on a policy of ‘no-first-use’ and the assured capability of inflicting unacceptable damage on an adversary indulging in a nuclear first strike. The Separation Plan will not limit our option either now or in the future to address evolving threat scenarios with appropriate responses consistent with our nuclear policy of restraint and responsibility.

Sir, questions have also been raised regarding safeguards in perpetuity. I believe Shri Swain referred to it and he also said that assurances for supply have been given by the United States bilaterally while safeguards will be with the International Atomic Energy Agency multilaterally. So, he asked as to how we reconcile and ensure that India’s interests are effectively protected. Under the last year’s July Statement, India agreed to identify and separate civilian and military facilities and put civilian nuclear facilities under safeguards. The Separation Plan provides for an India-specific safeguards agreement to be negotiated with the International Atomic Energy Agency.

People ask, why is it India specific safeguards? Because it is certainly true that we are not a member of the NPT nuclear powers so we are not in those P5. But we are also not in this other category, that is, non-Nuclear Weapon States. We have a nuclear weapon programme of our own and there is today an implicit recognition of that reality on the part of the rest of the world. Therefore, it is certainly true when we go to sign safeguard agreements with the International Atomic Energy Agency, our safeguard agreement cannot be a carbon copy of either Model I or Model II. It has to be a unique safeguard agreement, which we will work to negotiate with the International Atomic Energy Agency.

I wish to assure the House that India will not accept the safeguard agreements signed by non-Nuclear Weapon States under the NPT,
otherwise called Comprehensive Safeguards. This is precisely because our military facilities will remain outside the purview of safeguards like those of other Nuclear Weapon States. Each of the Nuclear Weapon States has concluded separate safeguard agreements with the International Atomic Energy Agency, listing specific facilities offered for safeguards. Similarly, we too will include in an India’s Specific Act Safeguard Agreement a list of facilities offered for International Atomic Energy Agency Safeguards.

Sir, such an India specific safeguard agreement is yet to be negotiated. It will be difficult to predict the contents and details. However, it will contain protection against withdrawal of safeguarded nuclear material for a civilian use at any time. It will be negotiated so that India will be permitted to take corrective measures to ensure uninterrupted operation of our civilian nuclear reactors in the event of disruption of foreign fuel supplies.

Sir, on the subject of fuel supplies, I must underline that the United States has provided a number of assurances of uninterrupted supplies of fuel. These must be read with the assurance of India’s right to take corrective measures in the event fuel supplies are interrupted. Even after these assurances, if all measures fail and supplies to our safeguarded reactors are disrupted, India retains the sovereign right to take all appropriate measures to fully safeguard its interests. That safeguards, in perpetuity, must be seen in this overall context of being backed up by credible assurances about uninterrupted supply.

The third issue relates to measures announced by the Government with regard to CIRUS and Apsara Research Reactors, those of which are located at BARC. As I explained in my last suo motu statement, we have decided to permanently shut down the CIRUS Reactor in 2010 and to shift the foreign resource fuel core of the Apsara Reactor outside BARC.

Questions are being asked, why are we doing it? The fuel core will then be available for safeguards in 2010. Let me clarify that only the fuel core will be shifted and not the Reactor. We have decided to take these two steps because the BARC complex is of high national security importance and we will not allow any international inspection in this area.

Now, while the CIRUS Reactor was refurbished recently, the associated cost will be more than recovered by the Isotope reduce and the research that we will be conducting before it is closed. Both CIRUS and Apsara are not related to our strategic programme and therefore, our scientists have assured me that these steps are announced in the separation plan will have no impact on our strategic programme.
Some Members also expressed concern whether these steps will hinder ongoing research and development. Through this august House, I assure the nation and, in particular, the scientific community that we will take all possible steps to ensure that there is no adverse fallout on research and development. Our scientists will have state-of-the-art facilities to expand the frontiers of knowledge. One of the main criteria motivating us in drawing up the separation plan has been our determination to safeguard the autonomy of our research and development programme. This will be ensured in full measure.

Finally, some Members have also expressed concern whether the confidentiality of the strategic programme was fully preserved during the negotiations with the United States. I can assure the hon. Member that our discussions with the United States pertained only to those facilities that are being offered for safeguards between 2006 and 2014. The discussion did not cover our strategic programme. Confidential information on our national security and the strategic programme has been and will remain fully protected.

Mr. Speaker, Sir, I believe that it is the sentiment of the House that the decision we have taken will lead to welcome resumption of international cooperation. Our understandings will open the doors for cooperation and the development of our civilian nuclear energy sector not only with the United States but also with other key international partners like Russia, United Kingdom and France. At the same time, we will also be able to internationally share our recognised capabilities in the field of civilian nuclear technologies. In this context some Members spoke of the global nuclear energy partnership which is a separate issue from our bilateral discussions with the United States on civil nuclear cooperation. Our comprehensive capabilities across the spectrum and mastery over all aspects of the nuclear fuel cycle are well established and widely recognised. Our possible association with any such international initiative, therefore, can be only on the basis of participation of India as an equal partner with other founding member and as a supplier nation. I would like to emphasise this point. We will not forgo the three-stage Programme which will enable us to utilise our vast thorium reserves in future.

Mr. Speaker, Sir, I believe I have covered most of the points that have been made in this debate. And I repeat what we have done is to widen our development options with regard to ensuring adequate energy security for our country. We have, at the same time, taken full care that our
strategic programme is protected. We have, at the same time, taken care that the research and development opportunities in this vital area of national endeavour are not in any way adversely affected by this Agreement. So, what we have done, I believe, is a step forward in taking our country on to a higher growth and development trajectory.

Thank you Sir.

067. Question in the Lok Sabha: “Ban on Nuclear Tests”.

New Delhi, May 10, 2006.

Will the Prime Minister be pleased to state:

a) whether the US asked India to ban nuclear tests permanently as part of Indo-US nuclear deal as per the draft agreement received in this regard;

b) if so, the details thereof; and

c) the response of the Union Government thereto?

The Minister of State in the Ministry of External Affairs (Shri Anand Sharma):

(a)-(b) Discussions are ongoing between India and the United States on a bilateral civil nuclear energy cooperation agreement. Among the elements in the draft proposed by the United States, there was a reference to cooperation being discontinued were India to detonate a nuclear explosive device.

(c) India has conveyed to the United States that such a provision has no place in the proposed bilateral agreement and that India is bound only by its commitment in the July 18, 2005 Joint Statement to continuing a unilateral moratorium on nuclear testing.

Relevant Extract of the “Glenn Amendment” on Sanctions: Amendment to the Arms Export Control Act

(b) PROHIBITIONS ON ASSISTANCE TO COUNTRIES INVOLVED IN TRANSFER OR USE OF NUCLEAR EXPLOSIVE DEVICES; EXCEPTIONS; PROCEDURES APPLICABLE-
(1) Except as provided in paragraphs (4), (5), and (6), in the event that the President determines that any country, after the effective date of part B of the Nuclear Proliferation Prevention Act of 1994

(A) transfers to a non-nuclear-weapon state a nuclear explosive device,

(B) is a non-nuclear-weapon state and either—

(i) receives a nuclear explosive device, or

(ii) detonates a nuclear explosive device,

(C) transfers to a non-nuclear-weapon state any design information or component which is determined by the President to be important to, and known by the transferring country to be intended by the recipient state for use in, the development or manufacture of any nuclear explosive device, or

(D) is a non-nuclear-weapon state and seeks and receives any design information or component which is determined by the President to be important to, and intended by the recipient state for use in, the development or manufacture of any nuclear explosive device, then the President shall forthwith report in writing his determination to the Congress and shall forthwith impose the sanctions described in paragraph (2) against that country.

Text of statement made by MEA Spokesman (17 April 2006)

“USA has shared with India some weeks ago a preliminary draft Agreement on the Indo-US civil nuclear cooperation under article 123 of the US Atomic Energy Act. Among the elements suggested by the United States there is a reference to cooperation being discontinued were India to detonate a nuclear explosive device. In the preliminary discussions on these elements so far India has already conveyed to the United States that such a provision has no place in the proposed bilateral agreement and that India is bound only by what is contained in the July 18 Joint Statement, that is continuing its commitment to a unilateral moratorium on nuclear testing. India’s position on CTBT, that you mentioned, is well known and continues to remain valid.”

Relevant Text of the Draft Bilateral Agreement

**ARTICLE 11 - CESSATION OF COOPERATION**

1. If either Party at any time following entry into force of this Agreement:
(A) does not comply with the provisions of Article 5, 6, 7, 8, or 9; or
(B) terminates, abrogates, or materially violates a safeguards agreement with the IAEA; the other Party shall have the rights to cease further cooperation under this Agreement and to require the return of any material, equipment, or components transferred under this Agreement and any special nuclear material and weapons-usable byproduct material produced through their use.

2. If India at any time following entry into force of this Agreement detonates a nuclear explosive device, the United States of America shall have the same rights as specified in paragraph 1.

3. If either Party exercises its rights under this Article to require the return of any material, equipment, or components it shall, after removal from the territory of the other Party, reimburse the other Party for the fair market value of such material, equipment, or components.

New Delhi, May 11, 2006

1. The resumption of full civilian nuclear energy cooperation between India and the United States arose in the context of India's requirement for adequate and affordable energy supplies to sustain its accelerating economic growth rate and as recognition of its growing technological prowess. It was preceded by discussions between the two Governments, particularly between President Bush and Prime Minister Manmohan Singh, of the global energy scenario and the long-term implications of increasing pressure on hydrocarbon resources and rising oil prices. These developments led to the announcement in April 2005 of an Indo-US Energy Dialogue that encompassed the entire spectrum of energy options ranging from oil and gas to coal, alternative fuels and civilian nuclear energy. Through the initiation of a sustained dialogue to address energy security concerns, the two countries sought to promote stable, efficient, predictable and cost effective solutions for India's growing
requirements. At the same time, they also agreed on the need to develop and deploy cleaner, more efficient, affordable and diversified energy technologies to deal with the environmental implications of energy consumption. India had developed proven and wide ranging capabilities in the nuclear sector, including over the entire nuclear fuel cycle. It is internationally recognized that India has unique contributions to make to international efforts towards meeting these objectives. India has become a full partner in ITER, with the full support of the US and other partners. India also accepted the US invitation to join the initiative on Clean Development Partnership.

2. Noting the centrality of civilian nuclear energy to the twin challenges of energy security and safeguarding the environment, the two Governments agreed on 18 July 2005 to undertake reciprocal commitments and responsibilities that would create a framework for the resumption of full cooperation in this field. On its part, the United States undertook to:

- Seek agreement from the Congress to adjust US laws and policies to achieve full civil nuclear energy cooperation.
- Work with friends and allies to adjust international regimes to enable full civil nuclear energy cooperation and trade with India, including but not limited to expeditious consideration of fuel supplies for safeguarded nuclear reactors at Tarapur.
- In the meantime, encourage its partners to consider fuel supply to Tarapur expeditiously.
- To consult with its partners to consider India’s participation in ITER.
- To consult with other participants in the Generation IV International Forum with a view towards India’s inclusion.

3. India had conveyed its readiness to assume the same responsibilities and practices and acquire the same benefits and advantages as other leading countries with advanced nuclear technology, such as the United States. Accordingly, India for its part undertook the following commitments:

- Identifying and separating civilian and military nuclear facilities and programmes in a phased manner.
1. Filing a declaration regarding its civilian facilities with the IAEA.
2. Taking a decision to place voluntarily its civilian nuclear facilities under IAEA safeguards, and
3. Signing and adhering to an Additional Protocol with respect to civilian nuclear facilities.

4. Other commitments undertaken by India have already been fulfilled in the last year. Among them are:
   a. India’s responsible non-proliferation record, recognized by the US, continues and is reflected in its policies and actions.
   b. The harmonization of India’s export controls with NSG and MTCR Guidelines even though India is not a member of either group. These guidelines and control lists have been notified and are being implemented.
   c. A significant upgrading of India’s non-proliferation regulations and export controls has taken place as a result of Weapons of Mass Destruction Act of May 2005. Inter-Ministerial consultations are ongoing to examine and amend other relevant Acts as well as framing appropriate rules and regulations.
   d. Refrain from transfer of enrichment and reprocessing technologies to states that do not have them and supporting international efforts to limit their spread. This has guided our policy on non-proliferation.
   e. Continued unilateral moratorium on nuclear testing, and
   f. Willingness to work with the United States for the conclusion of a multilateral Fissile Material Cut-Off Treaty.

5. The Joint Statement of 18 July 2005, recognized that India is ready to assume the same responsibilities and practices as other leading countries with advanced nuclear technology, such as the United States. India has an impeccable record in nonproliferation. The Joint Statement acknowledges that India’s nuclear programme has both a military and a civilian component. Both sides had agreed that the purpose was not to constrain India’s strategic programme but to enable resumption of full civil nuclear energy cooperation in order to
enhance global energy and environmental security. Such cooperation was predicated on the assumption that any international civil nuclear energy cooperation (including by the US) offered to India in the civilian sector should, firstly, not be diverted away from civilian purposes, and secondly, should not be transferred from India to third countries without safeguards. These concepts will be reflected in the Safeguards Agreement to be negotiated by India with IAEA.

6. India’s nuclear programme is unique as it is the only state with nuclear weapons not to have begun with a dedicated military programme. It must be appreciated that the strategic programme is an offshoot of research on nuclear power programme and consequently, it is embedded in a larger undifferentiated programme. Identification of purely civilian facilities and programmes that have no strategic implications poses a particular challenge. Therefore, facilities identified as civilian in the Separation Plan will be offered for safeguards in phases to be decided by India. The nature of the facility concerned, the activities undertaken in it, the national security significance of materials and the location of the facilities are factors taken into account in undertaking the separation process. This is solely an Indian determination.

7. The nuclear establishment in India not only built nuclear reactors but promoted the growth of a national industrial infrastructure. Nuclear power generation was envisaged as a three-stage programme with PHWRs chosen for deployment in the first stage. As indigenous reactors were set up, several innovative design improvements were carried out based on Indian R&D and a standardized design was evolved. The research and technology development spanned the entire spectrum of the nuclear fuel cycle including the front end and the back end. Success in the technologies for the back end of the fuel cycle allowed us to launch the second stage of the programme by constructing a Fast Breeder Test Reactor. This reactor has operated for 20 years based on unique carbide fuel and has achieved all technology objectives. We have now proceeded further and are constructing a 500 MWe Prototype Fast Breeder Reactor. Simultaneously, we have launched design and development of reactors aimed at thorium utilization and incorporating inherent safety features.

8. Concepts such as grid connectivity are not relevant to the separation
exercise. Issues related to fuel resource sustainability, technical design and economic viability, as well as smooth operation of reactors are relevant factors. This would necessitate grid connectivity irrespective of whether the reactor concerned is civilian or not civilian.

9. It must be recognized that the Indian nuclear programme still has a relatively narrow base and cannot be expected to adopt solutions that might be deemed viable by much larger programmes. A comparison of the number of reactors and the total installed capacity between India and the P-5 brings this out graphically:

<table>
<thead>
<tr>
<th>Country</th>
<th>Number of Reactors</th>
<th>Total Installed Capacity</th>
</tr>
</thead>
<tbody>
<tr>
<td>India</td>
<td>15</td>
<td>3.04 GWe (2.8% of the total production)</td>
</tr>
<tr>
<td>USA</td>
<td>104 (103 operational)</td>
<td>99.21 GWe (19.9% of the total production)</td>
</tr>
<tr>
<td>France</td>
<td>59</td>
<td>63.36 GWe (78.1% of the total production)</td>
</tr>
<tr>
<td>UK</td>
<td>23</td>
<td>11.85 GWe (19.4% of the total production)</td>
</tr>
<tr>
<td>Russia</td>
<td>31</td>
<td>21.74 GWe (15.6% of the total production)</td>
</tr>
<tr>
<td>China</td>
<td>9</td>
<td>6.602 GWe (2.2% of the total production)</td>
</tr>
</tbody>
</table>

Source: Nuclear Energy Institute, Washington DC

10. Another factor to be taken into account is the small capacity of the reactors produced indigenously by India, some of which would remain outside safeguards. Therefore, in assessing the extent of safeguards coverage, it would be important to look at both the number of reactors and the percentage of installed capacity covered. An average Indian reactor is of 220 MW and its output is significantly smaller than the standard reactor in a P-5 economy.
The chart below illustrates this aspect:

<table>
<thead>
<tr>
<th>Country</th>
<th>Most Common reactor</th>
<th>Number of such reactors</th>
</tr>
</thead>
<tbody>
<tr>
<td>India</td>
<td>PHWRs 220 MWe</td>
<td>12</td>
</tr>
<tr>
<td>USA</td>
<td>69 PWRs and 34 BWRs.</td>
<td>Most plants are in the range of 1000-1250 MWe 51 Reactors in the range of 1000 MWe to 1250 MWe</td>
</tr>
<tr>
<td>France</td>
<td>PWRs of 900 MWe and 1300 MWe size</td>
<td>34 PWRs of 900 MWe and 20 PWRs of 1300 MWe</td>
</tr>
<tr>
<td>UK</td>
<td>No standard size. AGR is the most common in the range of 600-700 MWe</td>
<td>14 AGRs</td>
</tr>
<tr>
<td>Russia</td>
<td>3rd Generation VVER-1000 PWRs and RBMK 1000 Light Water Graphite Reactors</td>
<td>9 third Generation VVER-1000 PWRs and 11 RBMK 1000 Light Water Graphite Reactors</td>
</tr>
<tr>
<td>China</td>
<td>PWRs 984 MWe</td>
<td>Four</td>
</tr>
</tbody>
</table>

11. The complexity of the separation process is further enhanced by the limited resources that India has devoted to its nuclear programme as compared to P-5 nations. Moreover, as India expands international cooperation, the percentage of its thermal power reactor installed capacity under safeguards would rise significantly as fresh capacity is added through such cooperation.

12. India’s approach to the separation of its civilian nuclear facilities is guided by the following principles:
   - Credible, feasible, and implementable in a transparent manner;
   - Consistent with the understandings of the 18 July Statement;
   - Consistent with India’s national security and R&D requirements as well as not prejudicial to the three-stage nuclear programme in India;
13. Based on these principles, India will:

- Include in the civilian list only those facilities offered for safeguards that, after separation, will no longer be engaged in activities of strategic significance.
- The overarching criterion would be a judgement whether subjecting a facility to IAEA safeguards would impact adversely on India’s national security.
- However, a facility will be excluded from the civilian list if it is located in a larger hub of strategic significance, notwithstanding the fact that it may not be normally engaged in activities of strategic significance.
- A civilian facility would therefore, be one that India has determined not to be relevant to its strategic programme.

14. Taking the above into account, India, on the basis of reciprocal actions by the US, will adopt the following approach:

i) Thermal Power Reactors: India will identify and offer for safeguards 14 thermal power reactors between 2006 and 2014. This will include the 4 presently safeguarded reactors (TAPS 1&2, RAPS 1&2) and in addition KK 1&2 that are under construction. 8 other PHWRs, each of a capacity of 220MWe, will be offered. The overall plan will be as follows:

<table>
<thead>
<tr>
<th>S.No.</th>
<th>Facility</th>
<th>Year offered for safeguards</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>TAPS 1</td>
<td>2006</td>
</tr>
<tr>
<td>2.</td>
<td>TAPS 2</td>
<td>2006</td>
</tr>
<tr>
<td>3.</td>
<td>RAPS 1</td>
<td>2006</td>
</tr>
<tr>
<td>4.</td>
<td>RAPS 2</td>
<td>2006</td>
</tr>
<tr>
<td>5.</td>
<td>KK 1</td>
<td>2006</td>
</tr>
<tr>
<td>6.</td>
<td>KK 2</td>
<td>2006</td>
</tr>
</tbody>
</table>
The above offer would, in effect, cover 14 out of the 22 thermal power reactors in operation or currently under construction to be placed under safeguards, and would raise the total installed Thermal Power capacity by MWe under safeguards from the present 19% to 65% by 2014.

ii) Fast Breeder Reactors: India is not in a position to accept safeguards on the Prototype Fast Breeder Reactors (PFBR) and the Fast Breeder Test Reactor (FBTR), both located at Kalpakkam. The Fast Breeder Programme is at the R&D stage and its technology will take time to mature and reach an advanced stage of development.

iii) Future Reactors: India has decided to place under safeguards all future civilian thermal power reactors and civilian breeder reactors, and the Government of India retains the sole right to determine such reactors as civilian.

iv) Research Reactors: India will permanently shut down the CIRUS reactor, in 2010. It will also be prepared to shift the fuel core of the APSARA reactor that was purchased from France outside BARC and make the fuel core available to be placed under safeguards in 2010.

v) Upstream facilities: The following upstream facilities would be identified and separated as civilian:

- List of specific facilities in the Nuclear Fuel Complex, Hyderabad which will be offered for safeguards by 2008 is give below:
Uranium Oxide Plant (Block A)
Ceramic Fuel Fabrication Plant (Palletizing) (Block A)
Ceramic Fuel Fabrication Plant (Assembly) (Block A)
Enriched Uranium Oxide Plant
Enriched Fuel Fabrication Plant
Gadolinia Facility

The Heavy Water Production plants at Thal, Tuticorin and Hazira are proposed to be designated for civilian use between 2006-2009. We do not consider these plants as relevant for safeguards purposes.

vi) Downstream facilities: The following downstream facilities would be identified and separated as civilian:

- India is willing to accept safeguards in the ‘campaign’ mode after 2010 in respect of the Tarapur Power Reactor Fuel Reprocessing Plant.
- The Tarapur and Rajasthan ‘Away From Reactors’ spent fuel storage pools would be made available for safeguards with appropriate phasing between 2006-2009.

vii) Research Facilities: India will declare the following facilities as civilian:

(a) Tata Institute of Fundamental research
(b) Variable Energy Cyclotron Centre
(c) Saha Institute of Nuclear Physics
(d) Institute for Plasma Research

These facilities are safeguards-irrelevant. It is our expectation that they will play a prominent role in international cooperation.
15. Safeguards:

a) The United States has conveyed its commitment to the reliable supply of fuel to India. Consistent with the July 18, 2005,Joint Statement, the United States has also reaffirmed its assurance to create the necessary conditions for India to have assured and full access to fuel for its reactors. As part of its implementation of the July 18, 2005, Joint Statement the United States is committed to seeking agreement from the U.S. Congress to amend its domestic laws and to work with friends and allies to adjust the practices of the Nuclear Suppliers Group to create the necessary conditions for India to obtain full access to the international fuel market, including reliable, uninterrupted and continual access to fuel supplies from firms in several nations.

b) To further guard against any disruption of fuel supplies, the United States is prepared to take the following additional steps:

i) The United States is willing to incorporate assurances regarding fuel supply in the bilateral U.S.-India agreement on peaceful uses of nuclear energy under Section 123 of the U.S. Atomic Energy Act, which would be submitted to the U.S. Congress.

ii) The United States will join India in seeking to negotiate with the IAEA an India-specific fuel supply agreement.

iii) The United States will support an Indian effort to develop a strategic reserve of nuclear fuel to guard against any disruption of supply over the lifetime of India’s reactors.

iv) If despite these arrangements, a disruption of fuel supplies to India occurs, the United States and India would jointly convene a group of friendly supplier countries to include countries such as Russia, France and the United Kingdom to pursue such measures as would restore fuel supply to India.

c) In light of the above understandings with the United States, an India-specific safeguards agreement will be negotiated between India and the IAEA providing for safeguards to guard against withdrawal of safeguarded nuclear material from civilian use at any time as well as providing for corrective measures that India may take to ensure uninterrupted
operation of its civilian nuclear reactors in the event of disruption of foreign fuel supplies. Taking this into account, India will place its civilian nuclear facilities under India-specific safeguards in perpetuity and negotiate an appropriate safeguards agreement to this end with the IAEA.

16. This plan is in conformity with the commitments made to Parliament by the Government.

069. Response of Official Spokesperson to a questions on media reports that “India can make 50 nuclear warheads a year”

New Delhi, June 23, 2006.

We have seen this report in question. Unfortunately, there has been a considerable amount of misinformed speculation about our nuclear programme. First of all, you must remember that our nuclear deal with the US is about civilian nuclear energy cooperation and not about our strategic programme. The issues touched upon in this report have all been covered by the Separation Plan, which has been tabled in Parliament. It is clear and unambiguous, just as the July 18 Joint Statement is. There is no room for misinterpretation.

The argument that the nuclear deal with the US would enhance our strategic capacity is as misplaced as its opposite extreme - that it would cripple our programme. We believe that Secretary Rice has accurately summed up the situation in her Congressional testimony when she has noted that the nuclear deal would have no impact on our strategic programme. India remains committed to a credible minimum deterrent.
070. Interview of Minister of State Anand Sharma with *Indian Express* on civil nuclear energy agreement with the USA.

New Delhi, July 2, 2006.

[While the Indo-US nuclear deal may have crossed the first hurdle comprehensively in the House and Senate in America, it hasn't impressed opposition BJP or ally Left back home. It has been left to Anand Sharma, MoS, External Affairs, to formulate a political response to what, many believe, is largely political opposition to the deal. In an interview to JAYANTH JACOB, Sharma says the Government welcomes the Left’s “constructive criticism” and was confident of winning it over, while the BJP’s charges reek of double standards:]

**Question:** The Indo-US civilian nuclear deal has come in for a lot of criticism. And the opposition parties have been alleging that they were not kept in the loop.

**Answer:** Such criticisms are motivated, a partisan propaganda aimed at misleading public opinion on the issue. The deal is a bipartisan endorsement of the two countries' mutual vision, as expressed in their July 18, 2005, statement of civilian nuclear cooperation.

There is also inadequate comprehension on the part of many about the legislative process in the US. What we heard during the debate in the House of Representatives was a sense of the House. And in any democracy, individual members are entitled to air their views...

We are committed to what forms the basis of the July 18 statement and the parameters defined in the nuclear separation plan on May 2 agreed between Prime Minister Manmohan Singh and President George Bush. There is no deviation, dilution or further addition to our stand. All such criticisms are premature, uninformed and deliberately partisan. India is committed to pursue a sovereign foreign policy that will be judicious and will be based on merit. There is no question of India deviating from that.

**Question:** It's not only the BJP, even the Left parties have criticised the deal.

**Answer:** We respect the inputs of the Left parties, their constructive criticism. They are our partners. There is a mechanism of coordination with Left parties in addressing such issues. Then, in a democracy, political parties have their own stands on issues. But we seek broad-based national
consensus on all matters related to foreign policy. And the country’s interests are always safeguarded.

**Question:** But don’t you think there is less and less attempt to hold inter-party consultations before major policy decisions, irrespective of who’s in power?

**Answer:** It has been our endeavour to seek consensus on major foreign policy decisions. When in power, the NDA, led by the BJP, had taken specific steps on the nuclear issue, Indo-US relations and Pakistan. We were not informed. Parliament was not informed. Their policy lacked consistency. The armies of India and Pakistan stood eyeball-to-eyeball on the border for 11 months. Things have improved in the past two years.

The BJP’s charges should be rejected with the contempt they deserve. We are only discussing the civilian nuclear plan, the NDA was discussing strategic deterrent plans with the US.

**Question:** Is this on record?

**Answer:** It is on record. The Vajpayee government was talking strategic restraint, strategic deterrent plans with the US. In 1998 then PM Vajpayee told the UN General Assembly that India’s de facto ban on nuclear testing can become a de jure one. Strobe Talbott wrote about Jaswant Singh’s readiness to sign the Comprehensive Test Ban Treaty. All these show the BJP’s double standards.

**Question:** Do the records suggest the NDA discussed other strategic issues?

**Answer:** That’s not the issue here. Parliament was not kept informed about such foreign policy decisions by the NDA. (On the other hand) there was an extensive discussion on the July 18 statement in Parliament in which Prime Minister Manmohan Singh respondend to the concerns of the members. Parliament had even met on a Saturday to discuss the issue.

**Question:** Moving on to the Shashi Tharoor issue, many feel that by fielding him for the UN Secretary General’s post, India has traded off on its Security Council aspirations?

**Answer:** This is not correct. The prevailing perception among a large number of UN member nations is that the next Secretary General be from Asia in conformity with the principle of regional rotation. As Tharoor is the
best available candidate from Asia, we offered him support. He is a distinguished intellectual and has vast experience at the UN...Even BJP supported Tharoor’s candidature.

As regards our UNSC aspirations, we are committed to pursuing our campaign on comprehensive UN reforms in accordance with the G-4 resolution. We are engaging other countries too. But first a framework resolution has to go through. Our rightful aspirations for the UNSC have been endorsed by a vast majority of countries.

**Question:** Again, why didn’t the Government keep the Opposition in the loop on this, when it would have been confident of their support?

**Answer:** Tharoor’s candidature was not cleared in one day. When we decided to support him, Tharoor called up former prime minister (Vajpayee), L K Advani and CPI(M) leaders Prakash Karat and Sitaram Yechury. But the BJP which prides itself as a nationalistic, patriotic party doesn’t even take pride in major achievements of the country at the international level—like India bagging 173 out of 190 votes to get elected to the United Nations Human Rights Council.

**Question:** What’s the level of Indian involvement in Sri Lanka? Considering the stake Tamil Nadu parties have in the UPA, it must be a tough balancing act.

**Answer:** We are concerned about the situation in Sri Lanka. Our stand has been that the peace process should continue and there should be a negotiated settlement. When it comes to foreign policy there is no different opinion from any of our allies.

**Question:** But the Lankan refugee problem is getting bigger...

**Answer:** Refugee problem is refugee problem and ethnic issue is ethnic issue. I would also like to state that the LTTE is a banned organisation.

**Question:** Is the time ripe for the Prime Minister to visit Pakistan?

**Answer:** It’s an open-ended question. Our relations with Pakistan have improved a lot since the UPA came into power.

2. This Convention, initially proposed by the Russian Federation, was adopted by the UN General Assembly (UNGA) on 13/4/05 by a consensus resolution and was opened for signature at the UN Headquarters from 14th September 2005. The Convention is the first anti-terrorism convention adopted since the terrorist attacks of September 11, 2001. The Convention requires States to make punishable as serious offence under their domestic law, terrorist acts involving the use of nuclear materials. States are also required to cooperate in the prevention, investigation and prosecution of these offences through information sharing, extradition and mutual legal assistance.

3. India is already a Party to the other 12 international terrorism conventions and protocols and attaches high priority to the formulation of international legal instruments to combat terrorism. Terrorism presents the most serious threat to peace and security. India has always emphasized that the international community must adopt an approach of zero-tolerance for terrorism anywhere and be ready to undertake all necessary measures to bring to justice the perpetrators, organizers, sponsors of these and other terrorist acts and those who incite terrorists to commit them.

4. This Convention is an important step forward in multilateral efforts to strengthen the international legal framework against terrorism and sends an undeniably clear signal that the international community will not tolerate those that threaten or commit terrorist acts involving radioactive material or nuclear devices. India shares the objective of the International Convention for the Suppression of Acts of Nuclear Terrorism, which demonstrates the resolve of the international community to deny terrorists access to nuclear materials and enhances international cooperation between states in devising and
adopting practical measures for prevention of acts of nuclear terrorism and for the prosecution and punishment of their perpetrators.

072. Statement of Prime Minister in Rajya Sabha on the India-US Nuclear Agreement.

New Delhi, August 17, 2006

THE PRIME MINISTER (DR. MANMOHAN SINGH): Mr. Chairman, Sir, as I stand before this august House, I would like to share with you and the hon. Members the vision that inspires us and that vision is bequeathed to us by no less than a person than Jawaharlal Nehru, when, on the eve of our Independence he said, “Our task will not be complete so long as we cannot get rid of chronic mass poverty, ignorance and disease which still afflict millions and millions of our country men and country women.” In the last sixty years, a great deal has been done to soften the harsh edges of extreme poverty. But, who can deny that we have to do a lot more to reach our cherished goal. Sir, Panditji said in 1947 that it has been the dream of the greatest man of our age, referring to Mahatma Gandhi, to wipe out every tear from every eye and, he then said, that may be a tall order for us. But, that is the inspiration which has to inspire Governments in a country as poor, as under-developed as we are.

Sir, it is my solid conviction that mass poverty can be removed only if we have a fast expanding economy. Even though, I recognise that a fast expanding economy is by itself not a sufficient condition of getting rid of poverty. We need institutional mechanisms to focus, particularly on the needs of the under privileged sections of our society. If India has to grow at the rate of 8 per cent to 10 per cent and, maybe, more, India needs rising amounts of energy. A question has been asked, ‘Have I calculated what type of energy mix this country needs and have I worked out the costs of that?’ Mr. Chairman, I had some experience of that. Soon after the Pokhran Tests in 1974, I became the Member for finance of the Atomic Energy Commission and, along with colleagues like Dr. Ramanna, Dr. Sethna, Dr. Iyengar, we worked out the role of nuclear energy in meeting the deficit in our energy requirements.
In this context, we must never forget the primary motivation for India’s nuclear programme was the production of energy, defence came much later. And, where are we? After six years, our total production of nuclear power is no more than 3,000 MW. People say that we can use coal. We have plenty of coal. Often low-grade coal has high ash content. If you use increased quantities of coal you run into environmental hazards, like, the CO2 and other gas emissions. As for hydrocarbons, you know there is a great insecurity of supplies. We know that the price of hydrocarbons, oil and gas, can go, in a very short period, to hundred dollars a barrel. Therefore, in this environment, prudence demands that we must widen our energy options. I am not saying that nuclear energy will provide the final answer. All I am saying is, as I understood, all development is about widening human choices. And, when it comes to energy security, widening our choices means that we should be able to make effective use of nuclear power. If the need arises. If the economic calculus demands that this is the most cost-effective means.

It is my belief that the nuclear order that prevailed in the world for thirty odd years, which has imposed restrictions on nuclear trade with India — if this nuclear order is not changed, India’s development options, particularly its quest for energy security will face, to put it mildly, a great degree of uncertainty. Mr. Arun Shourie asked me what calculations have I seen. I have seen many calculations in the Department of Atomic Energy. In the eighties when Shri K.C. Pant was the Chairman of the Energy Policy Committee, a detailed study was done and it was shown that if you were talking of generating power and reaching it to place 700 kms away from a coal mine, nuclear energy is the right economic answer. Things can change. And, I think, the Planning Commission has done recent work, and they have also come to the conclusion that having the nuclear option is something which will give us greater degree of security on the energy front. That’s the vision that inspires our quest for changing the nuclear order.

We have, of course, security concerns, international security concerns. Nuclear proliferation in our neighbourhood is something which worries us and, therefore, it is quite clear that while we are committed to our civilizational heritage of working untiringly for universal disarmament, we have to recognise that we are living in a world, where this is not going to happen today, tomorrow, or, day after tomorrow. In this uncertain world, the unpredictable world that we live in, we have legitimate security concerns. The nuclear weapon programme, its autonomy, its independence,
dependent solely on our own assessment, must remain a cardinal principle of our nuclear policy.

Sir, I do recognize, if you are trying to move away from the status quo, you do run risks. Change is very disruptive. It upsets existing institutions; existing ways of thinking, and status quo has the satisfaction of being rooted in reality. If you are planning for a future and the future is inherently uncertain, you run the risk that you may go wrong. But we live in a world, where change is the only constant. This country has to be prepared to think big about its future and if that is the vision, that is the mission, then, I sincerely believe the path that we have identified is the right path. I am not saying that I know whether we will succeed or not.

In fact, if I had been allowed to initiate this debate, I would have outlined the risks that we face and, maybe, at the end of it the whole House would have said that this is what things should be and this is what our approach should be. I was not given that opportunity even though I offered, in both the Houses, that I was willing to make a suo moto statement setting out our vision, goals, risks and uncertainties that we face and how we will tackle those risks and uncertainties.

Sir, my thoughts go back to the year 1991. Shri Yashwant Sinha handed me a bankrupt economy with foreign exchange reserves of no more than two weeks. I had to improvise within one week a programme to rescue this economy. Within one month I had to come with a Budget which required far-reaching changes in the way we were taught to think about our economic problems. On that occasion also, in 1992, when I rose to present my second Budget, all Opposition, the Right and Left, rose and said that I should be impeached because I have prepared this budget in consultation with Washington and that I was an American agent. I have lived with that sort of thing. And, therefore, it does not surprise me that today all sorts of adjectives were used. I am strong or weak, history will determine that. But, I do wish to share with this House that I do recognise the risks that reform undertakings run into in all modern societies.

I was reading Machiavelli recently. I should like to quote a paragraph from ‘The Prince’: “It must be considered that there is nothing more difficult to carry out, nor more doubtful of success, nor more dangerous to handle, than to initiate a new order of things. For the reformer has enemies in all those who profit by the old order, and only lukewarm defenders in all those who would profit from the new order. This lukewarmness arises partly from the fear of their adversaries, who have the laws in their favour; and partly
from the incredulity of mankind, who do not truly believe in anything new until they have the experience of it. Thus it arises that on every opportunity for attacking the reformer, his opponents do so with the zeal of partisans, the others only defend him half-heartedly, so that between them he runs a great danger.”

Therefore, I am aware of the risks that I do incur. Mr. T.T. Krishnamachari once told me that there are tigers on the prowl on the streets of Delhi. I am aware of the risks but for India’s sake, I am willing to take those risks.

Mr. Chairman, you forgive me if I become a little sentimental on this occasion. I was born in a very poor family on the other side of Punjab. I was the first one in the family who went to High School. My father left his class in the eighth standard and became a freedom fighter in Nabha and Jaito morchas that were launched at that time. I may not have been in politics, but I have in my blood the feelings of a freedom fighter’s family. I may be late comer into politics, but I have the privilege of belonging to a Party which fought for India’s freedom. The Party which produced great leaders like Mahatma Gandhi, Jawaharlal Nehru, Indira Gandhi, Sardar Patel, Maulana Abdul Kalam Azad, Khan Abdul Ghaffar Khan, Rajiv Gandhi, etc. That is the heritage of which any Party must be proud.

When I stand before this House, I say in all faithfulness that in these two years and three months that this nation has entrusted me with the job of the Prime Minister, I did not seek it; it came my way, but it has been my effort to do my very best to serve the vital interests of this nation.

This commitment I made in 1991. In my first Budget Speech I said, “No power on earth can stop an idea whose time has come”. I had then said, “The emergence of India, as a major pole of the global economy is one such idea whose time has come.” And, I said: “I will dedicate myself to that task.” I was criticised by the Right, by the Left, names were used, epithets, 15 years down, who will today say that what I did then was wrong. This Nation stands tall, proud, fast-growing and if India had not launched, if we had not launched the programmes of reforms, I shudder to think, how India would have faced the Asian crisis of the mid 90’s. So, Sir, I speak with some experience, even though, I may be novice in politics. I do not have the skills of Jaswant Singhji, Yashwant Sinha, or, Arun Shourieji, but I do wish to say to our countrymen that the service of India, as Jawahar Lal Nehru used to say, means a service of teeming millions who suffer day and night and that is the vision, that is the mission which inspires me and will
guide me for whatever is left of my life. No power on earth can take away that privilege from me. I will discharge my duties to this country, to the last ounce of my blood. Sir, I now come to the subject matter of discussion today.

1. At the outset, I would like to convey my gratitude to all the Hon’ble Members who have participated in this debate. I am grateful for this opportunity to clarify some of the issues arising from the discussion. I will do so in a non partisan spirit and I have every reason to believe that after I have finished that I will be able to carry the whole House with me. Our Government has never shied away from a full discussion in Parliament on this important issue. On three previous occasions on July 29, 2005, February 27, 2006 and March 7, 2006, I had made detailed statements and discussed this important subject in this august House. Once again, several issues have been raised during the current discussions and I wish to take this opportunity to respond to them. I also intend to cover developments since my last Suo Motu statement of March 7 this year.

2. Two types of comments have been made during the discussion in the House. The first set of issues pertains to the basic orientation of our foreign policy. Some Hon’ble Members have observed that by engaging in discussions with, and allegedly acquiescing in the demands made by the United States, we have compromised the independent nature of our foreign policy.

3. The second set of issues pertain to deviations from the July 18 Joint Statement and the March 2 Separation Plan. Many of the points raised by the Hon’ble Members have also been aired outside Parliament, notably also by some senior members of the scientific establishment. Overall, a listing of the important concerns include the following: that the India-US Nuclear initiative and more particularly the content of the proposed legislation in the US Congress, could undermine the autonomy of our decision-making; limit the options or compromise the integrity of our strategic programme; and adversely affect the future of our scientific research and development. To sum up, this would suggest that India’s strategic nuclear autonomy is being compromised and India is allowing itself to be pressurized into accepting new and unacceptable conditions that are deviations from the commitments made by me to Parliament in July 2005 and in February and March this year.
4. I recognize that many of these concerns are borne out of genuine conviction that nothing should be done that would undermine long standing policies that have a bearing on India's vital national security interests. I fully share and subscribe to these sentiments. I would like to assure the Hon’ble Members that negotiations with the US regarding the civilian nuclear deal have not led to any change in the basic orientation of our policies, or affected our independent judgment of issues of national interest. Last year during my visit to the US, I addressed the National Press Club in the full glare of the media. A question was put to me regarding what I thought about the US intervention in Iraq. In the full public glare of the media I said that it was a mistake. I said the same to President Bush when he visited India. I said India does not find favour with regime change.

5. The thrust of our foreign policy remains the promotion of our national interest. We are unswerving in our commitment to an independent foreign policy. We do recognize the complexities present in an increasingly inter-dependent and multi-polar world. While we recognize that the United States is a pre-eminent power and good relations with the U.S. are in our national interest, this has not in any way clouded our judgment. There are many areas of agreement with the United States, but at the same time there are a number of areas in which we have differences and we have not shied away from making these known to the US, as also expressing them in public. Currently, we are engaged not only with the US but other global powers like Russia, China, the EU, UK, France and Japan. We are also focusing on ASEAN, as well as countries in West Asia, Africa and Latin America. More importantly, we are devoting proportionately larger time and effort in building relations with countries in our immediate neighbourhood like Nepal, Bhutan, Sri Lanka, Bangladesh, Myanmar, and Pakistan. Our relations with all these countries are determined by the dictates of our enlightened national interest and we have not allowed any other country, including the United States, to influence our polices. This will not change as long as I am Prime Minister.

6. I would, hence, again reiterate in view of the apprehensions expressed, that the proposed US legislation on nuclear cooperation with India will not be allowed to become an instrument to compromise India’s sovereignty. Our foreign policy is determined solely by our national interests. No legislation enacted in a foreign country can
take away from us that sovereign right. Thus there is no question of India being bound by a law passed by a foreign legislature. Our sole guiding principle in regard to our foreign policy, whether it is on Iran or any other country, will be dictated entirely by our national interest.

7. Let me now turn to some of the concerns that have been expressed on the second set of issues regarding possible deviations from assurances given by me in this august House on the July 18, 2005 Joint Statement and the March 2, 2006 Separation Plan. I would like to state categorically that there have neither been nor will there be any compromises on this score and the Government will not allow such compromises to occur in the future.

8. Hon’ble Members will recall that during President Bush’s visit to India in March this year, agreement was reached between India and the United States on a Separation Plan in implementation of the India-United States Joint Statement of July 18, 2005. This Separation Plan had identified the nuclear facilities that India was willing to offer, in a phased manner, for IAEA safeguards, contingent on reciprocal actions taken by the United States. For its part, the United States Administration was required to approach the US Congress for amending its laws and the Nuclear Suppliers’ Group for adapting its Guidelines to enable full civilian nuclear cooperation between India and the international community.

9. The US Administration had thereafter approached the US Congress to amend certain provisions of the United States Atomic Energy Act of 1954, which currently prohibit civil nuclear cooperation with India. The US House of Representatives International Relations Committee passed a Bill on the subject on 27th June 2006. The House of Representatives passed the Bill as approved by its International Relations Committee on July 27.

10. The Senate Foreign Relations Committee passed its version of the Bill on June 29, 2006. The US Senate is now expected to vote on this version of the Bill some time in September. We have concerns over both the House and Senate versions of the Bill. Since the two Bills are somewhat different in content, according to US practice they will need to be reconciled to produce a single piece of legislation. After adoption by both the House and the Senate, this would become law when the US President accords his approval. The final shape of
the legislation would, therefore, be apparent only when the House and the Senate complete the second stage of assent/adoption.

11. Meanwhile, the US Government has approached the Nuclear Suppliers' Group to adapt its guidelines to enable full civil nuclear cooperation between India and the International community. In March this year, the NSG at its plenary meeting in Brazil held a preliminary discussion on this issue. The matter will be further discussed by the Nuclear Suppliers' Group later this year. On our part, we have separately raised this issue with several countries and urged them to lift the existing restrictions on nuclear supplies to India. I myself have raised this issue with the Heads of State or Government of Russia, France, UK, Japan, Germany, Brazil, Norway, Iceland and Cyprus, among others.

12. In view of the concerns voiced by the Hon'ble Members, I shall try to address each of these concerns in some detail. I shall, however, begin by affirming that our approach is guided by the understandings contained in the July 2005 Joint Statement and the March 2006 Separation Plan. What we can agree with the United States to enable nuclear cooperation must be strictly within these parameters.

13. The key provisions to which references have been made in Parliament and outside are the following:

(i) Full Civil Nuclear Cooperation: The central imperative in our discussions with the United State on Civil Nuclear Cooperation is to ensure the complete and irreversible removal of existing restrictions imposed on India through iniquitous restrictive trading regimes over the years. We seek the removal of restrictions on all aspects of cooperation and technology transfers pertaining to civil nuclear energy - ranging from nuclear fuel, nuclear reactors, to re-processing spent fuel, i.e. all aspects of a complete nuclear fuel cycle.

This will be the surest guarantee of India’s acceptance as a full and equal partner of the international nuclear community, even while preserving the integrity of our three stage nuclear programme and protecting the autonomy of our scientific research and development. We will not agree to any dilution that would prevent us from securing the benefits of full civil nuclear cooperation as amplified above.
(ii) Principle of Reciprocity: I had earlier assured the House that reciprocity is the key to the implementation of our understanding contained in the July 2005 Statement. I stand by that commitment. When we put forward the Separation Plan, we again made it clear to the United States that India could not be expected to take on obligations such as placing its nuclear facilities under safeguards in anticipation of future lifting of restrictions. India and the United States have held one round of discussions on a proposed bilateral cooperation agreement. India and the IAEA have held technical discussions regarding an India-specific Safeguards agreement. Further discussions are required on both these documents. While these parallel efforts are underway, our position is that we will accept only IAEA safeguards on the nuclear facilities, in a phased manner, and as identified for that purpose in the Separation Plan only when all nuclear restrictions on India have been lifted. On July 29 last year, I had stated that before voluntarily placing our civil nuclear facilities under IAEA safeguards, we will ensure that all restrictions on India have been lifted. There has been no shift in our position on this point.

(iii) Certification: The draft Senate Bill requires the US President to make an annual report to the Congress that includes certification that India is in full compliance of its non-proliferation and other commitments. We have made it clear to the United States our opposition to these provisions, even if they are projected as non-binding on India, as being contrary to the letter and spirit of the July Statement. We have told the US Administration that the effect of such certification will be to diminish a permanent waiver authority into an annual one. We have also indicated that this would introduce an element of uncertainty regarding future cooperation and is, not acceptable to us.

(iv) India as a State possessing Advanced Nuclear Technology: Hon’ble Members may recall that the July Statement, had acknowledged that India should be regarded as a State with advanced nuclear technology enjoying the same advantages and benefits as other states with advanced nuclear technology, such as the US. The July Statement did not refer to India as a
Nuclear Weapons State because that has a particular connotation in the NPT but it explicitly acknowledged the existence of India’s military nuclear facilities. It also meant that India would not attract full-scope safeguards such as those applied to Non-Nuclear Weapon States that are signatories to the NPT and there would be no curbs on continuation of India’s nuclear weapon related activities. In these important respects, India would be very much on par with the five Nuclear Weapon States who are signatories to the NPT. Similarly, the Separation Plan provided for an India-specific safeguards agreement with the IAEA with assurances of uninterrupted supply of fuel to reactors together with India’s right to take corrective measures in the event fuel supplies are interrupted. We have made clear to the US that India’s strategic programme is totally outside the purview of the July Statement, and we oppose any legislative provisions that Mandate scrutiny of either our nuclear weapons programme or our unsafeguarded nuclear facilities.

(v) Safeguards Agreement and Fuel Assurances: In this respect too, it is worth emphasizing that the March 2006 Separation Plan provides for an India-Specific Safeguards Agreement with the IAEA, with assurances of uninterrupted supply of fuel to reactors that would be placed under IAEA safeguards together with India’s right to take corrective measures in the event fuel supplies are interrupted. We, of course, have the sovereign right to take all appropriate measures to fully safeguard our interests. An important assurance is the commitment of support for India’s right to build up strategic reserves of nuclear fuel over the lifetime of India’s reactors. We have initiated technical discussions at the expert level with the IAEA on an India-Specific Safeguards Agreement. Both the Bilateral Nuclear Cooperation Agreement with the United States and the India-Specific Safeguards Agreement with the IAEA would be only within the parameters of the July Statement and the March Separation Plan. There is no question of India signing either a Safeguards Agreement with the IAEA or an Additional Protocol of a type concluded by Non-Nuclear Weapons States who have signed the NPT. We will not accept any verification measures regarding our safeguarded nuclear facilities beyond
those contained in an India-Specific Safeguards Agreement with the IAEA. Therefore there is no question of allowing American inspectors to roam around our nuclear facilities.

(vi) Integrity and reliability of our strategic programme – autonomy of decision-making and future scientific research and development: In my statement of March 7, 2006, I had assured Parliament that the Separation Plan would not adversely affect our strategic programme. I reiterate that commitment today. The Separation Plan has been so designed as to ensure adequacy of fissile material and other inputs for our strategic programme, based on our current and assessed future needs. The integrity of our 3-Stage nuclear programme will not be affected. The autonomy of our Research and Development activity, including development of our fast breeder reactors and the thorium programme, in the nuclear field will remain unaffected. We will not accept interference by other countries vis-à-vis the development of our strategic programme. We will not allow external scrutiny of our strategic programme in any manner, much less allow it to be a condition for future nuclear cooperation between India and the international community.

(vii) Moratorium on production of fissile material: Our position on this matter is unambiguous. We are not willing to accept a moratorium on the production of fissile material. We are only committed to negotiate a Fissile Material Cut-off Treaty in the Conference on Disarmament in Geneva, a commitment which was given by the previous government. India is willing to join only a non-discriminatory, multilaterally negotiated and internationally verifiable FMCT, as and when it is concluded in the Conference on Disarmament, again provided our security interests are fully addressed.

(viii) Non-discriminatory Global Nuclear Disarmament: Our commitment towards non-discriminatory global nuclear disarmament remains unwavering, in line with the Rajiv Gandhi Action Plan. There is no dilution on this count. We do not accept proposals put forward from time to time for regional non-proliferation or regional disarmament. Pending global nuclear disarmament, there is no question of India joining the NPT as a non-nuclear weapon state, or accepting full-scope
safeguards as a requirement for nuclear supplies to India, now or in the future.

(ix) Cessation of Future Cooperation: There is provision in the proposed US law that were India to detonate a nuclear explosive device, the US will have the right to cease further cooperation. Our position on this is unambiguous. The US has been intimated that reference to nuclear detonation in the India-US Bilateral Nuclear Cooperation Agreement as a condition for future cooperation is not acceptable to us. We are not prepared to go beyond a unilateral voluntary moratorium on nuclear testing as indicated in the July Statement. The same is true of other intrusive non-proliferation benchmarks that are mentioned in the proposed US legislation. India’s possession and development of nuclear weapons is an integral part of our national security. This will remain so.

14. Hon’ble Members will appreciate the fact that an international negotiation on nuclear energy cooperation particularly when it involves dismantling restrictive regimes that have lasted for over three decades is a complex and sensitive exercise. What we are attempting today is to put in place new international arrangements that would overturn three decades of iniquitous restrictions. It is inevitable, therefore, that there would be some contradictory pulls and pressures. This does not mean that India will succumb to pressures or accept conditionalities that are contrary to its national interests.

15. I had personally spoken to President Bush in St. Petersburg last month on this issue, and conveyed to him that the proposed US legislation must conform strictly to the parameters of the July 18, 2005 Statement and the March 2, 2006 Separation Plan. This alone would be an acceptable basis for nuclear cooperation between India and the United States. India cannot, and is not prepared to, take on additional commitments outside this agreed framework or allow any extraneous issues to be introduced. I have received an assurance from the US President that it was not his intention to shift goalposts, and that the parameters of the scope of cooperation would be those contained in the July 2005 Joint Statement and the March 2006 Separation Plan. A White House Statement of Administration Policy of July 26, 2006 recognizes some, though not all, of India’s concerns, and conveyed that the Administration has voiced them with the
16. I can assure you that there is no ambiguity in our position in so far as it has been conveyed to the US. The US is aware of our position that the only way forward is strict adherence to July Statement and March Separation Plan. I am hopeful that the bilateral India-US Civil Nuclear Cooperation Agreement when concluded will take into account the issues raised here. However, I must be honest and frank that I cannot predict with certainty the final form of the US legislation or the outcome of this process with the NSG, which consists of 45 countries with divergent views. We are hopeful that this will lead in a direction wherein our interests are fully protected and that there is a complete lifting of restrictions on India that have existed for three decades. Such an outcome if it materializes will contribute to our long-term energy security by enabling a rapid increase in nuclear power. It would lead to the dismantling of the technology denial regimes that have hampered our development particularly in hi-tech sectors. I will have wide consultations including with the members of the Atomic Energy Commission, the nuclear and scientific communities and others to develop a broad based national consensus on this important matter. I wish to inform members of the House that I have invited members of the Atomic Energy Commission on the 26th August for a meeting. That same day I have also invited the group of distinguished scientists who have expressed concerns to meet me.

17. Finally, I would only like to state that in keeping with our commitments to Parliament and the nation, we will not accept any conditions that go beyond the parameters of the July 18, 2005 Joint Statement and the March 2, 2006 Separation Plan, agreed to between India and the United States. If in their final form the US legislation or the adapted NSG Guidelines impose extraneous conditions on India, the Government will draw the necessary conclusions, consistent with the commitments I have made to Parliament.

[Prime Minister also gave the following responses to points raised by the Left parties]

1. Whether the deal will give “full” civilian nuclear technology and lift all existing sanctions on dual use technology imposed on India for not signing the NPT.

Response: The objective of full civil nuclear cooperation is enshrined
in the July Statement. This objective can be realized when current restrictions on nuclear trade with India are fully lifted. In accordance with the July Statement, US has initiated steps to amend its legislation and to approach the NSG to adapt its guidelines. We seek the removal of restrictions on all aspects of cooperation and technology transfers pertaining to civil nuclear energy – ranging from supply of nuclear fuel, nuclear reactors, reprocessing spent fuel, i.e., all aspects of complete nuclear fuel supply. Only such cooperation would be in keeping with the July Joint Statement.

2. Cannot accept restrictions on Indian foreign policy to be imposed such as on Iran, irrespective of whether it is in the policy section or in the sense of the House section of the legislation.

Response: Government is clear that our commitments are only those that are contained in the July Joint Statement and in the Separation Plan. We cannot accept introduction of extraneous issues on foreign policy. Any prescriptive suggestions in this regard are not acceptable to us.

Our foreign policy is and will be solely determined by our national interests. No legislation enacted in a foreign country can take away from us this sovereign right.

3. Signing of IAEA safeguards in perpetuity for the civilian programme to take place after the US Congress had approved a “123 Nuclear Cooperation Agreement”. All restrictions on India to be lifted before we sign the IAEA safeguards.

Response: I had conveyed to Parliament on July 29, 2005 on my return from Washington that before placing any of our nuclear facilities under IAEA safeguards, we will ensure all restrictions on India have been lifted. Under the Separation Plan agreed to with the United States, India has offered to place under IAEA safeguards 14 of its reactors presently operating or under constructions between 2006 and 2014. The nuclear facilities listed in the Separation Plan will be offered for safeguards only after all nuclear restrictions have been lifted on India. This would include suitable amendments to the US legislation to allow for such cooperation, the passing of the bilateral agreement with India and the adaption of the NSG guidelines. It is clear that India cannot be expected to take safeguards obligations on its nuclear facilities in anticipation of future lifting of restrictions.

In case the US reneges on supply of fuel, they will ensure continuity through other members of the Nuclear Suppliers Group (NSG).

Response: Separation Plan includes elaborate fuel supply assurances given by the United States. Understandings in the Separation Plan also provide for contingency of disruption of fuel supplies to India. In such a case, the United States and India would jointly convene a group of friendly supplier countries (Russia, France and United Kingdom) aimed at restoring fuel supplies to India. An important assurance is the commitment of support for India’s right to build strategic reserves of fuel over the life time of its nuclear reactors. In the event of disruption of fuel supplies despite the assurances, India will have a right to take corrective measure to ensure the operation of its nuclear reactors.

5. India will work for an FMCT and for nuclear disarmament with all nuclear weapon states, in line with the Rajiv Gandhi Plan or Delhi Declaration in tandem.

Response: Our support for global nuclear disarmament remains unwaivering. Prime Minister Rajiv Gandhi had put forward an Action Plan in the 1988 UNGA Special Session on Disarmament. We remain committed to the central goal of this Action Plan, i.e., complete elimination of nuclear weapons leading to global nuclear disarmament in a time-bound framework. India has agreed to negotiations in the Conference on Disarmament in Geneva for a Fissile Material Cut-off Treaty. There has been no change in our position on this matter.

6. In the original deal, there is no provision for US inspectors, only provision for IAEA inspectors. The draft US Bills contains such provisions.

Response: In the Separation Plan, we have agreed to offer for IAEA safeguards nuclear facilities specified in the Separation Plan for that purpose. The nature of safeguards will be determined by an India specific safeguards agreement with the IAEA. This will be applied to the safeguarded nuclear facilities in India. Therefore, there is no question of accepting other verification measures or third country inspectors to visit our nuclear facilities, outside the framework of the India specific safeguards agreement.

7. An India-specific protocol and not an Additional Protocol as per IAEA Standard Modified Protocol.

Response: In the Separation Plan, we have agreed to conclude an
India specific safeguards agreement with the IAEA. The question of an Additional Protocol will arise only after the India specific safeguards agreement is in place. As a country with nuclear weapons, there is no question of India agreeing to a Safeguards agreement or an Additional Protocol applicable to non-nuclear weapon states of the NPT.

8. References to Iran in the House Bill.

Response: We reject the linkage of any extraneous issue to the nuclear understanding. India’s foreign policy will be decided on the basis of Indian national interests only.

9. Reference to Proliferation Security Initiative in the House and Senate Bills.

Response: The Proliferation Security Initiative (PSI) is an extraneous issue as it is outside the framework of the July 18 Joint Statement. Therefore, we cannot accept it as a condition for implementing the July Statement. Separately, the Government has examined the PSI.

We have certain concerns regarding its legal implications and its linkages with the NPT. We also have concerns with amendments to the suppression of Unlawful Activities at Sea Treaty under the International Maritime Organisation.

10. The Jackson-Vanik Amendment linking the granting of MFN status to USSR to Jewish emigration is an example relevant to the current debate.

Response: We have studied the proposed US legislation very carefully, including the so-called binding and non-binding provisions. The non-binding provisions do not require mandatory action, but at the same time, have a certain weight in the implementation of the legislation as a whole. We have conveyed our concerns to the US Administration in this respect. Jackson-Vanik Amendment was binding on the Administration and cannot be cited as a precedent for non-binding references in the current bills. A more accurate example than the Jackson-Vanik Amendment is the set of provisions accompanying the renewal of MFN status to China, that included references to China’s human rights, China’s political and religious prisoners, protection of Tibetan heritage and freedom of political expression.

Response: India follows a Parliamentary model, as specified in our Constitution, wherein treaty making powers rest with the Executive. However, we have kept Parliament fully in the picture regarding various stages of our negotiations with the United States. Broad based domestic consensus cutting across all sections in Parliament and outside will be necessary. We will work towards that objective by addressing various concerns as fully as possible.

[Prime Minister also gave the following responses to points raised by the group of nuclear scientists]

1. “India should continue to be able to hold on to her nuclear option as a strategic requirement in the real world that that we live in, and in the ever-changing complexity of the international political system. This means that we cannot accede to any restraint in perpetuity on our freedom of action. We have not done this for the last 40 years after the Non-Proliferation Treaty came into being, and there is no reason why we should succumb to this now. Universal nuclear disarmament must be our ultimate aim, and until we see the light at the end of the tunnel on this important issue, we cannot accept any agreement in perpetuity.”

Response: We are very firm in our determination that agreement with United States on Civil Nuclear Energy in no way affects the requirements of our strategic programme. We are fully conscious of the changing complexity of the international political system. Nuclear weapons are an integral part of our national security and will remain so, pending the global elimination of all nuclear weapons and universal non-discriminatory nuclear disarmament. Our freedom of action with regard to our strategic programmes remains unrestricted. The nuclear agreement will not be allowed to be used as a backdoor method of introducing NPT type restrictions on India. Our offer to put nuclear facilities under safeguards in perpetuity is conditional upon these facilities securing fuel from international sources for their life time. If the fuel supply assurances as enumerated in Separation Plan are disrupted, then India will have the right to take corrective measures to ensure the continued operation of these reactors.

2. ‘After 1974, when the major powers discontinued cooperation with us, we have built up our capability in many sensitive technological areas, which need not and should not now be subjected to external control. Safeguards are understandable where external assistance for nuclear materials or technologies are involved. We have agreed to this before, and
we can continue to agree to this in the future too, but strictly restricted to those facilities and materials imported from external sources.’

**Response:** Sensitive nuclear technology facilities have not been covered in the Separation Plan. Therefore, there is no question of putting them under safeguards or under external controls. Even with regard to nuclear facilities that have been included in Separation Plan, safeguards will be applied in phases between 2006 and 2014. These safeguarded facilities will be eligible for and will receive fuel materials and technology from international sources. If such supplies cease, then India will be free to protect its interests through corrective measures. That will be spelt out clearly in the India specific safeguards agreement.

3. ‘We find that the Indo-US deal, in the form approved by the US House of Representatives, infringes on our Independence for carrying out indigenous research and development in nuclear science and technology. Our R&D should not be hampered by external supervision or control, or by the need to satisfy any international body. Research and technology development are the Sovereign rights of any nation. This is especially true when they concern strategic national defence and energy self-sufficiency.’

**Response:** Our independence for carrying out independent research and development in nuclear science and technology will remain unaffected. There will be no external supervision of our R&D since none of the sensitive R&D facilities which handle nuclear material have been included in the Separation Plan. Nothing in the Separation Plan infringes on our sovereign right to conduct research and technology development concerning our national defence and energy self-sufficiency. Government is committed to preserve the integrity of the three stage nuclear power programme, including utilization of our vast thorium resources. Certain nuclear facilities including centers such as TIFR, Variable Energy Cyclotron Centre, Saha Institute of Nuclear Physics etc., have been designated as civilian in the Separation Plan. As these facilities will not handle nuclear material, there is no question of safeguards being applied to them. We expect these centers to participate as full partners in international collaboration project.

4. ‘While the sequence of actions to implement the cooperation could be left for discussion between the two governments, the basic principles on which such actions will rest is the right of Parliament and the people to decide. The Prime Minister has already taken up with President George Bush the issue of the new clauses recommended by the US House of Representatives. If the US Congress, in its wisdom, passes the bill in its
present form, the ‘product’ will become unacceptable to India, and diplomatically, it will be very difficult to change it later. Hence, it is important for our Parliament to work out, and insist on, the ground rules for the nuclear deal, at this stage itself.’

Response: I had taken up with President Bush our concerns regarding provisions in the two bills. It is clear that if the final product is in its current form, India will have grave difficulties in accepting the bills. US has been left in no doubt as to our position. The ground rules for our discussions are clear. These are the parameters of the July Statement and the March Separation Plan and commitments given by me to Parliament in the three Suo Moto Statements and my reply to today’s discussions will be the guiding principles of our position. Parliament has been kept fully informed at every stage of the discussions. In their final form, if US legislation or the NSG guidelines impose extraneous conditions on India, the Government will draw the necessary conclusions consistent with my commitments to Parliament.

073. Speech of Chairman of Atomic Energy Commission Dr. Anil Kakodkar at the 50th General Conference of International Atomic Energy Agency.

Vienna, September 20, 2006.

Mr. President, Kindly accept our congratulations on behalf of my Government and on my own behalf on your election as the President of the 50th General Conference. I am sure, under your able leadership and with the support of your team and the Secretariat of the Agency, this General Conference will be able to accomplish the tasks before it.

I take this opportunity to welcome the entry of the Republic of Palau, the Republic of Mozambique, the Republic of Malawi and the Republic of Montenegro to the Membership of IAEA.

Let me also use this occasion to once again congratulate Director-General Dr. Mohamed El Baradei and the Agency for the well deserved Nobel Peace Prize.

Mr. President, I would like to begin with a message from our Prime
Minister Dr. Manmohan Singh to this fiftieth session of the General Conference of the Agency and I Quote:

“I am happy to convey my greetings to Members of the International Atomic Energy Agency, its Director-General, and members of IAEA Secretariat on the occasion of this 50th General Conference. Over the past five decades, the Agency has made commendable progress in fulfilling its objectives as laid down in its Statute. The Nobel Peace Prize awarded to Dr. El Baradei and the Agency last year is a timely and well deserved tribute to the IAEA’s contribution.

The International Atomic Energy Agency is an unique organization in the entire UN system, founded on a strong science base and dedicated to spreading understanding of and knowledge about the benefits of atomic energy in a safe and secure manner, with special attention to those areas of the world where developmental needs and aspirations are yet to be fulfilled and are therefore most pressing. With issues related to energy resource sustainability assuming increasing salience and global climate change looming large as arguably the most serious challenge of our time, atomic energy with its immense energy potential and readily available and deployable technologies has become an inevitable and indispensable part of the solution.

Nuclear energy being unique in its ability to regenerate more fuel from uranium and thorium several ten-folds while producing energy, offers us the possibility of meeting global energy requirements in a non-polluting and sustainable manner. However, if we are to be successful in realizing the potential of the atom in meeting our needs, we need to act in concert consistent with the spirit of global harmony and adhering to our respective international commitments. The IAEA and Director-General deserve high compliments for ensuring that the Agency is an effective platform for the global community to work together in its noble mission of ‘atoms for peace and prosperity’.

India, home to one-sixth of the world population and having embarked on a rapid economic growth path, has a strong interest in utilizing the full potential of atomic energy for national development. I am confident this will be realized, based on our natural endowment of vast thorium resources and the development of effective technologies for their utilization.

We have developed advanced technological capability based on our
own self-reliant efforts, while having maintained an unblemished record of responsible behaviour. I am glad that the emerging possibility for expanding civil nuclear cooperation between India and the international community would supplement and complement our domestic efforts to meet the developmental aspirations of our people through additional nuclear energy inputs. We look forward to cooperating with international partners in realizing this possibility.

While nuclear power is of crucial importance for sustainable development, of equal significance are other peaceful applications of atomic energy. The Agency’s Programme of Action for Cancer Therapy (PACT) is one such important effort which I am happy to learn is being given special emphasis. India having developed significant experience in affordable cancer – related programmes has been supporting this activity actively, and would be pleased to offer a recently developed Cobalt – 60 teletherapy machine (BHABHATRON) as a contribution to the Agency’s PACT.

It is my hope that the fiftieth session of the General Conference would be an important milestone in the ongoing and future work of the Agency. I wish you all productive deliberations and progress in your important tasks. My greetings and good wishes to all.” Unquote

Mr. President, The Agency and the Department of Atomic Energy, India, have traced history together. This year is also the 50th year of the Bhabha Atomic Research Centre, (BARC), the premier nuclear research centre in India. Dr. Homi Bhabha, the founder of the Indian Atomic Energy Programme, was the President of the first Geneva Conference on ‘Peaceful uses of Atomic Energy’ held during August 1955.

Mr. President, The activities in atomic energy in India continue to make progress in accordance with the well established three stage nuclear power programme. Units 3 and 4 of the Tarapur Atomic Power Station, which are the 540 MWe indigenously designed and built Pressurised Heavy Water Reactor (PHWR) systems, are now in commercial operation. One more 220 MWe PHWR unit at Kaiga would also become operational before the end of this financial year. The Government of India has recently approved pre-project activities on eight reactor units at four different sites with a total power generation capacity of 6800 MWe. With the completion of these Units alongwith other Units that are already under construction, the total nuclear power generation capacity in India would reach around 14000 MWe.
We now have sixteen reactor units with a total capacity of 3900 MWe in operation. Unit I of Kakrapar Atomic Power Station had a record continuous operation of 372 days before it was shut down for mandatory inspection. The average duration of outage of biennial shutdown has now been reduced to just 26 days.

Major upgrades for ageing management and safety were completed on three PHWR units. The safety upgrades at the two Boiling Water Reactors that started commercial operations in 1969, were completed in just four and a half months. The replacement of all reactor feeders of one of our PHWRs was accomplished for the first time in the world. One of our latest 540 MWe PHWRs was offered for pre-start-up peer review by an expert team of WANO. This was the first ever review of its kind in Asia. We are now ready for implementation of the newly designed 700 MWe PHWR units which would enable further significant reduction in the capital cost per MWe of indigenous PHWR units.

India considers a closed nuclear fuel cycle of crucial importance for implementation of its three stage nuclear power programme with its long-term objective of tapping vast energy available in Indian thorium resources, based on development of effective technologies for their utilisation. This is central to India’s vision of energy security and the Government is committed to its full realisation through development and deployment of technologies pertaining to all aspects of a closed nuclear fuel cycle.

As a part of our development efforts in high level radioactive waste management technologies, India achieved two major landmarks this year namely (i) hot commissioning of Advanced Vitrification System (AVS) which employs Joule-heated ceramic melter and (ii) demonstration of Cold Crucible Vitrification Technology.

The Fast Breeder Test Reactor (FBTR) at Kalpakkam, which has been the foundation of our fast reactor programme, has shown excellent performance with an availability factor of over 90% in the last few campaigns. The unique U-Pu mixed carbide fuel used in FBTR has reached a record burn-up of 154.3 GWD/t without a single fuel pin failure. This achievement has been possible through a combination of stringent fuel specifications, quality control during fabrication and inputs obtained from the detailed post irradiation examination of fuel at different stages combined with the modeling of the behaviour of the fuel clad and wrapper materials. This year, we have proposed to introduce mixed oxide fuel with 45% Pu in FBTR in order to increase the power level as well as to provide experience on the behaviour of high Pu content oxide fuel in fast reactors. Last year I had informed that
the carbide fuel discharged from FBTR at a burn up of up to 100 GWd/t had been successfully reprocessed. This experience in the reprocessing campaigns have provided significant inputs to the design of the equipment and flow sheet for the Demonstration Fast Reactor Fuel Reprocessing Plant [DFRP], which is in an advanced stage of construction.

The construction of 500 MWe Prototype Fast Breeder Reactor (PFBR) is on schedule and is expected to be commissioned by the year 2010. In keeping with our philosophy of efficient utilization of a fuel material by closing the fuel cycle, we have embarked on the design and construction of a fuel cycle facility to cater to the PFBR. The facility will be commissioned by 2012.

Simultaneous with the construction of the PFBR we have already initiated programmes towards the conceptualization of the FBRs to follow, with the objective of further enhancing the fuel performance as well as making the energy production more economical. To ensure rapid growth in the fast reactor programme for meeting the energy needs in the country, we have already embarked on R&D programmes targeting towards the introduction of metallic fuel in fast reactors, which would provide much higher breeding. A host of R&D programmes in associated areas such as advanced materials, structural mechanics, heat transport, in-service inspection systems, physics, chemistry, safety, etc., are being pursued to provide R&D inputs for further advancement of FBR technology. This comprehensive and indigenous programme in all major areas provides a strong foundation for India’s fast reactor programme. India is also prepared to contribute to international efforts in scaling new technological frontiers in this field as an equal partner with other countries having advanced technological capabilities.

Thorium utilization is the long-term core objective of the Indian nuclear programme for providing energy independence on a sustainable basis. The third stage of the programme is thus based on Thorium-Uranium-233 cycle. We are actively engaged in developing 300 MWe Advanced Heavy Water Reactor (AHWR). The design of this reactor incorporates several advanced features to meet the objectives being set out for future advanced nuclear reactor systems. A critical facility to validate physics design of AHWR will be functional this year. The facility is flexible enough to study the physics of advanced systems, including source driven systems, in future. Development of high current proton accelerator and spallation source for Accelerator Driven Sub-Critical Systems (ADS) is also being pursued. Such systems would offer the promise of shorter doubling time, even with Thorium, and incineration of long lived actinides and fission products, thus leading to the possibility of
eliminating long-lived radioactive waste. A Compact High Temperature Reactor (CHTR), with 100 kW thermal power rating, is being developed as a demonstrator of technologies relevant for next generation high temperature reactor systems. Such reactor systems will address the needs such as electricity generation in remote places, production of alternative transportation fuel such as hydrogen, and refinement of low-grade coal and oil deposits to recover fossil fluid fuel.

India has had a fusion research programme of its own since the early eighties. Two tokamaks have been indigenously built. The Steady State Super conducting Tokamak-SST-1 is currently undergoing commissioning tests. India has recently joined ITER as one of seven full partners. On the basis of indigenous experience and expertise available in Indian industry, India will contribute equipment to ITER and will participate in its subsequent operation and experiments. Indian scientists are also working on establishing an India-based Nutrino observatory for doing comprehensive research in Neutrino Physics, an area in which Indian research groups have sustained interest and have made significant contributions. We would welcome participation of interested international scientific groups in this effort. The 2.5 GeV synchrotron radiation source Indus-2 being set up at Raja Ramanna Centre for Advanced Technology, Indore, has started functioning. The utilization of the storage ring for condensed matter studies using the synchrotron radiation from the bending magnet beam lines has also begun.

The excellent safety record of Indian reactors and other facilities has been achieved through sustained Research and Development programmes. As part of the safety studies on nuclear containment structures, the construction of a 1:4 size containment test model has been initiated at Tarapur. The ultimate load capacity of the containment would be studied on this test model and the experimental results would be available to the participants of a round robin exercise, which is being organized by us. We would welcome participation of interested research groups in this exercise.

As in the previous years, we have been interacting with the IAEA very closely in almost all its activities. We have been an active participant in the IAEA – INPRO programme. We were one of the six countries to perform a national case study for development of INPRO methodology under INPRO phase-1B part-1 activity which was done using the Indian Advanced Heavy Water Reactor. We are also involved in joint case studies on fast reactor with closed fuel cycle and high temperature reactors for hydrogen generation. We have also contributed to chapters of the INPRO
document on guidance and methodology for assessment of economics, safety and waste management. We strongly support international cooperation through cooperative research and joint initiatives, as envisaged under INPRO phase-2. India remains supportive of the IAEA fulfilling its statute responsibilities, particularly the developmental and international co-operative dimensions of nuclear energy.

The Indian programme on the application of radioisotope and radiation in health, agriculture, industry, hydrology, water management and environment for societal benefit has a close match with several activities of the Agency. Our experts thus take active part in all Agency activities. As a founder member, we participate actively in RCA activities. Last year, we had hosted 6 events in India. We have also hosted 34 IAEA Fellows and Scientific visitors. I am glad to inform this gathering that the International Union Against Cancer (UICC) selected the Tata Memorial Centre in Mumbai for the “Outstanding UICC Member organization” award for its outreach programmes related to cancer control. PACT programme drawn up by the Secretariat deserves our fullest and speedy support.

Mr. President, A special event on “New Framework for Utilisation of Nuclear Energy in the 21st Century: Assurances of Supply and Non-Proliferation” is currently in progress as a part of this General Conference. Out of the current fleet of 443 nuclear power reactors operating in the world, less than half are under IAEA safeguards. Even in this scenario and with a very slow growth of nuclear power in the last two decades, the volume of human and financial resources needed for implementation of IAEA safeguards have constituted a large fraction of the resources available to the Agency. Now with anticipated rapid growth in demand for nuclear power, mainly in the developing countries, cost effective safeguards are essential so that the safeguard system does not itself become an hindrance to the development of nuclear power while at the same time providing the necessary assurances in terms of verification. India therefore feels it is necessary to look for institutional as well as technological solutions with enhanced proliferation resistance along with an assured fuel supply, without adversely affecting long-term sustainability of nuclear fuel resources. Thorium offers a very important and attractive solution from this perspective and we urge the Agency and its members to give serious consideration of the possibilities offered by the Thorium route.

Over the years India has developed advanced capabilities in the utilization of thorium, as a part of its strategy to enhance nuclear capacity through a closed nuclear fuel cycle that would enable timely deployment of its thorium reserves. We are convinced that this is a viable and sustainable
strategy for India's and global long term energy security. Seen in the context of nuclear power becoming a significant fraction of energy supply in a world where everyone is assured of a minimum of 5000 KWh of energy in a year, entire global Uranium if used in once through mode would last only a few tens of years. Even with a shorter term perspective of deployment of a proliferation resistant nuclear energy system that could address the need for incineration of available surplus plutonium, the use of thorium, in reactors using proven technologies, presents a vastly superior option as compared to other options based on fast reactors. In my presentation at the special event tomorrow I would elaborate on this aspect further. I will urge the IAEA to give a further boost to its activities that could lead to an early expansion of global reach and volume of deployment of nuclear energy, using thorium based fuel cycle as one of the important routes to reach the goal.

We have been constantly reminding the Agency of the need to maintain a balance between its promotional and safeguards related activities. The risk arising out of global climate change and rapid depletion of global fossil fuels is real and substantial. We believe that future enhancement of the share of nuclear energy as a clean energy source is possible and feasible in a manner that satisfies the imperatives of nuclear safety and security. Let us therefore resolve that we would pool our scientific and technological abilities together in finding holistic solutions so that the next 50 years are seen as the golden period of nuclear energy development in meeting global energy needs. As a responsible state with advanced nuclear technological capabilities, India is prepared to play its part in this glorious endeavor.

Thank you Mr. President.

074. Statement by Member of the Indian Delegation to the UN Mufti Mohammed Sayeed on Agenda Item 81: Report of the International Atomic Energy Agency at the 61st session of the UN General Assembly.

Please see Document No. 580

New Delhi, November 17, 2006.

1. We welcome the passage of the Bill on Indo-US civil nuclear cooperation in the US Senate by an overwhelming majority. This, undoubtedly, reflects the very broad bipartisan support which this initiative enjoys.

2. President Bush and Secretary of State Rice have worked personally to ensure the passage of the Bill and we express our sincere appreciation for their tireless efforts.

3. We now expect that the final version of the legislation, which would emerge after the Joint Conference of the House and Senate, should adhere as closely as possible to the understandings incorporated in the July 18, 2005 Indo-US Joint Statement and the March 2006 Separation Plan, so that full civil nuclear cooperation between India and the US becomes a reality and contributes to India’s energy security.

4. We understand that, as per present indications, the Joint Conference will convene after the passage of the Bill, and the final version will likely come up for a vote by both Houses when they reconvene after the Thanksgiving holidays, on December 4, 2006. We must await the final version before drawing any conclusions on the legislation.

1. On December 6 in answering questions in the Lok Sabha on the Bill specifically those dealing with joint research; the External Affairs Minister said: “An amendment to the waiver Bill passed by the US Senate on November 16, 2006 to enable full civil nuclear energy cooperation with India envisages setting up of a cooperative threat reduction (CTR) programme to further common non-proliferation goals. No prior discussions on setting up such a programme have taken place between the two Governments. By its very nature, establishing such a programme would require the agreement of Government of India, which would take a decision after fully taking into account all aspects of our national security. In fact, US Congress had earlier legislated on establishing a CTR programme with India under the Department of Defense Appropriations Act 2002, which has not been implemented. Government of India has conveyed its concerns with regard to current versions of the legislation to the US side. It is our position that the final legislation adhere as closely as possible to the understandings contained in the India-US Joint Statement of July 18, 2005 and the March 2006 Separation Plan.”
076. Address by Dr Anil Kakodkar, Chairman, Atomic Energy Commission on the occasion of signing of the Agreement¹ on the establishment of the ITER International Fusion Energy Organization for the Joint Implementation of the ITER project.

President Chirac, European Commission President Barroso, excellencies, ladies and gentlemen, I would like to begin with a Shloka from Rig Veda, one of our ancient scriptures.

Translated it means
Seven Bay Steeds harnessed to thy car bear thee,  
O thou farseeing One, God, Surya, with the radiant hair...........

Our ancestors intuitively grasped the importance of the Sun as the Ultimate Provider and Sustainer of Life on Earth! What they perhaps did not foresee is that one day their progeny would imitate the sun right here on earth to cater to vastly increased energy needs! India is proud to be a partner in this enterprise of getting the man made star - ITER - off the ground with our shoulders to the wheel ….like one of the seven mythological steeds pulling on the carriage of the Lord Surya - the Sun!

Today, we take a momentous step towards realization of our common goal to seek a clean source of energy of a magnitude capable of supporting a decent quality of life for the entire humanity. Fusion has the potential to provide abundant and clean energy based on resources available everywhere without significant ecological issues associated with mining of earth’s resources. It is in this context that the Indian delegation is very happy to be a part of this historic human scientific endeavour. At this point, allow me to record our appreciation of the hard and sustained efforts on part of all those who have contributed to ITER project development and progress made to date.

Most current estimates suggest that the world’s population would

---
¹. The Agreement on the establishment of ITER (International Thermo-nuclear Experimental Reactor) International Fusion Energy Organisation was signed in Paris for the joint implementation of the ITER project. The signatories were the seven parties of the ITER i.e. China, European Union, India, Japan, the Republic of Korea, the Russian Federation and the United States of America.
reach around 8 billion over the next 25 years with another billion in the following 20 years. Virtually all increase will be in the developing countries. Thus the core challenge for development is to provide access to energy for all at affordable prices based on a technology that is acceptable from the point of resource and environmental sustainability.

Speaking specifically about India, in spite of being one of the top 5 electricity producing countries, we still have very low per capita electricity consumption. The objective of electrification of all villages is yet to be realized. Studies indicate that even to reach a modest target of per capita generation of about 5000 kWh, total annual electricity generation has to be about 11 to 12 times the generation at present. While immediate increase would inevitably come from fossil fuels, nuclear energy has to play a significant role in the coming decades. We have an ambitious programme to tap fission energy based on closed fuel cycle approach. However, considering the size of our country and rapid growth in economy, even that is not likely to be sufficient in the long term. There is thus a need to look at new technologies such as fusion that provides even larger energy potential. We have been pursuing fusion science and technology programme at our Institute for Plasma Research, Gandhinagar. Our scientists have already designed and fabricated two tokamak devices Aditya and the steady state superconducting tokamak SST 1. Many technologies of relevance to the forefront of fusion research have been developed by our scientists and engineers in collaboration with our industries. We thus bring to the table a combination of strong commitment from the government and special scientific and technological skills, which are of relevance to ITER and to fusion research.

Ladies and gentlemen, we have gathered here today for a historic occasion. We have just signed the ITER agreement which is a unique step in the history of mankind. It is the first time that more than half of the world is standing together shoulder to shoulder and looking at a technological challenge in the eye and telling it with confidence “Thou shalt be conquered!” It is perhaps a harbinger of the future telling humanity how it must face up to its problems and solve them. A model to be followed again and again.

I am happy that all issues related to cooperation have been resolved, the Director-General, Principal Deputy-Director-General and the Deputy Director Generals have joined the ITER team in Cadarache. Now the next step is to strengthen the technical team at Cadarache with an appropriate balance of experienced and young engineers and scientists and to provide
them with an environment which rapidly promotes the task of implementation of the project. We must do this ensuring that the critical human resource from original ITER teams is fully utilized and that long term and viable management tools for ITER are immediately put into place. Ladies and gentlemen, on behalf of the Government of the Republic of India and on my own behalf, I wish this cooperative venture a grand success. Thank you.

New Delhi, November 22, 2006.

Will the Minister of EXTERNAL AFFAIRS be pleased to state:

a) the current status of the Indo-US Nuclear Deal;
b) the number of meetings held in this regard since July, 2005;
c) the details of discussion held and the outcome of these meetings;
d) whether the conditions put forward by the US have been sorted out;
e) if so, the details thereof;
f) whether the separation of civil and defence nuclear facilities have since been carried out;
g) if so, the details in this regard;
h) whether special protection is likely to be provided to companies entering this sector;
i) if so, the details thereof; and
j) the time by which supply of nuclear material is likely to commence?

The Minister of External Affairs (Shri Pranab Mukherjee):

(a) The US Congress is currently considering amendment to US laws to enable full civil nuclear energy cooperation with India. On 26 June 2006, the US House International Relations Committee passed a Bill H.R. 5682 titled “United States and India Nuclear Cooperation Promotion Act of 2006” with a strong majority of 37-5. Later the Bill
was passed with an overwhelming majority of 359-68 by the US House of Representatives on 26 July 2006. Similarly, US Senate Foreign Relations Committee approved by a vote of 16-2 its version of the Bill S.3709 entitled the “United States and India Peaceful Atomic Energy Cooperation Act” on June 29, 2006. On 16 November 2006, the US Senate in its lame duck session passed the Bill by an overwhelming majority of 85-12. A Conference will be convened shortly by the Congress to reconcile the House and Senate versions of the Bill which will then be voted upon in its final form by both chambers.

(b)-(c) The nuclear understanding has been discussed with the US side in several meetings since July 18, 2005. Notable meetings, apart from the meetings referred elsewhere in the note, inter alia, include:

- Meeting between President Bush and Prime Minister on March 2, 2006 in New Delhi
- Meeting between Prime Minister and President Bush in New York on September 25, 2005.
- Meeting between Prime Minister and President Bush in St. Petersburg on July 17, 2006.
- Meetings with leaders in the US Congress during the visits of Foreign Secretary to Washington DC.
- Meeting between Foreign Secretary and US Under Secretary Burns in Washington DC in April 2006.
- Meeting between Foreign Secretary and US Under Secretary Burns in London on May 23, 2006.
- Meeting between Foreign Secretary and US Under Secretary Burns in Paris in July 2006.
- Meeting between Foreign Secretary and US Under Secretary Burns in New York in September 2006.
- Meeting between RM and US Secretary of State Condoleezza Rice in New York on September 21, 2006.

The above meetings were used to exchange views and take stock of
the process underway to bring about full civil nuclear energy cooperation, and to convey India’s concerns on some aspects of the legislation under consideration in the US Congress.

**India-US Bilateral Nuclear Cooperation Agreement**

Both sides held one round of 123 negotiations from June 12-14, 2006 during which substantial progress was registered. Foreign Secretary also met Under Secretary Burns in July and September 2006 to discuss US legislation and the next steps on the 123 Agreement negotiations. Thereafter, an informal meeting between teams of the two countries took place in New Delhi from November 6-8, 2006 to discuss various concepts pertaining to the legislation and unresolved issues in the agreement.

**Discussions with IAEA**

Discussions with IAEA on the Safeguards Agreement were initiated when the Chairman of the Atomic Energy Commission, Dr. A. Kakodkar visited Vienna in early March 2006 for a meeting with the Director General of the IAEA. Subsequently, an IAEA team visited New Delhi for discussions with the Indian side on July 8, 2006.

**Adjustment of NSG Guidelines**

As part of its commitments, US circulated a statement in the NSG in March 2006 proposing to adjust NSG Guidelines with respect to India to enable full civil nuclear cooperation. An Indian delegation made a presentation to the NSG meeting in Vienna in October 2006. We have also taken up this issue bilaterally with a number of countries.

**(d)-(e)** Prime Minister had made a statement during a Short Duration Discussion in Rajya Sabha on 17 August and in Lok Sabha on 23 August 2006. The statements made clear that anything that went beyond the parameters of July 18 Joint Statement would be unacceptable to India. There were elements of concerns with regard to what is in the current version of the Bills, and these had been conveyed to the US Government. It would be premature to predict
the eventual outcome of this process or to comment on the matter till we have seen the legislation in its final form.

The India-US nuclear understanding is as laid out in the July 18, 2005 Joint Statement and the Separation Plan tabled in Parliament by the Prime Minister on March 7, 2006. There is no question of accepting any additional requirements beyond those contained in July 18, 2005 Joint Statement and March 2006 Separation Plan. This has been conveyed to the US side. The US side in its Statement of Administration Policy of July 26, 2006 issued after the passage of the House version of the Waiver Bill has clarified that any conditions imposed by the waiver bills to be passed by US Congress that goes beyond the July 18 2005 Joint Statement would not be acceptable to the US Administration.

(f)-(g) India finalized its Separation Plan in March 2006 and it was tabled in the Parliament by the Prime Minister on March 7, 2006. The full and complete version of this plan was once again laid on the table of the Parliament by PM on 11 May 2006. The Separation Plan has laid out the schedule of placing India’s nuclear reactors under safeguards beginning from 2007. As, Prime Minister stated in the Parliament, on 17 August 2006, India will not place its nuclear facilities under safeguards till all restrictions on India are lifted.

(h)-(i) Government of India is seized of all aspects of the matter. However, specific policy decisions would need to be taken only at an appropriate time.

(j) It is premature to speculate on the specific time by which supplies could commence as the process to enable full civil nuclear energy cooperation with India is still underway.
I rise to share with this august House recent developments pertaining to the implementation of the understanding between India and the United States on the resumption of civilian nuclear energy cooperation. A reconciled Bill for this purpose was passed by the US House of Representatives and the Senate on 8/9 December 2006.

This nuclear understanding with the USA is significant from the larger perspective of our energy security. Energy has become a critical constraint to expanding our economic growth and development. We have to expand our generating capacity in every form of energy. Presently, nuclear energy provides less than 3% of our energy mix. Our current estimates envisage nuclear power generation of 30,000 MWe by 2022 and 63,000 MWe by 2032. The absence of international cooperation seriously constrains us from reaching these nuclear energy targets. India is today seriously pursuing several energy options including clean coal technologies, exploitation of coal bed methane and gas hydrates, wind as well as solar power. India can today expand its access to other forms of energy, relying on market mechanisms to do so. Our access to nuclear energy is impeded by an international regime and requires a political solution consistent with our national security and energy requirements.

The US Administration committed in the 18th July Joint Statement to adjust its laws that otherwise prohibited civil nuclear energy cooperation with India. Although the passage of any legislation is an internal matter of that country on which we would not otherwise comment, this legislation is an enabling measure necessary for civil nuclear energy cooperation to be worked out between India and the United States. Keeping that in mind, the enactment of waivers from certain provisions of the US Atomic Energy Act, which allows the United States to cooperate with India in civilian nuclear energy despite our not accepting full scope safeguards and despite maintaining a strategic programme, is significant. We recognize the initiative that President Bush has taken to make these exceptions for India possible. We also note the bipartisan support that this initiative has garnered in the US Congress.
The legislation that has been passed is an enabling measure that will now allow US negotiators to discuss and conclude with India a bilateral cooperation agreement, which is popularly known as a 123 Agreement. Such an agreement is a pre-requisite for nuclear cooperation and trade with the United States.

In parallel, we are engaging the International Atomic Energy Agency with the intention of negotiating and concluding an India-specific Safeguards Agreement and an Additional Protocol. At a broader level, we have already been discussing with member States of the Nuclear Energy Suppliers' Group (NSG) the need for an adjustment of their guidelines to permit transfers to India. We have briefed them collectively on various issues of mutual interest and look forward to their taking a decision on the adjustment of NSG guidelines at an appropriate time. We should bear in mind that while every stage of this process is important, the test of this process is for India to secure full civil nuclear cooperation with the international community while protecting our strategic programme and maintaining the integrity of our three-stage nuclear programme and indigenous research and development.

I would like to inform the House that the US Administration has categorically assured us that this legislation enables the United States to fulfill all of the commitments it made to India in the July 18 and March 2 Joint Statements and that this legislation explicitly authorizes civil nuclear cooperation with India in a manner fully consistent with those two Statements. We fully expect the July 18 Statement and the March 2 Separation Plan to be reflected in the text of the 123 Agreement.

In regard to the principles and concerns that guide our approach to the nuclear understanding, the Prime Minister had set forth the Government’s position when he spoke to the Parliament on August 17, 2006. These principles and concerns continue to remain the basis for our engagement with the United States and the international community on the tasks ahead. I would also like to share with the House that the Government has taken note of certain extraneous and prescriptive provisions in the legislation. We have always maintained that the conduct of foreign policy determined solely by our national interests is our sovereign right. We have also been clear that our strategic programme remains outside the purview of these discussions. We will not allow external scrutiny of or interference with the strategic programme.

Eventually, our objective is that technology denial regimes that have
targeted India for so many decades must be dismantled so that our national development is unimpeded. We are also committed to creating a climate where our scientists and technologists can participate in and contribute to international initiative in various fields. We have taken a big step towards that goal and I am sure that the House would continue to support us in that endeavour.

079. Speech of Prime Minister in the Lok Sabha on the Civil Nuclear Energy Cooperation with the U. S.

New Delhi, December 18, 2006.

PRIME MINISTER (DR. MANMOHAN SINGH): Mr. Speaker, Sir, I am grateful for this opportunity to intervene in this debate on an issue of high national importance. I pay my tribute to Members who have participated in these discussions. This debate does credit to our democratic ethos and principles. Hon. Leader of the Opposition has tried to paint a stale picture, which has no relation with the facts of the matter. In a process, he has sought also to divide UPA alliance in the expectation that perhaps he may succeed in toppling this Government. I can assure Shri Advani that he will have to wait for a very very long time. In any case, he will have to seek the permission of Shri Atal Bihari Vajpayee.

Mr. Speaker, Sir, in this debate, there are certain basic issues. What is it that we are trying to seek in this Civilian Nuclear Cooperation with the United States and other members of the international community. I would like to emphasis, this is a programme about Civilian Nuclear Cooperation. We have never discussed with the United States or with anybody about the content and the scope of our strategic programme and I have assured the House before, and I repeat that assurance that our strategic programme will respond to our own decisions and it will not be subjected to any international scrutiny of any country. I have also assured the House before that in going forward with this programme of Civilian Nuclear Cooperation, we will do nothing which will hurt the ability of our Department of Atomic Energy to pursue research and development; to pursue the development of Fast Breeder Reactors; and to pursue the complete three cycle
programme from Uranium to Plutonium to Thorium. I can assure the House that I stand by that commitment.

Then, this question arises: Why all this turmoil? It is certainly true that the Act that has been passed by the United States Congress has several features which are in our favour. The fact that the United States Government has gone to the US Congress to seek a waiver for India speaks volume of India’s recognition in the world community as a power to be reckoned.

There are elements in the Act which we will welcome and there are other elements which cause us concern. The United States Administration has assured us that they will be able to fully comply with their commitments as outlined in the July 18 Statement or the March 2 Statement or the Separation Provision but whether this thing materializes or not will very much depend upon the content of the 123 Bilateral Cooperation Agreement which we have to negotiate with the United States Government. I believe you can judge us from the content of that Agreement when the time comes but right now, quite frankly, it is premature to pass the type of verdict that the Leader of the Opposition has sought to do.

Our primary concern has been the lifting of international restriction on international trade with India on nuclear materials, nuclear equipment, and nuclear technologies which has lasted for nearly 35 years. Our nuclear scientists have done us proud but it is also a fact that the nuclear programme which Dr. Bhabha had envisaged as giving rise to immense power being made available out of this programme that objective has not been realized. I was a member of the Atomic Energy Commission and it was in the seventies that we had laid down an objective of 10,000 megawatt of capacity. We are in the year 2006 and entering 2007, our total capacity is only about 3600 megawatt. I am not saying that nuclear power is a panacea for all our ills on the energy front but the purpose of Government intervention in the nation’s affairs must be to widen the development option. I do believe that if you have access to international trade in nuclear technologies and equipment that will widen our development options with regard to our energy supplies, that is the primary objective that we see and that is the primary objective by which we should be judged. At the same time, of course, if in the process we make compromises of a type which hurt our national interest, if in the process we undertake any foreign policy commitments which interfere with the pursuit of our national interest or the independence of our national foreign policy, the House can take legitimate exception and I would be the last
one to plead to the House that we should live with an arrangement where India’s foreign policy is made in Washington or any other place.

Therefore, I do believe a sense of proportion is necessary in dealing with a sensitive matter which has a vital bearing on not only the future of development in our country but the future of our relations with major powers in the world.

I was in Japan three days ago and the amount of enthusiasm about India’s development prospects that was found in the Japanese Government, in Japanese Industry and trade, I have never seen it before. I say it with humility, it is partly the result of the recognition that has come our way that despite the fact that we were till yesterday the pariah in the nuclear world, today we have acquired a place in the nuclear order which protects our essential interests and we must not, therefore, ignore the amount of transformation that has come about in the world’s view of India in the process of these nuclear negotiations.

Sir, as I was saying, the first important stage to cross has been the waiver that has been granted by the US Congress to the US President. That despite the fact that we have a nuclear weapon programme the US will be willing to co-operate with us in the development of civilian nuclear capacities. That, I think, itself is a great advantage. We will not be considered the nuclear weapon State in the sense of the term in which the term is defined in the NPT. Therefore, for all practical purposes we are here and this is a recognition which comes today totally from the US. It is Russia, France, United Kingdom and many other countries are willing to recognize the reality that India is a nuclear weapon State. That this nuclear weapon programme will not be subjected to any extraneous, intrusive supervision or monitoring is a commitment which I gave when I spoke on many occasions and I repeat that assurance. Therefore, an important stage has been reached in the process of nuclear co-operation with the United State with the passage of legislation by the US Congress with substantial bipartisan support. Shri Advani ridiculed that bipartisan support. I do not minimize the importance.

Shri Advani’s Government was negotiating in secret with Mr. Strobe Talbot for umpteen number of months. They never had the courage to tell Parliament what is it that they were negotiating. I have at every stage taken Parliament into confidence. After July 18, after March 02 and at every stage Parliament has been fully kept in the picture. This was not the case with
the NDA. We do not know till this day what is it that Shri Jaswant Singh discussed with Strobe Talbot. We had to find out from Shri Strobe Talbot’s book that this was essentially a promise to deliver India’s signature to CTBT by a particular date. I heard him saying – if my friends in the NDA value the words of Mr. Strobe Talbot more than mine and I think, he was shown on the New Delhi Television channel — a few days ago that he was opposed to this deal with India because that gave India too much and he said that if India were now to say that we reject it, then, he said, that would not be in India’s interest. But what is of India’s interest is not something to be determined by Mr. Talbot. It has to be determined by this Parliament and this Government and we will not do anything behind the back of our country. We will keep the country fully informed of all these matters.

What has been done basically is an enabling clause in pursuance of the undertakings of the United States in the July Joint Statement that it would seek to adjust US laws and policies to achieve full civil nuclear cooperation with India. This Act is necessary for the United States to resume civil nuclear cooperation with India and also an important step leading to the lifting of international restrictions currently applicable to India.

Let me say that we appreciate the efforts made by the US Administration and the bipartisan support in the US Congress which has led to the passage of this legislation. This law has several positive features which take into account our concerns. However, I will be the last one to deny that there are areas which continue to be a cause for concern and we will need to discuss them with the US Administration before the bilateral cooperation agreement can be finalized.

What has been done was to enable the US Administration to enter into negotiations with us. The negotiations with India have yet to begin and the House has my assurance that the promises and the commitments I made, I spoke in the House on earlier occasions, will be our guidelines for these negotiations.

Sir, the passage of the legislation enables the US Administration to follow up on another commitment made by the US in the July 18 Joint Statement, namely, approaching its international partners, particularly in the Nuclear Suppliers Group to lift restrictions to allow civil nuclear cooperation with India. We will seek to ensure that the Nuclear Suppliers Group takes action to permit full civil nuclear cooperation with India in terms acceptable to us.
India is interested in long-term, stable and predictable cooperation in civil nuclear energy with the United States and other members of the international community. Such a partnership with the United States can be facilitated if the legislation – its scope, content and implementation - were to strengthen the hands of the Administration to fulfill all the commitments agreed to by the US in the July 18 Joint Statement and the March 2 Separation Plan. On the other hand, this objective can be hindered by extraneous issues that were not part of the understandings in the July 18 Joint Statement and the March 2 Separation Plan. India will find it difficult too and cannot accept any such conditions over and above those already agreed to in the understandings with the US. I have mentioned it earlier also.

Our strategic programme was outside the discussions that led to the July 18 Joint Statement. There was no discussion on details of our strategic programme, which culminated in the March 2 understandings. Our strategic programme will not be subject to external scrutiny or interference of any kind. So, Shri Advani does not have to worry about the future of the nuclear programme.

Safeguarding the autonomy of the strategic programme is a solemn duty of this Government. Nothing will be done that will compromise, dilute or cast a shadow on India’s full autonomy in the management of its security and national interests. I repeat that no legislation of a foreign country can take away from us our sovereign right to conduct foreign relation, be it with Iran or with other countries, solely in accordance with our national interest.

The US for its part has assured us that the legislation, as passed by the US Congress, will enable it to fulfill all its commitments vis-à-vis the July 18 Joint Statement and the March 2 Separation Plan. We feel clarifications are necessary because there are areas in the Act which causes us concern. Therefore, clarifications are necessary and will be sought from the US on how this will be done.

International negotiations are a complex process. We recognize that the outcomes are not entirely predictable nor always under our control but I do recognize and do state that compromises, if any, cannot violate basic principles. I believe that any calculation of risks and opportunities will need to be done in a reasoned and transparent manner but evidently we cannot agree to anything that is not consistent with our vital national interests, including protecting the autonomy of our strategic programme, maintaining the integrity of the three-stage nuclear power programme and safeguarding
indigenous R&D, including the Fast Breeder Programme. This will be our underlying approach – I am replying to Shri Rupchand Pal — when we negotiate the bilateral 123 Agreement, which will form the basis of our civil nuclear cooperation.

Looking back, though the July 18 Joint Statement and the March 2 Separation Plan involved complex issues, I believe, we were able to achieve outcomes that in no way compromised India’s interests. In fact, there was wide public support when the issues were fully explained. This has been made possible using innovative and creative approaches to these complex issues. There is, I believe, a large measure of support within the country in favour of breaking out of our isolation, and in joining the international mainstream in a manner that secures for India full civil nuclear cooperation with the international community while protecting our strategic programme and maintaining the integrity of our three-stage programme and indigenous R&D. This is the objective set out as far as the bilateral nuclear agreement is concerned.

Parliament has my solemn assurance that while the Government will make every effort so that the vision of the July Statement becomes a reality, this objective will not be achieved at the cost of our vital national interests. Clearly, difficult negotiations lie ahead. Our broad approach and expectations of these negotiations are a matter of public record. My August 17th 2006 Statement, dwelt at length on how India perceives the implementation of the July Statement and the March Separation Plan. I stand by the commitments that I have made to Parliament.
080. Speech of External Affairs Minister Pranab Mukherjee in the Lok Sabha on Civil Nuclear Energy Cooperation with the U. S after adoption of the Henry J. Hyde Act by the US Congress.

New Delhi, December 18, 2006.

Madam Chairman, I express my gratitude to all the hon. Members who have participated in this discussion. A number of points have been raised in this discussion. The Members have highlighted some of the issues concerning the national interest and also the broad vision keeping in view the way the Government is proceeding on this matter.

Normally, in a debate like this, there would be divergence of views. That is the essence of democracy. But at the same time, it speaks of the mind of the nation in a way that the divergent views which are prevailing in the body polity get reflected in the observations of the representatives of various political parties.

When the Prime Minister mentioned that there is a broad national consensus, he meant that a broad national consensus is there that India must move forward and India must have access to the technology which has been denied for so long. If our scientists and technologists have access to this technology, they can do wonders and I do not think anybody, wherever he or she may be sitting in this House, will disagree with this objective. This is precisely the objective with which the Government initiated the process to have the civil nuclear cooperation arrangement with the United States of America.

Keeping that broad objective in view, the Joint Statement of 18th July, 2005, which reflected the essence of all the essential parameters of this agreement, was placed before the House. The Separation Plan which was worked out – America was fully involved with this Separation Plan – was also placed before the House as also the agreement of 2nd March, 2006.

Thereafter, the Prime Minister explained in detail concerning all issues in his reply to the debate on 17th August 2006.

I will touch upon the first point on which the Leader of the Opposition has made, to my mind, a very strong plea. He has indicated that we have mortgaged the Foreign Policy; we have jeopardized our security concern; there will be no Pokhran III and Pokhran IV. Pokhran I and Pokhran II had
already taken place. But most respectfully, I would like to submit for the consideration of the House, who declared unilateral moratorium. What prompted them to do so? What prompted them to do so within a few months of the Second Pokhran Explosion?

It took place in May 1998. They came to power in March 1998. Surely, a layman would appreciate that everything was ready, the previous Government, for the best visions, did not take the decision and they owned that decision. The only phrase which we use repeatedly, justifiably and we stuck to that is that yes we have the capabilities. That is why we keep our nuclear options open. We did not close that option. That was the message which our young Prime Minister conveyed to the international community in the Disarmament Conference that we are in a position to manufacture nuclear weapons, if we so desire. We are almost screwdrivers away from that stage that we are willing to continue in the threshold level and we do not want to graduate ourselves to be a nuclear weapon State provided un-nuclear weapon States and other countries of the world agree for the total nuclear disarmament. That is what we said.

We established our capabilities in 1974. We were just screwdrivers away. That is why within less than three months after coming to power, they could do that. What prompted the Leader of the Opposition to say that Pokhran III and Pokhran IV are mortgaged for all time to come? What did they say?

The then Prime Minister, Shri Atal Bihari Vajpayee stated on 24th September 1998 in the UNGA and I quote:

“These tests do not signal a dilution of India’s commitment to the pursuit of nuclear weapon disarmament. Accordingly, after concluding this limited testing programme, India announced a voluntary moratorium on further underground nuclear test explosion. We conveyed our willingness to move towards a de jure formalization of this obligation in announcing a moratorium. India has already accepted the basic obligation of the CTBT in 1996. India could not have accepted that obligation as such a restrain would have evaded our capability and compromised our national security.”

Therefore, they did it and they accepted it. This statement was repeated in the following year by the then Foreign Minister and today they are accusing us that there cannot be a Pokhran III and there cannot be a Pokhran IV.
You yourself accepted that nuclear disarmament is one of the basic objectives of it. Even today, we have submitted a working paper to the United Nations, we wanted nuclear disarmament. The Prime Minister has already assured you as to what is the rationality of having a separation plan. If the civilian nuclear agreement with the USA would cover the strategic programme, then what was the rationality of having a separation plan? This itself speaks that it cannot be a part of the arrangement which we are entering into with the United States of America. This is completely a different plan, and surely we are not expecting to have any support from them for this programme. We will carry on this programme; we will carry on our own the strategic programme; and we will use our own fuel and materials, whatever would be needed, and that is why the Prime Minister is quite confident that there cannot be any compromise on it, and there cannot be any inspection so far as this is concerned.

Now, Sir, certain portions have been quoted by a large number of Members. Most respectively I would like to submit that it is the pattern of the US legislation, particularly two Sections. Almost in every legislation, Section 101 is the normal short title of the Bill; Section 102 and Section 103, one speak the sense of the House and another speak of the policies of the United States of America, and these are of recommendatory natures. These are not of the mandatory natures. If there is a reference to FMCT, there is a reference to the nuclear weaponization programme, in respect of some of these recommendations it would be the obligation of the United States Administration to provide the necessary information to the Congress but it is not an obligation to me, to us not even to provide the necessary information. They can collect that information on their own, and actually they are doing so.

A number of Reports are made to the Congress by the US Administration in respect of human rights, in respect of bonded labour, in respect of child labour, and sometimes some activities work on that. It is their practice. So far as we are concerned, the Prime Minister has very correctly pointed out as to what this Bill is. Why did I say that normally we do not comment on the legislation of another country? What is the purpose of this Bill? The purpose of this Bill is to provide waiver, waiver not to India, waiver to the US Administration to enable them to enter into an agreement with India for the civil nuclear programme. Why was this waiver needed? It was needed because of the 1954 Act that if any country had tested nuclear explosions, then they would be debarred to be a partner with the USA in any nuclear programme.
If all the nuclear arrangements of a country are not under total safeguard of the IAEA, that country is not eligible to be a partner with the USA for any nuclear cooperation programme. If a country has nuclear weapons, that country is not eligible to be a partner, to be an arrangement for Civilian Nuclear Cooperation with the USA as per the USA law. Therefore, these waivers were necessary. Without these waivers, the US Administration is unable to deal with India in respect of the Civilian Nuclear Cooperation arrangement. So, this is being done.

A number of questions have been raised saying: “When this is debated in the US Congress, it is not a final state; when it is debated in the US Senate, it is not a final stage.” When the reconciliation conference takes place, even then you are saying that it is not the final stage. Yes, it is not the final stage. These are the various stages of the process. The process is yet to be completed. Negotiation under Section 123 of their Act is to begin, it is to start; and what we have said is how we are going to safeguard our interest.

When the Prime Minister talks of the reciprocity, what does he say? He says that ‘before we accept the full safeguard, this 123 Agreement is to be finalized.’ That is the arrangement because once we enter into the safeguard, the safeguard would be for perpetuity in respect of those imported materials, equipment and fuel. But before we enter into that, all our concerns are to get reflected in the 123 Agreement, which is yet to be done. NSG (Nuclear Supplier Group) is also to amend their rules, their guidelines because as per their Supply Groups, they do not deal with a country, which is having their nuclear weapon programme.

Therefore, those guidelines are also to be amended to suit the Indian requirement. When we are going to enter into an arrangement with IAEA safeguard protocol, that will also have to be India-specific because the three conditionalities are required for entering into Civilian Nuclear Programme, and India does fulfill that requirement. That is why these explanations ought to be made, these ought to be made India-specific.

Now, somebody is saying: “What is great in it?” It is true, that in foreseeable future, nuclear power is not going to be a big component in our energy basket. We are to depend on coal; we are to depend on hydro power; we are to depend on imported hydrocarbons; and we are to depend on our non-conventional energy. But at the same time, nuclear energy is going to be a very major component in foreseeable future because that is the cleanest energy, which is available. Volatile oil market is known to everybody; it need not be explained in details.
Somebody was talking that we have huge quantity of Thorium. Yes, we know that one-third is in our country. Thirty per cent of the Thorium reserves are in our country. But the big block is access to technology. This barrier should be removed. It is not merely in respect of mere nuclear energy, nuclear power, but we have to remove apartheid. The Leader of the Opposition took exception to the word ‘apartheid’. It is apartheid. Despite the best brain, best talent, our scientists cannot show their mettle to the fullest extent because of the lack of access to these technologies and lack of access to the equipment. Are we not aware of the fact that how much problem we had to face to get a supercomputer or the cryogenic engine and how did it affect some of our very important strategic programmes? We do not even have access to the dual use technology.

What is the relevance of USA? Somebody tried to import extraneous political elements. There is no need of bringing it. Unless you have okayed it from the US, unless US extends the collaboration and co-operation, no other country is going to do that. At least, the Leader of the Opposition should be fully aware and he should be fully conversant with that fact because he was in the Government during the current period for at least five to six years.

How much problem we are facing to have access to the technology, to have equipment, to have the materials which we want to have? But does that mean we should compromise our basic national interest? The Leader of the Opposition says Indian Foreign Policy has been mortgaged. I have heard this phrase umpteen number of times. I do not know how many times sovereignty can be mortgaged. In 1994 when I signed the Agreement of WTO, Mr. Speaker, Sir, a senior colleague—I cannot take his name—on the floor of this House, said you have bartered our sovereign right of international trade. After a couple of years, when they came to power, they did not make a change in the comma and full stop of that Agreement and to justify the agreement, they had to reprint the argument which I gave on the floor of both the Houses.

Therefore, do not take these things so lightly. Nobody is going to mortgage sovereignty, not to speak of the Congress Party which has served for the freedom of this country in its long history. Even after Independence, they had to fight for all sorts of obscurantist forces; and to fight against even obscurantist forces, they had to sacrifice the lives of their supreme leadership starting from Mahatma Gandhi to Rajiv Gandhi. Therefore, do not think that a Congress Prime Minister is going to mortgage
the sovereignty, independent decision making broad national interest.

Then regarding the expression of opinion by different legislative bodies, the other day I was watching with interest though I have nothing to do but my friends from West Bengal may be interested in knowing the language in which the West Bengal Legislative Assembly passed a unanimous Resolution condemning the attack on Iraq. It is their own sovereign legislation. They have expressed it. Many Legislatures expressed their views on different issues.

Therefore, Mr. Speaker, I do feel that we need not be unnecessarily agitated on the norms. The basic issue is that whether we are going to maintain the parameters which have been clearly indicated in the July 18th Statement, in the 2nd March Statement and in the 123 Agreement which we are going to sign.

Therefore, the option would be this. If we cannot have the full agreement and if our parameters do not get reflected on it, it may not go through. But why should we say so? Why should we not try? Everybody in the world recognizes it and I am pretty sure if by accident, there is no way that by normal chance of their coming to power on this side, they will use the same argument to defend the action which they will be pursuing. Therefore, let us not go to that aspect of the issues.

A question has been raised whether our independent, three-stage research programme would be maintained. It would be maintained. It cannot be interfered with. It is because we have to protect it. Why are they saying that the US Administration is saying that? Even after this Bill being passed, the Secretary of State was on record that it would be possible for the Administration to implement the commitments which they have made to India in the 2nd March and 18th July Statements. They are fully aware of it. They have analysed their own legislation which has been passed by their own Congress. When they are saying it and when we are going to have this agreement, after this when we will be entering into it, let us wait for it. What is the harm in it?

We are not doing anything behind the back of Parliament. At every stage, whenever a demand has been there that there should be a discussion, readily we have agreed. This is the third or fourth, I think fourth, discussion here. If it is required, it would be done there. Next time it would be done. But if somebody wants to expand the scope of the debate and discussion, I am afraid, Mr. Speaker, Sir, it cannot be done. It cannot be done that the international agreements will have to be ratified by the Parliament. That
position cannot be accepted because it is a larger issue. For that you require a mandate. None of us spoke that we will amend the Constitution and bring this provision within the Constitution. Yes, many countries have it. When our Constitution-makers drafted the Constitution, they were fully aware of it. They had not got it.

I would not give the example; but I know. I signed one agreement with my neighbouring country for having some hydel power project some time in 1995 as the then Foreign Minister. But because of the internal political situation and the situation prevailing in the Parliament of that country, till 2006 it has not been ratified. Therefore, these issues are also to be kept in view. Let us not be carried away by emotion. Yes, on the demand that Parliament should be taken into confidence, the Parliament should be informed, we are already ready to do that.

Questions have been raised about the scientific community. I do not know whether any Government discussed with the scientific communities in so many details on so many times as this current Government has done. Dr. Manmohan Singh himself was the member of the Atomic Energy Commission. For umpteen number of times he himself has the fraternity with the scientific community. Naturally, the scientific community may feel concerned on certain areas. Whenever they feel concerned, their concerns are taken note of. As he has pointed out, I can reiterate that nothing will be done which will stand in the way of our indigenous development, indigenous research and development programme because that is the core of our strength and we cannot compromise, under any situation, with that core strength of our economy, of our national asset.

On foreign policy, the hon. Prime Minister has already explained in detail. We do not believe that the relationship with one country is dependent on the relationship with other country. We have never accepted that proposition. We had a very successful visit of the Chinese President very recently. China has excellent relations with Pakistan. That does not stand in the way of our building up excellent relations with them. Therefore, these relations are independent. If somebody wants to say that it is inclusive, then I have myself stated that certain phrases are there which are extraneous and prescriptive. It is for them to use that type of phrases, but it does not concern us.

So long as the text of the main agreement is concerned, Mr. Speaker, Sir, I think that I have covered in general terms the issues which have been
raised. An assurance has been given by no less a person than the Prime Minister. I need not reiterate it.

Thank you Mr. Speaker, and hon. Members, for giving me this opportunity of sharing some of my thoughts with you.

Thank you.

F F F F F

081. Speech of External Affairs Minister Pranab Mukherjee in the Rajya Sabha replying to the Short Duration Discussion on the Indo - U. S. Civil Nuclear Energy Cooperation.

New Delhi, December 19, 2006.

Mr. Deputy Chairman, Sir, before I start my observations, I would like to inform the House that the Prime Minister had the intention of intervening, but because of his tooth problem, he cannot speak. That is why what he wanted to assure the House, convey to the House, on his behalf, I will do so. But he has taken the trouble, despite physical illness, to spend large part of his time to listen to the debate in the House.

Mr. Deputy Chairman, Sir, at the very outset, I would like to express my gratitude to all the Members who have participated in this discussion and made very valuable contributions. I have been associated with this House for so long that I became almost a fixture of this House, from the late 60’s till the last Lok Sabha elections. According to my experiences, any Parliamentary debate, and, especially, in this House, and also, today’s debate, despite some interruptions, speak of the high tradition of the House. Members, while making their contributions, demonstrated their knowledge, their appreciation of the situation, and their information; I congratulate them. It is not necessary for me or for anybody to agree with every view which is expressed on the floor of the House because divergence and dissension is the essence of democracy which we have followed, which we have cherished. I think this would be the fifth discussion which we have had. Some hon. Members, perhaps, in over-enthusiasm, stated that Parliament is not taken into confidence. It is not correct, because the whole process began with the joint statement of Prime Minister, Dr. Manmohan Singh and
President Bush on 18th July, 2005. After that, there have been four occasions — in July, 2005, February 27, 2006, March 7, 2006, and August 17, 2006, and before the end of the year 2006, on 19th of December, 2006, we are having discussions for the fifth time. If anybody can correct me, I will appreciate him that on any piece of subject, or, title, so much debate and discussions have taken place and in every one of it, Prime Minister himself has participated. It is true. It is the constitutional provision and neither you nor me have the mandate to change the Constitution. If I remember correctly, one election in this country was fought on the basis of a mandate to change the Constitution. If I remember correctly, one election in this country was fought on the basis of a mandate to change the Constitution. That was in 1971 when the executive came into confrontation with the judiciary and one important judicial pronouncement put restrictions on the amending procedures of Parliament in Golaknath’s case. Before that, the Lok Sabha was dissolved. In that election, one of the major issues was that the then Prime Minister sought the mandate of the people that “I would like to amend the Constitution for a social legislation, for a social purpose. I do not have the majority. Two-thirds majority is required.” And, on that basis, she got a massive mandate. The Twenty-fourth amendment of the Constitution took place for the first time in article 368. The constituent power of the Parliament was institutionalised. Therefore, it cannot be just on the desire of somebody that you amend the Constitution. But short of that, short of having ratification by the Parliament at all important stages, the Executive takes the matter to the Houses and seeks the advice and guidance from the Houses. That has been the practice in the past and this practice is followed even now.

Sir, let me start by saying that I was listening to the entire debate since 1 o’clock and sometimes, I thought that I was not in the Upper House of the Indian Parliament, but in one of the chambers of United States of America, because we were discussing the Hyde Act. While making a *suo motu* statement, I had mentioned that this has some relevance but not all. Now, what is the relevance of the Act? To my mind, this is a matter between the US Executive and the US Legislature. When the Executive decided upon having cooperation with India on civil nuclear deal, they knew it very well that the 1954 Act stands in the way, and unless the Executive gets some waiver from the Legislation, that cannot extend civilian nuclear cooperation to India, because India had tested nuclear devices. In India, all the nuclear installations are not fully under the safeguard of IAEA, and India has nuclear weapons. Therefore, in these three areas, waivers were required for the Administration to negotiate with India in respect of the civilian nuclear cooperation. This is an enabling legislation, to enable the US Administration to have negotiation with us, and that negotiation will, of course, take place.
I am not going into the details of the US procedures and US systems. There are Constitutional experts here; they know about it much better than me. But one clarification was sought, I think by Dr. Bimal Jalan, and he had raised an issue pertaining to Section 203 of the US law. He asked whether there was any precedent where the US President, despite the intention of the Legislature, the sense of the House, and the US Policy, enacted a law, entered into an agreement, but it was not complied with. And this was in the case of China — Normal Trade Relations with People’s Republic of China, Public Order 106-286/October 10, 2000. This is one precedent; there are other precedents also. And if you look at it, exactly in the identical language, ‘human rights have been violated by China in Tibet’. The manufactured goods have been produced with the help of bonded and imprisoned labour.

Therefore, US Congress advised the Administration to ensure that these things did not happen. But the US Administration had no way of administering and, therefore, it remained as a desire. Section 103 of the Act, Section 104 of the Act, sense of the House, formulation of the policies of the US Administration are being articulated every year. Dr. Alexander has very clearly explained the constitutional position and the relation vis-à-vis the US Administration and the US Congress. I would not like to go into the details of it. But, surely, Mr. Deputy Chairman, Sir, I would like to make a general observation. The question comes: Who is to interpret the US legislation, its effectiveness and its binding? Me; the Indian Parliament, or the person who is directly concerned, the US President? I would just like to quote a few lines from the statement of President Bush after signing this Agreement with reference to some of the provisions of the Hyde Act. I quote, “Today I have signed into H.R. 5682 and Act containing the Henry J. Hyde United States-India Peaceful Energy Cooperation Act, 2006. That will strengthen the strategic relationship between the United States and India and deliver valuable benefits to both nations. Section 103 of the Act proposes to establish US policy with respect to various international affairs methods. My approval of the Act does not constitute my adoption of the Statements of Policy as United States foreign policy.

Given the Constitution’s commitment to the Presidency of the authority to conduct the nation’s foreign affairs, the Executive Branch self-construe such policy statements as advised. Also, if Section 104 (d) (ii) of the Act was construed to prohibit the Executive Branch from transferring or approving the transfer of an item to India contrary to Nuclear Suppliers Group Transfer Guidelines that they may be in F.A. at the time of such future transfer, a serious question would exist as to whether the provision on constitutionally
delegated legislative power to an international body.’ That is the interpretation of the person who is instructed by the law to implement the Act. That is the rationality in which the Prime Minister assured the House yesterday despite knowing the extraneous and prescriptive provisions, not all but some, of the Hyde. What Prime Minister said yesterday? I can just quote a few lines as he is unable to speak. I quote, “We appreciate the efforts made by the US Administration and the bipartisan support to the US Congress which has led to the passage of this legislation. This law has several positive features which take into account our concerns. However, there are areas which continue to be a cause for concern and we will need to discuss them with the US Administration before the bilateral Cooperation Agreement can be finalised.

The House can rest assure that in these negotiations, the commitments and assurances I gave — I mean the Prime Minister gave — to the Parliament on August 17, 2006, will constitute our guidelines. The passage of the legislation enables the US administration to follow up another commitment made by the US in July 18 Joint Statement, that is, approaching its international partners, particularly, in the industry to lift restrictions, to allow full civil nuclear cooperation with India. We will seek to ensure that the NSG takes action to permit full civil nuclear cooperation with India in terms acceptable to us”. Many other paragraphs are there. The total contention, the moot contention, of the assurance is that the Prime Minister’s stand committed, the Government of India’s stand committed to the Joint Statement of 18 July 2005, to the Separation Plan of the 2nd March, 2006 and to the assurances which the Prime Minister gave to this very House on 17th August, 2006, which is being repeated and reiterated by me right now.

Mr. Deputy Chairman, Sir, a number of issues have been raised. I will try to address some of these issues, because quite a number of other issues that have been made here are extraneous. I am not going into the issues which, to my mind, are extraneous to this debate, like, some American businessmen or some Indian businessmen entered into an arrangement among themselves and to do business. Keeping that in view, this whole arrangement is being done. Now, let us come to the tests and non-proliferation. I have no hesitation to say, yes, I belong to the party which does not believe in Non-proliferation Treaty. Yes, we do believe that nuclear non-proliferation is absolutely necessary for the very existence of civilisation. Because of this very fact, Mr. Deputy Chairman, Sir, from 1974, after the first explosion in Pokhran, repeatedly we refused to sign the NPT. Why? When the whole world signed—Ram Jethmalani has correctly pointed out, except three or four countries, the whole world signed—we refused. Because always we considered that NPT is
a fraud treaty. It is discriminated. It is creating a class where the nuclear weapon states would have the right of stockpiling, of making experiments, horizontally and vertically, while the Non Proliferation Treaty-bound States will not have that right. So, we refused to accept this discriminatory treatment. What was the message which—Mr. Rajiv Gandhi, the then Prime Minister, and my colleague, Mr. Natwar Singh, who is present here, was the Minister at that time—we conveyed to the International Community in the Disarmament Conference of the United Nations? In plain, simple language it was that we are on the threshold, we are screwdrivers away from the manufacturing of weapons. But still, I would desire to continue to be at the threshold level. I would keep my option open. All along you use the phrase that India will keep its option open. We will not foreclose the option. I would not graduate myself to a nuclear weapon states, provided you, the nuclear weapon States, agree to a definitive timeframe for nuclear disarmament.

That was the stand; good, bad, or indifferent too. Even this year, we have presented a paper to the United Nations. But I am really, Mr. Deputy Chairman, Sir, at a loss to understand the logic of the spokesman of the party who indulged in closing the option, going for the test in the month of May. You came to power in March, 1998. Surely, in two months, you were not competent enough to start from zero. Everything was ready. That is why you could take the advantage of going for explosion in May, 1998. Then what had prompted you to declare a unilateral moratorium? What had prompted you not only to declare a unilateral moratorium here but also to reiterate it? Mr. Jaswant Singh wanted to have the documents. Mr. Deputy Chairman, Sir, I have some documents.

This is the text of the speech of Mr. Atal Bihari Vajpayee delivered in the United Nations General Assembly on 24th September 1998. And there too you did not say that you would not go for disarmament; you would not go for non-proliferation. What did you say? “These tests do not signal a dilution of India’s commitment to the pursuit of global nuclear disarmament.” You retained that policy. And what did you say? Thereafter, you went one step ahead and said, “I am ready to sign.” Instead of reading the paragraph, I am quoting the paragraph. The Sl. No. of paragraph is 60. Your speech on 22nd September 1999 where you also quoted the Prime Minister’s speech and stated:

“Last year, my Prime Minister declared in this Assembly that India was engaged in discussions on a range of issues including the CTBT. These discussions are in process and will be resumed by the newly elected
Government. Our position remains consistent. We remain ready to bring — thereafter you came to power — these discussions to a successful conclusion. Naturally, this requires the creation of a positive environment as we work towards creating the widest possible consensus domestically.”

Fine. There is no problem with it. Therefore, the short question, which comes to my mind, is this. Truly, you were talking that you would not have the opportunity of testing. What did we say? What did the Prime Minister say? What is in the Separation Plan? We are not accepting any additional commitment. We are just sticking to the voluntary moratorium which we declared. We are not going to accept any Treaty-bound commitment. We are not going to accept a part of the Treaty which we will sign, because we would like to keep our options open. If situation demands, if the national priority demands, if the superior national interests require, we may have to do that. That will be left to the wisdom of the decision-making authority at that point of time. But we would not like to foreclose the option. We have just exactly retained that commitment which you agreed to, which you did. But we are ensuring that it will not be a Treaty-bound commitment. The Prime Minister stated that it was a hard negotiation. No denial of the fact. The real task to my mind, Mr. Deputy Chairman, Sir, is that the real negotiations will start now, because we shall have to enter into the 123 Agreement. Of course, the 123 Agreement is under the overall Act of 1954.

But, that will be between India and the USA. What has happened right now is between the US legislation and the US Administration, to enable the US Administration to enter into negotiations with us. We cannot place the cart before the horse. Now, the issue which had been raised was that what would happen if the USA, suppose for certain reasons, refuses to supply fuel to us. Would it foreclose the option for us to go to any other NSG countries? Nothing prevents us, in this treaty, to go to others and have it. Nothing compels us. That is why, you will have to have an amendment in the NSG guidelines. The agreement which you will have to enter into with IAEA would be India-specific because these are the few important points that all the nuclear installations are not under total safeguard.

Although India is a nuclear weapon State and India has tested earlier before we entered into this agreement, these provisions, these situations, cannot be undone. This is very much there. Therefore, I will just like to quote a few lines from the conference paper. It has been stated many a time that why they have not accepted India as a nuclear weapon State. We did not seek for a nuclear weapon State status nor can it be conferred by
anybody. It is the ground reality that India has tested twice and India has nuclear weapons. In the second paragraph on page 2 of the conference report, it is stated that section 123 (a) (2) of the Atomic Energy Act requires that a non-nuclear weapon State should have IAEA safeguards on all nuclear material in all peaceful nuclear activities in that State, under its jurisdiction, or carried out under its control anywhere, commonly referred to as full-scope safeguards, as a condition of US nuclear supply and approval for new nuclear cooperation agreements, a requirement that India does not meet and, as a State with nuclear weapons, would be unlikely to meet for the foreseeable future.

This is not my comment. This is the comment in the conference paper that we are not going to meet this requirement in the foreseeable future. On page 12 of the conference paper, the conferees understand that the US peaceful nuclear cooperation with India will not be intended to inhibit India’s nuclear weapon programme. There is no intention. Neither we nor anybody else has the intention that somebody will declare us as a nuclear weapon State. Five States are nuclear weapon States. They are not going to expand. They are not going to open the door. It is as simple as that. But the ground reality is that they had to recognise that India has nuclear weapons and India is not going to give up that programme which even the conference paper has admitted.

Mr. Chairman, Sir, the question is that, what would be sequence of the safeguards. The Government has assured the House that before voluntarily placing our nuclear facilities under IAEA safeguards, we would ensure that all nuclear restrictions on India had been lifted. The legislation provides for finalisation of the text of the India-specific safeguard agreement with IAEA, but not its “entry into force.” This point is to be appreciated.

It is not “entry into force”. The “entry into force” will come after the finalisation of the 123 Agreement. Therefore, I can assure Mr. Yechury that it is not going to be done, whatever be the intention. I don’t doubt the source of the quotation which you have made. It is, perhaps, impossible and not going to take place, within such a short period of time, as it is not “entry into force”, before the passage of the 123 Agreement by the US Congress. Hon. Members should have noted that it also provides for the NSG guidelines being properly adjusted before the approval of 123 Agreement. The application of safeguards on reactors, identified as civilian by us, will only take place when the international cooperation is resumed. Members should also recall that it should be implemented in a phased
manner up to 2014. Thus the principle of reciprocity has been fully safeguarded. I should add that India would only conclude the safeguards agreement with the IAEA, and not with anybody, not even with the US.

Now, the question is whether full civil nuclear cooperation is going to be met or not. The promise of full civil nuclear cooperation has also been commented upon extensively. It has been argued that the legislation does not address our permanent entitlement to reprocess foreign-origin spent fuel or enrich foreign-origin uranium. Hon. Members who have read the legislation carefully would have noted that there is nothing in the legislation which bars India from reprocessing such spent fuel or enriching imported uranium. I should inform the Members that this particular issue is actually a key element of our ongoing negotiations of 123 Agreement. We are clear that there can be no recurrence of the Tarapore situation where India is denied the right to reprocess the spent fuel. Some Members have expressed concern that the legislation provides for only conditional access to reprocessing, enrichment and heavy water technology. We should note that the US has a universally applicable policy of not transferring such sensitive technologies to any country, irrespective of whether that country is a nuclear weapon State or a non-nuclear weapon State. In that sense, there is no discriminatory provision against India. The legislation, in fact, specifies the condition under which such transfers to India would be possible. While we carefully evaluate the implications, I will also remind Members that our scientists have already established an indigenous infrastructure for processing, enrichment and heavy water production.

Members have expressed some anxiety about the supply assurances worked out on 2nd March, 2006, whether it would be fully honoured in the light of the legislation. The US administration has categorically conveyed, as I have mentioned to you, that the legislation provides that it is the authority to fulfil all those commitments that it has made to India, both in the July 18th statement and in the Separation Plan.

I have already explained to the Members about the issue of conducting nuclear tests.

Now, about the end-use monitoring, some Members have made some comments. I would like to suggest, as Members are aware, that this is not a new practice directed towards India. All the Governments, since 1985, have been implementing the end-use procedures. We have already been scrupulous about honouring our assurances and indeed have established a reputation for responsibility on that basis. At the same time, utmost care
has been taken to see that our national security and strategic autonomy is not compromised in any manner. This will remain our guiding principle. Members should also know that India requires end-use procedures for its own high technology exports.

Some confusion has been sought to be created regarding the basis of India-specific additional protocol. Let me clearly state that references in the legislation to a particular model of additional protocol do not, in any way, detract from our entitlement to negotiate an India-specific additional protocol with the IAEA.

Members would note that even an NPT nuclear weapon State like the USA has followed the same model for its additional protocol with IAEA as the one that is referred to in the legislation, with exemptions and exceptions based on national security and other considerations.

Certain questions have been raised in regard to fissile material production moratorium. I would also like to mention it clearly that the legislation does not impose any obligation on India by the way of fissile material production moratorium as a condition of cooperation. Certainly, the views of some Members of the Congress have found expressions in some provisions of the legislation. As far as India is concerned, our commitment is limited to the 18 July Joint Statement to work with the USA for the conclusion of a multilateral FMCT. Their position is quite clear. It must be non-discriminatory. It must be universal and it must be verifiable. Therefore, no interim, bilateral, regional or ad hoc initiatives in this field are acceptable to us. We are clear that this is a civil nuclear energy cooperation agreement and this is not an arms control measure. Our scientists have referred to Section 109 of the legislation concerning the possibility of joint research by India and US scientists on non-proliferation and safeguards. There are apprehensions that this could result in inclusive scrutiny of our strategic programme. The legislation does not require, but only authorises the administration to explore the possibility of such joint research. Secondly, there is no compulsion on India to accept such proposals. In fact, in the Conference Document itself, as I mentioned, Section 109 is not intended to create an obligation for India to meet but rather to open an avenue for increased cooperation on topics of concern for both the countries.

Mr. Chairman, Sir, it has also been pointed out by some hon. Members, and they even used phrases like ‘mortgage’, ‘mortgage of independent foreign policy’. The Prime Minister categorically stated that the foreign policy of a country is an extension of its national policy. The
foreign policy of a country is determined on the basis of the requirement to safeguard and to advance the national interest. Therefore, it cannot be determined by anybody else. And, even our threat percept depends on our own perception. As an old hat in the Defence Ministry when somebody asked me, I told them very categorically that my threat percept depends on my own perception, not on your perception. Whether India has a threat or not, it is for the Government of the day in office chosen by the people of the country to determine what is the threat percept. Similarly, it is for the Government of the day chosen by the people of the country to determine what is in the best interest of their foreign policy. Yesterday, I mentioned that and I am repeating it, my relation with one country is independent of its relation or approach with other countries. With Iran, we have civilizational links, long before these things came and that civilizational link will continue.

Somebody was asking, “Why are we giving up the Iran gas pipeline project? We are getting gas at cheap price.” Perhaps, the hon. Member is a little learned. The agreement which was entered into from the Iranian side, the suggestion is that the prices are to be revised. Instead of going through newspaper articles, if these questions had been raised here, I would have answered them earlier. I myself had a detailed discussion with the Iran’s Foreign Minister when he came over here. He suggested that the Agreement, which was made at that point of time, about the prices of gas, required to be revised. We are engaged in the negotiations. The pipeline project has not been given up. Who said that the pipeline project has been given up? But, surely, a project of this dimension would require assistance from financiers; we have to get money to implement it. We are seriously considering it. Therefore, Mr. Chairman, Sir, I see no reason why we should have any doubt, why we should have any suspicion. It is true that our Treaties are not ratified by the Parliament.

But it is equally true; even more unceremoniously as you dismiss your domestic servant, the House has the power to dismiss the Government by bringing in a Motion of No Confidence and if it is carried by a majority of the House. That is the strength of the Parliamentary system of Government. For every action, we are accountable to you. In our excitement, in our enthusiasm, we should not forget that those who are sitting here today would be sitting on the other side tomorrow, as it has exactly happened. The only thing which I would like to remind the hon. Members sitting there right now is, please do not change your policy with the change of the seat, which they are doing more often than not. When I was listening to Joshiji, it just reminded me of 1994, and with that, Mr. Chairman, Sir, I would conclude. It was in connection
with the passage of the Patents Act. India signed the WTO, and I was the villain of the piece.

As the then Commerce Minister, I had to bring that Amendment. For three days I could not even make my case presented here. There were so much uproarious scenes, and they shouted that the sovereignty had been mortgaged. I do not know myself as to how many times I have mortgaged India’s sovereignty! When, in 1982, as India’s Finance Minister, I entered into an extended financial facility with the IMF, my Left friends accused me that I had mortgaged India’s sovereignty. Further, I was the only Finance Minister from among the developing countries who did not take the last instalment of the loan and also returned 1.1 billion SDR to the IMF. What I was saying is that a drama was enacted on the floor of the House. As per the terms of the Agreement, we were to amend the Patents Act of 1970. We could not do it, and Shri Murli Manohar Joshi, while participating in the debate, told me that I had no guts. He said, “Put up some guts and reject the Bill. Tell the WTO that we would not sign this Agreement.” All these are in the red books here. After sometime, by democratic rule, from here I went there, and Joshiji came here from there. And, their Government had to pass that Bill with our support. The Left opposed then. The Left opposed during my time, and the Left opposed during their time. But I do believe what is good for the country does not depend on which side of the House I sit. If it is good, it is good whether I sit here or I sit there. Despite the opposition from some of my colleagues, I gave them an assurance that the Congress (I) Party would support the Bill, and with that support, the Patents Bill was passed. The country has been benefited; the Indian pharmaceutical industry is booming. Thank you, Sir.

SHRI SITARAM YECHURY: Sir, I just wish to make one point. I am sure, the hon. External Affairs Minister would yield for a minute. All that we want you to assure the House is that without these assurances — the assurances given by the hon. Prime Minister earlier in the House and the assurances made by you — no 123 Agreement will be entered into. That is the assurance we want. That is all.

SHRI PRANAB MUKHERJEE: Sir, I have stated categorically, and the hon. Prime Minister has categorically stated, that we shall have to seek clarifications, we shall have to get these things reflected in the Agreement under 123. What more assurance do you want? (Interruptions)
INDIA’S FOREIGN RELATIONS - 2006
SECTION - IV
DIASPORA
082. Speech by Prime Minister Dr. Manmohan Singh at Pravasi Bharatiya Divas 2006.

Ladies and Gentlemen,

I am truly delighted to be here to inaugurate the 4th Pravasi Bharatiya Diwas. This day last year we met in Mumbai. We met in the port city at which the “Great Pravasi”, Mahatma Gandhi, arrived 91 years ago, returning to his Motherland from South Africa. He returned to liberate our country from the colonial yoke. He returned to inspire us, to guide us, to forge a new unity in our ancient land.

I am, therefore, particularly delighted that we have with us today a great son of South Africa. I welcome the Honourable, Mr Ahmed Kathrada, leader of the South African people. Mr Kathrada fought, as Gandhiji did, to free his people and to lead them into a brave new world of freedom, dignity and self-respect. The people of Indian origin have come to symbolize the world over the spirit of a free people. Of a people who have the courage to stand on their own two feet. A people who have time and again demonstrated the power of unity amidst diversity. Of knowledge and compassion over force and authority. Our civilization is based on the idea of plurality, diversity, tolerance, and on the possibility of the co-existence of multiple identities, which in a sense, is what this gathering epitomizes.

I am also delighted that this year, we meet in Hyderabad. This city symbolizes the idea of India, the idea of being Indian. Hyderabad’s composite culture, its cosmopolitanism and its modernism have always been admired. What is often not recognized is the global outlook of the Hyderabad person and the Andhra people. Long before we had Non-resident Indians and People of Indian Origin, this land was home to teachers and traders who went to distant lands as ambassadors of a great civilization. Centuries later, when the Charminar was built, one of the four roads leading away from it went straight to the port of Machilipatnam from where pearls from East Asia came to Hyderabad. [I am sure delegates to this Conference have set time aside to buy Hyderabad’s legendry pearls. They remain the symbols of this city’s past globalisation.

Today, Hyderabad has new symbols of globalisation such as Cyberabad, the pharma and bio-tech industries and the many sports facilities. This magnificent new Convention Centre, is yet another symbol.
I am happy to learn that the new International airport project is on track. It will help improve the world’s connectivity with Hyderabad.

All these symbols of global connectivity and globalised activity capture the face of a new India. To my mind, the most important aspect of reconnecting with the world is for us to reach out to People of Indian Origin. The NRIs and the PIOs are the most important elements of our globalisation. There is a fundamental difference between the globalisation of India and many other developing countries. For us, globalisation is a natural means of linking up with the international community of Indians. As I said last year, if there is one phenomenon in the world over which the sun truly never sets, it is the phenomenon of the global community of people of Indian origin.

Ladies and Gentlemen,

As I look around me today, realize just how unique this gathering is. It is both a conference and a carnival, a business meet and a cultural festival. It is characterised by serious discussion and palpable emotion. It has also given us the opportunity to pursue major initiatives with respect to overseas Indians.

Last year at Mumbai I had declared our Government’s intention to make sure that one day every person of Indian origin living anywhere in the world can aspire to become a citizen of our sacred Motherland. As an important first step we have delivered on our promise to grant the status of Overseas Citizen of India (OCI) to eligible applicants. The Ministry of Overseas Indian Affairs will soon complete the process of rationalization of categories and ensure convergence of benefits.

Of the three categories, overseas Indians in the Gulf are unique. They are NRIs who will never become naturalized citizens of those countries. Most of them have immediate families back in India and have thus a vital stake in local governance, including the issue of who would represent them in the State Assembly or the National Parliament. Their demand seeking “voting rights” at home has, therefore, a convincing political basis. This proposal is at an advanced stage of consideration by our Government. We hope to take appropriate measures in this regard soon.

There are an estimated four to five million overseas Indian workers all over the world. Every fifth member of the diaspora is thus a worker. They have contributed a great deal to the economic and social empowerment of their families back home, to the development of their
communities and to the economic enrichment of our country. Their hard work helps build the host countries while their remittances sustain their families and the local economy back in India.

In recent years, remittance inflows have increased impressively, rising from US$13 billion in 2001 to over US$ 20 billion in 2005. I salute the overseas Indian, the workers and professionals, who are contributing with their skills and sweat to the economic development of our Motherland.

Apart from granting them voting rights, I assure overseas Indian workers and professionals that we will address some of their urgent concerns. Improving the efficiency of financial and consular services is one such concern. I propose the following ‘on-site’ welfare measures for their benefit:

- An easy-to-use remittance facility that is affordable and efficient. The Ministry of Overseas Indian Affairs has partnered with UTI Bank to develop an electronic, integrated remittance gateway. My colleague, Shri Chidambaram will launch it this evening.

- We will launch a more liberal Pravasi Bharatiya Bima Yojana, with effect from 1st February 2006, to provide enhanced benefits to workers. Competition from a number of insurance providers will ensure that the premiums remain affordable.

- We will work with international and other agencies to streamline and modernize the process of emigration and to create awareness among the workers about their rights and obligations.

- We will support initiatives to develop the skills of workers and set up credible mechanisms for certification of those skills so that over the years, we are able to re-position India as a source of skilled, rather than unskilled, labour.

Ladies and Gentlemen,

It is often said that the 21st Century will be the “knowledge century”. We in India are proud of our inheritance in this regard. Overseas Indians have played an extremely important role in global brand building in this respect. If India is today viewed as a “knowledge economy” it is because of the reputation that many of you have earned for our knowledge institutions by your creativity and diligence wherever you now work.

To enable improved connectivity between people of Indian origin worldwide, we intend to set up a Diaspora Knowledge Network to provide
a dynamic framework within which the users and providers of knowledge can discover each other and work together. Knowledge itself needs to be widely defined to include operational and management expertise. I am happy that an exclusive session is addressing this matter in this conference. It is encouraging that apart from overseas Indians, UNESCO and the UN country team in India will also be participating in this session.

Apart from such a network, our ability to tap the expertise of overseas Indian professionals will depend on our ability to forge partnerships with them. We must launch pilot initiatives with clear goals that are consistent with national objectives. Lessons from such initiatives can then develop into successful sectoral programmes. I am happy that one such initiative is being launched at this conference with the signing of a Memorandum of Understanding between the Ministry of Overseas Indian Affairs and the American Association of Physicians of Indian Origin. I hope this initiative will begin with projects in basic healthcare.

Ladies and Gentlemen,

I have often said that long before Indians crossed the seas as workers, they traveled the world as traders and teachers. Time was when the Indian gurukul system and our universities at Takshila, Nalanda and Nagarjuna, not far from here, were the envy of the world. Even after independence, Indian colleges and universities continued to attract students, particularly from countries like Malaysia and Mauritius. In the last twenty to thirty years, we have lost ground both because we failed to incentivise our institutions to become global players and because foreign universities became more aggressive in marketing. I am conscious of the fact that an important demand of the overseas Indian community is to secure access to educational opportunities in India.

I am happy that institutions like the Delhi Public School, Birla Institute of Technology and Science and Manipal Academy of Higher Education have already established a presence in a number of countries. I believe that this trend needs to become much wider and stronger. Education is a service and as in other service sectors, India has tremendous comparative advantage in providing and exporting education services. I believe that there is an unmet demand for higher education in a number of countries with a significant diaspora population that can provide one outlet for our talents here. In the process, we should be able to attract other overseas students as well. And as India becomes a stronger economic power, there will be a lot of interest in students all over the world to come and study in
India for the sheer experience of being in the most happening society in the world.

Convinced, as I am that this is a tremendous opportunity area, I am aware that the regulatory and support systems need to be in place. We also need a policy framework to deal with proposals from abroad to partner educational institutions in India. I believe your conference will be discussing the idea of creating a University for People of Indian Origin. I look forward to your considered views in this regard.

We also need an institution that will play host to students coming to India from abroad. Our Government will create an institutional interface in this area. Here again, I seek your views on what we should be doing. Organisations like the British Council offer one model that can be discussed. I am happy that a session on educational opportunities is part of this conference where eminent educationists are coming together along with the delegates to suggest the way forward.

While a national policy framework is probably necessary in many of these areas, I would urge State Governments to take the initiative and devise their own strategies to tap into the developmental potential of overseas Indians. When I visited Mauritius last year I was truly impressed by the remarkable contribution of people of Indian origin to the modernization and transformation of Mauritius. From being a single crop agrarian economy, Mauritius is rapidly transforming into a knowledge-based services and tourism economy. Many enterprising citizens of Mauritius trace their ancestry to the Indian state of Bihar. I invited them to come and help transform Bihar.

I am sure every State Government can devise its own strategy to benefit from the creativity, the talent, the enterprise, the enthusiasm and commitment of people of Indian origin hailing from different parts of our vast sub-continental Nation. I am glad that an entire session is being devoted at this conference to a discussion with State Governments. I hope you will all get them to compete for your affection, your talent and your investment! Healthy competition between States can be helpful!

This is the time to think big and think boldly. This is the time to forget our differences and labels and celebrate our common Indian-ness. This is the time for all of us to become strategic partners in progress in a ‘one-for-all; all-for-one’ spirit. I do hope annual meets like this, while giving us a chance to review immediate plans and projects, also provide the stimulus to strategise and take this relationship to the next logical step.
Ladies and Gentlemen

India is a land of opportunity that places premium on enterprise and creativity. Our Government is committed to create a hospitable climate for investment and enterprise. We will work hard to improve the quality of governance, at all levels, and remove barriers to growth and competition. I invite you to make use of the investment and business opportunities that India now offers. I invite you to be active partners of a new India and walk with us in finding new pathways of development and progress. I invite you to feel the love and affection of Mother India and feel the warmth of her embrace.

Jai Hind!

UMBILICAL CONNECTIVITY AND SOCIETAL CHANGE

I am delighted to participate in the conferment of Pravasi Bharatiya Samman Awards 2006. I congratulate the award winners for their contribution in promoting international understanding for healthy bilateral relationship between the countries and enable us to project the right image of India abroad. I am happy to meet you all in this gathering. I also congratulate the PIO’s for the Overseas Citizenship of India (OCI). My greetings to the organizers - Ministry of Overseas Indian Affairs in partnership with Government of Andhra Pradesh and the Federation of Indian Chambers of Commerce and Industry.

Cultural deprivation

Sometime back Nobel Laureate Sir V.S. Naipaul met me with his wife Lady Nadira. We walked through the Mughal Gardens in Rashtrapati Bhavan and discussed various issues related to the history of our country and its people. Sir Naipaul thoughtfully told me that while India as a Nation is a very recent phenomenon, Indian as people are as old as the mankind on this planet. Sir Naipaul informed me that he is the descendant of unskilled labourers of North Indian Brahmin origin, who were shipped out of India as
settlers for farming of the British Empire. He called him a dispossessed child of India whose upbringing in a far away Trinidad familiarized him with a new type of deprivation that is the cultural deprivation. His books reflects his in-built love for the nation of his origin.

**Empire of Indian Mind**

Today, the 9th day of January marks the return of Gandhiji from South Africa to India 91 years ago. His work in South Africa and reasons of his return are well known. The point I would like to make is that when Gandhiji returned, he travelled from one colony to another of an Empire on whose territory; the sun would never set at that time. It would not be an exaggeration, if I say that today the sun truly cannot set on the empire of the Indian Mind.

Some children of Mother India are always working wherever the sun is shining on this planet be it Asia, Africa, Australia, Europe, the Americas and, indeed, on the icy reaches of Antarctica. Twenty million children of India live in various parts of the planet and every year it is increasing, because they are needed.

**Experiences**

Before coming here, I was at Peda Amiran village near Bhimavaram town today morning with Prof MR Raju, a Nuclear Scientist who held important positions in American Laboratories, including Los Alamos National Laboratory, during his 33-years stay there. On 1992, 2nd October the birth anniversary of Mahatma Gandhi, Prof Raju decided to move with his family, permanently to their village and serve the society with their knowledge and wealth. His contribution during the last one decade has made a difference to the village. I participated in the inauguration of a Rural Cancer Treatment and Research Center built by him under Mahatma Gandhi Memorial Trust. I met on that occasion a lawyer, a maxillofacial surgeon and an ophthalmologist; they are all working in the United States and drawn to Raju's mission. I also saw Byrraju Foundation’s work in the rural community. Working in 150 villages across five districts of Andhra Pradesh, it has an impact on nearly one million rural lives. Their programmes include healthcare, education and adult literacy, water, environment and sanitation and livelihood skills. The Foundation is entirely funded by Satyam Computer Services Limited. I can see the impact of their work on Human Development Index in the Bhimavaram region. I discussed with Shri B. Ramalinga Raju, Chairman, Satyam Corporation for establishing the linkage for economic connectivity.
What attracts India?

What does all these people symbolize? What attract people spread across the planet to the land of their origin? I asked this question to a Minneapolis-based engineer Madhu Reddy who met me few days ago in Hyderabad. He informed me that he just signed a MoU with Electronics Corporation of India Ltd to set up a production unit for Digital X-ray (D.R.) systems. These systems are latest in Radiography equipment and have not yet arrived in India due to its prohibitive cost. He told me that not only he would sell the D.R. Systems in a cost effective way to Indian hospitals, and also export to other countries. The product will be internationally competitive. When I asked, “Why are you doing that? Madhu Reddy replied, “Sir, while it makes a perfect business sense to manufacture electronic products in India and export them, I also want to repay the debt I owe to this land and society where my forefathers had existed to whom I am just a connected link." Madhu Reddy who is successful in the United States was born and educated here. “There is a debt to be repaid by me,” he says. Friends, it is not only important for the Non-Resident Indians to pay the debt to their motherland but all of us living here have also to pay back the debt to our motherland which has nurtured and grown us.

Four Waves

People of Indian Origin worldwide represent four waves of migration in the past. The first, and probably the longest wave, was of Indians going forth in search of knowledge and opportunity as travellers, as teachers and as traders. Indians went to China and around Indo-China. The second wave was one of enforced migration of indentured labour, a legacy of colonialism.

Indians were taken to Africa, West Indies and England. The third wave was a product of partition. The fourth and the most recent wave has been that of Indians empowered with skill and knowledge seeking various type of opportunities and challenges. The destination is the United States, Canada and English speaking European countries and West Asia. Will there be a fifth wave? In the fifth wave, towards the end of 21st century, Indians may participate in the planetary civilization that may result many resourceful Indians inhabiting Mars and entering the space industrial establishment on Moon.

The spirit of movement

The four migratory waves happened in different historical settings for different reasons, but the central theme remained quest for better living
conditions and opportunities to excel. Hope to transform, to translate our living present to a productive future is what makes human a unique creature of the Cosmos. This is indeed true of migrants the world over. The important point is that Indians always migrated as individuals and never as communities. In fact even during the Partition, brothers chose to separate rather than migrating as a family. The attraction of the homeland has been historically proved powerful than compulsions of migration, definitely in the long run and over a period of lifetime. The presence of all of you here today testifies this. What is that unique thing that binds an Indian to this land?

The Eternal Mother

Overseas Indians have been successful, thanks to the foundation in education and the heritage their home country gave them, and also the opportunities that the country they have gone has given. I receive visitors settled abroad from all walks of life. Many of them have brought their children first time to their motherland. They look for the warmth of human relations in India. This society remains a loving mother to grown up sons and daughters who always return. This I will call umbilical connectivity between the mother and the children. We belong to same umbilical connectivity, whether you are in India or in any other part of the planet. Friends, India, whose 70% people live in rural areas, has a vision to transform itself into an economically developed country before 2020. Now I would like to discuss what I presented in the Indian Science Congress on 5th January 2006 about how a rural area can be developed with education centres as base line.

Technology for societal transformation

The transformation of India will need transformation of six hundred thousand villages. This would need creation of seven thousand PURAs spread in different parts of the country with physical connectivity, electronic connectivity, knowledge connectivity leading to economic connectivity. I suggested that the decision could be taken to allot Rs. 500 crore to develop 100 PURA Clusters. Each cluster, comprising of 20 to 30 villages, will have an educational institution as a nucleus. The development will comprise of setting up of village knowledge centres; agro-clinics; Tele-education and Tele-medicine centres; and other employment oriented schemes such as bio-gas plants; water treatment plants (brackish to potable water); bio-fuel esterification plant; cold storage; consumer product development; vocational training centres and setting up of business centres by the entrepreneurs for national and international marketing of the products from these rural
enterprises. In all these cases, the educational institutions should plan the activities in consultation with local people who are the beneficiaries of this programme.

**A Performance Challenge**

These hundred PURA programmes originating from educational institutions and with public-private partnership will provide the experience for taking up big programmes in future in an industrial scale. This undertaking will build the capacities of the villagers and encourage the Indian entrepreneurs to become an active partner in this development process. These activities should not be treated as mere experiments and scientific knowledge; it is the application of science and technology to societal transformation. The winners are the academic institutions and the rural people belonging to the PURA Clusters. Finally, there should be a clear assessment whether the villagers have been benefited. A joint team of the village members and the scientists/technologists can do this. This will lead to the birth of the Civic Scientists. This is the performance challenge, which I would like to pose to the experienced scientific community and to the Government officials. This mission I gave since I had seen three operational PURA projects: one in Tamil Nadu which I have discussed earlier in the last year, second in Maharashtra and the third in Madhya Pradesh. I would like to describe the three PURA systems to the members assembled here.

Periyar PURA (Tamil Nadu): I have inaugurated Periyar PURA complex pioneered by Periyar Maniammai College of Technology for Women, Vallam in Tanjore, a year back. I thought of sharing with you the developmental concept of a cluster of over 65 villages near Vallam, Thanjavur district of Tamil Nadu that involves a population of 3 lakhs. This PURA complex has all the three type of Connectivity - physical, electronic and knowledge - leading to economic connectivity.

The centre of activity emanates from the women engineering college that provides the electronic and knowledge connectivity. Periyar PURA has health care centres, primary to post graduate level education and vocational training centres. This has resulted in large-scale employment generation and creation of number of entrepreneurs with the active support of 850 self-help groups. Two hundreds acres of waste land has been developed into a cultivable land with innovative water management schemes such as contour ponds and water sheds for storing and irrigating the fields. All the villagers are busy in cultivation, planting Jatropha, herbal and medicinal plants, and power generation using biomass, food processing
and above all running marketing centres. This model has emanated independent of any government initiative. The Engineering institution has provided the committed leadership. Recently, 5 of Periyar PURA villages are connected through Wi-MAX Wireless of 4 mbps connectivity It provides a sustainable economic development in that region. This gives me the confidence that PURA is a realizable proposition and this movement can be multiplied by thousands of entrepreneurs, educational administrators, small-scale industrialists and bankers with the support of the government agencies.

Loni PURA (Maharashtra): At Loni in Maharashtra, pioneered by Pravara Medical trust, a participative model of integrated rural development has come up among 44 villages with the population of 80,000. It is improving the productivity of the rural people through improved quality of life with healthcare, education and employment. The concept is people centric development for social transformation.

The thrust area of development has been on comprehensive Medicare particularly for women and children, need based health education and e-connectivity to the farmers. The complex has created 27 educational and vocational institutions consisting of schools, colleges, polytechnic and ITI including medical and engineering colleges. They have created sugar factory, biogas plants, chemical plants and power projects. They have large number of self-help groups for providing low interest loan for the weaker sections in the society. Due to the co-operative effort of the people, literacy in these villages has gone up from 63% to 83%, birth rate has come down, infant mortality rate has decreased to 35 per 1000 from 70 per 1000 and the standard of living of the people has gone up by over 20% compared to other villages in the neighbouring areas.

Chitrakoot PURA (Madhya Pradesh): At Chitrakoot in Madhya Pradesh, I met NanajiDeshmukh, the ninety-year-old social worker. His team belonging to Deendayal Research Institute (DRI) is developing and implementing a village development model. Nanaji told me that people’s power is more potent, stable and enduring than political power. By becoming one with the oppressed and depressed, one gains the acumen of administration and governance.

Social advancement and prosperity are possible only by injecting the spirit of self-reliance and excellence in the younger generation. Using this principle, DRI has plans to develop one hundred clusters of villages having approximately five villages each around Chitrakoot. They have
already developed 80 villages in 16 clusters consisting of about 50,000 people.

I witnessed sustainable development at Patni village based on indigenous and traditional technology, knowledge systems and local talents. The programme aims at income generation through value addition, innovative agricultural practices, inculcating scientific temper among the villagers, improvement of health and hygiene, striving towards 100% literacy. The villagers are doing water harvesting; effectively using it for cultivation of food grains, medicinal and aromatic and horticulture cultivation. Apart from all these development activities, the Institute is facilitating a cohesive conflict free society. I understand that the eighty villages around Chitrakoot are almost litigation free. The villagers have unanimously decided that no dispute will be taken to court and the differences will be sorted out amicably in the village itself. Nanaji told me that if the people fight among each other they would have no time for the development. This message has been understood by the society.

The Institute has developed a novel concept of putting a graduate married couple at the hub of the societal transformation. Called "samajshilpi dampati" (societal sculpture couple), they counsel and intervene in the affairs of the village citizens. In the same Chitrakoot environment there is another social organisation called Shri Sadguru Seva Sangh trust is carrying out number of social activities including the running of quality eye care centre.

**GRID Connectivities**

India has embarked on a mission to provide connectivity for billion people in the form of GRIDs. This GRID gives national connectivity consisting of Knowledge GRID, Health GRID, E-Governance GRID and PURA GRID. That means citizen to citizen, citizen to state, Government to Government and citizen to institutions and organisations are connected. This GRID system will certainly maximize the synergy between the organisation and people leading to faster economic growth and productivity. The Grids are as follows:
084. Address by President Dr. A.P.J. Abdul Kalam to the Indian Community.

Port Louis, March 12, 2006.

Umbilical Connectivity with India

I am delighted to meet and interact with the people of Mauritius this evening. My greetings to all of you. Some of the people of Indian origin assembled here whose parents and grandparents left India's shores many years ago to build a life and a home in Mauritius; as well as more recent arrivals who represent the finest of India’s technical and professional talent. You are all inheritors of the great Indian tradition of assimilation, adaptation and creative genius and provide the best to the country in which you are living.

Stability in Pluralistic Society

Throughout my stay, I have seen numerous instances of your contribution to the socio-economic development of Mauritius. You contribute not only to the economy but to the development and preservation of a stable multi-ethnic, multi-lingual, multi-religious society. These are values that Mauritius and India share at a fundamental level. These are also values which define us as Indians, no matter which part of the world we live in. Mauritius and India have a vital stake in ensuring that the world of tomorrow is one that protects the interest of all pluralistic societies.

In the modern context, you are a vital link between India and Mauritius, a country with which we enjoy the friendliest of relations. You have to play a crucial role in strengthening the strong multi-faceted relationship that Mauritius and India are engaged in building, be it the political sphere or economic, commercial, academic and cultural fields. Mauritius is an important financial services destination. I am sure many of you may be contributing to the growth of financial services in this country.

Today, India is one of the fastest growing economies of the world. I would like to discuss some of the developments taking place in India.

Ambience in the Nation

In the Indian history, very rarely our nation has come across a situation, all at a time, an ascending economic trajectory, continuously rising foreign exchange reserve, reduced rate of inflation, global recognition of the technological competence, energy of 540 million youth, umbilical
connectivities of 20 million people of Indian origin in various parts of the planet, and the interest shown by many developed countries to invest in our engineers and scientists including setting up of new R&D centers. The distinction between the public and the private sectors and the illusory primacy of one over the other is vanishing. India as the largest democracy in the world has a reputation for its democracy and for providing leadership for the one billion people with multi-cultural, multi-language and multi-religious backgrounds. And also our technological competence and value systems with Civilizational heritage are highly respected. Also, FII’s find investing in India attractive. Indians are also investing abroad and opening new business ventures. As per the report titled “From the Ganges to the Thames” which states that the Indian Foreign Direct Investment in British capital is second only to that of the US and Indian FDI project in Europe has increased from just 5 to 119 during the period 1997 to 2004. The Government is also committed to economic development by ensuring growth rate of 7% to 8% annually, enhancing the welfare of the farmers and workers and unleashing the creativity of the entrepreneurs, business persons, scientists, engineers and other productive forces of the society. We are translating this opportunity for transforming India into a Developed nation before 2020.

Technology for Societal Transformation

The transformation of India will need transformation of six hundred thousand villages. This would need creation of seven thousand PURAs (Providing Urban Amenities in Rural Areas) spread in different parts of the country with physical connectivity, electronic connectivity, knowledge connectivity leading to economic connectivity. I suggested in the recently held Indian Science Congress that a decision could be taken to allot Rs. 500 crore to develop 100 PURA Clusters by the local educational institutions in the rural areas. Each cluster, comprising of 20 to 30 villages, will have an educational institution as a nucleus. The development will comprise of setting up of village knowledge centres; agro-clinics; Tele-education and Tele-medicine centres; and other employment oriented schemes such as bio-gas plants; water treatment plants (brackish to potable water); bio-fuel esterification plant; cold storage; consumer product development; vocational training centres and setting up of business centres by the entrepreneurs for national and international marketing of the products from these rural enterprises. In all these cases, the educational institutions should plan the activities in consultation with local people who are the beneficiaries of this programme.
A Performance Challenge

These hundred PURA programmes originating from educational institutions and with public-private partnership will provide the experience for taking up big programmes in future in an industrial scale. This undertaking will build the capacities of the villagers and encourage the Indian entrepreneurs to become an active partner in this development process. These activities should not be treated as mere experiments and scientific knowledge; it is the application of science and technology to societal transformation. The winners are the academic institutions and the rural people belonging to the PURA Clusters. Finally, there should be a clear assessment whether the villagers have been benefited. A joint team of the village members and the scientists/technologists can do this. This will lead to the birth of the Civic Scientists. This is the performance challenge, which I would like to pose to the experienced scientific community and to the Government officials. This mission I gave since I had seen three operational PURA projects: one in Tamil Nadu which I have discussed earlier in the last year, second in Maharashtra and the third in Madhya Pradesh. In building a developed India the overseas Indians can participate by establishing a PURA around a cluster of villages in a region of your choice.

The Eternal Mother

Overseas Indians have been successful, thanks to the foundation in education and the heritage their home country gave them, and also the opportunities that the country they have gone has given. I receive visitors settled abroad from all walks of life. Many of them have brought their children first time to their motherland. They look for the warmth of human relations in India. This society remains a loving mother to grown up sons and daughters who always return. This I will call umbilical connectivity between the mother and the children. We belong to same umbilical connectivity, whether you are in India or in any other part of the planet.

Conclusion

In building an India of our dreams, I see an increasing role for the overseas Indian community. There are tremendous business opportunities whether in establishing PURA, in the field of manufacturing and services, or in the areas characterized by high Science and Technology, Biotechnology, Pharmaceuticals, Space Technology. In all these areas, we welcome your cooperation.
I once again bring to you greetings from people back home. I wish you all success in your missions. Your prosperity is our happiness.

My good wishes to all of you.

085. Address by Prime Minister Dr. Manmohan Singh to the Indian Community in Germany.

Berlin, April 24, 2006.

I am delighted to be here with members of the Indian community in Germany.

You have all earned for yourselves an enviable reputation for diligence, for creativity, and for enterprise and for assimilation in a foreign culture and ethos without losing or abandoning the intrinsic values that make you Indian. This has enabled each and every one of you to be ambassadors of India and to favourably shape the perception of India among your colleagues at work, your neighbours in your communities and your elected representatives. We admire your contribution in furthering the understanding for India in Germany. I also compliment you for the love and respect, which you have for the land of your ancestors.

India and Germany are Strategic Partners. Germany is the 6th largest investor in India and the 3rd largest trading partner for India in Europe. Indo-German collaborations are among the market leaders in a whole range of sectors. Our two countries also have a long-standing scientific and technical collaboration. The two countries also continue to work closely with regard to the reform of the UN Security Council.

This is a unique year for India in Germany. We are the Partner Country at the Hannover Trade Fair and the Guest of Honour Country at the Frankfurt Book Fair. In the month of May, India is the Focus Country at the Bonn Biennale. For each of these important fairs, India has the unique distinction of being the only country to have been bestowed the honour for a second time. Several German cities would be holding special events on India. This shows the tremendous interest that India has generated and I am confident that they will all contribute towards bringing the people of Germany and of India closer together.
India is on the move today. The Indian economy has recorded high rates of growth on a sustained basis since our process of economic reforms began. India is among the most attractive destinations globally for doing business. Several Indian companies have expanded their global presence in various sectors across the world, including in Germany.

Today, our external economic profile is robust and reassuring to investors, at home as well as abroad. Our economy has recorded close to 8 per cent annual growth for two years in a row. We are confident that we would be able to raise India’s annual growth rate to around 9-10%. Our optimism is based on the fact that our savings rate is now over 29% of our GDP and the investment rate is about 31% of GDP. Our policies relating to investment, banking, finance and capital markets have evolved to make Indian industry and enterprise more competitive globally. We have launched a massive programme for rural renewal that will upgrade rural infrastructure and incomes and thereby, expand the domestic market. Our new policies are enabling public-private partnership in the modernization of our roads system, railway system, ports, airports, power and the entire urban infrastructure. I do believe that the transformation India is going through will be one of the most exciting in this century as over one billion people move towards growth and prosperity.

I have come to Berlin today from Hannover, where India’s participation at Hannover Messe 2006, with over 300 companies, will showcase the vast potential for partnership that the expanding Indian economy offers for trade, investment and technology collaboration for mutual benefit. I have no doubt that our participation as a Partner Country for the second time in 22 years, a unique honour bestowed on India will impart significant momentum to bilateral relations between India and Germany.

It has been said that in the new globalised world it is those societies, which have evolved into so-called “global tribes”, which will be best poised to take advantage. I believe that our historic project of globalization will, therefore, remain incomplete unless we reach out to People of Indian Origin. Our NRIs and the PIOs are important partners in our globalization process. I, therefore, invite you to join in the exciting journey of creating a new modern and prosperous India.
Ladies & Gentlemen,

At the very outset, let me express my gratitude for all of you present here this evening and for an opportunity to share some of our perceptions and also an opportunity to meet you all. We are in a period of good cheer in India on the eve of our annual festive season, when we will be celebrating festivals of many great faiths which have enriched our heritage over the centuries and millennia. The holy month of Ramzan has just begun today. We marked the beginning of the Jewish new year yesterday. Amongst you I see so many faces of diverse India, and I feel as if I am at home.

When I look at you and meet other fellow Indians from different parts of the world, I often ask myself - what is it about us that we are able to adapt ourselves so easily to different societies, traditions and cultures? Why is it possible for Indians to make different places their home and to make themselves liked and admired? How is it that they make such meaningful contributions to the societies in which they live? In short, how is it so effortless for them to adapt seamlessly to the globalised world and yet retain their links over generations with the glorious civilizational heritage of India? While I do not always look at antiquity to seek answers to the riddles of contemporary times, I am convinced that many of the answers to the success of Indians at home and abroad lie in our history and culture.

It is indeed a matter of great pride for us that we represent a great and composite civilization that defines our “Indianness” and our worldview. Our thinking is shaped by a history in which practically all the communities of world have thrived. India has always been a mosaic of cultures and an open society. Great religions have been born in our nation, and many from outside have been absorbed and internalised. Not many people are aware that while the great religions of the East - Hinduism, Buddhism, Sikhism, Jainism and many others - grew from the soil of India, the faiths from West Asia were also embraced with equal respect and reverence. It was as early as the middle of the first century AD that Christianity came to India; that is about a thousand years before it took root in most of Europe. Jewish people lived in India with dignity and respect for centuries. Islam came first to India with Arab traders and enriched our civilization. Zoroastrians sought refuge
and thrived in India for centuries. This rich heritage became an integral part of our identity. In contemporary India, it is reflected in our commitment to secularism, which is enshrined in our Constitution.

In a world of conflict and bigotry, India provides an alternative model of peaceful co-existence. In an age in which people talk of the end of history and a clash of civilizations, Gandhi’s message is that civilizations enrich each other by overlapping and interacting.

Friends, Another characteristic of the globalized world is the exchange of goods, services and people amongst the different parts of the world. It is a reflection of the logic of business and industry that they will move to wherever it is profitable and economical. This was also happening thousands of years ago. A spice route traveled north through Jammu & Kashmir in India to Central Asia to connect with the great Silk Route from China to Europe. Similarly, ships from the Malabar coast of India sailed to the Gulf and the Red Sea for further movement to the west. Ships from the eastern coast of India also traveled great distances to the Far East for trade and other exchanges. This overland and maritime trade connected our land with distant peoples and cultures. India has never been an insular land unused to trade and commerce with others. It is, therefore, not surprising that we see merit today in an increasingly inter-dependent and globalised world. The logic of our economic reforms was to strengthen ourselves to compete, and by competing, further strengthen our nation.

Friends, I am aware that you represent the fastest growing and third most populous Asian group in the United States. Indian-Americans are the best educated and amongst the wealthiest ethnic groups in this country. The largest number of foreign students in US universities is from India. Thousands of prominent Indian-American scientists, faculty members and research workers are contributing to the intellectual capital in American universities and other institutions. Indian-Americans have made their mark in areas of high technology and innovation, real estate development, journalism, legal practice, literature, music and art. They run a number of successful small businesses, head some large US corporations and control about 40% of hotels in this country. With over 40,000 doctors and more than 12,000 medical students and interns, Indian Americans contribute significantly to healthcare in the United States.

You have the great advantage of coming from an open and pluralistic society and making another free society your home. And openness is the basis of human creativity. Democracies sometimes seem noisy and divisive,
but they are ultimately the true guarantee of unity and equitable development. Free and fair elections in India over the last six decades and the steady strengthening of democratic institutions have ingrained a tradition of democracy in such a large and diverse a country – a phenomenon which is unparalleled and unprecedented in world history. A society as diverse as India can only be governed as a democratic, federal and pluralistic polity. Since, for most of you, your country of origin and your country of adoption are both democracies, I am sure that your participation, as good American citizens, in the political process of this country will serve your and this nation’s long-term interests. I have thus been heartened to learn of contribution of the Indian-American community to political life of the United States. I am sure that, with each passing year, your participation in the political processes at the local, state and national level, will continue to increase and be commensurate with your contributions to other aspects of life in the United States.

The Indian-American community has rightly earned for itself an extraordinary place in this country. We rejoice in your well-being and take great pride in your achievements. As you have flourished, so has the relationship between India and the United States. Today, we stand on the cusp of a great transformation in this relationship. Your role in this process is vital. Your creativity, knowledge and work ethic have helped to transform the image of India in American minds. In a relatively short span of time, you have traversed a vast distance. The rise of the influence of the Indian-American community has occurred in parallel with the strategic, economic and technological resurgence of India. India has experienced a noticeable growth of its GDP in the last few years, which reached 7.5% in fiscal 2004 and 8.4% in fiscal 2005. Our economy continues to remain buoyant and we hope to have sustained growth at higher levels. In the first four months of fiscal 2006, our exports have grown by nearly 34%. During the first quarter of 2006-07, foreign direct investment inflows into India have grown 47%. India’s industrial growth was 12.4% in July 2006; the fastest in the past decade. It will perhaps not be inaccurate to say that India is today the fastest growing democracy in the world.

Friends, India has, and will, continue to be a responsible member of the international community. We are one of the largest troop contributing countries to UN peacekeeping operations. Within our capabilities, we have always responded to the need for relief and supplies in case of natural disasters in any part of the globe. Even as a country affected by the tsunami of December 2004, we were the first to provide help to neighbours such as
Sri Lanka, Maldives and Indonesia. When Hurricane Katrina caused death and devastation in the United States, we made a modest contribution in money and relief supplies flown abroad Indian Air Force aircraft as a gesture of our sympathy and solidarity with the American people. When an earthquake struck the northern Indian state of Jammu and Kashmir and parts of Pakistan, we offered assistance to our neighbour.

India has also been a responsible member of the international community in other ways. Despite being the first Asian country to have built a nuclear reactor indigenously and then developing full nuclear fuel cycle activities, we have always used these sensitive technologies with great caution and care. There has not been even one case of outward nuclear proliferation from India to any country. This is the premise on which the international community today is prepared to cooperate with us in developing civil nuclear technology. Avenues for this cooperation were opened by the 18th July understanding reached during the visit of Prime Minister Manmohan Singh to the United States last year, and the 2nd March agreement reached during the visit of President Bush to India this year. The India-US civil nuclear agreement is emblematic of the new relationship. Let me state clearly that this agreement pertains solely to civilian power generation. The agreement does not pertain to and will not in any way affect our strategic programme nor our indigenous research and development programme. We look forward to the completion of the legislative and other processes to permit the commencement of civil nuclear cooperation.

Our initiatives have not been limited to that of civil nuclear cooperation. Let us look at some developments in the last 18 months alone. During this period, India and the United States signed an Open Skies Agreement to increase the number of flights between our countries and enhance trade and tourism. Since then the number of flights have increased and non-stop flights between the two countries have commenced. We concluded the Next Steps in Strategic Partnership, or the NSSP process. This has made licensing procedures for export of sensitive goods and technologies from the United States to India easier and more predictable. We have established an Energy Dialogue that aims at boosting cooperation across the whole spectrum of energy sources. We have established a new Economic Dialogue between our two Governments, and launched a CEO’s Forum representing top Indian and US companies. The New Framework for the India-US Defense Relationship that Defence Secretary Rumsfeld and I concluded in June last year laid the foundation for cooperation,
including in defence industry. India and the United States have also signed a bilateral Science and Technology Agreement and established a Bi-National Science and Technology Commission with the objective of vastly enhancing cooperation in basic and applied sciences. We have decided to cooperate in the field of space. We have established a Knowledge Initiative in Agriculture aimed at generating a second Green Revolution in India. We have also taken various India-US initiatives which will have a positive global impact - in promotion of democracy, in natural disaster management, in meeting the challenges caused by pandemics like HIV/AIDS and avian flu and in other fields. Hence growing India-US cooperation will not only be of benefit to India and the USA but have a positive global impact.

I am confident that this trend of closer India-US partnership will strengthen in the coming years. India will continue its rise in the comity of nations, and so will the role of the Indian American community within the United States. The future of India and that of the Indian-American community within the United States thus appear to be intrinsically inter-twined. To respond to the widespread desire of this vibrant and dynamic community to have greater formal links with the land of its origin, our Government took the initiative of creating a separate Ministry of Overseas Indian Affairs and also put in place the overseas citizenship scheme.

Friends, I appreciate the fact that you have come from far and near to attend this programme. I extend my warm greetings and good wishes to all of you who are present this evening, as well as to all resident Indian citizens and Indian-Americans. We look forward to continuing to work together even more closely with you in forging a deeper partnership between India and the United States, based on abiding values cherished by both our countries as well as our common concerns and intersecting interests.

I thank you for gracing this occasion with your presence and giving me a patient hearing. Jai Hind!
087. Address of Prime Minister Manmohan Singh to the Indian Community in London.

London, October 9, 2006.

I am delighted to be here with members of the Indian community in the United Kingdom, which as the High Commissioner has just now said, is among the most well-established communities of the worldwide Indian Diaspora.

The Indian community, of whatever faith, in the UK is truly exceptional in terms of educational attainments, economic profile, social integration and cultural vibrancy. They are an enormous asset to the country of adoption and a matter of pride for all of us back home in India.

The integration achieved by the community of Indian origin is a shining example of successful adaptation and contribution of any community in the United Kingdom. There is no room for the clash of civilizations in India and the Indian community is a vibrant example of that, with Indians of all faiths and persuasions doing equally well.

Our plural society has ingrained in every Indian the virtues of tolerance and co-existence among cultures, languages, religions, political and social views, and varied ways of life. I believe that this background has something to do with the astonishing ability to adapt, which has characterized Indians wherever and whichever part of the world they have gone.

It is particularly true of Indian achievement in a free society like the United Kingdom which cherishes individual worth, and which has extended political, economic and social freedoms to successive waves of immigrants. When applauding the remarkable success of our countrymen in this land, I would also like to pay tribute to the openness of British society, which has created an enabling climate for our people to do well and to flourish.

India is on the move today. The Indian economy has recorded high rates of growth on a sustained basis since our process of economic reforms began some fifteen years ago. India is among the most attractive destinations globally for doing business. This is indicative of the extent to which the Indian economy has successfully globalized. Several Indian companies have expanded their global presence in various sectors across the world, including in this country.
India is proud of its remarkable achievements in sustaining 8% growth of its economy for the fourth year in a row. The buoyancy and vitality of our economy is a measure of the creativity of our people which has been unleashed after full-scale economic reforms were undertaken in the early 90s. While doing so we are engaged in a massive task of fulfilling the basic needs of our teeming millions.

In my interactions with Prime Minister Blair, the British political leadership and with the captains of business and industry, I see recognition of the new India that is emerging that is on the horizon. I do believe that India and the United Kingdom can join hands, as we are both well equipped to take advantage of the knowledge economy, which will shape the 21st century.

We have close understanding of each other’s political institutions and traditions and a shared commitment to democracy and fundamental human rights. We would welcome your continuing active engagement with the political process in the United Kingdom.

The transformation under way in India, ladies and gentlemen, is, in my opinion, one of the most far-reaching revolutions of this century. More than a billion people are seeking their salvation within the framework of an open society and an open economy committed to rule of law and fundamental human rights. I invite you all to participate in this adventure of creativity and enterprise any way you can.

In concluding, I wish to recall to you Pandit Jawaharlal Nehru’s advice that Indians living abroad should be loyal to the country of their adoption while keeping a place in their hearts for India. I am happy to note that all of you have lived up to that injunction.

I thank you.
INDIA’S FOREIGN RELATIONS - 2006
SECTION - V
(i) ASIA
Inaugural Speech of Defence Minister Pranab Mukherjee at the 8th Asian Security Conference organized by the Institute of Defence Studies and Analysis.

New Delhi, January 30, 2006.

I am indeed honoured to meet this august gathering of eminent experts and to inaugurate the 8th Asian security Conference of Institute of Defence Studies and Analysis (IDSA). Since its inception in January 1999, this Conference has served as a forum for free and open discussion by security analysts, experts and scholars from different parts of the world. Every year IDSA selects a specific theme concerning Asian security for in-depth discussion. This year’s theme for the Conference, “Changing Security Dynamic in West Asia: Relevance for the Post 9-11 Systemic”, is particularly relevant since growth and India’s security are closely linked to that of the West Asian region. As a member of the international community, India has been deeply concerned about the vicious cycle of violence and counter-violence and the consequent deterioration of the security situation in West Asia. It has also repeatedly called for de-escalation of tensions.

I am happy that the Conference organisers have expanded the scope of the Conference by including the North African region. The socio-political and cultural continuum that characterises the security environment of the entire region, extending from Western Sahara till Iran, in fact, demands such an extensive coverage.

Throughout human history, trade and cultural linkages between the people of Indian subcontinent and the region which we now call West Asia, have ensured a lasting relationship. This relationship continues and, in fact, vigorous efforts are being made to deepen and strengthen it.

Much is made out of the theory of “Clash of Civilizations”, advanced by Prof. Samuel P. Huntington in his famous book. But such theories are predicated on division of the world in narrowly defined ideological terms. Our own experience as a functioning, multi-religious, pluralistic democracy completely debunks such divisive theories. Indeed, our interaction with the West Asian region has been traditionally warm and marked by cooperation and mutual enrichment, leading to cross-fertilisation of cultures. Ideas have been exchanged in the fields of mathematics, astronomy and medicine; and literary texts have been translated or transliterated for mutual benefit. The influence of Persian and Arabic learning in India, and the impact
of the architectural styles and aesthetics of West Asia, are too obvious to be missed today. The birth of Urdu, the language of the Bollywood, and its influence on Hindi and other Indian languages symbolises the creative cross-fertilisation between India and West Asia.

The unceasing stream of mutual influences has contributed to the growth of an amazing interweave of cultures in the region. In the increasingly inter-dependent world today, there are easily discernible civilizational and cultural links among nations—stretching from the coast of Mediterranean to the Bay of Bengal. These remind us of the history that has gone into the making of the culture of interdependence that we emphasise so much today. We all live in turbulent and even dangerous times today. In this turbulent and tense phase of our times, it is appropriate for us to emphasise the commonalities between our cultures and peoples. We should work together to preserve and sustain this invaluable historical legacy.

Historians have pointed out that there were trade links between the cities of Mohenjodaro and Harappa and Mesopotamia nearly 4000 years ago. The trade links between India and West Asia were seasonal and influenced by the monsoon winds. These links had developed between the Malabar Coast in India and the mouth of the Red Sea, as well as between other port cities in India and ports in the Persian Gulf and the Arabian Peninsula. There is evidence to show that there was trade in cotton cloth, spices, perfumes and handicrafts between India and the West Asian region from around 200 BC. The Arabs traded more than a thousand years ago with South West India for spices and carried them back to Europe.

It is also well known that people-to-people contact between West Asia and India continued over the centuries. In the post-colonial period, close political relations between India and other countries in the region gave us a common voice in shaping the global agenda through Non-alignment, characterised by principles of equality, rejection of colonialism, and independence in decision-making and action. These close relations also facilitated dialogue to resolve differences.

The unprecedented revolution in communication technology has activated cross-State linkages among non-State actors. Intra-State conflicts have the capacity now to snowball into international crises. This makes it necessary to isolate the factors causing international insecurity today and work in a cooperative manner to make our societies safer and more secure. As the traditional concept of militaristic state security is yielding ground to
a more comprehensive notion of security, we now need to identify non-traditional threats to security.

Given the vast reserves of hydrocarbon in the region, West Asia has emerged as the principal source of energy in the world. Once described as a ‘marginal crescent’ in world politics, it has made its mark as a critical pivot in the international economy today. The entire world, thus, has a stake in the security and stability of the region.

India has an abiding interest in peace and prosperity of the region. There are about 3.5 million workers from India in the Gulf countries. The remittances they send home are an important source of foreign exchange for us. Our oil imports from the region account for nearly 60% of our total crude oil imports. As regards our exports, the region is the third largest destination for Indian goods, behind only the European Union (EU) and North America. Exports to the region account for nearly 16% of our global exports.

India has always remained willing to share its experience with the countries in the Gulf and Middle East region. Economic reforms initiated in our country since the early nineties have led to a robust growth rate of over 7% in the GDP. This has been fuelled in large measure by ever growing manufacturing base in the country, alongside the world leadership position achieved in the areas of cutting edge technology. If the world has already witnessed the phenomenal growth of I.T and computer software industry in India, the coming years are expected to see India clocking similar, if not greater, thrust in the biotechnology and other development defining sectors. I have dwelt on this issue at some length since in the present times, this aspect has increasingly begun to define relations between countries and peoples. I am happy to note that these relations are poised to grow even stronger in the coming years with new opportunities having been made available, for flow of investments, both ways.

Our relationship with the Gulf Cooperation Council (GCC) has been growing. We have a mutual commitment to get engaged proactively. We have signed a Framework Agreement for Economic Cooperation with the GCC. We have also intensified our relations with all the key countries of the region. The King of Saudi Arabia has just concluded a historic visit to India. We have an ongoing dialogue mechanism with the Arab League and the possibility of further cooperation between India and Arab League Members, is being continually explored.
In recent years, the menace of international terrorism has been causing increasing concern to the world at large. The depredations of this scourge are not restricted to this country or that country or any specific region alone. We are witness every day to the growth of ever new global linkages amongst terrorist and radical groups. While it took the tragic events of 9/11 to focus world’s attention to the threat posed by international terrorism, India has been a victim of this kind of terrorism for much longer. The international community can no longer afford to find excuses for not dealing with this problem in a concerted manner. Our fight has to be directed not only against those who perpetrate the terrorist crimes but also those more powerful interests which harbour and support terrorist elements for their narrow and short term, but ill-conceived, gains.

Commitment to the Palestinian cause has been a bedrock of our foreign policy even before we gained independence. In a cable sent to Mufti of Jerusalem on 4th Sept 1937, Pandit Jawaharlal Nehru, who became our first Prime Minister after independence, had affirmed, “The Indian National Congress sends you greetings and assurance of full solidarity in the struggle for Palestine Independence”. In the post-independence period we have remained fully supportive of the legitimate aspirations of the Palestinian people for a homeland of their own. We believe that the conflict can be resolved only through meaningful dialogue and not by force; particularly since Arabs and Jews have lived together in peace for long. A just, comprehensive and durable peace in the region can only be achieved through negotiations on the basis of relevant UN Security Council resolutions as well as the “Land for Peace” principle. In this context, we support the ‘Quartet Road Map’ which has been accepted by both sides.

India welcomes the Gaza disengagement and hopes that the resurgence of violence will soon give way to peaceful negotiations. India has consistently urged an end to violence from all sides. We look forward to further progress in the peace process that would bring about a just and peaceful solution within a reasonable time frame, leading to a sovereign, independent State of Palestine with well-defined and secured borders, living at peace with the State of Israel. We also remain ready to join in the efforts of the international community for capacity building of the Palestinian people and for strengthening their administrative and democratic institutions.

Our people have traditionally enjoyed friendship and cordiality with the people of Iraq. We feel their pain and suffering and deeply empathize with them in these trying times. We are ready to respond to the needs of
the Iraqi people for stability, security, political progress and economic reconstruction. We have committed US $20 million in assistance to the Iraqi people in response to the UN Secretary General's appeal in 2004 and, at the Donors' Conference held in Madrid in October 2004, we further committed an additional amount of US$10 million to the two Iraqi Trust Funds. We distributed milk powder worth US $ 1.2 million to Iraqi children through the World Food Programme in 2004 and have sent foodgrains to Iraq in 2005. We have also expressed our willingness to participate in the reconstruction of Iraqi petro-industry in future.

We believe that the UN has a crucial role to play in the process of political and economic reconstruction of Iraq. As such we welcomed the unanimous adoption of Resolution 1546 by the UN Security Council, on June 8, 2004. We also remain fully supportive of the right of the Iraqi people to freely determine their political future and to exercise control over their natural resources. We welcomed the Interim Government of Iraq as the first step towards transfer of full sovereignty to the people of Iraq. Only a fully inclusive political process leading to a truly representative Government in Iraq can effectively deal with challenges of fighting insurgency and rebuilding of the economy and it is in this context that we have welcomed the recent elections in Iraq. The priority before the international community now is to ensure gradual return to peace and normalcy in Iraq. A stable and peaceful Iraq is vital for the stability of the entire region, more so for India, since continued instability in Iraq can have dangerous consequences.

West Asia stands at the crossroads of history today. The ongoing turbulence in West Asia will have a major impact on the global security system. With its energy potential and the rest of the world's critical dependence on its resources, the region will continue to attract international attention in years to come. Large and growing extra-regional military presence in West Asia, and the rising constituency of radical religious groups threatening to assert their subversive strength against the States, will continue to be of great concern to the international community.

We have all seen the disastrous consequences of an untamed tide of violence in the region. We will have to cooperate with one another to stem this tide and find more effective ways of addressing the root causes of such violence. The main task awaiting the international community is to bring lasting peace and security to the region.

Distinguished Delegates, the concerns I have briefly touched upon are included in the comprehensive agenda of the Conference. I am sure,
during the course of the next two days you will deliberate on the issues defining the security dynamics of West Asia and its impact on the international political system. I have no doubt, your deliberations will provide valuable inputs for the strategic community in India and abroad, and help us in securing peace and prosperity for the people of West Asia and the world.

I would like to conclude with a quotation from our revered national poet Gurudev Rabindra Nath Tagore, He is conscious about our disagreements, our difficulties and our sufferings; but an eternal optimist that he was, he urges the mankind to move on and to strive to achieve happiness and peace:

“The current of the world has its boundaries, otherwise, it could have no existence, but its purpose is not shown in the boundaries which restrain it, but in its movement, which is toward perfection. The wonder is not that there should be obstacles and sufferings in this world, but that there should be law and order, beauty and joy, goodness and love.”

089. Statement by Minister of State E. Ahamed at the 6th Meeting of the Council of Ministers of IOR-ARC.

Mr. Chairman,

Hon’ble Ministers,

Distinguished Delegates,

1. Let me, at the outset, convey my warm appreciation to the Government and people of the Islamic Republic of Iran for the gracious hospitality extended to me and my delegation and for the excellent arrangements made for our meeting here.

2. We are very sad that the driving force behind the last two IOR-ARC Council of Ministers meetings at Colombo H.E. Mr. Laxman Kadirgamar is no more with us. May I offer our condolences to the departed soul and take a vow to keep his vision of a successful IOR-ARC alive!
3. Our senior officials have had detailed deliberations over the past two days. They have, inter-alia, discussed administrative and budgetary concerns. The recommendations they have made for our consideration are practical and result oriented. We need our Secretariat to be assured of logistical and budgetary support so that we can demand commensurate results from it. On our part, we would be happy to support the recommendations that have been made.

4. I wish to also place on record my delegation’s appreciation for the generous financial contribution Mauritius has made in the running of the Coordinating Secretariat at Port Louis. We hope that the Coordinating Secretariat will closely monitor the implementation of the many activities and projects proposed by the Academic Group, the Business Forum and the WGTI. We understand that many of these projects would require additional financial assistance in the form of voluntary contribution from the Member States. I am, therefore, pleased to announce India’s voluntary contribution of US$50,000 to the Special Fund in the year 2006 to carry out IOR-ARC’s activities. This reconfirms our trust in IOR-ARC and demonstrates our political will to support the activities of the grouping.

5. Mr. Chairman, in assessing the achievements of our organisation, we must also take into account the fact that we are a diverse group of countries, with different levels of economic development and also belonging at times to different regional groupings. However, it is the Indian Ocean, which sustains the maritime lifeline of over 50% of world trade that binds us together. We should encourage the three working groups - the Academic Group, the Business Forum and the Working Group on Trade and Investment to come up with tangible proposals based on our complimentarities and synergies.

6. I would like to suggest that we organise workshops on issues having direct relevance to our trade and industry sectors or for developmental activities in our countries. There are many areas where we can benefit by sharing each others’ developmental experiences, technologies, traditional knowledge or best practices.

7. Disaster Mitigation and Management has emerged as a significant area of international cooperation, particularly after the Tsunami of 26 December 2004. India had organized an IOR-ARC Workshop on Disaster Mitigation and Management in 2005. Tsunami has made us to recognize the need for a comprehensive oceanogenic disaster
forecasting and mitigation system. I am happy to note that the Committee of Senior Officials have accepted India’s offer of establishing an Expert Group to discuss issues related to setting up of a network of early warning centers in the member countries to transact real time data. India is prepared to share the experience gained in Mitigation of Natural Disasters with other IOR-ARC Member States and provide training for building capacity in prediction, modeling, forecasting and early warning of natural disasters. At the same time, we would be happy to learn from the experiences of other member states in this important field.

8. Mr. Chairman, the private sector in India has made a significant progress in recent years. Our knowledge industries have created their own brand image. This is attracting major global corporations to invest and locate in India. At the same time, the Indian private sector is also looking for investment opportunities overseas. My Government is ready to facilitate private sector investments in IOR-ARC member states for mutual benefit. In this context, I am happy to announce that we would organise an IOR Trade Fair in India. On the sidelines of the Trade Fair, sectoral seminars, Buyer Seller Meets could also be arranged. In order to promote the private sector led business activities, we need to look at the issue of visa facilitation for bonafide business travelers. India grants multiple entry long term visa for individuals falling in this category.

9. Mr. Chairman, you would agree with me that people to people interaction would indeed play a pivotal role in bridging the civilization gaps in our region. Let us think of initiating such activities which can utilize this synergy and lead to a better visibility of the region in our own countries in particular and world at large. We can think of events such as IOR-ARC cultural festivals, Film Festivals etc. as way forward in this context.

10. Tourism is an important aspect of our interaction. According to a World Tourism Council report, South Asia and South East Asia have shown the largest percentage increase in tourist arrival which encompasses the entire Indian Ocean Rim. India will be willing to host a roundtable of tourism sector representatives from the member countries leading to better synergy amongst our tourism industry players, including tour operators. They should be encouraged to work out tour packages encompassing more than two countries in our region.
Before I conclude, let me express Mr. Chairman, my delegation’s full support and commitment for the Indian Ocean Rim Association for Regional Cooperation. I am confident that our deliberations under your mature leadership would lead us to concrete decisions that would take forward our young grouping.

Thank you, Mr. Chairman.

090. Speech of Prime Minister Dr. Manmohan Singh at the Asian Corporate Conference “Driving Global Business: India’s New Priorities, Asia’s New Realities”.

Mumbai, March 18, 2006

I am truly delighted to welcome you all to India! I thank Vishakha Desai and her colleagues for choosing Mumbai as the venue for your Conference this year. We, in India, are delighted that an authority on Indian art and a charming daughter of India has been chosen to head the Asia Society! I am particularly happy to welcome in our midst Ambassador Phillips Talbott, who studied here more than half a century ago, at universities in Aligarh and Santiniketan.

I am also happy to welcome Mr Richard Holbrooke. I believe he too has an old and intimate association with India, going back to his childhood. His father was the personal physician of the Late Krishna Menon in New York! It is these personal memories of individuals that bind our two great democracies together. It is the warmth of such people-to-people relations and the rewards of business-to-business relations that have taken the relations between our two countries to a new height. The Asia Society has done commendable work in fostering understanding and cooperation between the USA and Asia in the field of culture, arts, economics and business. I thank organizations like the Asia Society for playing their constructive part in this renewed engagement between our two nations. I congratulate you on the establishment of your regional center in Mumbai.

I was impressed by the fact that President Bush chose your forum to articulate his views on the Indian sub-continent before his visit here. In his speech President Bush observed: “Some people have said the 21st century
will be the Asian century. I believe the 21st century will be freedom’s century.” Both are true, as the one does not exclude the other. I do not mean that it will be Asia’s Century, or indeed any region’s century, in terms of the dominance of any single region or power. Those days are gone. In this globalised world, we are all inter-dependent, and the world will become better only when we all work together. That I believe is what your President meant when he indicated that rather than an Asian century, we should look forward to the dominance of freedom.

In a very real sense, Asia too has been finally coming into its own. No part of the world is more full of diversities or so rich in variety. Home to so many of the world’s greatest civilisations, to so many of its most gifted peoples, after centuries of subjugation its different countries have again become leading contributors to the evolution of our world. They have their problems, they have their challenges. They have yet to work together more closely and productively. Doing so on the basis of equality and mutual benefit, they can make for a more harmonious and stable international community as a whole. Cooperation between them and America is no less essential than cooperation between themselves. In that context, the strengthening of ties between India and America is, I believe, a major positive development for Asia as a whole.

The theme of your Conference, “Driving Global Business: India’s New Priorities, Asia’s New Realities”, captures the essence of the change that has taken place since you last met in India in 2001. The reality of Asia’s significance in the global economy today cannot be brushed aside. The economic balance is definitely and decisively shifting to Asia as half the growth in world output now comes from Asia. In manufacturing and services, Asia is a globally competitive region. Asia is possibly equally competitive in agriculture if we had fewer distortions in agricultural trade. In global finance, Asia now funds almost the entire current account deficit of the rest of the world. I believe that the time has now come for financial markets and the global financial architecture take cognizance of this shift in balance and reform the architecture in the best global interest. And cities like Mumbai, with their top class human capital and commercial acumen, have a role in this new global financial architecture as international financial centers.

Just as Asia has changed in the last decade, India too has changed. When we initiated a new turn in our economic policies in 1991, we did not anticipate that within a decade India would be “driving” global business.
Our share of global merchandise trade was very low, and continues to be low. Our share of global capital flows was low, and continues to be so. Yet, by 2001 Indian enterprise was making a difference to global business in various sectors.

It began with “Y2K”. It may not have been a coincidence that your last meeting in 2001 was in Bangalore. That city symbolized the arrival of India on the global stage in the knowledge economy. Global companies reached out to Indian professionals to secure an edge in a competitive global market. Companies and countries that made good use of Indian talent benefited and remained competitive. Graduating out of Y2K, the Indian information technology industry offered a range of services that have found a growing market worldwide.

Indian enterprise and talent are driving global business in a wide range of sectors across the world. This has given Indian business a new sense of confidence. Gone are the days of the “Bombay Club”. There is today more steel in the resolve of Indian enterprise! This new sense of confidence comes from growing success of Indian enterprise in the face of competition in an increasing number of sectors.

Our tariffs have come down, but our share of world trade has gone up! There was a time when finance ministers were pilloried for cutting tariffs, today they are praised for doing so! What has made the difference?

Certainly, our own experience of recording higher growth in a more open economy has helped. But I must also pay tribute to East Asia and South East Asia for boosting our confidence. The success of member countries of ASEAN, of the Republic of Korea and of China, have all shaped our thinking. When we first set the target of bringing India’s tariffs down to “ASEAN levels”, it was not just an exercise in tariff liberalization but an attempt to benchmark our economic performance against some of the best performers in our neighborhood. And this benchmarking has helped.

I must pay tribute to our East and South-East Asian neighbours for shaping our own thinking on globalisation and the means to deal with it. Some of you might recall that in 1992, our Government launched India’s “Look East Policy”. This was not merely an external economic policy, it was also a strategic shift in India’s vision of the world and India’s place in the evolving global economy. Most of all it was about reaching out to our civilizational neighbours in the region. I have always viewed India’s destiny as being inter-linked with that of Asia and more so South East Asia. Our
trade with Asia has increased exponentially in the past decade. Today the East Asian Community of nations has overtaken Europe and the Americas as the largest bloc among our trading partners.

This is Asia’s “new reality” and it is shaping India’s “new priorities”. Together these will drive “global business”. Your Conference could not have been better conceptualized!

What are our new priorities? I believe that India has come to terms with the reality of globalisation. We have concerns about nascent protectionism, particularly in agriculture. We have concerns about the priorities of the World Trade Organisation and the uneven pursuit of the Doha Round agenda. We have concerns about the lack of transparency in the policies of some countries. Yet, we are now ready to face global competition on a level playing field.

India’s share in the global flows of goods, services, knowledge and culture has grown in the past decade. Today, our external economic profile is robust and reassuring to investors, at home as well as abroad. Our economy has recorded close to 8% annual growth for two years in a row. We do hope to raise India’s annual growth rate to the range of 9 to 10%. Our optimism is based on the fact that our savings rate is now over 29% of GDP and the investment rate is about 31% of GDP. And with a growing young population and as our economy becomes more hospitable to foreign direct investment, we expect a further increase in the investment rate.

In the past year and a half, our policies relating to investment, taxation, foreign trade, FDI, banking, finance and capital markets have evolved to make Indian industry and enterprise more competitive globally. We have launched a massive program for rural and urban renewal which will upgrade our infrastructure. It will generate new incomes and employment, and thereby expand the domestic market. New policies are in place for enabling public-private partnerships in the modernisation of the roads system, railways, ports, airports, power and the entire urban infrastructure. The telecommunications boom of the past decade has to be sustained for which we are working towards releasing additional spectrum to mobile telephone firms so that they can reach out to the hitherto underserved regions of rural India. Sector specific mega-investment regions with investments of upto US$ 10 billion in each location are being promoted, beginning with chemicals and petrochemicals, and the necessary policy framework for this is being evolved. The entire energy sector including petroleum, natural gas, power and captive coal mining offer exciting
opportunities. Investment opportunities exist in all these sectors and I invite investors from across the world to participate in the growth processes we have unleashed.

India is a vibrant marketplace. Our entrepreneurs are investing overseas successfully. Businesses from abroad, including from many Asian countries find India a productive and profitable business destination. The process of engagement in the Asian region has truly taken off. I am confident it will be self-sustaining, enhancing direct contact between peoples and civil societies of the region. We are linking India into a web of partnerships with the countries of the region through free trade and economic cooperation agreements. We have concluded Free Trade Agreements with SAARC, Singapore, Thailand and ASEAN. We are working on similar arrangements with Japan, China and Korea. This web of engagements may herald an eventual free trade area in Asia covering all major Asian economies and possibly extending to Australia and New Zealand. This Pan Asian FTA could be the future of Asia and will, I am certain, open up new growth avenues for our own economy.

The challenge that faces all of us today is to create and maintain a regional and international environment that enables us to attain and sustain high rates of economic growth. We must create opportunities for entrepreneurship to flourish not only locally, but also regionally and globally. Economic activity cannot be confined to national borders; it must be channeled to fuel growth in each other’s countries. Regional trading arrangements have become important building blocks of multilateralism in the increasingly globalized world that we live in.

I do recognize, however, that we have some work to do at home to make our economy more competitive and to facilitate faster economic growth. Our Government is committed to creating world class infrastructure, to investing in building human capabilities and to stepping up the rate of growth of investment, while at the same time building a caring, inclusive society.

To guide us in attaining these goals I invited one of Mumbai’s most highly regarded business leaders, my friend Shri Ratan Tata, to chair the Investment Commission. The group recently submitted its first report and our Government will implement many of the ideas in it. Mr Tata and his colleagues have estimated that to sustain an annual growth rate of 8% over the next five years, the economy would require investment of over $1.5 trillion. The Commission has estimated that this should include FDI of over $70 billion.
I fully agree with the overall thrust of the Investment Commission’s recommendations. We have to reduce the transaction cost of doing business in India. We have to bring our infrastructure in line with global standards. We have to ensure global best practices in our regulatory institutions and systems. We need to simplify regulatory and approval procedures. We are committed to doing so. Today morning, I launched an e-governance initiative of the Ministry of Company Affairs which automates the statutory record filing and record keeping functions of a key ministry. This would benefit business firms. We need to do more of the same. I have often said that our people have come to expect that they are entitled to world class facilities, world class services and world class infrastructure. It is incumbent on us in Government to fulfill these expectations.

Power is one area where critical gaps persist. We have taken many new initiatives recently to facilitate public-private partnerships in the energy sector. Many of you will be relieved to know that we have finally resolved all issues related to the Dabhol power project in Maharashtra which will restart this year. We are working on mega power projects to bridge the demand-supply gap. Our recent agreement with the United States should open up new avenues for investment in civilian nuclear power, in non-conventional sources of power, and in clean coal technologies. Availability of cheap, environment friendly, good quality power is an essential ingredient of growth and I am confident that with the access to best technologies in the world, we will achieve our goals.

I recognize that there has been a relative neglect of manufacturing in India in recent years. Mumbai was the manufacturing capital of India. To revive manufacturing industry, to make it globally competitive, and to make it the driving force for employment and economic growth, we have unveiled a ten year National Manufacturing Initiative. Emphasis will be placed on labour-intensive sectors such as textiles & garments, leather & leather goods, food processing, IT hardware & electronics and auto components.

Focused attention will be given to the growth of our dynamic services sector including software, outsourcing, tourism, education and healthcare so as to create large employment opportunities. At the same time, we are reforming the institutional architecture within which enterprises function. We are trying to reform the legal system to reduce arrears and improve the speed of the justice delivery system. We are examining the possibility of having alternate dispute resolution mechanisms, particularly for commercial disputes. The Knowledge Commission is working on strengthening the
base of the knowledge economy through improved higher education systems. We have taken the first steps by beginning work on setting up three new Indian Institutes of Science. I do believe that if we create a more liberal environment for enterprise, the Indian genius will respond more handsomely to new opportunities for employment and income generation.

I urge business leaders in Mumbai to provide the leadership we need here to give a new lease of life to Mumbai. I am convinced that a historic opportunity for the revamping of Mumbai presents itself before us today. Mumbai can emerge as a new financial capital of Asia, and be the bridge between Asia and the West in the world of finance.

A proposal to make Mumbai a Regional Financial Centre is already under active consideration. Our economic reforms have accelerated growth, enhanced stability and strengthened both external and financial sectors. Our trade as well as financial sectors are already considerably integrated with the global economy and the trend is irreversible. Mumbai, with all its inherent advantages in terms of human capital and commercial acumen, can be positioned as a viable Regional Financial Centre. Given the changes that have taken place over the last two decades, there is merit in moving towards fuller capital account convertibility within a transparent framework. Our own position, internally and externally, has become far more comfortable. I have requested the Finance Minister and the Reserve Bank to revisit the subject and come out with a roadmap on capital account convertibility based on current realities. This will facilitate the transformation of Mumbai into not only a Regional but also a Global Financial Centre. There are multiple options that are possible for such a centre, including as an SEZ, and I am confident that we can make steady but firm progress in that direction.

I am happy to learn that the Asia Society will open an India Center here in Mumbai. Mumbai is one of our most vibrant and globalised cities, pulsating with creativity and enterprise. I am sure that the Asia Society will find Mumbai a hospitable city, and truly a “Gateway to India”. Mumbai needs investment in urban renewal. Mumbai needs a world class airport. Mumbai needs better public transport. Mumbai must unlock the potential of its under-utilised assets, especially land.

When I spoke of turning Mumbai into a Shanghai, many wondered what I had in mind. It is not my intention to draw a road map for Mumbai’s future. But I do believe that Mumbai can learn from Shanghai’s experience in reinventing itself; in rebuilding itself; in rediscovering itself. Mumbai is
one of our most cosmopolitan cities. The Mumbaikar is a truly national Indian. I salute the spirit of Mumbai. I urge every Mumbaikar to transform this city from being a Gateway to India to becoming a Gateway to Asia! Mumbai has the human skills, the connectivity and the advantage of location to become the financial capital of Asia. It will get the infrastructure it rightfully deserves to realize this dream.

I hope the Asia Society will be one of the catalysts in this process. I wish your Conference all success.

091. Address by Secretary (East) in the Ministry of External Affairs Rajiv Sikri at the 6th Bangladesh-China-India-Myanmar Forum.

New Delhi, March 30, 2006.

President of Centre for Policy Research, Prof. Pratap Bhanu Mehta, Deputy Foreign Minister of Myanmar, H.E. Mr. U. Maung Myint, Vice Governor of China’s Yunnan Province, H.E. Mr. Liu Ping, Chairman, Centre for Policy Dialogue, Bangladesh, Prof. Rehman Sobhan, Distinguished scholars, Ladies and Gentlemen,

1. I am grateful to the Institute of Chinese Studies and the Centre for Policy Research for giving me this opportunity to address this august gathering of scholars and officials who are present here to attend the Sixth Forum on Regional Economic Cooperation among Bangladesh-China-India-Myanmar, or BCIM. That the current forum is the sixth of its series is testimony to the utility of this Track-II initiative in exploring sub-regional cooperation among the four countries.

2. The BCIM initiative has attracted much attention in India, as it has the potential to bring our three of our most important neighbours closer to us in a joint pursuit of common prosperity through the increasing use of mechanisms of regional integration. The initiatives and ideas jointly conceived by our scholars at the past forums have provided substantive inputs for policy-makers in the four countries.

3. India enjoys excellent political relations with Bangladesh, China and Myanmar. It is not just that we are neighbours sharing common
borders; all of us also face similar opportunities and challenges in our respective quests for rapid economic growth, national development and prosperity of our people. In our mutual relationships, there is increasingly greater focus on economic issues, which will enable us to realize the untapped potential of our economic cooperation and make it commensurate with the level of our political relationships.

4. India is actively engaged in a sustained endeavour to strengthen bilateral engagement with Bangladesh, China and Myanmar. For us, cooperation with these three important neighbours is a core component of our “Look East” policy, which occupies high priority in India’s foreign policy and reflects recognition of the strategic importance of Asia in tomorrow’s world and of our place in the evolving global economy. It is also our belief that developments in our eastern neighbourhood directly affect our security and development. Thus the bonds of friendship and cooperation that we are actively creating with our eastern neighbours have a strong economic foundation as well as a positive convergence of security interests.

5. Bangladesh is a key member of the South Asian fraternity, and a most important neighbour and regional partner for India. In fact, I would say that it is special and unique for India, because the Indian State of West Bengal, Bangladesh and the Northeast region of India have historically constituted an integrated space. Our multi-dimensional relations and our traditional friendship and wide-ranging cooperation with Bangladesh were given a boost during Prime Minister Begum Khaleda Zia’s State visit to India a few days ago. With our respective rich natural and human resources, India and Bangladesh have a significant convergence of interests in taking full advantage of the shared opportunities, complementarities and synergies that flow out of our historical, geographical, political, economic and cultural closeness, and in tackling some of the challenges in our region, such as terrorism and drug-trafficking.

6. India’s relations with Myanmar, rooted in shared historical, ethnic, cultural and religious ties, are marked by friendship, mutual trust and sustained high-level exchanges. Earlier this month, President Dr. A.P.J.Abdul Kalam’s significant visit to Myanmar provided a welcome opportunity to renew our mutual commitment for a deeper and more broad-based engagement. Economic cooperation
provides an important underpinning of India-Myanmar ties. Sharing with India a long land and maritime boundary, Myanmar is India’s gateway to South East and East Asia. We are involved in a number of infrastructure projects in Myanmar to improve road and rail connectivity, address our energy needs, and promote development.

7. As India’s largest neighbour and a key player in the international arena, China remains an important priority of India’s foreign policy. Through our joint efforts, India-China relations have progressively developed and diversified. The overall trend of the relationship in recent years has been overwhelmingly positive, and marked by regular high-level exchanges. Based on our shared conviction that they have more than just a bilateral dimension, India-China relations have now acquired a long-term, global and strategic character. The fact that trade and economic relations have emerged as the trendsetter in the overall India-China relations is not a mere coincidence, but rather the result of a conscious effort on both sides to bring our relationship in tune with the present realities by building upon mutual complementarities. Not only is there enough space and opportunity in the region and beyond for both India and China to grow together, rather the economic dynamism of India and China offers an unprecedented opportunity for growth and development in the region and in the whole of Asia, including for countries in our immediate neighbourhood. India-China partnership is an important determinant for regional and global peace and development, and crucial for Asia’s emergence as a pole of growth and influence in the 21st century.

8. India has changed significantly in the last decade and a half since we launched a bold agenda of economic reforms and liberalization. This has yielded impressive dividends. India has emerged as one of the largest and fastest growing economies of the world, with a leadership role in many cutting-edge technologies. Against this backdrop, we increasingly see our growth and prosperity as being interlinked with the rest of world, particularly with our larger neighbourhood in Asia. Our “Look East” policy has acquired greater substance and depth. We have a vision of a more robust regional integration in Asia, perhaps in the form of a Pan-Asian Free Trade Area or even an Asian Economic Community, which would take optimal advantage of our continent’s new economic dynamics and the existing synergies which are bringing us closer together in search of greater collective prosperity and security.
Articulating the vision of a prosperous South Asia, Prime Minister Dr. Manmohan Singh has emphasized that it is essential that we unlock the potential of this region by dismantling the existing barriers that restrict the movement of people, goods and investment within and across the region. The same logic applies to our extended neighbourhood to the east. Meaningful sub-regional and regional cooperation on India’s east, that would create an arc of prosperity from the Himalayas to the Pacific, is dependent upon greater connectivity and a dismantling of barriers between us to allow free movement of goods, people and ideas.

Our four countries are already mutually interacting with one another through a wide array of many bodies promoting regional and sub-regional cooperation. For example, India and Bangladesh are close partners in SAARC where China will also be an Observer. Bangladesh and Myanmar closely cooperate with us within the framework of the Bay of Bengal Initiative for Multi-Sectoral Technical and Economic Cooperation, or BIMSTEC. With Myanmar, India shares another important regional organization – the Mekong-Ganga Cooperation (MGC), besides cooperating within the India-ASEAN Summit framework. Both India and China are Summit partners of ASEAN. With China and Myanmar, we have joined hands in an important initiative in the form of the East Asia Summit, launched in December last year in Kuala Lumpur, which has laid the foundations for a cooperative regional architecture in Asia leading to the long-term goal of creating an East Asian Community. Our three countries are also cooperating within the framework of the Pentalateral Group on Drug Control. As an Observer in the Shanghai Cooperation Organisation, or SCO, India shares with China yet another forum for regional cooperation, in this case in Central Asia. Our regional engagement with China also includes the trilateral cooperation that the two of us have with Russia.

Sub-regional exchanges among our four countries could help realise the latent potential that exists between us for meaningful cooperation based on mutual complementarities and equal partnership. But the impressive web of our regional and sub-regional interaction with one other does bring out that the conceptual framework offered by the BCIM initiative is already subsumed within the existing collaborative architecture in our region. Given that we already have between us a number of overlapping regional and sub-regional groups that provide established platforms for exploring mutually beneficial cooperation,
we need to examine deeply, critically and clearly whether a proliferation of sub-regional groups is desirable without establishing their economic utility or viability.

12. More important than formal structures is the vision of practical cooperation that the scholars and businesspersons from the BCIM countries gathered here can bring, as a result of your deliberations, to our common objective of getting the four countries to harness their respective advantages for all-round benefit. We would welcome ideas for project-based cooperation in specific sectors, such as trade, transport and tourism. Projects in these areas, however, must be concrete, economically viable and interlink the major production and commercial centres of all the four countries.

13. It is encouraging that the civil societies in our respective countries are increasingly coming together to explore the avenues for greater contacts and exchanges between the four countries. Our scholars and trade bodies have done good work in putting forth various ideas to enhance economic integration and people-to-people contacts in the sub-region. In its past meetings, the BCIM Forum has come up with ideas for sub-regional cooperation in some important areas such as trade, transport, tourism, energy security, etc. Some of the interesting ideas include test transportation of cargo from Kunming to Kolkata through Myanmar and Bangladesh, Kolkata-Kunming motor car rally via Bangladesh, enhancement of civil aviation links, development of tourism circuits and promotion of cultural exchanges between the four countries. I am confident that the same effort will continue in the present Forum and specific proposals would emerge from its deliberations, for consideration by the Governments of the four countries.

14. Ladies and Gentlemen, I am confident that your exchanges and deliberations over the next couple of days would be stimulating and productive. Before concluding, I would like to place on record our commendation of the good work done by the BCIM Forum and our appreciation of its usefulness as a Track-II initiative. We would be happy to see this Track-II exercise continuing, with appropriate involvement and support of the concerned Governments as needed.

15. I wish the Forum all success. Thank you.
092. Regional Cooperation Agreement on Combating Piracy and Armed Robbery against Ships in Asia.

April 7, 2006.

The Contracting Parties to this Agreement. Concerned about the increasing number of incidents of piracy and armed robbery against ships in Asia.

Mindful of the complex nature of the problem of piracy and armed robbery against ships.

Recognizing the importance of safety of ships, including their crew, exercising their right of navigation provided for in the United Nations Convention on the Law of the Sea of 10 December 1982, hereinafter referred to as “the UNCLOS”.

Reaffirming the duty of States to cooperate in the prevention and suppression of piracy under the UNCLOS.

Noting the relevant resolutions adopted by the United Nations General Assembly and the relevant resolutions and recommendations adopted by the International Maritime Organization.

Conscious of the importance of international cooperation as well as the urgent need for greater regional cooperation and coordination of all States affected within Asia, to prevent and suppress piracy and armed robbery against ships effectively.

Convinced that information sharing and capacity building among the Contracting Parties will significantly contribute towards the prevention and suppression of piracy and armed robbery against ships in Asia.

Affirming that, to ensure greater effectiveness of this Agreement, it is indispensable for each Contracting Party to strengthen its measures aimed at preventing aid suppressing piracy and armed robbery against ships.

Determined to promote further regional cooperation and to enhance the effectiveness of such cooperation,

Have agreed as follows:
Part I Introduction

Article 1
Definitions

1. For the Purposes of this Agreement, “piracy” means any of the following acts:
   a. any illegal act of violence or detention, or any act of depredation, committed for private ends by the crew or the passengers of a private ship or a private aircraft and directed
      i. on the high seas, against ship, or against persons or property on board such ship;
      ii. against a ship, persons or property in a place outside the jurisdiction of any state;
   b. any act of voluntary participation in the operation of a ship or of an aircraft with knowledge of facts making it a pirate ship or aircraft;
   c. any act of inciting or of intentionally facilitating an act described in subparagraph (a) or (b).

2. For the purposes of this Agreement, “armed robbery against ships” means any of the following acts:
   a) any illegal act of violence or detention, or any act of depredation, committed for private ends and directed against a ship, or against persons or property on board such ship, in a place within a Contracting Party’s jurisdiction over such offences;
   b) any act of voluntary participation in the operation of ship with knowledge of facts making it a ship for armed robbery against ships;
   c) any act of inciting or of intentionally facilitating an act described in subparagraph (a) or (b).

Article 2
General Provisions

1. The contracting Parties shall, in accordance with their respective national laws and regulations and subject to their available resources or capabilities, implement this agreement, including preventing and suppressing piracy and armed robbery against ships, to the fullest extent possible.
2. Noting in this agreement shall affect the rights and obligations of any Contracting Party under the international agreements to which that Contracting Party is party, including the UNCLOS, and the relevant rules of international law.

3. Nothing in this agreement shall affect the immunities of warships and other government ships operated for non-commercial purposes.

4. Nothing in this agreement nor any act or activity carried out under this agreement shall prejudice the position of any Contracting Party with regard to any dispute concerning territorial Sovereignty or any issues related to the law of the sea.

5. Nothing in this agreement, entitles Contracting Party to undertake in the territory of another Contracting Party the exercise of jurisdiction and performance of functions which are exclusively reserved for the authorities of that other Contracting Party by its national law.

6. In applying paragraph 1 of Article 1, each Contracting Party shall give due regard to the relevant provisions of the UNCLOS without prejudice to the rights of the third parties.

Article 3
General Obligations

1. Each Contracting Party shall, in accordance with its national laws and regulations and applicable rules of international law, make every effort to take effective measures in respect of the following:

   a. to prevent and suppress piracy and armed robbery against ships;
   b. to arrest pirates or persons who have committed armed robbery against ships;
   c. to seize ships or aircraft used for committing piracy or armed robbery against ships, to seize ships taken by and under the control of pirates or persons who have committed armed robbery against ships, and to seize the property on board such ship; and
   d. to rescue victim ships and victims of piracy or armed robbery against ships.

2. Nothing in this Article shall prevent each Contracting Party from taking
additional measures in respect of subparagraphs (a) to (d) above in its land territory.

Part II Information Sharing Center

Article 4
Composition

1. An information sharing center, hereinafter referred to as “the Center”, is hereby established to promote close cooperation among the Contracting Parties in preventing and suppressing piracy and armed robbery against ships.

2. The Center shall be located in Singapore.

3. The Center shall be composed of the Governing Council and the Secretariat.

4. The Governing Council shall be composed of one representative from each Contracting Party. The Governing Council shall meet at least once every year in Singapore, unless otherwise decided by the Governing Council.

5. The Governing Council shall make policies concerning all the matters of the Center and shall adopt its own rules of procedure, including the method of selecting its Chairperson.

6. The Governing Council shall take its decisions by Consensus.

7. The Secretariat shall be headed by the Executive Director who shall be assisted by the staff. The Executive Director shall be chosen by the Governing Council.

8. The Executive Director shall be responsible for the administrative, operational and financial matters of the Center in accordance with the policies as determined by the Governing Council and the provisions of this Agreement, and for such other matters as determined by the Governing Council.

9. The Executive Director shall represent the center. The Executive Director shall with the approval of the Governing Council, make rules and regulations of the Secretariat.

Article 5
Headquarters Agreement

1. The center, as an international organization whose members are the contracting parties to this agreement, shall enjoy such legal
capacity, privileges and immunities in the Host State of the center as are necessary for the fulfillment of its functions.

2. The Executive Director and the Staff of the Secretariat shall be accorded, in the Host State, such privileges and immunities as are necessary for the fulfillment of their functions.

3. The Center shall enter into an agreement with the Host State on matters including those specified in paragraphs 1 and 2 of this article.

**Article 6**

**Financing**

1. The expenses of the Center, as provided for in the budget decided by the Governing Council, shall be provided by the following sources:

   (a) Host State financing and support;
   (b) Voluntary Contributions from the Contracting Parties;
   (c) Voluntary Contributions from international organizations and other entities, in accordance with relevant criteria adopted by the Governing Council.

2. Financial matters of the centers shall be governed by a financial regulation to be adopted by the Governing Council.

3. There shall be an annual audit of the accounts of the Center by an independent auditor appointed by the Governing Council. The audit report shall be submitted to the Governing Council and shall be made public, in accordance with the financial regulation.

**Article 7**

**Functions**

The functions of the Center shall be:

(a) to manage and maintain the expeditious flow of information relating to incidents of piracy and armed robbery against ships among the Contracting Parties:

(b) to collect, collate and analyze the information transmitted by the Contracting Parties concerning piracy and armed robbery against ships, including other relevant information, if any, relating to individuals and transnational organized criminal groups committing acts of piracy and armed robbery against ships;
(c) to prepare statistics and reports on the basis of the information gathered and analyzed under subparagraph (b), and to disseminate them to the contracting parties;

(d) to provide an appropriate alert, whenever possible, to the Contracting Parties if there is a reasonable ground to believe that a threat of incidents of piracy or armed robbery against ships is imminent;

(e) to circulate request referred to in article 10 and relevant information on the measures taken referred to in Article 11 among the Contracting Parties;

(f) to prepare non-classified statistics and reports based on information gathered and analyzed under sub-paragraph (b) and to disseminate them to the shipping community and the international Maritime Organization; and

(g) to perform such other functions as may be agreed upon by the Governing Council with a view to preventing and suppressing piracy and armed robbery against ships.

**Article 8**  
**Operation**

1. The daily operation of the Center shall be undertaken by the Secretariat.

2. In carrying out its functions, the center shall respect the confidentiality of information provided by any Contracting Party, and shall not release or disseminate such information unless the consent of that Contracting Party is given in advance.

3. The center shall be operated in an effective and transparent manner, in accordance with the policies made by the Governing Council, and shall avoid duplication of existing activities between the Contracting Parties.

**Part III Cooperation through the Information Sharing Center**

**Article 9**  
**Information Sharing**

1. Each Contracting Party shall designate a focal point responsible for its communication with the Center, and shall declare its designation of such focal point at the time of its signature or its deposit of an instrument of notification provided for in Article 18.
2. Each Contracting Party shall, upon the request of the Center, respect the confidentiality of information transmitted from the Center.

3. Each Contracting Party shall ensure the smooth and effective communication between its designated focal point, and other competent national authorities including rescue coordination centers, as well as relevant non-governmental organizations.

4. Each Contracting Party shall make every effort to require its ships, ship owners, or ship operators to promptly notify relevant national authorities including focal points, and the Center when appropriate, of incidents of piracy or armed robbery against ships.

5. Any Contracting Party which has received or obtained information about an imminent threat of, or an incident of, piracy or armed robbery against ships shall promptly notify relevant information to the Center through its designated focal point,

6. In the event that a Contracting Party receives an alert from the Center as to an imminent threat of piracy or armed robbery against ships pursuant to subparagraph (d) of Article 7, that Contracting Party shall promptly disseminate the alert to ships within the area of such an imminent threat.

Article 10
Request for Cooperation

1. A Contracting Party may request any other Contracting party, through the Center or directly, to cooperate in detecting any of the following persons, ships or aircraft;
   
   (a) pirates;
   
   (b) persons who have committed armed robbery against ships;
   
   (c) ships or aircraft used for committing piracy or armed robbery against ships, and ships taken by and under the control of pirates or persons who have committed armed robbery against ships; or
   
   (d) victim ships and victims of piracy or armed robbery against ships.

2. A Contracting Party may request any other Contracting Party, through the Center or directly, to take appropriate measures, including arrest or seizure, against any of the persons or ships mentioned in
subparagraph (a), (b), or (c) or paragraph 1 of this Article, within the limits permitted by its national laws and regulations and applicable rules of international law.

3. A Contracting Party may also request any other Contracting Party, through the Center or directly, to take effective measures to rescue the victim ships and the victims of piracy or armed robbery against ships.

4. The Contracting Party which has made a direct request for cooperation pursuant to paragraphs 1, 2 and 3 of this Article shall promptly notify the Center of such request.

5. Any request by a Contracting Party for cooperation involving extradition or mutual legal assistance in criminal matters shall be made directly to any other Contracting Party.

**Article 11**

Cooperation by the Requested Contracting Party

1. A Contracting Party, which has received a request pursuant to this Article, shall make every effort to take effective and practical measures for implementing such request.

2. A Contracting Party, which has received a request pursuant to this Article, may seek additional information from the requesting Contracting Party for the implementation of such request.

3. A Contracting Party, which has taken measures referred to in paragraph 1 of this Article, shall promptly notify the Center of the relevant information on the measures taken.

**Part IV Cooperation**

Article 12

Extradition

A Contracting Party shall, subject to its national laws and regulations, endeavor to extradite pirates or persons who have committed armed robbery against ships, aid who are present in its territory, to the other Contracting Party which has jurisdiction over them, at the request of that Contracting Party.

Article 13

Mutual Legal Assistance

A Contracting Party shall, subject to its national laws and regulations,
endeavor to render mutual legal assistance in criminal matters, including the submission of evidence related to piracy and armed robbery against ships, at the request of another Contracting Party.

Article 14
Capacity Building

1. For the purpose of enhancing the capacity of the Contracting Parties to prevent and suppress piracy and armed robbery against ships, each Contracting Party shall endeavor to cooperate to the fullest possible extent with other Contracting Parties which request cooperation or assistance.

2. The Center shall endeavor to cooperate to the fullest possible extent in providing capacity building assistance.

3. Such capacity building cooperation may include technical assistance such as educational and training programs to share experiences and best practices.

Article 15
Cooperative Arrangements

Cooperative arrangements such as joint exercises or other forms of cooperation, as appropriate, may be agreed upon among the Contracting Parties concerned.

Article 16
Protection Measures for Ships

Each Contracting Party shall encourage ships, ship owners, or ship operators, where appropriate, to take protective measures against piracy and armed robbery against ships, taking into account the relevant international standards and practices, in particular, recommendations adopted by the International Maritime Organization.

Part V Final Provisions

Article 17 Settlement of Disputes

Disputes arising out of the interpretation or application of this Agreement, including those relating to liability for any loss or damage caused by the request made under paragraph 2 of Article 10 or any measure taken under paragraph 1 of Article 1, shall be settled amicably by the Contracting
Parties concerned through negotiations in accordance with applicable rules of international law.

Article 18
Signature and entry into force

1. This Agreement shall be open for signature at the depositary referred to the paragraph 2 below by the People’s Republic of Bangladesh, Brunei Darussalam, the Kingdom of Cambodia, the People’s Republic of China, the Republic of India, the Republic of Indonesia. Japan, the Republic of Korea, the Lao People’s Democratic Republic. Malaysia, the Union of Myanmar. the Republic of the Philippines, the Republic of Singapore, the Democratic Socialist Republic of Sri Lanka, the Kingdom of Thailand, the Socialist Republic of Viet Nam.

2. The Government of Singapore is the depositary of this Agreement.

3. This Agreement shall enter into force 90 days after the date on which the tenth instrument of notification by a State listed in paragraph 1, indicating the completion of its domestic requirements, is submitted to the depositary. Subsequently it shall enter into force in respect of any other State listed in paragraph 1 above 30 days after its deposit of an instrument of notification to the depositary.

4. The depositary shall notify all the States listed in paragraph 1 of the entry into force of this Agreement pursuant to paragraph 3 of this Article.

5. After this Agreement has entered into force, it shall be open for accession by any State not listed in paragraph 1. Any State desiring to accede to this Agreement may so notify the depositary, which shall promptly circulate the receipt of such notification to all other Contracting Parties. In the absence of a written objection by a Contracting Party within 90 days of the receipt of such notification by the depositary, that State may deposit an instrument of accession with the depositary, and become a party to this Agreement 60 days after such deposit of instrument of accession.

Article 19
Amendment

1. Any Contracting party may propose an amendment to this Agreement, any time after the Agreement enters into force. Such amendment shall be adopted with the consent of all contracting parties.
2. Any amendment shall enter into force 90 days after the acceptance by all Contracting Parties. The instruments of acceptance shall be deposited with the depositary, which shall promptly notify all other Contracting Parties of the deposit of such instruments.

**Article 20**

**Withdrawal**

1. Any Contracting Party may withdraw from this Agreement at any time after the date of its entry into force.
2. The withdrawal shall be notified by an instrument of withdrawal to the depositary.
3. The withdrawal shall take effect 180 days after the receipt of the instrument of withdrawal by the depositary.
4. The depositary shall promptly notify all other Contracting Parties of any withdrawal.

**Article 21**

**Authentic Text**

This Agreement shall be authentic in the English language.

**Article 22**

**Registration**

This Agreement shall be registered by the depositary pursuant to Article 102 the Charter of the United Nations.

In Witness whereof, the undersigned, being duly authorized there to be their respective Governments, have signed this agreement.

For the Lao People’s Democratic Republic: For Japan:

**Done Somvorachit**
Ambassador Extraordinary and Plenipotentiary

**Ichiro Aisawa**
Senior Vice-Minister for Foreign Affairs

For the Republic of Singapore: For the Kingdom of Cambodia:

**Raymond Lim**
Acting Minister for Foreign Affairs

**Kem Mongkol**
Ambassador Extraordinary and Plenipotentiary
For the Kingdom of Thailand:  
Dr. Kantathi Suphamongkhon  
Minister of Foreign Affairs

For the Republic of the Philippines:  
Belen F Anota  
Ambassador Extraordinary and Plenipotentiary

For Brunei Darussalam:  
Pengiran Dato Paduka Haji Yusof bin Pengiran Kula  
High Commissioner

For the Union of Myanmar:  
U Win Myint  
Ambassador Extraordinary and Plenipotentiary

For the Republic of Korea:  
Park Joon-Woo  
Ambassador Extraordinary and Plenipotentiary

For the Republic of India:  
Shri Alok Prasad  
High Commissioner

For the Democratic Socialist Republic of Sri Lanka:  
Shehan Ratnavala  
High Commissioner
093. Media Briefing by Official Spokesperson on the meeting of the SAARC Standing Committee.

New Delhi, April 17, 2006.

Last week,... Foreign Secretary had ... gone to Dhaka. This was for the Fifth Special Session of the Standing Committee. During the Thirteenth SAARC Summit in November 2005, it was felt that a comprehensive review and reform of all SAARC institutions and mechanisms including the Secretariat and the Regional Centres should be undertaken. The Fifth Special Session of the Standing Committee was held in Dhaka on April 11, 2006 to undertake a review of the SAARC processes in its entirety. The meeting also considered several other important issues including the modalities for admitting Afghanistan as the new member of SAARC; guidelines for Observers in SAARC; a Draft Vision Document that will be adopted at the Fourteenth SAARC Summit in New Delhi and the Terms of Reference for SAARC’s Observer status at the United Nations.

The meeting took substantive decisions that would facilitate focussing SAARC’s activities towards result-oriented and concrete actions, regional initiatives and projects. Some of the more important ones would be implemented during the Fourteenth SAARC Summit to be hosted by India in 2007. China and Japan will be invited as Observers to this Summit. The Standing Committee also considered the requests received from the Republic of Korea and the United States of America seeking Observer status with SAARC and recommended that the requests be approved. The modalities for Afghanistan’s participation as the new SAARC member were finalised. Afghanistan would be invited to attend the 27th Session of the Council of Ministers and preceding meetings as a Special Invitee with a view to familiarise themselves with the SAARC process before the Fourteenth Summit, when they will sign a Joint Declaration formalising their entry into SAARC. The Meeting also discussed the draft Vision Document for the third decade of SAARC. This draft would be subject to further review by appropriate SAARC bodies before the Fourteenth Summit.
094. Media Briefing by Official Spokesperson on developments related to SAARC, specifically SAFTA.

New Delhi, July 7, 2006.

Official Spokesman: Good afternoon. Let me bring you up to date on some recent developments related to SAARC, specifically speaking the SAFTA.

To give you some background to begin with, a framework agreement on the South Asian Free Trade Area (SAFTA) was signed during the 3rd Summit in Islamabad in 2004. And upon successful resolution of outstanding issues, SAFTA has come into effect retrospectively from Jan 01, 2006 and is to be operationalized through a phased trade liberalization programme which covers all tariff lines except those kept in the sensitive or negative list by each member country. In Nov 2005, at the 13th SAARC Summit in Dhaka, the leaders of the SAARC countries had reaffirmed their commitment to accelerate cooperation in economic and commercial fields. They had stressed the importance of timely entering into force of the SAFTA agreement on the scheduled date and stated that launching of SAFTA would mark an important milestone on the road to a South Asian Economic Union. They had further directed that the negotiations and outstanding issues on SAFTA be completed on time to facilitate the operationalisation of the agreement.

We have now seen the notification issued by the Government of Pakistan. This notification is SRO No. 695(1)2006 dated July 01, 2006 regarding tariff concessions under SAFTA for SAARC member countries. The notification states that goods can be imported into Pakistan under the agreed SAFTA tariff concessions "subject to import policy order notified by the Ministry of Commerce". This last qualification refers to the import policy order of July 21, 2005 which limits SAFTA tariff concessions for India only to items on the existing bilateral positive list. We regard this action as against the very essence of SAFTA. SAFTA operates on the basis of agreed

---

1. Indian High Commissioner in Islamabad Shivshankar Menon addressing the Islamabad Chambers of Commerce and Industry on August 3 said that by refusing to implement the SAFTA with India, Islamabad had denied Pakistan access to the huge Indian market, jeopardized the agreement for the other countries in the group and raised questions about its credibility on good-faith negotiations. He said: “Pakistan has chosen to turn her back on the Indian opportunity at her doorsteps.” Pakistan could have used the South Asian Free Trade Area agreement to access the Indian market and increased its exports.
sensitive lists. SAFTA has little operational meaning if member countries
do not honour their commitments in letter and in spirit. The credibility of the
participating member country and SAFTA itself will be seriously questioned
if attempts are made to introduce additional conditionalities that were neither
discussed nor agreed to when SAFTA was being negotiated. Any efforts
to subject SAFTA to such conditionalities would be a derogation of the
agreement. It would also contradict the commitment made by the leaders
at the 13th SAARC Summit. India has along argued that if South Asia has
to become a dynamic component of the larger process of regional
cooperation and globalization that is taking place in the world, it must first
bring about economic integration amongst SAARC member countries
otherwise SAARC runs the risk of being left far behind other regional
organisations.

On our part, India is fully committed to honour its commitments and
prepare to shoulder a major share of responsibility to promote intra-regional
and other forms of economic and technical cooperation. Some more
background on this will be made available to you.

but it had instead chosen to limit the application of the treaty to a positive list of 773
items. “This is a negation of SAFTA, jeopardizes its implementation and affects all the
contracting parties.” Pakistan’s refusal to provide an overland transit route for trade
between India and Afghanistan and Central Asia was another example of a decision by
Islamabad that made neither economic sense, “nor has it contributed to the resolution of
any political differences between India and Pakistan over the last 60 years.” It may be
recalled that earlier in the year on February 16 the Pakistani Commerce Minister Humayun
Akhtar Khan had said : “We will continue our bilateral trade through 773 items. Those
products which are not included in the positive list would not be allowed to be imported
under the SAFTA.” On February 15 the Pakistan Cabinet ratified the SAFTA. Pakistan’s
position had been that unless a solution of the Kashmir problem was found trade beyond
the ‘positive list’ was not possible. It may be noted that India has accorded the MFN
status to Pakistan for trade with India, without Pakistan reciprocating it. Again commerce
minister said that his country would not give MFN status to India until a move was made
in tandem on other bilateral issues particularly Kashmir.
Finally on November 3 Pakistan added another 302 items to the list of commodities that
can be imported from India taking the number to more than 1000, a move that could
significantly increase trade between the two countries. The Pakistani Commerce
Ministry on November 3 notified the additional items which included homeopathic
medicines, machinery, machinery parts, surgical equipment and diesel locomotives.

Foreign Secretary: We have just concluded the first day of the SAARC Standing Committee Meeting. We have completed most of our discussions but there are still a few issues, which we hope can be resolved. I will now give you a sense of some of the issues which were raised by India today:

(i) Operation of SAFTA: As you are aware, A framework Agreement on South Asia Free Trade Area (SAFTA) was signed during the 12th Summit in Islamabad in 2004. Upon successful resolution of outstanding issues, SAFTA has come into effect retrospectively from January 1, 2006. SAFTA has been operationalised w.e.f. July 1, 2006 through a phased Trade Liberalisation Programme (TLP), which covers all tariff lines except those kept in the Sensitive (Negative) List by each member country.

Government of Pakistan has issued Notification (SRO No. 695(1)/2006) on July 1, 2006, regarding tariff concessions extended under SAFTA to SAARC countries. The Notification states that goods can be imported into Pakistan under agreed SAFTA Tariff Concession “subject to import policy order notified by the Ministry of Commerce”. The last qualification refers to the import policy order of July 21, 2005 which limits SAFTA tariff concessions for India only on items on the existing bilateral Positive List. This is clearly a violation of Article 23 of the SAFTA Agreement which states very clearly and I quote “This Agreement shall not be signed with reservations, nor will reservations be admitted at the time of notification to the SAARC Secretariat of the completion of formalities”.

This matter does not concern India alone, even though India has been singled out. This is not merely a technical or bilateral issue. It is a negation of SAFTA and jeopardizes the implementation of the Agreement. It affects all contracting parties and questions the future of the Agreement.

The objective of SAFTA is to promote free trade among member countries on a regional basis. The agreement operates on the basis of agreed “sensitive lists”. Pakistan negotiated a regional agreement with member countries of SAARC for as long as 4 years, with complicated and difficult negotiations on the respective sensitive lists.
A lot of time and effort was invested in good faith while negotiating SAFTA. All that effort has now become infructuous, because Pakistan has no intention to honour an understanding solemnly agreed to by all member countries. The question being asked is: Why did SAARC member countries spend 4 years negotiating this Agreement and its annexes including the Sensitive List if earlier country specific import policy takes precedence over SAFTA commitments?

Pakistan’s action contradicts the public pronouncements made by its leadership, who have publicly stated that once SAFTA is operationalised, it would constitute an MFN plus trading regime. It also contradicts the commitments made by the Leaders of the 13th SAARC Summit when they had reaffirmed their commitment to accelerate cooperation in economic and commercial fields. They had stressed the timely entry into force of the SAFTA Agreement, stating that launching of SAFTA would mark an important milestone on the road to a South Asia Economic Union.

This matter needs to be resolved with utmost urgency; otherwise SAFTA may well remain an Agreement only in words, with no way to implement it. This concerns all member states not just India. SAFTA should be implemented in the spirit in which it was negotiated with all parties living up to the commitment they have solemnly undertaken. This has a bearing on the success of the SAARC process itself, affecting all other aspects of cooperation among the Member countries.

Basically, this is what we have put forward during the Standing Committee meeting under the item of Economic Cooperation in SAARC, because we believe that economic cooperation under SAARC cannot be advanced unless this matter is resolved. After having raised this issue in the SAARC Standing Committee, of course we are also going to raise this matter in the SAARC Ministerial Council meeting because we believe this is a policy matter and a matter which requires urgent consideration by the SAARC Council of Ministers.

(ii) **Terrorism:** The other issue that we also discussed was one of terrorism, which is again of great importance to all the SAARC countries. We have stressed the importance of enabling legislation being passed by SAARC countries in order to give effect to the convention on counter terrorism which SAARC has already adopted. I also drew attention to the fact that the need for cooperation amongst all the SAARC countries on this major challenge that we face is something which has been brought home to us most recently by the terrible bomb blasts which have taken place
both in Mumbai and in Srinagar, causing loss of lives of innocent people. We continue to believe that there is no cause which justifies the murder of innocent people. We believe that South Asian countries must stand together and fight this scourge and whatever cooperation is required amongst us in order to get rid of this scourge must be taken urgently.

(iii) **SAARC related issues:** There are a number of other issues that have been also taken up by our delegation. You would recall that during the 13th SAARC Summit, our Prime Minister had proposed that we should organize a car rally as a run up to the 14th summit, which would be held in India in 2007 and we have worked out a Concept Paper for this rally. This Concept Paper has been circulated to all member countries of SAARC and I am happy to say that the Standing Committee has approved the holding of this car rally. We have also decided to set up an organizing committee of representatives of SAARC countries who will then get down to assess the logistic details and how this is to be financed and what kind of arrangements need to be made, particularly in terms of media and the security arrangements which may be required along the routes. India has agreed to host the first meeting of the organizing committee in order to take up the proposal.

We have also made reference to some other important proposals which have been made by India. This has been in the context of the 13th SAARC Summit, when our Prime Minister suggested that we should set up a South Asia University, a common campus where students from all the SAARC countries could live and study together, a SAARC University which would have faculties drawn from best minds from member countries of SAARC and an institution, which we hope will become a Centre of Excellence, not only for our region, but also for the entire world.

We also have another very important project. We have drawn attention to the fact that South Asian countries occupy what can be described as a common cultural space. There are very strong cultural affinities amongst countries of SAARC and these affinities can be leveraged to create a greater sense of identity amongst the SAARC countries and to celebrate what is really a shared cultural legacy amongst us.

One of the proposals has been for setting up of a SAARC Museum of Textiles and Handicrafts. These are two areas where all South Asian countries have a very rich tradition, have demonstrated rich diversity and we believe that it would be very worthwhile for us to set up this kind of a museum which would provide a venue for craftsmen, for artisans from all
these SAARC countries to demonstrate the diversity of their products. It would also enable them to interact with each other in a creative manner.

The third proposal is for setting up of a tele-media network, which could link together some of the very important Centres of Excellence in the medical/health field in our region. India is prepared to share our experience in this regard and also to contribute to the setting up of infrastructure, which is required for making this possible. Perhaps some of you may be aware that we are already involved in a very major and ambitious project for connecting all the African countries in a Pan African network which would use both satellite as well as fibre-optics network for tele education and tele-medicine. This is something which has been very much welcomed by the African countries. We are also working currently on a similar project with four ASEAN countries. So, we have considerable experience in this regard and we hope to offer this to all member countries in SAARC also.

You are aware that India has also been chosen to host the SAARC Disaster Management Centre and we have agreed to draw up modalities for the actual operation of this center. This is a center which is particularly relevant, after some of the natural disasters that our region has faced in the recent past like the tsunami and the earthquake which affected various parts of India and Pakistan. This is an institution which is of urgent necessity in our region. So, we are very proud of the fact that we would have the chance to host this center and also to make it a Centre of Excellence.

(iv) Afghanistan: I would also like to welcome the participation of representatives from Afghanistan led by their Deputy Minister. As you are aware, the decision has already been taken at the 13th SAARC summit to admit Afghanistan as a new member of SAARC, pending the formalities which are required to be gone through for them to attend as a full-fledged member at the 14th SAARC Summit. It was decided that they would be permitted to attend other meetings like Council of Ministers meeting, Standing Committee meeting as well as of some other meetings of SAARC as a guest which would enable them to familiarize themselves with the manner in which SAARC functions. We believe that with the entry of Afghanistan into SAARC, we have now completed the identity of SAARC in this region. We have agreed that an inter-governmental body would be set up to help finalise all the different modalities and issues which are involved in operationalising Afghanistan’s membership at the 14th SAARC summit.

(v) India’s Chairmanship of SAARC: As you know, it is India’s turn to chair SAARC, after completion of the current chairmanship of
Bangladesh. We are very much looking forward to take up this challenging role. Bangladesh has done an excellent job in chairing SAARC. During Bangladesh’s Chairmanship, a number of major initiatives have been undertaken and it would be our privilege to take these initiatives forward and to add further substance to the relationship.

One of the areas which we believe is of great importance is inter-connectivity amongst SAARC countries. Again, if I could recall the speech made by our Prime Minister at the 13th SAARC summit, he drew attention to the fact that South Asia is really a compact economic unit. It is also a shared cultural space, it has a long history of trade amongst the different regions in South Asia and until 1947, in fact all parts of the subcontinent were well connected with highways and railway networks. Many of these inter-connections amongst South Asian countries have been interrupted in the past 50 years or so. If we really wish to realize the vision of South Asia economic unity and if we are to realize the promise of SAFTA, then it is very important that the lack of connectivity amongst the South Asian countries be addressed on an urgent basis. Our Prime Minister had stated during the 13th SAARC Summit that, as the largest country in the region, India is ready to provide transit on a reciprocal basis to all our neighbouring countries.

The centre of global economic activity is shifting to Asia. If India and China can continue to grow at 8-10% per annum, for the next few years, we can become an engine house for the world. The starting point is to be connected within our region, before we can start connecting with other regions. We need to restore highways, railways and telecom links using modern technology, as well as shipping and air-links. India has made progress in air connectivity with many countries. For instance, India and Sri Lanka now have over 100 flights per week, which is a substantial increase from the last few years. India is ready to play its part in establishing such links. We welcome the establishment of the SAARC Development Fund and India has offered US$ 100 million for Poverty Alleviation. The Fund can also be used for infrastructure development.

To conclude, India remains committed to the goal of a South Asian Economic Community and we hope to play a positive role during our Chairmanship.
Good evening to all of you. As you are aware, we have just concluded the 27th Session of the SAARC Council of Ministers and this meeting discussed some very important issues which have a long-term impact on the future of SAARC as a regional organization. The Council reviewed the progress of implementation of some major decisions which were taken at the 13th SAARC Summit, including some of the proposals which were made by Prime Minister Dr. Manmohan Singh at that Summit.

First of all, I would like to announce here that the dates for the 14th Summit which will be held in India have now been finalized. The Summit will be held in New Delhi on April 3 & 4, 2007. This will be preceded by the meetings of the Council of Ministers and, before that, the Standing Committee meeting and the Programming Committee meeting.

As a curtain raiser to the 14th SAARC Summit, the SAARC Car Rally which I had mentioned earlier in my press briefing, this has now been accepted by the SAARC Member countries. We have decided to set up an Organising Committee of representatives from all SAARC Member countries and India has offered to host the first meeting of this Organizing Committee. This will go into the details concerning the rally, viz. the route which would be taken, the financing of the rally, the arrangements for the media for the rally. The idea is that it should cover all our SAARC member countries.

Another important decision from our point of view is that the modalities for the SAARC Disaster Management Centre which is to be located in India, have been approved and the Centre will now hold the first Governing Board meeting and, thereafter, it will be formally established.

Then, if you recall there were three important proposals made by India at the 13th SAARC Summit - (i) setting up of a SAARC Museum for Textiles and Handicrafts, (ii) proposal for establishing a Telemedicine Network linking all the SAARC member countries, (iii) setting up of a South Asia University to which we attach great importance. We are very happy to report that the Council of Ministers which met today endorsed these proposals and welcomed India’s initiative in this regard. We have agreed that the details concerning these projects will now be taken up at the next meeting of the Programming Committee. The concept papers have already
been circulated to all the member countries. Some comments were made on these proposals by the Ministers today. For example, it was agreed that the idea of a South Asia University is a particularly good one and that we should make it into a Centre of Excellence for our region. It would be an institution which would bring together not only young people from all over the region, but it would also enable some of the brightest minds of South Asia in academics in various fields, whether it is Information Technology or Bio Technology, or some of the science subjects, humanities to come together. This would be a very good venue for the brightest minds of South Asia to interact with one another. So, this was something which was uniformly welcomed by all the Ministers who were present today and we are very much looking forward to taking this idea forward.

I would also like to mention here with regard to South Asia University that you are perhaps aware that Mr. Gohar Rizvi, who is an academic and well known scholar in Bangladesh, has been requested by India to prepare a concept paper for the South Asia University. It is based on his inputs that we have put together the first preliminary paper which has been circulated to all SAARC member countries. In the light of the comments which have been made, our Consultant Mr. Rizvi will take this particular concept paper into some greater detail.

The Council also approved the Report of the First Finance Ministers meeting and again, as I had indicated earlier, the very important decision of the SAARC Finance Ministers was to agree upon the modalities for the SAARC Development Fund. As you know, at the 13TH SAARC summit it was decided that all the different financing mechanisms which are there under SAARC should be integrated together into a common SAARC Development Fund. So this Fund has now been set up and has been approved by the Council of Ministers. As you are aware, India had already announced contribution of US $ 100 million, especially towards projects involving poverty alleviation projects. Now what would happen is that under the social window of the SAARC Development Fund, this money will be available for utilization. We feel that along with SAFTA, which has become operational, the SAARC Development Fund becomes the second pillar of economic cooperation among the SAARC countries. This is something which we welcome very much and we hope that we can move into a phase of more projects being implemented.

One of the things that we are always concerned about is that in the 20 years of existence of SAARC, while we have come up with very
interesting ideas and had many sessions with various kinds of initiatives and consultations on different issues, these have not really been translated into even one single collaborative project. This is the great shortcoming of SAARC that we have not moved away so far from a declaratory phase into an implementation phase. It would be correct to say that SAFTA can be described as the first project for collaboration amongst the SAARC countries. The establishment of SDF now creates another platform which will make possible for SAARC countries to really get down into implementing collaborative works. I have mentioned to you the great importance we attach to connectivity amongst the SAARC countries and some of the projects for connectivity include certain corridors, highway corridors or railway corridors or the upgrading of some of our ports or airports. These are some of the projects which would be very conveniently covered under the SAARC Development Fund.

I had also mentioned that during the Council of Ministers Meeting, there was a formal welcome to Afghanistan as our new Member. We are very happy that they were able to attend the Council of Ministers Meeting as a guest. It was decided that an intergovernmental group will be set up to go over and finalize all the various formalities for the formal inclusion of Afghanistan as a Member at the 14th Summit. The Draft Declaration which will have to be signed by Afghanistan committing itself to the SAARC Charter as well as various other Instruments of SAARC, has also been finalized. At the 13th Summit, we had agreed to requests from China and Japan that we would accept them as Observers. Then, later on when we had the meeting of the Standing Committee, we had received requests from the Republic of Korea and from United States of America. The Standing Committee had agreed that we would approve the requests of these two countries to become the Observers to SAARC. Now, just before the meeting of this Council of Ministers, there has been an additional request from the European Union. During the meeting of the Council of Ministers, it was unanimously agreed that this request be approved. It was also agreed that the Observers would be invited to be present at the next Summit, i.e 14th SAARC Summit, which would be held in India.

This is another important decision. I had also mentioned that we would be raising at the Council of Ministers Meeting the issue of SAFTA, the coming into force of SAFTA. We did raise this matter and several delegations who were present in the meeting also drew attention to the fact that nothing should be done which would adversely impact on the operationalisation of SAFTA and that this matter should be resolved as
soon as possible. I think it was clear from the statements which were made by other Ministers that they did consider this to be a matter which involved all the SAARC Member States and that this was not something which was merely a bilateral matter or technical issue between India and Pakistan. Now, as a result of our discussions, the Council of Ministers decided to request the SAFTA Ministerial Council to convene and to discuss this and resolve this issue and that the results of their deliberation should be made available to the Council of Ministers at its next meeting. We are very hopeful and optimistic that this matter will be taken up without further delay by the SAFTA Ministerial Council and that when we have the 14th SAARC Summit in Delhi, that this matter has been put behind us. That is our hope.

India is satisfied with the results of the Council of Ministers Meeting. Several of the issues which were of importance to India were discussed in considerable detail and we are also very happy that the report of the Standing Committee, particularly the sections relating, for example, relating to terrorism were specifically drawn attention to by delegations as something which is very important for the future of SAARC. It was agreed that the commitment to eradicating the scourge of terrorism from our region, the need for us all to follow up on our commitments to the various conventions which have been signed on Terrorism as well as on Narcotics Trafficking and that it was critical that all States should implement the provisions of these Instruments and whatever enabling legislation needs to be passed in our respective countries in order to give effect to these conventions. So, this has been a very successful and substantive Council of Ministers Meeting. We have expressed our very deep appreciation to Bangladesh Foreign Minister Morshed Khan for the very efficient and business-like manner in which he conducted the proceedings of the Council of Ministers and enabled us to come to a very successful conclusion. All the delegations were delighted that we have had the opportunity to visit the beautiful city of Dhaka again and to enjoy the warm hospitality of our friendly host.

So I will stop here and if there are any questions I would be of course very happy to answer.

**Question (Badiul Hassan, News Today)**: Regarding SAFTA, an issue has developed since the liberalisation process of India has been nullified by maintenance of tariff and non-tariff barriers. This is not only the complaint of Pakistan, but it is the complaint of Bangladesh also. The Standing Committee and Council of Ministers were to discuss this issue.

**Answer**: I would first of all like to request you to please focus attention
on what has been agreed upon in SAFTA. Nobody has been compelled to agree to anything which is there in SAFTA. This is something which has been agreed upon by all the Member States collectively. If there were issues relating to para-tariffs or if there are issues relating to non-tariff barriers, all these have been taken into account during the negotiations of SAFTA. This is not to say that we cannot improve our trade relations. I think as far as Bangladesh is concerned, perhaps, the chief beneficiary of SAFTA is Bangladesh, because India has free trade agreements with Nepal and Sri Lanka and it has a customs union with Bhutan. So the major beneficiary particularly in the least developed category is Bangladesh. The chief beneficiary in terms of the instrument of revenue loss compensation is Bangladesh and India is the country which in fact champions the cause of Bangladesh during the SAFTA negotiations. It was India which led all Member States to agree to a higher form of compensation.

With regard to many of the concessions which have been given to Bangladesh, these are all non-reciprocal in nature. Again, I would like to make the point that this is not to say that we cannot improve the trade relations, particularly the negotiations that we are already having with Bangladesh. With regard to non-tariff barriers, many of these elements will be taken into account. There is an Early Harvest already in place with the export of cement and ceramics from Bangladesh. So I don’t think it is fair to really point fingers at India and say that India has not been doing enough with respect to these kind of barriers. All of us maintain certain barriers. This is the reason why there are sensitive lists in SAFTA. The sensitive lists have been negotiated amongst the Member Countries. Our sensitive list is the shortest and it should be because we are the largest country in the region. But I think once we have decided that we will operate this Free Trade Agreement in the region on the basis of sensitive list and not on the basis of so called ‘positive list’, then it stands to reason that if one country is imposing the same mechanism of positive list, this is a negation of SAFTA. So I don’t think there is any reason to put the complaint that India has made on the same level as complaints from Pakistan or from Bangladesh with regard to so called non-tariff barriers or para tariff barriers.

**Question:** My question is about SDF - how this financing process would be implemented and whether only the contribution of India of $ 100 million will be considered or other partners would also contribute?

**Answer:** Well, I was referring to the US$ 100 million contribution made by India but when it was decided to set up the SDF, I think the fund
will start of with a contribution from all Member Countries totaling up to US$ 300 million. Further contributions will be on the basis of the assessed contribution of Member Countries. But the additional element is that the Board which will be governing the SDF would also have the possibility of raising funds from the international market or from the international financial agencies for any specific infrastructure projects that they may decide upon. Since this would be in fact something which would be done on the basis of all the Member Countries of SAARC, it would enable us to leverage our strength in terms of raising more finance for these types of projects. So, actually this can be a very useful mechanism for financing some very important infrastructure projects.

**Question (Farooq, Pakistan Times):** Sir, you have issued a press noting in press conference which is Pakistan specific and saying that Pakistan is denying implementation of SAFTA. Then Pakistan took a stand to take the issue to expert’s level and finally issued a statement. Whose stand do you think has been vindicated?

**Answer:** I would hesitate to term it as a win or loss kind of situation. As I said, it is not India or Pakistan. What we are concerned about is that a certain step taken by Pakistan may jeopardize the future of SAFTA itself. And therefore it is not a matter of whether has India won out or if Pakistan has won out. The issue is whether or not the SAARC Ministerial Council has considered this matter and seen it fit to accept that this is something which will impact on the agreement itself and therefore must be dealt with expeditiously. The fact that the Ministerial Council did spend time discussing this matter and where there were interventions made not only by India and Pakistan, but by other delegations also who were present. The sense of the Council of Ministers was that irrespective of whatever points may have been raised, there is no doubt that if this matter is not resolved satisfactorily, it is something which will impact on SAFTA as an agreement among the SAARC countries.

So it is a matter that whether we like it or not, it does impact on the future of SAFTA and it does impact on the future of the SAARC process. So from that point of view, all the delegations, including the delegation of Pakistan, have welcomed that this matter will be now considered by the SAFTA Ministerial Council and also that the results of the meeting of the Ministerial Council on this particular issue will be available to the Council of Ministers at its next meeting. So, it is a recognition of the fact that this is an important policy issue and that it cannot be delegated to a simple
technical procedure under SAFTA. So, we think that our view that this is an important policy issue that it impacts on all SAARC Member Countries has been accepted. We believe that this has been considered and recognized by the Council of Ministers Meeting.

**Question:** When will be meeting of experts take place?

**Answer:** Well, now that a decision has been taken by Council of Ministers that this matter should be taken up by SAFTA Ministerial Council, what we intend to do is now on the basis of this decision we will be suggesting some dates to the Member Countries for an early meeting of the SAFTA Ministerial Council.

**Question:** Will SAARC again turn into a battlefield between India and Pakistan due to SAFTA?

**Answer:** Well, I don’t think that from the point of view of India, there was any reason to convert the SAARC meetings or SAARC into a feat for India-Pakistan competition because we don’t think that this is India- Pakistan competition. I think both India and Pakistan recognize that we have a shared destiny, that the future of SAARC as a forum for regional economic cooperation can only go ahead if there is cooperation amongst all the countries of the region, not merely between India and Pakistan. So, right from the beginning, our effort was to precisely project that this is not a matter between India and Pakistan, but this is a matter which concerns all the SAARC Member Countries and that is the spirit in which this matter was discussed during the Council of Ministers meeting.

**Question(Amitabh Reki, NDTV):** Sir, moving to bilateral relations between India and Pakistan, the talks between Foreign Secretaries were postponed. Pakistan has said that the ball is in India’s court and that it is up to India to propose the dates for next meeting?

**Answer:** Well, we can go into a long argument about the ball being in who’s court! We can keep throwing the ball back and forth between the two sides! What is important is that we had an opportunity for the two Foreign Secretaries to discuss the issue with certain degree of candour and frankness the concerns that we have and I have mentioned to you what our concerns are. We have also stated quite openly that we expect that on the issue of terrorism, we should be able to see some evidence of Pakistan fulfilling the very solemn commitments that have been made at the highest level. Concerning terrorists, we have agreed that we will remain
in touch and there is also a common understanding that the peace process between the two countries is very important and that we should try and take this process forward. This is what the leadership of the two countries wish, this is what the people of Pakistan and people of India wish. So, it will be our endeavour to make certain through whatever appropriate actions which are required that this peace process does not get affected and it is in this context that the two Foreign Secretaries have agreed to remain in touch.

**Question (Amitabh Reki, NDTV):** We say we want evidence of Pakistan acting against terrorism, while they say they want evidence of linkages with terrorism. What is your reaction to it?

**Answer:** Well, I don’t think I would describe the situation as stalemate as there is ongoing dialogue between our two countries. With regard to evidence, well, our view has again been expressed rather clearly that we have provided considerable amount of evidence in the past, most recently during the Home Secretary level talks. I have pointed out myself to the fact that we have, for example, the leader of the Jamaat-u-Dawa which is a reincarnation of the Lashker-e-Toiba, as everybody knows. We have seen him going around freely and JuD continues to profess that it will carry on Jehad with regard to India. We also have the Hizbul Mujahideen chief who moves around quite freely within Pakistan. Certainly, no efforts seem to have been made to apprehend him. So there are certain actions which could be taken very easily in order to convince the people of India that when Pakistan says that it is very serious about curbing terrorism, that it is going to take some action in order to do that. That is our position.

**Question:** Why is India hindering the access of Bangladesh products to Nepal via Banglabandha Landport?

**Answer:** Well, I am not quite certain why you say that there is a hindrance, there is a very open corridor and the question is whether or not there is enough traffic. If you are going to have, may be 4 or 5 trucks which are going to cross over everyday, then it is unreasonable to expect that India should have a full scale 24 hour customs post or immigration post at that point for those 4-5 trucks. So what usually happens is that there is usually a build-up of may be 20 trucks or 25 trucks at the border when the immigration and customs officials are called in, in order to clear the traffic. Once the volume of traffic increases, the infrastructure can certainly be improved, through mutual agreement.
097. Talk by Foreign Secretary Shyam Saran at the Indian Council of World Affairs: “Does India have a Neighbourhood Policy?”

New Delhi, September 9, 2006.

1. I had spoken on India’s policy towards neighbours in February 2005 at the India International Centre. Most of the points I had made then remain valid.

2. Our effort has been to construct an overarching vision for South Asia, so that we do not deal with neighbours in an ad-hoc and reactive manner, but formulate policies that fit into and promote this larger vision.

3. A vision of South Asia as an integrated and single entity is not new. Former Prime Minister Vajpayee had spoken about our aim to establish a South Asian Economic Union on the basis of a South Asian Free Trade Area (SAFTA). At the Dhaka Summit in November, 2005, Prime Minister Dr. Manmohan Singh elaborated further on this vision. He said that although South Asia is divided by political boundaries, the region forms a single geographical and economic unit. It occupies a shared cultural space and a shared cultural legacy. He said that we could not erase political boundaries or redraw them, we could certainly work together to make them progressively irrelevant. There should be a free flow of goods, peoples and idea across our borders in the same manner as in the European Union today. Over a period of time, the sense of division among our people would be erased.

4. For this vision to be realized, Prime Minister emphasized the overriding importance of connectivity among countries of South Asia. We must restore cross-border transport linkages through highways, railways, air and sea links as well as electronic communications. We are today not even as connected as we were in the sub-continent before 1947. The vision of an integrated South Asia cannot be realized without such connectivity.

5. India must start looking at national boundaries not as impenetrable walls which somehow protect us from the outside world, but as “connectors”, bringing India closer to its neighbours. This needs a mindset change.
6. Another mindset change, linked to the one mentioned above is to stop looking at our border areas as being on the periphery or serving as “buffer zones” preventing ingress into the heartland. We must rid ourselves of this “outpost” mentality and begin to accept our border states and regions as being as much a part of national territory as the heartland. The idea that such areas must be left largely underdeveloped and remote, as is reflected in the whole outdated system of “inner line permits”, must be jettisoned.

7. If borders are “connectors”, then border regions become extremely important as the points of mutual interaction with neighbours. They become the bridges linking countries and could be leveraged for development of border regions and their economic well-being. A new vision of South Asia demands a new mindset.

8. It is in this context that PM’s address to the Dhaka Summit elaborated a different kind of approach to our neighbourhood. When PM said, in relation to Pakistan, “I do not have the mandate to change borders; but I do have the mandate to make these borders irrelevant over a period of time,” he was enunciating a principle applicable to all our neighbours. Further, in order to implement this you must have as good an infrastructure as possible to enable easy cross-border movement. We may set up a SAFTA, but unless we have what I would call “transmission belts” across borders to permit the uninterrupted flow of goods, peoples and ideas, SAFTA would yield little practical benefit.

9. Over the past two years, a major effort has been made to try and bring about a high level of connectivity among South Asian countries. These are a significant component of our neighbourhood policy.

10. Another significant part of this policy is based on the recognition of the crucial role of culture and of people-to-people contact. Culture can be a very powerful part of diplomacy. There are very strong cultural affinities among the people of the sub-continent and by giving full play to these affinities we can reinforce the sense of togetherness, a sense of shared identity. We have a plan to set up cultural centres in each and every one of our neighbouring countries. The new Embassy projects in Kathmandu and Dhaka have incorporated such centres. We are also not insisting on mechanical reciprocity in promoting cultural exchanges, but adopting a liberal and proactive policy of funding exchange of visits of scholars, academics, contacts and others.
11. Politically, our neighbourhood policy is now based on the recognition that what can best secure India’s interests in the region would be building a web of “dense interdependencies” with our neighbours. We must give our neighbours a stake in our own economic prosperity. This would impart a certain stability in our relations. We want a neighbourhood policy which is capable of adjusting, capable of shaping events. There will be moments in history when it may be difficult for us to influence events in our neighbourhood. We should assess when a neighbour is in the midst of a transformational process and take steps to make ourselves relevant to that change. There will be other moments in history where we could play a more definitive and active role to orient change in a constructive direction. Making the right judgement and adopting the policies appropriate to the nature of change, is the challenge to our diplomacy.

12. For example, there is momentous change taking place in Nepal. We do not quite know how this change will culminate but, in retrospect, by aligning ourselves with democratic forces in Nepal, by supporting the transformation in progress, we have done rather well.

13. A very major transformation is taking place in another very close neighbour – Bhutan. His Majesty, the King, has decided to introduce over the next couple of years, what would essentially be a constitutional monarchy. Here, as in some other countries, we will soon be dealing with much more diffused political structures rather than one single powerful leader, or an established elite. We must keep ahead of these changes rather than always playing “catch up”. We must identify and begin to deal with emerging leaders and institutions.

14. The same is true of Pakistan. We are dealing with President Musharraf because he happens to be the current leader of Pakistan. But Pakistan is also undergoing a transformation. We need to reach out beyond the Government, to the people in Pakistan, to other political forces that are emerging on the horizon. The policy of promoting people-to-people contacts assumes significance in this regard.

15. We can claim credit that our policy has been quite successful. Within just two years, traffic across our border with Pakistan has reached over 200,000, which is an incredible volume given the history of India-Pakistan relations. The train service between Khokrapar and
Munnabao, connecting Sind and Rajasthan, was carrying 700 passengers every week. Now it is 400 because Pakistan has restricted the number of passenger bogies.

16. We have a sense today that change is coming about in India-Pakistan relations because it is more and more people-driven and we need to reinforce that. There can be no barriers from our side. Our motto should be that we are prepared to go as far as the comfort level of our neighbours would allow us to go.

17. I will now give you a sense of what we have been able to achieve in terms of promoting connectivity in our region:

**Pakistan** : Two years ago, we inaugurated the Srinagar-Muzaffarabad bus service across the LOC. We have followed through in this landmark event, by inaugurating, recently, the Poonch-Rawalkot bus service. We have proposed a further bus service between Kargil and Skardu and Jammu and Sialkot. But Pakistan has not yet agreed. With Punjab, we have the Amritsar-Lahore bus service, the Amritsar-Nankana Sahib bus service and another is proposed to Kartarpur Sahib.

We have a major plan for the upgradation of border checkpoints and their backward linkages. Thus an Integrated Checkpoint (ICP) is planned at Wagah, which will house customs, immigration and warehousing, health facilities, shopping complex and parking. The road leading from Amritsar to Wagah is also going to be upgraded into a 4-lane highway.

**Nepal** : A number of Integrated Checkpoints are being planned on the India-Nepal border, as well upgradation of highways and extension of train links into Nepal. We have plans to develop Integrated Checkposts at (i) Jogbani (Bihar) – Biratnagar; (ii) Raxaul (Bihar) – Birgunj; (iii) Sunauli (U.P.) – Bhairawa; and (iv) Nepalganj Road (U.P.)– Nepalganj. The road linkages to these checkpoints from the Indian side will also be upgraded. The Government is also working on development of a ‘Garland Road’ along the border for better patrolling, surveillance and border management.

As regards rail links, we are setting up new links or upgrading existing links between important border towns of India and Nepal. These include (i) Katihar-Jogbani (Bihar) - Biratnagar, (ii) Gonda (U.P.) - Nepalganj, (iii) Nautanwa (U.P.) - Bhairawa, (iv) New Jalpaiguri (W.B.) -Kakarbhitta, and (v) Jaynagar (Bihar) - Bardibas.

In addition, we are working to develop link roads to East-West
highway in the Terai region of Nepal; as well as to implement pipeline between IOC and Nepal Oil Corporation for channelling of oil supplies between Raxaul (Bihar) and Amlekhgunj.

**Bhutan:** While we have invested in development of road infrastructure in Bhutan, there has not been commensurate investment on our side of the border. We are, therefore, planning to upgrade several approach roads to Bhutan including (i) Rangia-Tamalpur (Assam) - Jhonkar, (ii) Pathsala (Assam) - Nangalam, (iii) Santabari (Assam) - Gelephu, and (iv) Baribesa (W.B.) - Kalikhola. In addition, we are working on establishing rail links between border towns in India and Bhutan, including between (i) Hasimara (W.B.) - Phuentsholing, (ii) Darranga (Assam) - Samdrup Jhonkar, (iii) Kokrajhar (Assam) - Gelephu, (iv) Banarhat (W.B.) - Samte, and (v) Pathsala (Assam) - Nangalam. There are also proposals to establish Integrated Checkposts at Jaigaon (W.B.) and a dry port at Phuentsholing.

**Bangladesh:** We share a long land border of more than 400km, yet there are at present only few operational road links between the two countries. These include Kolkata-Petrapole and Siliguri-Phulbari road link in West Bengal; Agartala-Akhaura road link in Tripura and Shillong-Sylhet road link in Meghalaya. Of these the most important road link is Kolkata-Petrapole highway, which carries more than 80% of the trade. The infrastructural facilities on our side of the highway, however, are woefully inadequate, both at the checkpoint and the highway leading to it. This only hampers development of trade and economic linkages. We have therefore decided to expedite upgradation of Kolkata-Petrapole highway including by building bypass and over-bridges. In addition, there is also a proposal to establish Integrated Checkposts at Hilli (West Bengal), Chandrabandha (West Bengal), Akhaura (Tripura), Dawki (Meghalaya), Sutarkhandi (Meghalaya) and Kawarpuchiah (Mizoram). We are also at the same time working to complete the border fencing and construction of border roads for effective border management.

**Myanmar:** Similarly, with Myanmar, we are developing a network of linkages. These include cross-border developmental projects, such as (i) Upgradation of Tamu (Manipur) - Kalewa-Kalemyo, Rhi-Tiddim and Rhi-Falam roads (Mizoram sector); (ii) Upgradation of Jiribam (Manipur) – Imphal - Moreh road and integration with proposed Trilateral Highway; (iii) The Kaladan Multi Modal Transport Project, linking Mizoram with Arakan province of Myanmar and providing an alternative access to out North-East through the historic port of Sittwe (Akyab) bypassing Bangladesh. It
incorporates a highway, river transport and a gas pipeline; and (iv) Jiribam-Imphal rail link, which may be extended to Mandalay as part of Delhi-Hanoi rail link.

**China**: The border trade point at Nathu La in Sikkim has just been inaugurated and the backward linkages on the Indian side are being upgraded. Here too, we intend to set up an Integrated Checkpoint. We have suggested another border trade point at Bumla in the eastern sector for which a response is awaited. We have approached Nepal for transit to Tibet. In general, there are plans to upgrade the entire road network in the North East including two inter-basin roads in Arunachal, 7 roads leading up to the LAC and reviewing the Inner Line Permit system so that tourism could be promoted.

**Question & Answer Session (Edited)**

**Speaker (Shri Dalip Mehta)**: In the spirit of what you have said, there are two treaties that presently exist, the 1950 treaty with Nepal and 1949 treaty with Bhutan. Their clauses are really quite irrelevant; they are obsolete, and anachronistic. Given the kind of spirit that you have spoken of with respect to our neighbours, don’t you think we should take the initiative in either revising them, amending them or even thinking about signing new treaties with them, taking into consideration present day realities.

**FS**: Well, I would say that whether it is the 1950 treaty with Nepal or the 1949 treaty with Bhutan, they served a very good purpose during a certain phase in our relationship. I mean, they provided a tremendous amount of support to these countries during a period when they were quite vulnerable. So, I don’t think we should rubbish the role played by these treaties. But, India has been quite open to a possible revision of these treaties, or, a possible updating of these treaties, into something which is more in keeping with the current state of our relations, and in line with how we see our relations developing in the future. I do not think that this is a barrier.

Let me draw your attention to the fact that in the year 2000, the Prime Minister of Nepal, Mr. G. P. Koirala, did raise this issue with India about the possible revision of the 1950 treaty and we responded very positively to that and said we would be more than ready to look at the treaty afresh. It was even decided - in 2002 if I am not mistaken - that the Foreign Secretaries of the two countries will sit down together and begin the process of review. One round of talks was held to initiate the process
but since then there has been a lot of turmoil in Nepal. We have not followed up on that. I do not think from the Indian side there is any problem in looking at revision.

With regard to Bhutan, yes, there are elements in the 1949 treaty, which are obviously out of date, precisely because of the kind of changes that you referred to, the constitutional changes which are taking place in Bhutan and if there is the need to revise the treaty or look at a more appropriate kind of a treaty text in the contemporary situation, we would have no difficulty with that. In fact, I may mention that this revision of the Bhutan treaty also has been raised in the past. It is not a new issue, it has been raised in the past, and I can only say that there is openness about this in India. There is no problem.

**Speaker:** You just said that we have to leave certain things in the neighbouring countries to themselves but here we are suffering because of our own thinking, is that so?

**FS:** Especially when you’re dealing with your neighbours you have to accept the situation as a given. You need to take into account the domestic dimensions of your relationship with any of the neighbouring countries. For example, when you are dealing with Sri Lanka, there is no doubt that you have to take into account the Tamil Nadu dimension of your relationship with Sri Lanka. Now you cannot always be very successful in balancing these interests, because there are sometimes forces which are beyond purely foreign policy control. What you can try and do is that you have a policy, which is very broad-based. You have a policy, which puts in place a multiple series of interests which are binding the countries together. So, even if there are political changes, there is a certain stability which is given to the relationship, because there are those kind of very strong interdependencies, whether they are on the economic side, whether it is in terms of the sharing of river waters, whether it is in terms of our energy interdependence.

Take for example Bhutan. You have developed a very strong energy relationship with that country and, in the near future, you have some other major projects which are coming up like Tala, for example. It would mean that on Indian side this will be a huge contribution to the energy sector, but it will also present a major and significant contribution to the welfare and to the wealth of Bhutan. So, even if there are political changes which may be taking place in that country, which, of course, you should always be
responsive to, the fact is that the stand of interdependence is to provide a certain stability to the relationship despite political changes, because the logic of the interdependence will not permit the political relationship to swing from one side to another.

So, in the long-term that is the kind of relationship we should look at, and, certainly with regard to neighbours, it cannot just be a relationship between governments. There are strong cultural linkages as I mentioned, there are strong people-to-people linkages. I just gave you one example of what happens on the India Nepal border. Now, partly our shortcoming has been that in our state-to-state relations with our neighbouring countries we have not also leveraged much of these assets that we have available to us.

So, I am not saying that we have been extremely successful with the policies but what I am trying to give you is a sense that, number one, we must know the limits of how far we can go. It is not like sending in the marines and taking care of a situation arising in our neighbourhood. We can not do that. There are certain very, very real constraints; as I said, there are moments in history when it is better to step aside and let whatever transformation that is taking place, take place, and not try to interfere with it nor try to interpose yourself in that transformation that is taking place. These require considered judgments. Sometimes you make good judgments; sometimes maybe you make the wrong judgments. But, I think, generally speaking, over the last few years we have not done too badly in managing our relationships, particularly in terms of making the kind of changes we need to do on our side.

As I said, you need to have a change in the manner in which you look at your neighbourhood. If you all the time consider yourself to be under siege from your neighbours, and you develop that kind of a defensive mentality, then you can not follow a successful neighbourhood policy. So you have to get away from that sense. You can not build walls between yourself and your neighbours. But if you have the framework of this vision of South Asia, as I have mentioned, and we recreate a subcontinent where there is a free flow of goods, of people, of ideas, and of trade, it is going to be a win-win situation for all the countries. We very sincerely believe that.

Now it is a question of how to translate that vision into practice. That is why I gave you a sense, modest maybe of an effort to try and bring about that connectivity on the ground. Merely having a vision is not good enough; you must be able to translate it on the ground, and I would submit
that one of the great successes that we have had in the past two years is to get a sense in the government that they must really pay a lot more attention to connectivity, change our mind sets with regard to our periphery, and really get down to business. I want to give you a sense that we have got down to business in that respect.

**Speaker:** The rail, road connections with most of our neighbours.... It has taken us more than 50 years to think about these. It is a very good step. Now it is materialising and it is taking shape, but over the last 50 years most of our neighbours have built up linkages with outside powers who have been using these linkages to create problems, and I think it is the right step, the connectivity which you have talked about, but the other issue which you mentioned was sharing with our neighbours, since most of them are poorer than we are, but the issue is sharing of technology, whether it is in small-scale industry we are providing them, generating employment etc., and it is good to hear that we have succeeded in getting gas from Myanmar. My question is, we have not been successful with Bangladesh in getting gas, maybe due to political problems and other issues. Is the MEA thinking in terms of special economic zones on the border regions, either in the northeast or in West Bengal? We have built up successfully in Oman; now we’re going to Egypt and other countries. The demand for fertilisers is growing and especially the air lifting of these in north-east. Is the ministry considering special economic zones where these factories are located, or other factories which could generate employment also and prevent other issues. The other point I have is, sometime back we had built up a road link with Afghanistan. Is there any new initiative to revive that to our interest, which I don’t have to underline.

**FS:** Bangladesh gas, well I know. Whether we have access to Bangladesh gas is dependent upon Bangladesh’s willingness to supply that gas. We can not force Bangladesh to supply gas. We offered various alternatives - one was that we build a gas pipeline from Myanmar through Bangladesh into India, which would provide some transit income to Bangladesh, it would provide a infrastructure which could be utilised for Bangladesh also to put its gas into the pipeline, if it so wished, in the future. But Bangladesh eventually did not agree to that and linked that up with several other conditions which were obviously not possible for us to agree to. Therefore, even though the direct pipeline between Myanmar and India will be somewhat more expensive, we think that it is a better alternative since our need for gas and energy resources are huge, so we believe that this investment is worth making.
Again, I come back to the point that barriers are not from our side. We have told our neighbours, we are prepared to go as far as you are prepared to go, what your comfort levels are, because we are a very large country, we have large resources, our room for maneuvers is more, so, really, it is a question of how much comfort level our neighbours have, and, hopefully, as our linkages with our neighbourhood increase, the sense of shared prosperity, or the sense of having opportunities in India rather than looking at India as a threat or dominating power would begin to take hold. So, I think we have to continue soldiering on, and try and see whether we can over time change this kind of thinking in our neighbourhood.

The other aspect which you have mentioned about whether we can set up some special economic zones, or whether we can set up some industries, well, that was the logic of the very attractive investment proposal which was made by Tatas to Bangladesh. Three linked projects which would have been, I think, $2.5 billion and would have meant a huge change in the economic prospects of Bangladesh and would have used some of the gas available in Bangladesh itself, and that project alone by the exports to India would have actually completely wiped out the trade deficit which Bangladesh keeps complaining about. Now whether or not there is a willingness to accept such a thing is not in our hands; it is in the hands of Bangladesh. To say that because Bangladesh has not accepted, this means a failure of Indian foreign policy, I do not think that is very fair.

With regard to the resources, yes, we, again in terms of our energy requirements, have already drawn attention to what we have been able to do with Bhutan, we would certainly like to do with Nepal as well, because Nepal has a very large potential for hydropower. I think current estimates are above 87,000 MW and, by the way, if these were developed in Nepal, they would be more economical in terms of India’s needs, because they are far closer to our main consuming sectors, so the transmission lines would not be as long as they are with Bhutan. What we are trying to do with Nepal is to really try and take this out of the political domain, and put it in the economic domain, and to say that let us look at these projects from their economic viability, if you can come up with a project, no matter who finances it, you have the power purchase agreement with the Power Trading Corporation of India or other consumers in India. You develop your resources, you sell your power to India, as long as it is economical for us, we will buy it. So try and take the political edge out of these discussions and, I think that in the longer term, that is probably what will work. We are headed in that direction.
**Speaker:** You have just talked about the India’s vision actually. Do you think that this vision is being shared by our neighbourhood because I feel that there is a trust deficit among the countries of the region and you will find that the trust deficit between India and China has come down, Bhutan has been another addition but as far as the other countries are concerned, this deficit remains. In spite of the connectivity, what you have said just now, what do you think, because you have been meeting the people - whether this vision is shared by the neighbourhood and whether we can bring down this trust deficit which has been there for a long time? Secondly, whether the projects which you have mentioned just now, will there be a bilateral funding or it is going to be a some kind of an international funding of sorts?

**FS:** Most of the projects that I have mentioned to you just now, these are all being funded by India There is a willingness to make the kind of investment which is required in order to make these projects a reality.

Is the vision of South Asia shared by others? Well, it was Bangladesh which came up with a vision of SAARC to begin with, not India. So I presume they are committed to the vision of South Asia as a very vibrant, as a very co-operative entity. We are certainly taking the matter seriously and we are certainly prepared to work on that basis, but I do not think we should go too much into this aspect of, you know, is there a trust deficit or is there not a trust deficit, is India being loved by its neighbours, or is it being hated by its neighbours. At the end of the day what will count is self-interest. If this vision of a interconnected South Asia is something which brings benefits to all our neighbours, then reason demands that people should sign on to it. If somebody is not willing to sign on to it and says that because of trust deficit I do not want to be part of this, then he will become irrelevant.

We are a very large country; we have other options. We will not be prevented from developing because some neighbour of India is not prepared to work together with us; what we are saying is, here is the vision of South Asia that we subscribe to. We believe in it very strongly, particularly since the developments that have taken place in India over the last 15 years, where we have become a remarkably open economy, a very liberal economy, today we have really the ability to take our neighbours along with us. It is not just a theory.

If you look at, for example, how the free-trade agreement with Sri Lanka has worked, it is Sri Lanka which said that we want to now upgrade
this free-trade agreement into a comprehensive economic partnership agreement. Why? Because they have seen the benefits that have come from this free-trade agreement; there has been a remarkable increase in the volume of trade, the trade deficit has come down, and there are a number of Indian companies despite the uncertainties created by insurgency. Despite that there are major Indian companies which are investing money in Sri Lanka, and, by the way, there are Sri Lankan companies investing in India. And the Sri Lankans are talking about economic integration with the economies of the southern states of India, not we. There are today, where there used to be maybe three flights a week or four flights a week between India and Sri Lanka, there are more than a hundred flights a week today. I mean the results are there for everybody to see, and we are not talking just about a vision. This is something I think which we have proved in practice, it works. So I think if self-interest, if national interest is something which drives countries or policies, including those of our neighbours, I think it is quite apparent where the future lies.

**Speaker (Shri Jagat Mehta):** Sir, I want to congratulate you. Reading between the lines I see a vision. I thought that it was quite apparent in the lines themselves. But I would like to say that in the 21st century both nationalism and interdependence have increased. And nothing is so difficult for diplomacy than to be a large country and to be surrounded by small countries. All large countries have failed in relationships with their small neighbours, not just India. You mentioned the initiative from Bangladesh on SAARC. Let me be quite frank. I am old, retired. That initiative was only because they feared hegemony. That all those who are neighbours of India should get together because they were all unwarrantedly afraid of India...

But our problem has been that except for Bhutan, where we started our diplomacy at the Summit level, there have been ups and downs. And the problem is memory. What we remember, others forget and what they remember, we forget. I will give you an example. Take IC-814. Nobody here has mentioned that after 814 what were the merits of it. We stopped flights to Kathmandu for three months. Every Nepalese knows that most Indians have forgotten it. So the problem is that of being a large country. South Asia has been rather slow in moving ahead, and it is a very difficult process. But it will have to be consistent. We have one foreign secretary like you who has a vision, then there will be others like me who do not have a vision and in between we sometimes pull in some direction. We sometimes get ignored
and the problem now is we have resources, but it is really a shame that Bangladesh should not see its own interest in exporting surplus gas to India.

Nepal would have had a per capita income as high as Japan if only they had developed 20% or 30% of their hydropower. Having seen this, the contrast between Bhutan and Nepal is obvious. If Panditji had not gone to Bhutan in 1958, Bhutan by now would have been lagging behind.

In Afghanistan, it is beyond NATO, it is beyond Pakistan and it is now beyond us, but it is important in some ways. Afghanistan is a part of South Asia and we will never be able to establish the natural connection with the concentric circles of Central Asia, unless we have a steady link with Afghanistan and Pakistan. Because I think that is extremely important.

**FS:** I would say that with regard to Afghanistan, it has been a constant endeavour to try and get a direct connection to Afghanistan. We have taken Pakistan at its own words, where Pakistan says that it is a natural bridge between South Asia and the Gulf and South Asia and Central Asia. We said, well, you mentioned a bridge from where to where, I mean you cannot have a bridge going only in one direction. A bridge means you are connecting two areas. So, this has been a constant refrain in our dialogue with Pakistan. We have gone to the extent of telling Pakistan that both India and Pakistan have a very important self-interest in the political stability of Afghanistan and in the economic recovery of Afghanistan. Rather than looking at India as somehow being a competitor to Pakistan in Afghanistan, why do we not work together in order to bring about that political stability in the country, and we can contribute much more than anybody else can.

We have also said to Pakistan that if you have any reservations about India’s activities in Afghanistan, we are ready to sit down together with you and talk about that; we have no problems. From our side, I think, there has been a fairly proactive approach to precisely establish close linkages, to try and bring about a sense of shared interest between India and Pakistan with regard to Afghanistan, which, have to, by the way, be dependent upon that kind of an access. I am hoping that over a period of time this will work. But again, we may make efforts but if there is a lack of response, or if there is a partial response, I do not think it is fair to blame it on Indian foreign policy, that somehow or the other this has been a failure on our part.

I am making this point because this keeps happening, and it is said that you have not been able to get that, you have not been able to do that.
We can try. If we were not making an effort, then we would be certainly subject to such allegations, but if we are making an effort, and if there is no response from the other side there is not much that we can do. I mean, when you mentioned, for example, Bangladesh and gas, and what benefits can come to Bangladesh. There are Bangladeshis themselves who are saying that this would be a major plus point for the Bangladeshi economy. Bangladesh came very close to accepting the Tata proposal.

So it shows that not all is lost; there is a sufficient body of opinion which is looking at the possibility of such co-operation. There is a sense in some of our neighbours that we are being left behind by India. That also they do not wish to see. Or a sense that India is losing interest in its neighbourhood because it wants more linkages with South-East Asia, it wants more linkages with dynamic economies in the West, and it does not really care about its neighbourhood. So there is also that pressure which is operating on our neighbours, which also I think we should capitalise upon and try and take advantage of.

So there is a certain opportunity today which I perceive, which was perhaps not there a few years back. These things will not happen overnight. It will not happen overnight because, as I said, part of the problem is our own mindset, whether we are able to change the way we think, the way we look at our borders, the way we look at our neighbours. But, equally, there is a problem of mindset on the part of our neighbours. There has to be a certain confluence in terms of these perceptions before we can really move ahead. I would submit that in several cases we have actually succeeded in moving ahead and the success of those efforts, say with Bhutan, say with Sri Lanka, is having an important impact on others. I think we should try and leverage that.
098. Speech by Minister of State E. Ahemad at the inauguration of the SAARC Disaster Management Centre.

New Delhi, October 10, 2006.

Shri Shivraj Patilji, Hon’ble Union Home Minister,

Gen. N.C. Vij, Hon’ble Vice-Chairperson, National Disaster Management Authority,

Shri V.C. Duggal, Home Secretary,

Shri B.S. Lalli, Secretary, Border Management,

Dr P.G. Dhar Chakravarti, Executive Director, National Institute of Disaster Management Centre & Director SAARC Disaster Management Centre,

Distinguished Ambassadors and High Commissioners,

Distinguished Members of the Governing Board of the SAARC Disaster Management Centre,

Ladies and Gentlemen,

1. It gives me immense pleasure to be here with you at the inaugural event of the SAARC Disaster Management Centre.

2. I understand that the First Meeting of the Governing Board of the SAARC Disaster Management Centre has had very fruitful discussions. The Board has outlined the programme, the administrative set up and the budget of the Centre. I would like to congratulate members of the Governing Board for concluding a very successful meeting on a very important subject of relevance to our entire region. An institutional mechanism has been established and the stage is now set for regional cooperation on disaster management.

3. The need for regional cooperation in disaster management is imperative. South Asia is a victim of natural disasters. Time and again, we have seen the terrible toll that natural disasters have inflicted on vulnerable communities in our region. In recent years, there has been an alarming increase in natural disasters in our region. The magnitude of these disasters has far reaching social, economic
and environmental impact. The extensive damage to lives, property and livelihood of the affected communities has adversely impacted on our development efforts.

4. Natural disasters do not discriminate between national boundaries. While natural disasters cannot be avoided, certainly, what is possible is to reduce the risks, be better prepared to tackle them as a collective challenge and work together in relief and rescue operations. There is a lot that we can learn from each other’s experiences and good practices in different fields and there is a great scope for increased cooperation and exchange of ideas and information. The Tsunami that struck Indian Ocean in 2004 followed by the earthquakes in India and Pakistan in 2005 have made us realize the need to cooperate with each other, if we have to prevent disasters or mitigate their recurrence in the future.

5. The Leaders at the 13th SAARC Summit in Dhaka recognized the importance of regional cooperation in disaster management, when they welcomed India’s offer for hosting the SAARC Disaster Management Centre. This is an important development, considering the extensive loss of life and property due to natural disasters such as Tsunamis and earthquakes that have affected South Asia. A permanent regional response mechanism, dedicated to disaster preparedness, emergency relief and rehabilitation will benefit the entire region. As the largest country in the region, we are conscious of our larger responsibilities in tackling this challenge in the region. We are prepared to play this role.

6. India’s record and demonstrated capabilities in disaster management are well-known. The decision to establish the SAARC Disaster Management Centre within the NIDM premises is a tribute to its capabilities and recognition of the excellent work done by the Institute in the area of disaster management and preparedness. We hope to develop the SAARC Disaster Management Centre as a centre of excellence for knowledge, research and capacity building on disaster management. NIDM’s known expertise and capacity to undertake this task will contribute towards regional cooperation in this area.

7. Disaster management and preparedness are cross-cutting issues that cannot be tackled without a collective effort. Different Ministries and Departments in the Government, both in the Centre and in the States in our respective countries are responsible for addressing
issues relating to disaster management. Community efforts at the grassroots level are at the core of all successful examples of disaster management and preparedness.

8. I am aware that in Bangladesh, there is a separate Ministry for Food and Disaster Management, which allows it to take a holistic view of the issues involved not just in addressing disaster preparedness, risk mitigation and management, but also in rehabilitation and reconstruction. Sri Lanka has also created a separate Ministry of Disaster Management and Human Rights, and adopted a Roadmap on Disaster Risk Reduction and Management. I believe that Nepal, Bhutan, Afghanistan and Maldives are also reviewing their policies and practices to set up a holistic system of disaster management. In our own country, as in the case of some other South Asian countries, the Ministry of Home Affairs is the nodal point for such efforts at the national level. We have set up a National Disaster Management Authority to address all crosscutting issues in a holistic manner. It is our conviction that disaster risk reduction is not just an issue of relief and rehabilitation, but also of development. We have mainstreamed it into all sections at all levels.

9. Each country has to evolve its own national plans and strategies, given the specificity of each country’s needs and situation. There can be no one size-fits-all approvals. But, we can certainly learn from each other and benefit from that. As we prepare our respective National Plans of Action for implementation of the SAARC Framework in Disaster Management and Disaster Risk Reduction, we should be mindful of the crosscutting nature of this subject. Now that the SAARC Disaster Management Centre has become operational, I would recommend that SAARC’s activities on Disaster Management should be channelised through the Centre. This will avoid duplication of efforts and proliferation of forums. Proliferation of forums will defuse the focus, at a time of crisis management, when focus is most required. At the same time, the SAARC Disaster Management Centre should be able to work in close coordination with other existing national, regional and international centers and mechanisms, to obtain optimum benefits of the efforts and the good work done by others in tackling the challenges of natural disasters and rehabilitation in the region.

10. The Centre should establish a powerful networking with all relevant organization and institutions, so that it can emerge as a resource
base and a think-tank on disaster management in South Asia. While the Centre shall, of course, play its role in networking, knowledge integration, documentation, research, training and capacity building, there are larger areas of disaster risk reduction and management, such as early warning, disaster response and recovery, which would require substantial cooperation among all countries at all levels.

11. I am happy that a Framework of Regional Cooperation has been developed. This would come up for consideration at the 14th SAARC Summit to be held in New Delhi in April 2007. I look forward to our discussions to deepen our cooperation.

12. In conclusion, I would like to wish the SAARC Disaster Management Centre all success in their endeavors at regional cooperation. This is a very crucial area for cooperation, as it has major developmental impact for all of us.

Thank you.
INDIA’S FOREIGN RELATIONS - 2006

SECTION - V

(ii) COUNTRIES OF THE SAARC
BANGLADESH

099. Briefing Points by Official Spokesperson on the talks between Prime Minister Manmohan Singh and Bangladesh Prime Minister Begum Khaleda Zia.

New Delhi, March 21, 2006.

- On terrorism\(^1\), both sides agreed that India and Bangladesh are victims of terrorism and need to join hands in fighting this scourge.

- On trade, it was noted that Bangladesh’s exports to India have been steadily rising. There is still trade imbalance which we recognize and are sensitive to Bangladesh’s concerns and there was a desire to address this issue with flexibility and with pragmatism. One way, of course, is by promotion of Indian investments in Bangladesh. For instance, there is the proposal for USD 2.5 billion worth of Tata investment in Bangladesh. On this, Bangladesh side said that they are examining various proposals in this regard. Certain matters need clarification and they were waiting for those.

- On various other issues like water issues and security issues, it was felt that institutional mechanisms which are available for the two sides must be strengthened. For instance, the Home Secretary level meetings which address the security issues should be held more

\(^1\) For sometime India had been concerned about the terrorist activities in Bangladesh and from Bangladesh into India. The attention of Dhaka was drawn to it on various occasions. Jairam Ramesh Minister of State for Commerce on a visit to Dhaka in connection with the first meeting of the SAFTA Ministerial Council told the Bangladesh journalists in Dhaka on April 20 that “an impression is gaining ground in India that Bangladesh is allowing itself to be manipulated against Indian interests.” Stating that fundamentalism was “becoming a huge problem in South Asia” he said “no government in Bangladesh should allow fundamentalists to gain ground.” He said another impression gaining ground was that Bangladesh’s territory and citizens are being used to create problems in India. “Our interest is to see a secular democratic and liberal Bangladesh.” “New Delhi had nothing to do who ruled Dhaka. It is the sovereign, democratic choice of the people of Bangladesh,” he said but added that “the electoral process must be free and fair.” But unfortunately there was no change in the ground situation. Seeing no improvement in the situation and in desperation the National Security Advisor M. K. Narayanan on November 19 told journalists in Bangalore after addressing a meeting of Senior Police Officers on the national security scenario that India regarded Bangladesh as a “sanctuary” for terrorists and also a “launching pad” for them into India. “We are in touch with the Bangladesh Government on this issue and I think the cooperation is not forthcoming as it should be,” Mr. Narayanan said.
regularly, as well as the meetings of the Joint Rivers Commission should be held more regularly.

- On SAARC, they appreciated the role played by Prime Minister in contributing to the success of the 13th SAARC Summit in Dhaka and they agreed that SAFTA needs to be implemented as soon as possible.

- The Sealdah – Jaidevpur train link - they are agreeable to operationalisation of this link.

- On Teesta river issue, they decided that the meeting can be held early. In response to a question on terrorism the Official Spokesperson said: “They are aware of our concerns. There was a very constructive exchange of views on all these issues which are matters of mutual concern. India and Bangladesh are both victims of terrorism. That was all recognized and terrorism by its very nature is a kind of phenomenon which can be best tackled by joint cooperation.”

100. Speech by Prime Minister Dr. Manmohan Singh at the banquet in honour of Bangladesh Prime Minister Begum Khaleda Zia.

New Delhi, March 21, 2006.

Your Excellency Begum Khaleda Zia, Prime Minister of the People’s Republic of Bangladesh, Distinguished members of the Bangladeshi delegation, Ladies and Gentlemen,

It is a great pleasure for me to welcome you Madam Prime Minister and the members of your delegation as honoured guests in India. Your visit is testimony to the tremendous importance that both our countries attach to our bilateral relationship.

We have just concluded an intensive and useful exchange of views on the full range of issues that are important in our bilateral ties. As we are friends and neighbours, this encompasses all subjects. Our dialogue was most useful in understanding each other’s point of view and in making progress on various issues. Some important Agreements have been signed and these will provide the right framework for guiding and expanding economic and commercial cooperation between our two countries.
We believe sincerely that India and our neighbours all have a common destiny. One cannot prosper without the other and it is only through cooperation within the region that we can compete outside it. We believe it is in our fundamental interest to see a strong, stable and economically strong Bangladesh making its full contribution to regional development.

There is a huge reservoir of goodwill for Bangladesh in India. After all, our culture, language, history and heritage have many common roots. Our people recognize our separate and distinct national identities but draw from a shared consciousness, and cherish a common desire for a life of peace and dignity and for cultural and social upliftment. We can never forget that in the past we have stood shoulder to shoulder to defend these aspirations that we hold so dear.

Both countries have rich intellectual traditions and we must promote much greater interaction between our scholars, intellectuals and opinion makers. It is a matter of satisfaction that today we are able to see Bangladeshi TV channels in India and I understand that they give our local channels stiff competition.

The same poetic voice has given expression to our national identities and to our souls. Our national anthems have been composed by the same great poet, Rabindranath Tagore and Kazi Nazrul Islam is as revered in India as he is in Bangladesh. Liberal and democratic values are cherished in both countries. The artistic wealth contained in Rabindra Sangeet and Nazrul Geeti is a heritage for both our countries. It is on the basis of these fundamental beliefs that we must build our bilateral relations and take them forward.

As we rededicate ourselves to ever stronger friendship between India and Bangladesh, I wish to conclude with the lines from that immortal poet Kazi Nazrul, whose message of hope is an inspiration and a challenge;

\[
\text{Ushar duware hani aghat, amra anibo naya probhat,} \\
\text{Amra gocchabo timiro raat, badhar bindhachal}
\]

\(
\text{(Striking at the door of dawn, we would usher in a new morning, We would overcome the dark night and the mountains of obstacles.)}
\)

Thank You.
Joint Press Release issued at the end of the visit of Bangladesh Prime Minister Begum Khaleda Zia.

New Delhi, March 22, 2006.

1. H.E. Begum Khaleda Zia, Prime Minister of the People’s Republic of Bangladesh paid a state visit to India from 20-22 March 2006 at the invitation of the Indian Prime Minister, H.E. Dr. Manmohan Singh.

2. During the visit, the Bangladesh Prime Minister held comprehensive discussions with the Indian Prime Minister H.E. Dr. Manmohan Singh on the entire gamut of bilateral relations. They also discussed regional and international issues of mutual interest. The discussions between the two leaders were underpinned by the common desire to strengthen and consolidate the friendly ties that already exist between the two countries based as they are on shared history and culture and wide-ranging people-to-people relations.

3. The Bangladesh Prime Minister called on the Indian President H.E. Dr. A.P.J. Abdul Kalam, the Vice-President H.E. Shri Bhairon Singh Shekhawat and the Chairperson, United Progressive Alliance, Smt. Sonia Gandhi. The Hon’ble Minister of Commerce and Industry Shri Kamal Nath, the Hon’ble Leader of the Opposition Shri L.K. Advani, and the Hon’ble Chief Minister of Mizoram, Shri Zoramthanga, also called on the Bangladesh Prime Minister.

4. Two Agreements were signed during the visit of the Bangladesh Prime Minister. These were: the Revised Trade Agreement and the

---

1. The details of the two agreements are: Revised Trade Agreement between India and Bangladesh. The Revised Trade Agreement is being signed between India and Bangladesh upon expiry of the Trade Agreement originally signed in 1980. The agreement aims at expanding trade and economic relations between the two countries on the basis of equality and mutual benefits by facilitation, expansion and diversification of trade. The agreement recognizes that expansion of trade is important for the development of the two countries and also takes into account the asymmetries that exist between the two countries. The agreement also calls for cooperation between the two governments to prevent infringement and circumvention of rules and regulations of either country in matters related to foreign exchange and foreign trade. Both the countries would make mutually beneficial arrangements for the use of their waterways, roadways and railways for commerce between the two countries for passage of goods between places in one country through the territory of the other. According to the agreement, both the countries would also facilitate holding of trade fairs and exhibitions and visits of business and
Agreement for Mutual Cooperation for Preventing Illicit Trafficking in Narcotic Drugs and Psychotropic Substances and Related Matters.

While the revised trade agreement is expected to provide a framework for expansion of bilateral trade\textsuperscript{2}, the other agreement signals the joint determination of the two Governments to combat drug trafficking.

5. Both leaders agreed on the need to maintain high-level political dialogue between the two countries. It was recalled that the Indian Prime Minister had met the Bangladesh Prime Minister in Dhaka in November last year during the 13th SAARC Summit. The current visit of the Bangladesh Prime Minister has provided both countries the opportunity to continue and sustain their high-level political dialogue. The visit is also testimony to the highest priority attached by both countries to the promotion of their bilateral relations in all aspects.

6. Discussions between the sides led by the two Prime Ministers were held in a cordial atmosphere and there was a constructive and forward-looking exchange of views. The discussions resulted in trade delegations.

**Agreement for mutual cooperation for preventing illicit trafficking in Narcotic Drugs and Psychotropic Substances & Related Matters** The agreement on cooperation for preventing illicit trafficking in Narcotic Drugs and Psychotropic Substances & Related Matters signed during the visit of the Prime Minister of Bangladesh is a reaffirmation of the joint determination of India and Bangladesh to fight against drug abuse and illicit trafficking. Under the agreement, the Narcotics Control Bureau would be the nodal agency for India and the Department of Narcotics Control would be the nodal agency for Bangladesh, which shall meet periodically with the aim of promoting field level contact and cooperation between the two countries. The agreement also envisages quick exchange of information regarding operational intelligence and to help each other build up records in respect of smugglers, suspects, financiers, organisers, etc.

2. There is an outstanding complaint by Bangladesh side that the trade between the two countries was lopsided. But some improvement in the situation was perceptible as pointed out by Commerce Minister Kamal Nath. He pointed out that Bangladesh exports to India had grown by massive 68 percent in 2004-05 but the trade imbalance still remained. Stressing that Dhaka and New Delhi needed to look at their basic trade basket, the Commerce Minister stated that with the operationalisation of the SAFTA and India’s initiative to address market access issues of Bangladesh’s textiles and garment sector there would be a “substantial increase” in exports to India. Calling for greater “political impetus” to existing economic mechanisms, he pointed out that the Joint Economic Commission between the two sides had not met for the last three years. “We need to give more political impetus to these groups,” he said. Mr. Kamal Nath suggested the need for a free trade agreement between the two countries and cited the success of India – Sri Lanka Free Trade Agreement as an example.
greater understanding and appreciation of each other’s point of view. It was agreed that meetings of the bilateral institutional mechanisms such as the Joint Economic Commission, the Joint Boundary Working Groups, the Joint Rivers Commission and the Home Secretary-level talks would be held more frequently to ensure movement in a positive direction and their outcome monitored by the political leadership on a continuous basis. Whether it is security, trade or sharing of water, the two leaders reaffirmed their commitment to work closely together to find mutually satisfactory solutions. Both sides agreed that the visit of H.E. Begum Khaleda Zia, the Bangladesh Prime Minister to India had contributed to further consolidation and progress in the already close and friendly relations between the two neighbouring countries.

7. The two leaders also expressed their satisfaction over the successful conclusion of the 13th SAARC Summit in Dhaka in November 2005. They agreed that the positive outcome of the Summit would enable SAARC member countries to achieve specific economic and social objectives. Both leaders emphasized that implementation of SAFTA must be pursued with vigour to advance the SAARC economic agenda.

8. The Bangladesh Prime Minister conveyed her thanks to the Indian Prime Minister as well as the Government and the people of India for the warm hospitality extended to her and members of her delegation during her visit to India. She extended an invitation to the Indian Prime Minister to visit Bangladesh. The invitation was accepted by the Indian Prime Minister with pleasure and precise dates would be worked out through diplomatic channels.

New Delhi, March 21, 2006.

The Government of the People’s Republic of Bangladesh and the Government of the Republic of India (hereinafter referred to as the contracting parties): -

Considering that the Single Convention on Narcotic Drugs of 1961, as amended by the 1972 protocol, the Convention on Psychotropic Substances of 1971, and the UN Convention Against Illicit Trafficking in Narcotic Drugs and Psychotropic Substances, 1988 form the basis for national and international drug control;

Reaffirming their joint determination to fight against drug abuse and illicit trafficking in strict conformity with international law, and respect for the sovereignty and territorial integrity of States and for the principle of non-interference in the internal affairs of States;

Taking into consideration due Constitutional, Legal and Administrative systems existing in either country;

Have agreed as follows:-

ARTICLE – I

The contracting parties shall use their best efforts, consistent with their national laws and narcotics control situations, taking appropriate action, where applicable, to cooperate with each other using following measures:

a) Exchange of information of operational, technical and general nature between the nodal enforcement agencies of India and of the People’s Republic of Bangladesh;

b) Assisting one another, upon request, in operational matters, including employing such investigative techniques as may be necessary for interdicting all types of narcotic and synthetic drugs;

c) Identifying and destroying illegal drug processing sites and
laboratories and to identify and eradicate illicit cultivation of cannabis and opium poppy wherever found;

d) Regulating and monitoring the production, importation, exportation, storage, distribution and sale of precursors, essential chemicals and solvents which may be used in illicit manufacturing and production of narcotic drugs;

e) Reducing demand through prevention, treatment and public awareness activities.

ARTICLE – II

The Contracting Parties, recognizing that medicinal drugs like phensedyl, morphine, pethidine, tidigesic injection (Buprenorphine) and preparations of psychotropic substances are being abused by the drug addicts, attach due importance to the control of such medicinal drugs and shall take appropriate action and extend cooperation in the following areas:

a) Assessment of the nature and extent of the abuse of medicinal drugs;

b) Exchange of information on trafficking routes, seizures, arrests, origins and sources of medicinal drugs recovered from illegal possessions;

c) Regulate and monitor the production, importation, exportation, storage, distribution, sale, possession and use of medicinal drugs under the existing legal and administrative systems;

d) Arrange, whenever felt necessary by the contracting parties, joint inspection of the whole gamut of activities relating to production and dispensation of medicinal drugs with a view to determine the level of licit and illicit supply of such drugs;

e) Assist one another, upon request, in operational matters including undertaking such investigative measures as may be necessary for eradication of the sources of illicit supply of medicinal drugs;

f) Hold meetings between the two nodal agencies of the two contracting parties to review the prevalence of medicinal drugs for abuse and addiction from time to time; and

g) Harmonize, where applicable and feasible, the control provisions of national laws in respect of medicinal drugs and their ingredients.
ARTICLE – III

For the purpose of this agreement, drugs shall be understood to be the substances that are scheduled or described in the Single Convention on Narcotic Drugs, 1961, as amended by the Protocol of 1972, and Convention on Psychotropic Substances 1971 and precursors, essential chemicals and solvents are those substances included in the Tables appended to Article 12 of the UN Convention Against Illicit Traffic in Narcotic Drugs and Psychotropic Substances, 1988 or any other substances as mutually agreed upon as such substance.

ARTICLE – IV

In furtherance of the objectives of this Agreement, subject to their national laws, the Contracting Parties shall;

a) Exchange literature on existing laws, rules, procedures etc. concerning drug abuse control and on amendments which may take place in the existing laws in future;

b) Combat drug trafficking, prevent money laundering and cooperate in tracing, identification, freezing, seizure and forfeiture of properties derived from or used in illicit traffic, following exchange of information.

ARTICLE – V

The contracting parties shall designate agencies and officers through whom regular exchanges of information may be effected. In respect of the Republic of India, the nodal agency would be the Narcotics Control Bureau and in respect of the People’s Republic of Bangladesh, the Nodal Agency would be the Department of Narcotics Control. A list of postal address, telephone telex/fax numbers of the Nodal Agencies and the contact officers is appended to this agreement as Appendix-I.¹

The Nodal Agencies of the contracting parties shall have periodical meetings on mutually convenient places and dates as may be decided due to operational reasons. The two sides may include field level officers in their respective teams to facilitate and promote field level contact and cooperation.

ARTICLE – VI

The exchange of any type of information under this Agreement shall be channelised through the Nodal Agencies specified above. The nature
of intelligence/information which may be exchanged between the nodal agencies of the contracting Parties would be of two types:-

a) Operational intelligence which may be communicated through the fastest means of communication, viz. telephone and telex/fax;

b) Information of a detailed nature which will be communicated through correspondence in order to build up dossiers in respect of smugglers, suspects, financiers, organizers, etc.

On the issue of exchange of information on drug traffickers operating between the two countries, the normal exchange may take place in the formats as at Appendices II1 and III1. While the normal mode of exchange of information and operational intelligence on matters relating to drug trafficking will be in the prescribed format, any other information of significance may be exchanged on any other format on ‘as and when necessary’ basis.

This Agreement shall enter into force upon signature and shall remain in force until terminated by either party by giving at least three months’ notice in writing.

In witness whereof the undersigned being duly authorized by their respective Governments have signed this Agreement.

**Done** at New Delhi on the Twentyfirst day of March Year Two thousand and six (21st of March 2006) in two originals each in Hindi, Bangla and English languages, all texts being equally authentic. In case of doubt, however, the English text shall prevail.

On behalf of the Government of the People’s Republic of India
On behalf of the Government of the Republic of Bangladesh

(M.Morshed Khan) (Kamal Nath)
Minister for Foreign Affairs Minister of Commerce and Industry

---

1. Not include here.

New Delhi, March 21, 2006.

The Government of the Republic of India and the Government of the People’s Republic of Bangladesh;

Being conscious of the urge of their two peoples to enlarge areas of mutual co-operations;

Desirous of expanding trade and strengthening economic relations between the two countries on the basis of equality and mutual benefits;

Have agreed as follows:

Article I

The two Governments recognizing the need and requirements of each other in the context of their developing economies undertake to explore all possibilities, including economic and technical cooperation for promotion, facilitation, expansion and diversification of trade between the two countries on the basis of equality and mutual benefit.

Article II

The two Governments agree to take appropriate measures in accordance with the evolving international trading system for mutual benefit of developing countries and least developed countries in so far as such measures are consistent with their individual, present and future development, financial and trade facilitation.

Article III

The two Governments agree that expansion of their mutual trade exchanges would make an important contribution towards their development. To this end, they agree to take appropriate and special measures during periodic reviews taking into account the asymmetries between the two countries with a view to augmenting and diversifying their mutual trade specially in respect of specific products as may be agreed upon.
Article IV

All payments and charges in connection with trade between the two countries shall continue to be effected in freely convertible currencies in accordance with the foreign exchange regulations in force in each country from time to time.

Article V

Imports and exports of commodities and goods produced or manufactured in India or Bangladesh, as the case may be, shall be permitted in accordance with the import, export and foreign exchange laws, regulations and procedures in force in either country from time to time taking into account asymmetries between the two countries.

Article VI

Each Government shall accord to the commerce of the other Government, treatment no less favourable than that accorded to the commerce of any third country.

Article VII

The provisions of Article VI shall not prevent the grant or continuance of:-

a) Privileges which are or may be granted by either of the two Governments in order to facilitate frontier trade by separate agreement(s);

b) Advantages and privileges which are or may be granted by either of the two Governments to any of their respective neighbouring countries;

c) Advantages resulting from a customs union, a free trade area or similar arrangements which either of the two Governments has concluded or may conclude in the future.

d) Advantages or preferences accorded under any scheme for expansion of trade and economic cooperation among developing countries in so far as such countries, which is open for participation by all developing countries, and to which either of the two Governments is or may become a party.
Article VIII

The two Governments agree to make mutually beneficial arrangements for the use of their waterways, railways and roadways for commerce between the two countries and for passage of goods between two places in one country through the territory of the other.

Article IX

Each Government will grant merchant vessels of the other country while entering, putting off and lying at its ports and most-favoured-nation treatment accorded by their respective laws, rules and regulations to the vessels under the flag of any third country.

Both the Governments agree on the basis of shipper’s preference, to utilize to the maximum extent possible, the vessels owned/chartered by shipping organizations of the two countries concerned for shipping cargoes imported or exported under this Agreement at competitive freight rates.

Article X

The two Governments agree to cooperate effectively with each other to prevent infringement and circumvention of the laws, rules and regulations of either country in regard to matters relating to foreign exchange and foreign trade.

Article XI

The two Governments agree to accord, subject to their respective laws and regulations, reasonable facilities for the holding of trade fairs and exhibitions and visits of business and trade delegations sponsored by the Government concerned.

Article XII

In order to facilitate the implementation of this Agreement, the two Governments shall consult each other at least once in a year or earlier as and when necessary, and shall review the working of the Agreement with special asymmetries between the two countries.

Article XIII

This Agreement shall come into force on the 1st April, 2006. It shall remain in force for a period of three years. It may be extended by a further
period of three years by mutual consent subject to such modifications as may be agreed upon.

Done in New Delhi, on the 21st March 2006, in two original copies, each in Hindi, Bengali and English, all the texts being equally authentic. In case of difference, the English text shall prevail.

(Kamal Nath)  
Minister of Commerce and Industry, Government of the Republic of India

(M. Morshed Khan)  
Foreign Minister, Government of the People’s Republic of Bangladesh
102. Press Release of the High Commission of India in Dhaka on meetings held by Minister of State E. Ahamed with Bangladesh leaders.

Dhaka, August 1, 2006.

On the sidelines of the 27th session of the SAARC Council of Ministers meeting, being held in Dhaka, from August 1st – 2nd, Shri E. Ahamed, Minister of State for External Affairs, today paid a courtesy call on the Prime Minister of Bangladesh, H.E. Begum Khaleda Zia. Shri E. Ahamed also held a meeting with the Foreign Minister of Bangladesh, H.E. Mr. Morshed Khan.

Shri E. Ahamed thanked Prime Minister Begum Khaleda Zia for her letter to Prime Minister Manmohan Singh, strongly condemning the Mumbai train blasts and for her expression of solidarity. Shri E. Ahamed said that the perpetrators of this act would be defeated by the people of India who have displayed their firm resolution to maintain unity, integrity and peaceful existence. Shri E. Ahamed also reiterated India’s continued commitment to further strengthening bilateral relations.

Shri E. Ahamed discussed these and SAARC related issues in detail with Foreign Minister Morshed Khan. Both sides also reviewed recent developments in West Asia. In the context of the SAARC Council of Ministers meeting, Shri E. Ahamed conveyed India’s deep concerns over the actions being taken by Pakistan in preventing the implementation of the SAFTA. Shri E. Ahamed underlined that the SAARC Council of Ministers had a responsibility to take a stand against any country specific measures. He also underlined the importance of ensuring that an important SAARC treaty does not unravel at the very first step.

Foreign Minister Morshed Khan reiterated Bangladesh’s commitment to SAFTA and assured that as the current Chair of SAARC, Bangladesh would make all efforts to help find a resolution to this issue. Shri E. Ahamed thanked Foreign Minister Morshed Khan for his support.

Shri E. Ahamed also made a courtesy call on H.E. Sheikh Hasina, President, Awami League and Leader of the Opposition in Bangladesh Parliament.
It is a privilege for me to address the distinguished gathering present here today. Many of you played an important role in the Liberation War of Bangladesh in 1971 and have made immense sacrifices to create this vibrant nation. Today, I would also like to remember the countless men and women who laid down their lives for the cause of freedom. They are not amongst us today but their memories still inspire us. It is their courage and sacrifice that enables us today to lead our lives in freedom.

The democratic and secular values of our own freedom struggle motivated the people of India to wholeheartedly extend their unstinting support to the people of Bangladesh in their fight for liberation. Today, I am reminded of the words of late Prime Minister Shrimati Indira Gandhi who had declared at a public rally here in Dhaka on March 17th 1972: “If India has helped you, it is because we could not sit idly by after hearing your voice and after knowing of the sorrow and suffering that you have undergone. If we have helped you, it is in order to be true to ourselves, and to the principles to which we have adhered for years”.

We in India have watched Bangladesh with admiration as all sections of the people rallied together and dedicated themselves to building a new nation. As you now prepare for the next general elections. Let us not forget that our freedom today, our ability to freely exercise our democratic choice, which is taken for granted, has been built on the sacrifices of our freedom fighters. We in India have learnt that it takes enormous strength to preserve our freedom and institutions and to work constantly to build upon and strengthen them.

I have been contesting elections since 1967. In addition to my five terms in the Kerala State Legislative Assembly, this is my fifth term as an elected member of parliament. Let me draw upon this long and enriching experience and share a few thoughts with you.

With a population of one billion and an electorate of more than 650 million, India is not only a flourishing democracy but can rightfully claim to be the world’s largest. In the last general election in India, the 14th, in
which my government was elected, more than 60% of the people turned-out to cast their vote. It is not only a staggering statistic but a daunting exercise as well.

The very process of an election contains within it two interrelated aspects; on the one hand the simple but powerful act of freely casting their vote greatly empowers the people; and on the other, the very process of regular elections not only ensure the fearless exercise of political choice but facilitate the orderly change of governments.

I am sharing my experiences because there is today a great focus on the forthcoming general elections in Bangladesh, due to take place by January next year. There is already an intense debate in Bangladesh on the coming elections. I must admit that there is also a keen interest in India. But to me, the discussions and debate that surround the forthcoming elections are a clear demonstration of the strength of the democratic traditions in Bangladesh. We hope that the next general elections will be truly free and fair, as befits a vibrant democracy like Bangladesh. At the same time, I would also like to underline that we look forward to working with whichever government the people of Bangladesh decide to elect.

We, in India, attach the highest importance to our relations with Bangladesh. This sentiment is shared by all, cutting across party lines. A strong, stable, secular, democratic and prosperous Bangladesh is not only in the interests of the people of India, but also for the region as a whole and, most importantly for the people of Bangladesh. Let me assure you that there is no dilution whatsoever in our commitment to extend all assistance and cooperation to help Bangladesh achieve these goals.

Terrorism, today, poses the greatest danger to the peaceful and stable existence of nation-states in the world today. It is the open and democratic societies that are most vulnerable to the threat posed by extremism and terrorism. The recent blasts in Mumbai and Srinagar have once again shown the kind of destruction such elements can cause and the extent to which these elements can go to impose their views and beliefs.

We believe Bangladesh should and can set an example to others. It is in our mutual interest to cooperate and work to curb the rise of fundamentalist and extremist beliefs.

With a common historical heritage, language, literature, music and art there is much that unites our two countries. We can expend our energies
in constructing artificial divisions or address the vital challenges that confront our people. Just as Durga puja is celebrated with joy in Bangladesh, India’s 150 million Muslims herald Id ul Fitr to mark the end of the holy month of Ramadan. Just as lakhs of Muslim pilgrims throng each year to the annual Bishwa Ijtema congregation at Tongi (near Dhaka), equal numbers travel to India each year to offer ziarat at Ajmer Sharief.

As neighbors it is natural that differences will arise but it is only through dialogue and understanding that trust can be created. Once we are committed to meaningfully working together we can hope to work for resolution of complex issues.

In conclusion, I would like to say that all of you have an important role to play. I do believe that in achieving our goal of implementing the vision of a dynamic South Asia region, organisations like the Bangladesh-Bharat Maitri Samiti, the Bangladesh Bharat Shampriti Parishad and the Bangladesh Muktijoddha Kalyan Foundation can play a catalytical role. I believe that by continuing to preserve the spirit and ethos that marked your struggle for independence can also help to strengthen India-Bangladesh relations.

I will end by quoting Prime Minister Manmohan Singh. In his address to the 13th SAARC Summit, here in Dhaka last November, Dr. Manmohan Singh said: “India seeks a neighbourhood of peace and prosperity. Our sub-continent has been home to all the great religions of the world. It is a powerhouse of human creativity, where knowledge is worshipped as the gift of our creators. With wisdom and farsightedness, we South Asians can transform not just this region, but the whole world”.

Thank You.
104. Media Briefing by Official Spokesperson expressing concern at the Bangladesh Rifles unprovoked firing on Indo-Bangladesh border.

New Delhi, August 14, 2006.

... This morning at about 11:30 hrs, the Joint Secretary dealing with Bangladesh in the Ministry of External Affairs summoned the High Commissioner of Bangladesh in India to the Ministry to express concern on the issue of unprovoked firing by the Bangladesh Rifles in the Surma River area. The Joint Secretary informed the High Commissioner that a note verbale on the subject has already been delivered to the Bangladesh Foreign Office through our High Commission in Dhaka. A similar note verbale was handed over to the High Commissioner also. In response, the High Commissioner of Bangladesh assured the Joint Secretary that he would convey India’s serious concern on the matter to his Foreign Office and also suggested that the matter could be discussed in greater detail in the forthcoming Home Secretary level talks.

To give you more background, I can tell you that the firing took place in the Zakiganj sector on the 10th of August. The background to the firing was the continuing attempt at infiltration and encroachment by Bangladesh into approximately 220 acres of land on the western bank of Surma River. There are well-demarcated boundary pillars in this area clearly indicating that this is Indian territory. The land records with the Settlement Officer, Cachar and Hailakandi District in Silchar, Assam confirmed that the said land is not under adverse possession as is mistakenly being claimed by Bangladesh Rifles.

At the same location as far back as June 28th, the Bangladesh Rifles had opened unprovoked automatic weapons firing and subsequently, during the Commandant level flag meeting and on July 4th, the Bangladesh Rifles Commander had assured the Indian side that they would stop Bangladeshi civilians from illegal cultivation in the Indian land lying across the River Surma. Unfortunately, on contrary to accepted norms, the Bangladesh Rifles evidently tacitly encouraged Bangladeshi civilians to continue their illegal cultivation of Indian land. Once again this matter was discussed in Silchar with the DIG, BSF and the BDR Sector Commander.

Despite this, on the 9th of August, 38 Rifles Battalion of BDR opened unprovoked and heavy fire on the BSF with automatic weapons like...
Universal Machine Guns and Heavy Machine Guns. Thereafter, the BDR also resorted to large-scale indiscriminate mortar firing on Indian territory, firing about 140-150 mortar shells from 60 mm mortars and 82 mm long range mortars. The firing continued throughout the night of August 9-10. This resulted in the death of two Indian women—Shanta Dey and Sabita Dey of the village Kinokhal and critically injured a child. Many other civilians also suffered injuries. It is a matter of concern that despite mutually agreed decision, on the morning of August 9th by senior BSF and BDR officials to resolve the issue through a flag meeting on August 13th, on the night of August 9th itself unprovoked firing started.

**Question:** Was the Deputy High Commissioner of India also summoned there in Dhaka?

**Official Spokesperson:** The Deputy High Commissioner of India was handed over a note by the Bangladesh Foreign Ministry during his courtesy call on the new Director General (South Asia). This was a note drawing attention to certain comments made by Shri Rajnath Singh, President of the BJP while addressing a rally in Panaji on August 12th. We have seen those reports regarding Shri Rajnath Singh’s statement and all I can say is that those reported remarks do not represent Government policy.

---

**105. Statement by Official Spokesperson on developments in Bangladesh.**

**New Delhi, October 29, 2006.**

Government of India is closely watching developments in Bangladesh. As a friendly neighbour, we are naturally interested in Bangladesh remaining peaceful, democratic and stable. It is our hope that the people of Bangladesh will be allowed to exercise their right to choose their own government in a free and fair manner in the forthcoming elections in accordance with their Constitution.

---

1. The Spokesperson was referring to widespread disturbances in Bangladesh on the formation of caretaker government for the conduct of general elections to the Bangladesh Jatiya Sangsad (Parliament).
BHUTAN

106. Statement to the media by Foreign Secretary on his visit to Bhutan.

Thimpu, April 18, 2006.

This has been short but a very pleasant visit to Bhutan. I have had the privilege of an audience with His Majesty The King, which provided the opportunity for in depth and wide-ranging review of the many facets of our bilateral relations. It gives me great pleasure to be able to say – yet again - that our bilateral relationship is an exemplary one. There are no outstanding issues between us.

I was very happy also to have had the opportunity to meet Their Majesties The Queens and His Royal Highness The Crown Prince during my stay here and renew our acquaintances.

New Delhi, April 26, 2006.

The Kurichhu Hydro Electric Project (HEP), a run-of-the-river 60 MW Project on Kurichhu River in Mongar District in Eastern Bhutan was inaugurated on 26th April 2006 by the Crown Prince of Bhutan, His Royal Highness Jigme Khesar Namgyel Wangchuck and the Ambassador of India Shri Sudhir Vyas. The ceremony was attended by Lyonpo Yeshey Zimba, Bhutan’s Minister for Trade, Industry and Power and other dignitaries.

The Kurichhu Power Project was funded by Government of India at a cost of Rs. 560 Crore. The project was executed by M/s National Hydroelectric Power Corporation (NHPC) and was commissioned in 2002. Kurichhu HEP supplies electricity to eight districts in Eastern Bhutan and another two districts will be covered after the completion of the Tingtibi – Trongsa-Bumthang Transmission Line funded by GOI in 9th Five Year Plan of Bhutan. Surplus power from Bhutan is exported to India.
The Kurichhu Hydro Electric Project marks yet another milestone in the ongoing partnership between India and Bhutan in the hydro power sector. It is a manifestation of the close ties of friendship and cooperation between the two countries and the potential that exists for joint projects for the mutual benefit of the people of both the countries.

108. Agreement on Trade, Commerce and Transit between the Government of the Republic of India and the Royal Government of Bhutan

New Delhi, July 28, 2006

The Government of the Republic of India and the Royal Government of Bhutan,

Conscious of the age-old ties between India and Bhutan and with a desire to strengthen them,

Convinced of the benefits which accrue to their people from the free trade- and commerce between the two countries, expansion of the bilateral trade and collaboration in economic development,

Have, in furtherance of the aforementioned objectives, agreed as follows:

ARTICLE - I

There shall, as heretofore, be free trade and commerce between the territories of the Royal Government of Bhutan and the Government of the Republic of India.

ARTICLE - II

Notwithstanding Article - I, the Royal Government of Bhutan may, henceforth, impose such non-tariff restrictions on the entry into Bhutan of certain goods of Indian origin as may be necessary for the protection of industries in Bhutan. Such restrictions, however, will not be stricter than those applied to goods of third country origin.

ARTICLE-III

Notwithstanding Article – I, the Governments of the two countries
may impose such non-tariff restrictions on entry into their respective territories of goods of third country origin as may be necessary.

**ARTICLE - IV**

In view of the free movement of goods flowing between the two countries and of the possibility of the flow from one to the other of goods of third country origin, the Governments of the two countries shall have annual consultations.

**ARTICLE - V**

All exports and imports of Bhutan to and from countries other than India will be free from and not subject to customs duties and trade restrictions of the Government of the Republic of India. The procedure for such exports and imports and the documentation which are detailed in the Protocol to this Agreement, may be modified by mutual agreement from time to time.

**ARTICLE - VI**

Notwithstanding the foregoing provisions, either contracting party may maintain or introduce such measures or restrictions as are necessary for the purpose of:

i. Protecting public morals;

ii. Protecting human, animal and plant life;

iii. Implementing laws relating to import and export of gold and silver bullion;

iv. Safeguarding national treasures; and

v Safeguarding such other interests as may be mutually agreed upon.

**ARTICLE - VII**

Trade between India and Bhutan will continue to be transacted in Indian Rupees and Bhutanese Ngultrum.

**ARTICLE - VIII**

Each of the Governments agrees to provide appropriate refund to be mutually decided annually in respect of excise duties on goods of its origin exported to the other.
ARTICLE - IX

Merchant ships sailing under the flag of Bhutan shall be accorded treatment no less favourable than that accorded to ships of any other foreign country in respect of matters relating to navigation, entry in to and departure from the Indian ports, use of ports and harbour facilities in India, as well as loading and unloading dues, taxes and other levies, except that the provision of this Article shall not extend to coastal trade.

ARTICLE - X

The two Governments agree to enter into immediate consultations with each other at the request of either side in order to overcome such difficulties as may arise in the implementation of this Agreement satisfactorily and speedily.

ARTICLE - XI

This Agreement shall come into force with effect from the 29th July 2006 and shall remain in force for a period of ten years.

This Agreement may be renewed by mutual consent to such changes and modifications as may be agreed upon between the two countries.

IN WITNESS WHEREOF, the undersigned, being duly authorized thereto have signed the present Agreement.

Done in two originals at New Delhi on the Twenty Eighth Day of July Two Thousand Six in the Hindi, Dzongkha and English languages. In case of conflict the English text shall prevail.

FOR THE GOVERNMENT OF THE REPUBLIC OF INDIA
(KAMAL NATH)
MINISTER OF COMMERCE AND INDUSTRY

FOR THE ROYAL GOVERNMENT OF BHUTAN
(LYONPO YESHEY ZIMBA)
MINISTER FOR TRADE AND INDUSTRY
Protocol to the Agreement on Trade, Commerce and Transit between the Government of the Republic of India and The Royal Government of Bhutan

With Reference to Article 1 of the Agreement

For the purpose of this Agreement, the term ‘free trade and commerce’ in Article I shall be understood to include within its scope sale of Bhutan lottery tickets in India and the sale of Indian Government or State lottery tickets in Bhutan, subject to the relevant laws which may be in force in the territories of the Kingdom of Bhutan and India, as the case may be.

With Reference to Article V of the Agreement

The following shall be exit/entry points in India for the imports into and exports from Bhutan for the duration of the Agreement:

1. Jaigaon - road route
2. Chamurchi - road route
3. Ultra Pani - road route
4. Hathisar (Gelephu) - road route
5. Darrange - road route
6. Kolkata - air & sea route
7. Haldia - sea route
8. Dhubri - riverine route
9. Raxaul - road & rail route
10. Panitanki - road route
11. Changarbandh - road route
12. New Delhi - air route
13. Mumbai - sea & air route
14. Chennai - sea & air route
15. Phulbari - road route
16. Dawki - road route

(i) These routes may be discontinued or new ones added by mutual agreement.

(ii) All exports and imports of Bhutan to and from countries other than India shall be effectively monitored and supervised by the Royal Government of Bhutan.
Import Procedure

When goods are imported from third countries for Bhutan through India, the following procedure shall be observed at the Indian place of entry (hereinafter referred to as “Customs House”): -

a) Clearance of goods imported for Bhutan shall be against Letter of Guarantee issued by the Royal Bhutan Customs/ Representative of the Royal Government of Bhutan.

b) At the Customs House, the importer or his agent (hereinafter referred to as the “Importer”) shall present the Letter of Guarantee in the prescribed form (Annexure I) in five copies. The last two columns pertaining to classification of goods and duty shall be completed by the Indian Customs.

c) The Customs House shall ensure that the seals are intact in case of containerised goods and in case of non-containerised goods, after percentage check if necessary, goods may be sealed individually or the transport in which they are being carried be so sealed.

d) The Customs House, after having satisfied with the procedures in Para C above, shall endorse all the copies of the Letter of Guarantee, The fourth copy shall be handed over to the importer. The fifth shall be sealed and handed over to the importer for passing on to the Indian Customs Officer at the exit point in India.

e) On arrival of the goods at the Indo-Bhutan border, the importer shall present to the Indian Customs Officer, the goods as well as his copy of the Letter of Guarantee and the sealed copy for the Customs Officer. The Customs Officer shall compare the two copies and allow movement of goods into Bhutan after checking the seal. The fourth copy shall be returned to the importer after due endorsement and fifth copy sent to the Customs House.

f) In case of imports not reaching their destination, the Customs officials of the two countries shall get in contact so as to trace the movement of the goods. In case the goods are found to have been diverted intentionally or purposely into India, the Indian Authorities would invoke the guarantee and get in touch with the Transit & Liaison Office/ Representative of the Royal Government of Bhutan in Kolkata to realize the Customs duties and other dues of the Government of the Republic of India.
Note:

Any cargo consigned to Bhutan arriving in Kolkata, Delhi, Mumbai and Chennai airports which has to move by surface transport through the territory of the Republic of India shall follow the import procedure as outlined in this Protocol.

Export Procedure

The Import Procedure detailed above shall apply *mutatis mutandis* for Bhutan’s exports to third countries.

Movement of Goods from one Part of Bhutan to Another Through The Indian Territory

For the movement of goods including forestry products from one part of Bhutan to another through the Indian territories, the following procedure shall be observed:-

a) The Bhutan Customs will issue a Transit Declaration in the prescribed form (Annexure II) to the owner of the goods or his agent. In the case of third country goods, the transit declaration would also carry an undertaking from the Customs authorities of Bhutan that the goods are meant for consumption in Bhutan only, and in cases of deflection, the laws of both Indian and Bhutan Customs would be applicable. Movement of goods, through India accompanied by the Transit Declaration shall not be subject to any sample checking by the Indian authorities except in cases where a specific information is made available to the Indian Customs authorities about consignment(s) carrying goods which are contraband in nature or contrary to the importability of those in any manner. These goods will be examined by Indian customs while transiting through India,

b) At the entry point in India, the Transit Declaration pertaining to goods of third country origin shall be presented to the Indian customs who shall endorse and return it to the owner or his agent and allow movement of goods.

c) The Transit Declaration shall be deposited with the Bhutan Customs Officials at the point of re-entry into Bhutan who shall release the goods after inspecting the same.

* * *
Let us know if you need further assistance.

Signature

New Delhi, July 28, 2006.

The Government of India and the Royal Government of Bhutan, bearing in mind the friendly relations existing between the two countries and their peoples;

Recognizing that the cooperation the two countries have developed in the hydropower sector is capable of contributing greatly to the economic growth and to the greater welfare of the two countries;

Recognizing the need for energy security of their respective countries:

Being desirous of achieving the development of hydropower in the Kingdom of Bhutan in a manner that will make a lasting contribution to the economic development of both countries;

Recognizing that desirable benefits to their countries can be secured by cooperative measures for hydroelectric power generation; and

Realizing the need to accelerate construction of hydropower plants

HAVE AGREED AS FOLLOWS:

ARTICLE - 1

The Government of India and the Royal Government of Bhutan agree to facilitate, encourage and promote the development and construction of hydropower projects and associated transmission systems as well as trade in electricity between the two countries, both through public and private sector participation.

ARTICLE - 2

For projects to be implemented jointly by the two Governments through joint ventures or government owned agencies, a suitably empowered joint group would be set up to facilitate identification of projects, preparation of Detailed Project Reports (DPRs) and selection of agencies for speedy implementation of projects. The Government of India agrees to a minimum import of 5000 MW electricity from Bhutan by the year 2020.
ARTICLE - 3

The development of projects would be governed by project implementation and power purchase agreements. The parties entering into such agreements shall mutually determine the terms and conditions of such agreements including implementation, the quantum and parameters of supply, the points of delivery and the price of supply of electrical power.

ARTICLE - 4

The parties entering into such agreements shall be accorded all necessary assistance by the respective Governments, in accordance with the laws and regulations of the respective countries, for conduct of surveys including field investigations and for construction, installation, operation and maintenance of facilities required for generation, transmission, and sale of power in the territories of their respective countries.

ARTICLE - 5

The parties entering into such agreements shall be granted all the incentives and concessions by the respective Governments, available under relevant laws, policies and regulations of the respective countries, for generation and transmission of power.

ARTICLE - 6

The parties entering into such agreements shall fulfill all necessary requirements stipulated in relevant laws and regulations and shall also comply with necessary technical requirements of the respective countries.

ARTICLE - 7

Power exchange between the two countries shall play an important role to ensure energy security. In this respect, India shall continue to supply power to Bhutan in the event of any shortfall of power supply in Bhutan through various arrangements and delivery points mutually agreed upon.

ARTICLE - 8

The two countries shall cooperate in the development of renewable energy and both countries shall support each other to develop projects under the Clean Development Mechanism of the Kyoto Protocol, using India’s carbon emission baseline, and any other international mechanisms that may come into force to encourage renewable energy.
ARTICLE - 9

For the construction and operation of hydro projects in Bhutan by public sector and government owned agencies, India shall facilitate the availing of facilities including financing from various financial institutions in India and deployment of human resources as may be desired by Bhutan.

ARTICLE - 10

Any differences regarding interpretation and application of this Agreement shall be resolved by mutual consultations between the two Governments.

ARTICLE - 11

This Agreement shall come into force on the date of signing of this Agreement. It shall remain valid for a period of sixty (60) years from the date of its coming into force and its validity may be extended by mutual consent. The provisions of this Agreement shall be reviewed after an interval of ten (10) years or earlier as required by either Government and shall be amended by mutual consent. Either party desirous of terminating this Agreement shall provide a minimum of one (1) year prior notice.

ARTICLE - 12

The quantum of electricity to be imported from Bhutan shall be appropriately enhanced as required during the review period.

In WITNESS WHEREOF the undersigned, duly authorized by their respective Governments have signed this agreement at New Delhi this the Twenty Eighth Day of July, Two Thousand and Six, in two (2) original copies in Hindi, Dzongkha and English and all texts being equally authentic. In case of any divergence in interpretation, the English text shall prevail.

FOR THE GOVERNMENT OF THE REPUBLIC OF INDIA  FOR THE ROYAL GOVERNMENT OF BHUTAN

(Sushil Kumar Shinde)  (Lyonpo Yeshey Zimba)
Minister of Power  Minister of Trade & Industry

New Delhi, July 28, 2006.

The Government of the Republic of India and the Royal Government of Bhutan, (hereinafter called the ‘Parties’);

Bearing in mind the friendly relations subsisting between the two countries and their peoples and working to strengthen the same;

Noting the provisions of Article 9 of the Inter-Governmental Agreement pertaining to the Tala Hydroelectric Project dated March 5, 1996 with regard to establishing the rate at which Tala power will be sold to India;

Recalling that currently the PTC India Ltd. (PTC) and the Department of Energy (DOE) are the designated nodal agencies in India and Bhutan respectively for inter-country transfer of power.

Have agreed, in pursuance of the said Agreement as follows:

(1) The tariff for both primary and secondary energy shall be Rs. 1.80 per unit with effect from the date of commercial operation of Tala Hydroelectric project.

(2) Review of the aforementioned tariffs shall be undertaken between the two governments and the review will be carried out as per frequency and on the basis as outlined below;

a) With respect to the provision in the Tala Agreement of 1996 pertaining to review every three years, it is hereby agreed that in the event the expenditure for Operations & Maintenance (O&M) exceeds 1.5% of the total cost to completion of the project escalated at 4% per annum, the same shall be reviewed and the excess expenditure compensated through suitable adjustment in tariff,

b) In case of any unforeseen event requiring excessive expenditure not covered by insurance, such unforeseen event would also be considered and provided for, through suitable adjustment.
c) The tariff arrived at (1) above will be increased by 1.0% every five (5) years till (the loan is fully repaid and thereafter @- 5% every five (5) years. However, since the loan liquidation will not necessarily fall in multiples of five (5) year period, it will be accordingly prorated to take into account the different increase rates.

(3) Through this Protocol, the two governments hereby authorize the designated nodal agencies to enter into a Power Purchase Agreement (PPA) taking into account the contents of this Protocol.

(4) The sale of surplus power from Tala project to India within the scope of the 1996 Agreement, this protocol and subsequent PPA between the designated, nodal agencies, shall be valid for a period of thirty five (35) years. The two governments may agree to extend the Agreement by mutual consent for which a new PPA will be negotiated.

(5) All other provisions of the March 5, 1996 Inter-Governmental Agreement between the Government of the Republic of India and the Royal Government of Bhutan regarding the Tala Hydroelectric Project shall remain unchanged.

IN WITNESS WHEREOF, the Parties have caused to be subscribed thereto signatures of their duly authorized representatives.

Written in English language in New Delhi and signed on the Twenty Eighth Day of July, Two Thousand and Six.

FOR THE GOVERNMENT OF THE REPUBLIC OF INDIA
(Sushil Kumar Shinde)
Minister of Power

FOR THE ROYAL GOVERNMENT OF BHUTAN
(Lyonpo Yeshey Zimba)
Minister Trade & Industry
MALDIVES

New Delhi, April 16, 2006.

The Defence Minister, Mr Pranab Mukherjee, handed over a fast patrol craft, INS Tillanchang, rechristened ‘HURAWEE’, to the Coast Guard of Maldivian Security Service. The formal transfer took place today, at a glittering ceremony held in the port city of Male – the Maldivian capital.

Speaking on the occasion, Mr Mukherjee stressed the “deep and enduring “relationship” that the two countries have enjoyed and that is growing from strength to strength over the years. The Defence Minister said, “the two countries have common perception on global issues of mutual concern. The prompt transfer of the patrol vessel, after the request was received from the Maldivian government, is just another manifestation of how much we value our relationship with them. “India was willing to extend any assistance that would promote peace and security in the Indian Ocean region, a prime prerequisite for ushering development and prosperity in this part of the world”, Mr. Mukherjee added.

INS Tillanchang, named after an island in the Nicobar group, has been built by Garden Reach Shipbuilders and Engineers, Kolkata. The ship was commissioned in 2001 and has rendered yeoman service to the Indian Navy, while based at Port Blair in the tri-services Andaman and Nicobar command. The craft is capable of attaining a top speed of 26 knots and has an endurance of over 7 days, covering a distance of approximately 2000 nautical miles. The ship will primarily be used for patrolling, policing and search and rescue missions in the vast areas of sea around the Maldivian chain of islands, considerably enhancing their capability against illegal poaching and drug trafficking.

The handing over ceremony was attended by a host of dignitaries, which included the President of Maldives Mr Abdul Gayoom, the Defence Minister Mr Ismail Shaifeeu, the Foreign Minister Mr Abdul Shaheed, top officials from the Indian Ministry of Defence and Indian Navy and members of the diplomatic corps.

The Defence Minister of Maldives lauded the role of Indian government in despatching ships with relief supplies with “promptness and
alacrity” to provide immediate succour to the affected people in the aftermath of the devastating tsunami in December 2004. ‘The role of the Indian government in launching Operation Cactus in December 1988 was a defining moment in the relationship between the two countries and a landmark event in the history of their nation’, he said.

After the ceremony, Mr Mukherjee called on the President of Maldives and held high-level interactions with the Defence and Foreign Ministers of Maldives, which “reiterated firm commitment of both the countries to the development of privileged partnership”.

Later, at a joint press conference with the Indian Defence Minister, the Maldivian Foreign Minister, Dr. Shaheed said that Maldives had a ‘very, very strong friendship with India’. In fact, cooperation with India is the lynchpin of our external relationship,” he added. Maldives is an important member and partner of the Indian Ocean region and strategically located astride the vital sea-lanes of communication in this part of the world. India’s mutually beneficial relationship with the Republic of Maldives will not only secure its vital interests in the region, but also reinvigorate ties with a key member of South Asian Association for Regional Cooperation (SAARC).

112. Press Release of the Ministry of Defence on the Defence Minister’s visit to Maldives.

New Delhi, April 17, 2006.

India and Maldives have decided to develop “a privileged partnership” between the two countries. Addressing a joint press conference with the Maldivian Foreign Minister Dr. Ahmad Shaheed in Male a short while before departing for home at the end of his two-day visit to the Island country yesterday, the Defence Minister Shri Pranab Mukherjee said that India would like “to maintain and consolidate its close links and trust with Maldives and to be of assistance, wherever and whenever we can, with our friends”. Describing Maldives as an important member and partner of the Indian Ocean Region, Shri Mukherjee said that India’s mutually beneficial relationship with the Republic of Maldives will not only secure its vital interests in the region, but also reinvigorate our ties with a key member of
the South Asian Association for Regional Cooperation (SAARC). He reiterated New Delhi’s desire to strengthen relations with Maldives “on the basis of equality and respect so as to elevate them to an ever high level”.

Earlier, in the day, India handed over the INS Tillanchang to the Maldives National Security Coast Guard at an impressive ceremony held in the port city of Male – the capital of Maldives. With a gentle breeze blowing from the Indian Ocean, on an otherwise sultry morning, the Indian ensign was hauled down for the last time from INS Tillanchang. The Indian crew disembarked from the ship and the Maldivian crew took charge. The Maldivian National flag was hauled up and the ship was rechristened “Huravee” after a Maldivian hero and a freedom fighter. A galaxy of dignitaries of Maldives including the President Maumoon Abdul Gayoom, Minister of Defence and National Security Mr Ismail Shaifeeu, Foreign Minister Dr Ahmad Shaheed attend the ceremony. The Indian side was led by the Defence Minister Shri Pranab Mukherjee. Others who attended the function included the Indian High Commissioner Shri AK Pande, Chairman and Managing Director of Garden Reach Shipbuilders and Engineers Rear Admiral TS Ganeshan, senior officials from the Ministry of Defence and Indian Navy. Speaking on the occasion Shri Mukherjee described the event as a “truly landmark and historic one” and announced that the Indian Navy will assist the National Security Service in the maintenance and up keep of this patrol craft during her lifetime.

Named after one of the islands of the Andaman and Nicobar chain, the INS Tillanchang, built by Defence Public Sector Undertaking, Garden Reach Shipbuilders and Engineers (GRSE), Kolkata was inducted into the Indian Navy five years ago. The 260 tonne Trinkat class fast attack craft INS Tillanchang is fitted with state-of-the-art navigation aids, communication and GMDSS Systems, which facilitate her role-worthiness and effectiveness in operational missions, air operations, safe navigation and survival at sea. The main armament is the indigenous 30 mm gun, manufactured by Ordnance factory Medak. Two high speed boats have been provided onboard for facilitating rapid interception in shallow waters and lifesaving tasks. Powered by MTU engines of German make it has a maximum speeds of 28 knots and is capable of extended deployment up to 2000 nautical miles. The ship is also capable of mobilizing a naval Quick Reaction Team of up to 35 men at short notice.

The ship will primarily be used for patrolling, policing and search and rescue missions in the vast areas of sea around Maldivian chain of
islands, considerably enhancing their capability against illegal poaching and drug trafficking.

Speaking on the occasion, the Minister of Defence and National Security of Maldives Mr. Ismail Shaifeeu lauded the role of Indian government in dispatching ships with relief supplies with “promptness and alacrity” to provide immediate succour to the affected people in the aftermath of the devastating tsunami in December 2004. ‘The role of the Indian Government in launching Operation Cactus in December 1988 was a defining moment in the relationship between the two countries and a landmark event in the history of their nation’, he said.

Later in the day, Shri Mukherjee called on the President of Maldives and held high level interactions with the Defence and Foreign Minister of Maldives.
**NEPAL**

113. **Response of Official Spokesperson to a question on the withdrawal of ceasefire by the Maoists in Nepal.**

New Delhi, January 2, 2006.

In response to a question on the withdrawal of ceasefire by the Maoists in Nepal the Official Spokesperson said: “This is an unfortunate decision. We have consistently called upon the Maoists to abandon the path of violence and terror, accept the discipline of multi-party democracy, and work for a political settlement that contributes to the political stability and economic prosperity of Nepal.”

* On 2nd January the Maoists ended their unilateral four-month old cease-fire. They said: “we want to make it clear our future action will be targeted against the autocratic regime. We are compelled to go on offensive not only for the sake of peace and democracy but for the sake of self-defence.” The Royal Army was ambivalent about the announcement. “The Army’s position has not changed whether there is a ceasefire or not, we are acting on the government’s mandate. The army will continue to do its duty,” a senior army officer said.

New Delhi, January 19, 2006.

We are receiving reports from Nepal about the arrest of leaders of political parties as well as human rights and civil society activists. We are also aware of the latest measures announced by His Majesty’s Government of Nepal curbing political activity in Kathmandu and other cities¹.

These actions of His Majesty’s Government of Nepal are regrettable and a matter of grave concern to all those who wish to see the constitutional forces in Nepal working together to achieve peace and stability in the country.

1. India was deeply concerned about these developments and the Prime Minister expressed the view that peace and stability in Nepal was vital to India for more than one reason. “Nepal is a flourishing democracy and all concerned should work to realize these goals.” Bringing back peace in the Kingdom was a step-by-step process and the King should have meaningful negotiations with political outfits interested in preserving democracy. But the King remained uncompromising. In view of the uncompromising attitude of the King to the political process, advocated by India, New Delhi felt compelled to continue with the ban on arms supply to Nepal. Indian Ambassador in Kathmandu told the local Kantipur TV channel on January 9, that “the Army was being used for arrests and detention, raids on media and other various acts which are not the task of a professional army...Let us not forget that India is a democracy and it has political compulsions. We could hardly go for training and equipping an Army that is not confined to protecting the state. That is why we cut off lethal supplies.” He added: “What we don’t agree with is a monarchy that is a political player competing for power with the political parties. That role belongs to multi-party democracy, to the political parties and representatives elected by the people.” Meanwhile, expressing “dismay” over the arrest of political activists in Nepal ahead of a political rally, UN Secretary General, Kofi Annan called for initiation of an inclusive national dialogue to resolve the issues facing the country. On January 19 the Security forces detained 107 activists and political leaders and cut mobile telephone services in a crackdown condemned by India, US, the EU and Japan. More detentions took place the next day.

New Delhi, February 9, 2006.

We have seen the information provided by the Election Commission of Nepal on the conduct of the elections to the municipalities in Nepal.

The fact is that the elections have been held against the backdrop of a boycott by the major recognized political parties, sharp curtailment of their legitimate activities, and continued arrest and detention in various forms of many of their leaders. The Maoists have engaged in several violent attacks in the run up to the elections.

We are of the view that the grave challenges facing Nepal demand the initiation of a genuine process of national reconciliation, dialogue and participation which can facilitate a peaceful political settlement. Any credible electoral exercise should have the active involvement and participation of all the mainstream parties. Only then would such elections be able to contribute to the restoration of democracy and political stability.

As a close and friendly neighbour of Nepal, India wishes to see an early return to peace, stability and development in Nepal.

H.E. Bharat Bahadur Thapa,
Secretary,
Ministry of Industry, Commerce and Supplies,
His Majesty’s Government of Nepal,
Kathmandu, Nepal.
Excellency,

I have the honour to state that our two Governments have completed the review of the Protocol and Memorandum to the Treaty of Transit between the Government of the Republic of India and His Majesty’s Government of Nepal, in accordance with Article XI of the Treaty. Following the review, the Treaty signed on 6th January 1999 and in force until 5th January, is extended for a period of seven hears until 5th January 2013,

Amendments in the Protocol and Memorandum to the Treaty agreed to by the two sides are contained in the Annexures 1 – 3 to this letter and shall constitute an integral part of the Treaty.

Transit facilities through Phulbari route and Radhikarpur route relating to Nepalese trade with and through Bangladesh would continue to be governed by the terms of existing separate arrangements concluded between the two governments.

I shall be grateful if you could kindly confirm¹ that the foregoing correctly sets out the understanding reached between our tow Governments.

Please accept, Excellency, the assurances of my highest consideration.

(S. N. Menon)
Commerce Secretary, Government of India

¹. This was confirmed by the Nepalese Commerce Secretary on the same day.
ANNEXURE – 1

Agenda 2: Designation of the routes for sensitive goods

In the Protocol to the Treaty, under Section II, paragraph 4, after sub-paragraph (a), insert a new sub-paragraph (b)

Goods declared sensitive for foreign trade by Government of India from time to time with prior intimation to His Majesty’s Government of Nepal, shall be permitted transit on the following routes:

1) Kolkata – Naxalbari (Panitanki),
2) Kolkata – Jogbani,
3) Kolkata – Raxaul,
4) Kolkata – Raxaul – ICD Birgunj,
5) Kolkata – Nautanwa (Sunauli),
6) Kolkata – Nepalgunj Road,
7) Kolkata – Banbasa.

The existing sub-paragraph (b) will be re-designated as sub-paragraph (b1) and shall read as follows:

Sensitive goods shall be permitted transit by marine container or pilfer-proof container trucks or railway wagons at the option of the importer/exporter.
ANNEXURE – 2

Agenda 3: Linkage with Rail Services Agreement

In the Protocol to the Treaty, insert a note under Section II, Paragraph 1, under the words “Note: Kolkata shall include Haldia”.

Note:

(i) Kolkata – Raxaul route also includes movement of goods-in-transit by direct train services from Calcutta/Haldia Ports to Birgunj in Nepal via Raxaul.

(ii) The operation of rail services between Kolkata/Haldia Ports and Birgunj in Nepal would continue to be governed by the India – Nepal Rail Services Agreement, while transit of goods shall be governed by the Treaty of Transit.

Procedure for Customs examination and clearance for goods on this route are annexed to the Rail Services Agreement and are also set out in Memorandum.

ANNEXURE 3

In the Protocol to the Treaty in Paragraph 1 and (I) covered accommodation delete the following:

‘A’ shed Kidderpore Docks –Covering approximately 3135 Sq.metres

(including ‘A’ Annex)

Calcutta Jetty Shed No. 8

Ground Floor.
117. **Letters of Exchange between India and Nepal to provide for the transit of Indian goods from one part of India to another through Nepal.**

*Kathmandu, March 30, 2006.*

Excellency, Consequent upon the understanding reached between His Majesty’s Government of Nepal and the Government of India and in the course of the meeting to review the Treaty of Transit between Nepal and India, it was agreed that Nepal shall accord on a reciprocal basis freedom of movement of the Indian goods from one part of India to another through Nepalese territory by inserting a new provision which runs as follows:

“In keeping with provisions of Treaty of Transit between Nepal and India, it was agreed that for the movement of goods and Indian vehicles from one part of India to another through Nepalese territory, the procedure prescribed for export of goods from Nepal to third countries shall apply *mutatis mutandis* except that there will be no cash deposit or bond system upon the necessary undertaking given by the Indian customs authorities. Further, as regards the movement of baggage accompanying a person traveling from one part of India to another through Nepalese territory, His Majesty’s Government of Nepal shall prescribe a simplified procedure in respect of such articles of baggage as His Majesty’s Government of Nepal may specify as being likely to be retained in Nepal having regard to the differences in prices in India and Nepal and other relevant factors. For other articles of baggage accompanying a passenger, movement shall be freely allowed.”

I shall be grateful if you could kindly confirm¹ that the forgoing correctly sets out the understanding reached between our two Governments.

Bharat Bahadur Thapa  
Secretary  
Ministry of Industry, Commerce, Supplies  
His Majesty’s Government of Nepal

H.E. Mr. S. N. Menon  
Commerce Secretary  
Government of India, New Delhi, 110011.

¹ This was confirmed by the Indian Commerce Secretary the same day.

New Delhi, April 6, 2006.

The situation is an evolving one. For the present let me only say that we are concerned over the arrests and detention, once again, of several political leaders, professionals and students which we strongly deplore. These actions by the government in Nepal are counter-productive. There needs to be cooperation among the constitutional forces in Nepal, not confrontation. We urge the immediate release of those arrested and a return to the path of dialogue and reconciliation.

Earlier in response to another question on Maoist violence in Nepal on April 5 the Official Spokesperson had said:

We condemn acts of violence by the Maoists, including last night’s attack at Malangawa in Sarlahi district. We are awaiting full details.

New Delhi, April 12, 2006.

“We are deeply concerned over the turn of events which have undermined political stability and have also seriously affected the economy of Nepal. It has always been our view that the current crisis in Nepal can only be resolved through a genuine process of dialogue and reconciliation. The resort to repressive measures by the government in Nepal can only undermine prospects for this process. We hope that in view of the seriousness of the situation, a genuine effort will be made by His Majesty’s Government of Nepal to initiate a dialogue with the political parties at the earliest.”

_In response to another question on recent violence by the Maoists in Nepal the Official Spokesperson said:_

"India has always been of the view that a purely military solution to the current political crisis is not feasible and that all parties concerned must seek a political solution which is based on the principle of multi-party democracy. The Maoist movement must abandon the use of violence as a political instrument and commit itself to the principles of democracy thereby creating conditions for joining the political mainstream.”

120. Media Briefing by Official Spokesperson on the meeting of Indian Ambassador with the King of Nepal.

New Delhi, April 17, 2006.

**Question:** Any reaction to what is happening in Nepal? Yesterday what happened when our Ambassador met the King?

**Official Spokesperson:** The Ambassador’s meeting with the King was part of a continuing interaction with the Government of Nepal. Naturally, the current political situation was discussed and our concern over the situation as well as the need for an immediate initiation of a dialogue between the Government of Nepal and the political parties was underlined by the Ambassador.
Question: Who took the initiative for yesterday’s meeting in Nepal? Has there been any follow up by the King on the issue of dialogue with the political parties?

Official Spokesperson: We do not know. We are monitoring the situation very closely. As you have reported already there was a meeting taken by the Prime Minister to review the developments in Nepal and we are monitoring the situation. We are saying what we have always said - that the political parties and the monarchy have to work together and take forward the process of reconciliation and dialogue and develop a national consensus.

Question: Did we ask the King to institute and all party government in Nepal. Do we believe that the King may abdicate?

Official Spokesperson: Let me answer part of the first part of your question, which is essentially that while I cannot go into the details of the meeting between our Ambassador and the King, we have stressed the need for an immediate initiation of dialogue between his government and the political parties.

Question: When you say the political parties and the monarchy work together in Nepal, does that include the Maoists too?

Official Spokesperson: The political parties are very well known political parties. It depends on who joins the political parties. If you join the political mainstream...

Question: India has said in the past that Maoists are terrorists. The December agreement that took place between the Maoists and the political parties of Nepal in India, does the Government of India have any facilitation...

Official Spokesperson: We have already issued a statement on that agreement¹. I refer you to our website.

Thank You.

¹ Please see document no. 162 (p. 532-33) in “India Foreign Relations-2005” Edited by A.S. Bhasin
121. Media Briefing on the visit of Special Envoy of the Prime Minister Dr. Karan Singh to Nepal.

New Delhi, April 18, 2006.

Official Spokesperson: Good evening. Dr. Karan Singh, Member of Parliament will be visiting Nepal as the Special Envoy of the Prime Minister from April 19, 2006 that is tomorrow. During his visit the Special Envoy is expected to receive an audience with His Majesty King Gyanendra Bir Bikram Shah Dev. He is also expected to meet political party leaders in Nepal.

Question: What message is he carrying?

Official Spokesperson: I do not have details about the message that the Special Envoy would be carrying.

Question: What is his brief actually?

Official Spokesperson: As you know the current political and economic situation that has developed in Nepal is a cause for concern for India. Special Envoy’s visit is taking place in that background.

Question: Will the Foreign Secretary be there?

Official Spokesperson: The Foreign Secretary is expected to join Dr. Karan Singh in Kathmandu, yes.

Question: Is India going to press on a fixed time frame for the restoration of democracy?

Official Spokesperson: As I said I do not have the details of what message the Special Envoy will be carrying but as you know our position all along has been that there is a need for genuine dialogue between the constitutional forces in Nepal to overcome the crisis that that country is now facing. A solution to the problems of Nepal has to be found by the people of Nepal themselves through a political settlement but India is ready to support all efforts towards this end.

Question: But the political parties have been asking India to play a greater role. Is there any sort of reaction from the King himself?

Official Spokesperson: Well, you know we have been monitoring the process closely. Our Ambassador met His Majesty the King the other day on which we briefed you on, and now the Special Envoy is going.
**Question:** Is the Special Envoy related to the King?

**Official Spokesperson:** I do not want to get into these issues, let us stick to the policy issues.

**Question:** Are we advocating some sort of interim government...

**Official Spokesperson:** I have just told you what our position is. I have at the same time told you I do not have the details of the message he would be carrying.

**Question:** Mr. Sarna, do you have the names of the other political party leaders whom he would be meeting?

**Official Spokesperson:** No, at the moment I am not aware of the details of his other engagements. As they are worked out and confirmed, you will get to know.

**Question:** How long will he be there?

**Official Spokesperson:** The visit begins tomorrow. As you can see I have not given you any time and date of the audience. So, he will stay till that at least and his other engagements.

**Question:** You say that the solution in Nepal has to be found by the people of Nepal for a political settlement...

**Official Spokesperson:** peaceful political settlement...

**Question:** ...yes, would India prefer that the elections, which as announced by the King next year, be held sooner rather than later?

**Official Spokesperson:** You know, when I say that the solution has to be found by the people of Nepal themselves, it is not a question of India’s preferences. As I am telling you, it is up to the people of Nepal themselves to find a solution that they feel meets the needs of reconciliation and general national consensus that is built up in that country towards a peaceful political settlement. India’s role at this stage is to be standing ready to support all such attempts. Thank You.
122. Press Release issued by the Embassy of India in Kathmandu on the visit of Dr. Karan Singh, MP, Special Envoy of the Prime Minister to Nepal.

Kathmandu, April 20, 2006.

Dr. Karan Singh, Member of Parliament, paid a visit to Nepal as the Special Envoy of the Prime Minister of India from April 19-20, 2006. During his visit, the Special Envoy received an audience with His Majesty King Gyanendra Bir Bikram Shah Dev on Thursday, 20 April 2006 and held meetings with leaders of prominent political parties on 19 and 20 April. The visit of the Special Envoy took place in the backdrop of the current political developments in Nepal, which have been a cause of deep concern to India and other members of the international community.

In his interactions, the Special Envoy has stressed the need for genuine dialogue between the constitutional forces in Nepal, with the objective of urgently restoring multiparty democracy in the country in order to overcome the crisis that Nepal is faced with. He has conveyed India’s readiness to support all efforts towards this end while emphasizing that a lasting solution to the problems of Nepal has to be found by the people of Nepal through a peaceful political process.

123. Media Briefing by Official Spokesperson on the visit of Special Envoy to Nepal.

New Delhi, April 21, 2006.

Dr. Karan Singh, Special Envoy of the Prime Minister returned yesterday and today he has briefed the Prime Minister on the developments in Nepal and conveyed his assessment of the situation after the meetings that he has held with King Gyanendra, with other political leaders and with civil society leaders including Shri G.P. Koirala, Sher Bahadur Deuba, Madhav Nepal, and Surya Bahadur Thapa. It remains the considered view of Government of India that the situation in Nepal is continuing to deteriorate undermining the political stability and economic viability of that country. And it is our earnest hope that the process of dialogue and reconciliation will begin immediately in order to restore the political normalcy and begin the difficult task of economic recovery. So, this is the position at the moment.
As you know there has also been a meeting between the Indian Ambassador and King Gyanendra as a follow up to the visit of the Special Envoy. That is all I have.

**Question:** Some announcement…

**Official Spokesperson:** Well, we have seen some reports in the media that some announcement is expected. Let’s wait and watch.

**Question:** The Special Envoy has been repeatedly saying that an announcement is to be made. Isn’t it embarrassing for the Government of India that no announcement has been made and this has been happening in full public gaze?

**Official Spokesperson:** I do not see this in any case as any cause for embarrassment. I think the developments in Nepal, the situation in Nepal are a matter of concern for us. They are a matter of deep concern. The Special Envoy has been sent by the Prime Minister. He has conveyed the Prime Minister’s message and he has come back and we have only seen these reports about this proposed announcement. So let’s wait and watch, let’s monitor the situation.

**Question:** What was the response of the King?

**Official Spokesperson:** I do not have that to share.

**Question:** Does India continue to believe that constitutional monarchy is one of the pillars in Nepal?

**Official Spokesperson:** Our position on Nepal is quite clear. We have said that all constitutional forces must come together in a process of dialogue and reconciliation.

**Question:** Would you consider the King to be constitutional…

**Official Spokesperson:** As I have said it is a very fast evolving situation. It is a very serious situation and it is for the people of Nepal to come up with a political and a peaceful and a lasting solution.

**Question:** But what would we want the King to do now precisely?

**Official Spokesperson:** I think you are now getting into repetition. I have told you yesterday the message we have conveyed. We have conveyed the message that there should be a return to multiparty democracy. We have conveyed that there should be a process of dialogue and reconciliation.

**Question:** The meeting of the Ambassador with the King was at our instance or…

**Official Spokesperson:** It was a follow up meeting to the meeting of
the Special Envoy. I exactly do not know how the message went by but obviously it was a meeting which was mutually convened.

**Question:** Any further readout on what happened?

**Official Spokesperson:** No, not at the moment. I do not have a readout on that.

**Question:** It seems that Nepal is moving towards anarchy. The movement is going stronger and stronger. Do we have any contingency plan?

**Official Spokesperson:** We would not like to get either panicky or speculative. I think the concerns that you mentioned are very valid and that is why we have been monitoring this very closely. That is why the Prime Minister had sent a Special Envoy. So, these concerns are quite valid.

**Question:** We have been saying in the past few weeks that the King should restore democracy urgently? How long will we wait?

**Official Spokesperson:** As I said let’s wait and watch and let’s monitor this closely. It is a matter which is with the people of Nepal. We stand ready to help them come back to the path of democracy and we have conveyed all our messages yesterday as well as today. Thank You

---

**124. Press Release of the Ministry of External Affairs on the statement of Nepalese King.**

**New Delhi, April 21, 2006.**

We have seen the address to the Nation by His Majesty, King Gyanendra. India welcomes his intention to transfer all executive power of the State to a government constituted by the alliance of the seven political parties, which has been in the forefront of the movement by the people of Nepal for the restoration of multi-party democracy and their democratic freedoms. This action by His Majesty the King of Nepal, who has reaffirmed his commitment to multiparty democracy and constitutional monarchy, should now pave the way for the restoration of political stability and economic recovery of the country.

The people of Nepal have undergone acute suffering and economic hardship during the last several months, but have always kept their faith with democracy and freedom. They deserve our respect and admiration. We sincerely hope that the aspirations of the people of Nepal can now be
addressed by enabling them to enjoy their rights through a democratic electoral exercise free from the threat of violence.

India has stood by the people of Nepal in their hour of need and now stands ready to render all possible assistance to enable Nepal to achieve political stability and economic recovery at the earliest possible date.

125. Press Briefing by Foreign Secretary Shyam Saran on Nepal.

New Delhi, April 22, 2006.

DIRECTOR (XP) (SHRI DINESH BHATIA): Good evening ladies and gentlemen. We have amongst us the Foreign Secretary Mr. Shyam Saran. May I request him to please begin.

FOREIGN SECRETARY (SHRI SHYAM SARAN): Good evening to all of you. I thought it might be useful for me to just share with you our current assessment of the developments taking place in Nepal.

As you know, the situation has been evolving at a rather rapid rate. We would like to clarify for you how we look at the situation and also what has been our engagement with Nepal concerning these recent developments¹. Let me begin by drawing your attention to the fact that India has all along supported the restoration of multi-party democracy in Nepal and we have consistently supported the democratic forces.

1. The change in Government of India's policy towards Nepal was hinted at by the Prime Minister too in his answers to question in Hanover at his press conference. "Developments in Nepal are of vital concern to us", said the Prime Minister in response to a question about Nepal's political crisis and what India could do to resolve it. "Ever since February 2005, we have been concerned about the developments in Nepal which led to the removal of multi-party government." He explained that India’s efforts had been to “persuade the King that restoration of a multi-party government is absolutely essential to deal with the crisis that has arisen.” His special envoy last week “impressed upon the King the need to move quickly and fast enough to restore multi-party democracy and to hand overall executive power to that government. I think since then the political parties have been discussing among themselves how they can cooperate to carry forward this whole process.” Earlier on way to Hanover Prime Minister gave hint of a slightly different approach. In a conversation with the journalists accompanying him on board the Air India flight he was asked certain questions to which he responded. These were:

Q: There has been a major development in Nepal. But on the streets the mood seems
You will recall that when on February 1, 2005, a state of emergency was declared and the then civilian Government was dismissed by His Majesty the King, we had condemned that action. You would recall that we had also taken the step of suspending arms supplies to Nepal. This was an expression of our support for the restoration of democracy. Since then, all these last several months, we have been very consistent in our support and the arms suspension has remained in force. Our consistent approach has been to try and persuade the constitutional forces in Nepal to work together in order to restore democracy, in order to bring about political stability as well as economic recovery in the country.

We have always felt that political power should be exercised by the representatives of the people, and it is for them to really decide what the future of Nepal is going to be. But we as a close neighbour of Nepal, as a country which has very very intimate cultural and ethnic links with this country, it has always been our wish to seek peace and prosperity in Nepal because stability in Nepal is in the best interests of India. We have also believed that democracy in Nepal is the best guarantee of such stability.

It is in pursuit of this approach that when the situation in recent weeks started deteriorating, the Prime Minister decided to send a Special Envoy, a very experienced political personage Dr. Karan Singh to Nepal. I was present with Dr. Karan Singh in Kathmandu a couple of days ago. We had meetings with the political party leaders. We conveyed to them our continuing support to the democratic aspirations of the people of Nepal. The Government of India has come out with an endorsement of the King’s action. Could you please give us an update of this?

Ans: Dr. Karan Singh went as my special envoy. He gave his assessment of the situation in Nepal to His Majesty. I think by and large whatever moves the King has made, they are in the right direction. The important thing is there should be the restoration of multi-party democracy, that there should be a government in place which exercises all executive powers. I think the process has begun.

Q: As for the demand for the revival of parliament, and further down the road, for the constitution of Constituent Assembly, the King has said nothing and in fact, seems to be against it.

Ans: Well our role is to ensure that all elements of the Nepali polity are talking to each other. We are not dictating to them. Our role is the role of a conciliator, to ensure that the democratic process is restored. Now I hope the King and the political parties will be talking about the future consequential steps.

Q: The future of the monarchy itself is up in the air. It’s a question mark. Are we keeping our position open or do we stay with the old position—a constitutional monarchy and multi-party democracy?

Ans: So far our position has been that constitutional monarchy and multi-party democracy are the two pillars of Nepali polity. There is no change in that position.
Nepal. We also conveyed our admiration for the fact that the Seven Party Alliance had stood together united. We also expressed our appreciation and our admiration for the manner in which they had led the political movement for the restoration of democracy in Nepal. Our message when Dr. Karan Singh met His Majesty the King was to share with him our assessment of the situation, the groundswell of public opinion, groundswell of popular emotion in favour of the restoration of democracy. We asked His Majesty the King to take stock of the seriousness of the situation and take appropriate measures, make the appropriate gestures in order to ensure the restoration of multiparty democracy and to respond to the sentiments of the people.

In that context, I would like to mention that yesterday you would have seen the press statement which was made by our Spokesman on the proclamation made by His Majesty the King. The one aspect which we thought was very important was the aspect of the intention of His Majesty the King to transfer all executive authority to a Government which would be formed by the Seven Party Alliance under a leader of its own choosing. Having said that we of course realize that it is really up to the people of Nepal to decide in what manner this is to be brought about. We do not wish to be in a position to prescribe for Nepal, and to prescribe for the people of Nepal in what manner they would go about realizing their democratic aspirations.

We have stood by the people of Nepal in their movement for realizing their democratic aspirations. Yesterday you would have seen in our press release that we also stated that the people of Nepal deserve our respect and admiration for the manner in which through peaceful demonstrations they have given expression to their desire for multiparty democracy. That admiration is very much an expression also of the very close affinity that we feel for the people of Nepal. We have also pointed out in the statement that we are very conscious of the great hardship that the people of Nepal have been facing as a result of prolonged economic and political turmoil. We have also expressed our intention that in the task of restoring political stability and economic recovery, India would stand ready as always to extend all possible assistance and support to Nepal.

I would like draw attention to the fact that this morning there have been some reports that there was some dissatisfaction in certain quarters about India’s stand and I think there was a misrepresentation of India’s stand by some elements who are perhaps hostile to the very close and
friendly relations between India and Nepal. I would like to state here that these kind of sentiments which are being spread amongst people have absolutely no basis. There is no doubt of India’s commitment to democracy in Nepal and to our support for the democratic forces in Nepal. I think this message should go very loud and clear to the people of Nepal.

I would like to mention that we have seen the press release issued by the alliance of the seven political parties today. They have had a high-level meeting of the alliance in the afternoon today. The press release has reiterated the agenda of the Seven Party Alliance. We, of course, support the view of the Alliance that restoration of peace and multiparty democracy in Nepal is the need of the hour. The Alliance of course has been in the forefront, as I said, of the peaceful movement for the restoration of multiparty democracy in Nepal. They have given expression to the aspirations of the people of Nepal for democratic values and freedom and we believe that the sentiments of the people of Nepal need to be respected.

We are very concerned about the situation in Nepal and we believe that there should be a constant review of the manner in which these developments continue in the coming days because we also believe that the economic situation in the country is deteriorating very rapidly. I would like to draw your attention to the fact that for the last several days there has been a long line of cargo vehicles and tankers which have been backed up on the Indian side of the border. It is our effort to see that as soon as conditions permit we would try and facilitate as much as possible the movement of cargo of essential commodities from the Indian side into Nepal because the shortages that are now beginning to appear in places like Kathmandu or in Pokhra, this would only increase the economic hardship that the people of Nepal are suffering. And it is always going to be our endeavour that our brothers and sisters in Nepal do not suffer because of the possible disruption of the supply of essential goods. So, even though because of the conditions in Nepal the cargo vehicles have been lined up on the Indian side we are trying our very best to see how we can facilitate the movement of essential goods so that the situation is not further exacerbated.

I think I will stop here. I would be very happy to take any questions from you.

QUESTION: What the King has said was almost similar to what he announced a few days ago…What exactly you see the difference? What he said before he tried to present in the new bottle. He did not clarify when
the elections will be held. Second question: what signals do you get from
the Narayanhiti Palace? Did he appreciate the steps taken by India or has
seen it as an interference?

FOREIGN SECRETARY: We commented on the King’s
announcement. One of the main point was that the executive power should
go to the Seven-Party Alliance; and they have the authority to elect their
leader, the prime minister. What he has said now is somewhat different
from what he said earlier; but as I said this has to be taken forward. It is up
to the Seven-party Alliance and the people of Nepal to decide how to take
it forward. It is not for India to suggest how to take it forward. Our comment
was on principle; that the full executive power should not be in the hands
of the King; that should be in the hands of the people. Our comment was
on that principle; how this principle is put into force , is a mechanism which
the people themselves have to think and implement it. As for as Indian
cooperation is concerned there is nothing interference in that. Nepal is
very close neighbour of India. What ever happens in Nepal, will have impact
on India.

QUESTION: IS the Nepal King also believes in that…that it is not
interference?

FOREIGN SECRETARY: We have not discussed with him whether
there is Indian interference or not. Our special envoy gave our assessment
to him as a good neighbour, as to how we perceive the developments that
are changing the atmosphere. We also told him that if early steps were not
taken it is possible that the situation in Nepal can further deteriorate. We
also told him that the principles of democracy; the democratic values and
advised him that it was very necessary to respect the demand for democracy
being made by the people of Nepal. I don’t think this can be taken as an
interference.

QUESTION: You referred to the groundswell and the reality there.
How come there was a mismatch between India’s assessment and what
the parties involved in the movement have said because all of them have
rejected the King’s proposal yesterday?

FOREIGN SECRETARY: I think you should be careful not to take
India’s statement yesterday as an acceptance of this or rejection of that
proposal. As I said, what we tried to put across in the statement yesterday
was that the principle that power should be handed over by the monarchy
to the people of Nepal, that particular principle the King in his statement, in
his proclamation, appears to have conceded. How that is to be taken forward in terms of the actual formation of a Government with all the full executive authority, how the process of democratization would be carried forward, this is really for the people of Nepal to decide. In this regard we will respect the decisions of the people of Nepal.

QUESTION: The way India responded to King’s announcement, the people of Nepal are raising anti-India slogans. They are not accepting it in a general manner.

FOREIGN SECRETARY: I do not think that it is the people of Nepal who have rejected or responded negatively to what India has said. I think there have been certain sections or certain elements who have deliberately distorted the implication of what India has said. We have been and continue to be firmly on the side of democratic forces in Nepal. There should be no ambiguity about that.

Our reaction to His Majesty’s statement yesterday was to welcome the principle that full executive authority would be handed over to where it belongs, that is, to the people of Nepal. If you look at the rest of the statement which was made yesterday I think it would be very clear. We have expressed our deep admiration for the people of Nepal for the manner in which they have upheld their faith in democracy, their faith in the realization of their own democratic rights. So, there should not be any room for any ambiguity about India’s stand. After all, as I mentioned to you, right from February 1, 2005, India has taken a very clear-cut stand with regard to the restoration of democracy. How can there be any question about India’s stand? We were the first to stop the supply of arms to Nepal. We persuaded our other international partners to join us in the same action. So, it is we who have in fact gathered together the international community also to work together with us for the restoration of democracy in Nepal. How can there be any doubts about India’s credentials in this regard?

QUESTION: As the demonstrations are going on in Nepal, if in a situation they throw out the King and if the King asks for political asylum from the Indian Government, will the Indian Government provide the political asylum to the King or not?

FOREIGN SECRETARY: I think you are asking a hypothetical question to which I do not think a response is necessary at this point of time.

QUESTION: Sir, you said India will not interfere there. But what you
are saying is that what announcement the seven-party alliance has made, he should accept. On the other hand when the seven-party alliance has rejected it how far can we support constitutional monarchy?

FOREIGN SECRETARY: We believe that the people of Nepal should decide the future of Nepal. It is not our right to say how you constitute the government. It is not the right of India in Nepal to suggest what type of government they have there. But this is certainly our duty as a close neighbour to take note of the delicate situation created in Nepal, it can result in impacting us. We have to review this all the time. Our support for democracy has been consistent in Nepal; we do not regard that interference in any way.

Third thing that you said that the seven-party alliance has rejected the offer made by the King. As far as I see, they said that the seven-party alliance government; they want it to be through the restoration of parliament. They have their own road map. It should be fully authorized government and how it is formed that the people pf Neal will decide. We have our own principle, and that is the principle of the political parties, that is the principle of the people as well, that the political power should come from the King to the hands of the people. On this principle there is no difference of opinion among us, the political parties or the people of Nepal. It is in the hands of Nepali people what type of executive government is formed, what is the road map; what should be its road map etc. we cannot take a decision on that. We want to give this message that it is in the hands of the people of Nepal how they want to make their future, want to revert to democracy...India will respect the wishes of the people of Nepal.

QUESTION: Foreign Secretary, you are saying that you support the views of Seven Party Alliance in restoring democracy yet you do not want to get involved in the mechanism. If the Seven Party Alliance says that it wants not only the executive power, state power, will you support any mechanism that the Alliance will put forward? What is your view on that the King is actually playing games by offering the post of Prime Minister to the Seven Party Alliance because they would not be able to name one?

FOREIGN SECRETARY: I think what you should really be looking at is the response from the parties that what the King has said is not enough. So, more needs to be done. But in terms of that particular principle that power should go from the monarchy to the people, I do not think there is any difference of opinion as far as India is concerned, as far as the
international community is concerned - you have seen the statements by several friendly countries – or as far as the political parties are concerned. So, we have very consciously avoided getting involved in details of what needs to be done and what need not be done in terms of measures. We have always stood by a certain principle and that principle is the restoration of multiparty democracy in Nepal. If there is a sense amongst the political parties that the King perhaps cannot be trusted, or that he needs to do more in order to display his good faith, that is the viewpoint of the political parties. As I said, we will confine ourselves to continuing to offer our full support for the restoration of democracy in Nepal and let the people of Nepal decide how they want to go about it.

QUESTION: What if protests continue, violence continues and things snowball?

FOREIGN SECRETARY: This is why we have been so concerned because if the demonstrations continue, if the agitation continues we are also concerned about the possibility of violence. If there is violence, there is disruption of life not only in the valley but in the other parts of the country. I just mentioned to you the tremendous economic hardship which is appearing because of the disruption of supplies. All these things are matters of major worry for us. So, certainly our desire is to see that there should be an early restoration of political stability and economic recovery in the country. It is in the best interests of Nepal and it just so happens to be in the best interest of India as well.

QUESTION: I am a Nepali. I know very well what is happening in Nepal. I would like to know if you would resume the military assistance to Nepal in this period?

FOREIGN SECRETARY: We are not looking at this sort of question at this point of time. At this point of time the first order of business is for political stability and economic recovery to be established in Nepal. We would also hope, we have always said this, that with regard to the armed conflict in Nepal, there is no purely military solution. We have to find a political solution. Therefore, if there are negotiations through which the Maoists can be brought into the political mainstream, but on the basis of the principles of multiparty democracy and on the clear abandonment of violence as a political tool, I think this is something that should be welcomed.

QUESTION: Has the Government of India been in touch with any of the SPA leaders today or with the Palace today?
FOREIGN SECRETARY: We have been in touch with a very wide section of people in Nepal since quite some time and today as well.

QUESTION: And with the Palace?

FOREIGN SECRETARY: Yes.

QUESTION: Sir, The SPA leaders are talking in terms of Constituent Assembly and constituting a parallel government, and their comments, the manner in which they have reacted and the manner in which India appears to have reacted to this, would you say that in terms of the principle regarding the transfer of political power, that condition has been met? The people there on the ground, the SPA leaders, do not seem to believe that this by itself is enough for them to give up their protest. That is the core issue. How to address it? You feel the Nepal King has to do something more than what he has already done and that could be necessary for the SPA to accept it and then the consequent restoration of normalcy in Nepal? Do you buy this argument?

FOREIGN SECRETARY: As far as the question of constituent assembly is concerned, the meeting of the SPA took place today. There was a press release: if you see the road map they have given they have said in that— “The joint movement of the Seven Party Alliance is being conducted for restoration of Parliament and constituting an all-party Government and on the basis of its decisions, dialogue with the Maoists, and on the basis of the agreement arrived through that dialogue, elections to the constituent assembly…” So the talk of constituent assembly they have mentioned, it is part and parcel of a certain road map. And the constituent assembly, as far as I could understand from the statement, is something that will emerge through peace negotiations with the Maoists. So, this is their roadmap. I have no comment on this.

So, as I mentioned to you, we are not going to start prescribing the manner in which they should go about with the further evolution of the political process. Now, as far as whether or not the concessions made by His Majesty the King are enough, really the situation is evolving very rapidly. There is no doubt that at the end of the day the sentiments of the people of Nepal and their desire for the early restoration of democracy and democratic values is something that everyone will have to respect - the political parties will have to respect; I think the institution of monarchy will have to respect; and we who are the friends of Nepal would have to respect that.
QUESTION: Do we still stand by the policy of multiparty democracy and constitutional monarchy? Have we changed or shifted from this stand or do we still stand by this? Another question, you were talking about anti-India elements. Can you identify these elements?

FOREIGN SECRETARY: As far as the first point that you have mentioned, when we said India stands for multiparty democracy and constitutional monarchy, we were reflecting nothing more than what the people of Nepal themselves and the political parties themselves had committed to. So, you should not take this as something that was prescribed by the Government of India. With respect to what will be the future political arrangement, as I said, this is really a matter for the people of Nepal to decide, not for India to decide. With regard to who the anti-India elements would be, frankly I do not know. But there have always been some elements in Nepal who have been hostile to friendly relations between India and Nepal. Perhaps those are the elements who have tried to give this a distorted twist. But I do not think I have any information with regard to any specific people or specific persons who have been involved in this. But I think it is important for us in India to nail this kind of lie because it is really distorting the position of India which quite unambiguously has stood by the democratic forces in Nepal right through this very difficult period. And we intend to stand by them.

QUESTION: Will you support the demand of Constituent Seven Party made by them?

FOREIGN SECRETARY: We have said we are not going to prescribe. It is not for us to say whether it is constituent assembly or parliament; whether the elections should be now or later; our stand has been one of principle. Our stand has been that the sovereignty resides in the people. And the political power should pass into the hands of the people. There should be democracy in Nepal because the people of Nepal want it; and we sympathise in that.

QUESTION: Just to clarify on the answer you gave a second ago, are we effectively saying the end of the twin pillars policy? Just that the twin pillars policy applied to a moment in time when ...(Inaudible)... multiparty Nepal ...(Inaudible)... and the Nepali people and is not something which is fixed. Are you effectively saying that India has moved away from that?

FOREIGN SECRETARY: As I mentioned, it is not really for India to
decide what are the kind of political arrangements that the people of Nepal eventually wish to see established in Nepal. We have supported the restoration of democracy in Nepal. When we have been saying the twin pillars of constitutional monarchy and multiparty democracy, we have been reflecting only what the people of Nepal and the political parties in Nepal have wanted. If today or tomorrow the people of Nepal wish to see a different future for themselves, different kind of political arrangements for themselves, that is for the people of Nepal to decide, not for India to decide.

**QUESTION:** As you have told that we are in touch with all sections of the Nepali society as well as the political parties. Does it mean the Maoists too? If we do have, do not you think that Maoists have emerged as major stakeholders in Nepal’s politics? What is your assessment about their inclusion in the future dispensation?

**FOREIGN SECRETARY:** I have said that we are in touch with the political parties and we have been in touch with the Palace as well essentially to try and play as constructive a role as we can to defuse the situation. We have not been in touch with the Maoists. But we have also said that in the conflict that Nepal is undergoing, a purely military solution is not possible. You need to have a political solution. Since we are wedded to the concept of democracy, we believe that if the Maoists have to come into the political mainstream, coming into that political mainstream must be based on the principles of multiparty democracy. It should be based on the principle of renunciation of violence because if there is no renunciation of violence, then how can you make democracy succeed. So, yes, certainly there is a need for them to be brought into the political mainstream but it has to be on the basis of the principle of multiparty democracy and the renunciation of violence. I think it is fairly clear.

Thank you very much.

(The text is italics is translated from Hindi)

New Delhi, April 25, 2006.

The Government of India welcomes the developments in Nepal towards the restoration of multiparty democracy and the handing over of political power to the representatives of the people of Nepal. We await the convening of the revived House of Representatives and the installation of a government as indicated by the seven party alliance. This is a victory for the people of Nepal, who have displayed extraordinary courage and reaffirmed their faith and commitment to freedom and democracy. The future of Nepal is safe in their hands.

We are conscious of the challenges that lie ahead for Nepal as it embarks on the journey towards restoring political stability, achieving economic recovery and finding a peaceful solution to the armed conflict. These challenges will require the positive contribution of all concerned, drawing upon the support of the people of Nepal. As a close friend and neighbour, India has all along stood by the people of Nepal in their

1. The reaction of the Government of India came after the meeting of the Cabinet Committee on Political Affairs met under the chairmanship of Defence Minister Pranab Mukherjee and attended by Agriculture Minister Sharad Pawar, Parliamentary Affairs Minister Das Munsi, Army Chief Gen. JJ Singh, Cabinet and Foreign Secretaries and chiefs of the Intelligence agencies among others. Before this meeting of the Cabinet Committee there was another high-powered meeting also chaired by Defence Minister on April 24 to review the deteriorating situation in Nepal in view of the continuing pro-democracy protests. The meeting sought to find out way to deal with the situation including security bearing on India. Others who attended the two-hour long meeting were Home Minister Shivraj Patil, Cabinet, Foreign, Home and Defence Secretaries, Chief of the Army Gen. JJ Singh, Raw Secretary, Intelligence Bureau Director among others. After the formal meeting of the Cabinet Committee on Political Affairs on April 25 the above statement was issued. Separately Mr. Mukherjee in his statement welcomed the restoration of democracy in Nepal and said: “this is a victory of the people of Nepal”, who have displayed extraordinary courage and reaffirmed their faith and commitment to freedom and democracy. The future of Nepal is in safe hands.” Extending “unstinted support” to the people of Nepal in whatever manner they wished, the Defence Minister said that India has all along stood by them in their “unrelenting struggle” for the restoration of their democratic rights. Earlier CPI(M) leader Sitaram Yechury had met the Defence Minister on April 23 and discussed with him the Nepal situation. He told journalists that he had suggested to the Defence Minister a seven-point formula to resolve the Nepal problem which included immediate restoration of the dissolved parliament and setting up of an interim government. He also said that that formula had also been forwarded to the King and his response was awaited.
unrelenting struggle for the restoration of their democratic rights. We are ready to render unstinted support to the people of Nepal in whatever manner they wish. India wishes to see the emergence of a peaceful, stable and prosperous Nepal and will contribute to this end to the best of its ability and resources.

127. Press Release of the Embassy of India in Kathmandu on the Ambassador’s meetings with the Prime Minister and other Ministers of Nepal.

New Delhi, May 4, 2006.

Ambassador of India to Nepal Mr. Shiv Shankar Mukherjee called on Prime Minister Mr. G.P. Koirala today. He congratulated the Prime Minister on the assumption of the august office at this crucial juncture in Nepal’s history and expressed confidence that Nepal will successfully address all challenges under Mr. Koirala’s leadership. Ambassador Mukherjee also conveyed to Mr. Koirala good wishes for his health and wished him a speedy recovery.

Ambassador also called on Deputy Prime Minister and Minister for Foreign Affairs Mr. K.P. Sharma Oli, Home Minister Mr. K.P. Sitaula, Minister for Finance Dr. R.S. Mahat and Minister for Agriculture and Cooperatives Mr. Mahant Thakur, and discussed with them the current situation in Nepal. Ambassador conveyed his good wishes to the Ministers for success in discharging their responsibilities and reiterated India’s readiness to contribute to lasting peace, stability and prosperity in Nepal to the best of its ability and resources.
128. Media Briefing by Official Spokesperson on the visit of Prime Minister of Nepal.

New Delhi, June 7, 2006.

Official Spokesperson: Good afternoon. As you know His Excellency Girija Prasad Koirala, Prime Minister of Nepal is here on an official visit. He arrived yesterday and the visit will carry on till the 9th of June. This is the first visit abroad of the Prime Minister of Nepal after he assumed office on the 30th of April.

You already have the details of the Nepalese delegation but just to mention, the visiting delegation includes Mr. Gopal Man Shreshtha, Minister of Physical Planning and Construction, Mr. Mahanta Thakur, Minister for Agriculture and Cooperatives, Dr. Ram Sharan Mahat, Finance Minister, Mr. Rajendra Prasad Pandey, Minister for Local Development, Mrs. Urmila Aryal, Minister of State for Women, Child and Social Welfare and also senior officials, business delegation as well as a delegation of media representatives.

On the Indian side at the delegation level talks that took place today, the Prime Minister was joined by Raksha Mantri, Minister of State for External Affairs Mr. Anand Sharma, Principal Secretary to the Prime Minister, National Security Advisor, Foreign Secretary and our Ambassador in Kathmandu, besides other officials.

Yesterday, as you know, setting aside protocol norms Prime Minister had gone himself to the airport to receive Prime Minister Koirala on his arrival and this indicates the close, warm and friendly ties which India shares with Nepal and the significance that India attaches to this visit.

This morning there were one-to-one talks which were followed by delegation level talks. One-to-one talks lasted, I understand, for about forty minutes. To give you a gist of the discussions, Prime Minister Koirala thanked the Government and people of India for their support to the people of Nepal and for the movement for restoration of multiparty democracy in Nepal. He reaffirmed the traditional and strong ties between Nepal and India.

Prime Minister Dr. Manmohan Singh said that India welcomes Mr. Koirala not just as a Head of Government but as a towering personality and the leader of all democratic forces in Nepal and South Asia. He
congratulated Prime Minister Koirala for the success of the democratic movement and paid special tribute to the people of Nepal, noting that Nepal was at a historic juncture. He conveyed India’s full support, within our means, for Nepal’s economic recovery and reconstruction efforts. In this context, I may add, Prime Minister Koirala gave an outline of Nepal’s requirements and needs for economic recovery. He informed the Indian side of the serious economic situation facing Nepal due to months of political turmoil and he requested India’s assistance to help meet Nepal’s immediate needs as well as long term reconstruction efforts.

Prime Minister in response stated that Nepal’s needs will be given the utmost importance and immediate consideration of the Government of India, which would hope to finalize details before the conclusion of Prime Minister Koirala’s visit. India would like to help both in the immediate term as well as in the long-term requirements over the coming years. Prime Minister also confirmed that India is deeply committed to several large projects in the social and infrastructure sectors such as roads, bridges, railway linkages and ongoing projects will be pursued with renewed vigor.

During the rest of the visit Prime Minister Koirala is scheduled to have extensive engagements. He will call on Rashtrapati Ji and Vice President. Vice President will be hosting a dinner in his honor tomorrow. Tonight Prime Minister is hosting Prime Minister Koirala for dinner. Minister of Defence, Mr. Pranab Mukerjee, Minister of Home, Mr. Shivraj Patil and Leader of Opposition in the Lok Sabha, Mr. L.K. Advani will also be calling on the Prime Minister of Nepal. He will also meet chairperson of UPA and President of the Indian National Congress, Smt. Sonia Gandhi as well as former Prime Minister, Mr. Chandra Shekhar.

**Question:** Did the issue of military supplies come up? What is the quantum of economic package requested by Nepal?

**Official Spokesperson:** I will take up your second question first. Since the requirements have been outlined by the Nepalese side, I don’t feel at liberty to share what they have asked for. What I can tell you is that the details of the package are being worked out. There will be short-term measures of an immediate nature as well as long-term measures and these will be addressed in the package. The idea, and this I must stress, is to respond to the needs and priorities of the Government of Nepal. As far as the issue of military supplies is concerned, all I can say at this stage is that if there is any formal request by the Government of Nepal then that will be considered by India.
Question: Was there a formal request?

Official Spokesperson: No

Question: Was there any discussion on hydro projects and water sharing?

Official Spokesperson: There was no discussion on any specific project.

Question: Did the issue of monarchy come up?

Official Spokesperson: I cannot give you a sentence-by-sentence reconstruction of the talks. If you are asking me what is our view about monarchy I can only say that this is an issue which is to be decided by the people of Nepal.

Question: Will the economic package be announced during the visit?

Official Spokesperson: As I said this is being worked out and Prime Minister has said that both short-term and long-term measures are being addressed and all the details that we can hope to finalize at the end of the visit; we will you know at the end of the visit.

Question: During the visit of Mr. Deuba, some Joint Working Groups were established for cooperation in the fields of science and technology etc. What happened to those working groups? Are they being revived?

Official Spokesperson: India and Nepal have a fairly wide-ranging cooperation and there are huge development projects in sectors like infrastructure, health, energy and education. There are 137 small and large projects which are under various stages of implementation. These ongoing projects are going to be followed with renewed vigor. The idea is that Government of Nepal is in need of assistance for political stability and economic recovery and India is committed to that.

Question: …inaudible…will the UN be involved? The Nepalis are saying...

Official Spokesperson: These are issues for the Government of Nepal to decide. They are a sovereign government and it is for them to decide what should be the role of the outside parties. The very fact that direct peace negotiations are being held between the political parties and the Maoists shows that the people of Nepal have the ability to face these challenges.
Question: Was the issue of any relationship between the Maoists of Nepal and those of India raised?

Official Spokesperson: As I said I cannot give you a sentence-by-sentence reconstruction of the talks. What I can say is that we support the peace efforts of the Government of Nepal and the Maoists and we believe that Maoists must abandon violence and must accept the discipline of multiparty democracy to enter the mainstream of politics in Nepal.

Question: …inaudible…

Official Spokesperson: I think I have given you a fairly detailed readout of what was discussed in the talks. I can only hazard a guess that the entire current political situation in Nepal would have come up for discussion as well as a fair amount of the very wide gamut of bilateral relations.

Question: Did the Prime Minister of Nepal ask for the release of any Maoists in Indian jails?

Official Spokesperson: I do not have anything on that.

Question: When you say that the people of Nepal should themselves decide on the future of monarchy, does that mean there is a shift in our position?

Official Spokesperson: I am giving you the briefing today. There is a particular situation today in Nepal, perhaps most of you know it better than I do. You have been there, you have seen the tremendous political changes that have taken place in Nepal. I am giving you a briefing based on developments that have taken place in Nepal and on the fact that you have a Prime Minister and a new Government in place and the fact that the Prime Minister has come here as a representative of the sovereign people of Nepal and as a representative of a multiparty democratic movement.
129. Joint Press Statement issued at the end of the visit of Nepalese Prime Minister Girija Prasad Koirala.

New Delhi, June 9, 2006.

1. The Rt. Hon’ble Girija Prasad Koirala, Prime Minister of Nepal, paid an official visit to India from 6-9 June 2006 at the invitation of His Excellency Dr. Manmohan Singh, Prime Minister of India. The Prime Minister of Nepal was accompanied by Hon’ble Mr. Gopal Man Shrestha, Minister for Physical Planning & Works, Hon’ble Mr. Mahantha Thakur, Minister for Agriculture and Cooperatives, Hon’ble Dr. Ram Saran Mahat, Minister for Finance, Hon’ble Mr. Rajendra Prasad Pande, Minister for Local Development, Hon’ble Ms. Urmila Aryal, Minister of State for Women, Children and Social Welfare and Adviser to the Prime Minister on Foreign Affairs, Dr. Suresh Chandra Chalise. The delegation also included senior officials of the Government of Nepal, a business delegation and a delegation of media representatives.

2. During his visit, the Prime Minister of Nepal visited Rajghat and paid homage to the memory of Mahatma Gandhi. The Prime Minister called on His Excellency the President of India, Dr. A.P.J. Abdul Kalam and on His Excellency the Vice President of India, Shri Bhairon Singh Shekhawat, who hosted a dinner in his honour. The Prime Minister of Nepal had a meeting with the Prime Minister of India, which was followed by delegation-level talks, led by the two Prime Ministers, on issues of mutual interest and concern. The Prime Minister of India hosted a dinner in honour of the Prime Minister of Nepal. Minister of Defence Shri Pranab Mukherjee, Minister of Home Shri Shivraj Patil, and the leader of Opposition in the Lok Sabha Shri L.K. Advani called on the Prime Minister of Nepal. The Prime Minister of Nepal had a meeting with the Chairperson of United Progressive Alliance (UPA) and the President of Indian National Congress, Smt. Sonia Gandhi as well as former Prime Minister Shri Chandra Shekhar.

3. The talks were held in an atmosphere of utmost cordiality and warmth. The two Prime Ministers shared their views and assessments of the situation in both the countries. They agreed that the restoration of democracy in Nepal provided a historic opportunity for a qualitative enhancement of bilateral relations between the two countries, which
rest on age-old social, economic and cultural ties; shared faith in
democracy, freedom and the rule of law; and pursuit of peace, stability
and prosperity. They reaffirmed their commitment to impart a new
dimension and dynamism in their relations based on the principles
of peaceful coexistence, sovereign equality, territorial integrity, mutual
respect and understanding.

4. The Prime Minister of India extended a warm welcome to Prime
Minister Girija Prasad Koirala as the leader of democratic forces
and conveyed his best wishes for his good health and continued
leadership, as he leads Nepal at an important juncture in its history.
He described the visit as being of great historical significance. He
applauded the extraordinary courage and achievements of the
people of Nepal in their successful struggle for restoration of multi-
party democracy and commitment towards institutionalising it. The
Prime Minister of India commended the recent initiatives taken by
the Government of Nepal to bring about peace, stability and return
to the path of economic recovery.

5. The Prime Minister of India reiterated that as a close friend and a
neighbour, India wishes to see a stable, peaceful, democratic and
prosperous Nepal. He offered India’s full support to the Government
of Seven Party Alliance under the leadership of Rt. Hon’ble G.P.
Koirala, Prime Minister of Nepal, and to the people of Nepal in their
quest to achieve these goals, and expressed confidence in their
ability to overcome the challenges that lie ahead.

6. The Prime Minister of Nepal conveyed the appreciation of the people
of Nepal to the people and the Government of India for the support
extended to them in their peaceful struggle for restoration of
democracy.

7. The Prime Minister of India appreciated the initiatives taken by the
Prime Minister of Nepal to consolidate the achievements of the
People’s Movement by finding a peaceful solution to the armed conflict,
restoring political stability and moving towards economic reconstruction
for the welfare of the people of Nepal. The two Prime Ministers agreed
that the success of democracy lay in creating an atmosphere free
from violence and coercion, and respect for the rule of law.

8. The Prime Ministers acknowledged the vital importance of accelerating
economic rehabilitation and development in Nepal. The Prime Minister
of India conveyed India's readiness to render all possible assistance to Nepal in that direction, in accordance with the priorities and wishes of the Government of Nepal. The Prime Minister of Nepal expressed appreciation to the Government of India for their generous cooperation in the socio-economic development of Nepal.

9. In this context, the Prime Ministers agreed to enhance the India-Nepal development partnership for expanding rural and economic infrastructures, developing education and healthcare facilities, and building human resources in Nepal. The Prime Ministers agreed to revive bilateral initiatives and mechanisms existing between the two countries in the areas of socio-economic cooperation.

10. The Government of India expressed its readiness to:

(a) Expedite progress on long-term mega infrastructure projects in the areas of roads, railway linkages, border infrastructure, water resources and construction of an oil pipeline\(^1\), Special Economic Zone, airports up-gradation, and other areas to be mutually agreed upon by both governments.

(b) Extend immediately a one-time grant of Indian Rs. 100 crore to the budget of Government of Nepal.

(c) Offer a soft credit line of US $ 100 million for the execution of infrastructure development projects as prioritised by the Government of Nepal.

(d) Enhance its ‘Aid to Nepal’ budget for the current financial year from Indian Rs. 65 crore to Indian Rs. 150 crore annually.

(e) Waive the dues outstanding as on date owed by the Government of Nepal to the Government of India on account of defence purchases.

(f) Arrange immediately supply of 25,000 metric tons of fertilizers to Nepal at subsidized prices.

(g) Grant exemption to all exports of goods manufactured in Nepal into India from the 4% Additional Duty of Customs.

---

1. The same evening the Official Spokesperson of the MEA when asked about the oil pipeline project clarified “This is a mega infrastructure project which is already on the anvil between India and Nepal.”
(h) Accelerate the release of all funds to Nepal under the Duty Refund Procedure Scheme.

(i) Double the number of scholarships provided by the Government of India for Nepalese students, including for girls.

(j) The Indian Oil Corporation will work out with Nepal Oil Corporation modalities for rescheduling the dues owed to it on account of oil supplies.

11. The Prime Ministers agreed that there would be early follow up to implement the above decisions so as to ensure that the benefits reach the people of Nepal, and economic cooperation between India and Nepal is further strengthened for mutual benefit.

12. The Prime Minister of Nepal extended an invitation to the Prime Minister of India to pay an official visit to Nepal at an early date. The Prime Minister of India accepted the invitation with pleasure. The visit will take place at a mutually convenient date.

130. Joint Statement issued at the end of the Inter Governmental Committee meeting on India-Nepal Trade and Investment Issues.

The two day meeting of the India-Nepal Inter-Governmental Committee (IGC) on Trade, Transit and Cooperation to control unauthorized trade concluded here today. Sh. S.N. Menon, Commerce Secretary, led the Indian delegation while the Nepalese delegation was led by Sh. Bharat Bahadur Thapa, Secretary, Ministry of Industry, Commerce and Supplies, Government of Nepal.

The two delegations recognized the need to widen and deepen economic ties through trade and investment ties in areas such as power and services sectors, including information technology, tourism, education and healthcare. The Indian delegation proposed to negotiate a Comprehensive Economic Partnership Agreement with Nepal to qualitatively enhance bilateral economic ties. The Nepalese side agreed to look into India’s proposal.
Both sides expressed satisfaction at the rapid growth in bilateral trade and investment ties during the past decade. They noted that the bilateral trade treaty would be renewed in March 2007 and decided to explore ways to make the treaty a more effective instrument for further strengthening bilateral economic ties. Sh. S.N. Menon conveyed India’s readiness to work with Nepal to expeditiously address Nepal’s concerns on non-tariff measures. The two sides noted the important role of Indian investments in Nepal’s industrial development and exports, and agreed that bilateral investment ties should be further promoted.

The two sides also reviewed progress on trade and economic infrastructure projects being undertaken by India in Nepal and stressed the need to accelerate their implementation. The Nepalese delegation sought assistance for new economic infrastructure projects, which would be discussed by the two sides in appropriate forums.

The IGC meeting took place against the backdrop of the commitment of support for Nepal’s economic recovery and development given by Prime Minister Dr. Manmohan Singh, during the visit of the Prime Minister of Nepal, Sh. Girija Prasad Koirala, to New Delhi in June, 2006. Sh. Bharat Bahadur Thapa also called on the Minister of State for Commerce, Shri Jairam Ramesh.

131. Media Briefing by Official Spokesperson on the visit of Nepalese Foreign Minister K. P. Sharma Oli.

New Delhi, November 6, 2006.

As you know, the Deputy Prime Minister and Foreign Minister of Government of Nepal His Excellency Mr. K.P. Sharma Oli is present in New Delhi and is conducting meetings with the Indian leadership. This goodwill visit follows the visit of Prime Minister Shri G.P. Koirala in June, 2006. This forenoon, Mr. Oli held delegation level talks with the External Affairs Minister Shri Pranab Mukherjee. Later on he has called on the Prime Minister.

To give you a sense of the discussions so far, the External Affairs Minister’s discussions lasted over an hour and were warm, friendly, cordial and involved a comprehensive review of bilateral relations between India and Nepal. The External Affairs Minister stated that India attaches the highest priority to its relations with Nepal with whom we are partners in
peace, progress and prosperity. Both sides expressed satisfaction at the way the bilateral relationship was going on, and agreed that there was tremendous potential for taking this further and strengthen the relationship further.

They reviewed in particular the implementation of the economic package which was announced after Prime Minister Koirala’s visit in June this year. Necessary modalities will now be worked out on an expeditious basis to operationalised the credit lines of USD 100 million granted by India to Nepal. We also received clarifications from Nepal on their request for exemption of four per cent additional customs duty on Nepalese exports to India. This will be given speedy consideration by the Indian Government. We also reviewed various agreements in negotiation, primarily those in the economic and commercial sectors such as the Bilateral Investment Protection and Promotion (BIPA), Avoidance of Double Taxation Agreement, and the Motor Vehicle Agreement. They also expressed their commitment to continue the review process for a renewal of the trade treaty which is due in March, 2007.

In response to a request from the Nepalese side, we have agreed to schedule technical level talks on the Pancheshwar project at an early date. They also agreed to discuss other projects such as the storage-cum-hydro power project on the Rapti river called Noumure. Discussions were also held on the construction of transmission lines and export of power from India to Nepal.

The two sides also recognized the important contribution of women in socio-economic development and agreed that special attention would be paid to the participation of women in various cooperation programmes between India and Nepal such as training schemes, scholarships and small development projects.

Mr. Oli also briefed the External Affairs Minister on the latest situation in Nepal including the ongoing peace negotiations. During his call on the Prime Minister, Dr. Manmohan Singh conveyed his best wishes to Prime Minister Koirala. He expressed his desire to see an early return of peace, stability and economic recovery in Nepal and said that India towards this end is committed to render all assistance and support within our means to the Government and people of Nepal.

---

1. On his part Mr. Oli speaking to the Indian business community assured that “a conducive atmosphere for investors while seeking their participation in the development of Nepalese
Mr. Oli extended an invitation to External Affairs Minister to visit Nepal and also extended on behalf of Prime Minister Koirala a similar invitation to the Prime Minister of India.

**QUESTION:** On this agreement that is likely between the Maoists and the Nepalese Government they have apparently come to some kind of understanding of how the weapons are to be dealt with in this situation of ..... Do you have a comment on that?

**OFFICIAL SPOKESPERSON:** As I said, today Foreign Minister Oli briefed the External Affairs Minister and the Prime Minister about the latest situation with regard to peace negotiations between the political parties and the Maoists. But I understand the discussions are still going on. So, we will wait and watch the developments and you will have our reaction in due course.

**QUESTION:** Maoist leader Prachanda has been invited by the India ... group here. Has the Government any objections to it?

**OFFICIAL SPOKESPERSON:** We have conveyed to the Government of Nepal that the Government of India has no role in the organising of this summit and that this is a private event.

---

infrastructure, tourism, water resources, agro-business and in other areas. On another plane while speaking at the Indian Council of World Affairs on November 7, Oli said that his country was “in the final stages of positive conclusion” and that he fully expected the Maoists to join the interim government. “We whole-heartedly commend India for its realization that the Nepali people are capable of deciding their own destiny, a major departure for her Nepal policy,” he said. As democracy in Nepal deepens the country would develop a “people-oriented and result-oriented foreign policy” he assured the audience. Mr. Oli was confident that the successful resolution of the Maoist conflict in Nepal through peaceful means “will have a salutary impact on regional peace and security.”
132. Statement by External Affairs Minister Pranab Mukherjee on developments in Nepal.

New Delhi, November 8, 2006.

The decisions taken by the leadership of the Seven Party Alliance led by Prime Minister G.P. Koirala and the CPN (Maoist) in the early hours of today are a victory for the people of Nepal1. We welcome this significant step in Nepal’s democratic progress to a settled constitutional order in which the people of Nepal can realize their aspirations for peace and prosperity. We expect these decisions to place Nepal on the path of reconciliation, peace, stability and economic recovery.

We look forward to the signing of the Comprehensive Peace Agreement between the Government of Nepal and the CPN (Maoist) on 16 November 2006, as has been decided today. The people of Nepal must have the right to freely choose and decide their own destiny and future without fear of the gun.

India stands ready, as always, to extend its full support to the efforts of the Government and people of Nepal.

1. EAM was referring to the Seven-party alliance and the Maoists signing an accord on November 8 thus formally ending a decade old insurgency in Nepal. The six-point agreement sought to settle all contentious issues including arms management and political processes. Maoists combatants would be confined to seven cantonments and their arms kept locked in the designated cantonments. The Maoist leadership keep the keys to the lockers but the UN would monitor the locks using closed circuit cameras and electronic sensor devices. In reciprocity the army would leave an equal number of weapons under UN inspection. It was decided that the future of Monarchy would be decided by the first meeting of the Constituent Assembly. It was agreed to nationalize King’s property which he acquired by virtue of ascending to the throne. His private property would be left intact.

New Delhi, November 21, 2006.

The Government of India welcomes the signing of the Comprehensive National Peace Agreement¹ between the Government of Nepal and the Communist Party of Nepal (Maoist). We believe the Agreement reflects the overwhelming desire of the people of Nepal for peace and stability. We hope that this Agreement brings to an end the politics and culture of violence, and heralds the beginning of a lasting peace in order to let the people of Nepal exercise their right to decide their destiny through free and fair elections, without intimidation. The critical test of this Agreement will be its implementation on the ground. We call upon all sides and all stakeholders in Nepal to strictly abide by their commitments under this Agreement. Violations must be dealt with under the laws of the land, and full cooperation extended to those empowered to supervise the steps ahead, such as the police, the Election Commission, and the UN. The people’s mandate, and their trust, must not be betrayed. India stands ready to continue to help in every way, to ensure that this historic opportunity is not lost.

¹ The Comprehensive Peace Agreement (CPA) interalia declared the end of all kinds of violent activities by the Government and the Maoists. Both sides agreed to honour all international treaties and covenants on human rights and uphold civil liberties. With the end of violence, all displaced Nepalis could return to their homes and they would not be forced to accept anything against their will. The CPA says that all the captured public and private properties will be returned within 60 days. The Maoists also agreed to dissolve its local government and courts. The agreement also said the armies of both sides will be confined to the barracks and cantonment and they would not take part in the election campaigns but their personnel would have the right to cast their votes.
134. Press Release of the Ministry of External Affairs on the visit of Foreign Secretary Shivshankar Menon to Nepal.

New Delhi, December 1, 2006.

The Foreign Secretary of India Mr. Shivshankar Menon paid a visit to Kathmandu from 29 November – 1 December 2006 at the invitation of the Acting Foreign Secretary of Nepal Mr. Bhagirath Basnet.

During the visit, the Foreign Secretary had wide-ranging and fruitful discussions on a range of issues of mutual interest with senior political dignitaries and officials of Nepal. He was received by Hon’ble Prime Minister Mr. Koirala, Speaker of House of Representatives Mr. Nemwang, Deputy Prime Minister and Foreign Minister Mr. Oli and Deputy Prime Minister Mr. Sherchan and Ministers Dr. Mahat, Mr. Tripathi and Mr. Sitaula. He also had discussions on the current political situation in Nepal with senior leaders of political parties of Nepal, including President of Nepali Congress (Democratic) Mr. Sher Bahadur Deuba, General Secretary of CPN (UML) Mr. Madhav Kumar Nepal, President of Rashtriya Janshakti Party Mr. Surya Bahadur Thapa and President of Rashtriya Prajatantra Party Mr. Pashupati S.J.B. Rana, and also a cross section of representatives of civil society and other leaders.

All these meetings took place in a friendly and cordial environment that characterises India-Nepal relations.

The visit of Foreign Secretary was the first by a senior Indian official after the historic changes ushered in by the People’s Movement of April 2006 and the signing of the Comprehensive Peace Agreement on 21 November 2006. It provided an opportunity to discuss the progress and future possibilities in the wide-ranging, close and multidimensional ties between India and Nepal, especially in the context of the landmark visit of Prime Minister Mr. Koirala to India in June 2006. Foreign Secretary reiterated the commitment of the Government of India to further strengthen the close, historical and friendly relations with Nepal, which are a matter of highest priority for India.

Foreign Secretary’s discussions in Kathmandu over the last two days strengthen India’s belief that the people of Nepal can successfully address the challenging tasks ahead related to democratic nation building. The international community can make a positive contribution by supporting these efforts. As ever, India is ready to support all efforts aimed at promoting
peace, democracy and development in Nepal, where its people are able to choose the manner in which they wish their country to be governed and developed without fear of intimidation and coercion.

135. Press Release of the Embassy of India in Kathmandu on the visit of External Affairs Minister Pranab Mukherjee to Nepal.

Kathmandu, December 17, 2006.

The External Affairs Minister of India Shri Pranab Mukherjee paid a visit to Kathmandu on 17 December 2006.

During the visit, the External Affairs Minister called on Hon’ble Prime Minister Mr. Girija Prasad Koirala and handed over to him the invitation from India’s Prime Minister to the 14th SAARC Summit to be held in New Delhi on 2-3 April 2007.

Mr. Mukherjee also met Deputy Prime Minister and Foreign Minister Mr. K. P. Sharma Oli. Before his departure from Nepal, he will hold discussions with the President of Nepali Congress (Democratic) and former Prime Minister of Nepal Mr. Sher Bahadur Deuba and General Secretary of CPN (UML) Mr. Madhav Kumar Nepal.

The External Affairs Minister is the first Minister from India to visit Nepal after the historic changes ushered in by the People’s Movement of April 2006. His visit provided an opportunity to discuss the progress and possibilities in the wide-ranging, close and multidimensional ties between India and Nepal, especially in the context of the landmark visit of Prime Minister Mr. Koirala to India in June 2006. In all his meetings with Nepali dignitaries, the commitment of the Government of India to further strengthen the close, historical and friendly relations with Nepal, which are a matter of the highest priority for India, was reiterated. It was also stressed that at this crucial time in Nepal’s history, India remains steadfast, as ever, to extend all possible assistance to Nepal in accordance with the priorities and wishes of the government and people of Nepal.
136. **Press Conference of External Affairs Minister Pranab Mukherjee on his visit to Nepal.**

**Kathmandu, December 17, 2006.**

**External Affairs Minister:** Good afternoon, ladies and gentlemen. I am very happy to be here in Nepal, a country with which India shares the closest and the friendliest of relations.

I am also privileged to be the first Union Minister from India visiting Nepal after the far-reaching political changes that were ushered in by the people of Nepal earlier this year. Since then, the people of Nepal, through their political leaders, have successfully taken a number of steps to consolidate peace and democracy, in the form of various understandings and agreements. This has amply proved that the people of Nepal, who have taken their destiny in their own hands, can successfully address the challenging tasks ahead.

My visit to Nepal is in the context of the forthcoming 14th SAARC Summit, which will be held in New Delhi on 3-4 April 2007. I called on the Hon’ble Prime Minister of Nepal, Mr. G. P. Koirala, and handed over to him the invitation from our Prime Minister to attend the Summit. During this meeting, we also recalled the landmark visit of Prime Minister Koirala to Delhi in June this year. We discussed the progress in implementing the decisions taken during that visit. The economic package that was announced during that visit has been largely implemented. There have been some other requests for assistance in terms of logistical equipment and I was happy to inform Prime Minister Koirala our agreement to provide these also.

I had a very useful meeting with Deputy Prime Minister and Foreign Minister, Hon’ble Mr. K. P. Sharma Oli. We discussed a number of issues related to our bilateral relations, as also the current situation with regard to the peace process in Nepal.

Before my departure, I will also be meeting the President of the Nepali Congress (Democratic), former Prime Minister of Nepal Mr. Sher Bahadur Deuba, and the General Secretary of the CPN (UML) Mr. Madhav Kumar Nepal.

Today, when Nepal stands at the threshold of a new and brighter future, India, as always, remains committed to supporting all efforts that
Question: (Mr. Anirban Roy, Correspondent, Hindustan Times): We do not understand why you did not meet or why are you not meeting the Maoist leaders? Does India still feel that Maoists are untouchable? Because we have seen during Mr. Menon’s last visit to Kathmandu, he also tried not to meet the Maoists. So why is the untouchability from India’s side?

EAM: There is no question of untouchability. We have welcomed the decision of the Maoists to join the mainstream of national politics and it is a very wise decision. But when the representatives of the Government come, we speak with the persons who are in the political system in the Government. And, therefore, these are the Government meetings and we are not meeting those political party leaders who have not joined the Government. The moment the Maoists join the Government, there will be no question of not meeting them. It is not a question of untouchability. We have already welcomed their decision and we do consider it is a very wise decision.

Question: (Mr. Kumar Lamichhane, Nepal-1 Television): Do you welcome the Interim Constitution or not and how do you view the provisions made there depriving the King all of his previous rights?

EAM: You know, we are not to make any comment. It is for the people and political parties of Nepal to decide what type of constitution they will have. So far I understand, these are the transitory provisions. And once the Constituent Assembly is constituted through free and fair elections and after the Constitution making process is complete in the Constituent Assembly, these transitory provisions will not be there.

Question: (Mr. Tilak Pokharel, The Kathmandu Post) - How do you think that the Maoists coming into the Government here will affect India’s internal security?

EAM: I do not think that their joining the Government here and joining the mainstream of the national politics would also encourage the extremists and Maoists in other areas to join the national mainstream of politics. And, in fact, in India we had it. Mizoram is one of the examples. AGP is another example in Assam. Mizo National Front (MNF) in Mizoram. They were extremists. We entered into dialogue with them; they joined the mainstream of the national politics and till today they are running the Government there. This is always encouraged.
**Question:** (Mr. Ramashish, Special Correspondent, *Hindusthan Samachar*) - Mukherjee Sahib, Last time when came to Nepal as Foreign Minister, you planted a tree named Pancheshwar. Is that tree (Pancheswar) still alive or has it withered?

**EAM:** When I came here in 1996, I initialed the Mahakakali Treaty and after that it was formally signed by the two Prime Ministers. At that point of time, India’s Prime Minister was Mr. P.V. Narsimha Rao and Nepalese Prime Minister was His Excellency Mr. Sher Bahadur Deuba. There were some problems and the process was little, I would not say disturbed, it did not get necessary momentum. So far Pancheswar Project is concerned, we, both the sides, have discussed it during the recent visit of Nepali leaders. A detailed project report will have to be prepared and we are awaiting note from the Nepali side and once it is decided, then the technical team will come and they will have discussions with their counterparts here and the process will continue.

**Question:** (Ms. Sudeshna Sarkar, Indo-Asian News Service) - You said there was a request from the Nepali Government for logistics and equipment, what kind of equipment except containers and what kind of logistics?

**EAM:** Firstly, there are requirements of some vehicles and some communication equipment. We have already agreed to provide 200 vehicles for the mobility of police force and also the communication equipment. In addition to that, for the use of the Nepali Armed Police, we have requested the Inspector General (IG) to come to India and discuss with his counterparts and identify the type of equipment and facilities they would like to have and we will be glad to provide them.

**Question:** (Mr. Ambar Mainali, *The Rising Nepal*) – I have a small query. Nepal and India formed a joint technical team for border agreement way back in 1970s. I have heard recently that Bhutan and India signed the treaty (on border demarcation) after 45 years. Can you tell us how long it will take for Nepal and India?

**EAM:** I think some talks are going on and it would be possible to sort out the issues and we will take the decision. But it is difficult to indicate the exact time frame. So far Bhutan is concerned, it is not a treaty, it is a joint survey.

**Question:** (Mr. Tom Bell, *Daily Telegraph*) - What is the attitude of your Government towards the retired Gorkha soldiers from the British and
Indian Army for their involvement in monitoring the arms and whether you understand that such schemes are likely to be implemented?

**EAM:** It is for the Government of Nepal to decide and if they want to recruit them as helpers to the Monitors, I think it would be a good suggestion. But after all, the decision is to be taken by the Government of Nepal.

**Question:** (Mr. Gunaraj Luitel, *Kantipur Daily*) – We have seen some political development in Bhutan; how do you see this recent development?

**EAM:** We have welcomed it. After all it is the decision of the King to abdicate in favour of his son and we have welcomed the decision.

**Question:** (Mr. Harihar Upadhyaya from Kantipur Television) – As you have said the recent developments in Bhutan, during your visit, did you discuss about the Bhutanese refugees problem Nepal is facing. They are saying that until and unless India comes forward, refugees problem is not going to be solved. What do you think, Sir?

**EAM:** I am aware of this problem. It is going on for quite sometime. We have always encouraged both Bhutan and Nepal Governments to engage in bilateral talks and to resolve this issue and we still hold that view.

**Question:** (Mr. Bishnu Budhathoki, *The Kathmandu Post*) – In the past, most of the Indian officials whenever they visited they used to meet the King but right now you have not mentioned about that. Are you going to meet him and if you are not, what could be the reasons for that?

**EAM:** So far the situation prevails after 1st February 2005 and subsequently in April 2006 you are fully aware of it. We go by the desire of the people as reflected in the form of the Government of the country concerned. Therefore, we have decided to meet the leadership of the political establishment as it exists today.

**Question:** (Mr. Kedar Bhattarai, *Gorkhapatra*) – How do you react the decision of the US Government to take 60,000 Bhutani refugees to US. Do you think is it the (best) solution at most (sic)?

**EAM:** I am afraid, it is not yet a decision. It is a proposal. As I mentioned in reply to earlier question that issues are to be resolved by both sides, on the one side Nepal and on the other side Bhutan. They can consider this proposal of US Government and respond as they think appropriate.
**Question:** (Mr. Keshab Paudel, Spotlight Weekly magazine) – How do you see the changing political scenario in Nepal and what kind of specific things you discussed with the Prime Minister and other political leaders in Nepal?

**EAM:** Of course, we have discussed the developments which are taking place. But, as we have mentioned repeatedly that here we go by the decision of the people of Nepal as reflected through their political parties and Government. Therefore, whatever they feel proper and just we stand by that.

**Question:** (Mr. Yugnath Sharma Paudel, Commander and Asian Bazar) – You have already said in Delhi, ISI’s activities in Bangladesh & Nepal still continue. What is the situation right now? And there are media reports from Terai region that fake currency business is growing in Terai region and on Indo-Nepal border. What is your comment?

**EAM:** So far ISI activities and fake currency circulation are concerned, these are the issues which we take seriously and we take it up with the appropriate authority. And whatever preventive measures are required from our side, we will take those preventive measures to checkmate these undesirable developments.

**Question:** (Ms. Rekha Shrestha, The Himalayan Times) – Earlier, during Foreign Secretary’s visit, he (FS) had said about reviewing of the 1950’s Treaty. So, in your meetings with Ministers and Prime Minister today did you have any kind of discussion, and if you could update us on this? How positive the Indian Government is?

**EAM:** In these meetings, we did not discuss about the revision of the Treaty. However, at some point of time there were some discussion and we are always prepared to talk about it.
PAKISTAN

137. Press Release of the Ministry of External Affairs announcing that India and Pakistan have exchanged lists of nuclear installations and facilities.

New Delhi, January 1, 2006.

For the fifteenth consecutive year, India and Pakistan today, through diplomatic channels, simultaneously at New Delhi and Islamabad, exchanged lists of nuclear installations and facilities covered under the Agreement on the Prohibition of Attacks Against Nuclear Installations and Facilities between India and Pakistan. This Agreement was signed on December 31, 1988 and entered into force on January 27, 1991.

Under the Agreement¹, the two countries are to inform each other on January 1 of each calendar year of the nuclear installations and facilities to be covered by the Agreement. The first such exchange of lists took place on January 1, 1992.

¹ Under the agreement both Pakistan and India are to refrain from attacking each other’s nuclear facilities in the event of a war.

New Delhi, January 6, 2006.

The LoC was opened on 7.4.2005 with the commencement of the Srinagar-Muzaffarabad bus service. After the earthquake on 8.10.2005, the bus service was temporarily suspended but five crossing points were opened to facilitate travel across the LoC. The bus service has since resumed from Srinagar to Kaman. Between April 2005 and 31 December 2005, 496 Indian nationals were given permission by Pakistani authorities to travel across the LoC. Of these, 355 traveled. 577 Pakistani nationals were given permission, of whom 374 traveled across the LoC in the same period.
139. Press Release of the Ministry of External Affairs giving details of relief assistance provided to Pakistan following earthquake of October 2005.

New Delhi, January 6, 2006.

India’s response to the disaster caused by the 8 October 2005 earthquake in Pakistan was swift and spontaneous. After the Prime Minister of India had spoken to the President of Pakistan on the same day of the quake offering to provide whatever assistance that Pakistan may require, India sent one aircraft and three trains carrying relief material. This material weighed about 900 tonnes and was valued at approximately Rs. 21 crore or equivalent to US$ 4.7 million. The following are the details of these relief goods.

- **Blankets** 25500
- **Tents** 2200
- **Sleeping Bags** 15200
- **Plastic/FRP Sheets** 41500
- **Medicines** 30 tonnes
- **Anti-Tetanus Injections** 10000
- **Pethidine Injection** 10000
- **Fortified biscuits** 100 tonnes

The material also included X-Ray machines & film and other essential medicines.

Following the opening of five Crossing Points on Line of Control, India also handed over relief material weighing more than 400 tonnes and valued at about Rs. one crore. This material included 1220 quintals of food packets containing essential items such as rice, atta, sugar, dal and salt; and the remaining comprised mainly, blankets, medicines and galvanised steel sheets.

With the above, the total amount of relief material sent by the Government of India to the Government of Pakistan works out to more than 1300 tonnes estimated at a value of about Rs 22 crores or US $ 5 million.

The Government of India pledged an assistance of US$ 25 million for the victims of the earthquake to be utilised in housing and education...
sectors. The Government of Pakistan has accepted this offer and indicated interest to source construction material from India utilising this assistance.

Apart from official assistance, considerable amounts of relief material have also been sent from India by private agencies, State Government of Punjab, Government bodies such as the Minorities Commission, local and foreign NGOs. Most of this material was sent via Attari-Wagah land and rail routes. As per available information, the following are the details of major items sent through this mode which are valued at approximately Rs. 47 crores or US$ 10.5 million:

- **Blankets 11.5 lakhs**
- **Tents/tarpaulins 60000**
- **Galvanised steel sheets 50 tonnes**
- **Biscuits 3365 tonnes**

To sum up, the total value of relief material, both official and private, sent from India to Pakistan is estimated at Rs. 69 crores, equivalent to US$ 15.5 million.

The High Commission of Pakistan in New Delhi has also been allowed to source material from India and send both by land and air. Available information indicates that about 4000 kg of blankets by air and 5000 tents by land route were sent by the High Commission of Pakistan.

---

**140. Joint Statement issued at the end of India-Pakistan talks on Munabao - Khokhrapar train service.**

**New Delhi, January 6, 2006.**

The Railway delegations of India and Pakistan met on 5th & 6th January 2006 in New Delhi to finalise the modalities for operationalising the rail link between Munabao in India and the newly established Railway station near Khokhrapar in Pakistan.

The Indian delegation was led by Shri Ashok Gupta, Adviser/Traffic, Ministry of Railways, Government of India, and the Pakistan delegation was led by Mr. Saleem-ur-Rahman Akhoond, General Manager, Pakistan Railways.
The talks were held in a cordial and constructive atmosphere. This passenger train between the two countries will be called “THE THAR EXPRESS”.

Both sides discussed a draft Agreement pertaining to the modalities of the running of the train. An Indian delegation will visit Pakistan before the end of January 2006 for the signing of this Agreement.

The two delegations have also agreed to commence the train operations on this route from 1st February 2006. The rake for this service will be provided alternately by Indian and Pakistan Railways on a six monthly basis. For the first six months, the Pakistan train will cross into India to Munabao. Thereafter, the Indian train will cross into Pakistan to Zero Point Railway Station near Khokhrapar. This six monthly process will be repeated alternately.

141. **Initial reaction of Official Spokesperson to remarks made by President Musharraf.**

New Delhi, January 7, 2006.

**Question:** Do you have a reaction to President Musharraf’s interview\(^1\) in which he has said that if India withdraws troops from Kupwara, Srinagar it will help fight insurgency?

**Official Spokesperson:** Have you seen the interview.

**Question:** Part of it…

**Official Spokesperson:** That is the whole point. We have not yet seen the entire interview and I think a full assessment and a full reaction

---

1. President Musharraf said in his interview to an Indian news channel actually telecast on January 8 that if India agreed to withdraw troops from Srinagar, Kupwara and Baramulla to the “outskirts”, there would be no militancy in the Kashmir valley. He complained of a non-response attitude from India towards Pakistan’s idea for resolving the Kashmir issue. He reiterated his “formula” of dividing J & K into seven regions. The formulation envisaged the identification of regions in Jammu and Kashmir and Pakistan-Occupied Kashmir and their administration with joint control by India and Pakistan. This formulation already articulated by him in 2004, at the time of Ramadan, was not only criticized in India but in Pakistan too.
can only come after we have seen the entire interview. Nevertheless, there have been some agency reports as well as excerpts which we have seen on the TV channels and on the basis of what one has seen so far I think it is possible to give some initial reaction on some of the elements which seem to be contained in the interview. But I must say that a full assessment can only be done once the full interview has been played.

On the basis of what one has seen so far I think I am in a position to make some comments.

Firstly, we have heard remarks made by President on demilitarization, and this time, about three specific cities in Jammu and Kashmir. I would like to say here first of all, that any demilitarization or redeployment of security forces within the territory of India is a sovereign decision of the Government of India and cannot be dictated by any foreign government. Such decisions are based on our assessment of the security situation prevailing in any particular part of the country. As long as the security situation in Jammu and Kashmir and indeed in other parts of the country is adversely affected by the phenomenon of cross-border terrorism and violence perpetrated by Pakistan-based terrorist groups, the Government of India will fulfill its responsibility to safeguard the lives and security of its citizens.

On the issue of the three specific towns or cities I think there seems to be some hint or a statement within the interview that there is a quid pro quo here that if the towns of Srinagar, Kupwara and Baramullah are demilitarized, then President Musharraf would ensure that there is no “militancy” there. What we are talking about here is “terrorism” and not mere militancy. Pakistan President has repeatedly given solemn assurances that no part of the territory under Pakistan’s control would be used for any cross-border terrorism against India. The implementation of this commitment is unconditional. Pakistan should implement forthwith its solemn commitments in this regard so that the peace process between the two countries can make progress and the two countries can live in peace and friendship as good neighbors.

Our aim should be to establish peace and tranquility all along the India-Pakistan border and all along the LOC so that there is no need for the two countries to deploy troops in proximity to one another. A complete cessation of cross-border terrorism as well as the permanent dismantling of the infrastructure of terrorism would contribute to an early realization of this aim.
The other issue that we have seen in the excerpts being talked about is references to self-governance. On this, India had already conveyed its response in the meeting between Prime Minister Dr. Manmohan Singh and Prime Minister Shaukat Aziz in Dhaka on the sidelines of the SAARC Summit. Our Prime Minister had conveyed that Jammu and Kashmir already enjoyed autonomy under the Indian Constitution and had in place a popular government elected through free and fair elections. However, there was clearly a lack of autonomy in POK and there had been no popular elections in Gilgit and Baltistan to determine the wishes and aspirations of the people. Against this background, I think it ought to be clear that concepts such as joint control or joint management over Jammu and Kashmir, which is an integral part of India, cannot be the basis of a settlement of the issue of Jammu and Kashmir.

So, I think these are some initial reactions which we thought we would share with you tonight on the basis of what we have heard so far, while we wait to see the full interview.

Question: There is some comment by interior Minister on Balochistan that India is funding...

Official Spokesperson: As far as any allegations about India’s interference in Balochistan are concerned I would like to categorically reject these allegations as being utterly baseless and false.

Question: In the same interview President Musharraf has said that he would invite Prime Minister to attend a Cricket match?

Official Spokesperson: We have seen that excerpt but I do not have any response to share with you tonight.

Question: Do you think such grand statements on TV complicates sensitive peace process which is ongoing and there is a plan?

Official Spokesperson: Let me not characterize this interview in any such terms. Let us, as I said, wait to see the entire interview. I have tried to share with you our positions on some of the issues which have come out in the excerpts so far. Thank you.
Media Briefing by Official Spokesperson at the end of first day of talks between the Foreign Secretaries of India and Pakistan.

New Delhi, January 17, 2006.

Official Spokesperson: Good evening. As you know the talks between India and Pakistan at the Foreign Secretary level took place today and they would continue tomorrow. We are right now in the middle of the talks. Naturally, I am only going to give you a very general and broad brush idea of how the talks are going and the issues that are being discussed. We will have a fuller briefing tomorrow.

Today, the two delegations met for about two-and-a-half hours followed by a working lunch. Thereafter, the Pakistan Foreign Secretary called on Minister of State for External Affairs Shri E. Ahamed. These talks will continue tomorrow morning.

Today, the two Foreign Secretaries reviewed the second round of the Composite Dialogue Process and looked forward to the third round. They made very positive assessments of the developments that have been achieved, the milestones that have been achieved in the second round of the Composite Dialogue and they both looked forward to an even more productive third round.

Amongst the positive developments, which you already know, are the overall improvement in relations between the two countries, the building up of confidence and trust and the reduction of what has been called the “trust deficit”, increased people-to-people contacts, several confidence building measures which have been put into place both in terms of connectivity as well as nuclear and conventional CBMs. These were all reviewed and looked at.

Generally, it was felt that a much larger number of people are traveling between the two countries, a much larger number of visas are being issued, people are going across for pilgrimages, greater bus and rail connectivity has been established or is to established. In this context, I should mention that India told the Pakistan side that we intend to extend the Munnabao-Khokhrapar rail link down to Ajmer. This will greatly facilitate travel of pilgrims from Pakistan to Ajmer. The Government is already in touch with the rail authorities in this regard.
The issue of release of prisoners and fishermen, the increased numbers of prisoners and fishermen to whom consular access had been granted over the last year, the numbers that had been released was much greater than 2004 - these were reviewed, outstanding figures were talked about. The schedule and dates of meetings over the next few months in terms of expert/technical-level talks as well as talks for the six remaining subjects were exchanged and discussed. We will get a final picture on this by tomorrow.

Trade and economic relations were discussed. Positive trends in India-Pakistan trade were discerned and noted. In terms of the CBMs, of course, the ones that I have already told you like Amritsar-Nankana Sahib bus, the Amritsar-Lahore bus, the Munnabao-Khokhrapar rail link, the successful implementation of the Srinagar-Muzaffarabad bus, the opening of the LoC points – these were all the matters that came up in the review as positive achievements. India's assistance during the earthquake was greatly appreciated by the Pakistan Foreign Secretary right at the beginning of the meeting.

In terms of the nuclear CBMs, as you know, one of the successes of the second round of the Composite Dialogue was the completion of the Pre-notification of Ballistic Missiles Agreement and that was noted. In this regard it would be recalled that we had presented to Pakistan a draft for a Memorandum of Understanding on reduction of nuclear accidents or unauthorized use of nuclear weapons. They said that they were studying it but preliminary observations from the Pakistani side were handed over to us and a more detailed response or set of amendments will be given to us before the expert-level meetings later in the first half of this year.

The successful implementation of the hotline between the Foreign Secretaries was also discussed. Incidentally, it was mentioned by Pakistan's Foreign Secretary that it was very effectively used by us when the earthquake took place and we got through to them to check the welfare of the Indian High Commission and that was the only telephone that was working at that stage.

One of the other agreements which is already in place is the agreement to upgrade existing communication links between the DGMOs and in this regard, related military CBMs, we handed over two Non-Papers to the Pakistani side. The first one on an understanding on not to develop new posts and defence works along the LoC, and the second one regarding
holding of Brigade Commander level flag meetings. They accepted the two Non-Papers and they will be studying these.

The issue of early opening of consulates in Mumbai and Karachi was also discussed as were some other outstanding issues and some possible new CBMs but on these and others I would rather wait for tomorrow to give you a more complete picture.

Civil Aviation links were discussed. As you know we already have in place an agreement in principle to increase the fights to 24 (in number) and to add more destinations – one more destination. Media products and their free movement between India and Pakistan were discussed, as were other major issues like terrorism, drug trafficking etc.

So, this is the broad brush flavor I wanted to give you of today’s meetings. I naturally cannot go into any specific details until the talks are over.

**Question:** There are reports that there are no takers for the Amritsar-Lahore bus because of some procedural problems. Has the state Government approached the MEA in this regard?

**Answer:** That is a matter that MEA has to work out with the state Government. Let us stick to India-Pakistan talks today.

**Question:** Was Jammu and Kashmir discussed during today’s talks?

**Answer:** Jammu and Kashmir will be discussed tomorrow. That is the second subject at the Foreign Secretaries’ level. As I told you yesterday, as per normal pattern the first day is a review and peace and security including CBMs. Tomorrow we do J&K.

**Question:** On terrorism any specific…

**Answer:** This is an overall review in terms of peace and security.

**Question:** Did India specifically raise the attacks in Delhi and Bangalore and the hand of Pakistan based terrorist groups?

**Answer:** No, there was no specific discussion of specific cases. But the overall concerns that we have on terrorism were placed on the table.

**Question:** On the opening of consulates, since the opening of the Pakistani consulate in Mumbai is stuck, is Delhi offering anything to facilitate that opening or is Pakistan willing to operate from a hotel?
Answer: Let me say that they discussed the difficulties that they had recently in renting a building and we offered them all our support in terms of approaching the state Government to facilitate their being able to rent appropriate premises.

Question: Siachen and Sir Creek are two issues where agreements are waiting to happen sooner than others. Any decision in this regard?

Answer: They were mentioned today in general terms but I would again wait for tomorrow to give you a more detailed assessment of where they stand. It would be premature for me to say anything on this today.

Question: What was the Pakistani stand on our proposal to extend the rail link to Ajmer?

Answer: That was appreciated. That is all within India.

Question: Will there be a Joint Statement tomorrow?

Answer: Let us wait till the end of the meeting. How do I tell you the result before the process?

Question: You mentioned about the holding of Brigade Commander Meetings, the Non-Paper. Would this be all along the LOC and would it also entail some hotlines between the Brigade Commanders?

Answer: These are initial ideas that have been conveyed from the Indian side to the Pakistani side. I think before they study it and come back with a reaction it would not be correct for me to give you details of what has been handed over.

Question: Any fresh proposals from their side?

Answer: They have come out with some ideas related to various nuclear CBM issues.

Question: They had proposed discussions on conventional CBMs. Was that part of today’s discussions?

Answer: Conventional CBMs were part of the discussions. They were discussed as I mentioned to you – the upgradation of the DGMO link and in terms of the two Non-Papers that I mentioned to you. These all come under the conventional CBMs.

Question: Any review of the October 2003 ceasefire?
Answer: No. It is November 2003.

Question: Did Balochistan find any mention in the talks?

Answer: Yes, Pakistan took up the issue of the statement that we had made and Foreign Secretary responded to that. In his response Foreign Secretary said that official statement had been made which spoke for itself. It had been made because a certain situation was developing in our neighborhood which was of concern to us and he rejected the unfounded allegations about India’s interference in Balochistan.

Question: Did they make the allegation even at the meeting?

Answer: Pakistan side did raise the Balochistan issue and our statement.

Thank you.
I think, yesterday Spokesman was able to give you some idea of the issues that were discussed during yesterday’s meeting on peace and security and confidence-building measures. Today we focused on Jammu and Kashmir. We had a review of the Second Round of our Composite Dialogue. It would be fair to say that both sides assessed the results of the Second Round in a positive manner.

There are a number of things that were achieved during the Second Round. I will draw your attention to some of the recent achievements. For example, we were able to conclude an agreement on the pre-notification of missile tests; we were able to also inaugurate the Srinagar-Muzaffarabad bus service; we were able to also agree on meeting points along the Line of Control; with the earthquake which took place sometime back, we also agreed upon five crossing points at the LoC; we have also quite significantly increased the exchange of peoples across the borders. According to the figures that we have, in 2004 the visas issued by the Indian High Commission in Islamabad was roughly about 60,000 and in 2005 it exceeded 90,000. So, you can see a very significant jump in terms of the exchange of peoples across the border.

There have been other important developments as well. As you are aware, there has been an upgradation of the existing DGMO-link between the two Director Generals of Military Operations. There is now an optical fibre hotline between them. There is also a hotline between the Pakistani Foreign Secretary and myself. We have agreement on a draft Memorandum of Understanding on narcotics-related issues. This has been agreed upon. It is going to be initialed at a subsequent meeting. We have an agreement on amending the 1975 Shipping Protocol. We are also looking at the possibility of concluding a new maritime, shipping agreement, between the two sides.

We have also signed agreements for the Amritsar-Lahore bus service as also the Amritsar-Nankana Sahib bus service. We are currently in the process of making arrangements for operationalising these two routes. We have also completed whatever arrangements were required for operationalisation of the Khokhrapar-Munabao rail link. We expect that this rail link will be operationalised early next month. Decks have been cleared also for the re-opening of the Consulates in Mumbai and in Karachi respectively.

So, if you look at the various achievements of the Second Round, I think it would be fair to say that the Second Round was certainly very
productive, certainly much more successful than the First Round. Based on that very solid foundation we are approaching the Third Round of our Composite Dialogue.

We have given to the Pakistani side a calendar and schedule of meetings for the Third Round stretching up to July and also a schedule for technical level meetings. By and large this particular schedule has been agreed to by both sides, though there will be obviously some adjustment of dates required in specific cases.

We also looked at a number of items that we have been discussing, for example, exchange of prisoners. Satisfaction was expressed that we have made actually a considerable amount of headway on that, and we are looking at ways in which we can improve this further.

As you know, we have handed over to the Pakistani side some amendments to the Consular Agreement. We were happy to receive from the Pakistani side a document setting out how we could perhaps take care of the inadvertent crossings of the LoC or the border and we are very happy to look at that.

We have also looked at some military CBMs, for example, not undertaking any fresh construction within 500 metres of the LoC, confining ourselves to just the improvement of existing structures but not creating new posts, for example, along the LoC.

One of the most important and very encouraging features is that for the last two years the ceasefire has held. Not only has the ceasefire held but I think there has been a scrupulous observance of the ceasefire on both sides. This is a very positive development. So, it was with some degree of optimism that we have now initiated the Third Round of our dialogue.

In this respect we are looking at some fresh ideas. For example, as you may be aware, we had given Pakistan a document relating to reducing the risk of nuclear accidents or unauthorized use of nuclear weapons. There have been some responses on some elements by Pakistan. We have agreed that we will continue our discussion on this with a view to reaching an early agreement. We have an understanding that we will conclude an agreement on prevention of incidents at sea in order to ensure the safety of navigation by naval vessels as well as aircraft belonging to the two sides. In this respect Pakistan has offered to give us a document which we can look at.
I have already mentioned to you the possibility of an agreement on the maintenance of tranquility on the LoC, particularly in terms of the undertaking of any new activity along the LoC. We have also proposed modalities for the conduct of monthly flag meetings between local Commanders at selected sectors. Both sides have handed over suggested modalities for such meetings.

Today, as I mentioned, we discussed Jammu and Kashmir. Here we have really, in a sense, carried forward a very substantive dialogue that we have been having on the issue of Jammu and Kashmir. The Indian viewpoint is that what are regarded as purely confidence-building measures by Pakistan are actually integral to the process of finding a final settlement to the Jammu and Kashmir issue. These are not in different compartments. So, the flexibility that has been shown by both sides in reaching agreement on the arrangements for the Srinagar-Muzaffarabad bus service or the agreement that we were able to reach on the opening of certain crossing points on the LoC - this is a sensitive area - the fact that we were able to reach agreement shows that we have been able to develop a degree of mutual trust and confidence. This is a process which we are taking forward. We had today, it would be fair to say, a rather substantive dialogue on the issue of Jammu and Kashmir.

The vision with which we are working is a vision which has been articulated by Prime Minister Dr. Manmohan Singh, which is a vision of peace and friendship between India and Pakistan, a departure from a history of conflict and mutual recrimination between the two sides to a future of friendship, cooperation not only for the welfare of the people of India and Pakistan but in the larger context of making this region, the region of South Asia, a region of peace or prosperity or dynamic prosperity, becoming a part and parcel of the larger Asian resurgence that is taking place all around us.

In this respect, obviously there are political limitations on both sides. Prime Minister has said that we are not in a position to redraw boundaries. We are not in a position really to look at territorial adjustments. But short of that, whatever is required in order to give comfort to people on both sides of the LoC, allow a free flow of people, free flow of goods, free flow of ideas and create opportunities for the celebration of the obvious cultural affinity which exists between the people of the two sides.

So, our approach to the issue of Jammu and Kashmir is that this is part and parcel of that larger search for peace and friendship between the
two countries. It is in that context that we should look at Jammu and Kashmir. That is the spirit with which we have approached the substantive talks that we have had today.

Again, it would be fair to say that there has been some movement. For example, we have agreed that there should be early operationalisation of the Poonch-Rawalakot bus service. We hope that the arrangements would be completed in terms of the infrastructure for enabling us to operationalise this, hopefully by March, or April maybe, this year.

We have also agreed to overcome the damage that has taken place on the Srinagar-Muzaffarabad bus route. We are hopeful that by March we should be able to make operational the bridge, the Aman Setu, which has been damaged during the earthquake. The normal bus service can then resume.

We for our part have also recommended additional bus routes. For example, we have recommended Kargil and Skardu. We hope that this would be something that can be operationalised at an early date. There is already a longstanding request from our side for the Jammu-Sialkot bus route.

You would recall that we have spoken earlier about five meeting points along the Line of Control. During this round it was agreed that we should try and operationalise at least two of these which are easier to operationalise. We will have some technical level discussion about the operationalisation and certain practical modalities like creating of an enclosure on either side of the LoC, of what would be the arrangements for people coming from the Indian side and people coming from the Pakistani side. We will try to make it as convenient, as easy as possible for people on both sides. So, these are important developments. I think this would enable us to carry forward in a positive manner our very substantive engagement on the issue of Jammu and Kashmir.

During his stay here in Delhi, the Pakistan Foreign Secretary called on the Minister of State for External Affairs, Mr. E. Ahamed. That was yesterday. This evening, just before I came for this briefing, he also called on Prime Minister Dr. Manmohan Singh.

Now, I would like to stress that one major theme in discussing India-Pakistan relations and also discussing the issue of Jammu and Kashmir is the issue of terrorism. It was conveyed in a friendly but in a very frank manner
that our ability to carry forward the peace process, our ability to take this dialogue process in a positive direction is very much related to the creating of an atmosphere which is free of violence. In that respect we drew attention to the fact that despite the assurances that we have received at the highest level from Pakistan, there is no end to cross-border terrorism.

We believe that the infrastructure of terrorism still continues to exist. We drew attention to the recent and serious incidents, terrorist incidents, which have taken place in India. You are aware of the bomb blasts in Delhi, the incident at Bangalore. These create a sense that all that needs to be done in order to curb cross-border terrorism, to really eliminate this atmosphere of violence, whether it is in Jammu and Kashmir or anywhere else in India, this is something which needs to be seriously addressed. We say this in a constructive spirit, in a spirit of friendship because we really do not wish this to be a question mark which hangs over the peace process. We believe, as Pakistan’s leaders themselves have conveyed to us, that terrorism is as much a threat to Pakistan and its security as it is to India. They have committed themselves to working together with India in confronting the phenomenon of terrorism. More needs to be done. We need to work together in order to deal with the issue of terrorism1.

So, this message has been given both at my level and Prime Minister also referred to this issue. For us this is a very critical issue. So, we would hope that in the coming weeks and months we will see a perceptible change in this area and that the assurances that have been conveyed to us on a number of occasions in the past, these are implemented with sincerity.

1. In a related development, Pakistan President accused New Delhi of providing support to rebels in Balochistan. In an interview to an Indian TV channel he claimed there was proof that India was providing support to the Baloch nationalist forces whom he described as “anti-government and anti-me”. Indian involvement in Balochistan included “financial support” and “support in kind”. He said he was disappointed and annoyed over the concern expressed by India over military operations in the province. But he added the “irritant” would not be allowed to upset the peace process. “It (the allegation over Balochistan) should not be a setback to the process of dialogue on the resolution of disputes. I am not only disappointed but annoyed….Now that you are asking, definitely it is a direct interference in our internal affairs.” However on January 11 in a satellite interview to an Indian daily the Hindu the Nawab Akbar Khan Bugti slammed Musharraf’s claim that India was providing support to the rebellion. “President Musharraf is using his favourite weapon –lie”. “His objective is to defame the legitimate demands of the people of Balochistan”. “What is the need for us to take anything from anyone”, he asked. “The weapons we are now using flowed into this region when the United States financed the Jihad in Afghanistan. It was the Inter-Services Intelligence which distributed them to Afghanistan, Iran Jammu and Kashmir –and to us in Balochistan.”
Prime Minister, during his meeting with the Pakistan Foreign Secretary, also referred to his vision of a future, a very bright future, for India-Pakistan relations and his personal commitment to that future - a future of friendship, a future of cooperation. What he said was, ‘I want permanent friendship between India and Pakistan’. So, that is the spirit in which we have had these talks during the last couple of days. This is the spirit in which we will carry forward this process.

Thank you very much.

**QUESTION:** You said that what Pakistan regards mere CBMs, India considers them a useful step towards final solution. Does it not indicate that Pakistan’s stand on Kashmir is far from flexible? My second question is whether it is the war of word on Balochistan or terrorist incidents in Delhi and Bangalore, how far these impacted the third round of talks?

**FOREIGN SECRETARY:** What I have told you is that whatever talks have been held they have been in a friendly manner. But there was also a candid atmosphere. If we do not look for frank solution to the problems before us, how will be take forward the relations between us? How will we strengthen them further? These are the problems. But there are also some positive developments which should be kept in view.

You have mentioned war of words: but as far as I remember there was no war of words: they clarified their stand. We also made our stand clear. What ever was talked yesterday the Spokesman briefed you on that; we have told you that we raised the issue of terrorist attacks in Delhi and Bangalore. If such incidents continue to take place, it is obvious that it would impact the on-going dialogue between us as also the bilateral relations. Keeping this in view we have suggested that there should be some seriousness from the Pakistani side also that whatever steps to stop the cross-border terrorism have been taken these are not sufficient.

**QUESTION:** Is Pakistan really flexible if .......

**FOREIGN SECRETARY:** We have told you what our stand is. The CBMs are a part of that process. The solution of Kashmir problem that we want to find out, it is quite significant in that process. As we told you in this round too some more steps have been taken. As I said there will be a substantive dialogue between us. It is possible there may be perhaps some differences in the thinking between the two. But if they too want to take this process forward, we also want to take it forward, then this will be another step in our relations.
QUESTION: Just rephrasing Abhisar’s question, when you said that this is India’s perception about CBMs being part of the integral process, that clearly indicates that it is not Islamabad’s perception. Was that the broad nature of what you are describing as a very frank discussion?

FOREIGN SECRETARY: I think one should not exaggerate the difference in perception on this issue. As long as there is a willingness on both sides to adopt more confidence-building measures, as long as there is an agreement on both sides that we should allow larger and larger numbers of people to cross the frontiers to meet each other, to interact with each other, these are positive developments from our side. Let me say that there is no hesitation on our part to also react to whatever proposals or whatever ideas Pakistan may bring with regard to Jammu and Kashmir issue. There is a willingness on our part to look at whatever is put forward before us.

QUESTION: Was it reciprocated with the kind of positiveness that you are trying to …

FOREIGN SECRETARY: I have just mentioned to you that we have adopted a number of measures in order to do precisely what we say; (it) is very important to the process, that is, to increase the opportunities for people on both sides of the LoC to interact with each other. We are looking at, for example, operationalising as early as possible a cross-LoC train. We have agreed to open at least one new bus route between the two sides. These may not seem to be very dramatic measures. But these are all measures which really take us closer to the objective of finding a final settlement to the Jammu and Kashmir issue.

QUESTION: Do not you think there is a stalemate?

FOREIGN SECRETARY: I would certainly not describe this as a stalemate. I think we are making progress and the outlook is good. I have frankly mentioned to you what could be the possible question marks over this process which is there.

QUESTION: You talked about the Kashmir specific CBMs. Can you elaborate a bit more on that? Did Pakistan give you any proposal, on what General Musharraf has been talking, about self-governance and things like that?

FOREIGN SECRETARY: We have spoken about self-governance. For us self-governance is something which means that there should be representative institutions. There should be institutions which reflect the
concerns and aspirations of people. On our side of the LoC we believe that such institutions exist. There is an elected Assembly there. We would hope that there are similar representative entities on the Pakistani side of the Line of Control whether it relates to Pakistan-occupied Kashmir, whether it relates to Gilgit or Baltistan. So, we are willing to hear from Pakistan what are the kind of steps that would be taken, for example, with regard to such representative institutions being created on the other side. We can then look at some areas where we can work together, these representative institutions can work together. We have common concerns, for example, relating to environment. Or, we could work together on common issues like tourism promotion. There are opportunities which can open up if we move in that direction. So, we have an open mind. If there are any specific suggestions in this regard, we will look at them. But I have also given to you the parameters within which we can approach this, which is what Prime Minister has already spelt out.

**QUESTION:** When you spoke about cross-border terrorism, what was the response of Pakistanis? Did they make any pledges to say they would do anything? What was their response to your concerns on cross-border terrorism?

**FOREIGN SECRETARY:** The response was that Pakistan is deeply committed to the struggle against terrorism, and that Pakistan would not allow any part of the territory under its control for terrorism against India.

**QUESTION:** Do you believe that?

**FOREIGN SECRETARY:** I have already mentioned to you that while some steps may have been taken, these steps are not enough. So, we would hope that further steps would be taken to control cross-border terrorism.

**QUESTION:** During the discussions today, did the Pakistani side present any proposal or a non-paper on self-governance issue to India?

**FOREIGN SECRETARY:** No, Sir.

**QUESTION:** Is there any Joint Statement that you are going to issue today?

**FOREIGN SECRETARY:** It is being worked on. We have just finished the meeting with the Prime Minister. It is being finalized.
QUESTION: Just a clarification. Which is the bus service you have agreed on?

FOREIGN SECRETARY: Poonch-Rawalakot.

QUESTION: What are the LoC points?

FOREIGN SECRETARY: As I mentioned, we are going to look at what would be the two most suitable points from the point of view of ease of access. That is something we will be having technical level discussions on, on some of these cross-LoC arrangements. In that technical level meeting we would also look at which are the two most suitable points.

QUESTION: You have mentioned that the Foreign Secretary met the Prime Minister. Did he invite Prime Minister Manmohan Singh to Pakistan?

FOREIGN SECRETARY: Yes, the Foreign Secretary did extend an invitation, or rather reiterated President Musharraf’s invitation to Prime Minister to visit Pakistan. Prime Minister said that he was very keen to visit Pakistan and an appropriate occasion would be found for this visit. He also said that he would like this visit to be a substantive visit.

QUESTION: Did the Pakistani side raise self-governance and demilitarization in any way? Was there any discussion on Siachen?

FOREIGN SECRETARY: I just mentioned to you that the self-governance was raised and what we have discussed.

QUESTION: And on Siachen?

FOREIGN SECRETARY: Yes, we have conducted further exchange of views on Siachen. We have to look at the modalities with regard to a possible disengagement of forces in Siachen. But those modalities will need further discussion.

QUESTION: Demilitarisation?

FOREIGN SECRETARY: I think we have already spelt out for you what our response to the issue of demilitarization is. This is something which is a sovereign decision of the Government of India. The deployment of security forces or their redeployment is something which is linked to our assessment of the security environment in a particular place. What we have said is that as long as there is a perceptible improvement, there is an end to terrorism, to acts of violence, then why just two or three points that are being mentioned, we would like the entire LoC and border between
India and Pakistan to have as thin a deployment of forces as is possible. If we establish a relationship of trust and confidence, of peace and friendship, if this border, this LoC becomes a line of friendship, then there is no need for deployment of large forces on either side. That is our perspective.

**QUESTION:** There are two military CBMs which Pakistan has proposed. One is on declaring South Asia ‘anti-ballistic missile free zone’ and the other is non-deployment of strike formations of the army on the borders. What is your view on these two proposals? If these were to be accepted, do you think it would inject a new lease of life in Indo-Pak relations?

**FOREIGN SECRETARY:** I think there is already a considerable lease of life in India-Pakistan relations. I do not think we need to look around for other leases of life. As far as this proposal is concerned on ‘anti-ballistic missile free zone’, we are only looking at the research and development aspect of anti-ballistic missiles. We are not already creating anti-ballistic missile defences in India. This is something we are looking at as a concept. We are examining it. This is not really the stage to talk about these kinds of concepts. With regard to deployment or redeployment of strike forces, I think I have answered that question. What we would like to really see is that the entire border and Line of Control should become a border of peace and tranquility. That would lead to, almost as a natural corollary, a thinning of forces as well as a redeployment of forces. This is what we would be looking at. We would like to be more ambitious in this regard.

**QUESTION:** My question pertains to Siachen. They were informed that before demilitarization one needs to demarcate and as such have a border in place on Siachen. From our side, that was the idea given across. Have they come across? How have they reacted to the concept of drawing a line, or making a border or a line of control as far as Siachen is concerned?

**FOREIGN SECRETARY:** What we have been talking about is a possible redeployment of forces and thereby creating a zone of disengagement. Such a zone of disengagement would have to acknowledge the positions which are currently there and from which there would be redeployment taking place. What we are trying to see is workout the modalities of how this is going to be actually translated into an agreement. The discussions are ongoing. We have made some progress. We are hopeful that we would make further progress as these talks proceed.

**QUESTION:** Whatever you said in response to the military CBMs and the non-deployment of strike formations, have you conveyed to the Pakistan side as well?
FOREIGN SECRETARY: I have just told you what our view is on this whole aspect of creating demilitarized zones or removal of strike forces from the border. Our view is that - (1) there has to be a significant improvement in the security environment; (2) why should we limit ourselves to certain specific areas? We would like there to be a border of peace and tranquility through the entire stretch of India and Pakistan border.

QUESTION: Did Pakistani side specifically bring up President Musharraf’s idea of demilitarization that he has talked about? Did that come up?

FOREIGN SECRETARY: Yes, reference was made. As I said, reference was made both to the concept of self-governance as well as to the concept of demilitarization. I have given you what our view on these concepts is.

QUESTION: In a recent interview the President of Pakistan talked about three districts in our part of Kashmir, that troops be taken out from these three districts. The implicit assurance perhaps was that this would lead to a substantial decrease in terrorist violence in the Valley. This also leads us to the inference that they have some control over people who are operating inside the Valley. Was this point specifically raised by our side to them and what was their response?

FOREIGN SECRETARY: You are aware that when this interview took place there was a response from our Spokesman to precisely the question that you are referring to. We have never accepted that there is any kind of link between the reduction of violence or terrorism with either demilitarization or any other steps to be taken. Terrorism is terrorism. There is no cause which justifies the killing of innocent men, women and children, full stop. So, there cannot be any kind of bargaining with this. You cannot use terrorism as a bargaining chip. I think the Indian viewpoint is very clearly stated.

QUESTION: When are you meeting next?

FOREIGN SECRETARY: The current round will go on till July. We have already agreed that the various meetings on different subjects on the Composite Dialogue as well as the technical level meetings will take place over a six-month period.

I would also like to mention here, as you are aware, in October we also revived the Joint Commission between the two countries which is at the Foreign Minister level. At the first meeting itself we had agreed that we
will set up certain working groups for promoting cooperation between the two sides in different areas. For example, we had agreed that areas like health, areas like education, environment, are areas where we would set up specific working groups. So, it was agreed at our current meeting that these working groups in fact should be set up and they should meet even before the meeting of the Joint Commission. So, maybe we will agree to have this sometime during the middle of this period, have the first meeting of the Joint Working Group which we both agreed could be at the level of Joint Secretaries, and then we could just on the eve of the next meeting of the Joint Commission, we could review their recommendations with a view to adopting some of their recommendations.

**QUESTION:** Is any specific date set up for Foreign Secretary level talks?

**FOREIGN SECRETARY:** Generally speaking, it will be around July. But we have not really fixed the exact dates.

**QUESTION:** When you raised the issue of terrorism, was the question of intelligence sharing also discussed?

**FOREIGN SECRETARY:** No sir, the intelligence sharing was not discussed. Perhaps you will remember during the last round of Foreign Ministers’ talks, a decision was made to find an opportunity for discussion between their Federal Investigating Agency and our CBI. No such meeting has been held so far. We reminded them about this decision this time. It would be useful if such a meeting takes place at the earliest.

**QUESTION:** We want more trade across the border. But Pakistan Cabinet yesterday took a decision not to ratify the SAFTA. Did you raise this issue with the Pakistani side?

**FOREIGN SECRETARY:** I was not aware that they have taken such a decision. Our view would be, of course, that SAFTA is an important and landmark agreement and all the members of SAARC should ratify it as early as possible.

Thank you very much indeed.

(The text in italics is translated from Hindi)
Joint Statement issued at the end of India-Pakistan Foreign Secretary level talks.

New Delhi, January 18, 2006.

1. The Foreign Secretaries of India and Pakistan met in New Delhi on 17-18 January 2006 to commence the third round of talks under the India-Pakistan Composite Dialogue framework. Foreign Secretary of India Shri Shyam Saran led the Indian delegation while the Pakistan delegation was led by Foreign Secretary Mr. Riaz Mohammad Khan. They discussed issues related to ‘Peace and Security including CBMs’ and ‘Jammu and Kashmir’. The talks were held in a cordial atmosphere and were constructive.

2. The two Foreign Secretaries assessed the developments in bilateral relations and expressed satisfaction at the progress made during the Composite Dialogue process. The two sides reaffirmed their commitment to move forward the peace process in a meaningful way during the third round. They recalled the outcome of the discussions between the President of Pakistan and Prime Minister of India reflected in the Joint Statements of 6 January 2004, 24 September 2004, 18 April 2005 and 14 September 2005. Recalling the Joint Statement of 4 October 2005 issued at the conclusion of meeting of the Foreign Minister of Pakistan and the Minister for External Affairs of India, the two sides reiterated their resolve to carry forward the peace process and maintain its momentum.

3. On the issue of Peace and Security including CBMs, the two Foreign Secretaries reviewed and assessed positively the progress made during the meetings of experts on Nuclear and Conventional CBMs. The two Foreign Secretaries, with the objective of promoting a stable environment of peace and security, agreed to mandate the two experts groups to continue consultations on security concepts and nuclear doctrines to develop measures for confidence building in the nuclear and conventional fields aimed at avoidance of conflict, including, inter alia, consideration of the following:

(i) Continue discussions with a view to finalising an agreement on “Reducing Risk of Nuclear Accidents or Unauthorised Use of Nuclear Weapons”, on which a draft has been presented by India;
(ii) Conclusion of an agreement on prevention of incidents at sea in order to ensure safety of navigation by naval vessels, and aircraft belonging to the two sides. The Pakistani side indicated that they will present a draft of such an agreement;

(iii) Elaborating, consistent with its intent, the agreement reached on no development of new posts and defence works along the LoC. The Indian side handed over proposed elements;

(iv) Modalities for the conduct of already agreed monthly flag meetings between local commanders at the selected sectors. Both sides handed over suggested modalities.

4. The two Foreign Secretaries had a detailed exchange of views on Jammu & Kashmir and agreed to continue the sustained dialogue in a purposeful and forward looking manner to find a peaceful and negotiated final settlement.

5. The Foreign Secretaries noted with satisfaction the opening of the five crossing points across the Line of Control, and hoped that the process of promoting greater interaction between the divided families would get further impetus. They reiterated their commitment to start a bus service between Poonch and Rawalakot and a truck service on Muzaffarabad-Srinagar route for trade in permitted goods as soon as the infrastructure damaged during the October 2005 earthquake is restored.

6. The two Foreign Secretaries recalled their decision of 2004 regarding provision of consular access to all civilian prisoners and fishermen and their early repatriation on humanitarian grounds.

7. Both sides reiterated their resolve to simultaneously reopen their respective Consulates General in Mumbai and Karachi and to facilitate the process.

8. Both sides discussed the schedule of meetings, including technical level meetings, under the Composite Dialogue framework. The Foreign Secretaries and Foreign Ministers will meet thereafter to review the third round of the Composite Dialogue.

9. Both sides also agreed to hold early meetings of the technical level working groups of the Joint Commission on Agriculture, Health, Science & Technology, Information, Education, I.T. &
Telecommunication, Environment and Tourism so that they can report their progress to the Joint Commission.

10. The Foreign Secretary of Pakistan called on Prime Minister Dr. Manmohan Singh and Minister of State for External Affairs, Shri E. Ahmed during the course of his visit to New Delhi.

145. Joint Statement issued at the end of India-Pakistan meeting for operationalisation of Munabao-Khokhrapar rail link.

The railway delegations of Pakistan and India met on 30-31 January, 2006 in Islamabad to finalize the Agreement for operationalisation of rail link between Zero Point Railway station near Khokhrapar (Pakistan) and Munabao (India).

The Pakistan delegation was led by Mr. Mushtaq Khan Jadoon, Additional General Manager (Passengers), Pakistan Railways, Government of Pakistan while the Indian delegation was led by Mr. Ashok Gupta, Adviser, Traffic, Ministry of Railways, Government of India.

The two sides signed the Agreement on the establishment of rail link via Zero Point Railway Station near Khokhrapar (Pakistan) and Munabao (India) and also agreed to various technical modalities for the running of the Thar Express.

The Thar Express will run every Saturday and return the same day. The first train with Pakistani rake will start on February 18, 2006.

The talks were held in a friendly and cordial atmosphere.
146. **Media briefing by Official Spokesperson about Firing on Indian fishermen by Pakistan Maritime Shipping Agency.**

**New Delhi, February 16, 2006.**

In the early hours of 13 February, an Indian fisherman Shri Shantilal Mangal, aged 21 years, was killed in firing by a Pakistan Maritime Shipping Agency (PMSA) ship. The Indian fishing boat, Avani, was fishing along the notional maritime boundary in Indian waters west of Gujarat coast when it was fired upon. The rest of the crew returned with the body to Okha harbour.

The same day, Pakistan Maritime Security Agency ship, Vehdaat, towed away three Indian fishing boats - MNF Bhiva, MFB Puspak and MFB Shiv Mukti - along with the crew of about 25 members, which were fishing in Indian waters near the notional maritime boundary. An Indian Coast Guard ship was able to rescue one other Indian fishing boat along with its crew and bring back another boat which had been set on fire.

The Deputy High Commissioner of Pakistan in New Delhi was summoned today to the Ministry and a protest lodged against the killing of the unarmed fisherman. The matter is also being taken up by the Indian High Commission in Islamabad with Pakistan Foreign Office.

Government of India has demanded the immediate release of the fishermen and their boats.

**Question:** How many fishermen were arrested?

**Answer:** 25.

**Question:** How many Indian fishermen are there on the Pakistani side?

**Answer:** Yes, I have got some figures to add to that. There are about 400 Indian fishermen in Pakistani jails who were arrested between September 2005 and February 2006. There are 269 Indian fishing boats in Pakistani custody and these have been detained in the period October 2003 till now. As you know, though Pakistan released 1171 fishermen in 2005 it did not release the fishing boats. Previously, Pakistan used to release Indian fishermen and the fishing boats but during this last period Indian fishermen were released via Attari border without the fishing boats being released.
Question: How many Pakistani fishermen are there on the Indian side?

Answer: We have 59 Pakistani fishermen in India who were arrested during September 2005 to February 2006. The Pakistani fishermen are being granted consular access on February 16 i.e. today at Jamnagar. There are 37 Pakistani fishing boats in Indian custody which were detained during December 2003 till now. During last year 222 Pakistani fishermen were released.

Question: Why have they detained the fishing boats?

Answer: As I told you earlier, Pakistan used to release our fishermen along with their fishing boats, but since 2003 they have been retaining the fishing boats.

Question: How many Indian fishermen have been granted consular access?

Answer: Government of Pakistan, just to give you the complete picture, granted consular access to 313 Indian fishermen on January 30-31 and another 83 fishermen are awaiting consular access.

Question: India is allowing journalists from Pakistan for the Khokhrapar- Munnabao rail link inauguration. Is Pakistan doing the same?

Answer: What is your experience? I can tell you what India is doing. India had offered that Pakistani mediapersons could come to attend that function and return at the end of the function without visas. However, I understand that Pakistan would rather that anybody who came from there to here came on visas. So, visas are being issued to whoever is asking the Indian High Commission for visas. I understand that about 150 visas have been issued to Pakistani citizens including Pakistani journalists. As to why Indian journalists are not being given visas I think you should address the questions to the right quarters. Naturally, it would have been useful in promoting people-to-people contacts if Indian journalists had also been given visas.

Question: There were news reports that the visas would be stamped on the train. If that is true would the numbers go up?

Answer: As I said that we had offered that they could come without visas but now they want visas to be issued, so visas are being issued.
And, if there are more people wanting visas, subject to other things being in order and logistics being prepared, we have no objection in issuing these visas.

**Question:** Another clarification, the Indian fishermen who was killed, was he fishing in Indian waters?

**Answer:** As I said this fishing boat Avani on which Shantilal Mangal was fishing was in Indian waters within the notional maritime boundary. As you know the maritime boundary is not delineated, it is a notional boundary.

**Question:** Body is still....

**Answer:** It has returned to the Okha harbour.

---

147. **Question in the Lok Sabha: “Use of Chemical Weapons by Pakistan”**.

**New Delhi, March 1, 2006.**

**Will the Prime Minister be pleased to state:**

(a) whether Pakistani forces are using chemical weapons as reported in The Hindustan Times dated January 24, 2006;

(b) if so, the facts thereof;

(c) whether the use of chemical weapons by Pak forces is creating tension in the region, particularly in India; and

(d) if so, the reaction of the Union Government in this regard?

**The Minister of State in the Ministry of External Affairs (Shri E. Ahamed):**

(a) - (d) A statement is placed on the Table of the House.

**STATEMENT**

(a) - (b) It has been reported in the Pakistani media that Pakistani forces used chemical weapons in Balochistan recently.
On 24 December 2005, Senator Sanaullah Baloch of the Balochistan National Party (BNP) alleged that the army was using gas and chemicals against Balochs. On 24 December 2005, Senators belonging to the nationalist parties of Balochistan accused the military of using poison gas in Kohlu, Balochistan, and of carpet bombing civilians in the area. On 7 February 2006, Mr. Agha Shahid Hasan Bugti, Secretary-General of Jamhoori Watan Party (JWP), accused the paramilitary forces of firing chemical gas shells on civilian population in Dera Bugti, Balochistan. However, on 2 January 2006, the Spokesman of the Pakistan Army, Maj. Gen. Shaukat Sultan, rejected the reports that Pakistan security forces had used poisonous gas in operations in Balochistan.

(c) - (d) Government remains fully vigilant and will take all necessary steps to safeguard India’s security and national interests.

148. Joint Statement issued at the end of Civil Aviation talks between India and Pakistan.

New Delhi, March 7, 2006.

Civil Aviation talks between India and Pakistan were held in New Delhi on 6-7 March 2006 to review existing bilateral arrangements. The Indian delegation was led by Shri Satendra Singh, Director General of Civil Aviation, Government of India and the Pakistan delegation was headed by Major General (Retd.) Mohammad Ashraf Chaudhry, Additional Secretary, Ministry of Defence, Government of Pakistan.

The talks were held in a friendly and cordial atmosphere. Both sides expressed desire to expand the scope of the existing Air Services Agreement and agreed to continue discussions for the enhancement of capacities, frequencies, and gateways for the benefit of the traveling public of the two countries.
149. Press Release of the Ministry of External Affairs conveying appreciation for humanitarian gesture shown by a Pakistani ship to an Indian ship.

New Delhi, March 8, 2006.

Government of India has also conveyed its appreciation to Government of Pakistan for the humanitarian gesture shown by Pakistan Maritime Security Agency (PMSA) ship, MSS Rehmat, to an Indian ship Dhow Fateh Salamat on February 27, 2006. The Indian ship had developed engine trouble about 170 nautical miles south-west of Karachi. MSS Rehmat had provided food and drinking water for those stranded in the Indian ship and towed it to the notional international maritime boundary from where it was brought back to India by an Indian Coast Guard ship.

150. Press Release of the Ministry of External Affairs on Government of India’s protest to Pakistan against proposed construction of Bhasha dam.

New Delhi, March 8, 2006.

The Government of India conveyed through diplomatic channels today to the Government of Pakistan, its protest against the proposed construction of Bhasha dam in territory that is part of the State of Jammu & Kashmir, which is an integral part of India by virtue of its accession to it in 1947. The reservoir of this dam, according to media reports, will inundate large parts of land which falls in the northern part of the State of Jammu & Kashmir.
151. Press Release of the Ministry of External Affairs responding to questions on news reports that some Pakistani Missions are circulating a new map of J&K.

New Delhi, March 10, 2006.

*In response to questions on news reports that some Pakistani Missions are circulating a new map of J&K, the Official Spokesperson said:*

We have seen reports in the Pakistani media that some Pakistani Missions are circulating a new map of Jammu & Kashmir which depicts the so-called Northern Areas (Gilgit-Baltistan) as a separate entity and only the rest of the state as J&K. However, the Pakistan Foreign Office has denied that it has circulated any new map. We would like to reaffirm that the region of Gilgit-Baltistan is a part of the State of J&K, which on the basis of its accession in 1947 is an integral part of India.

152. Joint Statement issued on the conclusion of the 2nd Round of Technical Level Talks between Central Bureau of Investigation (India) - Federal Investigation Agency (Pakistan).

New Delhi, March 22, 2006.

1. The second round of Central Bureau of Investigation (India) - Federal Investigation Agency (Pakistan) Technical Level Talks was held on March 21 and 22, 2006 at CBI Head quarters, New Delhi. The CBI (India) delegation was led by Mr. Vijay Shanker, Director, CBI, while the FIA (Pakistan) delegation was led by Mr. Tariq Parvez, Director General, FIA.

2. The talks were held after a gap of almost 17 years following a decision during the Home Secretary Level talks in New Delhi in August, 2005. The deliberations were constructive and were held in a cordial atmosphere. Both sides identified areas of mutual interest and agreed to work out the modalities of cooperation.

3. A Joint Study Group will be set up to decide upon the modalities of
future cooperation in the areas of human trafficking, counterfeit currency and illegal immigration. It was also agreed by both sides to designate an officer each as the nodal point to pursue cooperation between CBI and FIA in these areas.

4. A decision was also taken to have periodical meetings at short intervals between the Interpol nodal points. All efforts will be made by both sides for expeditious disposal of pending Interpol references.

5. It was agreed that the two agencies will explore possible avenues of professional training and share experience in various fields of criminal investigation.

6. Director, CBI accepted an invitation from DG, FIA to visit Pakistan with his team of senior officers by the end of this year.

153. Speech by Prime Minister Dr. Manmohan Singh on the launch of Amritsar – Nankana Sahib Bus Service.

Amritsar, March 24, 2006.

Chief Minister of Punjab Sardar Amrinder Singhji, Brothers and Sisters!

I am extremely happy to be here in Amritsar on this very important occasion of the launch of a regular bus service between Amritsar and Nankana Sahib. This is indeed a memorable day for Punjab. This is a historic day for the entire Sikh community, both in Punjab and elsewhere. This is a historic day for the Panth. In many ways, it is a historic day for both India and Pakistan.

Ever since the Independence of our country in 1947, every morning, every devout Sikh prays to let us have free access to the Gurudwaras left behind in Pakistan. And among the Gurudwaras, Nankana Sahib is the holiest and most important. Our government has made sincere efforts in this direction and this bus service between Amritsar and Nankana Sahib is a result of this.

This is an emotional day for every Sikh. And for me too. Memories
of the partition of 1947 and my own travel from Pakistan to India come vividly to my mind. My heart swells with pride to launch this bus service connecting two of the holiest sites for the Sikh Panth. On this historic occasion I send my greetings to the people of Pakistan and to President Pervez Musharraf.

Brothers and Sisters, We need more such links between the two countries in the months and years to come. For this, we require friendly relations between India and Pakistan. I hope this bus service opens yet another chapter in improving the relations between our two countries. When President Musharraf had come to visit us in New Delhi last year I had said that “The journey of peace must be based on a step-by-step approach, but the road must be traveled.” As an ancient saying goes, a road is made by walking.

I am happy that we are moving forward and creating a road, one step after another, even though many hurdles have come up along the way. The bus service from Srinagar to Muzzafarabad was one step. The rail link from Munnabao to Khokrapar was another step. The steps we have taken to promote trade and to make travel and transport easier are all small but important steps forward. Today, we take another step. A historic step. This bus service from Amritsar to Nankana Sahib renews an emotional bond between the two sides of the border.

I have said repeatedly to President Musharraf and the people of Pakistan that we are sincerely committed to peace and development in this region. Our government is committed to resolving all outstanding issues with Pakistan, including the issue of Jammu & Kashmir. For this, I and General Musharraf have agreed that it is necessary to keep firm control over terrorism. There is a growing realization in both our countries that terrorism is an enemy of civilized societies. General Musharraf has taken bold steps to curb extremism and I compliment him for that. But more needs to be done in the interest of both India and Pakistan.

As I see it, the normalization of relations between India and Pakistan will open up enormous opportunities for an accelerated rate of economic growth. And for creating new job opportunities. Our trade potential is far in excess of what we are able to realize on the ground. There are many things that the two Punjabs can learn from each other’s development experience. We must encourage people-to-people contacts between actors in civil society, between academics, businessmen, artistes, and most
importantly, the common people. It is through such contacts that we can explore a vision for a cooperative common future for our two nations – a future where peace prevails, where relations are friendly, where our citizens rejoice in the well-being of the other country.

I am aware that General Musharraf has often stated that the normalization of relations between our two countries cannot move forward unless what he calls the core issue of Jammu & Kashmir is dealt with. In my view, it is a mistake to link normalization of other relations with finding a solution to Jammu & Kashmir. But we are not afraid of discussing Jammu & Kashmir or of finding, pragmatic, practical solutions to resolve this issue as well.

A step-by-step approach has to be adopted given the inherent difficulties involved in finding practical solutions. I suggest that both sides should begin a dialogue with the people in their areas of control to improve the quality of governance so as to give the people on both sides a greater chance of leading a life of dignity and self respect.

I have often said that borders cannot be redrawn but we can work towards making them irrelevant – towards making them just lines on a map. People on both sides of the LOC should be able to move more freely and trade with one another.

I also envisage a situation where the two parts of Jammu & Kashmir can, with the active encouragement of the governments of India and Pakistan, work out cooperative, consultative mechanisms so as to maximize the gains of cooperation in solving problems of social and economic development of the region.

The vision that guides us is that the destinies of our peoples are interlinked. That our two countries must therefore devise effective cooperative strategies to give concrete shape and meaning to this shared vision. India sincerely believes that a strong, stable, prosperous and moderate Pakistan is in the interest of India and entire South Asia. We are sincerely committed to the prosperity, unity, development and well-being of Pakistan. We want good neighbourly relations. We want all the people of South Asia to live a life of dignity and self-respect. When our neighbours live in peace, we live in peace.

Brothers and Sisters, We must move forward. We want to move forward. We need to do much more to create the environment in which we
can move forward. It is possible for us to come to a meaningful agreement on issues like Siachen, Sir Creek, Baglihar. I am convinced we can move forward, if all concerned are willing to accept the ground realities; if all concerned take a long view of history and of our destiny. The time has come to leave behind the animosities and the misgivings of the past and to think the unthinkable of moving together in pursuit of our common objective of getting rid of chronic poverty, ignorance and disease that still afflict millions of our citizens. India and Pakistan must work together to open up new opportunities of economic cooperation, not only with South Asia, but also with West Asia and Central Asia. Cities like Lahore and Amritsar should once again become throbbing international commercial centers serving the entire region.

Instead of looking at each other as adversaries, we must have the courage to see each other as supporting the other for the realization of a better tomorrow for all the people of India and Pakistan. I have a vision that the peace making process must ultimately culminate in our two countries entering into a Treaty\(^1\) of Peace, Security and Friendship to give meaning and substance to our quest for shared goals. I make this offer to the people of Pakistan on this historic occasion. I am sure the leadership of Pakistan will reciprocate.

Brothers and Sisters, Today is a day of hope for Punjab. Punjab has seen many years of great pain and sorrow. Punjab has seen many years of waste and violence. But the past is behind us. This Golden Land of ours is once again bounteous and filled with joy. Our government in Delhi and in Punjab have been working tirelessly for the development of the state.

I am delighted to inform you that during the recent past after my last visit our Government has taken several steps to restore the glory of Amritsar. We have sanctioned Rs. 72 crore to complete the Galiara Project around Sri Harmandir Sahib. We have established a Centre of Research on Sri Guru Granth Sahib Studies in the Guru Nanak Dev University. We have

---

1. There was some reaction to Prime Minister’s proposal for a peace treaty from the Pakistani side. Foreign Minister Kasuri while welcoming the proposal maintained that all issues, including Kashmir should be resolved. In an informal chat with journalists in Lahore on 25 March Kasuri said the “positive tone” was appreciable. “We should seriously think why such efforts could not materialize,” He said the composite dialogue being underway for the last two years had made much progress and covered many dimensions. “Nevertheless, we should not forget that we had fought three major wars on Kashmir and had been fighting on the Siachen for 25 years. We should realize that we have to resolve all the outstanding issues including the Kashmir issue.”
allocated Rs. 48 crore for the completion of the Khalsa Heritage Project at Anandpur Sahib. I believe the first phase of it will be inaugurated next month.

I am happy to announce that we are taking further steps for the development of Amritsar. This is a holy city. A historic city with a great past. An international city whose people reside in all corners of the world. Both Amritsar and Ludhiana are covered under the new Jawaharlal Nehru National Urban Renewal Mission. Through this, we can fund the Sri Guru Ram Das Urban Development Project in Amritsar costing nearly Rs. 240 crore and an elevated road project costing Rs. 210 crore. The state government should pursue these on priority. The Amritsar-Wagah Road will be widened and made into a top class road so that it can become an international highway for trade, travel and tourism. We are taking steps for the upgradation of facilities at Attari Railway Station, being a major International Railway Station of the country. I am also happy that the state government has finalized the development of a Special Economic Zone in Amritsar. This city and its neighborhood had a great industrial past. We need to revive it and the SEZ is one such step.

I am also concerned about the problems being faced by industry which had come up in Goindwal Industrial Complex. I am confident that the Punjab Government will look into all the issues and come up with a package for its revival. I assure all necessary support from the Government of India in this regard.

I am also proud to announce that we have decided to hand over the historic Gobindgarh fort to the Punjab Government. A historic fort that has been so dear to the Punjabis is now once again their own.

Brothers and Sisters, Our Government has taken many steps for the development of Punjab. We have provided in the Union Budget a sum of Rs. 100 crore to the Punjab Agricultural University. This university must utilize these funds to generate a Second Green Revolution in Punjab. The hard working farmers of this lovely state feed the nation and made us secure as far as food is concerned. They created the first green revolution. We now need to move forward and transform the agriculture to the next level. As I travel across the country, I see states like Maharashtra, Andhra Pradesh, Karnataka and Tamil Nadu increasingly going for commercial agriculture centered around horticulture. Punjab farmers need to do the same if they are to keep ahead of the rest of the country. We will work with
the state government to realize this goal by establishing the necessary marketing and storage infrastructure and transport facilities. The high speed rail freight corridor connecting our Western and Eastern ports has been extended to Punjab to enable easy transport of goods. We are also working towards creating a second international airport in Punjab near Ludhiana and I hope this materializes in the coming months.

Brothers and sisters, Punjab has had a glorious history of industrial growth. Each town and city has been renowned for specific industrial products – bicycles, hosiery, machine tools, sports goods, etc. Over the last two decades, however, Punjab has lost its leadership role in many areas. We need a new wave of industrialization in the state. We need large industries which will generate demand for ancillary products. We need to provide technology and marketing support to small industries. We need to create a skilled pool of people who can drive this growth. We need to have better roads, transport facilities and power supply.

Steps are being taken towards this end. We have allocated 1500 MWs of power to Punjab from a Super Thermal Power Station to be set up in Chhattisgarh and 1200 MWs of power from other Power Stations in the country. Power supply in and around Amritsar will improve greatly through the creation of a major new sub-station at Amritsar at a cost of Rs 150 crore. We are establishing an Indian Institute of Science Education and Research in Punjab. I have directed the National Highways Authority of India to complete at an early date the 4-laning of widening of the following roads:

- Amritsar-Jalandhar Road; Amritsar-Pathankot Road; Kiratpur-Chandigarh Road; Ambala-Chandigarh Road; and also take up early the 6-laning of Ambala-Jalandhar Road and Ludhiana-Chandigarh Road.

Our Government has also decided to develop on-port and off-port facilities at Wagah International Border. This includes reducing waiting time for immigration and custom formalities at Wagah. We will modernize customs infrastructure at Wagah and speed up security clearance. We propose to expand immigration, customs and security halls and increase number of counters, and provide better amenities. We will make it easier for the arrival and departure of jathas and delegations. An animal quarantine station will be set up for exporters of live stock. We will improve facilities for the Amritsar-Lahore buses. We are also improving the infrastructure for the Beating Retreat ceremony at Wagah border post.
Brothers and sisters, Punjab is the granary of India. Every farmer in Punjab is a proud soldier in our war against poverty and hunger. Your hard work has made India proud and prosperous. Your courage and enterprise makes each one of us proud. As a son of Punjab I salute every son and daughter of this great land. May your path be blessed. Jai Hind.

Islamabad, March 27, 2006.

1. The Meeting of the Joint Study Group, led by the Commerce Secretaries of Pakistan and India was held at Islamabad on 27th March 2006.

2. The lists of delegates of Pakistan and India, respectively is at Annex-I.

3. Commerce Secretary, Government of Pakistan welcomed the visiting delegation of India and stated that the primary objective of the Joint Study Group was to focus on putting in place facilitation measures to enhance bilateral trade; and to supplement deliberations on substantive trade issues being addressed in the Composite Dialogue Meetings. He emphasized the importance of facilitation measures to reduce cost of doing business and make exported products competitive in the markets of importing countries.

4. The Commerce Secretary, Government of India concurred with the views expressed by the Secretary Commerce, Government of Pakistan and intimated that the facilitation measures for trade are being emphasized by the Government of India at bilateral, regional and multilateral fora. Initiatives like computerization and electronic data interchange have been taken up and are likely to be completed during this year.

5. The Sub-Groups on “Customs Cooperation and Trade Facilitation Measures”; and “Non-Tariff Barriers” met after the Plenary Session.

6. The Sub-Group on “Customs Cooperation and Trade Facilitation Measures” reached consensus on:
a) To explore the possibility of a bilateral agreement on Customs Cooperation.

b) To exchange information on the Certificates of Origin; import and export declarations; customs laws & procedures; valuation; trade statistics.

c) To encourage exchange of information electronically between the Customs of the two countries.

d) To identify areas for mutual technical assistance and capacity building.

7. The Sub-Group would endeavour to complete these exercises before the meeting of the next Joint Study Group.

8. The Sub-Group on Non-Tariff Barriers, established the following two Working Groups:-

   a) Working Group on Standards and Conformance

9. Both the Working Groups had in-depth discussions and worked out a roadmap to finalise the Mutual Recognition Agreement (MRA) to facilitate trade.

10. The reports of the two Sub-Groups were presented in the Second Session of the Joint Study Group in the afternoon of 27th March 2006.

11. The Joint Study Group appreciated the outcome of the deliberations by the Sub-Groups and decided to continue the deliberations in the future meetings of the Joint Study Group.

12. The next meeting of the Joint Study Group shall be held at India on a date convenient to both sides.

13. The Commerce Secretary, Government of India appreciated the excellent arrangements made for the meeting and the hospitality extended by Pakistan to the visiting delegates.

The Third Round of Pakistan-India talks on Economic and Commercial Cooperation within the framework of the Composite Dialogue was held on March 28-29, 2006 at Islamabad.

The Pakistan delegation was led by Secretary, Ministry of Commerce, Syed Asif Shah and the Indian delegation was led by Commerce Secretary, Shri S.N. Menon.

The talks were held in a cordial and constructive atmosphere. The two sides recognized the satisfactory progress on the initiatives agreed during the Second Round of the talks held in New Delhi on August 9-10, 2005. It was emphasized that the new Shipping Agreement would be signed in the near future at New Delhi; and the talks on Air Services Agreement would be concluded expeditiously.

The two sides agreed on the following:

- In line with the announcement of the Prime Minister of Pakistan on his visit to India in November 2004, to open branches of scheduled banks in each country, the central banks would process applications by banks expeditiously.

- To facilitate import of tea from India, both sides would encourage delegations of importers/exporters of tea to visit respective countries. It was also felt that after the new Shipping Agreement comes into effect, import of tea from India would be facilitated further.

- To identify the problems of transportation of goods by train between India and Pakistan, the relevant Ministries of both sides had a meeting on the sidelines of the talks. It was decided that they would continue their dialogue.

- Pakistan and India would constitute a Working Group to discuss the issues relating to joint registration of Basmati rice SGI.

- Pakistan would consider enlarging the list of importable items from India in consultation with stakeholders and after fulfilling legal and procedural requirements.

- India will provide detailed proposals for trade in IT-enabled medical
services and export insurance cooperation for consideration by Pakistan.

It was noted with satisfaction that the laying of optical fibre on the Indian side would be completed in the near future.

It was also noted that the initiative on liberalization of visa regime would be discussed in the relevant segment of the Composite Dialogue.

The Indian proposal to convene a meeting of the relevant technical level experts at the Attari-Wagah Border to draw up proposals to upgrade infrastructure to facilitate trade including export of transit cargo of Afghanistan, was noted by Pakistan.

An MOU on Assistance of Mutual Cooperation in Capital Markets has been conveyed by Pakistan SECP to their counterpart in India. It was agreed that India would communicate its response soon.

Both sides welcomed the ratification of SAFTA Agreement by all SAARC Member Countries and expressed the confidence that it would enhance regional trade.

Islamabad, April 26, 2006.

The fourth round of Pakistan-India Expert Level Dialogue on Nuclear Confidence Building Measures was held in Islamabad on 25-26 April 2006. The Pakistan delegation was led by Mr. Tariq Osman Hyder, Additional Secretary (United Nations), Ministry of Foreign Affairs. Mr. K.C. Singh, Additional Secretary (International Organizations), Ministry of External Affairs, led the Indian delegation to the talks. The visiting Indian delegation also called on the Minister of State for Foreign Affairs Makhdum Khusro Bakhtyar.

The two sides held discussions in a cordial and constructive atmosphere, in the framework of the Lahore MoU of 1999. As mandated by Foreign Secretaries the two sides continued consultations on security
concepts and nuclear doctrines to develop measures for confidence building. They reiterated their desire to keep working towards further elaboration and implementation of Nuclear CBMs within the framework of the Lahore MoU, with the objective of promoting a stable environment of peace and security between the two countries.

The two sides expressed their satisfaction on the signing of the Agreement on Pre-Notification of Flight Testing of Ballistic Missiles and the operationalization of the hotline link between the two Foreign Secretaries. These measures are, inter alia, intended to prevent misunderstanding and reduce risks relevant to nuclear issues. The two sides expressed their satisfaction on the signing of the Agreement on Pre-Notification of Flight Testing of Ballistic Missiles and the operationalization of the hotline link between the two Foreign Secretaries. These measures are, inter alia, intended to prevent misunderstanding and reduce risks relevant to nuclear issues. The two sides expressed their satisfaction on the signing of the Agreement on Pre-Notification of Flight Testing of Ballistic Missiles and the operationalization of the hotline link between the two Foreign Secretaries. These measures are, inter alia, intended to prevent misunderstanding and reduce risks relevant to nuclear issues.

The two sides held detailed discussions on the draft text of an agreement, the objective of which is to reduce the risk from accidents relating to nuclear weapons, and agreed to work towards its finalization.

Both sides discussed modalities for further securing the Foreign Secretaries hotline.

Both sides agreed that future periodic Expert Level talks on Nuclear CBMs would discuss, review and monitor the implementation of Nuclear CBMs as called for by the Lahore MoU of 1999. They also agreed to report the progress made in the present round of the talks to the respective Foreign Secretaries who will decide on the date and venue of the next Expert Level meeting on Nuclear CBMs.

Islamabad, April 27, 2006.

The third round of Pakistan-India Expert Level Dialogue on Conventional Confidence Building Measures (CBMs) was held in Islamabad on 27 April 2006. The Pakistan delegation was led by Mr. Tariq Osman Hyder, Additional Secretary (United Nations), Ministry of Foreign Affairs, and Mr. Dilip Sinha, Joint Secretary, Ministry of External Affairs, led the Indian delegation to the talks.

The two sides held discussions on Conventional CBMs in a cordial and constructive atmosphere.

As mandated by Foreign Secretaries the two sides continued consultations on security concepts to develop measures for confidence building in the conventional field aimed at avoidance of conflict.

As indicated in the Joint Statement of 18 January 2006, the Pakistan side presented a draft Agreement to the Indian side on the Prevention of Incidents at Sea in order to ensure safety of navigation by naval vessels, and aircraft belonging to the two sides.

The two sides agreed on the following CBMs aimed at avoidance of conflict:

i) Finalisation of Border Ground Rules for implementation along the international border.

ii) Modalities for holding quarterly flag meetings, and on needs basis, at sector level commanders in already agreed sectors. Modalities for communication in this context would be further discussed.

iii) Elaborating, consistent with its intent, the agreement reached on no development of new posts and defence works along the LoC.

iv) Finalisation of an agreement on speedy return of inadvertent line crosser(s).

Both sides agreed to periodically discuss further CBMs and to review and monitor the implementation of existing Conventional CBMs as called for in the Lahore MoU of 1999 and as mandated by the Foreign Secretaries in the Composite Dialogue process. They also agreed to report the progress
made in the present round of the talks to the respective Foreign Secretaries who will decide on the date and venue of the next Expert Level meeting on Conventional CBMs.

158. Joint Statement issued after India-Pakistan technical level talks on enhancing interaction and cooperation across the Line of Control (LOC).

New Delhi, May 3, 2006.

In pursuance of the Joint Statement of 18 April 2005 and as mandated by the Foreign Secretaries on 18 January 2006, India-Pakistan technical level talks on enhancing interaction and cooperation across the LOC were held in New Delhi on 2-3 May 2006. The Indian delegation was headed by Shri Dilip Sinha, Joint Secretary, Ministry of External Affairs and the Pakistan delegation was led by Mr. Syed Ibne Abbas, Director General, Ministry of Foreign Affairs.

The talks were held in a cordial atmosphere. Both sides reviewed the operation of the Srinagar-Muzaffarabad bus service and of the five crossing points. Both sides agreed to expedite clearances of applications.

Both sides also agreed to start the Srinagar-Muzaffarabad truck service to facilitate cross-LOC trade in the first half of July 2006. The two sides exchanged indicative lists of goods for trade. It was agreed that the delegations from Chambers of Commerce from either side of the LOC will undertake visits at the earliest to discuss various aspects of the trade.

The two sides agreed that Poonch-Rawalakot bus service would commence from 19 June 2006. The procedures, documentation and modalities will be the same as for the Srinagar-Muzaffarabad bus service. Initially the bus service will operate on a fortnightly basis.

The two sides discussed modalities for operationalising the meeting points along the LOC as agreed upon earlier.

The two sides will report the progress in their talks to their respective Foreign Secretaries.
159. Press Release of the Ministry of External Affairs on the Indian decision to release all 59 Pakistani fishermen in its custody on May 27.

New Delhi, May 23, 2006.

India has decided to release all 59 Pakistani fishermen in its custody on 27 May 2006 as a goodwill gesture. These fishermen will be sent back to Pakistan from Munabao (Rajasthan) by Thar express. They were taken into custody while fishing in Indian waters between September 2005 and February 2006. The Pakistani fishermen are being released unilaterally on humanitarian grounds.

There are 505 Indian fishermen in Pakistan who were taken into custody by Pakistani authorities between September 2005 and March 2006. There are in addition 287 Indian fishing boats in Pakistani custody detained since as far back as October 2003.

The Government of India is continuing its efforts to secure the release of Indian fishermen and their boats.
160. **Joint Press Release issued on the conclusion of Defence Secretary-level talks between India and Pakistan on the Siachen issue.**

**New Delhi, May 24, 2006.**

1. The Defence Secretary-level talks between India and Pakistan on the Siachen issue in the framework of the Composite Dialogue were held in New Delhi on May 23-24, 2006. The Indian delegation was led by Shri Shekhar Dutt, Defence Secretary, and the Pakistan delegation by Lt Gen (Retd) Tariq Waseem Ghazi, Defence Secretary. The Defence Secretary of Pakistan called on Shri Pranab Mukherjee, Defence Minister of India and Shri MK Narayanan, National Security Advisor.

2. The two sides held frank and constructive discussions in a cordial atmosphere. They welcomed the successful continuation of the ceasefire since November 2003 and reaffirmed their commitment to it.

3. The Defence Secretaries agreed to continue the discussions to resolve the Siachen issue in a peaceful manner¹.

---

1. Almost a month ahead of the Siachen talks National Security Advisor MK Narayanan had told journalists (on April 20) that India and Pakistan were “closer” to a “final point” on the Siachen problem. Talks were on to finalise the modalities for the authentication of the present troop positions, which could pave the way for the demilitarization of the world’s highest battlefield. He said India was keen on having “iron clad guarantees” from Pakistan to avoid a scenario in which India would have to “reclaim’ the positions it now occupied. “(Agreements) on Siachen and Sir Creek have been on the anvil for a long time. As far as Siachen is concerned the issue has been how do you authenticate the line where they (troops) are,” Mr. Narayanan said. Asked the minimum conditions that India would expect Pakistan to to meet, he said “I don’t think we are laying any conditions.” “The only point is that we are occupying positions on the Saltoro Bridge. If we move back and if for some reason it becomes necessary to go back, it becomes so much more difficult,” he said.
161. Joint Press Statement on India-Pakistan talks on Sir Creek.

New Delhi, May 26, 2006.

1. India-Pakistan talks on Sir Creek were held on May 25-26, 2006 in New Delhi as part of the Composite Dialogue. The Indian delegation was led by Maj. Gen. M. Gopal Rao, Surveyor General of India and the Pakistan delegation was led by Rear Admiral Ahsan-ul-Haq Chaudhri, Additional Secretary, Ministry of Defence. The Pakistan delegation called on Shri Shekhar Dutt, Defence Secretary.

2. The talks were held in a friendly and cordial atmosphere.

3. The two sides discussed the delineation of India and Pakistan boundary in the Sir Creek Area and delimitation of India-Pakistan Maritime Boundary.

4. Both sides agreed on the early settlement of the land boundary in Sir Creek area and the maritime boundary and to conduct a joint survey of the Sir Creek and adjoining areas and waters between November 2006 and March 2007.

5. It was decided that:

   a) Technical experts of the two sides would meet in Pakistan in August 2006 to work out the extent and modalities for the joint survey;

   b) The hydrographers of the two countries, in the same meeting, would discuss modalities and propose options for delimitation of the maritime boundary.
162. Joint Statement on the Third Round of the Pakistan-India Interior/ Home Secretary talks on Terrorism and Drugs Trafficking.

1. The Third Round of the Pakistan-India Interior/ Home Secretary talks on Terrorism and Drugs Trafficking under the Composite Dialogue was held in Islamabad on 30-31 May 2006. The Pakistan delegation was led by Syed Kamal Shah, Secretary Ministry of Interior, Government of Pakistan, and the Indian delegation was headed by Mr. V. K. Duggal, Home Secretary, Government of India.

2. The talks were held in a frank, candid and cordial atmosphere.

3. Both sides reiterated their commitment to fight terrorism in all its forms and manifestations, and re-emphasized the need for effective steps for the complete elimination of this menace. They also underlined the need to pursue effective and sustained action against the terrorists.

4. Both sides welcomed the release of fishermen by each other on the eve of these talks. They also agreed to release the remaining fishermen by 30 June 2006.

5. Both sides agreed that fishermen and civilian prisoners, who have completed their prison sentences and have been granted consular

---

1. After the meeting the Indian Home Secretary V. K. Duggal told the journalists that the two sides were making “step-by-step” progress. “If one is looking at step-by-step progress, it is a yes. The issues are fairly complicated. But if you are looking at whether the talks were successful, yes, we have moved a few steps forward. We spent three hours on all the issues and there is a movement forward,” he said. Commenting on the talks, Duggal said: “the friendship and understanding” between the two countries and the efforts towards peace represented a “sincere commitment” on the part of the leadership on both sides to resolve all issues through “the path of dialogue and discussion.” Informally officials who were in the meeting told the media that “Pakistan has agreed to go through the list with all its seriousness”. In turn the Pakistan delegation handed over a list of 58 of its fugitives whom it wants traced by India. As far as the Indian list is concerned, it was handed over to Pakistan almost two years ago. As early as January 17, the Home Secretary Duggal had said in Amritsar that “India will reiterate its demand for the extradition of 20 persons named in a list of ‘fugitives’ submitted to the Government of Pakistan more than two years ago,” and this demand would be raised “at the Home Secretary level talks scheduled this March and April at Islamabad.”

2. At the beginning of the month, after the dastardly terrorist attacks in Doda and Udhampur districts in J & K on the night of April 30 in which 35 people were killed, the High Commissioner Shivshankar Menon had cautioned Pakistan about India’s concern at the menace of terrorism. Speaking to the Supreme Court Bar Association in Lahore on 2nd May Menon said: “Despite some variations in infiltration patterns, terrorist training,
access and whose national status has been verified, would be released by 30 June 2006. In addition, they also agreed to exchange lists of civilian prisoners by 15 June 2006 to facilitate consular access by 31 July 2006 and subsequent release. They also agreed to the early release of inadvertent crossers, minors, senior citizens and disabled persons, who are not involved in any specific cases.

6. It was also decided to ensure implementation of an earlier decision arrived at the second round of talks in August 2005 for immediate notification of prisoners, grant of consular access within three months, and immediate repatriation on confirmation of national status/completion of sentence. Both also agreed on the need to ensure humane treatment of prisoners.

7. Both sides noted with satisfaction the exchange of information between the Anti Narcotics Force of Pakistan and Narcotics Control Bureau of India. In this regard, they agreed to the early finalization and signing of the MoU between the narcotics control agencies of the two countries.

8. Both sides appreciated the progress made at the meeting between the Federal Investigation Agency of Pakistan and the Central Bureau of Investigation of India in March, 2006. They agreed on the need to take measures to check human trafficking, illegal immigration and counterfeit currency.

9. The two sides agreed to continue discussions within the framework of the Composite Dialogue.

10. The Home Secretary of India and members of his delegation paid a courtesy call on H.E. Mr. Aftab Ahmad Khan Sherpao, Minister for Interior, Government of Pakistan.

communications and support continue, waxing waning with the seasons and the political climate.” Though the Pakistan Foreign Office had described the terrorist attack as “unfortunate act of terrorism”, the Spokesperson Ms. Tasneem Aslam declined to answer questions on whether Pakistani based terror outfits were involved. In his address Menon said borders between India and Pakistan cannot be redrawn but “the two sides could work towards making them just lines on a map” so that the people on both sides should be able to move more freely and trade with one and another. “Naturally this assumes that firm control is kept on terrorism, as had been agreed upon between President Musharraf and Prime Minister Dr. Manmohan Singh. Terrorism is an enemy of civilized societies everywhere and this is increasingly recognized in both our societies,” Mr. Menon said. He regretted that the earthquake relief had resulted in the rehabilitation of the terrorist organizations in Pakistan. High Commissioner said Pakistan’s view that the resolution of the Kashmir issue was essential for any other peace measures to have any meaning was an extreme and partial view.
163. Joint Statement issued at the end of the 3rd round of Secretary-level talks between India and Pakistan on ‘Promotion of Friendly Exchanges in Various Fields’.

New Delhi, June 2, 2006.

The third round of Secretary-level talks between India and Pakistan on ‘Promotion of Friendly Exchanges in Various Fields’ within the framework of the Composite Dialogue was held in New Delhi on 1-2 June 2006. The Indian delegation was led by Shri Badal K. Das, Secretary, Department of Culture, Ministry of Tourism & Culture and the Pakistan delegation was led by Mr. Jalil Abbas, Secretary, Ministry of Culture.

The Pakistan delegation called on the Hon’ble Minister of Tourism and Culture, Smt. Ambika Soni.

The talks were held in a cordial atmosphere. Progress since the first round of talks in August 2004 was reviewed. The two sides discussed various proposals for cooperation in the fields of arts & culture, education, Ayurvedic & Unani medicine, archaeology, tourism, youth affairs, sports and media.

The two sides underlined the importance of interaction in the field of culture and related areas as part of efforts to expand people-to-people contacts and agreed to work on the modalities of proposals identified by them.

164. Response of Official Spokesperson to Pakistan disqualifying all political parties and candidates who failed to meet the condition of declaring their allegiance to the accession of J&K to Pakistan from contesting elections.

New Delhi, June 12, 2006.

We have seen media reports that Pakistan has disqualified all political parties and candidates, who failed to meet the condition of declaring their allegiance to the accession of Jammu and Kashmir to Pakistan, from contesting the forthcoming elections in what Pakistan calls “Azad Jammu and Kashmir”. This confirms that the elections in the so-called “AJK”,...
scheduled to be held on July 11, will be a replay of the earlier exercises, in which the people did not have the freedom to vote for political parties and candidates of their choice. It also exposes the insincerity of Pakistan’s proclaimed policy that the future of Jammu and Kashmir should be decided by its people. This disqualification is particularly glaring in the light of the proposal made by President Musharraf of introducing self-governance in Jammu and Kashmir.

Besides, the forthcoming elections in the so-called “AJK” underline the absence of any form of representative government in the so-called “Northern Areas” of Pakistan occupied Kashmir, the residents of which are deprived of even their basic right to vote, as elections have never been held there.

F F F F F

New Delhi, June 20, 2006.

- The first meeting of the India-Pakistan Joint Commission Technical Level Working Group on Health was held in New Delhi on June 20, 2006. The Indian side was led by Mr B. P. Sharma, Joint Secretary, Ministry of Health & Family Welfare while the Pakistani delegation was led by Dr. Mohammad Reza, Deputy Director General (P&G), Ministry of Health.

- The two sides discussed measures for control of Polio and exchanged ideas on management of Avian Influenza. The delegations shared their experiences in health care and family welfare in their respective countries.

- The two sides exchanged information on drug and pharmaceutical administration and on the need for identifying areas of cooperation in the field of traditional systems of medicine.

- Both sides agreed to continue discussions in the next meeting to be held in Islamabad at mutually convenient dates.

F F F F F
166. Joint Statement issued on the conclusion of India-Pakistan discussions on the Wullar Barrage & Storage Project / Tulbal Navigation Project.

Islamabad, June 23, 2006.

1. As part of the Composite Dialogue between Pakistan and India, the delegations of the two countries met in Islamabad on 22-23 June 2006 for discussion on the Wullar Barrage & Storage Project / Tulbal Navigation Project. The Pakistan delegation was led by Mr. Ashfaq Mahmood, Secretary, Ministry of Water and Power, Government of Pakistan and the Indian delegation was led by Mr. J. Hari Narayan, Secretary, Ministry of Water Resources, Government of India.

3. The talks were held in a cordial and constructive atmosphere. The two sides exchanged views on the project and had a better understanding of each other’s views. They reaffirmed their commitment to the Indus Waters Treaty 1960.

4. The two sides agreed to continue discussions during the next round of Composite Dialogue with a view to resolving the issue in accordance with the provisions of the Treaty.

167. Information provided by Official Spokesperson on the number of people traveled between India and Pakistan.

New Delhi, June 26, 2006.

We also have some details on the travel between India and Pakistan this year, which has seen a significant increase. The travel figures for the first 5 months in 2006 indicate that about 1.70 lakh people moved across, both ways, between the two countries, using various modes of transport including air, train, bus and on foot. The details are:

By air, which includes both by Indian Airlines and Pakistan Airways
of which there are 28 flights every week, a total of 83,994 people have traveled.

By train, i.e. by the weekly Thar Express and by the bi-weekly Samjhauta Express a total of 47,697 people have traveled.

By bus, a total of 8,013 people have traveled, while 28,425 people crossed Wagah on foot. A total of 903 persons crossed LoC on foot or by bus.

Thus, a total of 1,69,032 people traveled. Clearly, air is the most widely used mode of transport, while train is a close second. Our High Commission has issued in these past five months nearly 33,000 visas.

Samjhauta Express between Delhi & Lahore and Thar Express between Munabao (Rajasthan) and Khokhrapar (Sind) have become important transportation linkages between India and Pakistan. In particular, Thar Express, which commenced in February 2006 with an average of 200 passengers per week, has gained in popularity carrying between 700 and 800 passengers a week by June 2006.

**Question:** Regarding the Thar Express which you have said is becoming more popular. How will it become more popular without the consulates in Karachi and Mumbai? What is the state of the consulate in Mumbai? Have we zeroed in one any building?

**Official Spokesperson:** Certainly, our hope and wish is that the consulates will open as fast as possible and that will certainly boost travel on this route and facilitate the issue of visas. But, notwithstanding that, the figures speak for themselves. There has been an increase. It is for Pakistan to zero in on the building. Everything is being done to facilitate that process as far as Indian Government is concerned, through the state government.

New Delhi, July 7, 2006.

In pursuance of the understanding between the Governments of India and Pakistan during Home Secretary level talks in Islamabad on 30-31 May 2006, India, on 30 June 2006 released 38 Pakistani civilian prisoners whose nationality had been confirmed and who had completed their sentences. The agreement between the two countries also provides for facilitating consular access by 31 July 2006 to the remaining civilian prisoners whose lists have been received by 15 June 2006. In implementation of this agreement, India will be providing consular access to Pakistani civilian prisoners as per the following time schedule. In Central Jail, Damdam, Kolkata 10-11 July, Central Jail, Jaipur 13-14 July, Central Jail, Amritsar, 20-21 July, Central Jail, Tihar, New Delhi, 27-28 July and Consular access to Pakistani fishermen is scheduled for 13 July 2006 at Jamnagar, Gujarat. At the same time, the Government of India hopes that the Government of Pakistan will reciprocate by providing consular access to 118 civilian prisoners and 192 fishermen in custody in Pakistan by 31 July 2006.

For your background information, currently there are 136 Indian prisoners in Pakistan and these are detailed in different categories as follows: Out of the 136, 16 are those to whom consular access has already been given and whose nationality confirmation is being awaited, 2 are those to whom consular access has already been given and whose nationality status has also been confirmed, and 118 are those for whom we have sought consular access.
169. Response of Official Spokesperson to a question on a report that India sided with the OIC against Israel in the Human Rights Council.

New Delhi, July 7, 2006.

Question: There were reports in a daily about India siding with the OIC against Israel?

Official Spokesman: I am glad you raised that because that report also had a fairly distorted perspective. Let me give you the factual position on that. The factual position is that the special session of the Human Rights Council was called not by the OIC but by the Group of Arab States led by Tunisia and the call for the special session was supported by several countries across the political spectrum so to speak. 29 affirmatives votes supported the call for a special session including China, Russia, South Africa, Sri Lanka, Mauritius, several members of the GRULAC group that is the Latin American group, and India.

The special session was thereafter held on 5th July and the resolution at the special session was adopted again by 29 votes. These included again China, Russia, most of GRULAC, Sri Lanka, South Africa, Mauritius, Zambia and India. Let me add that we have a traditional position on Palestine that we have followed in international fora. We have also been making official statements from time to time including three in the last 3-4 weeks on our positions on the developments in the Middle East and our voting in the UN Human Rights Council was in keeping with these positions. So I do not see where that item or headline came from.

New Delhi, July 11, 2006.

The Government of India (GOI) has decided to extend US$ 25 million as earthquake relief assistance to the Government of Islamic Republic of Pakistan (GOP). The two Governments have agreed to utilize this assistance in the following manner:
(i) GOP will source materials from India, as may be required for relief operations, subject to their availability in India and the rules and regulations pertaining to their export at the time of procurement. However, the total cost of construction materials, including their freight charges, will not exceed US$ 25 million. GOP may utilize the sum before 31 March 2007. GOP would provide a breakup of the materials they require to GOI.

(ii) While sourcing these materials from India, GOP will follow its own procurement procedures and will select the supplier(s), in consultation with GOI.

(iii) GOI will pay to the Indian supplier(s) the CIF value of the materials procured by GOP under this MOU. In this regard, the Government of India will specify the payment procedure as early as possible, in consultation with the GOP.

(iv) GOP will either pay or exempt payment of duties and taxes relating to import of any commodity under this MOU.

(v) The export of goods from India and their import into Pakistan shall take place through normal channels subject to the laws and regulations in force in both countries. The terms and conditions including price and quality shall be settled between the exporters in India and the importers in Pakistan through GOP.

(vi) Any dispute or difference arising out of or in connection with this MOU shall be settled amicably through diplomatic channels.

(vii) This MOU will come into force on the date of its signing and will expire on 31 March 2007.

Signed on July 11, 2006 at New Delhi

Authorized Representative of the Government of India

(Shyam Saran)
Foreign Secretary
Government of India

Authorized Representative of the Government of the Islamic Republic of Pakistan

(Aziz Ahmad Khan)
High Commissioner
Government of the Islamic Republic of Pakistan

New Delhi, July 12, 2006.

We have seen media reports regarding the elections held on 11 July 2006 in what Pakistan calls “Azad Jammu and Kashmir”. Once again the entire exercise shows the lack of credibility of the electoral process in the so-called “AJK”. Earlier, nominations of 30 out of 31 candidates of the pro-independence Jammu Kashmir Liberation Front – Amanullah Khan (JKLF) were rejected after they refused to sign the declaration of Kashmir’s accession to Pakistan. The “AJK” Election Commission also rejected 30 nominations of the All Party National Alliance, a coalition of other pro-independence parties of Jammu and Kashmir and Gilgit-Baltistan.

Besides disqualifying all political parties and candidates who failed to meet the condition of declaring their allegiance to the accession of Jammu and Kashmir to Pakistan from contesting the elections, Pakistan has also not allowed international observers to monitor the election process. These elections can, therefore, neither be called free and fair nor an exercise in self-governance.

The 14-member “AJK” Council, the upper house of the AJK Parliament, is headed by the Pakistan Prime Minister as Chairman and the “AJK” President as Vice-Chairman. Islamabad nominates five members to the Council from the Members of the Pakistan National Assembly and there are three ex-officio members. The Chairman, along with these federal nominees, gives the Government of Pakistan a majority in the Council as, of the 14 members, there are only six members elected through the “AJK” Assembly. Real power thus, rests with the officials of Pakistan and the Ministry of Kashmir Affairs in Islamabad.

The situation in Gilgit-Baltistan, the other part of Pakistan occupied Kashmir, is even worse as it has never had even a semblance of representative institutions. Elections have never been held in these areas and the residents do not enjoy the basic political right to vote.
172. Reaction of Official Spokesperson to remarks attributed to the Foreign Minister of Pakistan concerning the terrorist bomb blasts which took place in Mumbai.

New Delhi, July 12, 2006.

Official Spokesperson: Good Evening. We have seen press reports of remarks attributed to Mr. Khursheed Mahmood Kasuri, Foreign Minister of Pakistan, concerning the terrorist bomb blasts which took place in Mumbai on July 11.

We find it appalling that Foreign Minister Kasuri should seek to link this blatant and inhuman act of terror against innocent men, women and children to the so called lack of resolution of disputes between India and Pakistan. His remarks appear to suggest that Pakistan will cooperate with India against the scourge of cross-border terrorism and terrorist violence only if such so called disputes are resolved. Terrorism cannot be tolerated on any grounds whatsoever, and no cause justifies the murder of innocent people. We would hope that the Government of Pakistan rejects any such linkage and joins hands together with India to defeat the forces of terrorism, based on an ideology of extremism and violence. We would urge Pakistan to take urgent steps to dismantle the infrastructure of terrorism on the territory under its control, act resolutely against groups and individuals, who are responsible for terrorist violence and fulfill its solemn commitments enshrined in the India-Pakistan Joint Press Statement of January 6, 2004.

Question: Are the Foreign Secretary Level talks still on track?

Official Spokesperson: I do not have any announcement on the dates as yet.

Question: Will this have an impact on the CBMs?

Official Spokesperson: I think I have given you a detailed enough briefing. Any interpretation is yours.

Question: Are these talks scheduled for July 21?

Official Spokesperson: As I said, I don’t have any announcement regarding the dates.

Question: As far as the statement is concerned, on the Mumbai blasts, you have spoken again of the need for the dismantling of the
infrastructure of terrorism. Does India believe that the infrastructure of terrorism in Pakistan is related to the carnage in Mumbai?

**Official Spokesperson:** On the specific operations regarding yesterday, the relevant agencies are doing their work and no doubt the results will be made available.

---

173. **Reaction of Official Spokesperson to the remarks of Pakistani President Prevez Musharraf for proof of Pakistani involvement in the Mumbai bomb blasts.**

New Delhi, July 21, 2006.

**Question:** Can I ask you for a response on the statement made by President Musharraf last night? He had asked India for proof....

**Official Spokesperson:** We have seen the remarks made by President Musharraf in his address on television yesterday. We are disappointed at Pakistan’s continuing denial of the presence of and failure to take action against jihadi groups threatening to operate against India from Pakistan and Pakistan occupied Kashmir. President Musharraf’s offer to help in investigations in the Mumbai blasts if evidence is provided to him gives us no cause for satisfaction in view of Pakistan’s refusal to cooperate in the past, most recently at the Home Secretary level talks in May this year, when substantial evidence was provided to Pakistan of the presence on its territory of terrorist groups and fugitives. Nevertheless, in view of President Musharraf’s assurance, we will continue to provide to Pakistani authorities all available evidence and await practical action on their part.

Let me add that India remains committed to the dialogue process with Pakistan but this can be sustained and can yield results only if Pakistan acts against terrorist groups operating from territory under its control, in accordance with its solemn commitments enshrined given in the Joint Press Statement of January 6, 2004.

**Question:** Has there been any formal contact with Pakistan after the blasts?

**Official Spokesperson:** I do not know what you mean by formal
contact. You know that there were talks that were scheduled to be held and they did not take place.

**Question:** I want to ask if the peace process with Pakistan will go on or it has been rescheduled?

**Official Spokesperson:** As I have told you we remain committed to the peace process which can take place and yield results only if Pakistan acts against the terrorist groups operating from territories under its control.

**Question:** You are not convinced by President’s Musharraf’s……

**Official Spokesperson:** If Pakistan really wants to convince the people of India that we are working together with India against terrorism then it can take some action immediately and they can. For example, the self-styled chief of Hezbul Mujahideen, Syed Salahuddin, who is freely roaming about in Pakistan and PoK and has appeared on the same stage as many Ministers of the Federal Government, should be arrested and handed over to India. Instead of their saying that Jamaat-Ud-Dawa is being kept under close watch, the organization should be banned and its leader should be arrested. Besides that of course, Dawood Ibrahim, who has been listed in the UN Security Council’s 1267 Committee as an individual associated with the Al Qaeda, should be apprehended and deported to India. If Pakistan takes action to implement the directives of the UN Security Council, then it will give credibility to its assertion that it is willing to fight terror.

---

1. It may be recalled that Prime Minister Dr. Manmohan Singh concerned about the source of terrorism had said on July 15 when traveling on board the Air India flight taking him to St. Petersburg for the G- 8 summit, that “There has to be firm commitment that Pakistan’s territory will not be used to promote acts of terrorism against India, and that commitment has to be backed by action on the ground.” While stating that he has not spoken to President Pervez Musharraf since Tuesday’s blasts in Mumbai, but links have been established at every level. “India and Pakistan have to establish new pathways to establish friendly relations,” Dr Singh said. “Both countries need peace, stability and need to be free of terror to realise their potential.” All this could not move forward, the prime minister declared, if terror, aided and abetted by outside, continued to take the lives of innocent citizens as it did in Mumbai and Jammu and Kashmir the previous week. “Both India and Pakistan have an obligation to work together, but in a democracy, there is a limitation on what a leadership can do if the terrorists are having a free time,” he said. “President Musharraf is the president of Pakistan and we have to deal with people in government. In all these matters, it is a learning process and I would not like to use harsh words,” Dr Singh added. “Therefore, it is the solemn obligation of Pakistan to honour the commitment it made in January 2004 that Pakistani territory would not be used for aiding and abetting terrorism in India,” he said. “The terror acts in Mumbai were on a massive scale, and could not have been accomplished without external involvement,” Dr Singh pointed out. In the meantime the serial blasts in Mumbai and Srinagar figured in the Union Cabinet meeting which passed a resolution condemning the outrageous
Question: Are these not preconditions?

Official Spokesperson: I did not say that. I was asked a question what it would take to convince us. I have listed here some examples of practical actions which will add credibility to Pakistan’s claim that they are willing to fight terror together with India.

Question: In the context of Mumbai blasts, Pakistan has asked us to provide evidence. Have we provided any fresh evidence?

Official Spokesperson: This claim that provide us evidence and we will cooperate gives us no cause for satisfaction because in the past terror attacks and asserted that nothing would deter the government from its firm policy to fight the menace till it is wiped out. The meeting, chaired by Prime Minister Manmohan Singh, was briefed on the incidents and the investigations underway to unravel the conspiracy. Security agencies are suspecting Pakistan-based Lashker-e-Toiba and Students Islamic Movement of India (SIMI) to be behind the terror attacks in Mumbai. Meeting for the first time after deadly attacks, the Cabinet observed a two-minute silence and passed a resolution, affirming that terrorists and their acts “will never be allowed” to check the country’s march to economic growth and prosperity. The meeting lauded the spirit of the people of Mumbai and Jammu and Kashmir which “demonstrated very emphatically that terrorism cannot succeed.” The Cabinet expressed “profound sense of shock and outrage at the series of blasts in Mumbai and Srinagar” which resulted in “heavy loss of life and suffering,” it said. The Cabinet emphasised the government’s “strong commitment to combat terrorism in all its forms” and said “nothing will deter us from our firm policy to fight this menace till it is wiped out. “Despite these provocations from Pakistan and lack of sufficient trust in the Pakistani credentials, Prime Minister continued to look at the situation with optimism and hoped that Pakistan would cooperate in controlling terrorist attacks from its territory. Therefore when he spoke to journalists in Bhubaneswar on August 28 he said he was not averse to meeting Gen. Musharraf at the NAM Summit in Havana in September. But he added for good measure that peace process could not move forward until Pakistan took firm measures to tackle terrorism. “It all depends on what Pakistan is willing to do to check terrorism in the region.” Observing that terrorism was a big problem for Pakistan too, he said India would not hold talks with Pakistan till it took concrete steps to deal with the menace.

Meanwhile on August 3, Indian High Commissioner in Islamabad Shivshankar Menon said in Islamabad that while New Delhi wanted Pakistan to take action against “elements” that Indian investigators have linked to several terrorist attacks prior to the Mumbai blasts, it did not mean the two countries must “stop doing business” with each other. “Frankly, they are as much a threat to you as they are to us. We have common interest in dealing with this. We are not saying because of this we must stop doing business, No, not at all. What we should do is to make it harder and harder for these groups to work and to shrink the space within which they can operate and this primarily is the responsibility of the Government of Pakistan. Between the two governments, we hope we work our way through this”, he said. Mr. Menon was responding to questions from business community after he addressed them on “Indian Economy and Pakistan” at the Islamabad Chambers of Commerce and Industry.
when we have provided evidence, there has been no practical action on Pakistan’s part.

**Question:** After the blasts why does not India take stronger action? Why……..the dialogue process? You know they are backed by Pakistan……..

**Official Spokesperson:** Yes, we have had the Mumbai blasts. The Government of India is fully looking into the entire situation. We are also looking at all the implications in political and security terms and we are taking considered action step-by-step.

**Question:** As far as India is concerned, we do not have an extradition treaty with Kenya. How do we………..

**Official Spokesperson:** I don’t even have a confirmation of the arrest that you are mentioning. I have checked with our High Commission there and they have said that they will come back to us. If we have confirmation, then we will get into the process of how to get a certain person back. I would not like to jump steps. Thank you.

174. **Media Briefing by Official Spokesperson on the action taken by the Government of India and the incident relating to the Indian diplomat in Pakistan.**

**New Delhi, August 5, 2006.**

**Official Spokesperson:** Good evening everybody. This is to inform you about developments relating to Pakistan. This evening, the Deputy High Commissioner of Pakistan was summoned by Shri Dilip Sinha, Joint Secretary in the Ministry of External Affairs this evening. It was officially conveyed to him that Syed Muhammad Rafique Ahmed, Counsellor in the High Commission of Pakistan in New Delhi, had been involved in activities incompatible with his diplomatic status. The Government of India has, therefore, declared him *persona non grata*. Mr. Ahmed has been asked to leave India by August 7, 2006.

During the meeting, Shri Dilip Sinha lodged a strong protest against the outrageous treatment meted out to Shri Deepak Kaul, Counsellor of the High Commission of India, Islamabad by agencies of the Government.
of Pakistan, and categorically rejected allegations that Shri Kaul was engaged in activities incompatible with his diplomatic status. The officer was not in possession of any sensitive documents allegedly handed over to him by a so-called contact. These must have obviously been planted on him in order to falsely implicate him.

Shri Kaul had left Islamabad early this morning to go to Amritsar, by road, to fetch his family. As required by the Government of Pakistan, he had obtained written permission for his travel. At 7.30 a.m., about 90 kms. from Lahore, he was stopped by Pakistani security agencies and taken, hooded and handcuffed, to some unidentified location where he was interrogated intermittently for about five hours. Thereafter he was brought to the Pakistan Foreign Ministry and our High Commission was informed of his being declared persona non grata. The High Commission was also informed that Shri Kaul should leave Pakistan by August 7, 2006. The diplomat was then handed over to our High Commission.

Shri Dilip Sinha pointed out to the Deputy High Commissioner that the actions of the Government of Pakistan were in blatant violation of the Vienna Convention as well as the Code of Conduct for Treatment of Diplomatic/Consular Personnel in India and Pakistan 1992. Such action could not but undermine the bilateral relations between the two countries.

Shri Deepak Kaul is safe and the High Commission of India is arranging for his return to India by August 7, 2006.

**Question:** The Pakistan Foreign Office spokesperson said that Pakistan wanted to keep it (the incident) under wraps but Indian officials gave out the information....

**Official Spokesperson:** That is absolutely incorrect. The information first came out on Geo TV this afternoon and it was based on a detailed briefing, as was said, by Pakistani intelligence sources. Things cannot be more blatant than that.

**Question:** What happens now to the tentative road map that was there?

**Official Spokesperson:** I do not want to indulge in any hypothetical guess work at this time. I have told you the action that has been taken. But, if I can broadly respond to your question, I will only say that such action as has been taken by the Government of Pakistan cannot but undermine the bilateral relations between the two countries.
**Question:** This is the first time since after the peace talks that such a kind of major setback has happened...

**Official Spokesperson:** I do not want to get into any categorization but if you are asking me whether an officer of this level has been declared *persona non grata* after the dialogue process started, the answer is ‘yes’.

**Question:** What are the specific charges against Rafique Ahmed?

**Official Spokesperson:** I have just said that. He was indulging in activities incompatible with his diplomatic status. Thank you.

---

**175. Response of Official Spokesperson to questions on the killing of Nawab Akbar Khan Bugti, the Baloch leader.**

**New Delhi, August 28, 2006.**

The unfortunate killing of the veteran Baloch leader, Nawab Akbar Khan Bugti, is a tragic loss to the people of Balochistan and Pakistan. This military attack in which reportedly two of his grandsons were also killed and the heavy casualties in the continuing military operations in Balochistan underline the need for peaceful dialogue to address the grievances and aspirations of people of Balochistan. Military force can never solve political problems¹.

Nawab Akbar Khan Bugti played a prominent role in Pakistani politics for over four decades. His death leaves a vacuum that will be difficult to fill.

---

1. The Spokesperson was referring to the violence which had gripped Balochistan in which Pakistan military was heavily involved. The Baloch leader was killed in the military operations in the Bhambore Hills of Kohlu in Balochistan where he had been hiding with several other Bugti tribesmen. According to reports at least forty other died with him.
176. Extracts relevant to Pakistan from Prime Minister’s interaction with media on board the Special Air India flight to Brazil.

September 11, 2006.

Q1. On the impact of terrorism on Indo-Pak relations

PM. Our position is quite clear. Terrorism today constitutes a threat for both countries. And therefore I believe consistent with the January 2004 statement, consistent with the September 2004 joint statement, consistent with the April 2005 statement that I and President Musharraf signed, it is incumbent on us to work together in a manner that inspires confidence that both of us are very serious about tackling the menace of terrorism. That’s the minimum I feel our two governments, our two systems should commit to achieve.

Q2. Structure or agenda for meeting with President Musharraf

PM. We will be discussing all aspects of the relationship between our two countries. India is not afraid of any discussion.

Q3. Trust Pakistan

PM. There is a problem of trust deficit between our two countries. And we have to take that on board. We have to take adequate precautions and General Musharraf, he is the President of Pakistan and we have to deal with whoever is in power in Pakistan. And I have always said that the destinies of the two countries are very strongly inter-linked and full development of the sub-continent cannot be realized unless there is reconciliation between India and Pakistan.

On meeting Musharraf in Havana

PM. I will share with General Musharaff our perceptions of what’s the role of external elements in promoting terrorism in our country. We will have an exchange of views on all issues particularly the commitment of Pakistan to not to allow Pakistan territory and that includes parts of Jammu & Kashmir which is in their occupation to mount terrorist attacks against India.
Q19. On Indo-Pak talks no progress has been made.

PM. I don't see from recent meetings that's correct. I think we have moved very considerably over the last two years. Transportation routes have been opened up not only between the two parts of Jammu & Kashmir but also between our Punjab and their Punjab, Amritsar and Nankana Sahib, Munnabao and Kokrapar. Also two years ago, you could not say we would allow Hurriyat people travel freely wherever they wanted to go. They have been going on all directions. It's an unprecedented development. People of both countries including the two-parts of Jammu & Kashmir are meeting frequently to discuss possibilities of cooperation. So I don't know if it's correct to say that no progress has been made. We have been discussing various issues at part of the composite dialogue. We can and we should move forward. But this terrorism will surely act as a damper. I have said more than once that I can't carry the Indian public opinion with me if terrorist acts continue to plague our polity. Whatever, be the cause of that puts a damper on Indo-Pak relations. Whether in Mumbai or elsewhere if these events take place that certainly vitiates the climate.

Q20. Terrorism and peace moves, how do you reconcile both?

PM. As far as India's concerned, I think, we've given them substantial amount of evidence. But as far as the past is concerned, Pakistan sponsored terrorism has certainly been a fact of life. And the fact that Prime Minister Vajpayee and President Musharraf signed the joint statement in 2004 was in a way a tacit recognition of the ground realities and their solemn agreement to move forward in the reverse direction. But it is also true that incidents take place in Pakistan also. That Pakistan is also a victim of terrorism. These groups, whether it's Lakhser-e-Toiba or Jaish-e-Mohammad, they can act autonomously also. But our experience has always been in the past there has been, I would not use strong words, but our worry has been that Pakistan government has not done enough to control these elements.

* * * * *

Q23. Democracy in Pakistan

PM. The general belief is democracy is good for Indian people and is good for the people of the world. But what system prevails in Pakistan is for the people of the Pakistan to decide.
177. Joint Statement on talks between Prime Minister Dr. Manmohan Singh and Pakistani President Gen. Pervez Musharraf in Havana (Cuba).

Havana, September 16, 2006.

1. President General Pervez Musharraf and Prime Minister Manmohan Singh had a cordial, frank and detailed exchange of views on all aspects of India-Pakistan relations. Desirous of carrying forward the dialogue process, the leaders reiterated their commitments and determination to implement the Joint Statements of January 6, 2004, September 24, 2004, April 18, 2005 and September 14, 2005.

2. The leaders agreed that the peace process must be maintained and its success was important for both countries and the future of the entire region. In this context, they directed their Foreign Secretaries to resume the composite dialogue at the earliest possible.

3. The two leaders met in the aftermath of the Mumbai blasts. They strongly condemned all acts of terrorism and agreed that terrorism is a scourge that needs to be effectively dealt with. They decided to put in place an India-Pakistan anti-terrorism institutional mechanism to identify and implement counter-terrorism initiatives and investigations.

4. The leaders decided to continue the joint search for mutually acceptable options for a peaceful negotiated settlement of all issues between India and Pakistan, including the issue of Jammu and Kashmir, in a sincere and purposeful manner. On the Jammu and Kashmir issue, there have been useful discussions. There is a need to build on convergences and narrow down divergences.

5. The two leaders also directed the Foreign Secretaries on the following:

   - The Foreign Secretaries should meet shortly in New Delhi to continue the composite dialogue
   - To arrange consultations for early solution of the Siachen issue,
   - Experts should meet immediately to agree on coordinates for joint survey of Sir Creek and adjoining area, without prejudice
to each other’s position on the issue. The Survey should commence in November 2006. The experts should start discussions on the maritime boundary.

- The two sides will facilitate implementation of agreements and understandings already reached on LOC-related CBMs, including bus services, crossing points and truck service.

6. The President of Pakistan renewed his invitation to the Prime Minister of India to visit Pakistan. Thanking the President, the Prime Minister indicated that he looked forward to a purposeful visit at a time to be determined through diplomatic channels.

178. Media Briefing by Foreign Secretary-Designate¹
Shivshankar Menon after Prime Minister’s Meeting with Pakistani President.

Havana, September, 18, 2006.

QUESTION : …(Inaudible)… as with any discussion between the Prime Minister and President Musharraf on the fact that Pakistan has reached …(inaudible)…

FOREIGN SECRETARY DESIGNATE : I think the difficulty here is when you talk of terrorism, it is not just that there is one kind of terrorism and it is not that all terrorism is organized or run by one or two organizations. After all Pakistan Government has suffered from terrorism. You have seen attacks on Pakistan civilians, on Pakistani leaders by terrorists. You have seen the same thing in India. Now depending on the nature of the problem that we are dealing with, we have different ways of dealing with. Some of them within India we deal with ourselves. Somebody mentioned Malegaon. That is our own. First we will check, we will do our own investigation and we will decide. If there is something with cross border links that we think the Government of Pakistan can help us with, we will take it up in the mechanism. Other problems we will deal with through other ways. I think you are trying to say that all terrorism has to be dealt with in the same way

¹He formally took over as Foreign Secretary on October 1, 2006.
because all terrorism has one source or one root. That would be the implication of what you are saying. I am saying all this is possible at the same time, that it is a multi-faceted problem and we will use different means to deal with it depending on where it comes from. So, these are not mutually exclusive, as I said to Manoj. To your second question, no, not that I know of.

**QUESTION**: Sorry to take the topic away from Pakistan. In the discussions with Venezuelan President, did the issue of Venezuelan bid for the membership of Security Council come up because India is still noncommittal, I believe, about supporting Venezuela.

**FOREIGN SECRETARY DESIGNATE**: No, it did not come up. Not that I know of.

**QUESTION**: Mr. Menon, you were involved last time when threads were to be picked up in ties with Pakistan with the bus service and the situation that led to the January 2004 statement. Again you are also watching this. What was the toughest bit of trying to pick up things once again with Pakistan this time?

**FOREIGN SECRETARY DESIGNATE**: Actually I think we are learning to work with each other. It is much easier. When we did 2004, we had almost no experience of really doing a hard negotiation together, I think, both to them and for us. It is much harder when you are not quite sure what to expect. I think as we have gone through the process one of the big gains of the process from my point of view is that we have learned to live and work with each other. In that sense it is much quicker, just the physical fact of the production of the joint statement was much easier. I think that is when we say that the atmosphere of the relationship has changed and is very different from what it was in 2003 say, I think that is one of the advantages. What we would like to see is that happening across a range of sectors. The more contacts we can develop the more we can learn about each other, the more comfortable we can be with each other as societies, as economies. That is something we would like the whole process to result in. But which is the hard part? Actually it is getting easier. I hope the Pakistanis can say the same.

**QUESTION**: Going back to the anti-terrorism mechanism, even if you cannot specify the mechanism with Pakistan, can you give us an idea as to what kind of mechanism we have with other countries?
FOREIGN SECRETARY DESIGNATE: KC is the expert. Let him
tell you.

ADDITIONAL SECRETARY (International Organizations), SHRI
K.C. SINGH: We have got 23 Joint Working Groups on counter terrorism
with 23 countries and two regional organizations – one is with EU and the
other one is with BIMSTEC. BIMSTEC is the Bay of Bengal group of
countries which has Bangladesh, India, Myanmar, Sri Lanka and Thailand.
We try holding meetings at least once a year. With some of them even
there is a need being felt to hold it more often.

Generally the format that we follow is we exchange views on our
assessment of the region in which we are and the country gives us their
assessment, and see how we can do some capacity-building and how we
can do institutional link ups between agencies which can exchange
information and set up contacts. So, the Ministry of Foreign Affairs creates
the getting together of the different institutions and they put them in touch
with each other because we do not want to be the nodal point for everything.
Once you create the links, then it becomes easier because they talk to
each other.

QUESTION: Does that include the intelligence sharing?

SHRI K.C. SINGH: We do that with various countries, yes. But the
levels will vary, of course, based on the level of comfort with each country.

QUESTION: So, the model is more or less the same with the Joint
Working Groups that you have with other countries. Then, would you be
following the same model with Pakistan?

SHRI K.C. SINGH: I am only describing what we have. What we
have in mind for Pakistan, FS Designate will tell.

QUESTION: After a lot of painstaking effort we do come up with
some joint statement and then the result is dialogue. But some major
incident or something like that derails the process. What guarantee can
there be that this process can itself be insulated?

FOREIGN SECRETARY DESIGNATE: We are trying through this
to prevent major incidents. As you know, terrorism makes it very difficult
for us, especially events like Mumbai and so on would make it very difficult
for us, because public opinion in India finds it very hard to understand how
we can carry on with the dialogue process if terrorist incidents in India
have links into Pakistan. So, what we are trying by doing all this, by setting up this institutional mechanism, by talking to Pakistan, by working together, by our own national measures, is to prevent such incidents. And our goal remains to eliminate terrorism. How much success we will have, we have to see. But there cannot be any guarantees in this. I do not think anybody can guarantee the future in these things. But what we can do is we will make our best effort to try and ensure that the hypothetical eventuality that you have mentioned does not happen.

**QUESTION**: I have two questions please – the first about Pakistan and the next about Cuba. ...(Inaudible)...the idea of trust deficit. Has that been surmounted? Is there a feeling that there is sincere and earnest interest on behalf of the Pakistani President?

**FOREIGN SECRETARY DESIGNATE**: I think we are working at eliminating the trust deficit. That would be the best way to put it. But we have been working at it for sometime and we intend to keep working at it.

**QUESTION**: The Indian Prime Minister would be meeting Fidel Castro and conveying Indian Government’s position on what is happening in Cuba in terms of the transition, ...(Inaudible)...

**FOREIGN SECRETARY DESIGNATE**: I think right now he is meeting with the acting President. I really have nothing for you on that yet. I think what we do is, we will probably brief you on Cuba, on all the questions that you have mentioned altogether, after that.

**QUESTION**: The Joint Press Statement talks about a peaceful negotiated settlement on all issues between India and Pakistan. The statement could have stopped there, but it goes on to say, ‘including the issue of Jammu and Kashmir’. Was it necessary, diplomatically speaking?

**FOREIGN SECRETARY DESIGNATE**: I think it is something we have said since July 1972. It is one of those India-Pakistan mantras. But we also mean it. Ultimately, if you want to have good neighbourly relations, you have to address all the issues between you, and that includes Jammu and Kashmir. It is nothing new. It is something we have accepted and we have been trying to do for many years.

**QUESTION**: You can see that this agreement about terror mechanism is very difficult to digest. Do you think it would be difficult to sell in India? Do you foresee any resistance, any opposition, and any allegation of a sell out?
FOREIGN SECRETARY DESIGNATE: I did not hear anybody saying it is difficult to digest. I heard people asking what it is, what does it mean, is it new, etc. These are legitimate questions. I think naturally everybody in India would be interested to know for the simple reason that, as I said, terrorist incidents make it very difficult to continue business as usual especially if they are linked into Pakistan. I think that is a legitimate interest. But I do not think it is difficult to digest. In fact we are offering here, we think we have found out, one more way of trying to deal with this problem.

QUESTION: Do you see ISI and RAW working together as a result of this?

FOREIGN SECRETARY DESIGNATE: I keep saying I do not want to prejudge the future. Here, it has not even met. We have just set it a job. I am not going to say what it will result in. I cannot say it today. I know what we wanted to do and that we have spelt out quite clearly.

QUESTION: At least tell us whose idea it was.

FOREIGN SECRETARY DESIGNATE: It is now both our ideas. But now it belongs to both of us. It is in a Joint Press Statement. Do not forget that it is ‘joint’.

QUESTION: Could you tell us whether the question of nuclear security between the two countries came up during the talks?

FOREIGN SECRETARY DESIGNATE: It did not.

QUESTION: It is our old experience that every time in Washington or in the General Assembly in New York, General Musharraf makes promises on Terrorism; the same thing is repeated as you said. By token of the same experience can one not say that later they get free or buy more weapons from them. Are we not learning from the old experience? We give him a chance and clear him saying that he is also against terrorism, and he is in the same boat as we are.

FOREIGN SECRETARY DESIGNATE: As I said, we are trying to see whether certain forms of terrorism can be dealt with through this mechanism. That is what we are trying to do. We are not here in this, trying to allocate blame, responsibility, prejudge. Not at all! What we are seeing is, ‘Can we do something about it or not?’ And I think that is our responsibility.

I do not think any responsible Government of India can say, ‘Nahin
jee. Nothing we can do here. Forget it.’ We have to try our best and find every possible way of dealing with terrorism. It is a terrible thing the way it affects our people. And that is what we are trying. I am not saying, ‘Oh! This is going to do this. It is going to achieve that. It is going change the world’. No. But if we can cut down terrorism in India in any small way, it is worth it. It is an achievement. And I think every Indian will say so.

**QUESTION:** Will it help him?

**FOREIGN SECRETARY DESIGNATE:** I am an Indian, I am interested in cutting down on terrorism in India. That is the goal. If we can do that, it is worth it. I do not see how anybody can quarrel with that. That is the goal of this. That is why we have tried something new here.

**QUESTION:** How often this interaction meeting will be there?

**FOREIGN SECRETARY DESIGNATE:** We have not done all that kind of modalities. We have not done that yet.

**FOREIGN SECRETARY DESIGNATE:** We have not done schedule of meetings, when they will be meeting, all that we have not done.

**QUESTION:** Can Siachen and Sir Creek be resolved this year? The language seems very kind of forward-looking in the sense that it seems you have set the specific date November for Sir Creek...

**FOREIGN SECRETARY DESIGNATE:** I think we have said for some time that we think it is doable. I think you would remember last year also Prime Minister said that these are ‘doable’. We will certainly try our best to see whether we can do it. But I do not want to set a date. I do not want to say by this year, by November, by December, by January, because that I think actually complicates the process of finding a settlement and finding a solution.

(Text in italics is translated from Hindi)
179. Response of Official Spokesperson to questions regarding press reports and statements on the scope of the proposed India-Pakistan anti-terrorism institutional mechanism.

New Delhi, September 27, 2006.

The anti-terrorism institutional mechanism\(^1\) agreed to between India and Pakistan in Havana is clearly mandated by the September 16 Joint Statement to identify and implement counter-terrorism initiatives and investigations. There is no doubt in our minds as to what constitutes terrorism and it is clear that the group is mandated to address all forms of terrorism.

---

1. On July 24 speaking in Nanital the Prime Minister defending the proposed anti-terrorism mechanism with Pakistan said its objective was to “test” how Islamabad would fulfil its responsibility towards fighting terrorism. He maintained there was no change in government’s policy in regard to terrorism. New Delhi had maintained that for the dialogue to move forward, Pakistan must ensure that its soil was not being used to spread terrorism in India. Responding to questions over the charge by former Prime Minister on the joint mechanism Dr. Singh said: “Nukta Chini (criticism) was not right and our approach against terrorism has not changed.” He said “misapprehensions” being spread in various quarters over the proposal were “baseless”. He admitted to a “trust deficit” in relations with Pakistan but said things cannot stand still. The Foreign Secretary Shivshankar Menon after taking over as Foreign Secretary on October 1 said that India would use the anti-terrorism mechanism about which there was an agreement to seek Pakistani action on the evidence unearthed by the Police that the ISI Directorate was allegedly responsible for the July 11 serial train blasts in Mumbai. ‘We will take the issue up with Pakistan in view of the new evidence", Menon said. “We will judge them not by their immediate reaction of verbal statements but by what they actually do about terrorism,” he maintained. “It seems to me logical that the mechanism has to deal with this kind of evidence", the new Foreign Secretary asserted.
180. Response of Official Spokesperson to a question regarding remarks\(^1\) reportedly made by US Ambassador to Pakistan, Ryan Crocker.

New Delhi, October 5, 2006.

We have seen the remarks attributed to Ambassador Crocker. Coming from a democracy like United States, one would have expected Ambassador Crocker to understand that democratic governments have a primary responsibility to keep their own people fully informed.

\(^{1}\) The American Ambassador in Pakistan told a press conference in Islamabad: “India should communicate with Pakistan by having direct contact instead of talking about the Mumbai train blasts in the public”. Crocker added that the U.S. wanted Indian and Pakistani governments to discuss all the issues between them including Kashmir dispute to normalize their relations. “We hope that both the countries would keep all their channels open to rectify their misunderstandings,” he said, adding that accusing statements would serve no purpose.

This matter was also raised in the Rajya Sabha on November 23 and the Government reiterating said:

“The Government of India has taken cognizance of remarks made by US Ambassador to Pakistan, Ryan Crocker, on 3rd October, 2006 regarding evidence in the Mumbai train blasts.... As two democracies confronted with the common challenge of terrorism, U.S. and India have a robust dialogue on counter terrorism through the Joint Working Group on Counter Terrorism that was established in January 2000. The seventh meeting of the JWG on Counter Terrorism was held on 19-20 April 2006 in Washington. As part of this Dialogue, both sides continue to periodically exchange views on terrorism, including on cross border terrorism.”
181. TV Interview of National Security Advisor M. K. Narayanan with Karan Thapar in the CNN-IBN programme ‘Devil’s Advocate’.

New Delhi, October 22, 2006.

Karan Thapar: Hello and welcome to Devil’s Advocate. India’s decision to set up an anti-terrorism institutional mechanism with Pakistan and the language used to justify it have created a storm of controversy. With me to talk about both issues is the National Security Advisor M K Narayanan.

Mr Narayanan, let’s start with the language used by the Prime Minister to characterise Pakistan at the time when he agreed to the setting up of this anti-terrorism mechanism. He said, “Pakistan is a victim of terror.” He added, “Terrorism constitutes a threat for both countries.”

Does that suggest that India no longer looks upon Pakistan as a perpetrator of terror but a country that, in the sense, is an equal victim and on par with India as a battle against terror?

M K Narayanan: I think you are creating a lot more than what Prime Minister really meant. What he did say and I think what he intended to say was that there have been terrorist incidents in Pakistan. President Musharraf himself has been the victim of terrorist attacks. He is certainly not equating what is happening in Pakistan with what’s happening in India. What he did say was a fact, a fact that there have been terrorist incidents in Pakistan. He just mentioned a fact, he was not making a value judgment. He was not trying to sort of carry out any kind of equation between what’s taking place in our country and what’s taking place in Pakistan.

Karan Thapar: I am glad you said so, because many people who heard the Prime Minister came to the conclusion that he was making an equation, he was making a value judgment. And one reason they came to that conclusion is because the new Foreign Secretary at much the same time said, “We must drive a distinction between terrorist elements in Pakistan and the Government of Pakistan.” Now this contradicts what Farooq Abdullah as chief minister of Jammu and Kashmir had said. He said that, in fact, the ISI is responsible for arming and supporting the jehadi groups. It contradicts what’s the Police Commissioner of Mumbai has said, when he claims the ISI is responsible for the Mumbai blasts. So, whom do we believe? The Police Commissioner of Mumbai, Farooq Abdullah, Ghulam Nabi Azad or the Foreign Secretary?
**M K Narayanan:** I think the Foreign Secretary has a formidable list of people to contend with. The Foreign Secretary has just come from Pakistan. He was just making a statement. If the question is posed to him, saying that is the terror situation in India comparable with what is happening in Pakistan, I am quite sure he would say something entirely different. I think he did make a statement saying that as a Foreign Secretary, if he makes a statement that the Government of Pakistan is responsible, he will be called upon to say all right give produce evidence. What we all are aware of very clearly is that there are terrorist elements, they have the support of structures in Pakistan and I think it was more or less a statement. And the fact is that the ISI is involved is fairly well known. I think it is not a secret as far as India is concerned and I think is well known the world over.

So, the ISI’s role in one particular incident or another particular incident sometimes becomes difficult to determine. But as far as the Mumbai Police Commissioner is concerned, the involvement of the LeT, which is closely linked to the ISI, has been proved by the investigations. So, I suppose the Mumbai Police Commissioner is right. I would say the Foreign Secretary was being careful in his choice of words as far as what he said. And I think Dr Farooq Abdullah is well known for his very clear unambiguous statements.

**Karan Thapar:** You used a very careful language here. You said the Foreign Secretary was being careful. Actually a critic points out, by perceiving Pakistan in the language that the Prime Minister and the Foreign Secretary used, India has suffered a strategic setback. One of your successors as head of Intelligence Bureau, Ajit Doval, has gone on to record to say, “India suffered its first strategic setback in the fight against terrorism by certifying that Pakistan is not an aggressor, but a state aggressed upon”.

**M K Narayanan:** I do not wish to comment on what my former colleague has said. First and foremost, I don’t quite understand what he meant by strategic setback. I think the world has recognised the fact that India is a victim of terror. Most, if not all the terror, is coming from across the border. The country which is identified as the aggressor in this matter is Pakistan.

What we have, to a large extent, try to avoid — and that particularly at the level of Prime Minister, what we try to avoid - is finger-pointing Pakistan. Because as the Prime Minister keeps saying from time to time, we wish to try to make Pakistan understand that unless it gives up terror as
a weapon, unless it understands that terror is not going to make India do anything and there is a hope for improved relations between India and Pakistan, it is an ending of terror. So, he does not want to end up in what is called a slanging match between India and Pakistan.

**Karan Thapar:** Understandably. But the problem is that both the Prime Minister and the new Foreign Secretary used language that created an unfortunate impression. Many people misunderstood them to the point that people concluded that the Prime Minister was seeing Pakistan as a partner in the fight against terror, not a perpetrator. He was seeing Pakistan as a victim rather than an aggressor. And do you think, therefore, that in the light of this, the language used by both of them was unfortunate?

**M K Narayanan:** I don’t. I mean, if people misunderstood what the Prime Minister said, or the Foreign Secretary said, I think I can’t say. Because I don’t think — most definitely for the Prime Minister because I am part of that entourage, and I can say because the new Foreign Secretary is somebody whom I have known for many many years — I think both of them were careful on their choice of language. If people have misunderstood it or misinterpreted it, I think there has been more misinterpretation than misunderstanding. You know our obsession with terror is such that we do sometimes overstretch the limits of what is being said.

**Karan Thapar:** It is not just over his language that people think that the Prime Minister may have dropped his guard. After he came back from Havana, at Nainital, the Prime Minister said that levels of cross-border terrorism have fallen. The truth is that just four weeks earlier, the Home Ministry released figures to Parliament, which showed that during the first six month, the number of infiltration incidents has doubled and the number of infiltrators involved had trebled. So, once again, what the Prime Minister was saying, was in the contradiction with the facts given out by his own Home Ministry.

**M K Narayanan:** No. I think what was reported as the part of the Prime Minister’s speech there, I think a crucial sentence was lost. I have gone through that Nainital speech. It says that the level of infiltration has picked up over last six to eight months.

**Karan Thapar:** So you mean bad reporting was responsible?

**M K Narayanan:** I don’t know. But that was very much a part of the speech. And at some stage it has got lost - either in translation, or in transliteration or whatever it is.
Karan Thapar: But the interesting thing is that the Prime Minister’s Office didn’t put out the correction, they permitted the misunderstanding based on misreporting to continue and, therefore, the misrepresentation of the PM sort of become a fact. People now think that he has dropped his guard on Pakistan in terms of his language.

M K Narayanan: After that, there are several statements that the PM has made in which he has attacked terrorist acts coming from Pakistan. I think he did it even very recently. At every forum that I have been present with the PM, when an occasion has risen, in his own very persuasive style, he has referred to the importance of Pakistan restraining and keeping back the terrorist elements from their country. Now, if you wish to pick out a particular statement and see that as evidence of PM’s change of heart, well it’s very difficult to tell.

Karan Thapar: Let me ask you as his National Security Adviser. The people who conclude from the language that the Prime Minister used, seeing Pakistan as a victim rather than a perpetrator of terror, seeing Pakistan as a partner in the fight rather than an aggressor, people who conclude that he has changed his perception of the country, perhaps scale down the threat level from Pakistan - they are wrong?

M K Narayanan: They are totally wrong.

Karan Thapar: The Prime Minister continues to see Pakistan as the principal source of terror that India faces?

M K Narayanan: The Prime Minister sees terrorism as India’s biggest problem. He has made no bones on that question. He sees that most of the threat comes from across the border.

Karan Thapar: Pakistan?

M K Narayanan: Yes, Pakistan. And a fair amount of it is also coming in from pro-Pakistan elements in Bangladesh. He has not dropped his guard. He has no intention of dropping his guard. He has given direction to all of us to not to let down our guard in this matter. And what he does, and which is probably different from what many people would like to do, is to not get into a kind of a huge slanging match in a rather unseemly spectacle of the Prime Minister of India and the President of Pakistan exchanging words through the media, outside the media, across the globe etc. I think we have managed everything fine. I don’t think any leader who has met him, or any people across the world have misunderstood what the Prime Minister
has wanted to say. There are elements in this country who are very anxious to paint the PM as somebody who is naïve or weak. This is the sixth PM I have dealt with. I find that he is very clear in his mind as to where exactly India’s interest lies.

**Karan Thapar:** So, in your words you are saying he is strong on terror but he is dignified in his approach.

**M K Narayanan:** Exactly. I think I could not have put it better.

**Karan Thapar:** Mr Narayanan, let’s come to the anti-terrorism institutional mechanism that India and Pakistan have agreed to set up. This assumes that Pakistan has changed its attitude to terror as a weapon to use against India. Do you really believe that’s the case?

**M K Narayanan:** I again fall back on what the Prime Minister says, “Trust, but verify.”

**Karan Thapar:** Is it something we have learnt from the Americans?

**M K Narayanan:** No, no. But ‘Trust and verify’ is a good way of dealing with Pakistan. There were various options that we went through. One of the things we thought was to give a long rope to Pakistan. In the case of the terrorist attack for instance, we have what we call definite proof of Pakistan’s involvement in the attack or of a terrorist outfit in Pakistan. Since we are not prepared for a hot pursuit, we thought let’s see what Pakistan does with the evidence we give them. We hope we can give them specific locations, names, telephones. If Pakistan delivers on some, if not all, we can say that the mechanism is reasonably successful.

**Karan Thapar:** You are seeing this as an experiment worth trying. I can understand but the problem as you have said in this interview is that the ISI’s hand is discernable in so much of what Pakistan has done and this is something every Indian Government passionately believes in. Then how can the same people be cooperative in a meaningful sense in an anti-terror mechanism? Surely, the ISI cannot be the perpetrator and the solution at the same time?

**M K Narayanan:** I would say that is Pakistan’s dilemma, not ours. Pakistan has said if you give us evidence, we will help you with the investigation. We have given them the opportunity to prove what indeed they have said in words. We see it as giving them an opportunity.
Karan Thapar: Except that the people you are giving the evidence to are the ones who perpetrated the terror in the first place.

M K Narayanan: Well, every time we give them information and they give us a negative answer. Then we know that the mechanism is not working. Then we'll see what to do. But right now we want to put Pakistan in a spot, saying ‘This is the evidence, get back to us.’ If it happens in every case, it will become clear that the mechanism is not working and we can tell the rest of the world and Pakistan that there is no point in talking to them because they do not understand the language.

Karan Thapar: I get the clear impression that you will give Pakistan two or maybe three chances to cooperate, but if it continues, then you will call this off.

M K Narayanan: I wouldn’t say two or three, that depends on what happens. But if the mechanism does not work, we will call it off.

Karan Thapar: Your big opportunity will be when you give the evidence of ISI involvement in the Mumbai blasts. When exactly do you plan to present that evidence to Pakistan?

M. K. Narayanan: we have much of the evidence but quite clearly the Mumbai blasts would be where the most recent evidence would be available. We have some legal issues to clarify. As soon as that is done… we should be ready by the time the Foreign Secretaries will meet, which is by the middle of November.

Karan Thapar: The legal issues you are talking about. Are they the confessions made by those accused?

M K Narayanan: Yes. We do not want to hamper the process of prosecution of the cases in India. We do not want to throw the baby out with the bathwater in this case.

Karan Thapar: All right. Your target is the meeting of the Foreign Secretaries, which is on November 13-14. What would you characterise as an effective and satisfactory response from Pakistan when the evidence is made available to them?

M K Narayanan: Firstly, this is the first formal occasion when the anti-terrorism institutional mechanism will be discussed. If Pakistan says they need to review the mechanism, then there will be a delay in actually presenting the mechanism.
Karan Thapar: There are two aspects to this question then. Firstly, as the NSA, what would you like the shape and form of the mechanism to be?

M K Narayanan: We have on our side something in view that I don’t want to mention yet. Because it has not been presented to the Pakistan side. We have a two-tier mechanism that has been approved by our people. It has not been approved by Pakistan yet. I don’t think it has been formally presented. I think that will happen only at the meeting of the Foreign Secretaries.

Karan Thapar: Does the two-tier mechanism involve a role for intelligence chiefs on either side?

M K Narayanan: Well, I do hope intelligence chiefs or at least intelligence personnel will be involved.

Karan Thapar: So the ISI from Pakistan will be formally involved at one of these levels?

M K Narayanan: Yes, hopefully at one of these levels.

Karan Thapar: Does this two-tier mechanism also involve the sharing of information between both sides?

M K Narayanan: No, this is entirely an anti-terrorism machinery. So, there is no sharing of information.

Karan Thapar: So, the sort of information you were good enough to share with me when I last interviewed you in July, when you said that there was credible intelligence to suggest that the LeT could target one or more of India’s nuclear establishments, that sort of information will not be shared?

M K Narayanan: No, certainly not. If the anti-terrorism mechanism goes forward and we see that there is a lot of corporation from Pakistan and that there is a great deal of comfort between India and Pakistan, then we could. It’s our ultimate hope.

Karan Thapar: But that’s at a later stage.

M K Narayanan: That’s at a much much later stage.

Karan Thapar: After you have verified and got your trust. At this point, there will be no sharing of information?
**M K Narayanan:** No, certainly not.

**Karan Thapar:** At what level will this mechanism be headed? Will it be by the foreign secretaries themselves or will it be by people outside the MEA?

**M K Narayanan:** No. The foreign secretaries certainly will not head it. Because we have a composite dialogue where all these issues will be discussed in a broader framework. You have a Home Secretary-level talk going on. So I suppose it will be one level below, maybe an additional secretary or a special secretary.

**Karan Thapar:** And how often will this mechanism meet? Will it be as and when required or will it be in constant function?

**M K Narayanan:** No, because it is an anti-terrorism mechanism, it will work as and when required. But I presume the mechanism will also look into issues like money laundering. If that requires a broader framework, then it could be looked at definite intervals. But mostly, it will be meant for ongoing investigations and sharing of information regarding investigations.

**Karan Thapar:** Now you have already shared the information about the ISI involvement in the Mumbai blasts with the Americans and the British. What response did you get from them?

**M K Narayanan:** I did not say we have shared the information.

**Karan Thapar:** The American Ambassador said so. And I believe that officials in London said that the Prime Minister shared the information with Blair when he met him in London.

**M K Narayanan:** No, there is no evidence that has formally been supplied to them. We have given them the details. There is a lot of difference between the evidence and the details. As far as evidence is concerned, there are items regarding interrogation reports, which may be needed too. So, we will first give the information to Pakistan, because otherwise it will look as if we are doing some kind of a propaganda. We will provide that information to the Pakistanis. Whether we will share it with the Americans is a political decision.

**Karan Thapar:** So, newspaper reports that say that you have actually shared the information with them are inaccurate?
M K Narayanan: Information might have been shared, but not evidence.

Karan Thapar: One last question. So you as NSA and former head of the IB believe that India's evidence against the ISI for its complicity in the Mumbai blasts is clinching or do you think it is suggestive?

M K Narayanan: As the former head of the IB and NSA, I think it is as good evidence as you can possibly get in a terror case. Whether it is clinching is for the courts to decide. I think we have enough connectivity, linkages, confessions and arrests made based on those confessions. All these are pretty good, but there are some pieces of the puzzle missing. If the courts decide they want the full puzzle, it will be difficult. So I am hesitant to say that the evidence is clinching. But it is pretty good¹.

Karan Thapar: Mr Narayanan, it has been a pleasure talking to you on Devil’s Advocate. Thank you very much.

¹ On October 23 speaking about the quality of evidence Home Secretary VK Duggal said: “It is a very good evidence. Since I am also privy to this, it is fairly solid evidence.”
182. Media Briefing on Foreign Secretary level talks between India and Pakistan.

New Delhi, November 14, 2006.

OFFICIAL SPOKESPERSON (SHRI NAVTEJ SARNA): Good evening ladies and gentlemen. This is a very brief factual update on the talks today.

As you know the Foreign Secretary level talks between India and Pakistan began this morning and they are continuing tomorrow. So, it would not be correct at this stage to go into too many details.

A very extensive discussion was held this morning between the two delegations led by the respective Foreign Secretaries. The discussion carried on over a working lunch. As you know, normally the Foreign Secretary level discussions are an occasion to review the composite dialogue process and that was done. This was a meeting to resume the composite dialogue, so to speak, which had not been held after the Mumbai blasts.

Part of the discussions naturally were focused on the declaration that was agreed to between Prime Minister Dr. Manmohan Singh and President Musharraf in Havana, the follow-up action being taken thereafter. The two sides also discussed the menace of terrorism and the proposed anti-terror mechanism under the Declaration.

They also discussed J & K which is normally discussed when Foreign Secretaries meet as part of the composite dialogue. As part of that, they discussed the confidence-building measures, in particular the cross-LOC confidence-building measures that had been proposed and were partially implemented.

The status of several other confidence-building measures which have been on the table was reviewed with the objective of pushing them forward to an early implementation. Other issues of bilateral relations which have been implemented in part or been constantly under review such as travel, such as the situation regarding civilian prisoners, fishermen, other CBMs dealing with non-conventional and conventional security issues, were discussed.

Economic and commercial relations between the two countries came up for discussion. As I said, this meeting will resume tomorrow and we will have much more details for you thereafter.

In the afternoon at about 4:30, the Pakistan Foreign Secretary and
members of his delegation called on the External Affairs Minister, Shri Pranab Mukherjee. The call lasted for about half an hour. The External Affairs Minister reviewed the discussions held by the two Foreign Secretaries and gave his viewpoint in general terms on why it was important that both sides should fight the menace of terrorism jointly. He also welcomed the resumption of the dialogue process and underlined the need to address all issues as part of this process.

He also recalled some of the achievements of this dialogue process which have already borne fruit. For instance, the very positive change in atmosphere in the relationship between the two countries which was very much in evidence in the wake of the earthquake, when we had been able to make offers for rehabilitation and relief work to be carried out on the other side of the LOC. EAM\(^1\) also stressed to the delegations the need to take further action so that the expectation of the people of both countries can be fulfilled.

I am afraid, I know you have several questions, I have to leave it at that for today.

**QUESTION:** Regarding terrorism, did we share the evidence with them?

**OFFICIAL SPOKESPERSON:** I do not want to go into any more details. I think you will have a chance to discuss all these issues. This is an on-going meeting.

**QUESTION:** Was Siachen not discussed?

**OFFICIAL SPOKESPERSON:** I did not say that.

**QUESTION:** Was it discussed?

**QUESTION:** How will you describe today’s meeting, Sir?

**OFFICIAL SPOKESPERSON:** As I said, it was a very detailed meeting; it was held in a very constructive and positive atmosphere; and it is not over yet.

---

1. Later in the day when the Pakistani Foreign Secretary called on the External Affairs Minister, the latter “reviewed the discussions” that took place between the two Foreign Secretaries earlier in the day. He spoke in general terms about the need for both the sides to fight terrorism jointly. He “welcomed the resumption of the dialogue process, and underlined the need to address all issues as part of this process. He also recalled some of the achievements of the dialogue process....” Incidentally, External Affairs Minister did not wish to comment on the statement made by his Pakistani counterpart Khurshid Mehmud Kasuri that the Siachen issue could be resolved in a matter of days. Mukherjee said it was not necessary to react to every comment.
QUESTION: What was discussed …

OFFICIAL SPOKESPERSON: I do not want to go into discussions of what exactly was said or not. I did tell you that considerable amount of time was spent in discussing terrorism in the wake of the Havana Declaration.

QUESTION: What are the proposed CBMs? Siachen…?

OFFICIAL SPOKESPERSON: We will give you more details tomorrow as to what is being finalized. There are several CBMs which you are already aware of, which have not yet been implemented, in all fields. On Siachen, to give you a specific answer, this is something which has been informally discussed by the two Foreign Secretaries. So, there is no point in saying it was not discussed between 10 to 11 or it was not discussed between 11 to 12. These are on-going discussions. Subjects will possibly be discussed tomorrow again.

QUESTION: What is the programme for tomorrow?

OFFICIAL SPOKESPERSON: They will meet in the morning.

QUESTION: Is there going to be a joint press conference or statement?

OFFICIAL SPOKESPERSON: The statement I cannot yet say. If there is something produced and agreed, we will know only tomorrow. There are no plans for a joint press conference. We have a briefing by the Foreign Secretary in the afternoon tomorrow.

QUESTION: What was Pakistan’s response on our concerns on terrorism?

OFFICIAL SPOKESPERSON: I am not going go into the detailing of the whole dialogue. What I can say is that considerable time was spent on discussing terrorism and the External Affairs Minister also underlined the need to fight this jointly.

QUESTION: What about the nuclear risk reduction agreement?

OFFICIAL SPOKESPERSON: That is part of the discussions on the non-conventional security CBMs.
183. Joint Press Statement issued at the end of India-Pakistan Foreign Secretary Level Talks.

New Delhi, November 15, 2006.

1. The Foreign Secretaries of India and Pakistan met in New Delhi on November 14-15, 2006. Shri Shivshankar Menon, Foreign Secretary of India led the Indian delegation while the Pakistan delegation was led by Foreign Secretary Mr. Riaz Mohammad Khan. They reviewed the progress in the third round of the Composite Dialogue encompassing talks on Peace and Security including CBMs; Jammu and Kashmir; Siachen; Wullar Barrage/Tulbal Navigation Project; Sir Creek; Terrorism and Drug Trafficking; Economic and Commercial Cooperation and Promotion of Friendly Exchanges in Various Fields. The talks were held in a friendly and positive atmosphere.

2. They exchanged views on the issue of Jammu and Kashmir in the spirit of the Havana Joint Press Statement to hold purposeful discussions and to build on convergences and narrow down divergences. They agreed to fully implement measures to enhance interaction and cooperation across the LoC including the early operationalisation of truck service for trade on agreed items.

3. In pursuance of the Havana Joint Press Statement, they discussed terrorism and the need to effectively deal with it. They agreed to set up a 3-member anti-terror mechanism to be headed by Additional Secretary (International Organizations) from the Ministry of External Affairs of India and the Additional Secretary (UN&EC) from Pakistan’s Ministry of Foreign Affairs. Its mandate would be to consider counter terrorism measures, including through the regular and timely sharing of information.

4. The two Foreign Secretaries exchanged views on Siachen.

5. Both sides also agreed to hold a meeting of experts on 22-23 December 2006 to decide on the coordinates for joint survey of Sir Creek and adjoining areas, without prejudice to each other’s position, as well as to simultaneously conduct discussions on the Maritime Boundary. The joint survey shall be completed by February 2007.

6. The agreement on “Reducing the Risk from Accidents relating to Nuclear Weapons” was initialed by the two sides. They agreed on
its early signing. They expressed satisfaction over the implementation of the “Agreement on Pre-Notification of the Flight Testing of Ballistic Missiles”.

7. They welcomed the inauguration on November 14 of the hotline between the Pakistan Maritime Agency and the Indian Coast Guard.

8. On humanitarian grounds, all fishermen and prisoners of the other country, whose national status stands confirmed and who have completed their sentences, would be released by 25th December, 2006.

9. They reviewed the progress made towards the revision of the 1982 Protocol on Consular Access and expressed the hope that the Protocol will result in expeditious disposal of consular issues related to prisoners and fishermen of both sides. They also agreed to examine the release of prisoners of the other country who are detained on minor charges.

10. They also agreed to promote friendly exchanges between the two countries. They agreed on the need for an early finalization of an updated visa agreement between the two countries. In addition, it was agreed to expand the list of shrines under the 1974 Bilateral Protocol on Visits to Religious Shrines.

11. The Foreign Secretaries reiterated the importance of enhancing mutually beneficial economic cooperation.

12. Both sides reiterated their keenness to see their respective Consulates General in Mumbai and Karachi reopened quickly.

14. The Foreign Secretaries agreed to meet in February 2007 in Islamabad to launch the next round of the Composite Dialogue.

15. The Foreign Secretary of Pakistan called on the External Affairs Minister, Shri Pranab Mukherjee during the course of his visit.
184. Press Briefing by Foreign Secretary Shivshankar Menon on the conclusion of Foreign Secretary level talks between India and Pakistan.

New Delhi, November 15, 2006.

OFFICIAL SPOKESPERSON (SHRI NAVTEJ SARNA): Good afternoon. It gives me great pleasure to welcome the Foreign Secretary here. He is accompanied by High Commissioner Mr. Satyabrata Pal from Islamabad. The Foreign Secretary will brief you on the India-Pakistan talks. I must tell you that the Foreign Secretary has to leave for the airport straight after this. So, please keep your questions short and few.

FOREIGN SECRETARY (SHRI SHIVSHANKAR MENON): Good afternoon ladies and gentlemen. As you know, we have just been through two days of talks with the Pakistani Foreign Secretary. I believe he has just finished briefing you on the talks. You also have with you the Joint Press Statement which we issued at the end of the talks, which gives you an idea of the various decisions that we took. I thought what I do was briefly mention the context in which these decisions were taken. Then I will be happy to answer your questions on this.

As you know, these were the first round of official talks between the Foreign Secretaries after we postponed the July talks. They were postponed because of the Mumbai blasts, and because the links into Pakistan of those blasts had created a very strong sense of public opinion and a very strong opinion that we could not have held the talks at that time.

Subsequent to that, Prime Minister Manmohan Singh met with President Musharraf in Havana and it was decided that we would resume these conversations. In that sense this is an important round, a significant round, different from other rounds which were merely meant to review the progress in the Composite Dialogue that we have with Pakistan.

I am happy to tell you that we had a very useful and a constructive round where we not only addressed the various issues which we had been asked to address by the two leaders in the Joint Statement issued in Havana, but we also reviewed the third round of the Composite Dialogue and then discussed the way forward, the sort of actions that we can take and we should take to move this process forward.

Since this was the first formal meeting after the Mumbai blasts, as
you have seen from the Joint Press Statement, we discussed and then agreed how to establish the anti-terror mechanism which our leaders had mandated in Havana. It is to be composed of three people from each side and would be headed by an Additional Secretary from the Foreign Ministry. We also discussed its task, which is to consider counter-terrorism measures including through the regular and timely sharing of information.

We shared some information at this round itself with Pakistan on some of the terrorist acts which we have suffered from in the recent past where we have already done our investigations and filed charge-sheets. We also reviewed the third round which had taken place in the earlier part of the year and which you would recall had made progress in several respects.

This was the round which saw the opening of the Poonch-Rawalakot bus service. It was also the round which saw the agreement in principle on cross-LoC trade which has not still been implemented. It was the round which also saw the agreement on a revised shipping protocol which would make it easier to carry cargo between the two countries. This was the round which also discussed the nuclear risk reduction agreement which, as you know, is now ready.

We also agreed in principle on quarterly flag meetings. Apart from that, we then looked at the way forward at how we could take the dialogue process forward and the relationship forward. Most of the results of what we have said are in the Joint Press Statement. So, I would not go over that again.

What we envisage is the fourth round of the Composite Dialogue next year, which we will start off when the two Foreign Secretaries meet in Islamabad in February. Thereafter we will try and make progress on the various issues which are in the agenda. They are listed in the first paragraph of the Joint Press Statement.

Our goal in this process of talks, negotiations, contacts, visits, is frankly to try and achieve a relationship with Pakistan, who is our neighbour, which could be described not just as normalized but actually as good neighbourly relations. We are a long way from this. We obviously have many many things to do in order to achieve that, but that is our goal through this process. It is a fact of geography that we are neighbours and our destinies are linked and we will keep working at this and try and improve the relationship.
I would be happy to answer any questions you have.

**QUESTION:** The Pakistani Foreign Secretary has just told us that India has not presented ... evidence on the Mumbai blasts nor have you in any way given any information or had any discussion on the Mumbai blasts. Can you say anything on this?

**FOREIGN SECRETARY:** Let me make this clear. We handed over some information and material in writing about those cases in the recent past where we have completed our part of the investigation and where we filed charge-sheets. That we gave in writing to the Pakistani side. That does not include Mumbai because they still have not filed charge-sheets.

However, we have discussed the Mumbai blasts with Pakistan at various occasions in the recent past in our various contacts with them. Because of our legal processes, we cannot today give them formal material or evidence, or make demands until we complete our own legal processes. Anything else would amount to contempt of our own courts and this we cannot do. That is why in a technical sense, yes, that is correct. However the fact that we postponed the talks because of the Mumbai blasts, because that we resumed the talks and in all these contacts naturally we have discussed the Mumbai blasts.

Let me also make this clear. I think there is terrorism in Pakistan: there is terrorism in India. It is for each of us as sovereign states to deal with it on our own territory. It is the cross-border links that we have raised with Pakistan. The anti-terrorism mechanism gives us a way of dealing with that. So, now that we have given some information, this mechanism we hope will meet soon, and we hope that it will take some action.

**QUESTION:** So, Mumbai was not discussed at all.

**FOREIGN SECRETARY:** I think I have just answered that.

**QUESTION:** Pakistani Foreign Secretary says that Siachen was talked about and an agreement was possible. He said that if the desire is to authenticate or agree upon positions, it is alright. But if the desire is to endorse a claim, then there is ... What exactly is ...

**FOREIGN SECRETARY:** We did have a discussion on Siachen. It is one of the subjects. We have a separate meeting only on Siachen between the Defence Secretaries in every round of the Composite Dialogue. We did that in the third round as well. We will do so in the fourth round.
Even at this meeting we discussed Siachen. We both said what concerns us in Siachen. In that sense we both described what worries us. Our position is well-known. We would see the beginning of the process of this engagement as being prior authentication of present positions. I think what he was trying to say was what their position is on that same question. There is still a gap between our positions and let us be honest about this. It is something that we need to talk through and try and bridge. That is why we are still talking about this issue.

**QUESTION:** Can you please clarify, Sir, when you said that you have given some information on other cases where charge-sheets have been filed, could you tell us a little more on that?

**FOREIGN SECRETARY:** I think I would rather let the mechanism do its work. The whole point of giving the information was to let the mechanism do some work. Let us see what happens with that information, what the investigations into that information lead to. As I said, this is material relating to cross-border linkages to the terrorist cases in India in the recent past.

**QUESTION:** Foreign Secretary, your counterpart also mentioned possible discussions on demilitarization. This is an idea that has been there. I think he also said that Pakistan, if India took some steps in Kashmir - the term used was heavy military presence - if India decides to withdraw them, they would also take some reciprocal steps. Was that discussed substantively at the meeting you have had over the last couple of days? What is our response to his comments?

**FOREIGN SECRETARY:** Demilitarization is one of the concepts which has been mentioned recently - I think it is in the public discourse as well – on Jammu and Kashmir and how it should be dealt with. We have in fact removed some troops from Jammu and Kashmir last year. You would remember that there was some troop withdrawal. In our case the troop levels in Jammu and Kashmir are really related to the security situation, at least our appreciation of the security situation in Jammu and Kashmir. We have a responsibility to the citizens of our state to ensure peace and tranquility that they can live their lives free of violence. That is really what it is linked to. If there is an improvement in the situation, certainly it is possible to consider further troop withdrawals. But violence has to go down and the threats to ordinary people who try and lead peaceful lives, has to go down.
QUESTION: Mr. Menon, when Pakistani Foreign Secretary attention was drawn to the contacts of Member of the Pakistan National Assembly with Lashkar-e-Tayyiba and of which he was proud of; his reply was that we should look at the government policies and not on individuals or groups. Is Pakistan trying to escape its responsibility by such statements? The other thing he said was whenever their was a terrorist attack in India; in fifteen minutes Pakistan is blamed for that and this sort of finger pointing could be very dangerous...

FOREIGN SECRETARY: I have just seen a piece of paper given to me after I reached this place, in which it is stated that the Parliamentary Secretary Maj. Tanveer had earlier contacts with the Lashkar-e-Tayyiba. I was quite surprised to see this. Let us see; after some enquiries we will tell you what is its background. The other point you mentioned that the Pakistani Foreign Secretary said that Pakistan should not be blamed like this; we told Pakistan that the terrorist group that are there, that we have banned and hey too have banned, like Lashkar-e-Tayyiba, their operations should be stopped particularly the support they extend in India, the activities they indulge in, should be stopped. We have made this demand on them. Now they have assured us that if we give them some specific information they will do something about that. Let us see. We have given them some information...we will tell you after some time, what impact this have.

QUESTION: What he says is that within fifteen minutes how can you finger point?

FOREIGN SECRETARY: I do not think he accused the Government of India of doing that.

QUESTION: Which are the religious shrines that are proposed to be included in the religious protocol? Secondly about the trip of our EAM Pranab Mukherjee.......

FOREIGN SECRETARY: Sorry, I have not brought that list, neither is this list yet settled because from their side full list is not received. There is agreement on some shrines, they have indicated those could be included in the protocol. The list is quite long. If you want it can be given later. I do not have the list with me as of now. About the other question it is not yet settled, but he will definitely go. We are still discussing the dates. Let us see what suits them, we shall settle on that, but he will definitely go.

QUESTION: On the question of Maj. Tanveer Hassan. The visit that
took place at the level of parliamentary secretaries; can the government distance itself from his statement? Are they not at all responsible for that? The discussion about the mechanism that took place today, would it take off from today’s talks or the list that India had given earlier which included the names of Dawood and Salahuddin, will also come within its purview?

FOREIGN SECRETARY: on the first question when we asked the Pakistani Foreign Secretary he said why are you asking me? On the second question the information we gave them is not a new information; we gave them the information about what had been going on for almost the last year. Let us what happens on that. Gradually as the mechanism starts functioning, we will perhaps meet in December, then we shall see what can be done.

QUESTION: Does India believe that it is the Pakistan state actors that are involved in the recent terrorist attacks against India across the border? If so, are these state actors under the control of President Musharraf?

FOREIGN SECRETARY: What we say is that there are elements in Pakistan, and we do not qualify this, there are elements in Pakistan which have been involved in not just assisting but inciting terrorism in India. Who controls, how much control, that is not for us to say. It would be very difficult for us to make categorical statements about that. But it is any elements in Pakistan who are involved in this kind of cross-border terrorism we would expect action against.

QUESTION: India has accused in the past that in Pakistan there are a lot of terrorist camps. What is your information now? Are there still camps that train the so-called terrorists in Pakistan?

FOREIGN SECRETARY: There are.

QUESTION: Have you given them specific knowledge of those camps?

FOREIGN SECRETARY: I think they know.

QUESTION: Given the fact that New Delhi has had for long serious concerns about cross border terrorism emanating from Pakistan, how important is this three-member anti-terrorism mechanism and the peace process? How important a development is that? How would you put it in that context?
FOREIGN SECRETARY: I think terrorism has been a concern for us from the beginning. As we have explained, there are three things that we have tried to achieve through this peace process. We are trying to achieve an atmosphere free of violence which means that the various commitments on terrorism are implemented. We tried to resolve outstanding issue through process of negotiations which is what the eight groups and the six expert groups in the Composite Dialogue are meant to do. And we try and build a relationship with Pakistan in which both sides have stakes whether it is through trade, through travel, through normal business that neighbours would undertake with each other. In that sense, yes, terrorism is very important. It is a very important part of the Composite Dialogue process. Counter-terrorism is an important part of what we are trying to do, but it is one part. It is part of a larger process. I think we have made progress in all three aspects, if you look at the process since it started in January, 2004. I think the establishment of this mechanism, what it does is to give us an institution, an address where we can deal with the kinds of issues that we have been discussing in the past. We have now one specific institution which is supposed to address these concerns. But, as I said, we just have the decision on its composition, on its establishment. It still has to meet. So, it would be very premature to start ascribing various things to it and say, ‘Can it do this? Can it do that?’ , I think we have to give it chance.

QUESTION: Sir, this is with regard to Mysore terror plot. Has Pakistan sought Consular access for that person? Or have you given any information to follow up the matter?

FOREIGN SECRETARY: They have sought consular access and we are processing it. To amplify that we actually gave them information about Mohammad Fahad. They sought consular access and we are processing it.

QUESTION: Your counterpart was slightly vague on the number of areas spoken about as far as blasts were concerned. Did we speak about the Mumbai blasts at all? He said no evidence was provided. It is one thing to provide evidence and another to bring up the issue. Did you speak on other blasts or other such incidents like Mysore, like Varanasi, like New Delhi?

FOREIGN SECRETARY: I think I answered that right at the beginning that what we provided by way of written information related to previous blasts where we have completed investigations and have filed charge-sheets which did not include Mumbai. We did, when we spoke, include
Mumbai also in our discussions. So, in that sense, the simple answer is yes.

**QUESTION:** Pakistan took recourse to some technical argument that they have acted against terrorism, banned some militant outfits; that there are banned militant outfits on both sides of the border; and that some of these militant outfits have reinvented themselves and they are continuing their terrorist activities against India. Have you raised this issue saying that the point is not about nomenclature or banning but to stop terrorism against India?

**FOREIGN SECRETARY:** As I said, what we raised with them was the cross-border linkages of various banned organisations and organisations which are aiding and abetting terrorism on our side. I think that is the part that we raised with them.

**QUESTION:** What is the substantial gain? Are these successful talks? How can you term them as successful talks?

**FOREIGN SECRETARY:** It is successful for one simple reason. If you read the Joint Press Statement, we have set up the anti-terrorism mechanism; we have talked on the issues that divide us which include Siachen; and we have a clearer appreciation of what the other side is worried about; and what they are capable of. We have agreed on a whole series of steps which we think will help to carry the relationship forward. I do not want to read the whole Joint Press Statement out to you all over again. But that is what it says.

**QUESTION:** When do you expect Pakistan to get back to you on the evidence you have given them?

**FOREIGN SECRETARY:** This is an on-going conversation. But the mechanism itself, we hope, will meet soon.

**QUESTION:** Is the Joint Anti-Terrorism Mechanism the only forum to raise accusations or evidence on terror attacks in the future? Or is it an attempt to move away from exchanging these allegations through the media?

**FOREIGN SECRETARY:** We would certainly try to move away from exchanging allegations in public because I am not sure if that is the best way to get real action or get anything done. I think the fact is that this is an on-going conversation and it is not a conversation that just began today or yesterday. It is something that has been going on. The anti-terrorism
mechanism gives us another way of carrying on that conversation and seeing that it results in action. Thank you.

(Text in italics is translated from Hindi)

185. Remarks by External Affairs Minister Pranab Mukherjee and Foreign Minister of Pakistan Khurshid M. Kasuri after the private lunch.

New Delhi, November 27, 2006.

**EAM:** Ladies and Gentlemen, It was a wonderful lunch (that) we had with His Excellency Foreign Minister of Pakistan. As you know, this is not a formal visit. I will have the privilege of receiving him during the SAARC summit for which I am not inviting him here. I will go to Islamabad on the 13th (January) and I will formally invite him and His Excellency, the President. I will carry the letter of Prime Minister to him for inviting him for the Fourteenth SAARC summit. We will have substantial talks at that point of time. This was just an informal lunch. I am privileged to have the presence of Madam Kasuri along with the High Commissioner (of Pakistan).

**Mr. Khurshid M. Kasuri:** Thank you very much. I enjoyed the hospitality of the Foreign Minister and I look forward to receiving him in Islamabad on the 13th of January. We have agreed on the dates and I have assured him of a very warm welcome. Both of us agreed that Pakistan-India relations are very important and that we needed to develop a level of trust. I told him that I had developed that trust with his two predecessors and I was looking forward to developing similar trust with him. When we are in this job, it is a very heavy responsibility. And I am happy that a very senior leader of the Congress Party is in charge of the Ministry of External Affairs. That gives me great hope because whatever we have to do, it requires politicians who are strong. After my meeting today, I have greater hope. Thank you.

---

1. It was a private lunch hosted by External Affairs Minister for the Pakistani Foreign Minister who was on a private visit to attend the wedding of the daughter of the Indian Minister for Youth and Sports, and Panchayati Raj, Mani Shankar Iyer.
186. Speech of Prime Minister Dr. Manmohan Singh of a rally in Amritsar.

Amritsar, December 20, 2006.

I am delighted to be here today and lay the foundation stone of six major projects in Punjab. I am particularly pleased that these projects will change the face of not just Amritsar, but all areas in and around this great city.

In many ways, Amritsar is my home. In 1947, when India gained Independence, my family settled in Amritsar. I still have fond memories of the Amritsar of those days. Amritsar was a leading city, not only of India but also of the entire region. Amritsar was the foremost centre for India’s trading and commercial relations with Afghanistan, Iran and Central Asia. It was a magnificent and prosperous city where people came not only to pray at Harminder Sahib but also to make their fortunes. The partition that occurred at the time of Independence caused a great deal of harm to the industry and trade of Amritsar. Ancient trading routes got cut off and the border rose like a wall very close to the city.

However, the hardworking, industrious people of Punjab have worked day and night and have changed the face of this divided State. The enterprising farmers of Punjab have made it the granary of India. Cities such as Ludhiana, Jullandhar and Batala have become major industrial centres, making Punjab one of the leading industrial States of the country. This has been the result of the efforts of the people of Punjab and the entire nation is proud of each one of you.

Ladies and gentlemen,

However, it is not yet time to rest on one’s laurels. Punjab has some distance to go before it can say that it has achieved its developmental goals. There is no grinding poverty in the State but that is not enough. The growth in agriculture which we saw in the 60s and 70s, has slowed down. In agriculture, other states are reaching Punjab’s levels of productivity. And as far as industry is concerned, many other States have raced ahead Punjab. Therefore, it is essential that every citizen of Punjab renews his pledge to work hard to make this State the leading State of the country once again.

In the last five years, Chief Minister Amarinder Singh and Congress Government in Punjab have worked tirelessly and with vigor to take the State further on the road to progress. The Punjab Government has made
efforts to take agriculture in the state to new areas beyond paddy and wheat cultivation. Many industrial parks and SEZs have been set up to catalyze industrial growth. The conditions of cities in Punjab is improving rapidly and Amritsar and Ludhiana are competing with other cities to be counted among the best cities in the country. An SEZ is being built in Amritsar, Textile Parks have been sanctioned for Ludhiana and Barnala and an Industrial Park for Batala.

In order to strengthen the hands of Shri Amarinder Singh and his Government, the Central Government has been providing assistance on a large scale. New roads, new railway lines, new trains and new Airports are becoming operational all over the state. The Indian Railways have agreed to build eight more Rail Overbridges at Bhatinda, Malot, Abohar, Mansa, Mor Mandi and Lehragaga. On completion of these over bridges, traffic conditions at these locations will certainly improve. The railways have also decided to develop Amritsar, Jullandhar and Ludhiana railway stations into Stations with world class amenities. A Logistics Park is being planned by the railways near the railway freight corridor at Ludhiana. This Logistics Park will have a major transport centre and will enable Ludhiana to become the premier transport hub in Northern India. The Amritsar Airport is being modernized at a cost of Rs. 80 crores. As far as roads are concerned, the Central Government is doing work on almost 1000 Kms of national highways in the State through the NHAI. Among the important roads that are being improved are the roads from Delhi to Chandigarh, Ludhiana to Chandigarh, Panipat to Jullandhar, Chandigarh to Kiratpur, Amritsar to Wagah, Amritsar to Pathankot, Amritsar to Jullandhar and Ludhiana & Moga to Talwandi.

It is my earnest hope and desire that Amritsar once again regains its lost glory. I am confident that with the efforts of Shri Amarinder Singh and with the continued support of Government of India, Amritsar and whole of Punjab would certainly move in the direction of a glorious future.

I have come here today to hand over the historic Gobindgarh Fort to the people of Punjab. This fort has been in the custody of the Government of India for decades. Gobindgarh Fort has a special place in our hearts. It is closely linked to Maharaja Ranjit Singh. It went into the possession of the British more than one hundred and fifty years ago and since then, has been out of reach for the people of Punjab. Today, its doors have been thrown open to everyone and it now belongs to all of you. I am extremely happy that I have the privilege of handing it over to you. I am sure this Fort will become a major centre of attraction in Amritsar.
Ladies and Gentlemen

Since 1947, while saying one’s morning prayers (ardas) every morning, every Sikh has been expressing the wish and fond hope that they should once again have easy access to those religious places which are now in Pakistan. Our government has been working hard and making every possible effort to make this a reality. In the last two and a half years, we have improved our relations with Pakistan. It has been our sincere endeavour to establish an atmosphere of peace between our two countries so that both countries can live in harmony. As a result of our efforts, many bus services have started between the two countries, the benefits of which have accrued to the people of Punjab as well. Bus services continue between Amritsar and Lahore and Amritsar and Nankana Sahib. The movement of trucks between the two countries has also become simpler. This has greatly facilitated the easy movement of people and goods. Trade has increased and Amritsar has benefited. I am confident that if we continue on this path of peace, then Amritsar can once again regain its glory as a major centre of trade and commerce. I believe that this is possible and we will make it happen. This is not a dream, it can be a reality.

As I had said earlier, our government has been trying its best to ensure that we establish an atmosphere of peace with Pakistan and improve our relations. Last week, I had read about some new ideas and thoughts expressed from Pakistan¹. We welcome all ideas as they contribute to the ongoing thought process. If both sides approach issues with an open and friendly mind, and work together on resolving each of these, then it will be possible for us to resolve all pending issues through a dialogue process.

---

¹ The Prime Minister was presumably referring to the 4-point proposal made by Gen. Musharraf in an interview to an Indian TV telecast on December 5. President Musharraf proposed that “Pakistan is prepared to give up its claim on Kashmir, if India accepts a four-point proposal for resolving the dispute.” He was also quoted to have said: “if the four-point solution is agreed upon, Pakistan will give up on the UN resolutions and its long-standing demand for a plebiscite.” His four points were:

1. Kashmir will have the same borders but people will be allowed to move freely back and forth in the region
2. The region will have self-governance or autonomy, but not independence
3. Troops will be withdrawn from the region in a staggered manner
4. A joint supervision mechanism will be set up, with India, Pakistan and Kashmir represented. He also made it clear that Pakistan was against an independent Kashmir and his formula was not a first step towards that end.

Prime Minister earlier on December 16 was asked by journalists on board the flight bringing him back to New Delhi from Tokyo about the Musharraf proposals. He had then said: “I welcome the efforts whosoever put in to normalize relations between India and Pakistan. If anytime new ideas come, we welcome them and I would like to say that in the last two and a half years we have had very intensive dialogue with Pakistan.”
The destinies of our two nations are interlinked. We need to put the past behind us. We need to think about our collective destiny, a destiny where both neighbours can work jointly towards a better future for their citizens. If our minds are determined and focused on this goal, I am confident that this destiny can be realized.

I too have a vision regarding India and Pakistan. I earnestly hope that the relations between our two countries become so friendly and that we generate such an atmosphere of trust between each other that the two nations would be able to agree on a Treaty of Peace, Security and Friendship. I have spoken in the past about such a Treaty and I do so once again today from the same place. I am sure that we can overcome all hurdles in our path and realize such a Treaty. This will become the instrument for realizing our collective destiny and the basis for enduring peace and prosperity in the region.

Ladies and Gentlemen:

If the border areas of Punjab have to develop rapidly, then such a Treaty is essential. I am aware that the residents of border areas of Amritsar, Gurdaspur and Ferozepur have been facing a lot of difficulties because they live close to the international boundary. There are difficulties in cultivating their fields and prospects for industrial growth appear poor. If we are able to increase our trade and commercial relations with Pakistan, these deprived areas would certainly benefit a lot.

However, without waiting for that day, we have started work on many other initiatives. Last month, civilian flights began from Pathankot airport, increasing the connectivity of that area. We have started an industrial park project in Batala which will improve the industrial infrastructure there. In order to facilitate cultivation of farms in border areas, we have increased the duration for which farmers can cross the border fence to work their fields. They will now be able to work much longer than before along the entire 500 km. length of the border. As far as Amritsar is concerned, we have sanctioned a Rs 180 crore project under the Jawaharlal Nehru National Urban Renewal Mission for improving the basic facilities in the city. This is part of a larger City Development Plan which we will support. Amritsar will benefit greatly from this project and the living conditions in slums will improve substantially. Our government is 4-laning the road from Amritsar to Wagah through the NHAI. We will improve the facilities at Wagah and bring them to a level comparable to any international airport or port so that transit through Wagah becomes fast, convenient and easy. The foundation stones for some of these projects have been laid today. I believe that in a short
while, the journey from Amritsar to Wagah and the transit of people and goods through Wagah will become so easy that this road will once again become a major highway for trade and commerce.

In order to improve the basic facilities for people living in border areas, we have recently provided a package with an additional assistance of Rs 137 crores to the Punjab government. Under this, schools, dispensaries, hospitals, toilets and technical centres will be built in border districts. This will greatly benefit the residents of border districts. We have also agreed to build 500 kms. of rural roads in the border districts.

Ladies and Gentlemen:

The most enduring image of Punjab is that of hardworking, enterprising, prosperous farmers. They are the architects of our Green Revolution and have been instrumental in removing our foodgrain deficit. I am aware that in the last few years, farmers have faced some difficulty in carrying our agriculture. We have taken many measures to improve their conditions. We are providing loans to them at reduced interest rates. We are helping the state government to reduce the burden of debt on their shoulders. The farmers of Punjab have benefited from our efforts. The committee we have formed to look at ways of reducing the problem rural indebtedness is going to submit its report shortly and our government will soon be taking additional measures to reduce this burden. The farmers of Punjab also need new seeds and new technologies for improving their productivity. For this, we have provided Rs 100 crores to the Punjab Agricultural University so that they can modernize agriculture in Punjab and Punjab can play a leading role in the next Green Revolution that we need. I am confident that with the efforts of the government of Shri Amarinder Singh and with your hard work, the farmers of Punjab can look forward to a bright future with hope and confidence.

Ladies and Gentlemen:

Today, I have also laid the Foundation Stone of the Goindwal Power project. If Punjab has to grow rapidly, we need to pay greater attention to its industrialization. And electricity is crucial for this to happen. This is a major thermal power project in Punjab after a long gap. I compliment the Government of Punjab for this initiative. However, there is much still to be done. Punjab had taken a leading role in many industrial sectors such as bicycles, sports goods, hosiery, etc. It needs to once again show its dynamism and take the lead role in new areas such as electronics, automobiles, IT and biotechnology. The state government has worked quite hard in this direction and the results are slowly becoming visible. Mohali is
certainly becoming a centre for some of these new sectors. I believe that Jalandhar, Mohali, Ludhiana and Amritsar will soon be counted once again among the leading industrial centers of the country. The Central Government will continue to help the State Government in taking Punjab forward in this direction.

Ladies and Gentlemen:

Today is day of pride for the people of Punjab. The historic fort of Gobindgarh has been restored to the citizens of this great state. Work has also been begun on many new development initiatives. If we continue on the path we have begun and we strengthen the hands of Shri Amarinder Singh, I am confident that in a few years Punjab will once again become the premier state of the country in all respects. Jai Hind.

187. Joint Press Statement issued at the end of Technical level talks between India and Pakistan on Sir Creek.

Technical level talks between India and Pakistan were held in Rawalpindi on 22-23 December 2006 to decide the coordinates for a joint survey of the Sir Creek and adjoining areas without prejudice to the positions of the two countries, as well as to simultaneously hold discussions on the Maritime Boundary. The Pakistani delegation was led by Maj Gen Jamil Ur Rahman Afridi, Surveyor General of Pakistan while the Indian side was led by Rear Admiral B.R. Rao, Chief Hydrographer.

Discussions were held in cordial atmosphere. The two sides worked out the technical details of the joint survey in an amicable manner. It was agreed to commence the joint survey from 15th January 2007. The two sides also held useful discussions on various options to delimit the maritime boundary. It was agreed to verify the outermost points of coastlines of both countries during the joint survey with regard to the equidistance method.

The leader of the Indian delegation also called on Lt. Gen (Retd.) Tariq Waseem Ghazi, Secretary of Defence on 23 December 2006.

It may be recalled that the first joint survey of the 96-km long creek was held in January 2006.
SRI LANKA

188. Press Release of the Ministry of External Affairs on Erik Solheim’s meeting with Foreign Secretary.

New Delhi, January 27, 2006.

The Norwegian Minister for International Development and chief facilitator for the Sri Lankan Peace Process, Mr. Erik Solheim, met Foreign Secretary Mr. Shyam Saran on January 27, 2006 to brief him on his just concluded visit to Sri Lanka.

The Government of India reiterates its long-standing view in favour of a negotiated political settlement that meets the just aspirations of all communities and which respects the unity, sovereignty and territorial integrity of Sri Lanka1.

---

1. Erik Solheim after the meeting with Foreign Secretary told journalists that India was “very pleased” by the decision of Sri Lankan Government and the LTTE to hold talks to implement the ceasefire agreement. He described the meeting with F.S as “excellent” and said India was fully supportive of the latest developments.

New Delhi, March 1, 2006.

Government of India welcomes the holding of talks between the Government of Sri Lanka and the LTTE in Geneva on 22/23 February 2006. We are also happy to note that both sides have renewed their commitment to respecting and upholding the Ceasefire Agreement.

Government of India urges both sides to continue the political dialogue and in this regard, welcome the announcement that the next round of talks will take place in April 2006.
190. **Media Briefing by Official Spokesperson on the visit of Norwegian Minister for International Development Erik Solheim.**

**New Delhi, April 7, 2006.**

- Norwegian Minister for International Development, Mr. Erik Solheim, accompanied by the new Special Envoy for the Sri Lankan Peace Process, Ambassador Jon Hanssen Bauer, met Foreign Secretary\(^1\) on 7th April 2006. The Norwegian Minister briefed Foreign Secretary on the current status of the Peace Process, as well as prospects for the next round of talks scheduled to be held in Geneva in April between the Government of Sri Lanka and the LTTE. Mr. Erik Solheim was visiting Delhi after a visit to Sri Lanka, where he had talks with the Sri Lankan President, H.E. Mr. Mahinda Rajapaksa and senior officials associated with the Peace Process.

- The above visit may be seen as part of the ongoing exchange of views between the two countries in regard to the Peace Process in Sri Lanka. Both sides endorsed the need for maintenance of the ceasefire, and for a complete cessation of violence so that the climate for dialogue is further strengthened.

- Foreign Secretary took the opportunity to reiterate India’s well known position regarding the need for a politically negotiated and peaceful settlement of the ethnic problem, which is acceptable to all sections of Sri Lanka’s plural society, and which safeguards the unity, sovereignty and territorial integrity of Sri Lanka.

---

\(^1\) As a result of the meetings between New Delhi and the Norwegians from time to time there was some misunderstanding created since the Norwegians apparently claimed that they had passed on some message from New Delhi to the LTTE. When journalists questioned New Delhi how it was possible particularly when LTTE was a banned organization as far as India was concerned, the Spokesperson of the Ministry of External Affairs explaining the position on May 29 said: “As you know, for several years we have been sharing our assessment with the Norwegians on developments in Sri Lanka and the peace process. This does not amount to sending message to the LTTE or any other party.” Referring to the recent visit of Erik Solheim to New Delhi, the Spokesperson said Norway was continuing its efforts to resume the dialogue process in Sri Lanka. Indian officials conveyed to Solheim that India wanted a peaceful negotiated settlement to the ethnic problem in Sri Lanka, one which safeguarded the unity and sovereignty of the country.
191. Press release of the Ministry of External Affairs on Government of India’s deep concern at escalation in violence in Eastern part of Sri Lanka.

New Delhi, April 24, 2006.

The Government of India is deeply concerned at the recent escalation in violence in the Eastern part of Sri Lanka which has resulted in the ceasefire coming under serious strain. The Government of Sri Lanka has conveyed to us its policy of restraint and its intention to restore normalcy in the affected areas. We welcome this and call upon the parties concerned to scrupulously adhere to the letter and spirit of the Ceasefire Agreement. We take this opportunity to express our conviction that violence is not the answer to any problem and that political dialogue is the only way to resolve outstanding issues. We hope that the parties make every effort with a view to commencing talks at the earliest and taking the stalled peace process forward.

---

1. Violence had been troubling the island for some time and resulting in many deaths on both the sides and a large displacement of Tamils particularly. East was the worst sufferer in this escalation and Trincomalee bore the brunt of it. The Government of India was seriously concerned at this unfortunate situation. When large scale violence erupted in Trincomalee since April 7 resulting in the death of 15 Tamils in Claymore mine attacks for which LTTE was blamed and then there was a bomb blast on 12 April also linked to the LTTE which left several people dead and injured and sparked attacks on Tamil civilians and property, people in India were greatly agitated. Mahinda Rajapakse, the President telephoned Prime Minister Dr. Manmohan Singh to assure him that Colombo was deeply concerned and was taking necessary steps to bring the situation back to normal. Prime Minister’s main talking point was the situation in Trincomalee and offered his condolences over the death of soldiers and civilians. The Prime Minister besides expressing his concern at the deteriorating situation urged the President to take necessary measures to bring the situation under control and voiced support to the Norway brokered peace process that had now come under unprecedented strain.
192. **Press Release of the Ministry of External Affairs on Defence Minister speaking to Sri Lankan President.**

**New Delhi, April 25, 2006.**

Raksha Mantri spoke to Sri Lankan President Mahinda Rajapaksa and conveyed India’s shock at the suicide bombing incident in Colombo in which the Sri Lankan Army Commander was seriously injured and 5 persons were killed¹.

Raksha Mantri strongly condemned this brazen act of terrorism. He reiterated India’s conviction that violence is not the answer to any problem and that political dialogue is the only way to resolve outstanding issues. He expressed India’s solidarity with the Government and people of Sri Lanka in this difficult hour.

The Sri Lankan President appreciated India’s gesture and thanked India for the support and solidarity shown.

---

¹ After the bomb attack on the Army chief on April 24 by suspected LTTE cadres India had condemned the violence in general and this incident in particular. The Co-chairs of the peace process too expressed grave concern about further escalation of violence and also called on the LTTE to cease all suicide attacks and other forms of violence. “We condemn absolutely the attempted assassination of Lt. Gen. Sarath Fonseka, head of the Sri Lanka Army. We send the condolences to the families of the person who lost their lives in the attack and call on the LTTE to cease all suicide attacks and other forms of violence,” the statement from the Co-chairs said. President Rajapaksa said: “I emphasise and caution that one should avoid mistaking our desire for peace and our responsibility to achieve it as a government weakness.” On April 27 the Sri Lanka situation came up for review at the meeting of the Cabinet Committee on Security on return of the Prime Minister from his visit to Germany. The official sources were quoted by the media to say that the single message that India had been sending to Sri Lanka was not to escalate the violence any further. The Indian coast guards and the Indian Navy stepped up patrols on the Palk Straits and intensified their communication with the Sri Lankan Navy to monitor LTTE movements. India was too concerned at the possible influx of Tamil refugees from Sri Lanka in Tamilnadu. It may be recalled that New Delhi had been concerned about the developments in Sri Lanka right from the beginning of April. On 2nd April India appealed for “consensus” among Sri Lanka’s two main political parties to take the country’s wobbling peace process forward. The idea emerged as Sri Lanka’s former Prime Minister and leader of the opposition Party Ranil Wickremesinghe met Prime Minister Manmohan Singh in New Delhi on April 2 and held detailed discussions with the Foreign Secretary and National Security Advisor MK Narayanan.
193. Briefing Points by Official Spokesperson on Sri Lankan Foreign Minister’s call on Prime Minister Dr. Manmohan Singh.

New Delhi, May 8, 2006.

- Sri Lanka’s Foreign Minister Mr. Mangala Samaraweera called on Prime Minister Dr. Manmohan Singh and briefed him on the current situation in Sri Lanka and the peace process. He expressed the determination of Sri Lankan Government to maintain the ceasefire and to hold talks with Norwegian facilitation towards that end.

- They also reviewed CEPA negotiations.

- Prime Minister expressed India’s interest in the continued stability and prosperity of Sri Lanka.

1. When the Lankan Foreign Minister met Defence Minister Pranab Mukherjee the pending question of defence cooperation was an obvious issue for consideration. After the meeting Journalists asked Defence Minister about the Defence Pact and he said: “You know instead of calling it as such the pact, we have defence cooperation in multifarious areas including the supply of equipments, training, for example Sri Lankan officers is the highest user of all the technical opportunities which we have in different defence institutions starting from NDA. I am really appreciative that whatever number of scholarships given to them is fully utilized, hundred percent utilized and in all areas, starting from ITEC, to NDC and all this. This is one area. Secondly, in respect of equipment, also we are providing as and when requested. Constant interactions between the service officers of the two countries are also taking place………….”

194. Media Briefing by Official Spokesperson on the call by Minister of State E. Ahamed on Sri Lankan Foreign Minister.

New Delhi, May 9, 2006.

- MOS Mr. E. Ahamed called on visiting Foreign Minister of Sri Lanka Mr. Mangala Samaraweera today. He also hosted a lunch in honour of the visiting dignitary. Foreign Secretary Mr. Shyam Saran was also present.

- The two sides discussed various aspects of India-Sri Lanka relations. The Sri Lankan Foreign Minister briefed the Indian side on the latest
developments in the peace process. He also expressed readiness of the Sri Lankan Government to participate in the second round of talks at the earliest date possible.

- The discussions also covered other aspects of bilateral relations including the possibilities of early conclusion of the Comprehensive Economic Partnership Agreement as well as the progress on the grant of concessional credits to Sri Lanka for a number of infrastructural projects in Sri Lanka. Other programmes ongoing between the two countries were also discussed.

- Mr. Mangala Samaraweera extended an invitation to MOS Mr. E. Ahamed to visit Sri Lanka and this was accepted in principle¹.

¹ Sri Lanka's Foreign Minister Mangala Samaraweera had a day earlier called on Prime Minister Dr. Manmohan Singh and briefed him on the current situation in Sri Lanka and the peace process. He expressed the determination of Sri Lankan Government to maintain the ceasefire and to hold talks with Norwegian facilitation towards that end. They also took the opportunity to review the progress in negotiations for the CEPA. The Prime Minister expressed India's interest in the continued stability and prosperity of Sri Lanka. The Lankan Foreign Minister later told the Hindu that he “briefed the Prime Minister about the current situation in Sri Lanka.” When asked whether the situation would spiral towards total war or a salvage job was possible, he said he was “cautiously optimistic”. He said India could give leadership to the international community in telling the LTTE to see reason and return to the negotiating table. He said the EU and the US were too concerned about the situation in Sri Lanka. He said defence cooperation too figured in the discussions and the two were hopeful of concluding negotiations on a Comprehensive Economic Cooperation Partnership Agreement by September. The visiting Minister too had a separate meeting with the Minister of State Anand Sharma when the two took stock of the excellent economic and political bilateral relations. Mr. Mangala Samaraweera also sought India's support for the candidature of Mr. Jayanta Dhanapala for the post of the UN Secretary General. India took note of the request. Two days later (on May 11) the Japanese Special Envoy for Sri Lanka Mr. Yasushi Akashi visited New Delhi to brief India on his talks in Colombo both with the Sri Lankan government representatives and the LTTE. In his meeting with the Foreign Secretary he shared his assessment of the current state of peace process in Sri Lanka. The discussions centered on how countries that are friendly to Sri Lanka could help in a way that the ceasefire there is strengthened and the process of dialogue between the parties could commence at the earliest. Mr. Akashi also informed Foreign Secretary about the forthcoming meeting of the Co-Chairs in Tokyo on 30 May 2006 and said that they would welcome any contribution by India in this regard. (The other three Co-chairs are the United States, the European Union and Norway.)
195. Press Release of the Ministry of External Affairs on Sri Lankan Foreign Minister Mangala Samaraveera’s call on Prime Minister Dr. Manmohan Singh.

New Delhi, June 22, 2006.

The Foreign Minister of Sri Lanka, Mr. Mangala Samaraveera, paid a one-day visit to New Delhi enroute from Oslo, Norway to Sri Lanka.

He called on Prime Minister, Dr. Manmohan Singh, in the evening and briefed him on the latest developments pertaining to the situation in Sri Lanka.

Prime Minister conveyed to the Sri Lankan Foreign Minister, India’s abiding commitment to the unity, sovereignty and territorial integrity of Sri Lanka, even while the legitimate aspirations of all sections of Sri Lankan society needed to be addressed expeditiously. He emphasized the need to make all possible efforts to strengthen the ceasefire between the Sri Lankan government and the LTTE and to work towards a devolution package that could command consensus among the major political parties and restore ethnic harmony.

The Sri Lankan FM conveyed to Prime Minister that for his government, war was not an option and that it remained committed to a political solution to the ethnic issue. The government of Sri Lanka had invited the LTTE to enter into a dialogue to strengthen the ceasefire. At the same time, the all-party conference in Sri Lanka had decided to set up an Advisory Committee to look into different variants of a devolution package.

The Sri Lankan FM also briefed the Prime Minister on the security situation in the country. The two sides have agreed to remain in close touch with regard to developments in Sri Lanka.
196. **Statement by Official Spokesperson condemning the terrorist incident outside of Colombo.**

**New Delhi, June 26, 2006.**

**Official Spokesperson**: Good evening. The Government of India unreservedly condemns the terrorist bombing incident outside Colombo, Sri Lanka today in which the Deputy Chief of Staff of the Sri Lankan Army, Major General Parami Kulathunga was tragically killed, along with other defence personnel. Several innocent civilians have been seriously injured.

This incident is the latest in a series of recent terrorist attacks which are aimed at undermining the ceasefire and vitiate the environment for a political dialogue.

The Government of India extends its sincere condolences to the Government of Sri Lanka and to the members of the bereaved families. India is determined to stand by the people of Sri Lanka in our common struggle against terrorism, of which both our countries are victims.

It is our view that political processes must be activated through sincere dialogue to arrive at a settlement which takes into account the aspirations of all the sections of the Sri Lankan society, while upholding the unity, sovereignty and territorial integrity of Sri Lanka.

We welcome the efforts being made by the Government of Sri Lanka to evolve a political consensus in this regard and stand ready to share our own constitutional experience to contribute to this process.
National Security Advisor MK Narayanan made it clear in Chennai on August 9 that the Government of India would not directly intervene in the peace process in Sri Lanka. “But we are using all persuasion”. Interacting with reporters after his meeting with Tamilnadu Chief Minister, Narayanan said India was “an important factor in the thinking of the Sri Lankan government”. As the island government had also been sensitive to India’s efforts, it agreed to go ahead with devolution of powers to Tamils. But “the Sri Lankan Government had problems dealing with the LTTE,” he said. India’s persuasive efforts had become important and different agencies including Norway, and the peace-monitoring mission were talking to it, he said. Mr. Narayanan said he had come to Chennai as the Prime Minister’s special envoy to brief the Chief Minister on discussions between India and Sri Lanka during the visit of Sri Lankan Foreign Minister Managala Samarveera to New Delhi.

During the discussions India explained its position on ensuring safety and security of island Tamils and taking steps for devolution of powers, besides stressing the need for making a distinction between the LTTE and Tamils of that country. Asked if New Delhi had any second thoughts on banning the LTTE in the light of Karunanidhi’s remarks that the issue was “debatable”, he said, “I don’t think the Centre has any doubt on the ban on the LTTE. We regard the LTTE as a dangerous organization and hence the ban on it.” To a query, Mr. Narayanan said “I don’t think the LTTE will plan a threat in Tamilnadu. Of course, they would like to have the support of India to some extent.” He said he had spoken to the Chief Minister of “certain threats that had emanated.” The Chief Secretary of the State who was present at the meeting would take the necessary follow up action, he said. “There is complete unanimity on the issue of foreign policy between the State government and the Centre,” he said when asked if the Chief Minister asked for a change in the policy with particular reference to Sri Lanka.
198. In response to a question regarding the statement made by the Sri Lankan Minister of Tourism.

New Delhi, September 7, 2006.

In response to a question regarding the statement made by the Sri Lankan Minister of Tourism Mr. Anura Bandaranaike in Sri Lankan Parliament alleging that our High Commissioner in Colombo Mrs. Nirupama Rao is interfering1 in the internal affairs of Sri Lanka, the Official Spokesperson said:

"It is not the policy of Government of India and its representative abroad to interfere in the internal affairs of any country. Our High Commissioner in Colombo Mrs. Nirupama Rao is a senior diplomat and has conducted herself in accordance with the highest professional standards. Her contribution to strengthen Indo-Sri Lankan bilateral relations is well appreciated by the host Government."

1. Colombo media quoted Anura Bandaranaike to having said in Parliament that “the pretty Mrs. Rao should look after her Embassy and we will look after our own internal affairs.” He was also quoted as saying that both his parents who were prime ministers and the sister Chandrika Kumaratunga who retired as President in 2005 maintained good relations with India and that Mrs. Rao should not “meddle” in Sri Lanka. In a brief statement Sri Lanka’s Foreign Minister Mangala Samaraweera seeking to distance the government from Bandaranaike’s statement said: “The Government of Sri Lanka is also deeply appreciative of the proactive role the High Commissioner Nirupama Rao in further enhancing Indo-Sri Lanka relations upon taking her appointment of Sri Lanka. Sine the assumption of office by President Mahinda Rajapaksa in the face of many challenges, India continued to support Sri Lanka’s efforts to achieve peace and security while preserving the country’s territorial integrity and this should be appreciated by all right minded Sri Lankans.”

199. Briefing Points by Official Spokesperson on the visit of a delegation of All Party Representatives Committee (APRC) from Sri Lanka.

New Delhi, October 26, 2006.

- A 15-member delegation from Sri Lanka comprising All Party Representatives Committee (APRC) is visiting India from October 26 – October 29, 2006.

- The President of Sri Lanka has set up the All Party Representatives Committee and tasked it with finding the basis for a lasting political
settlement to the ethnic problem in Sri Lanka. With this in mind, the APRC is looking at various models of devolution.

- It is against this background that the APRC is visiting India and will be briefed by our Ministry of Law as well as Ministry of Home Affairs on the basic features of the Indian constitution, Centre-State relations and the working of grassroots institutions such as the panchayat. After receiving briefing in Delhi from the relevant Ministries and experts, the APRC is expected to travel to both Karnataka and Kerala to look at the functioning of the grassroots institutions of our democracy.

- The visit is evidence of our willingness to assist Sri Lanka in finding a negotiated, political settlement to the ethnic problem which would satisfy all sections of Sri Lankan society.

1. There was sharp deterioration in the ethnic situation in Sri Lanka which had its impact in Tamilnadu too. The Chief Minister of the State was deeply concerned and a delegation on his behalf led by Shipping and Transport Minister T. R. Balu met the Prime Minister in connection with the deteriorating law and order situation and requested him for “immediate” and “appropriate” intervention to put an end to such unprovoked and indiscriminate offensive of the Sri Lanka army against the Tamils. He drew Prime Minister’s attention to the series of ghastly killings and indiscriminate bombings by the Sri Lanka security forces. Later Mr. Balu told the media that the Prime Minister was “equally concerned” over the human tragedy and promised to discuss the matter with the External Affairs Minister. The Tamilnadu Chief Minister Karunanidhi next day (November 11) addressed a press conference and called upon the centre to think of an appropriate solution to end the war in the island. He did not think that sending a parliamentary committee to Sri Lanka to find facts would serve any useful purpose. Meanwhile in a Memorandum submitted to the Prime Minister on November 14 the All India Bar Association expressed serious concern over continuing hostilities in Sri Lanka. The Memorandum said the Sri Lankan Government repeatedly violated international norms and United Nations guidelines by “resorting to large-scale killings. It sought intervention of Prime Minister to stop ethnic killings in the island. The Bar Council said: “We call upon the international community to voice their strong protest to ensure that the ethnic conflict comes to an end. It must be noted that the present situation resembles what was witnessed during 1983 when such mass killings took place. Thousands of refugees have started coming to India leaving their homes and property in the island. In this precarious situation it is the responsibility of the Indian Government to make efforts to stop the ethnic killings immediately.” On November 16 responding to the Bar’s Memorandum, Sri Lanka High Commissioner in New Delhi Romesh Jaysinghe cautioned about the LTTE spreading misinformation globally to hide the reality that the violence in Sri Lanka was solely instigated by the state. He met the Chairman of All India Bar Council Adish Aggarwala and gave him a note on the ground realities on the island. The note said: “Sri Lanka continues to suffer from the terrorism perpetrated by the LTTE. This organization has due to its activities now been identified as terrorist in nature by the United States, the United Kingdom, the European Union, India and Canada. In this situation, the Government and the people of Sri Lanka have no option but to resolutely resist the terror of the LTTE. At the same time the Government of Sri Lanka is firmly committed to resolving the legitimate grievances of the Tamil Community.” The Hindu quoted Mr. Aggarwala to say that the High Commissioner told the Bar Council representing the legal fraternity not to fall prey to the LTTE misinformation and he told the High Commissioner that the Council was not supporting the LTTE.

The Indian Foreign Secretary Shri Shivshankar Menon visited Sri Lanka from November 22 – 24, 2006. This is the first visit to Sri Lanka undertaken by Shri Shivshankar Menon since assuming duties as the Foreign Secretary of India.

During his visit the Indian Foreign Secretary called on H.E. the President, Hon. Prime Minister, Hon. Minister of Foreign Affairs and on the Leader of Opposition. He held extensive discussions with Acting Secretary, Foreign Affairs and senior government officials on a range of issues relating to bilateral cooperation between the two countries.

Both parties noted in particular the satisfactory growth in the volume of trade since the signing of the Free Trade Agreement, which has now reached the US$ 2 billion mark. The need to conclude the ongoing CEPA discussions at the earliest and in a mutually beneficial manner was also underscored.

The visit underlined the warm and friendly relations between Sri Lanka and India and the need to continue the close cooperation that currently exists between the two countries1.

---

1. There has been no official word about the nature of talks held by the Foreign Secretary in Colombo, besides the trade as the Web site of the Indian High Commission said. But media reports stated that during his meeting with the Sri Lanka President, Menon said India looked forward to an early “comprehensive political settlement” of the ethnic issue, which must take into account the aspirations of all sections of the population particularly the Tamils. A report on the visit in the daily Hindu said:

“The free and frank exchange of views, Mr. Menon at his meeting with the interlocutors is reported to have articulated the Indian concerns, particularly over the death of innocent citizens and the humanitarian crisis caused by the continued fighting. The visit assumed added importance after Tamilnadu Chief Minister M. Karunanidhi wrote to the Prime Minister on November 9 raising concerns over the plight of the innocent citizens caught in the conflict. Dr. Singh replied to him last week saying that India would raise the issue with Sri Lanka. Mr. Menon is scheduled to return to New Delhi via Chennai. Indications are he will apprise Mr. Karunanidhi of the outcome of his visit. Mr. Menon told the Sri Lankan authorities that India was ready to provide humanitarian assistance to the internally displaced as well as people of Jaffna affected by the closure of A.9 highway. In his letter to Mr. Karunanidhi, the Prime Minister said the Centre was dispatching essential commodities to Sri Lanka taking into consideration the situation in the northern and...”
eastern parts. He said, 5,200 tonnes of rice, 1,500 tonnes of sugar and 300 tonnes of milk powder would be sent. India's interest in a solution to the ethnic problem that protected the Tamil citizens within the framework of a united and federal Sri Lanka was "deep and continuous." At his meeting with Mr. Menon Mr. Rajapaksa gave details of the work being done by the All Parties Conference and the multiethnic group of experts to provide a framework for resolution of the ethnic problem. A Sri Lanka Foreign Office statement said the peace process, the negotiations on the Comprehensive Economic Partnership Agreement, the proposed Indian investment in a coal power plant in Trincomalee and the prospects for cooperation in the health and cultural spheres figured at the meeting." Another report in the Hindu on the same day said that the National Security Advisor MK Narayanan was scheduled to arrive in Chennai to call on the Tamilnadu Chief Minister M. Karunanidhi and the Foreign Secretary who would be back from Colombo after his meeting there would join him in the meeting with the Chief Minister.

201. Briefing Points by Official Spokesperson on the visit of President of Sri Lanka.

New Delhi, November 28, 2006.

Shri Pranab Mukherjee, External Affairs Minister called on Sri Lankan President Mr. Mahinda Rajapakse and held detailed discussions on India–Sri Lanka bilateral as well as the peace process in Sri Lanka.

EAM conveyed the hope that there would be early progress in the peace process so that all ethnic communities in Sri Lanka can live harmoniously and are able to achieve their aspirations.

Thereafter, EAM held delegation level talks with Sri Lankan Foreign Minister Mr. Mangala Samaraweera on all aspects of bilateral relations. During these talks, several on-going economic projects between the two countries were also reviewed1.

---

1. On the eve of his visit to India, the Sri Lanka President floated the idea of joint patrolling of the seas by Indian and Sri Lankan navies. At a three-hour interaction with a group of journalists in Colombo he said the LTTE was emerging as a potent sea force, posing a serious threat to not only Sri Lanka but also to India and the world. "We believe joint patrolling would help check arms and smuggling and drug trafficking. In the last few weeks, there have been instances of the LTTE seizing trawlers of the Indian fishermen for its illegal activities. It was time we realized the Sea Tigers' threat," the President said. He further added: "In my interaction with the Indian leadership I would like to emphasise, that the LTTE does not represent Tamils. We would like some of the leaders of Tamilnadu to understand that all Tamils are not Tigers." Lauding India's role in resolving the ethnic conflict, he said: "We want Indian support economically and in furthering the
peace process without whose support we can’t go ahead. I am grateful to India. They are not only our neighbours, but our best friends too. They have offered some 7,000 tonnes of food and we are working on arranging supplies.” While in India, the President was the chief guest at the Asian Mayors’ Conference in Dehra Dun on November 26. Besides meeting Indian leaders, he attended some private functions too. Media reports quoted official sources to say that India did not accept Sri Lankan proposal for joint patrolling of seas, but India was willing to supply “non-lethal” logistical items to Sri Lanka military. The official sources claimed that the Indian ships were already patrolling its territorial waters and the idea of “joint patrolling” was not on the cards. According to the same official sources quoted by the media, the External Affairs Minister conveyed to the Sri Lankan President New Delhi’s concerns at the continuing civilian deaths in Sri Lanka and hoped that a way would be found to resume peace process. There was no military solution to the conflict between the government and the LTTE, the External Affairs Minister reportedly told the visiting President. India showed its willingness to send humanitarian supplies to deal with the humanitarian situation in the north and the east. The Sri Lanka President too had a meeting with the Prime Minister and later told journalists that “we had straight forward talks one –to-one.” Describing his talks with Dr. Manmohan Singh very cordial, the President told the Hindu that “I had the chance of explaining my position and the situation there.” “The Prime Minister also made his comments and (expressed) his concerns about the humanitarian issues in Sri Lanka, and the refugees that had come here (in India),” Rajapaksa said. India had been concerned with the developments in Sri Lanka and their impact on the public opinion in Tamilnadu for quite sometime. The Tamil leaders from the State had been drawing attention of New Delhi to the violence and the suffering of the Tamils. Vaiko, the leader of the MDMK had written to the Prime Minister on the subject and a delegation of the party had called on him on August 30 when the Prime Minister assured that India would not extend any military aid to Sri Lanka. Vaiko along with his party leaders also observed a day-long fast on November 27 coinciding with the visit of Sri Lankan President to protest against the visit and to urge the Union Government not to have any defence pact with the island nation. A day earlier on the eve of the visit he had called on the External Affairs Minister and opposed any defence pact or military cooperation with Sri Lanka. Soon after the present visit of the Sri Lankan President Chief Minister of Tamilnadu fearing that New Delhi might provide weapons to Sri Lanka with their possible use against the Tamils, wrote to the Chairperson of the United Progressive Alliance (an alliance of which his party DMK is a partner at the Centre) against any possible supply of military aid to the Island. The Chairperson, Mrs. Sonia Gandhi replied to the two letters of the Chief Minister on December 14, assuring him that as per the policy of the Central Government, New Delhi would not provide Colombo with arms or materials that could be used against the civilian population. She said in her letter that it had been the Congress stand, of which she is the President, that nothing should be done that would affect the lives and well-being of the Tamils of Sri Lanka “whose welfare remains a matter of utmost concern”. Regarding the large scale violence, she said that “we have consistently pointed out that there is no justification for such violence and that the killings of innocent people, especially women and children, is not acceptable.” She added that the UPA government had been taking up the issue with the Sri Lankan Government.
INDIA’S FOREIGN RELATIONS - 2006
SECTION - V
(iii) SOUTH-EAST, EAST ASIA AND PACIFIC
AUSTRALIA

202. Joint Press Conference by Prime Minister Dr. Manmohan Singh and Australian Prime Minister John Howard.

New Delhi, March 6, 2006.

Dr. Manmohan Singh: Mr. Prime Minister, ladies and gentlemen of the press.

It’s a matter of great pleasure to welcome Prime Minister John Howard and his delegation to our country. This is Prime Minister Howard’s second visit to India and he has just completed ten years as Prime Minister and I congratulate him on that important milestone.

Prime Minister John Howard and I have completed a very cordial and productive discussion today. We exchanged views on a number of important bilateral and regional issues. Our relations with Australia are developing well in diverse areas, including trade in goods and services, investment, defence, security, education, science and technology, environment, civil aviation and sports. We also discussed ways of rapidly expanding cooperation in counter terrorism, which is a subject of common concern.

Today we have signed six agreements¹ including a Trade and Economic Framework, an air services agreement, MOUs on cooperation in defence, customs and biotechnology and a letter of intent on the establishment of a strategic research fund. We look forward to the further

¹ The details of the agreements/MOUs signed are as under:

a. Trade and Economic Framework Agreement
   Indian Signatory: Mr. S.N. Menon, Commerce Secretary
   Australian Signatory: Mr. John McCarthy, High Commissioner for Australia

b. Agreement on Air Services
   Indian Signatory: Mr. Ajay Prasad, Secretary, Civil Aviation
   Australian Signatory: Mr. John McCarthy, High Commissioner for Australia

c. MOU on Defence Cooperation
   Indian Signatory: Mr. Shekhar Dutt, Defence Secretary
   Australian Signatory: Mr. John McCarthy, High Commissioner for Australia

d. MOU between Central Board of Excise and Customs, Government of India and Australian Customs Services of the Commonwealth of Australia
   Indian Signatory: Mr. M. Jayaraman, Chairman, Central Board of Excise and Customs
   Australian Signatory: Mr. John McCarthy, High Commissioner for Australia
The emerging regional architecture is an important focus of both countries and we have committed to working together to strengthen peace and cooperation in the Asia-Pacific region. Relations between Australia and India are evolving into a strong partnership and India is committed to working with Australia to upgrade our bilateral relations in all areas. Nay I now invite you Mr. Prime Minister to make some comments, if you wish, before we invite questions.

Mr. John Howard: Thank you very much Prime Minister. I am delighted to be back in India and I thank you very warmly for the hospitality that you have extended to me, to my wife and to the members of my party. By any measure this is a very significant moment in the history of India. There is little doubt that the world is seeking to interact with, and be part of, the extraordinary economic growth and achievements of India in recent years. The country’s economic changes of the early 90s, which you as a former Finance Minister were largely responsible, have begun to secure for India a growing place in the world’s economy and in so many different ways, Australia wishes to be part of that. Our trade has grown very rapidly. Our people-to-people links have always been strong. They have grown at pace in recent years and I remarked to you earlier that it’s been the rate of growth of those links, tourism, student numbers which have been very, very impressive. I especially welcome the comments you made about counter-terrorism. We both have an interest in fighting terrorism in our part of the world. Terrorism is a common enemy of all democracies and on that note, can I express my continuing admiration for the strength of democracy in India. I share the view that all people want to taste democracy. India has practiced democracy since gaining her independence in 1947 and has been an example through difficult times and easier times to the rest of Asia and many other countries around the world. It’s been a great example of democracy. The energy needs of India of course are known to Australia and they are matters that we discussed. Australia has had a long standing and

e. MOU on Biotechnology
   Indian Signatory: Dr. M.K. Bhan, Secretary, Department of Biotechnology
   Australian Signatory: Mr. John McCarthy, High Commissioner for Australia

f. Letter of Intent on India-Australia Strategic Research Fund
   Indian Signatory: Prof. V.S. Ramamurthy, Secretary, Department of Science and Technology
   Australian Signatory: Mr. John McCarthy, High Commissioner for Australia
very strong relationship in energy exports to many countries in the region and subject to the policies of my Government we would want to continue and to expand that process. Mr. Prime Minister, can I conclude by saying that there is so much that our two countries naturally have in common, for a combination of reasons, in the past the potential has not been fully liberated. I have the feeling that the potential between our two countries is now being freed of earlier constraints and I am very hopeful and indeed I am personally very committed to ensuring that association grows very much in the years ahead. Thank you.

**Question (Greg Turnbull, Ten Network):** My question is to both Prime Ministers on the issue of uranium sales. Prime Minister Singh, Mr. Howard has made it clear that he has no current intention to change the long-standing policy of Australia to refuse to supply uranium to countries which did not sign the Non-Proliferation Treaty. What arguments can you put why Australia should make an exception and supply uranium to India? And Mr. Howard, on what conditions or terms could you see Australia could supply uranium to India, short of India signing the NPT?

**Dr. Manmohan Singh:** India may not be a signatory to the NPT but we abide by most of the disciplines mentioned in that treaty. We have an impeccable record of not contributing to any unauthorised proliferation of sensitive nuclear technologies. We’ve also committed ourselves to a moratorium on further tests, and therefore I feel the world community must take note of India’s impeccable credentials of not having contributed to proliferations in making up its mind about cooperation with our country.

**Mr. John Howard:** Mr. Turnbull, it is true that we’ve had a policy for a long time of only exporting uranium to countries that adhere to the nuclear Non-Proliferation Treaty and you’re right Mr. Downer¹ and I both said there’s no current intention of changing that policy. So far as the agreement between the United States and India is concerned, it is a very significant agreement, and we look at it positively. In particular, it brings within the

---

¹ Speaking to journalists separately on March 6, Prime Minister Dr. Manmohan Singh said “We would very much like Australia to sell uranium to India.” In an interview to an Australian newspaper Dr. Manmohan Singh said: “I hope Australia will be an important partner in this. We are short of Uranium and our needs will increase in the years to come. I very much hope that Australia as a member of the Nuclear Suppliers’ Group would endorse what I and President Bush have worked out. This is an arrangement, which helps the cause of nuclear non-proliferation. India has an impeccable record of not entering into any unauthorized arms proliferation.”

In Canberra in an interview the Australian Foreign Minister Dower said Australia would
reach of international inspections, the civilian nuclear capacity of India and that’s a very important development and it would be very foolish to ignore it. It also means that India sees the need to interact on these issues with other countries. I think that is also a very important development and we are anxious to obtain more information about how the processes under that agreement would work and one of the things that the Prime Minister and I have agreed is that officials from the two countries will be in touch with each other so that we might better understand some aspects of the agreement that’s been concluded between the United States and India.

Question (Sambuddha, DD News): The US-India deal, does it give India the status of a de facto nuclear power and do you agree with President Bush in cutting this deal?

Mr. John Howard: Well the agreement between India and the United States is an agreement between India and the United States and it doesn’t have any automatic impact on Australia. It doesn’t automatically affect Australian policy in relation to these matters. But I don’t want to give it particular labels because it’s an agreement between two other countries and it’s not for me to put labels on that except to remark as I did earlier that it’s a very significant development and I think it has to be acknowledged that the decision of the United States President to come here and to have these discussions

not supply uranium to India as long as it did not sign the NPT. Speaking to two Indian journalists ahead of his Prime Minister’s visit to New Delhi, Dower recalled that the foundation of his country’s policy on nuclear supplies was that it would export uranium only to countries that had signed the NPT. Since India had not done so, and was unlikely to sign it soon, the export could not happen. “Some of the proposals put forward by India, even if they do not amount to signing the NPT but only adhering to the transparency of the regime, may not be optimal but that is a step in the right direction,” Howard remarked. Later on March 17 speaking at a press conference in Sydney along with US Secretary of State Condoleezza Rice, Prime Minister Howard said: “We have a policy and we’re not going to automatically change it” since India had not signed the NPT. Again speaking to journalists after his meeting with the visiting British Prime Minister Tony Blair and while discussing the possibility of sale of uranium to China, Howard said negotiations with China, a signatory to the NPT should not be seen as a model for uranium supplies to India. However he left the door open for future supplies of uranium to India. Prime Minister Howard said: “Whilst India is not a signatory to the treaty…her hehaviour since exploding a (nuclear)device in 1974 has been impeccable” as a practitioner of non-proliferation. Cautioning that “you should not think there is going to be an immediate change of Government policy in relation to India,” he said Canberra would “take one step at a time” in resolving the issue of uranium sales to New Delhi. Noting that the recent nuclear energy agreement between USA and India was “good”, he said Australia would send an official delegation to India “in the next few weeks” to discuss “the form and the substance” of that accord. The same team would then travel to Washington for talks with US administration on the same subject. “The next stage in the Indian process” would be discussions of the Indian case by the NSG which included Australia.
and to enter into this arrangement with the Indian Government is a very significant move and it’s something that the Australian Government views positively. Both Mr. Downer and I have made that very clear.

**Question (Jeff Thomson, ABC):** Both Prime Ministers, my question is first of all to Prime Minister Singh. Given that Australia has ruled out selling uranium to India for the time being, would you be asking Australia to lobby on your behalf to other members of the Nuclear Suppliers Group to sell you uranium, and if so, would you be prepared to do that?

**Dr. Manmohan Singh:** The agreement with the United States does provide that the US Government will use its influence with its friends and allies to soften the restrictions which members of Nuclear Suppliers Group apply to India, that we will be enabled to trade freely in sensitive nuclear materials and technologies. That is the commitment the United States has made. The United States may be talking to various members of the Nuclear Suppliers Group and Australia is an important member of the Nuclear Suppliers Group and I had the opportunity to raise this matter with the Prime Minister and you have heard his response.

**Question (Jeff Thomson, ABC):** Are you asking him though to lobby on your behalf as well?

**Dr. Manmohan Singh:** Well I sincerely expect that the Australian Government will take a positive view of recent developments.

**Mr. John Howard:** Well Mr. Thompson, the Australian Government’s position is exactly as I stated it. I’m not putting different words on it, I think you understand the meaning of English language in relation to these matters. So far as the Nuclear Suppliers Group is concerned, well that’s an issue that we will take our counsel on. It’s important to make the point that we have had a longstanding policy and we are operating in accordance with that policy and then along comes a very important agreement between India and the United States. Well we’re not going to suddenly, automatically change our position because of that, much in all as we support and laud the agreement that’s been made between India and the United States. We will have a look at everything, we’ll get some more information, we’ll take our counsel and then decide what position we will take in relation to the Nuclear Suppliers Group and obviously I’ve listened to what the Prime Minister has said and the discussion was conducted in a very friendly fashion. But we won’t decide our attitude in relation to that on the basis of representations from the United States any more than we would on other issues.
Question (Amit Baruah, The Hindu): Mr. Howard, I am a little confused by your remarks, what you said in Sydney you know, that you are willing to consider sales provided that India meets all the safeguards. That’s what you said. And that’s what you’ve been quoted as saying by all the wire services, Reuters etc. When you spoke this morning, you said officials of both countries would meet each other. Are you ruling out the supply of uranium? India has a special status because it is neither a non-nuclear weapons state nor is it amongst the five nuclear powers. It is a special kind of situation? As a friend of India will you now be willing to reconsider what our Prime Minister....?

Mr. John Howard: Well Australia is certainly a friend of India and I don’t think he expects me and I don’t think any reasonable person expects me to do other than repeat in plain English what our position is and I have said that. Our position has been that we would not sell uranium to countries that do not adhere to the nuclear Non-Proliferation Treaty. We don’t have any current intention of changing that policy. We’re very interested in the agreement that’s been made. We want to get more information about it, but we don’t sort of alter policy at press conferences.

203. Trade and Economic Framework between The Republic of India and Australia.

New Delhi, March 6, 2006.

The Republic of India and Australia (“the Parties”):

DESIRING to strengthen further the close and enduring relationship the Parties have developed through many years of productive and mutually beneficial cooperation;

REAFFIRMING their willingness to strengthen and reinforce the multilateral trading system as reflected in the World Trade Organization (WTO);

ASPIRING to lift total bilateral merchandise and services trade and
promote the Parties’ mutual interest through the further integration of their economies and by forging deeper and broader economic linkages through the facilitation and expansion of trade and investment;

Have reached the following understandings:

-Paragraph 1-

The Parties will work towards the facilitation of trade and investment on a balanced and comprehensive basis through various avenues.

-Paragraph 2-

The Parties will take steps to promote strategic cooperation in key sectors with outstanding potential, inter alia, energy and mining, infrastructure development and financing, information and communications technology, services of mutual interest (including education, tourism and film and entertainment), sports (major sporting event infrastructure and management, technology, management and medicine), the food and beverage industry, textiles, clothing and footwear; agriculture; inspection and quarantine; customs cooperation; investment; defence industries, and biotechnology. The cooperation in the above-mentioned areas and related initiatives will assist firms of both countries to identify commercial opportunities and strengthen bilateral trade and investment.

-Paragraph 3-

Being aware of the role of people-to-people links in providing a foundation for continued growth in trade and investment, and welcoming the existing depth of such relationships, the Parties will work to encourage and enhance cooperation and commercial exchanges in the areas of education, film and entertainment, sport and tourism.

-Paragraph 4-

The Parties recognise the benefits of regular bilateral meetings at senior levels, including in the areas responsible for trade, the economy and taxation, information and communications technology, education, science, tourism, immigration, agriculture, resources and energy, in building a stronger bilateral partnership and will work together cooperatively to facilitate such meetings, including at multilateral and regional fora.

The Parties will enhance dialogue on trade and economic cooperation (including through the Joint Working Group on Education and Training Cooperation, the Joint Working Group on Energy and Minerals, the Joint Science and Technology Committee, the Joint Working Group on Tourism,
the Joint Working Group on Information and Communications Technology), strengthen the India-Australia Joint Ministerial Commission and take steps to facilitate bilateral trade and investment and the resolution of issues that may arise.

**Paragraph 5**

The Parties will promote high-level two-way visits and dialogue between the government, business and academic communities of the Parties for the purpose of developing and enhancing the trade and investment partnership and strengthening cooperation on issues of mutual interest.

**Paragraph 6**

The Parties recognise that every effort should be made to facilitate travel between the two countries (particularly for business people) and note with satisfaction the recent introduction of Australia’s onshore Sponsored Business Visitor Visa which allows business in Australia to sponsor short-stay business visitors, and for applications to be processed in Australia.

**Paragraph 7**

The Parties recognise the importance of regular high level consultations on regional and multilateral trade issues, including in the WTO, and of seeking to coordinate policy positions and approaches to the extent possible. The Parties will hold regular dialogue on these issues, as appropriate, at senior officials and ministerial level.

The Parties will enhance dialogue in matters of trade, including trade remedies, to afford each other fair treatment in trade policy and trade measures.

**Paragraph 8**

The Parties recognise that all national government measures which impact on bilateral trade and investment should be implemented in a reasonable, objective and transparent manner. The Parties will afford adequate opportunity for consultations to exchange information on issues raised by either Party with respect to such matters. The Parties will extend such consultations to concerned businesses and investors.

**Paragraph 9**

The Parties will afford adequate opportunity for consultations to exchange information and views on issues related to the possible
implications of agreements between either country and a third country or countries that provide for preferential treatment of trade or investment.

-Paragraph 10-

The cooperation under this Framework is subject to the Parties’ respective laws and regulations and subject to the available resources of the Parties’ governments.

IN WITNESS WHEREOF the undersigned, being duly authorised by their respective Governments, have signed this Framework.

SIGNED in duplicate at New Delhi this sixth day of March 2006.

FOR THE REPUBLIC OF INDIA

FOR AUSTRALIA

F F F F F

New Delhi, March 6, 2006.

The Government of the Republic of India and the Government of Australia (hereinafter referred to as “the Participants”):

In pursuance of the understandings of the defence authorities of both Participants concerning the development of a close and constructive India-Australia defence relationship, based on the principles of open dialogue, mutual benefit and reciprocity;

Noting the common interests in the stability of the Asia-Pacific region, non-proliferation of weapons of mass destruction, combating international terrorism, and security of sea lanes of communication;

Recognizing the requirement of developing a close and constructive defence relationship that will be instrumental in promoting the common interests of the two Participants;

Desirous of improving mutual understanding of strategic perceptions and defence policies in accordance with their respective national laws and international obligations;
Have reached the following understanding:

SECTION 1

The purpose of this Memorandum of Understanding on Defence Cooperation between the Government of the Republic of India and the Government of Australia (hereinafter referred to as “the MOU”) is to promote cooperation and understanding between the Participants in defence strategic dialogue, defence industry, production, education, training and acquisition of defence equipment, research and development and management.

SECTION 2

2.1 The cooperation between the defence authorities of the Participants will include defence and military activities such as those listed in Section 3.

2.2 The primary mechanism to guide and monitor India-Australia defence cooperation will be the India-Australia Joint Working Group on Defence to be co-chaired by appropriate level officials designated by the Defence Ministers of the Participants.

SECTION 3

In particular, the defence cooperation may take the following forms:

3.1 Defence strategic dialogue - comprising of exchange of views on security and defence related matters, with a view to improving mutual understanding of strategic perceptions and defence policies, and regular exchange of high level visits and security assessment exchanges. The Participants will also exchange views seeking to strengthen the capabilities of their respective militaries to promote security and combat terrorism.

3.2 Defence professional exchanges - Continue with professional exchanges, seek to identify and investigate new opportunities to participate in knowledge focused cooperation through training, seminars and study visits in areas of mutual interest.

3.3 Defence Maritime Cooperation - Both Participants will explore options for extending cooperation in this sphere in the context of common interest in the security of the Indian Ocean and other areas of mutual interest and benefit. Maritime cooperation may include cooperation activities such as joint naval exercises, ship visits and professional exchanges.
3.4 **Defence material cooperation** - The Participants will strive to promote mutually beneficial exchanges between the defence organizations in various areas of mutual interest including, inter alia, acquisition of defence equipment, services, training, technology, research and development and management.

**SECTION 4**

The Participants may seek to expand the areas of cooperation listed in this MOU, by identifying new areas of cooperation for promoting and deepening India-Australia defence exchanges in the areas of mutual interest.

**SECTION 5**

5.1 In implementing these defence cooperation activities, each Participant, will unless otherwise mutually determined, bear its own costs.

5.2 Where appropriate, the implementation of cooperative measures under this MOU will be done pursuant to the written arrangements mutually determined by the defence authorities.

**SECTION 6**

Both Participants will ensure that the information acquired in the processes of defence activities under this MOU is dealt with appropriately, in line with their respective national laws, regulations and policies as well as complying with the request of either defence authority regarding specific requirements to protect particular information.

**SECTION 7**

7.1 Both Participants may review this MOU at any time and amend it by mutual consent in writing.

7.2 Any difficulties, which arise under this MOU will be resolved through consultation and negotiation between the Participants and will not be referred to any national or international tribunal or any third party.

**SECTION 8**

8.1 This MOU will come into effect on the date of signature and remain valid for a period of ten years and at the end of this period will be automatically extended for further periods of ten years, unless either Participant gives at least six months prior notice of its intention to terminate this MOU.
8.2 This MOU can be terminated by either Participant giving notice in writing at least six months in advance of its intention to do so. Any ongoing projects or any other implementing arrangement being conducted in pursuance to this MOU will remain in effect notwithstanding the termination of this MOU.

Done in New Delhi on 6-3-06 in Hindi and English, both texts being equally authentic. However, in case of dispute the English text will be taken as the primary reference.

205. Exchange of messages between President and Prime Minister with their Chinese counterparts in connection with “India-China Friendship Year”.

January 1, 2006.

[During the visit of the Chinese Premier Mr. Wen Jiabao to India in April 2005 it was decided to mark the year 2006 as the “India-China Friendship Year”. President Dr. A.P.J. Abdul Kalam and Prime Minister Dr. Manmohan Singh have exchanged messages with their Chinese counterparts on the occasion of the New Year which will be marked as the “India-China Friendship Year”.]

Following is the text of the messages from President A. P. J. Abdul Kalam to Chinese President Hu Jintao:

“Excellency,

I have great pleasure in extending to the Government and the people of China, and to you personally, warm felicitations and cordial greetings of the New Year, which is being marked as the “India-China Friendship Year”.

The deep historical and cultural association that our two ancient civilisations share has made rich contributions in shaping the development of humanity, and gives a unique dimension to India-China relations in contemporary time. It is, therefore, befitting that the vision of relationship reflected in the principles of Panchsheel jointly enunciated by our forefathers more than fifty years ago has been taken a step further by our decision to establish an “India-China Strategic and Cooperative Partnership for Peace and Prosperity” during the visit of Premier Wen Jiabao to India last year. This qualitative upgradation of our relationship, which is manifest across an array of collaborative pursuits our two countries are engaged in, has created conditions for raising the level of our ties to newer heights in this Friendship Year, even as we jointly move forward to address outstanding issues.

The remarkable growth and diversification of India-China relations in recent years is a matter of satisfaction and gives optimism for the future of our relationship. Today, the footprints of India and China are increasingly visible and have made an impact on the global landscape in diverse areas.
Our common pursuit of a peaceful environment for the paramount task of achieving national construction and prosperity adds great value to the India-China partnership.

The commemoration of “India-China Friendship Year” is truly a tribute to the distance traversed, through friendly exchanges and contacts, by our two nations through the labyrinths of time. It marks a landmark in our ties from where we hope to take forward our relations towards even greater substance and richness.

Excellency, please accept my best wishes for your good health and for the prosperity and well-being of the people of China.

With the renewed assurances of my highest consideration.”

Message from Prime Minister Dr. Manmohan Singh to Chinese Premier Wen Jiabao.

“Excellency,

On behalf of the Government and the people of India, and on my own behalf, I have great pleasure in extending to the Government and the people of China, and to you personally, warm felicitations and cordial greetings on the arrival of this New Year, which we have agreed to mark as the “India-China Friendship Year”.

The New Year begins against the backdrop of a year which witnessed a number of important milestones in our bilateral relations. This includes the historic visit of Your Excellency to India, during which we agreed to elevate our relationship to a “Strategic and Cooperative Partnership for Peace and Prosperity”. We also made significant progress in addressing some of the longstanding issues in our relationship without allowing them to define the agenda of our cooperative ties. We are confident that in the New Year, we will be able to continue, with greater determination, to impart further depth and substance to our rapidly growing ties, and add an important new chapter to India-China friendship.

Friendship and peace between India and China is our shared aspiration, which is also in consonance with our common long-term and strategic vision of the relationship. Indeed, our fast developing relationship today transcends the bilateral dimension and is an important determinant
for the peace and security, as well as development and prosperity, of Asia and the world. It is important that we continue adding greater substance to our bilateral exchanges and international cooperation. I recall with pleasure the warm exchange of views we had in Kuala Lumpur on the sidelines of the East Asia Summit where we reiterated our mutual resolve to accelerate the momentum of our wide-ranging cooperation. Excellency, as we celebrate the India-China Friendship Year with a series of commemorative events, we note with satisfaction the sustained growth and diversification of our relations. We are confident that with shared determination and joint endeavour, we will be able to elevate and strengthen the India-China partnership in the 21st century. I would like to take this opportunity to extend my best wishes for Your Excellency’s good health and for the prosperity and well-being of the people of China.

Please accept, Excellency, the renewed assurances of my highest consideration.”

"Message from Chinese President Hu Jintao to President Dr. A.P.J. Abdul Kalam.

“Your Excellency, On the occasion of the New Year’s Day of 2006, I wish to extend, on behalf of the Chinese Government and people and in my own name, our warm congratulations and best wishes to you, and through you, to the Indian Government and people.

China and India are friendly neighboring countries linked by common mountains and rivers. Our two peoples have a long history of friendship. Since the establishment of our diplomatic ties, thanks to our concerted efforts, the bilateral relations have been continuously brought to a still higher level. China and India announced to establish a Strategic and Cooperative Partnership for Peace and Prosperity in 2005. It symbolizes that the bilateral relations have entered a new stage of development. Our two sides also declared 2006 as the “Year of China-India Friendship”, reflecting the mutual wishes of the two governments and peoples to strengthen friendly and good-neighborly relations, expand mutually beneficial cooperation and promote common development.

China and India are major developing countries with great influence in the world. An everlasting China-India friendship not only serves the fundamental interests of our two countries and peoples, but also contributes
to peace, stability and development in Asia and the entire world. In the coming new year, the Chinese side is ready to work together with the Indian side, take the “Year of China-India Friendship” as an opportunity, carry forward the traditional friendship between our two countries, strengthen dialogues, exchanges and cooperation in all fields and at all levels, continuously deepen the contents of the bilateral relations, and push forward the China-India Strategic and Cooperative Partnership in an all-round and in-depth way.

May the Republic of India enjoy prosperity and your people well-being. May the friendship between the Chinese and Indian people grow with each passing day and pass on from generation to generation."

Message from Chinese Premier Wen Jiabao to Prime Minister Dr. Manmohan Singh:

“Your Excellency, On the occasion of beginning of the “Year of China-India Friendship”, I wish to extend, on behalf of the Chinese Government and in my own name, our warm congratulations and best wishes to you and the Indian Government. China and India are friendly neighboring countries and record a long history of friendly exchanges between our two peoples. Since the establishment of our diplomatic ties, the friendly cooperative relations between China and India have been continuously moving forward. Especially in recent years, China-India relations have made outstanding progress. During my visit to your country in April 2005, I jointly signed with your Excellency the China-India Joint Statement, announcing the establishment of a Strategic and Cooperative Partnership for Peace and Prosperity between our two countries, and declaring the year 2006 as the “Year of China-India Friendship”. China-India relations are faced with important opportunities for development.

The Chinese Government firmly pursues the policy of developing long-term, stable, good-neighborly and cooperative relations with India. The Chinese side is ready to work closely with the Indian side, by jointly holding celebrating activities of the China-India Friendship Year, to further expand friendly exchanges, strengthen mutually beneficial cooperation, and continuously enrich the contents of the strategic and cooperative partnership between our two countries. May the friendship between the peoples of China and India be everlasting.”
NOTE: The following programmes were lined up by the two countries for the celebrations:

{All proposals in bold will be undertaken jointly by India and China; rest are individual proposals, with facilitation from the other side.}

I. POLITICAL
1. Exchange of messages between Presidents and Prime Ministers to commemorate the Friendship Year.
2. Exchange of high-level visits.

II. DEFENCE EXCHANGES
3. Visit of Indian Defence Minister to China.
4. Continuation of defence exchanges at various levels.
5. Trans-border interactive visits and sporting activities between the two armies.

III. ACADEMICS AND PUBLICATIONS
6. Publication of “Across the Himalayan Gap: Volume II” as a joint endeavour between India International Centre (IIC) and Indira Gandhi Centre for National Art (IGNCA) on the Indian side and CASS/Beijing University on the Chinese side.
8. Mutual translation of literary classics.
9. Workshop to be organized in both countries on education cooperation by major universities of both sides.
10. Exhibition of Indian books in China.
11. The book “Dr. Kotnis and Me” written by Mrs. Kotnis (Mme. Guo Qinglan) to be translated and published in India.

IV. SCIENCE AND TECHNOLOGY
12. Signing and operationalisation of MOU on India-China Steering Committee on S&T Cooperation during the proposed visit of Indian Minister of State (S&T) to China.
13. Exhibition of practical patented technology from India

V. CULTURE, SPORTS AND YOUTH EXCHANGES
15. Inauguration/opening ceremony of the Xuan Zang Memorial in Nalanda
16. Visit of India’s Minister of Culture to China
17. Visit of Chinese Government cultural delegation to India
19. Reciprocal hosting of film festivals in each other’s country and encouraging joint production of films.
20. Visit of Indian Classical Dance Troupes to China (Bharat Natyam/Kathak/Odissi).
22. Academic seminar on “India-China Cultural Exchanges” to be organized by the Centre for India Studies in Peking University or the China Institute of International Studies (CIIS), Beijing.
23. Organization of “Treasures of Ancient India: Exhibition of Indian Civilization”. or
Exhibition on “Journey of Buddhism from India to China”
24. Friendly exchange of sporting activities.
25. Exchange visits of youth delegations.
26. Release of commemorative first day covers or joint issue of stamps
27. Establishment of friendship cities between the relevant cities of both countries.
28. A TV documentary series named “Along the Footprints of Xuan Zang” to be produced by China’s Central TV (CCTV).
29. Participation of Liaoning Peking Opera Troupe in India’s National Opera Festival
30. Shaanxi Culture Week in India.

VI. TOURISM
31. Indian tourism seminar and road shows in China
32. Indian Food Festival in China.
33. Indian photographic exhibition in China by Chinese photographer(s)
34. Launching of Chinese language website by India’s Ministry of Tourism.

VII. ECONOMIC AND COMMERCIAL
35. High-Level business seminar to be held in India and China jointly organized by FICCI/CII from the Indian side and CCPIT from the Chinese side.
36. Operationalisation of border trade through Nathu La by the summer of 2006.
37. “Made in India” Show in China.
38. Indian fashion show in China.

VIII. OTHERS
39. Eminent Persons Group (EPG) to come up with a set of fresh recommendations to promote relations based on deliberations in previous EPG meetings
40. Commemorative receptions to be respectively hosted by the two Ambassadors in each other’s country.
206. Media Briefing by Foreign Secretary Shyam Saran during his Second Round of Strategic Dialogue with the Chinese Vice Minister Wu Dawei.

Beijing, January 10, 2006.

Foreign Secretary: Let me give you a sense of what we have covered so far. As you know we had agreed to have an annual strategic dialogue between India and China. The first meeting was held in January last year between Vice Foreign Minister Wu Dawei and myself and that was the first inaugural session in a sense.

This particular meeting's importance is heightened by the fact that it is the first dialogue after India and China agreed to establish a ‘Strategic and Cooperative Partnership’ during the visit of the Chinese Premier Wen Jiabao to India in April last year. We have so far had three sessions of very intensive discussions of altogether seven hours and we are meeting again this afternoon for another hour-hour and a half.

I also called on Foreign Minister Li Zhaoxing yesterday and Executive Vice Foreign Minister and Special Representative on the India-China boundary issue, Mr. Dai Bingguo. Before I leave for Shanghai this evening, I would be meeting State Councillor Tang Jiaxuan. I will be, over lunch, arranged by the Ambassador, meeting leading personalities from the National People’s Congress, think tanks in Beijing and also the foreign policy establishment.

In Shanghai, I would be giving a talk on some aspects of India’s foreign policy at the Shanghai Institute for International Studies. And of course there would be an opportunity to interact with the local leadership. I would also be meeting one of the Vice Mayors of Shanghai.

Now on the dialogue with Vice Minister Wu Dawei - the agenda included bilateral, regional and international issues as well as some important security issues. One important theme of our meeting this time was the ‘Strategic and Cooperative’ relationship that we have established - What would be the content of this strategic partnership? How would we look at India and China working together in terms of the evolving regional situation in Asia as well as the global situation? In this context, we both expressed satisfaction at the positive trends we have witnessed in India-China relations in the recent past and we discussed how we could maintain and in fact accelerate the momentum of our relationship and also add
more substance to the relationship. We also exchanged views on how to address outstanding issues, including the boundary question in a proactive manner. The Special Representatives would be meeting during the first quarter of the current year in India.

It was agreed that the India-China Friendship Year which we are celebrating this year, would be marked by a host of activities that we have agreed upon. This would not only be a celebration of our close relations and friendship but would also be a means to add even more substance to our relations. You must have had a chance to see the exchange of messages that took place between the leaders of the two countries at the beginning of the year. The Chinese Ambassador in Delhi held a function to kick off, in a sense, the Friendship Year in India which I attended myself.

When I met Vice Foreign Minister Dai Bingguo, I extended a friendly and warm invitation to him from his counterpart Mr. Narayanan, our National Security Advisor. On regional and international issues broadly speaking there is a certain convergence of views between India and China. There is a similar assessment of the international situation. For example we both took the view that the current international situation is marked by an absence of conflict or serious tensions among the major powers, and the general trend is towards greater multi polarity in the world. The trend is towards a peaceful environment in the world. and this creates opportunities for both India and China to focus their attention on their own developmental goals. Of course, there are various regional conflicts which do create some concerns and we know that these must be addressed in an effective manner.

We also talked about some new elements in the international situation, for example the trend towards globalization, the fact that there are a number of challenges which we are facing which are cross-cutting in nature and these are what I will call - transnational in nature. We talked about the phenomenon of terrorism, the problem of drug trafficking and environmental degradation. All these are issues on which it is impossible for any one country no matter how powerful it is, to deal with these challenges singly, and therefore the importance of fashioning a global response to these global challenges. We discussed how India and China as the two largest developing countries can work together towards fashioning these global responses.

We also talked about our cooperation and coordination in various regional and international fora. This of course includes the UN itself. As
you know there is a very comprehensive reform of UN which is currently being discussed and negotiated and in that there was a willingness on the part of China to work together with India in ensuring, number one, that the principle of multilateralism is strengthened, secondly, the interest of the developing countries is safeguarded and thirdly that development returns as a central item on the agenda of UN. As you would be aware, we have also been talking about the reform of the UNSC. We had some discussion about that as well. In that respect, we were very happy that it was a reaffirmation of the support that was extended to India in this regard by Premier Wen Jiabao when he visited India in April last year. The Chinese side conveyed to us that there was no change in that position. We welcomed China’s association with SAARC as an observer and China welcomed our association as observer at the SCO. We both agreed that this development also created new opportunities for the two countries to work together.

There was some discussion on the East Asia Summit where again there was a similarity of views that Asia is emerging as one of the most dynamic economic areas in the world. In fact, it would be fair to say that there is an overall long-term trend for the centre of gravity of economic development to move more and more towards Asia. Both India and China would be major contributors to this trend as well as, in a sense, beneficiaries of this trend. We agreed that the East Asia summit offers a very good forum where the two countries would be able to work together to contribute to peace and stability of this region as well as to its further economic development. It was also agreed that we should be working together towards what PM Manmohan Singh has called the possibility of creating an East Asia Community. An East Asia Community of which one feature would also be a kind of a pan-Asian Free Trade Area.

There was also discussion about trilateral cooperation among India, China and Russia. Here we agreed that there are a number of areas where the three countries could work together like in the energy, trade and economic sectors. We also discussed the possibilities of cooperating more closely on some of the global challenges that I mentioned earlier.

We have found this dialogue a very valuable forum for a friendly exchange of views in terms of the global perspective of our relationship. It has certainly confirmed that there is a strong consensus on both sides for taking this relationship forward. The basic thrust of our approach is on managing the emergence of both India and China in a more cooperative framework. There is agreement to work more closely together on regional
cooperation and on integration in Asia. We also spoke about how India and China’s economic development itself can be a kind of an engine of growth for the entire Asian continent.

In the meeting that I had with Vice Foreign Minister Dai Bingguo, we touched upon the boundary question. We are looking now at working together in the next round to try and evolve a framework for the boundary settlement. Both sides are committed to seek an early settlement on the basis of the ‘Political Parameters and Guiding Principles’ which were adopted during Premier Wen Jiabao’s visit. It was reaffirmed in our meeting that what we are seeking is a political settlement adopting a package approach and proceeding from a long term and strategic perspective of our overall relations. I also pointed out to the fact that India and China have now established a strategic partnership- this particular aspect should be also brought to bear in terms of our search for a solution to the boundary issue.

Much of my meeting with Foreign Minister Li Zhaoxing was particularly focused on the UN reforms. We discussed a number of aspects of reforms including of course the UNSC reforms. The Chinese FM reaffirmed that one of the important aspects of China’s approach is to give greater representation to the developing countries in the UNSC. There was also a discussion on the best way to take this reform process forward. I briefed him about the recent developments which have taken place including the tabling of the G-4 resolution in the UNGA on January 5, 2006 and our continuing effort to try and find common ground between the African Union and the G-4, so that we can come up with a joint initiative between the two sides. We believe that this is achievable and after which the way would be clear for the next stage- the actual election of the new permanent members of the UNSC. We also discussed the calendar of high level visits which as you know have played an important role in maintaining the momentum in our relationship. We are looking forward to the visit of President Hu Jintao to India and the Chinese side has also invited our PM to visit China.

Q. Did you brief the Chinese side on the India-US nuclear agreement and were there any discussions on this subject? (Press Trust of India)

FS - We briefed each other about our respective relations with major powers and that included of course our respective relations with the US. On my side, I did brief them about energy cooperation between India and US which includes civilian nuclear energy cooperation.
Q. Keeping in mind that there were some press reports that the Chinese were unhappy about this agreement, was there any response from the Chinese side? (*Indian Express*)

FS - There was no such unhappiness expressed to me.

Q. Did you bring up reports about China sending nuclear reactors to Pakistan? (*Indian Express*)

FS - This did not come up in the discussion. As far as I know this has not been confirmed.

Q. Did China have to say anything about lifting of sanctions on India by the Nuclear Suppliers Group (NSG)? (*Indian Express*)

FS - No, this matter was not discussed in that kind of detail. But of course, with regard to the NSG I did point out that one aspect of the discussion with the US was the modification of the domestic law in the US with regard to civilian nuclear cooperation with India and the second was the modification in the guidelines of the NSG which would enable full civilian nuclear cooperation with India. In this respect, as China is a member of the NSG we have asked cooperation from China.

Q. Any specific cooperation from China in this regard? (*Times of India*)

FS – This matter will come up before the NSG and naturally the members of the NSG will have there say, but this is, of course, a matter on which the lead will have to be taken by the US.

Q. There are reports that China and Pakistan are opening consulates in Nepal near the Indian border. Was this discussed? (PTI)

FS - No, we did not discuss these specific issues but we did discuss Nepal. I presented our assessment on the recent developments in that country and pointed out that given the open border between India and Nepal and the very unique relations which exists between our two countries there is, naturally, a great concern in India over the continuing political turmoil and economic dislocation in that country. China for it part also shared this concern. China also reiterated their long standing policy that China does not believe that there should be any interference in the internal affairs of any country and that is the principle on which their policy towards Nepal is based.
Q. Any discussion on China-Pakistan relationship in terms of arm-sales and other issues? (Times of India)

FS – No.

Q. On UNSC reforms, according to China what is the best way forward given the fact that they support India but have a problem with Japan and since we are part of the G-4 … and the fact that when the G-4 resolution was re-tabled Japan did not actually participate. Did this make any difference to China’s position? (Indian Express)

FS - As mentioned, I briefed them about the tabling of the G-4 resolution and the fact that Japan has chosen not to join us in the tabling the G-4 resolution but has nevertheless expressed its continuing solidarity with the G-4. We believe that Japan is engaged in certain consultations and perhaps it would come back with its own position on this some what later. We of course attach a lot of importance to maintain G-4 solidarity and we trust that Japan will also join us in taking this resolution forward. Our idea is to engage in wide ranging consultations with different groups of countries, in particular the countries belonging to the African Union, so that a broad consensus can be fashioned in terms of the procedure to open the door for the actual election of the new permanent members of the UNSC. I also pointed out to our Chinese interlocutors that the G-4 draft resolution is not about this or that country becoming a permanent member of the UNSC, because even after the frame work resolution is adopted we would still individually have to go to the UNGA and obtain the necessary votes for our candidature. The importance of the G-4 resolution is precisely what it says- a framework resolution which sets out the procedure through which this reform of the Security Council should take place, so a distinction needs to be drawn between the two. We will remain in close consultation with all our important partners, which of course includes China.

Q. Was there any discussion on the Iranian and North Korean Nuclear issue? (PTI)

FS - The Chinese Vice Foreign Minister did brief me about the status of the Six-Party Talks and mentioned the efforts being made by China to ensure a successful convening of the next round. China, as you know played an important role in bringing the six-parties together. No date appears to have been fixed for the next round. We were given to understand that consultations are taking place with the parties concerned to try and convene this at an early date. As far as the Iran nuclear issue is concerned,
we did have an exchange of views concerning this matter. In general both countries agreed that what ever issues have arisen should be solved through a process of dialogue. Both countries have supported the resumption of dialogue between the EU-3 and Iran. Our general message has been that there should be a display of flexibility all around so that any kind of confrontation is avoided.

**Q.** You spoke about cooperation with China on the lifting of sanctions by the NSG. Did they respond to this, did they express support? *(Indian Express)*

**FS** - So far we have really not had a response because I was just briefing them on this.

**Q.** On the border issue, when you talk about a political solution is there a review of the manner in which the talks have gone on so far and would you want to look at it in the light of the changing situations? *(Times of India)*

**FS** - It was a very important development when the two countries concluded the ‘political parameters and the guiding principles’ for the settlement of the boundary issue and if you look at those principles they are in a sense practical principles to seek a settlement on the boundary issue. The idea is to go beyond claims and counter-claims between the two sides. Both sides have been saying that India China relations today have a certain strategic dimension, that there is a certain importance that India China relations have acquired in terms of the emerging global situation. Therefore, it is this perspective which should also then inform, in a sense, our discussions on the boundary issue. So what we are looking at is that having agreed upon a certain sets of principles which have a practical utility, how do we apply those to the actual ground situation taking into account the overall situation? What ever settlement we are able to find will be within the parameters of those guiding principles.

**Q.** What about the baggage of history? Are we trying to give less importance to that and are looking forward more? *(Times of India)*

**FS** - It is not a question of giving less or more importance, it is a certain broadening of our perspective in which we approach this question. In real terms what does this mean? It means that it would give a certain degree of greater flexibility to both sides in terms of dealing with this question because you are dealing with this question not merely on issues involved
as far as the boundary issue is concerned but you are also looking at it from a broader perspective of the relations between the two countries. Relations between the two countries which are categorized as a strategic partnership, relations which both recognise as having a certain global dimension, a certain global impact. Naturally if the boundary question is resolved this would have a very important impact in terms of that global perspective. So we are really interested in that strategic partnership and that global perspective that would in a sense contribute to finding a mutually acceptable solution.

207. Address by Foreign Secretary Shyam Saran at the Shanghai Institute of International Studies: ‘Present Dimensions of the Indian Foreign Policy’.

Shanghai, January 11, 2006.

Please see Document No. 001
208. **Press Release of the Ministry of External Affairs on the 7th round of discussions between the Special Representatives of India and China on the boundary question.**

**Kumarakom (Kerala), March 13, 2006.**

Special Representatives of India and China on the boundary question, Shri M.K. Narayanan, National Security Advisor and Mr. Dai Bingguo, Executive Vice Foreign Minister held their 7th round of discussions in New Delhi and Kumarakom from March 11-13, 2006. The two Special Representatives continued their discussions for an agreed framework for the resolution of the boundary question in a constructive and friendly atmosphere. Vice Foreign Minister Dai Bingguo called on the Prime Minister on March 11, 2006. The next meeting of the Special Representatives will take place in China on mutually convenient dates.

209. **Press Release issued by the Ministry of Commerce on trade between India and China.**

**New Delhi, March 16, 2006.**

India and China are poised to achieve US $ 20 billion bilateral trade turnover by the year 2007, a year ahead of the target set earlier, Shri Kamal Nath, Union Minister of Commerce & Industry, indicated in his keynote address at the India-China Joint Business Forum here today where Mr. Bo Xilai, Minister of Commerce of the People’s Republic of China, was the Guest of Honour, along with a large business delegation from China. The two Ministers earlier co-chaired the 7th Meeting of the India-China Joint Economic Group (JEG), which took place after a gap of six years. “That it coincides with the celebration of India-China Friendship Year is of additional significance. I also note that this is the first JEG meeting after China’s accession to the World Trade Organisation (WTO)”, Shri Kamal Nath observed. Both Mr. Xilai and Shri Kamal Nath emphasised that trade and economic cooperation held the key to strengthening the overall bilateral relationship.
"I reiterate India’s deep desire and strong commitment to continue developing a multi-faceted, mutually beneficial trading and economic relationship with China”, Shri Kamal Nath said. Mr. Xilai in turn during his bilateral with Shri Kamal Nath recalled the traditional ties between India and China dating back many centuries when the two countries together accounted for more than 20% of the world’s total trade and called for “recapturing the old glory”.

During the year 2000-01, the bilateral trade volume was barely US $ 2 billion. This increased to US $ 11.3 billion in 2004-05. “This year our bilateral trade will be in excess of US $ 15 billion”, Shri Kamal Nath said, reflecting rapidly expanding bilateral economic relationship. At the same time, he stressed the point both at the JEG Meeting as well as the Joint Business Forum that the trade basket continued to be narrow and restricted to a limited range of goods. “For instance, Indian exports are dominated by raw materials and products of natural resource based industries. If our trade is to expand exponentially it is imperative for both partners to diversify the trade basket. Between us we produce practically everything – and produce it cheaply, and with good quality. We both have export growth rates that are 25 to 30%. While our engagement with the rest of the world is galloping, we must make doubly sure that it gallops with each other”, he said.

The JEG discussions focussed on implementation of the recommendations of the Report of the Joint Study Group (JSG) which was constituted in June 2003 by Prime Minister Dr. Manmohan Singh and Premier Wen Jiabao to examine the potential complementarities between the two countries. The agenda included review of bilateral trade since 2000 and issues of bilateral trade and economic cooperation relating to market access for agricultural, industrial goods and services; non-tariff barriers; restrictive regulatory regimes etc. besides discussing the deliberations of the Joint Task Force on India-China Regional Trading Arrangement and talks on a Bilateral Investment Protection Agreement.

Shri Kamal Nath also underlined the need to decide on an early operationalisation of the border trade across the Nathu La pass.

**India-China Bilateral Trade: Backgrounder**

During the visit of Premier of the State Council of the People’s Republic of China to Republic of India in April 2005, the two countries agreed to make joint efforts to increase the bilateral trade volume to US $ 20 billion or higher by 2008.
Since 1997-98, Indo-China trade has registered a growth of 260% i.e., average yearly growth of around 33%.

The volume of trade with China during the last 5 years i.e., from 2000-01 to 2004-05 has increased by 224%, registering an annual average growth of around 44%.

Since 2000-01, the highest trade growth of about 62% was registered in 2004-05.

During 2004-05, India’s balance of trade deficit with China has almost doubled as compared to 2003-04 and amounted to US $ 2.2 billion.

Pursuant to the Declaration on Principles for Relations and Comprehensive Cooperation between India and China signed in June 2003 and the Joint Statement signed in April 2005 by the Prime Minister of the Republic of India and the Premier of the State Council of the People’s Republic of China, the Ministry of Defence of the Republic of India and the Ministry of National Defence of the People’s Republic of China (hereinafter referred to as “the two sides”) are committed, in accordance with the relevant purposes and principles of the Charter of the United Nations, to developing the strategic and cooperative partnership for peace and prosperity between India and China. Such a partnership is based on the principles of the Five Principles of Peaceful Co-existence, mutual respect and sensitivity for each other’s concerns and aspirations and equality.

The two sides note the utility of confidence building measures between them, including their armed forces.
The two sides reiterate that strengthening effective contacts in the field of defence is of vital importance to enhancing mutual trust and understanding between their two armed forces, ensuring a peaceful environment in which they can pursue their respective national development objectives, and maintaining peace and stability in the region and the world at large. In order to broaden and deepen defence exchanges between the two countries, the two sides have, through friendly consultations, reached the following understanding:

ARTICLE 1

(a) Maintain frequent exchanges between the leaders and high-level functionaries of the Defence Ministries and the armed forces of India and China. An annual programme of exchange of visits will be worked out through consultations for timely implementations;

(b) Convene an Annual Defence Dialogue at a mutually agreed level, to be hosted alternately by the two sides. The dialogue will review progress in defence exchanges and make suggestions for future exchanges. It will also exchange views on international, security and strategic issues;

(c) Endeavour to hold joint military exercises and/or training programmes in the fields of search and rescue, anti-piracy, counter-terrorism and other areas of mutual interest. Each side will invite senior military officers of the other side to witness designated military exercises;

(d) Establish a mechanism of study tours for each other’s senior and middle level military officers and relevant civilian officials, in order to facilitate better understanding of foreign, defence and national development policies of the host side, and participation in seminars and discussions on themes to be agreed upon. Specific arrangements will be decided through consultations;

(e) Establish a mechanism for military officers to study in the military academies of the other side to be identified by the host side. Carry out exchanges between counterpart military academies. The number of officers and academies involved in the above-mentioned exchanges can be increased if necessary; and

(f) Have exchanges in other mutually agreed fields to be decided through consultations.
ARTICLE 2

For the high level delegations as undertaken under clause (a) of Article 1 and other delegations designated by the two sides, on the basis of balance and reciprocity, the host will bear the local expenses for boarding, lodging and transportation. Other delegations will be self-financed. The delegations may comprise both military and civilian officials. The host will facilitate the visits and assist with visa and other travel arrangements, as necessary.

ARTICLE 3

This Memorandum of Understanding shall come into effect on signature by the two sides. It shall remain in force for five years unless terminated in advance by either side giving written notice for termination at least three months in advance. At the end of the five-year period, the Memorandum of Understanding shall be automatically extended by another five-years, unless either side gives written notice for its non-extension at least three months before the expiry date.

Done at Beijing on May 29, 2006 in two originals, each in the Hindi, Chinese and English languages, all texts being equally authentic. In case of any divergence in interpretation, the English text shall prevail.

211. **Press Conference of Defence Minister Pranab Mukherjee after his return from the tour of China and Japan.**

*New Delhi, June 13, 2006.*

Speaking at a press conference in New Delhi on June 13 after his visit to China and Japan, Defence Minister Pranab Mukherjee said the possibility of an armed conflict with China had receded thanks to several Confidence building Measures (CBMs) being implemented by both the countries to improve defence relations and eliminate tension on the border.

The latest CBM agreed to by both the parties during his recent visit to China was an institutional arrangement to deepen defence cooperation. Asked whether India sought ties with China despite its being a source of arms supply to Pakistan, he said India was aware of this aspect but it also recognized that China was interested in building good relations with India. “Neither do we consider them a threat to us not do they consider us a threat to them. There is enough space for both to grow in their own areas. The basic objective of the CBMs is that both sides want a tension free border. Therefore the CBMs will enable both countries to utilize their energy for the overall development of the people. If that fact is recognized, then I don’t think there or we are trying to outmanoeuvre each other. Over the year both countries have realized they cannot alter their neighbourhood. If we have to live together, it is better to live in peace. The ice was broken in 1988 during the Rajiv Gandhi’s Beijing visit and this was followed up with three CBMs. China has also settled the very old issue of recognizing Sikkim. The Special Representatives appointed by the two prime ministers have held two rounds of talks to resolve the border issue. All these positive developments recognized the fact that nobody is thinking in terms of an armed conflict.”

Asked if India and China could jostle for supremacy in future, Mr. Mukherjee said the strategic space was not limited. “It is also not correct to say that the entire space is occupied by China. I agree that China’s economic growth and economic strength is more compared with India’s but the impression that they have outpaced us in the region or on the world stage is not correct. They are playing their role and we are playing ours.”

The Minister described the visit to China and Japan as fruitful. “It is not that we were able to resolve all the outstanding issues but discussions took place in a cordial atmosphere and we created a good understanding
among ourselves. Both countries have developed excellent relations with India in economic and political fields. We thought that this should get reflected in defence cooperation also. India did not have deep defence cooperation with Japan but both countries moved closer after Tokyo recognized the need for building defenceties1. A Joint Statement issued during his visit outlined the mechanism of strengthening defence cooperation and institutional arrangements, which will review this relationship. Asked whether the increasing complexity of joint military exercises with other countries signalled India’s desire to join military operations outside the ambit of the United Nations, Mr. Mukherjee said, “We are contemplating nothing outside the UN.” India’s basic stand was that the collective action of nations should get reflected in the UN Charter.

1. Greater insight into defence relations with Japan was provided by Mr. Mukherjee in his telephonic interview on May 27 to the Southeast Asia correspondent of the Hindu in Singapore. Mr. Mukherjee told him India’s new military-related cooperation with Japan was “independent” of New Delhi’s “good relations” with the United States at this stage. He said the two aspects of India’s defence diplomacy were “not necessarily linked”. Japan is a close ally of US and the Indian Navy had joined the navies of these two as well as Australia’s to form a professional “core group” to meet the tsunami crisis along the Indian Ocean rim in December 2004. Asked whether the four were now thinking enhancing their linkages, he said there was “no military” plan of that kind. Asked about the importance of new India-Japan Joint Statement on defence cooperation, he cited maritime security along the Indian Ocean and Straits of Malacca as one of the primary objectives. Further asked if there was a plan to undertake naval patrolling of the Straits, he said there was “no such thing” other than “whatever we do in our normal course”. As for the current timing of the new consensus with Japan, he noted that the joint statement was signed at an “appropriate time” as a follow up to the political understanding reached during the Japanese Prime Minister’s visit to India in April 2005.
212. **Press Release of the Embassy of India in Beijing on the Eighth Round of talks between Special Representatives of India and China.**

**Xi’an and Beijing, June 27, 2006.**

1. The Eighth Round of talks between the Special Representatives of India and China, Mr. M.K. Narayanan, National Security Adviser and Mr. Dai Bingguo, Vice Foreign Minister respectively, on the India-China Boundary Question was held in Xi’an and Beijing from June 25 to June 27, 2006. The Special Representatives continued their discussions on an agreed framework for a boundary settlement on the basis of the Agreement on Political Parameters and Guiding Principles for Settlement of India-China Boundary Question. Talks were held in a friendly, cooperative and constructive atmosphere.

2. The National Security Adviser and the Special Representative of India had separate meetings with Premier Wen Jiabao and Foreign Minster Mr. Li Zhaoxing on June 26 and June 27 respectively.

3. Both sides agreed to hold the next round of talks between the Special Representatives in India at a mutually convenient time, which will be decided later through the diplomatic channel.

213. **Press Release of the Ministry of External Affairs on the inaugural function for the resumption of border trade between India and China held at Nathu La.**

**New Delhi, July 6, 2006.**

An inaugural function was held at Nathu La this morning on the occasion of resumption of border trade between India and China through the pass. The function was presided over by Dr. Pawan Chamling, Chief Minister of Sikkim and H.E. Mr. Champa Phuntsok, Chairman of the Tibet Autonomous Region. It may be recalled that India and China had signed the Memorandum on Expanding Border Trade on June 23, 2003. The said Memorandum provided the use of Nathu La for the purpose of border trade between India and China.
This is the third border trade point between the two countries, the other two being Lipulekh pass in Uttaranchal and Shipki La in Himachal Pradesh. Modalities for conducting border trade between India and China are laid out in the Memorandum on the Resumption of Border Trade signed between the two countries in December 1991 and the Protocol on Entry and Exit Procedures for Border Trade signed in July 1992. All provisions of these two documents would be applicable for border trade through Nathu La. Other details were worked out between the two countries last month when an Indian delegation visited the Tibet Autonomous Region from June 17-20, 2006. The following aspects of border trade through Nathu La may be of interest:

i. Border Trade through Nathu La resumed on July 6, 2006 at the Changgu border trade mart at Sherathang on the Indian side and Renqinggang trade mart on the Tibetan side.

ii. The border trade mart shall be open from June 1-September 30 every year. It will be open to the designated authorities of the two sides to extend or reduce the period of trade when considered necessary on account of exigencies like weather conditions.

1. On August 23 Minister of State for Commerce and Industry giving details of the trade via the Natha La pass said: “The import and export of the following locally produced commodities by the people living along both sides of the India-China border as per the prevailing customary practice are allowed freely :-

The border trade through Nathu La includes overland trade and the exchange of commodities by the residents along the border between the Tibet Autonomous Region of China and the state of Sikkim of India. The people of Sikkim living along the border would be able to export to China 29 items mentioned above and they would be able to import from China 15 items exempted from duty.” On November 23 the Rajya Sabha was informed that the “border trade through Nathu La which was conducted between July 6 and September 30, 2006 yielded a trade turnover of Rs. 12 lakhs,”
iii. The border trade marts on both sides will be open from Monday to Thursday every week; the daily opening time for the marts for border trade shall be from 0730-1530 hours Indian Standard Time.

iv. The traders from both sides would use trade passes for the purpose of border trade. Trade passes would also be issued to drivers of vehicles, which are utilized for the purpose of border trade. To start with, 60 four-wheeled vehicles including passenger buses, if any, would be issued border trade pass. This number could be increased or decreased based on mutual agreement.

v. Border trade would be transacted for items contained in the agreed list of commodities for border trade between the two countries, which presently includes 29 items for exports from India to China and 15 items of import into India from China.

214. **Response of Official Spokesperson to a query on India’s economic engagement with China**

*New Delhi, September 5, 2006.*

In response to a query, the Spokesperson said that India has been pursuing a policy of closer economic engagement with China. The trade with China has shown a rapid increase, and the number of Chinese companies operating in India and Indian Companies operating in China has grown significantly. While we welcome foreign investments and companies in India, this has to be in accordance with our relevant domestic laws and regulations, and taking into consideration, inter alia, our security concerns and assessments. As part of this policy, we also welcome investments from China and we are confident that the India-China economic engagement will continue to expand and grow in the future.

---

1. The query arose out of media reports that Government of India was as a matter of policy trying to block Chinese companies from sensitive infrastructural projects like ports etc.
215. Press Release of the Ministry of Defence on the meeting of Defence Minister Pranab Mukherjee with the Chinese Foreign Minister Li Zhaoxing in New York during the UNGA session.

Defence Minister, Shri Pranab Mukherjee met the Foreign Minister Li Zhaoxing of the Peoples’ Republic of China at New York yesterday. During the meeting, both leaders agreed that the pace at which bilateral relations were developing was very encouraging, and that the two sides should maintain efforts to ensure that this important relationship continues to develop. They said that frequent high-level contact was playing a significant role in adding momentum to the development of the bilateral relationship. In this context, they recalled the very successful visit of Chinese Premier Wen Jiabao to India in April 2005, and agreed to make efforts to ensure that the planned visit of President Hu Jintao to India would be a milestone in the bilateral relationship.

216. Reaction of Official Spokesperson to media report on China’s intention to divert the Brahmaputra waters.

New Delhi, October 23, 2006.

We have understandings with the Chinese side under which they provide hydrological information in respect of Brahmaputra and Sutlej rivers during the flood season for flood control and disaster mitigation in downstream areas. We are also discussing with the Chinese side the expansion of this cooperation¹.

¹. Official Spokesperson of the Chinese Ministry of Foreign Affairs in the meantime told a media briefing in Beijing that China had no such plan to divert the waters of Brahmaputra.
217. Reaction of External Affairs Minister Pranab Mukherjee to the reported statement of Chinese Ambassador claiming Arunachal Pradesh as Chinese territory.

New Delhi, November 14, 2006.

Reacting to the reported statement1 of the Chinese Ambassador Sun Yuxi made on November 13 that Arunachal Pradesh was a Chinese territory, External Affairs Minister Pranab Mukherjee when asked for his comments said Arunachal Pradesh is an “integral and inalienable part of India”.

---

1. On November 14 a Spokesperson of the Chinese Ministry of Foreign Affairs in Beijing sought to take an ambivalent position on the issue saying “I have not seen such a report. I will double check.” However, she added that it was the “strategic goal” of the two countries to find an early, fair and rational solution to the vexed boundary issue. The same day, the Chinese Ambassador in Delhi in a more conciliatory mood said that the two countries must make “mutual compromises” on the “disputed” issue of Arunachal Pradesh and that China was ready to do so. The two countries, through “friendly consultations” can arrive at a “mutually-acceptable and mutually satisfactory” solution to the issue “left over from history”. He said in an interview to the Press Trust of India. “He insisted that “We must make mutual compromises. We are ready to make compromises on that”. It is relevant to recall in this connection the visit of Pranab Mukherjee to China in May 2006 when he had an occasion to discuss India-China boundary with the Chinese Premier Wen Jiabao. After the meeting Mukherjee told the media that the progress of border negotiations was extensively discussed during his talks with the Premier. At that meeting Premier Wen had said that a broad agreement had already been reached on the political parameters and guiding principles for the talks on the border dispute. The Defence Minister had suggested that “strong political will should be applied to the problem with the aim of solving it as soon as possible. On the eve of the arrival in New Delhi of the Chinese President for his state visit, the Chinese Spokesperson in Beijing struck a conciliatory tone and said: “Our position on the boundary question is clear and consistent. Our position is to find a fair, reasonable and mutually acceptable solution through friendly consultations.” “Through the visit of President Hu Jintao, China hope to enhance the political mutual trust and lay the foundation for a strategic partnership,” Ms. Jiang spokesperson said. “We hope to promote comprehensive mutually beneficially cooperation and add more content to the bilateral strategic cooperative partnership,” she said.
FOREIGN SECRETARY (SHRI SHIVSHANKAR MENON): What I thought I would do, ladies and gentlemen, was just to run over what the President of China did today and try to give you a feel for the quality of the conversations that took place today.

As you know, he arrived yesterday evening, was received at the airport by External Affairs Minister, and Minister for Science and Technology and Earth Resources. Today morning he had a ceremonial welcome at Rashtrapati Bhavan, and then visited Rajghat to pay his respects at the Samadhi of Gandhiji.

The External Affairs Minister called on him in the morning. He then came to Hyderabad House where there was a restricted meeting between the Prime Minister and President Hu Jintao for about forty minutes with a small group. This was followed by delegation-level talks. The exchange of views between the Prime Minister and President Hu Jintao continued over lunch.

The atmosphere throughout was friendly, cordial, and there is a good rapport between the two. This is the fifth time that they are meeting in the last year and a half or so. They used this opportunity, in all these conversations, to review developments in bilateral relations in a comprehensive way. They exchanged views on regional and multilateral issues.

To characterize the discussions, I think they were positive, they were open, and they were constructive. You already have the text of the remarks that Prime Minister and President Hu made at the signing ceremony and the press interaction after that. This afternoon the Vice-President, the Speaker of the Lok Sabha, and Chairman of the UPA will be calling on the Chinese President. Rashtrapati Ji and President Hu Jintao will attend the India-China Friendship Year commemorative function this evening in Rashtrapati Bhavan where they will also meet the youth delegations of India and China consisting of 100 youths from each country.

Thereafter, President Hu will call on Rashtrapati Ji who will also host a banquet in his honour in Rashtrapati Bhavan this evening. Tomorrow
morning the Leader of the Opposition in the Lok Sabha will be calling on him and so will some of the political parties – the CPI(M), CPI. He will deliver an address in Vigyan Bhavan at a function hosted by the Indian Council of World Affairs before leaving for Agra and then for Mumbai.

In terms of outcome, we are very satisfied with the way the visit has worked out, with the quality of the conversations, and with the specific outcomes. As you know, we have a Strategic and Cooperative Partnership for peace and development with China which was announced last year during Premier Wen Jiabao’s visit to India.

The desired attempt through these conversations is to bring the relationship to a new level, to add that to the strategic partnership, and to see how we can take this relationship forward. In all these respects, we are very satisfied with what has been achieved today so far.

This, as you know, is the first visit by a Chinese President to India in ten years. The last visit was in 1996 by President Jiang Zemin, and it comes at a time when our relationship is already a mature relationship.

In terms of major outcomes, you have the Joint Declaration with you already and you have a synopsis of the thirteen agreements which were signed. You will notice that the Joint Declaration contains the ten-point strategy for the development of this strategic and cooperative partnership between the two countries and provides a template for its all-round development.

To give you the highlights, the leaders of India and China have agreed to hold regular summit-level meetings and to intensify high-level exchanges. We have also strengthened the institutional linkages and inter-ministerial dialogue mechanisms. The protocol on cooperation between the foreign offices, for instance, institutionalizes this dialogue and the consultation mechanisms between them. It also provides for a hotline between the Foreign Ministers of the two countries. Additional Consulates General will be opened in Kolkata and in Guangzhou. We are also very happy that the long-pending issue of the property of the Indian Consulate in China has been settled finally.

As you would have noticed from the document, there is a comprehensive economic and commercial engagement between India and China. Trade, as you know, has grown considerably in the last two years and is likely to cross twenty billion dollars this year.
The two leaders set a target of forty billion dollars of direct bilateral trade by 2010. In their presence the Bilateral Investment Protection and Promotion agreement was signed which is one important component of the relationship. In addition, the Joint Task Force which is presently discussing regional trading arrangements was asked to complete its work by October 2007 and it will give us its report on the kind of trading arrangements that will be viable and feasible, and which will help both economies.

In addition there was an agreement between the leaders on enhancing the trans-border connectivity. As you know, we opened Nathu La to border trade for the first time this year and we are going to be exploring additional routes both for the Kailash Manasarovar Yatra and for border trade. There is agreement on a car rally between Kunming and Kolkata.

We are also working on arrangements for trans-border movement of motor vehicles which we hope will help trade and passenger traffic for which we have already made some temporary arrangements at Nathu La this year.

In this field of cooperative endeavour we have also agreed to set up an expert-level dialogue mechanism to discuss interaction in cooperation on issues regarding trans-border rivers. This is an issue of considerable significance for both of us. It is an issue which impacts on development, and the development of our economies and societies in both countries.

We are already receiving very valuable hydrological data from China in respect of two rivers – the Brahmaputra and the Sutlej and we have agreed to finalise at an early date similar arrangements for the Parlung Zangpo and the Lohit. It has also been decided to establish an India-China partnership in science and technology and four sectors have been identified for this, to start with, which will focus on nanotechnology including advanced materials, biotechnology, earthquake engineering, climate change, and weather forecasting.

We have also, and you would have seen this in the Joint Declaration, agreed to step up cooperation in the field of civilian nuclear energy both bilaterally and through multilateral projects like ITER. I draw your attention to paragraph 27 of the Joint Declaration.

We have also agreed that the international civilian nuclear cooperation should be advanced through innovative and forward-looking
approaches. The other dimension that the two leaders looked at was increasing people-to-people exchanges and especially youth exchanges. The Government of China has invited 5000 youths from India over the next five years. We see this aspect of our relationship as really an investment in the future.

There are several other events at the people-to-people level including the organisation of Festival of India in China and a Festival of China in India. The year 2007 will be celebrated as “India-China Friendship Through Tourism” Year. You would have seen what has been done to make visas easier. We hope to do more work on that. We are also cooperating on making Nalanda a major centre of learning. We think these are important because these provide a solid base for the functional exchanges, for the other cooperation.

The two leaders also had a very useful exchange of views on the boundary question. They expressed appreciation for the progress and the effort and the work that these special representatives have put in, particularly for the achievement of signing the Agreement on Political Parameters and Guiding Principles for Boundary Settlement last year, and they asked them to hasten their work and to see that we can arrive at a boundary settlement. Earlier, they set this as a strategic goal for the relationship.

The most interesting part for me at least in these discussions was the very strong affirmation that India-China relations are no longer just a bilateral relationship but now have both a regional and global significance. This is something that you would have heard, President Hu also mentioned in the interaction.

Both sides are determined to ensure that India and China as good neighbours work together in their bilateral pursuits, that the rise of India and the rise of China in a sense are mutually reinforcing. We see this as helping us to develop our own societies. Good relations between the two countries contribute not only to our own development and to peace and prosperity in the region but we feel also for the rest of the world.

To sum up, I think we are very satisfied with the outcome of the discussions and with the understandings and with the agreements reached. I would be very happy to take any questions that you might have. Thank you.

**QUESTION:** Sir, I would draw your attention to point No.39 on page 7 of Joint Declaration on civilian nuclear cooperation. Are we to understand
that it indicates that China is ready to take a positive approach towards India?

FOREIGN SECRETARY: I think we have not come to that stage yet. We have had a conversation. As you know, we have had informal conversations with members of the NSG and we have told them what we think of the issue. But I do not think we have quite come to the stage yet where the NSG has to consider or to respond. I do not think they feel called upon to and we have not even asked them to at this stage to respond to that. I think it speaks for itself where it speaks of innovative and forward-looking approaches. I think that speaks for itself. It is clear that we all agree that this cooperation needs to be encouraged. We will have to find the way to do it.

QUESTION: Do you see it as a positive signal?

FOREIGN SECRETARY: I think it is positive, yes, it is.

QUESTION: In the same paragraph on the subject of civilian nuclear cooperation, were any details discussed on how to promote this?

FOREIGN SECRETARY: To the extent that we have discussed this earlier, we have discussed it during the visit. I think what you see is an expression of where we are today. We will take this conversation forward. You will notice this is in the larger context of energy security and how important that is. This is a shared concern. In fact, both leaders spoke of energy security, food security, environment as being issues which affect both of us and are going to be major concerns where we can work together, where we see we will need to. As I said, our own development processes will be mutually reinforcing.

QUESTION: More on the civilian nuclear cooperation, are there any firm details on how that cooperation is going to take shape? Is it exchanging technology, fuel, or specifics?

FOREIGN SECRETARY: Bilaterally, we have an ongoing cooperation with China. China, if you recall, supplied fuel for Tarapur in the early 1990s under IAEA safeguards. We have an ongoing cooperation programme with China. It is not as though we are starting from scratch here and that, you will notice, is reaffirmed in para 27 of the Joint Declaration. What we are talking about in para 39 is really the broader question of energy security and, as I said, of the new arrangements that we are entering into to make it possible for India and the rest of the world to cooperate in
civilian nuclear energy. But that is not a conversation which has come to
the point where they have been asked to say yes or no or we do it this way
or we do it that way. Not yet. That is still an ongoing conversation for obvious
reasons.

**QUESTION:** Can you give us some sense of the discussion between
the two leaders on the boundary question? Specifically there is a reference
in the Joint Declaration that the Joint Working Group should exchange
maps as soon as possible. This has been a sticking point as far as the
Working Group is concerned. Are we to understand that after this meeting
the exchange of maps is going to happen because of the reference ‘as
soon as possible’ in the Joint Declaration?

**FOREIGN SECRETARY:** I think there are two aspects to this. One is
the maintenance of peace and tranquility on the border because that creates
an enabling environment for us not just for discussing a boundary settlement
and for making progress on it but also in the general sense I think it is an
important aspect. And it is something we have done more than satisfactorily,
(in fact) very successfully for several years on the border. Ever since the
1993 agreement, we have maintained peace and tranquility all along the
border and both leaders expressed satisfaction at having achieved that.
The second part of it is work towards a boundary settlement. As you know,
we have made progress in those discussions. Last year we did the Guiding
Principles and Political Parameters. It is our hope that the Special
Representatives, when they meet and when they talk about it, can accelerate
the progress towards that. But our basic approach to the boundary question,
ever since the Rajiv Gandhi visit in December 1998, is to deal with the
boundary question, try and find a solution, but in the meantime to develop
the rest of the relationship. It would be a huge strategic gain if we could
settle it tomorrow and both sides want to settle it soon. But it is not holding
up the rest of the relationship, the comprehensive economic engagement or
the other work that we are doing.

**QUESTION:** Did we raise the issue of UN reform specifically and
India’s case for permanent membership in the Security Council?

**FOREIGN SECRETARY:** It was raised, discussed, and I think you
have a reference in para 38 to reform of the UN both in general and in
terms of reform of the UN Security Council and it is a question that we will
continue consulting. We were assured also in the course of our consultations
with the Chinese side that China will not be an obstacle to India’s
membership of the Security Council. But this is a conversation that still has
to go on because, as you know, this is not something that depends on one country or another. It is something that ultimately the UN system itself has to agree on reform and when we come to that stage we will see how it works itself out in practice. But there is no change in the Chinese position compared to what you heard about it.

**QUESTION:** They are still non-committal?

**FOREIGN SECRETARY:** That is not what I would call that. I would not call that non-committal but that is your characterization.

**QUESTION:** Was there any discussion on the issue of terrorism in the context of South Asia?

**FOREIGN SECRETARY:** There was a general discussion on terrorism. I think the Chinese are as concerned as we are about the fact of terrorism and its various sources. We have talked to them about it. We are working together actually on counter-terrorism as well. It is an element in our discussions with them. It is mentioned in passing. But you must appreciate that in three and a half hours you cannot cover everything in great detail.

**QUESTION:** You have talked about exchanging hydrological data. But China has been talking consistently about diversion of water from the Zangbo river to the Brahmaputra. This is a concern for India. Has this issue been raised?

**FOREIGN SECRETARY:** I think the Chinese Official Spokesman in Beijing and the Chinese Ambassador here have denied it. They have said they have no plans on it. But the fact is we now have a forum where we can discuss water issues whatever they are. Whether it is a question of diversion, whether it is a question of use, whether it is hydrological data, all these issues can be discussed in this forum. So we now have a forum to discuss it in. But the fact is that they have denied these reports that they plan to divert the water to Brahmaputra.

**QUESTION:** Can you tell us a little bit more about the trans-border activities. And also, would you say that trade would subsume the differences that we have?

**FOREIGN SECRETARY:** We do not see these as mutually exclusive or that somehow the trade solves all the differences. It just makes it easier. It gives you an atmosphere in which to address the differences, that is
true. The goal of 40 billion dollars we think is achievable by 2010 because if you look at the rate of growth in India-China trade over the last few years, it has really been very fast. It is well over 16 per cent I think in the first nine months of this year for instance. Otherwise we do not see this as exclusive. We would like to try and settle our differences as soon as possible. If it is a boundary issue, for instance, we would like to settle it and both sides are trying their best. We do not see one is stopping or starting the other. I do not think that is how we see it.

QUESTION: On the trans-border linkages …

FOREIGN SECRETARY: Trans-border linkages, I think what we are talking about is not just pilgrimages but also meeting points, and border trade, and also about traditional linkages across these borders which are of immediate interest to the people who live in those regions, near the boundary. It makes sense from their point of view to have links across these borders. This is really a part of our larger policy if you look at all our borders. As the Prime Minister also likes to say, you cannot change your borders but you can make the borders irrelevant. You can build up a kind of relationship across these borders which contributes to a peaceful environment which is what we need to develop our own country.

QUESTION: On the issue of civilian nuclear energy, para 27 (of the Joint Declaration) says, ‘consistent with the respective international commitments’. Does that once again raise the issue of India being a non-signatory to NPT? Since there have been no significant announcement except for the targets that have been set, do you see it as a mere symbolic statement?

FOREIGN SECRETARY: We could hardly say that we will do this in contravention of our own responsibilities and commitments. We will do whatever we do in accordance with our commitments just as I am sure China will do the same. That is just a statement of fact. I do not think it raises a question or complicates it at all. This is a statement of fact. Each of us will implement our commitments. It is on your word that international relations are built. You have to at least keep to your word. So, I do not think that complicates it at all. In fact, if you read the paragraph, it is the determination of both the countries to continue cooperating in an area, civilian nuclear energy, where they have been cooperating in the past. I would much rather that you read it as such.

QUESTION: If you can look at the next paragraph which talks about the space technology, can you expand on what the strengthening of
cooperation will be on satellite launch services? Does it mean reciprocal exchange of satellites or joint missions?

FOREIGN SECRETARY: I think they are discussing all these possibilities. All the things which you have mentioned are on the table. We have a forum directly where we discuss these. But it is something that I should leave for the technical people to answer, frankly.

QUESTION: Going back to the boundary issue, the boundary talks are yet to be successfully concluded. Did the two leaders at any point attempt to give a political push to solve the sticking points in their discussions?

FOREIGN SECRETARY: I think what we are trying to do is to set the dates for the next meeting of the Special Representatives and we are doing so through diplomatic channels. I think very soon we will probably agree on the fresh dates. I think the political push is clear when they say, ‘please accelerate your work’. When both leaders say this in a Joint Declaration, then I think that is a political push to a boundary settlement.

QUESTION: It is a general question about how you think China sees India’s role in the region. I think the Joint Statement refers to the two countries’ respective roles. Do you think China is yet ready to see India as an equal in Asia?

FOREIGN SECRETARY: I can only tell you what they said. Frankly, this question you should ask the Chinese, not me. How China sees things is for China to answer. But I can tell you what they said to us at the highest level, which is that China-India relations has gone beyond bilateral relations and has global significance. It is one of the most important bilateral relations in the world and this is the consistent view of the Chinese Government.

QUESTION: Did you refer to Pakistan in the talks, either on Sino-Pak nuclear deal, or on terrorism, or in any other way?

FOREIGN SECRETARY: Not that I know of.

New Delhi, November 21, 2006.

PRIME MINISTER: Good afternoon, Ladies and Gentlemen.

President Hu Jintao and I have had cordial, open and constructive talks focusing on our bilateral relations and cooperation on regional and multilateral issues. The Joint Declaration we have agreed on reflects the understandings arrived at in our talks. It puts in place a ten pronged strategy to intensify cooperation in all areas and to give greater content to our strategic partnership. The nature and range of agreements signed today point to the consolidation and diversification of our bilateral relations. President Hu and I have agreed that the positive development of India China relations in recent years must be made irreversible.

Our two Governments have agreed to hold regular summit level meetings and intensify high level exchanges. We will strengthen institutional linkages and inter ministerial dialogue mechanisms. Additional Consulates General will be opened in each country, one in Kolkata for China and one in Guangzhou for India, to facilitate our growing interaction in trade and tourism. We are happy that the long pending issue of the property of the Indian Consulate in Shanghai has been resolved.

President Hu and I have agreed that comprehensive economic and commercial engagement between India and China will receive our urgent and particular attention. We will endeavour to raise the volume of bilateral trade to US$ 40 billion by 2010 and encourage two way investment flows. We have instructed the Joint Task Force to expedite its study of the feasibility and benefits of the India China Regional Trading Arrangement and submit its report by October 2007. It has been decided to boost trans border connectivity and cooperation. We have endorsed a major initiative on science and technology, which will involve launching of several joint projects. Cooperation in the field of civilian nuclear energy will be promoted. We are also convinced of the imperative need to broad base the relationship through enhanced people to people contacts and cultural ties. There will be several initiatives in this regard, including the launching of an ‘India China Year of Friendship through Tourism’ in 2007 and a five year programme for exchange of youth delegations.

At the fulcrum of our efforts is our collective political will to enrich
and reinforce our strategic and cooperative partnership for peace and prosperity and to resolve outstanding issues in a focused, sincere and problem solving manner.

President Hu and I appreciate the progress the two Special Representatives have made in their discussions on the boundary question. We are asking them to accelerate their efforts to arrive at a boundary settlement on the basis of the Agreement on Political Parameters and Guiding Principles signed in April last year. We agree that an early boundary settlement will advance the basic interests of the two countries and must therefore be pursued as a strategic objective. Such a settlement will invest our strategic partnership with further strength and dynamism.

As two large Asian states and as two of the fastest growing emerging economies of the world, cooperation between India and China transcends the bilateral and has global significance. Jointly, our two countries can make effective contributions in dealing with global issues of sustainable and equitable development, energy security, peace and prosperity in Asia and in the world, environment protection and the fight against terrorism and cross border crimes.

I am reassured following my talks with President Hu today that as India and China move forward towards all-round national progress, friendship will be the underlying theme of our cooperation. We will take strength from our cooperative endeavours. President Hu and I are in full agreement that the prospects are bright for the simultaneous development of India and China. There is enough space for the two countries to develop together in a mutually supportive manner while remaining sensitive to each other’s concerns and aspirations, as befits good neighbours and partners for mutual benefit.

**PRESIDENT HU JINTAO:*** His Excellency Prime Minister Dr. Manmohan Singh, dear friends, ladies and gentlemen, I am very happy to visit the beautiful country of India.

To begin with, please allow me to take this opportunity to express our heartfelt gratitude to the Indian Government and people for the warm reception and protocol arrangements.

My friend Prime Minister Singh has already made a detailed interaction about the achievements that we have scored during the talks. So, what I need to do now is just to add a few more things. Just now, Prime
Minister Singh and I have had friendly and candid talks and we had an in-depth exchange of views on the bilateral relationship and other regional and international matters of mutual interest. Both Prime Minister Singh and I are satisfied with the growth momentum in our relationship.

We both believe that both China and India are major developing countries and our relationship is of global significance with bilateral, regional and international dimensions. China and India share broad and sustained common interests. China and India are true friends and cooperation partners. Our two countries need to carry forward our friendship in the long run, work hand in hand for cooperation and common development and work together to promote peace and development in Asia and the world at large.

We have decided to further expand and deepen our cooperation in economics, trade, finance, information, energy, science, technology, agriculture, human resources development, education and other fields.

The two countries will sign agreements on the investment promotion and protection, and the two sides have also started a new objective to raise the two way trade volume to a level of 40 billion US dollars in the year 2010. The two sides have also decided to speed up the joint feasibility study conducted by the two countries together on our regional trade arrangements.

The two sides have agreed to set up additional Consulates General in each other’s countries - one in Kolkata for China and the other in Guangzhou for India. The two sides have agreed to hold jointly a “China-India Year of Friendship through Tourism” in the year 2007.

I also announce on behalf of the Chinese Government our decision to invite five thousand young people from India in the next five years for a visit to China. We both believe that an early settlement to the boundary question serves the fundamental interests of our two countries and represents the common strategic objectives for the two countries. The two sides agreed to continue their efforts, intensify their work and follow the spirit enshrined in the agreement on the political guiding principles for settlement of the boundary question and explore and find such framework that is fair, reasonable and mutually acceptable. For any eventual solution to the boundary question the two sides need to continue their efforts to work together to maintain peace and tranquility in the border areas.
Both China and India are fully confident of the future of this relationship and we are willing to work together to facilitate the all-round and in-depth development of the strategic and cooperative partnership between our two countries.

220. Joint Declaration by the Republic of India and the People’s Republic of China issued during the visit of the Chinese President Hu Jintao.

New Delhi, November 21, 2006.

1. H.E. Mr. Hu Jintao, President of the People’s Republic of China, is currently paying a State visit to the Republic of India from 20 to 23 November 2006 at the invitation of H.E. Dr. A.P.J. Abdul Kalam, President of the Republic of India.

2. President Hu Jintao held talks with Prime Minister Dr. Manmohan Singh, earlier today. He will call on President Dr. A. P. J. Abdul Kalam later in the day. Vice President Shri Bhairon Singh Shekhawat, Speaker, Lok Sabha Shri Somnath Chatterjee, and Leader of the Opposition in Lok Sabha Shri L. K. Advani will pay courtesy calls on President Hu Jintao. Smt. Sonia Gandhi, Chairperson, United Progressive Alliance, will meet him. Earlier today, Minister of External Affairs Shri Pranab Mukherjee called on the visiting Chinese President. President Hu Jintao will deliver a policy address at the Vigyan Bhawan and attend the India-China Friendship Year commemorative function. He will also visit Agra and address a business summit in Mumbai, among other engagements.

3. The leaders of the two countries have noted with satisfaction the all-round progress made over recent years in India-China relations and their regional and multilateral cooperation. They reiterate the shared vision and fundamental principles for the future development of India-China relations, as embodied in the Declaration on Principles for Relations and Comprehensive Cooperation of 23 June 2003 and the Joint Statement of 11 April 2005 signed between the Prime Ministers of the two countries.
4. Both sides agree that the relationship between India and China, the two biggest developing countries in the world, is of global and strategic significance. Both countries are seeking to avail themselves of historic opportunities for development. Each side welcomes and takes a positive view of the development of the other, and considers the development of either side as a positive contribution to peace, stability and prosperity of Asia and the world. Both sides hold the view that there exist bright prospects for their common development, that they are not rivals or competitors but are partners for mutual benefit. They agree that there is enough space for them to grow together, achieve a higher scale of development, and play their respective roles in the region and beyond, while remaining sensitive to each other’s concerns and aspirations. Strategic partnership between the two countries with a similar worldview is consistent with their roles as two major developing countries. With the growing participation and role of the two countries in all key issues in today’s globalising world, their partnership is vital for international efforts to deal with global challenges and threats. As two major countries in the emerging multi-polar global order, the simultaneous development of India and China will have a positive influence on the future international system.

5. In order to promote the sustainable socio-economic development of India and China, to fully realise the substantial potential for their cooperation in a wide range of areas, to upgrade India-China relations to a qualitatively new level, and to further substantiate and reinforce their Strategic and Cooperative Partnership, the leaders of the two countries have committed themselves to pursuing the following “ten-pronged strategy”:

I. Ensuring Comprehensive Development of Bilateral Relations:

6. Both sides are committed to making the positive development and diversification of India-China relations in recent years an irreversible trend.

7. The two sides agree to hold regular Summit-level meetings, in each other’s country and in multilateral forums. They agree that high-level exchanges between Governments, Parliaments and political parties play an important role in expanding overall bilateral cooperation.

8. In order to sustain, facilitate and promote greater engagement
between the two countries, an additional Consulate General shall be opened in each other's country. The Indian side shall open a new Consulate General in Guangzhou, while the Chinese side shall open a new Consulate General in Kolkata. In this context, the mutually satisfactory resolution of the long-pending issue of the property of the Consulate General of India in Shanghai is a positive development.

II. Strengthening Institutional Linkages and Dialogue Mechanisms:

9. The two sides shall strengthen institutional linkages between their Governments in different areas and levels with a view to foster synergy and cooperation and promote greater understanding of each other's policies and positions on important national, regional and international issues. The concerned ministries and organisations of the two countries shall intensify exchanges under the existing dialogue mechanisms and revitalise those that have not been regularly used. The signing of the Protocol of Cooperation between the Ministry of External Affairs of India and the Ministry of Foreign Affairs of China during the visit is an important step in this direction.

III. Consolidating Commercial and Economic Exchanges:

10. Both sides believe that comprehensive economic and commercial engagement between India and China is a core component of their Strategic and Cooperative Partnership. They will endeavour to raise the volume of their bilateral trade to US$ 40 billion by 2010. They shall make joint efforts to diversify their trade basket, remove existing impediments, and optimally utilise the present and potential complementarities in their economies, in order to sustain and further strengthen bilateral commercial and economic cooperation. Towards this end, both sides will attach utmost priority to an early implementation of the decisions taken in March 2006 by the Ministerial-level Joint Economic Group, including the recommendations of the Joint Study Group, through mechanisms already created for this purpose. The Joint Task Force set up to study the feasibility and benefits of an India-China Regional Trading Arrangement shall complete its work by October 2007.

11. The conclusion of the Bilateral Investment Promotion and Protection Agreement during the visit is a welcome development that will provide the institutional and legal basis to encourage and promote greater investment flows between the two countries.
12. The Chinese side has invited India to participate in the World Exposition Shanghai 2010. The Indian side expressed its appreciation and stated that it will actively support and participate in the event.

IV. Expanding All-Round Mutually Beneficial Cooperation:

13. The two sides agree to further strengthen positive trends in the all-round development of relations and fully realize the substantial potential of cooperation, including in trade, industry, finance, agriculture, water resources, energy, environment, transportation, infrastructure, information technology, health, education, media, culture, tourism, youth affairs and other fields.

14. Both sides agree to fully implement the provisions of the Memorandum on Cooperation in the field of Oil and Natural Gas signed in January 2006 and encourage collaboration between their enterprises, including through joint exploration and development of hydrocarbon resources in third countries.

15. Given the complementarities that India and China enjoy in the area of information and communication technology, the two sides agreed to strengthen mutually beneficial cooperation in this sector, through closer policy dialogue and enhanced collaboration among their enterprises, including in third countries.

16. The two sides shall fully implement the Memorandum of Understanding on Agricultural Cooperation, step up the exchange of experience in the field of agriculture and rural development, including food security, and hold discussions and consultations on the standards for agricultural goods at an early date in order to facilitate trade in such goods.

17. The two sides will set up an expert-level mechanism to discuss interaction and cooperation on the provision of flood season hydrological data, emergency management and other issues regarding trans-border rivers as agreed between them. The on-going provision of hydrological data for the Brahmaputra/Yarlung Zangbo and the Sutlej/Langqen Zangbo Rivers by the Chinese side to the Indian side has proved valuable in flood forecasting and mitigation. The two sides agree to continue bilateral discussions to finalise at an early date similar arrangements for the Parlung Zangbo and Lohit/Zayu Qu Rivers.
18. Both sides shall intensify their consultations, bilaterally and in multilateral fora, on sustainable development, bio-diversity, climate change and other related environmental issues of common concern. The cooperation in wildlife conservation, particularly in tiger conservation, shall be stepped up.

V. Instilling Mutual Trust and Confidence through Defence Cooperation:

19. The exchange of visits in the field of defence has resulted in building of mutual trust and enhancement of mutual understanding between the defence establishments of the two countries. Both sides shall fully implement the provisions of the Memorandum of Understanding for Exchanges and Cooperation in the field of Defence signed on 29 May 2006, which provides a sound foundation and institutional framework for further development of defence cooperation.

VI. Seeking Early Settlement of Outstanding Issues:

20. Both sides are committed to resolving outstanding differences, including on the boundary question, through peaceful means and in a fair, reasonable, mutually acceptable and proactive manner, while ensuring that such differences are not allowed to affect the positive development of bilateral relations.

21. The Special Representatives of India and China on the boundary question have taken steps and shall continue to strive to arrive at a boundary settlement on the basis of the Agreement on Political Parameters and Guiding Principles for the Settlement of India-China Boundary Question signed on 11 April 2005. An early settlement of the boundary question will advance the basic interests of the two countries and shall, therefore, be pursued as a strategic objective. The Special Representatives shall complete at an early date the task of finalising an appropriate framework for a final package settlement covering all sectors of the India-China boundary. Pending the resolution of the boundary question, both sides shall maintain peace and tranquillity in the border areas in accordance with the agreements of 1993, 1996 and 2005.

22. Along with the talks between the Special Representatives, the Joint Working Group on the India-China Boundary Question shall expedite their work, including on the clarification and confirmation of the line
of actual control and the implementation of confidence building measures. It was agreed to complete the process of exchanging maps indicating their respective perceptions of the entire alignment of the LAC on the basis of already agreed parameters as soon as possible.

VII. Promoting Trans-border Connectivity and Cooperation:

23. Both sides shall promote greater trans-border cooperation at mutually agreed sites in India-China border areas with the objective of transforming their border from being a dividing line into a bridge that unites them in cooperative pursuits. In this context, border trade between India and China, including the recent resumption of border trade through the Nathula La Pass, is of significant importance. The two sides shall strengthen border trade through the existing locations, while continuing to explore the possibility of opening additional trading routes in India-China border areas.

24. The two sides welcome the organisation of a car rally, recommended by the BCIM Forum, between Kolkata and Kunming via Bangladesh and Myanmar.

25. The Chinese side shall provide greater facilitation to Indian pilgrims for the Kailash Mansarovar Yatra. Both sides shall explore the possibility of opening an additional route for the Yatra.

VIII. Boosting Cooperation in Science and Technology:

26. Bearing in mind the priority attached by India and China to scientific and technological development and innovation as a cornerstone of their efforts towards sustainable socio-economic development, the two sides shall establish an India-China Partnership in Science and Technology. The two sides welcome the establishment of the Ministerial-level Committee on Science and Technology Cooperation as a positive step in guiding, coordinating and facilitating cooperative activities. They agree to launch joint projects in the areas of

(i) earthquake engineering,

(ii) climate change and weather forecasting,

(iii) nano-technology with focus on advanced materials, and

(iv) biotechnology and medicines with focus on bio-nano. The cooperation framework shall include entrepreneurs on both
sides, besides the two Governments and their respective institutions.

27. Considering that for both India and China, expansion of civilian nuclear energy programme is an essential and important component of their national energy plans to ensure energy security, the two sides agree to promote cooperation in the field of nuclear energy, consistent with their respective international commitments. As two countries with advanced scientific capabilities, they stress the importance of further deepening cooperation bilaterally as well as through multilateral projects such as ITER, and enhance exchanges in the related academic fields.

28. As countries, which have made advances in space technologies, both sides reiterate their commitment to the use of outer space for peaceful purposes. They agree to strengthen their cooperation in the use of space-based technologies for peaceful and developmental applications, including through satellite remote sensing, satellite communications, satellite meteorology and satellite launch services. Cooperation in practical applications of space technology, such as those related to disaster management and distance education, shall also be actively explored. Towards this end, both sides shall fully implement the provisions of the Memoranda of Understanding on the peaceful use of outer space signed between India and China in December 1991 and January 2002.

IX. **Revitalising Cultural Ties and Nurturing People-to-People Exchanges:**

29. The centuries-old cultural contacts between the two peoples provide a strong foundation for enduring friendship between India and China. The initiatives to rediscover these historical linkages and revitalise them in the present day context, including through an early completion of the Xuanzang Memorial in Nalanda and the Indian-style Buddhist Shrine in Luoyang, will further strengthen these bonds. The two sides agree to strengthen cooperation in the area of spiritual and civilizational heritage, discuss collaboration in the digitisation of Buddhist manuscripts available in China as well as the re-development of Nalanda as a major centre of learning with the establishment of an international university on the basis of regional cooperation. In order to promote greater awareness of each other’s culture, the two sides shall organise a “Festival of India” in China.
and a “Festival of China” in India, with a joint logo. Detailed modalities in this regard will be decided by the concerned authorities through mutual consultations.

30. In order to promote greater academic exchanges between India and China, the two sides agree to work towards the establishment of an “India-China Exchange Foundation”. Detailed modalities of the Foundation will be worked out through mutual consultations.

31. India-China relations in the field of education will be further strengthened through a new Educational Exchange Programme concluded during the visit.

32. The two sides also agree to launch a five-year programme for mutual exchange of youth delegations. In this context, the Chinese side invites five hundred youth from India over the next five years.

33. With a view to vigorously promoting tourism between India and China, the two sides shall organise the “India-China Year of Friendship Through Tourism” in 2007 with a joint logo and take other initiatives, such as opening of the office of the China National Tourism Administration in India and an Indian Tourism Office in China, improved air connectivity, and continued liberalisation of the visa regime.

34. The two sides welcome cooperation linkages between the Indian States and the Chinese provinces in order to promote greater people-to-people exchanges.

X. Expanding Cooperation on Regional and International Stage:

35. The two sides shall hold regular exchange of views on the emerging security environment in the Asia-Pacific and in the world, and undertake proactive consultations on issues of immediate and emerging concern, so as to coordinate their positions and to make positive contribution towards peaceful resolution of such issues. They shall also have regular consultations on issues pertaining to regional peace, security and stability, such as regional maritime security, proliferation of weapons of mass destruction and related materials and their means of delivery, pandemics, natural disasters, illegal trafficking in arms, narcotics and people, and environmental degradation.

36. The two sides positively assess the trilateral dialogue mechanism among India, China and Russia and agree that exchanges and cooperation under it should be further substantiated.
37. Recognising that terrorism constitutes a crime against humanity that cannot be justified on any ground and condemning it in all forms and manifestations, the two sides agree to revitalise and broaden the India-China Dialogue Mechanism on Counter-Terrorism. They shall strengthen their efforts, bilaterally as also in the international fora, to fight against terrorism, separatism and extremism, and the linkages between terrorism and organized crime and illicit arms and drugs trafficking.

38. Recognising the central role of the United Nations in promoting international peace, security and development, both sides reiterate their determination to strengthen the UN system. The reform of the UN should be comprehensive, ensure balanced representation of developing and developed countries in the UN Security Council, and add to the efficiency and efficacy of the UN and its Security Council. The two sides shall conduct consultations on the question of UN reform, including the reform of the UN Security Council. The Indian side reiterates its aspirations for permanent membership of the UN Security Council. China attaches great importance to the status of India in international affairs. It understands and supports India’s aspirations to play a greater role in the United Nations.

39. Energy security constitutes a vital and strategic issue for producing and consuming countries alike. It is consistent with the common interest of the two sides to establish an international energy order, which is fair, equitable, secure and stable, and to the benefit of the entire international community. Both sides shall also make joint efforts, bilaterally as well as in multilateral fora, to diversify the global energy mix and to increase the share in it of renewable energy sources. Global energy systems should take into account and meet the energy needs of both countries, as part and parcel of a stable, predictable, secure and clean energy future. In this context, international civilian nuclear cooperation should be advanced through innovative and forward-looking approaches, while safeguarding the effectiveness of international non-proliferation principles.

40. Both countries are committed to non-proliferation objectives and agree to expand their dialogue on the related issues, in bilateral and international fora.

41. As two large developing countries with relatively successful developmental experiences, India and China share unique
responsibilities to protect and promote the interests of the developing world in the emerging international order and to help them benefit from the positive forces of globalisation. In this context, the two sides shall hold a two-part international seminar in Beijing and New Delhi, co-hosted by their Ministries of Finance, to share their developmental experience with other developing countries and the international community at large.

42. The two sides agree to strengthen their cooperation in the World Trade Organisation. They support the establishment of an open, fair, equitable, transparent and rule-based multilateral trading system, early resumption of Doha negotiations, and are determined to safeguard the legitimate rights and interests of the developing countries. As founder Members of the G-20 and the G-33, they are determined to strengthen their cooperation and to coordinate with other members of the WTO, especially the developing countries, in order to secure an early resumption of the negotiations on the Doha Work Programme, placing the development dimension at its heart.

43. Recognising that regional integration is an important feature of the emerging international economic order, the two sides agree to expand their coordination within regional organisations and explore a new architecture for closer regional cooperation in Asia. They positively view each other’s participation in Asian inter-regional, regional and sub-regional cooperation process, including in the progress towards the East Asian Community. In this context, the two sides agree to cooperate closely in the East Asia Summit. The Indian side welcomes China’s attainment of observer status in the South Asian Association for Regional Cooperation. The Chinese side welcomes India’s membership of the Asia-Europe Meeting. The two sides agree to expand their cooperation on issues of common interest under the Shanghai Cooperation Organisation.

44. The Indian side recalls that India was among the first countries to recognize that there is one China and that its one China policy has remained unaltered. The Indian side states that it would continue to abide by its one China policy. The Chinese side expresses its appreciation for the Indian position.

45. The Indian side reiterates that it has recognized the Tibet Autonomous Region as part of the territory of the People’s Republic of China, and that it does not allow Tibetans to engage in anti-China
political activities in India. The Chinese side expresses its appreciation for the Indian position.

46. The following agreements\(^1\) were signed during the visit:

i) Protocol on the Establishment of Consulates-General at Guangzhou and Kolkata;

---

1. The following is the synopsis of the agreements signed:

a. **Protocol between the Government of the Republic of India and the Government of the People’s Republic of China on the Establishment of Consulates-General at Guangzhou and Kolkata** *(Signatories: Shri Pranab Mukherjee, Minister of External Affairs and Mr. Li Zhaoxing, Minister of Foreign Affairs of the People’s Republic of China)*

   This Protocol provides for an Indian Consulate-General in Guangzhou, with its consular district covering the seven Chinese Provinces of Guangdong, Fujian, Hunan, Hainan, Yunnan, Sichuan and Guangxi Zhuang Autonomous Region. The Chinese Consulate-General in Kolkata will have its consular district covering the five States of West Bengal, Orissa, Chhattisgarh, Jharkhand and Bihar. This Protocol will help sustain, facilitate and promote greater engagement between India and China.

b. **Protocol on Cooperation between the Ministry of External Affairs of the Republic of India and the Ministry of Foreign Affairs of the People’s Republic of China** *(Signatories: Shri Pranab Mukherjee, Minister of External Affairs and Mr. Li Zhaoxing, Minister of Foreign Affairs of the People’s Republic of China)*

   This Protocol institutionalizes the bilateral dialogue and consultation mechanisms between the two Foreign Offices and provides for the establishment of a hotline between the two Foreign Ministers. The Protocol is expected to intensify dialogues, interaction and cooperation on issues of mutual interest between the two Foreign Offices.

c. **Agreement between the Government of the Republic of India and the Government of the People’s Republic of China on the Issue of Property of the Consulate General of the Republic of India in Shanghai** *(Signatories: Shri Pranab Mukherjee, Minister of External Affairs and Mr. Li Zhaoxing, Minister of Foreign Affairs of the People’s Republic of China)*

   Under this Agreement, the Chinese side shall provide the Indian side with a plot of land measuring an area of 5,000 square meters, free of charge for the construction of the premises of the Consulate General of India, Shanghai. The plot of land is provided to Indian side in lieu of the old Indian Consulate property in Shanghai. The signing of the agreement will bring to a close an issue which has remained outstanding for over 40 years now.

d. **Agreement between the Government of the Republic of India and the Government of the People’s Republic of China for the Promotion and Protection of Investments** *(Signatories: Shri Kamal Nath, Minister of Commerce and Industry and Mr. Bo Xilai, Chinese Minister of Commerce)*

   The Agreement provides for a framework for bilateral investment flows between the two countries, thereby creating favourable conditions for investors of one country to make investments in the other. This will send a positive signal to prospective Indian and Chinese investors and contribute to strengthening of the economic engagement between the two countries.

e. **Agreement of Cooperation on Inspection of Iron Ore between Export Inspection Council of the Republic of India (EIC) and the General Administration of Quality**
Supervision, Inspection and Quarantine of the People’s Republic of China (AQSIQ) (Signatories: Shri Kamal Nath, Minister of Commerce and Industry and Mr. Li Changjiang, Administrator, AQSIQ) The Agreement establishes a mechanism to inspect trade in iron ore between China and India. The Export Inspection Council of India and the General Administration of Quality Supervision, Inspection and Quarantine of China shall respectively recognise and designate inspection agencies in India and China. This Agreement is expected to give a further boost to bilateral trade in iron ore—the single largest export item from India to China.

f. The Protocol between the Ministry of Agriculture of the Republic of India and the General Administration of Quality Supervision, Inspection and Quarantine of the People’s Republic of China on Phytosanitary Requirements for Exporting Rice from India to China (Signatories: Shri Sharad Pawar, Minister for Agriculture and Mr. Li Changjiang, Administrator of AQSIQ) This Protocol, which provides the phytosanitary requirements regarding the entry into China of Basmati rice produced in India, will facilitate the export of Indian rice to China. Accordingly, Basmati rice that is exported to China shall comply with the Chinese plant quarantine laws and regulations and also adhere to the relevant measures under the WTO.

g. MOU between the Indian Council of Agricultural Research (ICAR) and the Chinese Academy of Agricultural Sciences (CAAS) for Cooperation in Agricultural Research (Signatories: Dr. Mangala Rai, Secretary, Department of Agricultural Research and Education and Director General, ICAR and Mr. Sun Yuixi, Ambassador of the People’s Republic of China to India) Under this MOU, the ICAR and CAAS agree to promote cooperation in the exchange of scientific personnel; germplasm and breeding material; scientific literature, information and methodology; equipment, etc. The signing of this MOU will facilitate cooperation in areas that are crucial to the well-being of a large part of their respective populations.

h. Exchange Programme between the Ministry of Human Resource Development of the Government of the Republic of India and the Ministry of Education of the Government of the People’s Republic of China on Cooperation in the Field of Education (Signatories: Shri R. P. Agarwal, Secretary (HE), Ministry of Human Resource Development and Mr. Cui Tiankai, Assistant Minister of Foreign Affairs of the People’s Republic of China) Through this Agreement the Ministry of Human Resource Development of India and the Ministry of Education of the Government of China seek to encourage the development of contacts and cooperation between the educational institutions of the two countries. As two developing countries with large human resources potential, cooperation in the area of education will contribute to the further broad basing of the bilateral relationship.

i. MOU between Forward Markets Commission, India and China Security Regulatory Commission Regarding Commodity Futures Regulatory Cooperation (Signatories: Shri S. Sundareshan, Chairman, Forward Markets Commission and Mr. Sun Yuixi, Ambassador of the People’s Republic of China to India) The purpose of this MOU is to promote investor protection and integrity of the commodity futures markets by providing a framework for cooperation, including channels of communication, increasing mutual understanding and exchange of regulatory and technical information.

j. MOU on Cooperation between the Indian Institute of Public Administration, India and the Party School of the Central Committee of the Communist Party of China, the People’s Republic of China (Signatories: Shri P. L. Sanjeeva Reddy, Director General, IIPA and Mr. Cui Tiankai, Assistant Minister of Foreign Affairs of
ii) Protocol on Cooperation between the Ministry of External Affairs of India and the Ministry of Foreign Affairs of China;

iii) Agreement on the Issue of Property of the Consulate General of India in Shanghai;

iv) Agreement on Bilateral Investment Protection and Promotion;

v) Memorandum of Understanding on Inspection of Export Cargo (Iron Ore);

vi) Protocol on Phytosanitary Requirements for Exporting Rice from India to China;

vii) Memorandum of Understanding between Forward Markets Commission of India and China Securities Regulatory Commission regarding Commodity Futures Regulatory Cooperation;

the People’s Republic of China) The MOU provides for cooperation between the IIPA and the CPS on issues of common interest such as rural development, agriculture, poverty alleviation, public administration, public policy, role of government in a market economy and role of Planning Commissions. The signing of the MOU reflects the desire of the public administration institutions of the two sides to better understand each other’s systems of governance and promote cooperation and exchange of experience. [Note: The CPS is a school for developing mid and high level Party and government officials under the direct leadership of the Central Committee of the Communist Party of China.]

k. The Agreement on Forestry Cooperation between Ministry of Environment and Forests of the Republic of India and State Forestry Administration of the People’s Republic of China (Signatories: Shri Gopal Krishna Prasad, Director General of Forests & Special Secretary, Ministry of Environment and Forests and Mr. Cui Tiankai, Assistant Minister of Foreign Affairs of the People’s Republic of China) Under this Agreement the two sides shall support cooperation and development in forestry related fields of economy, manufacturing, processing, and science & technology. This would provide an opportunity for the two sides to gain better insight into an important part of the other’s natural ecosystem and the activities that influence them.

l. MOU between the Archaeological Survey of India of the Republic of India (ASI) and the State Administration of Cultural Heritage of the People’s Republic of China (SACH) on Cooperation in the Conservation of Cultural Heritage (Signatories: Shri C. Babu Rajeev, Director General, Archaeological Survey of India and Mr. Shan Jixiang, Director General of State Administration of Cultural Heritage of China) The MOU provides for cooperation between ASI and SACH in the field of cultural heritage. Cooperation shall include exchange of professional experience; training of personnel; and joint scientific and academic research in related spheres of activity. Such cooperation assumes significance for the two countries which are inheritors of the oldest civilisations in the world.
viii) Memorandum of Understanding on Cooperation between the Indian Institute of Public Administration and the Central Party School of the Communist Party of China;

ix) Agreement on Forestry Cooperation;

x) Memorandum of Understanding between the Indian Council of Agricultural Research and the Chinese Academy of Agricultural Sciences;

xi) Exchange Programme on Cooperation in the Field of Education;

xii) Memorandum of Understanding on Cooperation in the Conservation of Cultural Heritage; and

xiii) Agreement on Preventing Theft, Clandestine Excavation and Illicit Import and Export of Cultural Property.

47. The two sides believe that the highly successful visit of President Hu Jintao to India marks the high point of the India-China Friendship Year in 2006, promotes mutual understanding and trust, helps in substantiating the Strategic and Cooperative Partnership between the two countries and leads to a qualitative and quantum improvement in bilateral relations. They also agree that this Joint Statement provides a valuable blueprint for enduring development and diversification of the relations between India and China and sustained enrichment of their strategic partnership.

48. President Hu Jintao extended invitations to President Dr. A.P.J Abdul Kalam and Prime Minister Dr. Manmohan Singh to visit China. The invitations were accepted with appreciation. The timing of the visits will be decided through diplomatic channels.

---

**m. Agreement between the Government of the Republic of India and the Government of the People's Republic of China on Preventing Theft, Clandestine Excavation and Illicit Import and Export of Cultural Property**

(*Signatories: Shri C. Babu Rajeev, Director General, Archaeological Survey of India and Mr. Shan Jixiang, Director General of State Administration of Cultural Heritage of China*)

Under this Agreement, the Ministry of Culture of India and the State Administration of Cultural Heritage of China shall collaborate in adopting preventive, mandatory and remedial measures to combat unlawful and criminal practices concerning the theft, clandestine excavation and illicit import and export of cultural property.
221. Speech by President A. P. J. Abdul Kalam at the Banquet in honour of the President of the People’s Republic of China Hu Jintao.

New Delhi, November 21, 2006.

Your Excellency,

Mr. Hu Jintao,

President of the People’s Republic of China,

Madam Liu Yongqing,

Excellencies,

Distinguished Guests, Ladies and Gentlemen,

It gives me great pleasure to very warmly welcome you, Mr. President and your delegation to India. Your visit is indeed a historic milestone in our bilateral relations. Its significance is further enhanced as it comes as the high point of the celebrations of the India-China Friendship Year. Today, we look back with great satisfaction at the steady evolution of our relations to new levels of cooperation and mutual understanding. There is a long and fascinating history of cultural and civilisational exchanges between our two countries. These exchanges in the fields of architecture, music, painting, astronomy, mathematics and medicine, and the role played by Buddhism in bringing our countries together in times gone by have been chronicled extensively. Our traditional friendship and civilisational contact continue to provide a strong underpinning to the development of our present day dialogue and interaction. We are confident in our belief, Mr. President that our relations will continue to flourish and grow in the years to come in multiple fields.

Let me recollect our history when, around the year 1750 A.D., China and India together accounted for almost two-thirds of the total world trade before colonization of both our countries. Our joint mission in the area of trade should always lead to higher and more competitive output in terms of trade. This will lead to a more prosperous and better world.

Excellency, India looks at China’s rapid development with deep interest and appreciation. As a large developing country, endeavouring to seek inclusive development for its people, India faces many of the challenges that China also does. As our two countries take steady steps in
