their forward march towards progress and prosperity, close cooperation between us is imperative for the overall betterment of humanity. I am aware that you have visited India in the past. Your visit this time would give you an opportunity to see and understand the significant developments that have taken place in India since then. I am confident that as our two countries develop and our peoples prosper, our cooperation and exchanges will achieve even greater substance and sustenance. The pace at which India-China relations have recently grown across a comprehensive spectrum testifies this. We are confident that your visit will impart significant momentum to this positive process.

Convergence of technologies is taking place at a fast pace and both our countries can work together in this area. Information and communication technology have converged into ICT. Information Technology has also combined with biotechnology and converged into bio-informatics. When bio-informatics will combine with nanotechnology, we can make great progress towards a disease free, happy and more intelligent human habitat.

Excellency, our relationship transcends our bilateral interaction. With a population of one third of humanity that is constantly moving forward, what happens in India and China concerns the whole world. Our healthy economic growth and steady national development is a stabilizing factor in today’s international economic order. Both our countries seek a peaceful environment to focus on the paramount task of national development. Positive trends in India-China relations, therefore, promote peace, stability and harmonious development in the region in which we live and even beyond. The youth of our two countries presents the greatest source of our strength and hope. The successful Youth Exchange programme between our two countries is an example of how these citizens of tomorrow can appreciate the great cultures of our two nations and look forward to a bright and harmonious future.

The regional and global perspective of our ties further necessitates that we take a long-term and strategic view of our relationship. We need to add more substance and meaning to our strategic relationship. Our discussions fully reflect our shared commitment to this end and are another pointer to the maturity of our relationship. Together, we can strengthen the global quest for multipolarisation and multilateralism, and harness the positive forces of globalization for the benefit of developing countries.

Excellency, India views its relations with China as being of utmost importance and remains fully committed to further invigorating the strategic
and cooperative partnership between our countries. We are confident that with the joint efforts of both sides, we will achieve this laudable goal. Let me once again welcome Your Excellency and Madam Liu Yongqing to India.

Excellencies, Ladies and Gentlemen, may I request you to join me in raising a toast to:

— the good health of his Excellency President Hu Jintao and Madam Liu Yongqing;
— the well-being of the Chinese people, and;
— everlasting friendship between India and China.

222. Address by President Dr. A. P. J. Abdul Kalam at the Friendship Year Commemorative Function during the visit of Chinese President Hu Jintao.

New Delhi, November 21, 2006.

India-China Friendship will lead to World Peace

Dear friends, it is indeed a beautiful day to commemorate the friendship year of the People’s Republic of China and the Republic of India in the presence of His Excellency Mr. Hu Jintao, the President of the People’s Republic of China. While I am with you, I would like to recall two scenes, one in India and another in China. These two episodes indicate the strong bonds between our two nations for many centuries which are continuing and which will continue.

Ancient Nalanda University and Hieun Tsang

The first scene, I would like to capture is a scene from the Nalanda Ancient University in India. I visited Nalanda and spent a full day there. This was a very active center of learning and research during the period between 5th to 12th Century A.D., in theology, philosophy and religion. Nearly 2000 teachers and 10000 students from many countries converged there and were studying and researching on how to elevate human minds. I saw the areas of Nalanda where the discourses took place, the remnants
of hermitages of monks and teachers. Hieun Tsang a famous Chinese philosopher and historian who came to India in the 5th century A.D. and stayed in Nalanda for 12 years as a student and a teacher and studied and researched the social and political conditions. His contemporaries were great thinkers like Nagarjuna, Dharmapal, and Aryadeva. Hieun Tsang has left detailed description of excellence of education in Nalanda. There is a memorial hall built in his memory. This indicates how educational connectivity in philosophy and theology existed between India and China, even during 5th Century A.D.

**Dr. D.S. Kotnis in China**

Now I would like to describe the second scene in China. Dr. D.S. Kotnis had worked as the Director of Dr. Bethune International Peace Hospital in Shec-Zia Zhong in China. Dr. Kotnis along with four other doctors were sent as the Indian Medical Mission Team in 1938 for providing medical cover to the people affected by Japanese invasion of China. All except Dr. Kotnis returned to India safely. Dr. Kotnis stayed in China for five years working in mobile clinics to treat wounded soldiers. Dr. Kotnis joined the 8-route army and worked 72 hours at a stretch for treating the war causalities. During his mission, Dr. Kotnis was a lecturer at the Dr. Bethune Hygiene School and the President of Dr. Bethune International Peace Hospital along with the Canadian Dr. Norman Bethune; Dr. Kotnis continues to be remembered by the Chinese people.

**Unity of Minds**

The deep historical and cultural association that our ancient civilizations share has made rich contributions in shaping the development of humanity and gives a unique dimension to India-China relations in contemporary times. The remarkable growth and diversification of India-China relations in recent years are a matter of satisfaction and gives optimism for the future of our relations. Today the footprints of India and China are increasingly visible and have made an impact on the global landscape in diverse areas. Our common pursuit of a peaceful environment for the paramount task of achieving national construction and prosperity adds great values to the India-China partnership.

The tradition of unity of minds, which we are building in India and China, can definitely enrich our society through technology, trade and business and above all a strategic partnership. The more, our two nations come closer and work together for the prosperity of the people, definitely
not only India and China will prosper but also this unique trend will lead to prosperity and peace in the world.

270The commemoration of the India–China Friendship year is truly a tribute to the distance traversed, through friendly exchanges and contacts, by two nations through the labyrinths of time. My best wishes to all the participants from China and India for success in their mission of reinforcing the strategic and cooperative partnership for peace and prosperity of the planet Earth.

May God bless you.

223. Address by President Dr. A. P. J. Abdul Kalam to the Youth Delegations during the visit of the Chinese President Hu Jintao.

New Delhi, November 21, 2006.

Enlightened Citizens of the World

I am delighted to participate and address the Youth Delegations of China and India in the company of his Excellency President Hu Jintao. It is always a unique experience to meet the young because they embody hope for the future. When I see you young friends, the youth of China and India I can see more than a billion youth of our planet. The youth indeed is well known for their ignited minds with a purpose and enthusiasm. The Ignited mind of the youth is indeed among all the resources, the most powerful resource, on the Earth, above the Earth and under the Earth. Both our countries are fortunate to have youth power of ignited minds.

Friends I would like to share certain experiences of the last four years as the President of India. I have travelled to almost all parts of my country and visited 14 countries. During these visits, I have interacted with over one million youth below 17 years of age both in the urban and rural environments. One message, I would like to give to the youth from India and China, is that youth irrespective of their nationality, have a dream to live in a peaceful, prosperous and happy nation. In these circumstances, what can be the mission for India and China? China already has got a
vision to build a harmonious society in China with economic development so as to achieve prosperity with its age old value system propagated by great philosopher like Confucius (Kong Fuzi) during the period 500 B.C. Similarly, young friends, India has a vision to transform itself into an economically developed nation before the year 2020 with its ethical base drawn from its civilizational heritage from before Buddha’s enlightenment in 500 B.C.

Friends, let me recall the great philosophy put forth by Confucius and Buddha for realizing a happy and harmonious and prosperous society. I would like to give the verses, which reflect the great thoughts of the two sages of great countries in the form of a hymn.

**Righteousness**

*Where there is righteousness in the heart,*
*there is beauty in the character.*

*Where there is beauty in the character,*
*there is harmony in the home.*

*Where there is harmony in the home,*
*there is an order in the nation.*

*Where there is order in the nation,*
*there is peace in the world.*

Dear young friends of India and China, can you see the beautiful thoughts of the great noble minds of China and India. Peace in the world indeed is born out of righteousness in the heart. Righteousness in the heart brings harmony in the home, which is cherished by both our countries.

What is needed today in the world is the birth of an enlightened society. To achieve an enlightened society, we need righteous citizens, who can be evolved through education with a value system up to the age of 17, religion transforming into a spiritual force, and above all both our nations playing a great role in uplifting the people of the countries who are living below the poverty line. This can be done by empowering the nation with knowledge and resources so that the inequality between people of various nations is reduced and peace is born.
The youth of our two countries with vision provided by the leaders of our nations can definitely bring peace, prosperity and happiness to our planet.

I wish you success in all your missions. May God bless you.

---

New Delhi, November 21, 2006.

The Ministry of External Affairs of the Republic of India and the Ministry of Foreign Affairs of the People’s Republic of China (hereinafter referred to as the “parties”),

Recalling their commitment to the fundamental principles for developing bilateral relations adopted through the Declaration on Principles for Relations and Comprehensive Cooperation between the Republic of India and the People’s Republic of China of June 2003;

Further recalling the visit of Premier Wen Jiabao to India in April 2005 during which the two sides characterized their growing relations as a Strategic and Cooperative Partnership for Peace and Prosperity;

Desirous of developing long-term friendly, good - neighbourly and mutually beneficial relations based on the principles of Panchsheel and mutual sensitivity to each others concerns and aspirations and equality,

Noting with satisfaction that bilateral relations between the two countries are gradually acquiring a greater global and strategic dimension,

Convinced that promotion of bilateral dialogue and exchanges at different levels on issues of bilateral relations and on regional and international issues of mutual interest contributes to further strengthening of mutual understanding and mutual trust between the two countries,

Recognising the need to further consolidate, institutionalize and strengthen their dialogue and consultation mechanisms, and
Convinced of the need to impart further substantive content to the growing bilateral relations,

Have agreed as follows:

ARTICLE I

The parties will institutionalize a system of regular meetings at the level of Foreign Ministers of the two countries and establish a hot line between the two Foreign Ministers to exchange views on bilateral relations and international and regional issues of common concern.

The hot line will be established within six months of the enforcement of this Protocol.

ARTICLE II

(a) The following shall be the levels and coverage of the different dialogue mechanisms:

i) The Strategic Dialogue at Foreign Secretary/Vice-Ministerial level to exchange views on major international and regional issues and those of long term significance to bilateral relations and to promote strategic partnership between the two countries;

ii) The Joint Secretary/Director General - level Foreign Office Consultations to exchange views on bilateral relations, and regional, multilateral and global issues of mutual interest;

iii) The Joint Secretary/Director General - level Dialogue on Counter-Terrorism with the two delegations being led by respective Foreign Ministries and including representatives of their Home/Public Security Ministries, Armed and Police Forces and other relevant law enforcement organs of the two parties engaged in counter-terrorism;

iv) The Joint Secretary/Director General - level Security Dialogue, which will cover issues pertaining to regional and international security, including disarmament and non-proliferation; and

v) The Joint Secretary/Director General - level Policy Planning Dialogue to enhance understanding of each others’ perceptions of the evolving international and regional situation
and exchange views on the policy options that emerge therefrom.

(b) These dialogue mechanisms shall ordinarily be covered once every year, alternately in the two countries. The parties may, by mutual agreement, increase the frequency of meetings to exchange views on issues of urgent nature.

(c) The dates, agenda, venue and other matters relating to the convening of these dialogue mechanisms will be decided through diplomatic channels.

ARTICLE III

(a) The parties will revitalize the mechanism of the Joint Working Group (JWG) on the Boundary Question at the Foreign Secretary/Vice Foreign Minister level. The JWG will meet regularly and carry out the mandate assigned to it by the two Governments.

(b) The India-China Diplomatic and Military Expert Group will hold its meetings as directed by the JWG.

ARTICLE IV

The following will be the administrative and financial arrangements for holding the bilateral dialogues as listed in Articles II and III above:

i) The host side will make necessary arrangements for the meeting venues for the dialogues at its cost and offer appropriate courtesies to the visiting delegations;

ii) The host side will provide appropriate invitation letters and facilitate issue of visas to the visiting delegations on gratis basis; and

iii) The parties will send their respective delegations for the dialogues on self-financed basis. However, if requested by the other side, the host side will assist the concerned diplomatic mission of the other side in making local arrangements for transportation and hotel accommodation for the visiting delegations for the dialogues.

ARTICLE V

(a) The parties will encourage cooperation between representatives of their diplomatic services, including between their diplomatic and
consular missions in third countries, to promote cooperation and consultations on issues of mutual interest.

(b) In order to promote mutual understanding between their diplomats, the two parties will exchange delegations of diplomats at appropriate levels on the basis of reciprocity and balance. The East Asia Division of the Ministry of External Affairs of India and the Asian Department of the Ministry of Foreign Affairs of China will be the organisers of this exchange of visits. The international travel expenses will be borne by the delegation itself, and the host will cover the expenses incurred during visits.

ARTICLE VI

The parties will continue to cooperate and hold consultations to coordinate their positions on various international and regional issues of mutual interest within the framework of international and regional organizations and forums. They will give positive consideration to each other’s requests for election to offices in regional and international organizations and forums.

ARTICLE VII

The parties will service the periodic meetings of the Eminent Persons Group (EPG). The meetings of the EPG will be held alternately in the national capitals of the two countries on the basis of the programme of work agreed to between the two Co-Chairmen. Participation will be on a self-financed basis except that the host side may, on the basis of reciprocity and balance, arrange a visit at its cost to a location outside the national capital for the visiting delegation.

ARTICLE VIII

The parties shall encourage the Indian Council of World Affairs and the Chinese People’s Institute of Foreign Affairs to effectively implement the Memorandum of Understanding on Exchanges and Cooperation Between the Chinese People’s Institute of Foreign Affairs, the People’s Republic of China and the Indian Council of World Affairs, the Republic of India signed in New Delhi on April 11, 2005.

ARTICLE IX

This Protocol may be amended through an Exchange of Notes with the consent of the parties.
ARTICLE X

This Protocol shall enter into force 30 days after the date of its signature and shall remain valid for a period of five years. Once this Protocol enters into force, it will supercede the existing Protocol on Cooperation between the Ministry of External Affairs of the Republic of India and the Ministry of Foreign Affairs of the People’s Republic of China signed on August 5, 1997.

This Protocol shall be renewable automatically for successive periods of five years unless either side requests its termination by serving a written notice to the other side six months prior to the date of expiration.

Expiration of this Protocol will not affect the on-going projects, unless otherwise decided by the parties.

Done in New Delhi on November 21, 2006, in two originals each in the Hindi, Chinese and English languages, all texts being equally authentic. In case of divergence in interpretation, the English text shall prevail.

For the Ministry of External Affairs of the Republic of India
For the Ministry of Foreign Affairs of the People’s Republic of China

New Delhi, November 21, 2006.

The Government of the Republic of India and the Government of the People’s Republic of China (hereinafter referred to as the “Parties”);

PROCEEDING from the common desire to develop friendly relations and strengthen the consular cooperation between the two countries;

RECALLING the Consular Convention between the Republic of India
and the People’s Republic of China signed on December 13, 1991, and also the Vienna Convention on Consular Relations of April 24, 1963;

HAVE agreed as follows:

Article I

The Government of the People’s Republic of China gives its consent to the Government of the Republic of India to establish a Consulate-General in Guangzhou, with its consular district covering the Provinces of Guangdong, Fujian, Hunan, Hainan, Yunnan and Sichuan, and Guangxi Zhuang Autonomous Region.

Article II

The Government of the Republic of India gives its consent to the Government of the People’s Republic of China to establish a Consulate-General in Kolkata, with its consular district covering the States of West Bengal, Orissa, Chhattisgarh, Jharkhand and Bihar.

Article III

The number of members of each Consulate-General of the two Parties shall not exceed the limit of twenty-five persons, of which consular officers shall not exceed the limit of ten persons.

Article IV

The Parties shall provide each other all necessary assistance and facilitation for the establishment of the said Consulates-General and in the performance of their consular functions in accordance with the Consular Convention between the Republic of India and the People’s Republic of China signed on December 13, 1991, the Vienna Convention on Consular Relations of April 24, 1963, the relevant laws and regulations of the two countries, and the principle of reciprocity.

Article V

Any issue that may arise concerning the functioning of the Consulates-General established under this Protocol shall be resolved by friendly consultations between the Parties.

Article VI

This Protocol shall come into force on the date of its signature. Any
amendment or addition to this Protocol may be done by mutual agreement in writing between the Parties.

Done in duplicate in New Delhi on November 21, 2006, in the Hindi, Chinese and English languages, all texts being equally authentic. In case of any divergence in the interpretation of the texts, the English text shall prevail.

For the Government of the Republic of India

For the Government of the People’s Republic of China

226. Remarks of External Affairs Minister Pranab Mukherjee in the Lok Sabha on the issue of Chinese claim on Arunachal Pradesh as claimed by the Chinese Ambassador.

New Delhi, November 24, 2006.

Sir, I would just like to clarify a couple of points. First of all, I would like to assure the hon. Leader of the Opposition that on Monday or Tuesday I am going to lay the joint statement, as per the practice, which was issued by the Chinese President and the Indian Prime Minister. That will be laid on the Table of House, along with the 13 Agreements which have been signed, as per the practice. If the hon. Members want to have a discussion on it and if you permit, as per the rules and procedure of the House, it can be discussed.

So far as the issue of Arunachal Pradesh is concerned, I think, it was not necessary to raise it in this format because the very next day I made it quite clear that Arunachal Pradesh is an integral part of India. Somebody has raised the point whether the Ambassador has been called or whether we have formally lodged a protest or not. When the highest person in the Ministry of External Affairs himself is refuting, these niceties are not required. If the Foreign Minister does not respond then on his behalf somebody from the Ministry of External Affairs respond. Not only that, it was also, our Ambassador in Beijing drew the attention of the Chinese authorities and pointed out that this statement should not have come from the Chinese Ambassador just on the eve of the visit. Naturally, their response was that we have not yet received the full text of the statement, we shall ascertain it.
So far as Arunachal Pradesh is concerned, the Resolution of 1962, Statement of Pandit Jawaharlal Nehru and all those are part of history. Everybody knows of it. Therefore, let us not go into this aspect. But at the same time, the fact of the matter is to be kept in view. I am just reminding the hon. Leader of the Opposition as he was very much in the Government at that point of time. In 2003, the then hon. Prime Minister, Shri Atal Bihari Vajpayee was visiting Beijing. I am not going back to the days of 1977 as Shri Mohan Singh did, he has the grand knowledge of history and he can put the things in historical perspective, but I am just drawing the attention of the House to the very recent happening that occurred between 22\textsuperscript{nd} to 27\textsuperscript{th} June 2003 hon. Shri Vajpayee Ji was visiting Beijing. At that point of time, on 26\textsuperscript{th} of June, there was a transgression. Normally, it happens. There was a transgression on the Actual Line of Control in the placed called Asephilla in the Upper Subansiri Region. Naturally, there was a formal protest.

This was also raised in the Monsoon Session of Parliament and the then Minister of External Affairs, Shri Yashwant Sinha, while responding to the questions in the Parliament on 24\textsuperscript{th} of July 2003 told the Parliament that India has taken up the issue with the Chinese side. He further added that this is an area where there are differences in the perception of the LoC between the two sides... (Interruptions) Please allow me to complete. Everyone of you have spoken. I will not take more than two minutes.

**MR. SPEAKER:** Please carry on.

**SHRI PRANAB MUKHERJEE:** What was the response of the Chinese side? This fact should be known to us. It is not like that as if this has happened for the first time. It has happened. We may like it or we may not like it. But unfortunately, this has happened. This happened on 24\textsuperscript{th} of July 2003. The Chinese Spokesperson of the Foreign Office stated that Indian people had crossed the Eastern sector of LoC in Arunachal Pradesh and not his forces, that means Chinese forces.

Then he further said that we have noted the relevant report; China does not recognize the so-called Arunachal Pradesh. This is not acceptable to us. We have never accepted this position. Even on the floor of the Parliament, the then Minister of State, Shri Digvijay Singh, had stated; it has been repeated by my colleague Shri E. Ahamed while replying to the questions on the floor of the Parliament that 90,000 square kilometres are illegally occupied by the other side, the Chinese side. But, at the same time, it is equally a fact that during that speech of Shri Vajpayee it was decided that the two sides will designate special representatives and they will work out the mechanism through which the border disputes could be resolved. The fact of the matter is that similar agreement of 1914 has not
been accepted by China. We have also not accepted the position that McMahon Line is not irrelevant. This is the stated position of both sides. But, at the same time, over the years, we have built up the relations. And the hon. Members will recognize that Sikkim became an integral part of India in 1974. But, till 2005, it was not officially recognized by China as an integral part of India. During the visit of the Chinese Prime Minister in April 2005 it was agreed upon; the ground was prepared. I must give credit to the NDA Government that when we were talking of where the border post should be there, the offer was that the border post should be at Kalimpong on the eastern sector. In 1995 when I was the Foreign Minister, I said: “No, Kalimpong cannot be the border; it should be Nathu La.” Accepting Nathu La means accepting Sikkim as an integral part of India. Ordinarily, it was recognized during the visit of the Chinese Prime Minister in 2005. In diplomacy, these are the processes in which we go. Somebody begins; somebody else also carries it on. Therefore, the question of Arunachal being an integral part of India – so far as we are concerned, so far as this Parliament is concerned – is not a debatable issue at all. The resolution is already there. But even then we have proceeded; we have not stood there by passing the resolution that is the resolution, we have not to move any forward. We have moved forward. Ice has been broken. China-India relationship is expanding in trade, commerce, economy and strategic partnership. And the process which began in 2003 – the discussions between the two special representatives – eight rounds of discussions have taken place. Therefore, my most respectful submission to the hon. Members would be that let us not just create a situation which will unnecessarily heighten the tension. Let us allow the process to continue. So far as Arunachal is concerned, I think I have made it quite clear that it is an integral part of India and it is going to be so.

1. On December 7 in answering a question in the Rajya Sabha on the same subject the External Affairs Minister again rejected the Chinese Ambassador’s contention on Arunachal Pradesh and said: “Government has unambiguously rejected the Chinese contention, stating that Arunachal Pradesh is an integral part of India. The matter has also been taken up immediately with the Chinese Government and India’s disappointment and concern over the remarks made by the Chinese Ambassador clearly conveyed. This position has also been reiterated on the floor of the House.”

Giving details of the Chinese claim on Indian territory in the Rajya Sabha on December 14 the External Affairs Minister said that “China illegally claims approximately 90,000 sq. kms of Indian territory in the Eastern Sector. In the Middle Sector China illegally claims about 2000 sq. kms of Indian territory.” He further told the House that “China continues to be in illegal occupation of approximately 38,000 sq. kms in the Indian State of Jammu and Kashmir. In addition, under the so-called Sino-Pakistan Boundary Agreement of 1963, Pakistan illegally ceded 5,180 sq. kms of Indian territory in Pakistan Occupied Kashmir to China.”
Suo Motu Statement by External Affairs Minister Pranab Mukherjee in Rajya Sabha on 'Chinese President's visit to India'.

New Delhi, November 28, 2006.

President Hu Jintao of China paid a State visit to India from November 20-23, 2006. Both Governments attached great importance to this visit and made careful preparations. This was the first visit by a Chinese President to India since President Jiang Zemin's visit in November-December 1996. The visit was seen as imparting even greater dynamism to the on-going high-level exchanges between the two countries.

President Hu had a productive and comprehensive exchange of views with our leaders on bilateral relations and regional and international issues of common interest. The visit highlighted the resolve of both countries to work towards the further consolidation and diversification of India-China relations. Hon'ble Members would recall that during the visit of the Chinese Premier to India last year, we had decided to establish a strategic and cooperative partnership. President Hu's visit offered us the opportunity to add greater content and meaning to this partnership. This was reflected in the "ten-pronged strategy" embodied in the Joint Declaration that was issued on behalf of Prime Minister and the Chinese President during the visit. A copy of the Joint Declaration is placed on the Table of the House. A synopsis of thirteen agreements signed during the visit is also being placed on the Table of the House. The range of these agreements reflects the evolving multi-dimensional nature of our relationship with China.

During the interactions, leadership on both sides reviewed recent developments in bilateral relations and expressed satisfaction over the sustained positive momentum in the relationship. Both Prime Minister and President Hu noted that India-China relations had transcended their bilateral dimension and acquired a global and strategic significance. President Hu characterised the present phase in the relationship as marking a "new historic beginning" and conveyed that his visit would send out a strong signal to the international community that India and China were willing to work hand in hand for long-term friendship and common development. He stressed that China had taken a "long-term and strategic view" of the relationship with India, desiring to build a strong and cooperative relationship based on shared and common interests. Prime Minister also highlighted
that he would like India and China to work together as good neighbours and partners and to develop together in a mutually supportive manner while remaining sensitive to each other's concerns and aspirations. Both leaders agreed on the need for sustained efforts to exploit the full potential of strategic partnership and to resolve outstanding issues in a focussed, sincere and problem-solving manner.

A number of initiatives were announced during the visit to consolidate institutional linkages between the two Governments, encourage comprehensive economic engagement, promote trans-border connectivity and cooperation, and enhance science and technology, cultural and people-to-people exchanges. Both sides agreed to hold regular summit level meetings and decided to open new Consulates in Kolkata and Guangzhou. The two sides also decided to set up an expert-level mechanism to discuss interaction and cooperation on the provision of flood season hydrological data, emergency management and other issues regarding trans-border rivers. Economic cooperation emerged as a major thrust area of the visit, with both sides keen to send out a clear message in this regard, reflected in the signing of Bilateral Investment Promotion and Protection Agreement, fixing of trade target of US$ 40 billion by 2010 and mandating the Joint Task Force already established by the two countries to complete its study on the feasibility and benefits of India-China Regional Trading Arrangement by October 2007. Important understandings were reached for continued expansion of border trade and greater facilitation of Kailash-Mansarovar Yatra. Both sides underlined the need to broadbase the relationship through enhanced people-to-people contacts and cultural ties, taking initiatives such as launching of an "India-China Year of Friendship through Tourism" in 2007 and a five-year programme for exchange of youth delegations.

Prime Minister and the Chinese President exchanged views on the boundary question and expressed satisfaction at the progress made by the Special Representatives. Both leaders agreed that an early resolution of the boundary question would not only advance the basic interests of the two countries, but also invest our strategic partnership with further strength and dynamism, and should therefore be pursued as a strategic objective. They directed the Special Representatives to intensify their work to expeditiously explore the framework of a boundary settlement on the basis of the Agreement on Political Parameters and Guiding Principles signed in April last year. Both sides also expressed the commitment that pending the final settlement of the boundary question, they would maintain peace
and tranquillity in the border areas and expedite the work of clarification and confirmation of the line of actual control.

I am aware of the concerns expressed by Hon'ble Members about remarks made by the Chinese envoy on the eve of the visit about the status of Arunachal Pradesh. As you are also aware, I unambiguously rejected the Chinese contention, stating that Arunachal Pradesh is an integral part of India. Let me also state that the matter was taken up immediately with the Chinese Government through our Ambassador in Beijing and our disappointment and concern over the Chinese statement clearly conveyed.

Prime Minister also had a useful exchange of views with President Hu on regional and multilateral issues. It was noted that as two most populous countries with rapidly developing economies, the development of India and China were important factors in the shaping of future global architecture. The two leaders noted that together India and China could make effective contributions in dealing with global issues of sustainable and equitable development, energy security, peace and prosperity in Asia and in the world, environment protection and fight against terrorism and cross-border crimes. On the issue of the reform of the United Nations Security Council, President Hu Jintao reiterated the assurance given by the Chinese Premier to Prime Minister in April last year that China understands and supports India's aspirations to play a bigger role in the United Nations, including in the Security Council, and that China would be happy to see India succeed in its endeavour to become a Permanent Member of the UN Security Council.

The importance of high-level exchanges and personal involvement of leaders in the development of India-China relations was clearly acknowledged during the visit. President Hu Jintao mentioned that this was his fifth meeting with Prime Minister in the last eighteen months. President Hu invited Prime Minister to visit China next year. Prime Minister has accepted the invitation. The exact timing of the visit will be decided through diplomatic channels.

On the whole, both sides are satisfied with the outcome of the Chinese President's visit to India, which is expected to give a significant boost to our joint efforts to seek an all round development of India-China relations while addressing the outstanding issues in a frank, purposive and proactive manner. The visit represented an important step forward in
the process of developing a cooperative framework of engagement with China, notwithstanding outstanding issues. It highlighted the commitment of the two sides to add greater content to their strategic partnership and to develop an action-oriented template for the future development and diversification of India-China relations. It also offered an opportunity to send out a strong signal to the international community that as good neighbours and partners, there was enough space for India and China to develop together in a mutually supportive manner, while remaining sensitive to each other's concerns and aspirations.

Let me conclude by saying that our policy towards China, which is an important component of our foreign policy, has been characterised by continuity and consensus. We are encouraged by the positive trends in India-China relations and remain hopeful that our continued engagement with China at the highest level will give further impetus to our bilateral relations and speed up the process of resolution of our outstanding differences. In this endeavour, we seek the full support and endorsement of the Parliament.
FIJI

Nadi (Fiji), October 26, 2006.

The Government of the Republic of India and the Government of the Republic of the Fiji Islands, hereinafter referred to as “the parties”;

DESIRING to enhance the existing friendly relations between the parties through development cooperation;

RECOGNISING the advantages to be derived by the parties, respective governments and peoples from such development cooperation;

FURTHER RECOGNISING the positive impact of such development cooperation in the political, economic and social sectors of the two countries and their contribution to poverty alleviation and sustainable economic growth;

PURSUANT to existing laws and regulations governing such matters in the countries of the respective parties;

HAVE reached the following understanding:

**Article 1**

**Purpose and Principles**

1. The purpose of this Memorandum is to provide a framework upon which the initial development cooperation assistance between the parties may be undertaken.

2. The principles that will govern the conduct of the parties towards one another shall be that of mutual respect for each other’s national sovereignty and integrity and respect for the rule of law and good governance.

**Article 2**

**Areas for Development Cooperation**

1. The parties agree that the sectors of their economies to be covered by this Memorandum shall include the following:
1. Human Resource Development
2. Civil Aviation
3. Tourism
4. Maritime Transport
5. Agricultural, fisheries and forests sector including “Industrial and Municipal Waste Management”
7. Sports
8. Cultural Exchanges
9. Small and Medium Enterprise Sector
10. Specialist training in Trade Negotiations and Diplomacy

2. Notwithstanding the areas enumerated above, the parties may through an Exchange of Letters between the Minister of Foreign Affairs of the Fiji Islands and the Minister of External Affairs of India, widen the coverage of this framework to include other sectors not specifically referred in Article 2 paragraph 1 above.

Article 3
Funding and Personnel

All cooperative activities pursuant to this Memorandum are to be undertaken subject to availability of funds and personnel.

Article 4
Executing Agency

The parties shall advise each other through the normal diplomatic channel of the two countries of the Executing Agency for activities undertaken under this Memorandum. The notice shall be submitted within 21 days from the date of signature of this instrument.

Article 5
Implementation

1. Activities undertaken under this Memorandum may be implemented through the development of specific arrangements, programs or
projects between the appropriate institutions or organizations, including private sector organizations of the parties;

2. The parties may agree to set up Working Groups or such other mechanism that would better facilitate the achievement of the overall purpose and objective of the Memorandum.

**Article 6**

**Amendment**

This Memorandum may be amended at any time by mutual consultation and consent. Such amendment shall come into force at a time agreed to by the parties.

**Article 7**

**Entry into Force and Duration**

1. This Memorandum shall enter into force from the date of its signing by both the parties.

2. The Memorandum shall remain in force initially for a period of three(3) years and it may be extended by mutual consent for subsequent periods of three(3) years at a time, unless it is terminated by either Party at any time by giving a written notice of its intention to the other party, at least three months in advance.

**IN WITNESS WHEREOF** the undersigned being duly authorized thereto by their respective governments, have signed this Memorandum of Understanding.

**DONE** at Nadi, on this 26th day of October in the year two thousand and six, in two originals.

FOR THE GOVERNMENT OF FOR THE GOVERNMENT OF
THE REPUBLIC OF THE FIJI ISLANDS THE REPUBLIC OF INDIA

(Kaliopate Tavola) (E. Ahamed)
Minister for Foreign Affairs and Minister of State for
External Trade External Affairs

F F F F F
229. Press Release of the Ministry of External Affairs on the visit of Minister of State E. Ahamed to Fiji.

New Delhi, October 27, 2006.

1. The Minister of State for External Affairs, Mr E Ahamed visited Fiji from October 25-27, 2006 to participate in the Post-Forum Dialogue (PFD) Partners’ Meeting held after the conclusion of the Pacific Islands Forum Meeting. The PFD meeting was held on the forenoon of October 27, 2006 in Nadi.

2. The Pacific Islands Forum delegation was led by the Fijian Minister of Tourism and Transport Hon. Tomasi Veutilovoni. Other members of the Forum delegation included the Minister of State for Foreign Affairs Palau, Hon. Temmy Shmull and the Foreign Minister of Nauru Hon. David Adeang.

3. The Minister of State for External Affairs, Mr. E. Ahamed was assisted by India’s High Commissioner to Fiji, Mr. Ajay Singh, Joint Secretary (South) in the Ministry of External Affairs, Mr. Biren Nanda, Counsellor in the High Commission of India, Suva, Mr. Anil Anand, and Deputy Secretary (South) in the Ministry of External Affairs, Mr. Avinash Pandey.

4. During the discussions in the PFD meeting, a range of topics related to India’s cooperation and assistance to Pacific Island countries were discussed. The PIF delegation gave an introduction in to the Pacific Plan and the priorities under the Plan. The Indian delegation commended the objectives of the Pacific Plan and reiterated its commitment to the Pacific Islands countries to assist with the realization of its objectives. Other topics discussed included SMEs and Private Sector Development, WTO and the problems of small economies, the review of the Pacific Plan and review of the Post-Forum Dialogue.

5. The Indian delegation gave a detailed presentation on India’s assistance to the developing countries in capacity building and training through the ITEC program. A presentation was also given on India’s assistance to Pacific Island countries. The Minister of State for External Affairs, Mr. E. Ahamed also unveiled India’s ‘Pacific Island Country Assistance Initiative’ during the meeting. Under this initiative, India has offered grant aid amounting to US $ 100,000 to each of
the 14 Pacific Islands countries. India will organize a workshop on sustainable development, waste management and water conservation and renewable energy in Suva; training for diplomats in Pacific Islands countries at the Foreign Service Institute in New Delhi; training for officials of Pacific Island countries in SME development in India and scholarships for students of Pacific Island countries for pursuing under-graduate/post-graduate studies in India.

6. Minister of State, Mr. E. Ahamed also paid a bilateral visit to Fiji concurrently with the Post-Forum Dialogue. During this part of the visit, he called on the Vice-President, H.E. Ratu Joni Madraiwiwi, the Prime Minister, Hon. Laisenia Qarase and held bilateral discussions with the Foreign Minister, Hon. Kaliopate Tavola.

7. During the discussions with Fijian dignitaries, there was a comprehensive review of bilateral relations. Both sides expressed satisfaction at the development of bilateral relations particularly since the successful visit of Prime Minister Laisenia Qarase to India in October 2005. It was agreed to further enhance bilateral cooperation in a number of fields including trade and investment, defense and security cooperation, healthcare, IT, agriculture, coconut cultivation, rice cultivation, water resources and tourism.

8. Foreign Minister Mr. Kaliopate Tavola and Minister of State Mr. E. Ahamed signed a Development Cooperation Agreement during their meeting on October 26, 2006. The agreement envisages furthering cooperation between the two countries in various fields including health, tourism, agriculture, civil aviation, water resources, sustainable development, IT and other areas.

9. The visit of Minister of State for External Affairs, Mr. E. Ahamed to Fiji for the Post-Forum Dialogue and for bilateral discussions with leaders of the Republic of Fiji Islands further strengthened India’s relations with Fiji and contributed to the deepening of our dialogue partnership with the Pacific Island countries.
230. Response of Official Spokesperson to questions on the situation in Fiji.

New Delhi, December 6, 2006.

In response to questions on the situation in Fiji, the Official Spokesperson said: "The situation in Fiji is calm and all personnel of the High Commission of India in Suva and their family members are safe. People of Indian origin in Fiji are safe and going about their daily lives in a normal manner."

1. The spokesperson was referring to the situation created by a military coup in the country in which the Military Commander Frank Bainimara seized control of the country and assumed the powers of the President and replaced premier Laisenia Qarase who was reportedly placed under house arrest.
JAPAN

New Delhi, January 4, 2006.

The Minister for Foreign Affairs of Japan, H.E. Mr. Taro Aso, accompanied by a high-level delegation, is paying an official visit to India on January 3-4, 2006. India is the first Asian country Foreign Minister Aso is visiting for bilateral consultations. The visiting Minister held delegation-level talks with Minister of State for External Affairs, Shri E. Ahamed at Hyderabad House this afternoon (January 4). He had meetings with Shri Kamal Nath, Minister of Commerce and Industry and Shri M.K. Narayanan, National Security Adviser. Later in the day, he will be calling on the President of India, H.E. Dr. A.P.J. Abdul Kalam.

During his talks with the Minister of State for External Affairs, the two Ministers made a positive assessment of the present status of bilateral relations and noted with satisfaction that the Global Partnership between India and Japan has acquired a new dynamism and momentum, especially since the landmark visit of Prime Minister Junichiro Koizumi to India in April 2005¹. They reiterated the principles and understandings contained in the Joint Statement signed by the Prime Ministers in New Delhi on April 29, 2005, and agreed on the following to further promote the Global Partnership, proceeding from a strategic perspective:

I. High-level Visits: In response to an invitation from Prime Minister Koizumi, Prime Minister of India is expected to visit Japan at an early, mutually convenient date. Regular ministerial-level exchanges, including between Foreign, Defence, Finance, Trade, and ICT Ministers, will continue.

II. Strategic Dialogue: Recalling that during Prime Minister Koizumi’s visit to India, the two Prime Ministers had decided to enhance the strategic

¹ India-Japan relations were significantly strengthened since the visit of Prime Minister Junichiro Koizumi to India in April 2005, when it was agreed to impart a new strategic orientation to the India-Japan Global Partnership and launch an “Eight-fold Initiative”, encompassing enhanced political and economic engagement, stepped-up security dialogue and cooperation, collaboration in science and technology, cultural, academic and people-to-people contacts, cooperation in ushering in a new Asian era, and cooperation at regional and multilateral forums.
focus of the India-Japan Global Partnership, the Ministers agreed to conduct henceforth Foreign Minister-level talks with a strategic perspective. Foreign Minister Aso invited the Minister of External Affairs of India to visit Japan for such talks. The existing Foreign Office Consultations at Secretary/Deputy Minister-level will be utilized to prepare for the Foreign Minister-level dialogue. The High Level Strategic Dialogue, agreed upon during Prime Minister Koizumi’s visit, will also be operationalised as soon as possible.

III. CEPA/EPA: The two sides agreed to earnestly consider the possibility of a comprehensive economic partnership agreement in the context of the ongoing work of the India-Japan Joint Study Group, which is expected to submit its report by June 2006.

IV. ICT Cooperation: Noting the positive outcome of the first ICT Forum held in New Delhi in August 2005, the two sides agreed that the immense potential for cooperation in this sector will be fully tapped, including through early meetings of the Working Groups of the Forum.

V. Cooperation in Energy Sector: The Indian side expressed its appreciation for Japan’s support for India’s participation in ITER. The two sides agreed to step up cooperation in the energy sector, including through timely implementation of the Plan of Action agreed upon between the Minister of Petroleum and Natural Gas of India and the Minister of Economy, Trade and Industry of Japan in Tokyo on September 29, 2005.

VI. Science and Technology Initiative: The two sides agreed to hold joint workshops to identify collaboration projects to be undertaken as part of the “Science and Technology Initiative”, announced by the two Prime Ministers in April 2005. The relevant modalities in this regard will be finalised through mutual consultations, in pursuance of the discussions held in the 7th Meeting of India-Japan Joint Committee on Science and Technology in New Delhi in November 2005.

VII. ODA: Foreign Minister Taro Aso conveyed that India will remain the largest recipient of the Japanese ODA loan in the current fiscal year for the third consecutive year. The Indian side expressed its appreciation for the Japanese assistance.¹

¹. There has also been a marked jump in Japanese FII inflows into India recently. India has been the largest recipient of Japanese Official Development Assistance [ODA] during the last two fiscal years. In 2004-05, the Japanese ODA to India amounted to Rs.5,600/- crores.
VIII. Freight Corridors Project: In pursuance of the understanding reached during Prime Minister Koizumi’s visit regarding dedicated multimodal freight corridors with computerized train control system on Mumbai-Delhi and Delhi-Howrah routes, the two sides agreed, through an exchange of Notes, that the feasibility study survey for the project will be carried out by the Japan International Cooperation Agency.

IX. Human Exchanges: Foreign Minister Taro Aso conveyed the decision of the Japanese side to launch the “Aso Programme” which will involve exchange of 4000 persons over the next three years in the fields of Japanese language, technology, youth interaction, etc., with Japanese funding and support. The India side expressed its appreciation for this initiative which will promote people-to-people contacts. The two sides also agreed to encourage further exchanges at local levels.

X. Visas: Noting the recent progress in the relaxation of visa procedures, including through issuance of multiple-entry visas valid for three years to Indian businessmen, the Ministers directed that consultations be held at an early date to consider further facilitation of visa procedures.

XI. Security Dialogue and Cooperation: The Ministers agreed to further strengthen dialogue and exchanges between the two countries in the security and defence fields. The Defence Minister of India is expected to pay an official visit to Japan later this year. The visit will be preceded by the next round of Comprehensive Security Dialogue and Military-to-Military Talks.

XII. Disarmament and Non-proliferation: The Ministers agreed to launch a Joint Secretary/Director General-level Annual Dialogue on Disarmament and Non-proliferation, with the objective of promoting commonalities and enlarging areas of convergence for mutual cooperation in a constructive manner, thereby contributing to the advancement of overall bilateral relations. This Dialogue will also address the issues relating to high technology trade.

XIII. East Asia Summit: Noting the positive outcome of the First EAS, the Ministers agreed that the EAS should play a significant role in the progressive realization of the vision of an East Asian community. India and Japan will continue their close consultation and cooperation in this regard.

XIV. UN Reforms: The Ministers reaffirmed the need for urgent and comprehensive reform of the United Nations, including the reform and expansion of the UN Security Council, in both permanent and non-
permanent categories, which is central to the UN reform process, within the current session of the UN General Assembly. They reiterated that the coming together of the G-4 (India, Japan, Brazil and Germany) has been a significant development, and that the G-4, in their consultations, are seeking to garner as much support as possible from other member States in order to realize the reform of the Security Council.

---

232. Joint Statement issued on the visit of Defence Minister Pranab Mukherjee to Japan.

1. H.E. Mr. Pranab Mukherjee, Minister of Defence of the Republic of India, is currently paying an official visit to Japan from May 25 to May 28, 2006 at the invitation of H.E. Mr. Fukushiro Nukaga, Minister of State for Defense of Japan. H.E. Mr. Pranab Mukherjee held in depth discussions in Tokyo on May 25, 2006 with H.E. Mr. Fukushiro Nukaga. The discussions covered bilateral, regional and international issues of mutual interest, and focused in particular on deepening the dialogue and cooperation between India and Japan in the areas of security and defence cooperation.

2. The two Ministers recalled that during the official visit to India of H.E. Mr. Junichiro Koizumi, the Prime Minister of Japan in April 2005, the two Prime Ministers had decided to reinforce the strategic focus of the Global Partnership between India and Japan and launched an Eight-fold Initiative in order to realize its full potential.

3. The two Ministers noted that the two countries are partners in peace, with a deep interest in promoting the security, stability and prosperity in Asia and in the world at large as well as in tackling regional and global security challenges. The Ministers reaffirmed their commitment to implement fully the decisions taken by the Prime Ministers to further develop the dialogue and exchanges between the two countries in the security and defence fields, proceeding from the broader perspective of the Global Partnership and building on strategic convergences.

4. The two Ministers discussed the emerging security environment in Asia and at the global level that have challenged both countries through
new and emerging threats including, inter alia: trans-national terrorism, violent extremism, proliferation of weapons of mass destruction and related materials, equipment, technologies and means of delivery; and threat to maritime traffic. The two Ministers recognized that in today’s era of globalization and inter-dependence among nations, such new and non-traditional threats affect the security of nations worldwide, including India and Japan. They also exchanged views on traditional security challenges of mutual concern and interest that have a bearing on Asian and global security.

5. Based on this understanding of the regional and international security environment, the two Ministers reaffirmed that both governments need to work closely together to pursue common objectives through their individual efforts, joint initiatives and cooperation in appropriate regional and international fora as the two countries are committed to democratic values, human rights, pluralism, open society and the rule of law which provide the foundation of their partnership. These objectives include, inter alia:

(i) Maintenance and promotion of peace and stability in Asia and at the global level, creating an international climate conducive to the continued economic growth and development;

(ii) Promoting confidence building measures in Asia, including promotion of transparency and frank exchange of views among defence authorities;

(iii) Countering terrorism and violent extremism;

(iv) Preventing the spread of weapons of mass destruction and related materials, equipment, technologies and means of delivery;

(v) Contributing to the safety and stability of regional maritime traffic;

(vi) Promoting international cooperation in the areas of disaster management and provision of relief operations;

(vii) Developing cooperative relationships with nations of Asia and in the world; and

(viii) Promoting the development of various regional cooperation mechanisms, in an open and inclusive manner.

6. The two Ministers expressed their determination to pursue cooperation, inter alia, in the following areas related to defence and security:
(i) Leadership, policy officials and joint staff level exchanges between the defence establishments to enhance mutual understanding and to promote wide range cooperation in the defence and security field;

(ii) Service-to-service exchanges including capacity building between the defence establishments at various levels, which may lead to cooperation in disaster relief, maritime security or other areas of mutual interest;

(iii) Exchange of information, assessments, experiences and lessons learnt on a regular basis in tackling of regional and global issues, including international terrorism, proliferation of weapons of mass destruction and their means of delivery, disaster relief and peacekeeping operations, at both the political and the operational level;

(iv) Promotion of cooperation in areas of training and education;

(v) Promotion of cooperation in areas of strategic and security studies;

(vi) Promotion of cooperation in technical areas; and

(vii) Expanding interaction and cooperation with other nations to promote regional and global security, peace and stability, including through closer collaboration in the relevant regional and multilateral framework.

7. With regard to the scope of cooperation identified above, the two Ministers directed that the mechanisms of implementation may include, inter alia, the following:

(i) Holding of meetings between the Defence Minister of India and the Minister of State for Defense of Japan at regular intervals, alternately in the two capitals or elsewhere, also making use of opportunities at regional and multilateral meetings;

(ii) Holding of a Defence Policy Dialogue at the Defence Secretary/Administrative Vice Minister level from time to time, alternately in India and Japan;

(iii) Holding of regular Comprehensive Security Dialogue and Military-to-Military Talks, alternately in India and Japan;

(iv) Regular exchange of visits at the Chiefs of Staff and Joint Staff level and Staff level of each service.
(v) Exchange of ship visits between the Indian Navy and the Japan Maritime Self Defence Force;
(vi) Holding of goodwill exercises between the Indian Navy and the Japan Maritime Self Defence Force, with progressively advanced nature that takes account of future possible exercises in areas of mutual interest;
(vii) Inviting officials of the other side to witness designated military activities;
(viii) Mutual exchange of student officers (including civilian officials) and researchers from defence establishments for various courses (such courses may be identified based on areas of interest of each country); and
(ix) Participating in security conferences and seminars hosted by their defence establishments, and cooperating in the relevant existing regional and multilateral fora.

8. Both sides concurred that:
(i) Areas of cooperation are not limited to those mentioned above, and that they will endeavour to identify other areas of cooperation relating to defence and security; and
(ii) They will also seek to develop an annual calendar of cooperation and exchanges in advance.

9. The two Ministers reiterated that all activities under this Joint Statement will be conducted in accordance with the relevant laws and regulations and national policies of each country, their international commitments, and on the basis of equality, reciprocity and mutual benefit.

10. H.E. Mr. Pranab Mukherjee, Minister of Defence of India, thanked the Government of Japan for the courtesy and hospitality extended to him and his delegation during the visit to Japan. He extended a cordial invitation to H.E. Mr. Fukushiro Nukaga, Minister of State for Defense of Japan, to visit India. The invitation was accepted with appreciation. The dates of the visit will be decided through diplomatic channels.

Pranab Mukherjee  
Minister of Defence

Fukushiro Nukaga  
Minister of State for Defence

Tokyo, May 26, 2006.

H.E. Mr. Pranab Mukherjee, Minister of Defence of India, currently on official visit to Japan held discussions with H.E. Mr. Kazuo Kitagawa, Minister of Land, Infrastructure and Transport of Japan on 26th May 2006. Their discussions covered all issues of mutual interest, with particular focus on maritime security and Coast Guard cooperation.

The Ministers noted that India and Japan share a common understanding on the issue of maritime safety and security in the areas of mutual interest as well as in the interest of Asia and the international community. Both sides reaffirmed the desire to enhance cooperation between the two countries and on measures to tackle transnational organized crimes at sea such as piracy, armed robbery, illegal arms and drug trafficking, illegal migration, cooperation in search and rescue operations, and protection of marine environment.

The Ministers expressed their satisfaction at the close cooperation between the two Coast Guards and directed that the Coast Guards should enhance their cooperation, including through: holding of annual Coast Guards’ talks; regular exchange of visits; exchange of Coast Guard ship visits; holding of combined exercises for anti-piracy, search and rescue, disaster relief and other areas of mutual interest.

The Ministers shared the views that, in the future, further possibility of interaction between the two Coast Guards will be considered. In order to further enhance and strengthen cooperation between the Coast Guards of India and Japan, the Ministers agreed on early finalization of the proposed Memorandum of Cooperation between the two Coast Guards. The Minister of Defence of India thanked the Minister of Land, Infrastructure and Transport of Japan for receiving him warmly. He extended a cordial invitation to H.E. Mr. Kazuo Kitagawa, Minister of Land, Infrastructure and Transport to visit India. In response to the invitation, the Minister of Land, Infrastructure and Transport is expected to visit India at a mutually convenient date.
234. **Press Conference of Defence Minister Pranab Mukherjee after his return from the tour of China and Japan.**

*New Delhi, June 13, 2006.*

Please see Document No. 211

235. **Briefing points by Official Spokesperson on India-Japan Foreign Office Consultations.**

*New Delhi, November 13, 2006.*

1. India Japan Foreign Office consultations were held this morning. Indian delegation was led by Foreign Secretary, Shri Shivshankar Menon, Japanese delegation was led by Deputy Minister, Ministry of Foreign Affairs, Mr. Tsuneo Nishida. The consultations were also continued over a working lunch.

2. The focus of the discussions was on preparing the agenda for Prime Minister Dr. Manmohan Singh’s visit to Japan. Follow-up work on several issues will now continue.

3. The Foreign Office consultations also included detailed review of bilateral relations, both political and economic, with the purpose of adding more substance and depth to the bilateral global partnership. Regional issues as well as global challenges were also discussed.

4. Mr. Nishida is also calling on EAM Shri Pranab Mukherjee and Special Envoy to PM Shri Shyam Saran.
236. Special Media Briefing by Foreign Secretary Shivshankar Menon and Secretary(East) Ministry of External Affairs N. Ravi on the visit of Prime Minster Dr. Manmohan Singh to Japan and Philippines.

New Delhi, December 6, 2006.

OFFICIAL SPOKESPERSON (SHRI NAVTEJ SARNA): Good evening ladies and gentlemen. We have the Foreign Secretary here who will brief us first on the Prime Minister’s visit to Japan. Thereafter, we will request Secretary (East) to brief us on the India-ASEAN and the East-Asia Summits1 leg of the Prime Minister’s visit. Then we will take a few questions.

FOREIGN SECRETARY (SHRI SHIVSHANKAR MENON): Good evening ladies and gentlemen. As you know, the Prime Minister accompanied by Smt. Gursharan Kaur, will be paying an official visit to Japan from December 13th to 16th, 2006 at the invitation of Prime Minister Shinzo Abe. He will be arriving in Tokyo from Cebu in the evening of December 13th. There will be an official welcome ceremony on December 14th. Prime Minister and Shrimati Gursharan Kaur will be received in an audience by Their Majesties the Emperor and the Empress of Japan in the afternoon of December 14th. Official talks between the two Prime Ministers have been scheduled for December 15th, followed by a Joint Press Meeting and an Official Banquet hosted by Prime Minister Abe.

In a singular honour, the Prime Minister has been invited to address a joint session of the Diet on the afternoon of 14th December. He will be inaugurating the Festival of India in Japan in the same evening, when the two Prime Ministers are also expected to unveil the joint logo of the India-Japan Friendship Year 2007. Prime Minister will be addressing the Business Luncheon hosted by Japanese Apex Chambers in association with India Apex Chambers and IBEF on the 15th.

In addition, Prime Minister will be meeting several Japanese dignitaries, including the former Prime Minister Yoshiro Mori, senior Cabinet Ministers, and the President of the Japan-India Parliamentary Friendship League, Dr. Taro Nakayama. He will depart from Tokyo for New Delhi just before noon on December 16th. As you can see, he has a very full schedule during his stay in Japan.

1. The two summits in Philippines were postponed due to weather conditions in that country.
The last visit of an Indian Prime Minister to Japan was five years ago in December 2001, when Prime Minister Shri Atal Bihari Vajpayee visited that country. In April 2005, Prime Minister Junichiro Koizumi visited India. Our Prime Minister’s visit now to Japan is taking place against the backdrop of a marked upturn in India-Japan relations, particularly since Prime Minister Koizumi’s visit last year.

We attach great importance to our relations with Japan which is a friendly nation and the second largest economy in the world. Japan is the focal point in our ‘Look-East Policy’. We believe that our bilateral relations with Japan are now poised to enter an even more vibrant and dynamic phase, based on converging long-term strategic, political and economic interests and our shared desire to enhance the relationship.

I thought I would highlight some important developments and trends in India-Japan relations.

You would recall that during Prime Minister Koizumi’s visit last year, the two sides agreed to reinforce the strategic focus of the India-Japan Global Partnership established in 2000 during Prime Minister Mori’s visit to India, and to put in place an ambitious “Eight-fold Initiative” to bring about a qualitative shift in the relationship. The Koizumi visit represented a new beginning in India-Japan relations. The extent of the understandings reached and their subsequent implementation have confirmed that there is a shared desire to forge an overdue partnership between these two important Asian countries. India and Japan are now taking a long-term and strategic view of their relationship.

We believe that there is a positive political ambience and cross-party consensus in both countries on the continued strength of India-Japan relations. The bilateral relationship is also benefiting from strong personal commitment on the part of the leaders of the two countries to take it forward. Prime Minister Shinzo Abe has publicly articulated his personal commitment to have stronger relations with India. He has said on more than one occasion, “Japan-India relationship is blessed with the largest potential for future development”. Our Prime Minister fully reciprocates these sentiments. He has been associated with Japan for well over two decades now and is taking a personal interest in moving towards a transformation of this important relationship.

The dynamic growth of this relationship is reflected in the number of high-level exchanges that have taken place since last year. Our senior
Ministers including Defence Minister, Finance Minister, Commerce Minister have visited Japan. Likewise, there have been a large number ministerial visits from Japan to India including virtually all the Ministers holding key economic portfolios. There have been similarly enhanced exchanges of Parliamentary delegations and interactions at provincial and official level. There is a parallel process of business and industry in both countries taking note of the opportunities that recent economic developments in India have created for them. That has led to a very sharp increase in exchange of business delegations.

Indeed a key driving force in the relationship now is a shared desire to move towards a comprehensive economic engagement. Bilateral trade in 2005-06 showed signs of growth but remains modest at about six billion dollars last year. Japan is the third largest investor in India with cumulative investment totaling US $2.1 billion. A number of new FDI ventures are on the anvil in the areas of petrochemicals, automobiles, auto components, pharmaceuticals and the financial sector. There is also growing interest among Japanese financial institutions in portfolio investment in India, with the flow of FDI funds from Japan to India estimated at over US$ 5 billion since last year. Both sides, however, realise that the present levels of economic and commercial interaction are way below potential. Both sides are working together to try and enhance the economic content of the relationship, taking advantage of the recommendations submitted by the Joint Study Group to the Prime Ministers of the two countries in July this year.

India today is the largest recipient of Japanese ODA, which we greatly appreciate. The Delhi Metro is a fine example of India-Japan partnership. We are working together on several other projects including a Multimodal Dedicated Freight Corridor between Mumbai and Delhi, and Delhi and Howrah.

Defence and security has also emerged as another important area in the relationship. The Joint Statement signed during the then Raksha Mantri’s visit to Japan in May this year has put in place a structured framework for a dialogue for cooperation and exchanges in this field. Joint exercises are being conducted annually by the Coast Guards of the two countries and the Memorandum of Cooperation between the Coast Guards was concluded last month.

We are also witnessing an impressive increase in the areas of functional cooperation, enhanced S&T exchanges and the strengthening
of cultural links. I think both sides recognize the need to step up the present level of human exchanges.

India and Japan are also seeking to upgrade their cooperation and coordination on UN reforms and several other regional, multilateral and global issues. We both have similar visions of an emerging Asian economic architecture.

While looking at the possible outcomes of the Prime Minister’s forthcoming visit to Japan, we have to bear in mind that India-Japan relations today are marked by positive trends - some of which I will try to give you an idea of – and that both sides are seeking to further consolidate those strengths and to raise the relationship to a new level of partnership. We are working to utilize the visit to further reinforce the strategic orientation of the India-Japan global partnership to move towards a comprehensive economic engagement and to bring about a quantum increase in people-to-people exchanges and seeking expanded cooperation in science and technology, energy, and a host of other fields.

Simultaneously, we both recognize that India and Japan will be two key anchors in the new emerging Asian era and that partnership has important regional and global dimensions. Both sides have made extensive preparations for this visit and we believe that it will have substantive outcome.

Thank you. I will be happy to answer questions. Perhaps we will first listen to Mr. Ravi about Cebu.

SECRETARY(EAST) (SHRI N. RAVI): Good evening to all of you. Ahead of Prime Minister and Mrs. Gursharan Kaur’s visit to Japan, Prime Minister would be visiting the city of Cebu for the India-ASEAN and India-East Asian Summit.

The Prime Minister would be reaching Cebu sometime in the evening of 11th of December. On 12th December, there would be some bilateral meetings between the Prime Minister and leaders of other countries. These are being fixed for the first half of the day. From about three o’clock till about six in the evening, there is the Fifth India-ASEAN Summit meeting. The day rounds off with the dinner hosted by President Arroyo for all the Leaders.

The agenda for the Fifth India-ASEAN Summit is - “Review of India-ASEAN Relations – the Future Directions”. As far as our expectations from the India-ASEAN Summit are concerned, we would be reviewing ongoing
cooperation. To give you an example, we have set up what are called Entrepreneurship Development Centres in three of the CLMV countries, namely, Laos followed by Cambodia and Vietnam. The one in Myanmar is under consideration and it is going to move forward. We are also moving forward on setting up English Language Training Centres in these CLMV countries. These countries are slightly less developed as compared to the other six members of the ASEAN. CLMV stands for Cambodia, Laos, Myanmar and Vietnam. The fields that we are covering apart from these two are IT industry and cooperation in entrepreneurship.

In February-March 2007, we are going to hold a Ministerial and Industry forum in India as part of the ongoing cooperation. We are also in the process of training ASEAN diplomats and (holding) other human resource development programmes for trainees coming from ASEAN to India. We would also be reviewing cooperation in sectors such as tourism, transport, infrastructure, science and technology.

Just to refresh your memory, early in November, 6th and 7th to be precise, there was a technology summit which was jointly organized by India and ASEAN countries here in Delhi. We would also be reviewing economic cooperation. Particularly to give you a figure, India-ASEAN trade crossed about 21 billion dollars in 2005-06, which is an increase of nearly 21 per cent over the previous period. The discussion regarding ongoing India-ASEAN free trade negotiations would also continue.

The East-Asia Summit, which would be held on the 13th of December, starts off with a plenary followed by a retreat just for the leaders after which there will be a presentation of a report on East Asia regional, economic and financial situation by the President of the ADB. This will be followed by a lunch and signing of the EA Declaration on energy security. At the last summit held in Kuala Lumpur, President Arroyo of Philippines had mentioned energy security as the main theme for the East Asian Summit which is going to be held in Cebu later this week.

As far as the expectations from the Second East Asia Summit is concerned, we would be taking forward some of the processes that were initiated last year to establish a regional architecture for cooperation and deeper integration and the declaration of energy security. There would be an emphasis on promoting the use of bio-fuels and collective efforts to develop renewable sources of energy and development of energy efficient and low carbon technologies, investment in infrastructure and development of clean coal technologies.
Other areas where we would be considering cooperation are finance, education, this recent phenomenon of avian influenza which had affected some of the South East Asian countries severely, and cooperation in the matter of dealing with natural disasters. This obviously has arisen from the rather tragic experience all the countries had in May 2004 as a result of the tsunami.

I would like to stop here and perhaps (you may address) some questions to Foreign Secretary.

**QUESTION:** Will any agreements be signed in Japan?

**FOREIGN SECRETARY:** I think we will let you know when we come to them. Let us do the visit, then we will know the outcome.

**QUESTION:** Mr. Foreign Secretary, what is Japan’s position on civilian nuclear cooperation and on the Indo-US nuclear deal? My question to Mr. Ravi relates to the FTA with ASEAN. The fact that we have not been able to conclude this FTA and given the great promise and the summit-level contacts that we held, does it not sort of detract from the ASEAN-India relationship that we have not been able to conclude these negotiations? And recently there has been a statement from one of the Ministers in Philippines about the possibility of expanding the ASEAN Plus Three arrangement. Would you give us some information whether anything on this line is planned?

**FOREIGN SECRETARY:** On civilian nuclear cooperation, we have discussed this subject with Japan for sometime, since, as you mentioned, the new frameworks that we are trying to put in place started with the Indo-US agreement starting in July 2005. From then onwards, we have been discussing this subject. It is not a subject we have asked the Japanese to either comment on what we are doing with the US or to commit, because as I said to you earlier, this is an ongoing conversation and as the situation evolves, we keep telling people what we think. We have briefed them, we have told them what we think, we shared views. But I think views are evolving on this subject. I would not like to characterize them today because this I think is still an evolving situation.

**SECRETARY (EAST):** As regards your first question, I would just like to draw your attention to the growth of India-ASEAN trade since 1990. For example, from 2.3 billion dollars in 1990 we have now reached 23.3 billion dollars. It is a ten-fold increase over a period of 15 years. This simply
goes to show the potential that has existed and it also goes to show the potential that exists on the basis of a free trade agreement how much we can achieve more. The fact that the negotiations are taking long, or are becoming hard, as you have perceived it, is a clear indication of the fact that all the sides want to cover their interest in a manner that will help the growth of this trade which is showing such a great promise. It is to this end that both sides want to keep negotiating and come to a conclusion in such a way that the business and commercial and trading interests on both sides, that is in India and in ASEAN, are given a framework which can really help them to grow for the next fifteen if not next twenty years on the basis of a good agreement that has been arrived at.

As regards the ASEAN Plus Three FTA and the Philippines leader’s comment, we must note that the ASEAN Plus Three phenomenon began in the late 90s and they have had a head start as compared to the India-ASEAN FTA. The sheer fact is that the volume of trade exchange between ASEAN and ASEAN Plus Three is much more and in multiples as compared to our own. So, the two actually stand on two different frameworks. I would not like to sort of connect the two and say that whether that is good or whether our FTA is going to be affected by that.

**QUESTION:** I was asking about the political summit. There is some talk of expanding ASEAN Plus Three arrangement to ASEAN Plus Four arrangement which would include India. Is there anything on that?

**SECRETARY (EAST):** I have no idea.

**QUESTION:** Could you tell us something about the status of negotiations on the negative list? Has any figure been given?

**SECRETARY (EAST):** The negotiations are still going on. It would not be proper for me to reveal the extent of the negative list right now.

**QUESTION:** Is there a meeting planned between our Prime Minister and the Chinese Premier? Secondly, what are the prospects of an FTA between India and Japan? Could you give a little more detailed idea of this comprehensive economic engagement which you are planning with Japan?

**FOREIGN SECRETARY:** I think they are working on bilateral meetings in Cebu and one of the meetings they are working on is a meeting between our Prime Minister and the Chinese Prime Minister.

On adding content to the economic relationship, I think the Joint
Task Force has produced a set of recommendations and both systems have processed these recommendations. It is really for the Prime Ministers to decide whether or not they want, which ones they want to move ahead on and in what form they want to start looking at possible agreement, whether we look at them, whether we show them what form, and so on. So, I think to say now would be a little premature. They will have a discussion on this when Prime Minister will go to Japan. By the end of next week I think you will know what sort of agreements we are looking at, what kind of comprehensive economic agreements we are looking at with Japan.

QUESTION: Mr. Menon, what is the status of G4? The Indian quest for permanent membership of the UN Security Council, will this be high on the agenda of talks? My question for Mr. Ravi is, is there any plan for expansion of East Asia summit membership …?

FOREIGN SECRETARY: On the G4, we continue within the G4 to consult and coordinate. About reform of the UN Security Council, we have just had a meeting actually of our officials in Geneva last month. We plan to meet again in New York before the debate on December 11th in the General Assembly on the reform of the Security Council. Obviously, we as India and the G4 as a group were still talking to other countries, to other groups to gather the largest possible measure of support for our ideas of reform. In this process I think various ideas are being thrown up by other countries, by other groupings. It is our hope that after this process of discussion and the debate in the General Assembly on 11th of December that we would have moved closer towards our goal which as you know is a permanent seat in the UN Security Council. I cannot be more specific at this stage because it is an evolving situation.

SECRETARY (EAST): At present the East Asian Summit comprises 16 countries and as of now we have not heard of any plans of expansion or increasing its membership.
237. Statement of Prime Minister Dr. Manmohan Singh on departure for Japan.

New Delhi, December 13, 2006.

I am traveling to Tokyo for an official visit to Japan from December 14-16 at the invitation of Prime Minister Shinzo Abe. I see this journey as part of the increasing Eastern orientation of India’s foreign policy and our quest for greater engagement with countries in the larger East Asian region.

In the evolving regional and international environment India and Japan increasingly find that their long-term political, economic and strategic interests are converging.

Today our bilateral relations are poised to enter a new and dynamic phase, driven by a shared desire to enhance the bilateral relationship. I will have the opportunity to discuss with Prime Minister Abe ways to reinforce the strategic focus in our global partnership, to move to a more comprehensive economic engagement, and to develop mutually beneficial cooperation over the entire range of the relationship, including security and terrorism, energy, transport, science & technology and culture.

During my visit to Japan, I will also have the honour to call on their Majesties the Emperor and the Empress of Japan. I am scheduled to address a Joint Session of the Diet, which I shall use to reaffirm to the leaders of Japan, India’s strong desire for closer relations. I will also inaugurate the “Festival of India in Japan” and participate in an interaction with senior business leaders of Japan.

I look forward to using this visit to elevate India-Japan relations to a qualitatively new level.
238. MOU between Ministry of Economy, Trade and Industry, Government of Japan (METI) and Ministry of Commerce and Industry for the establishment of the Japan-India Policy Dialogue (JIPD) at the Ministerial Level

Tokyo, December 13, 2006

On December 13th 2006, on the occasion of a formal visit of His Excellency, Dr. Manmohan Singh, Prime Minister of India, to Japan, both Ministers reviewed what they have done so far for wider and deeper bilateral economic relations and expressed satisfaction at the progress made by them including the “Interim Progress Report of the Japan-India Policy Dialogue (JIPD)” agreed on December 1st 2006. Both Ministers also reconfirmed that they will make further efforts to lift the bilateral economic relations to the next level.

For this purpose, both Ministers agreed to create the JIPD at the Ministerial level.

The JIPD at the Ministerial level would closely monitor the progress on the realization of “Delhi-Mumbai Industrial Corridor” and the follow up of “the action plan to promote Japanese investment to India with focus on SMEs”

Both Ministers agreed to hold the first Ministerial meeting of the JIPD at an early date.

Akira Amari
Minister of Economy, Trade and Industry
Japan

Kamal Nath
Minister of Commerce and Industry
India
Hon’ble Mr. Kono Speaker of the House of Representatives Hon’ble Madam Ohgi President of the House of Councillors Your Excellency Prime Minister Shinzo Abe, Hon’ble Members of the House of Representatives And the House of Councillors of the National Diet of Japan, Distinguished leaders and Ladies and Gentlemen I am acutely conscious of the honour you have bestowed upon me by giving me the opportunity to address this august House. It is a reflection of the goodwill and friendship that the people of our two countries have for each other. I bring to you greetings from the Parliament, government and people of India.

Excellencies, Ladies and Gentlemen,

Japan and India are civilisational neighbours. The common heritage of Buddhism is our oldest bond. Our two cultures have been enriched by mutual interaction throughout our history. The Indian Monk, Bodhisena, came to Nara over a thousand years ago to be present at the consecration of Daibutsu at the Todaiji Temple. In more modern times, Tagore and Okakura Tenshin built new bridges of understanding between our two great Asian nations.

The modernisation of Japan based on advances in science and technology since the Meiji Restoration and the energy and spirit with which it rose after the second world war had a deep impact on our first Prime Minister Jawaharlal Nehru. Jawaharlal Nehru wanted India to develop close ties with Japan and learn from its experiences.

It was Prime Minister Kishi who was instrumental in India being the first recipient of Japan’s ODA. Today India is the largest recipient of Japanese ODA and we are extremely grateful to the government and people of Japan for this valuable assistance.

Japanese industry has played a valuable role in the development of Indian industries such as automobiles and petrochemicals. Japan was steadfast in its support when India went through a period of deep economic crisis in the early nineties.

In turn, India signed a separate peace treaty with Japan in 1952 in which all war claims against Japan were waived. The principled judgement
of Justice Radha Binod Pal after the War is remembered even today in Japan.

These events reflect the depth of our friendship and the fact that we have stood by each other at critical moments in our history. Each time I visit Japan I am truly inspired by your progress and deeply touched by your generosity. I will never forget my visit here in 1992. It was my first bilateral visit as India’s finance minister.

I had then come to express our gratitude for Japan’s help in dealing with an unprecedented economic crisis in 1991. That crisis gave us an opportunity to break out of an old mould and embark on a new path to progress through an open economy ready to compete in a globalising world. We looked towards Japan then to learn the virtues of resilience and dedication and how to create opportunity out of adversity.

Today, I return to Japan as the Prime Minister of a new India. Our economy in the past fifteen years has grown at an average growth rate of over 6 percent per annum. In recent years, it has gained further momentum and the growth rate has accelerated to over 8 percent per annum. India’s investment rate is now 30 percent of our GDP. As a result of wide-ranging economic reform initiated by our Government in the early 1990s, India’s economy has acquired the resilience to accept the challenge and opportunity provided by economic globalisation and the emergence of a multi-polar world.

As an open society and an open economy, India is on the move. The success of our effort to transform India within the framework of a democratic polity is vital to peace and progress in Asia and the world. Never before in human history have over a billion people tried to banish poverty and modernise their society and economy within the framework of a plural functioning democracy.

We believe that India is now on a sustained path of high growth. We have developed a new model for service-led and technology-driven integration with the global economy. Today India has emerged as an important player in knowledge-based sectors like information technology, biotechnology and pharmaceuticals. Massive investments are being made in the expansion and modernization of physical and social infrastructure consisting of roads, railways, telecommunications, sea and airports. These developments will greatly add to the competitiveness and efficiency of India’s manufacturing sector.
It is these developments and the changed international scenario that have I believe created the foundation for our two countries to rapidly develop our ties. I believe the time has come for our two ancient civilizations to build a strong contemporary relationship involving strategic and global partnership that will have a great significance for Asia and I believe for the world as a whole.

We are two major Asian countries who share the universally respected values of freedom, democracy, respect for fundamental rights and commitment to the rule of law. We must draw on these common values and the enormous economic complementarities that exist between us to build a strong partnership of the highest mutual importance.

We also share the belief that both India and Japan must play their rightful and commensurate role in the emerging international order. Strong ties between India and Japan will be a major factor in building an open and inclusive Asia and in enhancing peace and stability in the Asian region and beyond.

Economic ties must be the bedrock of our relationship and a strong push is required in this area. Our trade and investment ties are well below potential. In contrast, India’s trade with both China and Korea is booming and grew last year at around 40% with both countries. China’s trade with India is nearly three times India’s trade with Japan and Korea’s trade with India is almost equal to Japan’s trade with India.

As I said this must change. To exploit the full potential of our economic cooperation, we need strong efforts by our two governments, business and industry.

Looking to the future I believe that the most important area in which we can build this partnership is the knowledge economy. The structure of our economies, the balance of our comparative advantages and the profile of our populations are compelling reasons for this.

In the field of science and technology we need to accelerate the pace of cooperation in the growth sectors of the future such as nano-technology, bio-technology, life sciences and information and communication technologies. We must exploit synergies in the development of Indian software and Japanese hardware industries.

Any partnership of minds involves greater people-to-people contacts.
I would like to see more students in India learning the Japanese language. Japanese has already been introduced as an optional foreign language in our secondary schools. Tomorrow, Prime Minister Abe and I will be launching the “Investing in the Future Initiative” and we hope to see thousands of our youth learning Japanese in the next few years.

Another area of mutual interest is energy security. Our region as a whole needs the assurance of the security of energy supplies, and the efficient functioning of energy markets.

We have an equal stake in promoting defence cooperation, including for protection of sea-lanes to secure our trade and energy flows.

Like Japan, India sees nuclear power as a viable and clean energy source to meet its growing energy requirements. We seek Japan’s support in helping put in place innovative and forward-looking approaches of the international community to make this possible. At the same time, I would like to affirm that India’s commitment to universal nuclear disarmament remains unshaken.

Terrorism is a common threat to our peace and is threatening the harmony and fabric of our open societies. It is a complex problem that has many faces, many causes and respects no geographical barriers. We cannot prevail in the fight against terrorism unless we work together.

I am very pleased that India and Japan are working together to revitalize and reform the United Nations, and the U.N. Security Council, making them more relevant to our times. Both of us have a vital stake in the enhanced effectiveness of the United Nations and its various organs. To that end we must intensify our cooperation for an orderly and equitable management of the interdependence of nations in an increasingly globalised world we live in.

As the largest and most developed democracies of Asia, we have a mutual stake in each other’s progress and prosperity. We are determined to provide an investment friendly economic environment in India. I invite Japanese companies to expand their presence in India. Prime Minister Abe and I will launch negotiations that will lead to a Comprehensive Economic Partnership Agreement to encourage greater flows of trade, investment and technology between our two countries.

Our partnership has the potential to create an “arc of advantage and prosperity” across Asia, laying the foundation for the creation of an
Asian Economic Community. These hopes and aspirations of an expanded India-Japan partnership will become a reality only if we increase exchanges between our two countries at all levels. We have agreed to establish a high level Energy Dialogue but such fora must be established in many more areas, not least of all between our trade and industry.

Excellencies, Ladies and Gentlemen,

The friendship between people is the cornerstone of any strategic partnership. I am delighted to hear of the popularity of “Odori Maharaja” among young people here. Our children were delighted to see your own “Odori Asimo” – the dancing robot! I believe the number of Indian restaurants in Japan has increased phenomenally. I assure you that sushi and tempura are becoming popular in India!

2007 is the India-Japan Friendship Year and the year of India-Japan Tourism Exchange. We also hope to substantially increase air connectivity between our two countries. I invite young and old Japanese to visit India and see for themselves the many splendours of ancient and modern India.

The idea of a new partnership between Japan and India has found its moment today. I come here to give concrete shape to the idea so that future generations will be able to thank us for the part we are trying to play in making the 21st century an Asian century.

Thank you.
240. Speech of Prime Minister Dr. Manmohan Singh at the inauguration of the Festival of India in Japan and launch of the India-Japan Friendship Year.

Tokyo, December 14, 2006.

Your Excellency, Prime Minister Shinzo Abe,
Madam Akie Abe, Honourable Ministers and Members of the Diet,
Dr. Karan Singh, President of the Indian Council of Cultural Relations
Members of the Indian community,
Distinguished Guests,
Ladies and Gentlemen:

1. I am delighted to welcome you on this happy occasion of the joint launch of the India-Japan Friendship Year 2007, marking the fiftieth anniversary of the Cultural Agreement between India and Japan.

2. More than a thousand years ago, the peoples of India and Japan initiated a vibrant civilizational relationship, when Buddhism traveled to Japan. The gentle message that was brought from India to Japan was a message of love, compassion and universal brotherhood.

3. The Festival of India which we launch today will bring out the vibrancy of India’s culture in all its diversity; the youthful dynamism of contemporary India’s free and open society, and the great transformations that are taking place in India’s economy.

4. We are also looking forward to the Festival of Japan in India, which will showcase both modern and traditional Japanese culture, which is catching the popular imagination in India.

5. I am also delighted to welcome members of the Indian Community here. I applaud their efforts to keep the culture, spirit and idea of India alive in their adopted home. They are our true ambassadors to the world since they represent the dynamism of a new India on the move. I am confident that they are building new bridges between our two nations through their diligence, creativity and enterprise that have become the hallmark of the Indian Diaspora all over the world.

6. We are delighted that Prime Minister Abe and Mrs. Abe have found it possible to join us at this special occasion. Excellency, we regard you as a valued friend of India, who has taken keen personal interest
in developing enhanced partnership between our two countries. We are heartened to note the warm sentiments towards India that you have expressed. I fully reciprocate your sentiments.

241. Memorandum between the Indian Council for Cultural Relations (ICCR) and the Japan Foundation

Tokyo, December 14, 2006

The Indian Council for Cultural Relations and the Japan Foundation [hereinafter referred to as “both sides”] confirm their recognition that India and Japan have a common cultural and spiritual heritage and that mutual respect for and understanding of their respective cultures and traditions have been developed between the peoples of both nations. From this sound base, both sides share the awareness that in the coming years, cultural exchange between India and Japan should assume even greater importance.

With reference to each other’s activities, the following views were exchanged:

I. Purpose of Collaboration

The purpose of collaboration between both sides is:

1. to facilitate mutual beneficial cooperation between India and Japan in the area of collaboration below mentioned in Section II.

2. to make their utmost effort to effectively implement the Eightfold Initiatives for Strengthening India-Japan Global Partnership, as decided by the Prime Ministers of India and Japan during the official visit of H.E. Mr. Junichiro Koizumi, Prime Minister of Japan, to India April 28-30, 2005.

II. Areas of Collaboration between the ICCR and The Japan Foundation

1. Arts and Culture

Both sides intend to assist each other to jointly implement Indo-
Japan-related activities in the arts and cultural fields that are conducted in both countries.

Possible collaboration fields are the visual arts, performing arts, audio-visual media and publications, including traditional and contemporary culture, and other areas of mutual interest. The modality of activities may range from lectures, seminars, and international conferences to exhibitions, demonstrations, performances, publications, and other events.

2. Intellectual Exchange

Both sides intend to explore the possibility of jointly organizing or assisting academic and intellectual seminars, conferences, or workshops on the subject of mutual interest concerning Indo-Japan relationship and global issues to encourage multilateral dialogue and networking among experts, scholars, and leading citizens.

Both sides intend to explore the possibilities of cooperation when one side seeks the assistance of, or asks for suggestions from, the other.

3. Exchange of Information

Both sides intend to exchange information, publications, research, and other instructive materials that are beneficial and useful to each other on an as-needed basis. Both sides intend to cooperate within their capabilities to obtain and provide the information requested from the other.

Examples of information that the Japan Foundation may seek:
- Information on the latest trend in the arts, culture, and academic fields in India that may be beneficial to the Japan Foundation in its programming;
- Suggestions and information regarding suitable candidates and institutions to participate in Japan Foundation programs;
- Updates on the current situation of foreign-language education (especially Japanese) in India.

Examples of information that the ICCR may seek:
- Information on the latest trends in the arts, culture, and academic fields in Japan that may be beneficial to the ICCR in its programming;
- Updates on the current situation of Indian studies in Japan.
III. **General Principles**

Joint activities between the ICCR and the Japan Foundation would be subject to availability of funds.

In planning and implementing joint projects, both sides will consult each other to confirm the interests of the other side and examine the possibility of collaboration regarding the project in question.

This memorandum in no way restricts either side from participating in similar activities with other entities.

Both sides intend to continue their communication in promoting this partnership and encouraging collaboration between the two institutions. Both sides may also discuss and explore other possibilities of mutual collaboration.

Any changes to the memorandum may be incorporated by either side by mutual consent.

This Memorandum is signed in two copies, one for each side, each in English, Japanese, and Hindi languages.

Signed in Tokyo on December 14, 2006 by:

**Pavan Varma**
Director General
The Indian Council for Cultural Relations

**Kazuo Ogoura**
President
The Japan Foundation
Address of Prime Minister Dr. Manmohan Singh at Business luncheon hosted by Japanese Apex Business Chambers in association with Indian Apex Business Chambers.

I am deeply honoured and mightily pleased to be in the midst of such an august gathering of leaders of Japan’s business and industry. I take this opportunity to extend my gratitude to all of you who have found time to be present here today.

I have many cherished memories from my long association with Japan, not least the helping hand extended by Japan to India during our very severe balance of payments crisis of 1991. Japan was truly a friend in deed, to an India sorely in need. Those early days of India’s economic reforms process now appear distant. It is important to remember that despite several changes of government in these past 15 years, India has remained on the path of economic reforms and liberalization we started in 1991.

The Indian economy is now on a new path of accelerated growth. For two decades our economy grew at around 6.0 per cent per annum. But in the past four years we have recorded 8.0 per cent annual growth. In the first half of the current fiscal year the growth rate recorded a new high of 9.1%. The manufacturing sector is fast catching up with the services sector. These two sectors account for almost 80 per cent of our national income.

This remarkable growth is being led by an investment rate of 31 per cent of GDP, financed almost entirely by a matching savings rate of over 29 per cent. India’s stable macro – economic indicators lead me to believe that we have the potential to achieve double digit growth in the coming years.

Our challenge, however, is not only to sustain high growth rates, but to make this process inclusive of the demands of equity and environmental sustainability. Growth has already helped millions of our citizens to emerge from abject poverty, which is reflected in the decline of the poverty ratio from above 50% in the seventies to below 20% today. This has added large numbers to our booming consumer markets.

In this journey of unleashing the creativity and enterprise of the Indian people, and seeking growth with equity, we want Japan to be our active partner.
We are deeply appreciative of the assistance Japan has made available over the years, through its official development assistance programme. Delhi Metro is already a visible symbol of India-Japan collaboration and we look forward to more such projects that can make a tangible difference to the daily lives of our citizens.

In the years ahead we wish to focus on building a much deeper and wider relationship with Japan's business and industry. Our economic relations presently fall far short of the potential. I have been surprised to see Japan lose ground in India during the 1990s to other East Asian and South-east Asian economies, both in terms of foreign investment flows and trade flows.

It is a fact that South Korean consumer brands have moved aggressively into India and their brands have very high recognition value among our consumers. On the trade front, India's trade with both China and South Korea is booming and grew last year at around 40% with both countries. China's trade with India is nearly three times India’s trade with Japan and Korea’s trade with India is almost equal to Japan's trade with India.

The time has come for Japanese companies to reverse this situation. Japan must regain its historic status as our most important business partner in Asia. We cannot forget the critical role Japanese companies have played in the development of India's automobile and other industries in India. The challenge is before all of us is obvious. I invite Japanese Business Community to take full advantage of opportunities that present themselves in my country.

I am happy that there are indications that the trend is already beginning to change. Since the end of 2004, over $ 5 billion have been invested from Japan in India’s capital markets. This is a ringing endorsement of the potential and profitability of investing in India and will, I hope, set the tone for greater direct investment as well. I am also told that the number of Japanese companies in India have grown by 50% in the last three years.

I do hope that you have noted the results of a JETRO survey conducted in 2005, which concluded that the profit prospects of Japanese manufacturing companies was the best in India as compared to all ASEAN countries. As a consequence, more than 90% of such companies in India were planning to expand their operations in the next couple of years. I urge you to weigh the initial problems of entry against the long-term profitability and stability of doing business in India.
An economically resurgent India today offers a variety of investment opportunities, both in traditional and new sectors, in labour-intensive and knowledge-based industries. In bio-technology, nano-technology, information technology, automobiles and aerospace, textiles and leather, marine products and in many other areas Japan and India can come together.

I am of course aware of the concerns Japanese investors have about doing business in India. Our government will address all legitimate concerns of investors. We are committed to improving our infrastructure, simplifying our taxation regime, reducing further our tariffs and eliminating bureaucratic delays. We have made substantial progress in each of these areas, but I am aware that there is more to be done. We will do our very best.

The focus of our government has been to create world class infrastructure in India. I am personally monitoring all the major infrastructure projects every quarter as head of the Committee on Infrastructure. We have estimated that India’s investment needs in area of infrastructure will be at least $320 billion in the next five years in infrastructure alone. We have estimated that our total investment requirement would be closer to US$ 500 billion. This requires public and private, domestic and foreign participation in our economy. We happily welcome foreign investment and seek to promote public-private partnership on a large scale.

As part of such innovative public–private partnerships, we have made provisions for grant assistance through a specially created “viability gap funding” mechanism, and for access to long-term funds through a special purpose vehicle, the Infrastructure Development Finance Company. The qualitative and quantitative expansion of education in India will enable us to sustain a highly productive work force with a wide range of skills.

There are already more than 70 Indian software companies and 5,000 Indian engineers operating in Japan and Indian companies are making significant efforts to train software professionals for the Japanese market. Japanese has already been introduced as an optional foreign language in our secondary schools and the government is committed to increasing Japanese language learning opportunities in India. We would urge the Japanese industry to exploit India’s IT advantage the way the US and Europe have done and are doing.

India’s fast expanding economy will create a large demand for energy. There are many opportunities for collaboration between Indian
and Japanese companies in the area of energy efficient and environmentally friendly technologies. We must exploit this vast latent potential.

Prime Minister Abe and I are sincerely and deeply committed to breathing new life into our traditional friendship. We propose to launch negotiations on a Comprehensive Economic Partnership Agreement between India and Japan.

I invite all of you to a youthful, dynamic and self confident India, where more than a billion people are seeking socio-economic progress in the framework of a functioning democracy, an open economy and an open society deeply committed to fundamental human rights and respect for rule of law. I invite you to join us in this historic journey of creativity and enterprise.

I am convinced that the 21st Century will be the Century of Asia. But to ensure this and to translate this into global prosperity and peace for all, Japan and India must work together. I invite you to join us to build a new India, a new Asia and a new world.
243. Synopses of Documents Signed/Issued during the visit of Prime Minister Dr. Manmohan Singh to Japan

1. Joint Statement: Towards India Japan Strategic and Global Partnership - Copy being circulated. (Signatories: Prime Minister of India and Prime Minister of Japan)

2. Joint Ministerial Statement on the launching of a Joint Task Force (JTF) to develop an Economic Partnership Agreement (EPA)/Comprehensive Economic Partnership Agreement (CEPA) between India and Japan - The Joint Ministerial Statement stipulates that the two sides will launch negotiations for the conclusion of an EPA/CEPA through a Joint Task Force (JTF). The India-Japan EPA/CEPA should cover, but may not be limited to trade in goods, trade in services, measures for trade promotion, promotion, facilitation and liberalization of investment flows, measures for promoting economic cooperation in identified sectors and other areas for a comprehensive economic partnership between India and Japan. It will be the endeavour of the JTF to complete the negotiations as soon as possible, in approximately two years. (Signatories: Minister of Commerce & Industry of India and Minister of Economy, Trade & Industry of Japan, Minister of Foreign Affairs, Minister of Agriculture and Fisheries and Minister for Finance from Japan.)

3. Memorandum of Understanding on Delhi-Mumbai Industrial Corridor: According to the MOU, the industrial corridor, to be developed along the Delhi-Mumbai Dedicated Freight Corridor, will have several supporting infrastructure projects such as power facilities, rail connectivity to ports en-route and would also cover development of ports on the west coast of India. Along this corridor, several industrial estates, Special Economic Zones and clusters with high quality infrastructure are proposed to be developed to attract more investments, including from Japan. A Task Force under Vice-Minister METI and Secretary, Department of Industrial, Policy and Promotion will develop this concept and the components of the projects. (Signatories: Minister of Commerce & Industry of India and Minister of Economy, Trade & Industry of Japan)

4. Cooperation Agreement between the Government of India and Japan Bank for International Cooperation (JBIC) - The Agreement provides
for undertaking investment promotion activities in India in a sustained and coordinated manner by strengthening collaboration between DEA and JBIC. The JIPD will be co-chaired by Minister of Trade and Industry from India and Minister of Economy, Trade and Industry from Japan. (Signatories: Ambassador of India in Japan and Chairman, JBIC)

5. MOU to upgrade Japan-India Policy Dialogue (JIPD): The MOU upgrades the existing JIPD to the level of Ministers from the existing official level. (Signatories: Minister of Commerce & Industry of India and Minister of Economy, Trade & Industry of Japan of Japan)

6. Joint Statement on the promotion of India-Japan tourism exchanges - The Joint Statement includes various activities as part of promoting exchange between the people of two countries and strengthening cooperation in the field of tourism. It, inter alia, includes designation of year 2007 as India-Japan Tourism Exchange Year; participation of Japan in the SATTE 2007, a travel fair in India and India's participation in events like JATA, World Travel Fair in Japan. The Joint Statement also sets target for increasing the number of visitors between the two countries to 300,000 by 2010, which will be almost the double of what it was in 2005 and further increase to 500,000 by 2015, which will be three times than in 2005. (Signatories: Ambassador of India in Japan and Deputy Vice Minister for Tourism Policy, Ministry of Land, Infrastructure and Transport and Director-General, Southeast and Southwest Asia Division, Ministry of Foreign Affairs of Japan)

7. Memorandum between Indian Council for Cultural Relations (ICCR) and the Japan Foundation - The Memorandum will facilitate mutually beneficial cooperation between the ICCR and the Japan Foundation in the areas of art and culture, intellectual exchange, exchange of information, among other things. (Signatories: Director General, ICCR and President, Japan Foundation)

8. MOU on the establishment of Indian Institute of Information Technology for Design and Manufacturing (IITDM) at Jabalpur - The MOU provides the framework for assistance by the Government of Japan towards the development of IITDM. (Signatories: Ambassador of India in Japan and Director-General, Southeast and Southwest Asia Division, Ministry of Foreign Affairs of Japan.)
9. MOU between Department of Science & Technology and the Japan Science & Technology Agency in scientific cooperation programme - The MOU provides for the commencement of a new programme for joint funding and support for cooperative research conducted by the scientists of the two countries. (Signatories: Ambassador of India in Japan and President, JST)

10. MOU between Department of Science & Technology and RIKEN (Institute of Physical and Chemical Research) on cooperation in science & technology - Under this MOU, the two sides have agreed to cooperate in detection tools for security, genome-related research, including system biology, computational science including development of bioinformatics tools and other areas of mutual interest. The MOU also provides for establishing a Joint Working Group for the successful implementation of the MOU. (Signatories: Ambassador of India in Japan and President, RIKEN)

11. Understanding on relaxation of Civil Aviation arrangements: During bilateral air services consultations between India and Japan, liberalized civil aviation arrangements have been worked out after a gap of 13 years. The provisions include the designated airlines of both sides granting access to one additional point of call each for operation of scheduled services; three more points in each country being allowed for code sharing operations; enhancing of capacity entitlement to 21 services per week; designated airlines of each country operating all cargo services up to seven frequencies/week; and setting up a mechanism on code sharing arrangements including the domestic code share.

12. MOUs for twinning relationship between Delhi State and Fukuoka Prefecture and Maharashtra State and Okayama Prefecture: The two sides have reached understandings for twinning arrangements between Delhi-Fukuoka and Maharashtra-Okayama. The MOUs provide for cooperation in the areas of economy, tourism, culture, etc.,. The objective of the MOUs are to promote and expand mutually beneficial cooperation and economic development in both states and to establish collaborative projects and assignments of mutual interest and benefit in identified thrust areas.
244. Remarks by Prime Minister Dr. Manmohan Singh at Joint Press Interaction with Japanese Prime Minister Shinzo Abe.

Your Excellency Prime Minister Shinzo Abe, Ladies and Gentlemen of the Media, This visit to Japan was for me a most memorable visit to your beautiful country. First of all, Mr. Prime Minister, allow me to convey very sincere appreciation for the warm welcome and gracious hospitality extended to me and my delegation. The Prime Minister and I have just concluded a very cordial, fruitful and extensive exchange of views on our bilateral relationship as well as on issues of mutual interest in regional and international affairs. Prime Minister Abe has already given you an overview of our discussions. I will, therefore, touch upon only a few salient aspects.

As two vibrant democracies sharing common values and aspirations, we have much to contribute to each other. We have converging political, economic and strategic interests and concerns. We are both committed to the promotion of peace, stability and economic integration for shared prosperity in Asia. Indeed, India and Japan are natural partners, with a mutual stake in each other's progress. There is much that we can and should do together.

To underline this point, we have already agreed to establish a Strategic and Global Partnership. It will be our endeavour to strengthen our political and diplomatic coordination on bilateral, regional and global issues, enhance our defence relations, undertake comprehensive economic engagement, to widen cooperation in science and technology and to seek a major expansion of people-to-people contacts. India-Japan relations are today poised for a transformation and we have resolved to seize this historic moment.

We are determined to counter terrorism in all its forms, in whatever garb it is cloaked and wherever it raises its head. We have decided to act in concert to oppose the spread of weapons of mass destruction.

The launch of negotiations on an India-Japan Comprehensive Economic Partnership Agreement marks the beginning of a new phase in our economic relations, which will enable us to develop their full potential and promise.
We have decided to work together for a quantum leap in educational and cultural ties and people-to-people contacts. Mere incremental increases are not what we seek. As a mark of this commitment, Prime Minister Abe and I launched the India-Japan Friendship Year 2007 as well as the Festival of India in Japan yesterday.

In conclusion, I am deeply satisfied with the outcome of my visit, and I am delighted that Prime Minister Abe has accepted my invitation to visit India next year. Mr. Prime Minister, we appreciate your personal commitment to the cause of India-Japan partnership. Let me assure you that I reciprocate your sentiments in the fullest possible measure.

245. Joint Statement issued at the end of the visit of Prime Minister Dr. Manmohan Sing to Japan.

1. The Prime Minister of India, H.E. Dr. Manmohan Singh, is currently paying an Official Visit to Japan from December 13 to 16, 2006 at the invitation of the Prime Minister of Japan, H. E. Mr. Shinzo Abe. He is accompanied by his spouse, Mrs. Gursharan Kaur and a high-level delegation.

2. Prime Minister Dr. Manmohan Singh was accorded a ceremonial welcome on December 14. Prime Minister Dr. Manmohan Singh and Mrs. Gursharan Kaur had audience with Their Majesties the Emperor and the Empress of Japan. He held extensive talks with Prime Minister Mr. Shinzo Abe of Japan, who also hosted a Banquet in honour of the visiting dignitary. He addressed a Joint Session of the Diet on December 14. Mr. Taro Aso, Minister for Foreign Affairs, Mr. Koji Omi, Minister for Finance and Mr. Akira Amari, Minister for Economy, Trade and Industry called on the Prime Minister of India. Mr. Yoshiro Mori, former Prime Minister and President of Indo-Japanese Association and Dr. Taro Nakayama, President of Japan-Indo Parliamentarians’ Friendship League also called on the Prime Minister of India. The two Prime Ministers unveiled the Joint Logo and launched the India-Japan Friendship Year 2007, to be organised in both countries, and attended the inaugural event of the Festival of India in Japan on December 14. Prime Minister Dr. Manmohan Singh
also addressed the business organisations of Japan at a luncheon meeting. Prime Minister Mr. Shinzo Abe received representatives of the Indian business delegation who accompanied Prime Minister Dr. Manmohan Singh. Mr. Yasuhisa Shiozaki, Chief Cabinet Secretary and Mr. Akihiro Ota, Chief Representative of New Komeito will call on the Prime Minister of India on December 16.

3. The two leaders recall the impressive development of India-Japan relations in recent years, noting in particular the establishment of a Global Partnership in 2000 during Prime Minister Mr. Yoshiro Mori’s visit to India and the decision taken last year during Prime Minister Mr. Junichiro Koizumi's visit to India to reinforce the strategic orientation of the partnership. They also note with satisfaction the all-round progress made towards the implementation of the Joint Statement on the “India-Japan Partnership in a New Asian Era: Strategic Orientation of the India-Japan Global Partnership” and the “Eight-fold Initiative for Strengthening India-Japan Global Partnership”, signed between the Prime Ministers of the two countries on April 29, 2005 in New Delhi, and reaffirm the principles and understandings embodied in these documents.

**Strategic and Global Partnership:**

4. The two Prime Ministers recall that India and Japan share ancient bonds and a proud civilisational heritage. The current context of India-Japan relations is rooted in their similar perceptions of the evolving environment in the region and the world at large. It is driven by converging long-term political, economic and strategic interests, aspirations and concerns and underpinned by a common commitment to democracy, open society, human rights, rule of law and free market economy. It is based on deep respect for each other’s contributions in promoting peace, stability and development in Asia and beyond, unencumbered by any historical differences.

5. The two leaders affirm that India and Japan are natural partners as the largest and most developed democracies of Asia, with a mutual stake in each other’s progress and prosperity. Indeed, a strong, prosperous and dynamic India is in the interest of Japan, and likewise, a strong, prosperous and dynamic Japan is in the interest of India. They have responsibility for, and are capable of, responding to global and regional challenges, and they must play an active role in the promotion of peace and stability in Asia and world at large.
Recognising that Asia is emerging as the leading growth centre of an increasingly interdependent global economy, the two countries are also keen to pursue a comprehensive economic partnership in the region and nurture sustainable economic growth, social peace and political tolerance in open and cooperative regional frameworks.

6. Given their shared determination to raise bilateral relations to a higher level, the two leaders decide to establish a Strategic and Global Partnership between India and Japan. This will impart stronger political, economic and strategic dimensions to bilateral relations, serve long-term interests of both countries, enhance all-round cooperation and contribute to greater regional peace and stability.

7. The Strategic and Global Partnership will involve closer political and diplomatic coordination on bilateral, regional, multilateral and global issues, comprehensive economic engagement, stronger defence relations, greater technological cooperation as well as working towards a quantum increase in cultural ties, educational linkages and people-to-people contacts. This partnership will enable both countries to harness the vast potential of bilateral relations, drawing upon complementarities and each other’s intrinsic strengths, and also work together to address regional and global challenges.

**Political, Defence and Security Cooperation:**

8. The two leaders welcome the important contribution made to bilateral cooperation by various existing dialogue mechanisms. With a view to sustaining and giving high-level guidance to the continued growth and development of bilateral relations, the two leaders confirm their intention to hold annual Summit-level meetings in respective capitals as well as on the sidelines of multilateral events. The Prime Minister of Japan will visit India in 2007 for the next bilateral Summit at the invitation of the Prime Minister of India. The two leaders encourage the continuation and enhancement of regular exchanges between members of their respective Cabinets in charge of Foreign, Defence, Finance, Trade and Industry, Agriculture, Information and Communications Technology, Science and Technology, Tourism and Civil Aviation portfolios. They also endorse the institutionalisation of Strategic Dialogue at the Foreign Ministers level as well as a regular Policy Dialogue between the National Security Advisor of India and his Japanese counterpart.
9. The two leaders endorse the continuation and enhancement of consultations between the Ministry of External Affairs of India and the Ministry of Foreign Affairs of Japan, including the Foreign Office Consultations (Foreign Secretary-level Talks), to advance the shared agenda of the relationship. The Indian side welcomes the Japanese plan to establish a consular post in Bangalore.

10. The two leaders welcome the Joint Statement issued following talks between the Defence Minister of India and the Minister of State for Defense of Japan in May, 2006 and reiterate their commitment to enhance defence cooperation to achieve the common goal of promoting the security, stability and prosperity in Asia and in the world at large as well as in tackling regional and global security challenges. They urge their concerned agencies to develop an annual calendar of cooperation and exchanges relating to defence and security and to progressively enhance cooperative activities, including high-level exchanges and consultation between services. The two leaders appreciate the recent developments in service-to-service cooperation, including cooperation in UNDOF. The two sides will also undertake a goodwill exercise between the Japan Maritime Self Defense Force and the Indian Navy in 2007.

11. Recognising that India and Japan have large Exclusive Economic Zones and maritime interests, the two leaders confirm their intention to work closely to enhance cooperation in capacity building, technical assistance and information sharing between their respective agencies and undertake anti-piracy measures. They share the view that India and Japan must cooperate closely to ensure the safety and security of international maritime traffic that are vital for their economic well-being as well as that of the region.

12. The two leaders endorse regular exchanges between the two Coast Guards through meetings of heads of Coast Guards, mutual visits of Coast Guard ships and holding of combined exercises. In this context, the signing of a Memorandum on Cooperation between the Coast Guards was welcomed. They also welcome the coming into force of the Regional Cooperation Agreement on Combating Piracy and Armed Robbery against Ships in Asia (ReCAAP) and reaffirm their intention to enhance cooperation in respect of anti-piracy countermeasures under its framework.
13. The two leaders unequivocally condemn terrorism in all its forms and manifestations and stress that there can be no justification whatsoever for any act of terrorism. They share the view that international community must further intensify efforts and cooperation to fight this scourge. In this context, they confirm that the two countries will continue to work together through the India-Japan Joint Working Group on Counter Terrorism. They also call upon all Member States of the UN to work towards the expeditious adoption of a Comprehensive Convention on International Terrorism.

**Comprehensive Economic Partnership:**

14. The two leaders welcome the report of the India-Japan Joint Study Group, which has made a series of recommendations, covering trade in goods, trade in services, investment flows, role of Japan’s Official Development Assistance (ODA) in promoting economic partnership and other areas of economic cooperation, and direct that those recommendations be implemented expeditiously. Convinced that comprehensive economic engagement between the two countries must be a core element of their strategic partnership and also recognising that closer economic integration between India and Japan will contribute to further growth and stability in the broader Asian region, the two Prime Ministers have decided to launch immediate negotiations for the conclusion of a bilateral Economic Partnership Agreement/ Comprehensive Economic Partnership Agreement (EPA/CEPA), on the basis of the recommendations submitted by the Joint Study Group. They note with satisfaction that a Joint Ministerial Statement, constituting a Joint Task Force to undertake the inter-governmental negotiations on the EPA/CEPA, has been signed during the visit. It will be the endeavour of the Joint Task Force to expedite these negotiations aiming to complete them in substance as soon as possible in approximately two years.

15. The two leaders welcome recent positive developments in bilateral economic relations and direct that the potential of economic partnership must be fully realised.

16. The Indian side expresses its appreciation for the fact that India is presently the largest recipient of Japan’s ODA. The Japanese side affirms that India will continue to be a priority country for its ODA. The two leaders confirm that Japan’s ODA will continue to support India’s efforts at accelerated economic and social development as
well as to further strengthen India-Japan partnership. They direct their concerned agencies to intensify cooperation under the ODA, particularly in priority sectors such as infrastructure, environment, social development and human resource development.

17. In order to widen and deepen economic engagement even as an EPA/CEPA is negotiated, the two leaders announce an “India-Japan Special Economic Partnership Initiative” (SEPI). This initiative will promote enhancement of investment from Japan to India and help develop India’s infrastructure and manufacturing capacity, taking full advantage of the ample availability of skill and human resources and the public-private partnership policy initiative of the Government of India. The SEPI will, inter alia, consist of the following:

A. Development of Infrastructure and Promotion of Manufacturing, Trade and Investment:

- Further cooperation in realising the Dedicated Multi-modal High Axle Load Freight Corridors with computerised control on Mumbai-Delhi and Delhi-Howrah routes. The two leaders note with satisfaction that the Japan International Cooperation Agency (JICA) has submitted its Interim Report of the Feasibility Study on the Project and that the Final Report will be ready by October 2007. The two sides will consult on the ways and means to realise the Project, utilising Japan’s Special Terms for Economic Partnership (STEP) Scheme and with the inputs of Japanese technology and expertise. The two sides will also examine the possibility of using Japanese technology in locomotives and signalling and electrical equipment, and in construction in railway sector;

- Promotion of “Delhi-Mumbai Industrial Corridor”, supported by Multi-modal Dedicated Freight Corridor between Delhi and Mumbai. This will include cooperation in development of one or two sea ports on the west coast and industrial estates and Special Economic Zones with high quality physical and social infrastructure, and other initiatives, through collaboration between private and governmental sectors of the two countries, with the objective of developing the requisite infrastructure and facilitating investment. The two governments will further discuss how to facilitate its development, including the formulation of a master plan;
• Cooperation in the setting up of a multi-product Special Economic Zone/Cluster in India to locate investments from Japan, with facilities for manufacturing and processing industries, hotels and recreational units, and educational and training centres. It will be an integrated conglomeration based on industrial needs and global best practices. The Government of India will facilitate the establishment of the Zone/Cluster;

• Efforts by the Government of Japan to encourage investment by Japanese companies in India, including through assistance in development of infrastructure relating to Special Economic Zones and industrial estates;

• Assistance by Japan External Trade Organization (JETRO) to Japanese small and medium enterprises to set up operations in India, with its Business Support Centre in India acting as an incubator;

• Support by JETRO for the rural business and industrialisation initiatives of the Government of India, under its “One Village One Product” programme, initially through the implementation of a pilot project; and

• Promotion of participation of Japanese companies in the power sector in India, including through the initiative of the Ministry of Economy, Trade and Industry of Japan on the establishment of a ‘Task Force on Indian Power Sector’. Projects proposed by the Indian side for the participation of Japanese companies include, inter alia, 4000 MW Coastal Ultra Mega Power Project at Chayyur, Tamil Nadu and 3000 MW Lohit Hydroelectric Project in Arunachal Pradesh.

B. Human Resource Development for Promotion of Manufacturing:

• Cooperation within the framework of Japan-assisted ‘Visionary Leaders for Manufacturing’ (VLFM) programme, under which Japanese manufacturing management and skills will be transferred to senior managers of Indian manufacturing industry;

• Continued involvement of Japanese private sector in training and quality control and utilisation of training programmes of the Government of Japan; and
• Collaboration towards the development of the Indian Institute of Information Technology for Design and Manufacturing, Jabalpur and exchanges between technological institutes of the two countries.

18. The Policy Dialogue between the Ministry of Commerce and Industry of India and the Ministry of Economy, Trade and Industry of Japan, to be upgraded to the Ministerial level, will advance the relevant elements of the agenda of the SEPI. An MOU on Delhi-Mumbai Industrial Corridor was signed between Minister of Commerce and Industry of India and Minister of Economy, Trade and Industry of Japan.

19. The two leaders welcome enhanced cooperation in the financial sector, including through Japanese participation in India’s capital markets, banking and insurance. They also welcome the collaboration through cooperation agreement between the Government of India and the Japan Bank for International Cooperation (JBIC). They take note of the business cooperation agreement between JBIC and the ICICI Bank as a useful model to enable companies of India or Japan to raise funds in local currency in either country. The Ministries of Finance of the two countries will further exchange views on the development of regional financial and capital markets.

20. The two leaders welcome major investment projects from Japan to India, including by Suzuki Motor Corporation, Honda Motor Co. Ltd., Nissan Motor Co. Ltd. and Mitsui & Co. Ltd., among others. The two sides will cooperate to facilitate the following projects:

• Development and setting up of integrated logistic platforms with rail-connected Inland Container Depot (ICD) and specialized warehouses based on Free Trade & Warehousing Zone (FTWZ) framework; and

• Setting up of new capacities in India by Japanese auto and auto-parts companies.

21. Emphasizing the major role of the private sector in strengthening economic engagement, the two leaders announce the setting up of a Business Leaders’ Forum, comprising ten business leaders from each country. This Forum will have the mandate to develop a roadmap for enhanced partnership and cooperation between the two countries at the business level and generate ideas for furthering the goals of the
SEPI and taking forward the negotiations on the EPA/CEPA. The two leaders express the hope that this Forum will provide inputs to them for promoting a comprehensive economic engagement between India and Japan. The two leaders will also designate senior representatives to guide the Business Leaders' Forum.

22. The Japanese side welcomes Indian investments in Japan. The two sides will coordinate to facilitate their location and activities in the country. Recognising the competitive advantage of India in software development and IT-enabled services, the two sides will also work together to facilitate the functioning of Indian companies in this field in Japan.

23. The two sides will continue cooperation in the field of urban development, including water supply, sanitation and construction of urban transportation systems in Indian cities along the lines of Delhi Metro, which is a shining example of India-Japan partnership. The two countries will coordinate to launch a Working Group in the field of water environment, urban development and urban transportation.

24. The two leaders welcome the outcomes of meetings of Working Groups set up under the India-Japan Information and Communication Technology Forum, which include field trials in India for introduction of Japanese wide-band wireless technology i-Burst for field trials in India, joint research on Natural Language Processing by National Institute of Information and Communications Technology (NICT) of Japan and Centre for Development of Advanced Computing (CDAC) of India, and exchange of researchers, software experts and other technical personnel. The two leaders urge their Ministries concerned to pursue actively the identified areas of cooperation. The Japanese side will give consideration to the request for assistance in setting up a National Gigabit Backbone Network in India.

25. The two sides are determined to tackle global energy security issues jointly and direct that the dialogue between their governments be strengthened. They also welcome the Joint Statement regarding cooperation in the hydrocarbon sector signed between the Minister of Petroleum and Natural Gas of India and Minister of Economy, Trade and Industry of Japan in September 2005, the signing of five MOUs and the progress made under them.
26. Recognising the critical importance of securing the energy needs of both countries, the two leaders share the desire to enhance the level and scope of cooperation in the energy sector. They endorse the setting up of an India-Japan Energy Dialogue, co-chaired by Deputy Chairman, Planning Commission of India and the Minister of the Ministry of Economy, Trade and Industry of Japan, to promote cooperation in the energy sector in a comprehensive manner. The areas covered will include oil and natural gas, coal, electric power, renewable energy sources, energy efficiency and other relevant sectors. The existing forum between The Energy Resources Institute (TERI) of India and New Energy and Industrial Development Organisation (NEDO) of Japan, which was successfully convened for the first time in December 2006, will provide inputs to the Energy Dialogue.

27. The two sides will expand cooperation in energy efficiency through exchange of experts, capacity building and technical cooperation.

28. Recognising the respective strengths of India and Japan in high technology and knowledge economy and the potential benefits of fostering cooperation and also noting the importance of promoting the objectives of non-proliferation, the two leaders decide to launch a consultation mechanism to facilitate bilateral high technology trade and address matters relating to respective export control systems of the two countries.

29. Recognising the importance of intellectual property for economic development, the two leaders confirm that their governments will continue to cooperate in capacity building activities in this area, including in developing human resources.

Science and Technology Initiative:

30. The two leaders believe that cooperation in science and technology, including in frontier areas of research and development, constitutes a key element of the strategic partnership between the two countries. The two leaders welcome the holding of the 7th Joint Committee on Science and Technology in November 2005 as well as the India-Japan Science and Technology Initiative Meeting in October 2006. Taking note of the outcome of intensive bilateral consultations in recent months, including the above meetings as well as consultations at the level of the Ministers in charge of Science and Technology,
they approve the launching of the following joint projects under the Science and Technology Initiative:

- Joint R&D Programme in areas such as nano-technology, life science and information and communication technology;
- Development of Open Access Database of the available ongoing and prospective research undertaken individually and through joint collaboration in their respective academic, public and industrial institutions; and
- Collaboration in the area of scientific deep sea drilling.

31. The two leaders recognise the importance of strengthening mutually beneficial research collaboration between the relevant organisations of the two countries. In this context, they welcome the signing of the following documents: (i) MOU on cooperation in science and technology between the Department of Science & Technology (DST) of India and RIKEN; and (ii) MOU on scientific cooperation programme between DST and Japan Science and Technology Agency (JST), (in addition to the existing MOU between DST and Japan Society for the Promotion of Science (JSPS) on Core University Program). The two leaders also welcome the collaboration between the National Institute of Advanced Industrial Science and Technology (AIST) of Japan and Indian research institutions, particularly the Council of Scientific and Industrial Research, DST, Department of Biotechnology and Jawaharlal Nehru Centre for Advanced Scientific Research in advanced industrial science and technology fields, including nano-technology and materials, energy and environment (clean coal and biomass resources), life sciences and information and communication technology.

32. The two leaders note with satisfaction the mutually beneficial cooperation between the Indian Space Research Organisation (ISRO) and the Japan Aerospace Exploration Agency (JAXA) in peaceful uses of outer space. The two leaders reaffirm their keenness to cooperate in such fields as space science, including lunar missions and X-ray astronomy, satellite remote sensing, satellite communication, and disaster management support. They also recognise the importance of capacity building and promotion of regional cooperation in space applications in the Asia Pacific region. In this context, the Japanese side appreciates the ISRO’s decision
to participate in the disaster management support system “Sentinel Asia”.

33. The two leaders welcome the signing of the agreement on ITER, in which they are partners.

People-to-People Exchanges:

34. The two leaders believe that in order to substantiate the India-Japan strategic partnership there must be a quantum increase in cultural, academic and people-to-people exchanges. Such contacts will also build upon the goodwill that exists in the two countries in respect of each other and help raise the profile of India in Japan and of Japan in India. With this larger policy objective in mind, the two leaders endorse a number of initiatives to qualitatively upgrade such contacts.

35. Recognising the important role played by the youth of both countries in fostering closer people-to-people ties, the two leaders launch an Investing in the Future Initiative, the main elements of which will, inter alia, consist of the following:

- The Japanese side will expand the Aso programme, announced in January 2006, with the support of the Indian side, with the objective of sponsoring visits of five thousand persons between India and Japan over the next three years in such fields as Japanese language, technology and youth interaction;
- The Indian side welcomes the designation of India as a target country for the Japan Exchange and Teaching Programme. Exchanges under this programme will be stepped up;
- The Governments of India and Japan will work together to promote Japanese language studies in India, with a target of 30,000 learners at different levels by the year 2010. The Japanese side welcomes the introduction of Japanese language as an optional foreign language in the secondary school curriculum in India;
- The two sides will continue promotion of Japanese language in India through Japan Overseas Cooperation Volunteers programme; and
- The Japanese side will assist the Indian side in setting up of Japanese language teaching cells in seven Indian Institutes
of Technology and establishing centres of Japanese studies at selected institutions and universities in India.

36. The two leaders welcome the signing of a Memorandum on the development of the Indian Institute of Information Technology for Design and Manufacturing at Jabalpur, with Japanese assistance. The two sides will also make every effort to collaborate towards the development of an Indian Institute of Technology.

37. The two leaders designate the Year 2007 as the “India-Japan Tourism Exchange Year” and direct the Ministries concerned to carry out various activities to promote tourism exchanges. They welcome a Joint Document on expansion of tourism exchanges between the two countries. The Indian side expressed its appreciation for Japanese assistance in development of tourism-related infrastructure, including the Buddhist pilgrimage circuit in India. The two sides will enhance their ongoing cooperation in development of infrastructure at Buddhist sites in India.

38. Noting that civil aviation links between the two countries are a key element for fostering closer economic and people-to-people contacts, the two leaders welcome the positive outcome of bilateral civil aviation talks and direct their respective authorities to expeditiously implement the agreed measures to expand air links commensurate with the requirements of growing economic relations and enhanced tourist flows. The Indian side invites Japanese participation in the development of airports in India through public-private partnership and also under the ODA. The Japanese side will give serious consideration to the idea.

39. Recalling the important role of Nalanda in the ancient period as a leading international university contributing to Buddhist and secular studies, the two sides will explore the idea of re-development of Nalanda as a major centre of learning with the establishment of an international university on the basis of regional cooperation.

40. The two leaders welcome the signing of an MOU on cooperation between the Indian Council for Cultural Relations and the Japan Foundation.

41. The two Prime Ministers welcome the understandings on Sister Province/State relationship reached between Delhi State and
Fukuoka Prefecture and Maharashtra State and Okayama Prefecture and encourage further expansion of such twinning arrangements to enhance people-to-people relations and closer economic ties.

42. The two leaders direct the concerned authorities to implement at the earliest the arrangement on the waiver of visas for holders of Diplomatic Passports. They also direct that the simplification of visa procedures to facilitate two-way travel be undertaken as soon as possible.

Regional and Multilateral Cooperation:

43. The two leaders confirm their intention to continue to work closely in the East Asia Summit (EAS) framework. While acknowledging the ASEAN as the driving force in the process of creating this new regional architecture, they reaffirm the need for all sixteen EAS countries to fully participate in and actively contribute to the objective of closer cooperation and community building in the region. In this regard, they stress the importance of the development of a roadmap and modalities for the progressive realisation of an East Asian community in the EAS framework.

44. The two leaders reaffirm the need to further promote regional economic integration and, in this context, recall their respective proposals for a Pan Asian Free Trade Area and for a Comprehensive Economic Partnership in East Asia. They decide to cooperate with each other in studies that will take forward these proposals. It is also decided that the two sides will cooperate towards the establishment of the Economic Research Institute for ASEAN and East Asia, which will conduct research, analyses as well as develop policy recommendations to advance the regional economic integration.

45. The two leaders note that the initiative by the G-4 for reforming the Security Council has brought the issue to the attention of the international community. They further reaffirm the determination to strengthen cooperation and coordination between India and Japan for comprehensive reform of the United Nations, including the expansion of the UN Security Council in both permanent and non-permanent categories to reflect contemporary realities of the world.

46. The two leaders share the view on the usefulness of having dialogue among India, Japan and other like-minded countries in the Asia-Pacific region on themes of mutual interest. The two governments will consult on the modalities.
47. The two sides reiterate their commitment to disarmament and non-proliferation objectives, and their determination to work as partners against proliferation. While expressing their respective positions on the approaches towards the shared goal of achieving a world free of nuclear weapons, they reaffirm that they will continue to promote commonalities and identify areas of convergence for mutual cooperation between them in a constructive manner, contributing to the advancement of overall bilateral relations. In this context, they welcome the First Joint Secretary/Director General level Annual Dialogue on Disarmament and Non-Proliferation, held in New Delhi in May 2006, and confirm that the Second Round of the Dialogue will be held in Tokyo in 2007.

48. The two leaders express serious concern regarding the threat of proliferation of weapons of mass destruction and their delivery systems, which confront the region and the wider world. They reaffirm that India and Japan need to work in a concerted manner to effectively counter these dangers, which imperil their peaceful societies.

49. The two leaders discussed recent events on the Korean Peninsula and shared grave concerns on the nuclear test conducted by DPRK, which has greatly complicated the security situation in the region and highlighted the true extent of clandestine proliferation. The two leaders stress the importance of fully implementing the UN Security Council resolution 1718 and confirm that they will promote practical cooperation towards this end. They welcome the recent progress towards the resumption of the Six-Party Talks for the denuclearisation of the Korean peninsula, an objective DPRK has also endorsed. They urge that the abduction issue be resolved at the earliest as a humanitarian concern.

50. The two leaders share the view that nuclear energy can play an important role as a safe, sustainable and non-polluting source of energy in meeting the rising global demands for energy, and that international civil nuclear energy cooperation should be enhanced through constructive approaches under appropriate IAEA safeguards. The two sides will continue to discuss the international civil nuclear cooperation framework with respect to India.  

---

1. After the release of the Joint Statement, the Japanese Prime Minister told journalists that “Japan will be actively involved in the discussions at the Nuclear Suppliers’ Group”. He said that he had heard from Prime Minister Manmohan Singh that nuclear power was
51. The two sides will establish Inter-Governmental Consultations on Environment and Climate Change. They will also promote cooperation in Asia-Pacific Partnership on Clean Development and Climate.

52. Recognizing that it is a matter of priority for both countries to also strengthen the ability to mitigate damages caused by natural disasters like earthquakes, tsunami and cyclones, the two sides confirm that they will promote mutual cooperation, including through Asian Disaster Reduction Centre, in the field of disaster management in line with the Hyogo Framework of Action.

53. The two Prime Ministers note with satisfaction that India has become a Member of ASEM and Japan an Observer in SAARC. Both countries resolve to work in close consultation in these forums. The Indian side looks forward to Japan’s attendance as an Observer at the 14th SAARC Summit in New Delhi in April 2007.

54. The two leaders reaffirm their shared recognition of the importance of strengthening the multilateral trading system. The two countries will make their utmost efforts towards the early conclusion of the WTO Doha Round negotiations as responsible members of the G-6.

55. The two leaders express their conviction that Prime Minister Dr. Manmohan Singh’s highly successful Official Visit to Japan and the decision of the two countries to establish a Strategic and Global Partnership has opened a new chapter in friendly and cooperative relations between them.

---

a necessity in India given the fact that there was an increasing demand for energy. Dr. Singh had also assured him that appropriate safeguards would be taken. He said that he had pointed out to Dr. Singh that Japan was the only country that had been a victim of the nuclear bomb, and as such had sensitivities on the subject. “Therefore India should respond to the concerns of the international community and work out appropriate safeguards with the IAEA,” the Japanese Prime Minister said. Replying to questions on board the special flight taking him back to New Delhi from Tokyo on December 16, the Prime Minister told journalists that he was not disappointed with the Japanese stance on India's civil nuclear energy plans. He said: “There is adequate appreciation of the fact that India needs nuclear power for its energy security and I am convinced that when the time comes, Japan will be on our side. Though of course, I had not come here to discuss this matter in any great length, Japanese sensitivities on matters relating to nuclear have to be respected because they are the only country in the world which had been devastated by the atomic weapons in the Second World War.”
Prime Minister Dr. Manmohan Singh has extended an invitation to Their Majesties the Emperor and Empress to pay a State Visit to India.

Prime Minister Dr. Manmohan Singh thanks the Government and the people of Japan for the warm hospitality accorded to him and his delegation. He has extended a cordial invitation to Prime Minister Mr. Shinzo Abe to pay a return visit to India at a mutually convenient date in 2007. The invitation was accepted with pleasure, with dates to be decided through diplomatic channels.

(Manmohan Singh)        (Shinzo Abe)
Prime Minister of Republic of India       Prime Minister of Japan

246. Speech by Prime Minister Dr. Manmohan Singh at a banquet hosted in his honour by Japanese Prime Minister Shinzo Abe.

Your Excellency, Prime Minister Shinzo Abe and Madame Abe, Ladies and Gentlemen,

I wish to thank the Government and people of Japan for the courtesy and warm hospitality with which we have been received in your country.

I have visited Japan many times but this is my first visit as Prime Minister. I have come at an important moment in your history as a new generation takes over the leadership of your country. I sense a spirit of optimism and hope for the future of Japan among the people. India and Japan share a proud civilisational heritage and a common Asian identity. Our two nations have converging long-term political, economic and strategic interests. We have a common commitment to democracy, human rights, the rule of law and a free market economy. India and Japan are thus natural partners with a mutual stake in each other’s progress and prosperity.

Most importantly, I believe that I am right in saying that there is a
broad political consensus in both our countries in favour of a strong and enduring partnership between India and Japan.

We are very grateful to Japan for the development assistance provided to India. However, there is a vast unexplored potential to expand flows of trade, technology and investment. I believe my visit to Japan will open up new pathways of cooperation between our two countries.

I thank you once again and end with a quote from the revered poet Rabindranath Tagore who wrote:

*Once we dreamt that we were strangers.*

*We woke up to find that we were dear to each other*

Excellencies, Ladies and Gentlemen, it gives me great pleasure to invite you to join me in raising a toast to:
- The health and well being of the Prime Minister of Japan and Madame Abe
- The prosperity and progress of our two peoples
- And to our partnership

Thank you.
Joint Ministerial Statement on the Launching of a Joint Task Force to Develop an Economic Partnership Agreement (EPA)/Comprehensive Economic Partnership Agreement (CEPA) between the Republic of India and Japan

Tokyo, December 15, 2006

We, Ministers of the Republic of India and Japan

Recalling the decision of the Prime Ministers of both the countries in November 2004 to set up a Joint Study Group (hereinafter the Group/JSG) to study the feasibility of strengthening economic relations between the two countries and to make recommendations, and also the directions given to this JSG in April 2005 to submit its report within a year of its launch;

Further recalling that the JSG composed of government officials and representatives of business and academia of the two countries had four meetings and, after detailed deliberations and studies, gave its report in June, 2006;

Confirming the conclusion of the JSG that an EPA/CEPA is the proper architecture for internal economic engagement as it will improve trade flows in goods and services, accelerate bilateral investments, increase economic growth, and will also serve as a building block for larger regional economic integration; and

Endorsing the report of the JSG, which recommend among others, that negotiations on the proposed EPA/CEPA may be conducted in a specially constituted Joint Task Force or another mutually agreed suitable mechanism, consisting of government officials;

Have decided as follows:

1. The India-Japan EPA/CEPA should cover, but may not be limited to:
   a) Trade in goods;
   b) Trade in services;
   c) Measures for trade promotion;
   d) Promotion, facilitation and liberalization of investment flows;
e) Measures for promoting economic cooperation in identified sectors; and

f) Other areas for a comprehensive economic partnership between India and Japan.

2. The proposed EPA/CEPA needs to be consistent with WTO provisions, while sensitive sectors should be treated with flexibility and practicality.

3. Both sides will launch, not later than January 2007, a JTF composed of government officials of both the countries to proceed with the task of developing an EPA/CEPA between the two countries. The JTF will bring about specific recommendations on each of the constituent elements of the EPA/CEPA for adoption by the two governments. The JSG report will serve as the framework for such work.

4. Negotiating structure of the proposed JTF is annexed.¹

Signed in Tokyo on the 15th day of December 2006.

For the Government of Republic of India

For the Government of Japan

KOREA, REPUBLIC OF

248. Statement to media by Secretary (East) Ministry of External Affairs Rajiv Sikri on the visit of President Dr. A.P.J. Abdul Kalam to Singapore, Philippines and Republic of Korea.

New Delhi, January 30, 2006.

SECRETARY (EAST) (SHRI RAJIV SIKRI): Good afternoon ladies and gentlemen. As you are aware, Rashtrapatiji will be leaving tomorrow for a ten-day trip that will take him to Singapore from 31st to the 3rd, then to Manila from 3rd to the 6th, and finally he goes to the Republic of Korea from 6th to the 9th.

Rashtrapatiji’s visit to these countries to our East is an important development in the evolution of our Look East Policy which, as you know, is a high priority of this Government. It will, I am confident, will give a new impetus, not only to our bilateral relations with the respective countries but also to the Look East Policy in general.

In his meetings with government leaders and other sections of society, Rashtrapatiji would focus on how our national development goals can benefit from exchange and interchange of ideas and experience with these countries, look at some technology cooperation, the focus also on getting inputs for rural and industrial development of India. His delegation will have the Minister for Rural Development Dr. Raghuvansh Prasad Singh, and three Members of Parliament – Shrimati Sumitra Mahajan, Shri Vanlalzawma, and Shri Sachin Pilot.

His programmes in all these countries involve naturally the meetings with the leaders of the respective countries. But they would also include meetings with the students, both in universities and in schools, visits to centers of learning and technology, meetings with the local and the Indian community in these regions, meetings with businessmen. Some agreements in each of these countries are also expected to be signed. Of course, there will be the usual ceremonials, banquets, lunches, dinners, the ceremonial aspects of the visit.

Singapore has been a very important partner of India in the region, in ASEAN. We have had frequent exchanges of high-level visits. The last
President from our side to visit Singapore was Shri K.R. Narayanan in November 2000. Since then we have had visits by their President, Mr. Nathan who still remains President in January 2003; former Prime Minister Goh Chok Tong in July 2004; and Prime Minister Lee Hsien Loong in June last year. So, a high-level visit from India at this juncture to Singapore is appropriate. You are also aware that both Mr. Lee Kuan Yew and Mr. Goh Chok Tong were in India in the last few months. We have also been having very frequent exchange of Ministerial level visits. I think all this reflects the importance that Singapore and India attach to their bilateral relations.

In June last year, during Prime Minister Lee’s visit we had signed the Comprehensive Economic Cooperation Agreement. It is the first of its kind that India has signed with any country and we hope it will lead to an increase in trade and investment and cooperation in services. As it is Singapore is our largest trading partner in the ASEAN region with trade of about 6-7 billion dollars.

We do cooperate with Singapore in the field of terrorism. There is a Joint Working Group for this. We have a Mutual Legal Assistance Treaty. Of course, with Singapore, beyond the bilateral dimension we are cooperating within the framework of ASEAN and the East Asia Summit.

Rashtrapatiji’s visit would reinforce the strong partnership and the close friendship that India and Singapore have traditionally enjoyed.

To give you an idea of programme there, he would have meetings with the leaders plus some of the leaders would call on him. He is expected to give a major address there – the Singapore lecture, meet the students at the National University of Singapore, visit Bharatiya Vidya Bhavan, have interaction with both the faculty and the students of the Nanyang Technical University. On the technology side he would also visit the Public Utility Board and the desalination plant which is there.

There will be some cultural elements in his programme also including a visit to the Museum of Asian Civilisations, and the Singapore Fine Arts Society. During High Commissioner’s Reception that would be organized, he will get an opportunity to meet with the local community.

Getting now to the Philippines, we have not had that kind of extensive exchange with the Philippines as we have had with Singapore. This will be a return visit to that by former President Ramos in 1997. Earlier, President Venkataraman had visited the Philippines in 1991. However, in the last
year or so, there have been frequent high-level exchanges including a visit by our Speaker in April last year. Rashtrapatiji’s visit will reinforce our ties with the Philippines, which is the second largest country in ASEAN, and will, I am sure, lead to many steps that would enable us to utilize the considerable unrealized potential in our ties. There are many complementarities and the scope for cooperation in the IT sector. There are some Indian companies which have a presence there. His programme there in Philippines will include meetings with the President and an address to the National Assembly which is their Parliament. An agreement for cooperation in the field of agriculture is expected to be signed.

Philippines, as you may be aware, is the host to the International Rice Research Institute. As a country which has a lot of seismic activity and volcanoes, it has a lot of experience in earthquake and volcano research. So, Rashtrapatiji will be visiting both the IRRI and the PHIVOLCS in Quezon City, which looks into the cooperation in the volcanology and seismology.

As you know, Manila is where the ADB is headquartered. So Rashtrapatiji would have an opportunity to meet the President and Senior Directors of the ADB. In the field of education, he would be visiting science school, there is a National Education Centre in the University of Philippines, as well as the College of Nursing. Philippino nurses, as you may be aware, are very well accomplished. Perhaps there is something that we can learn through them.

There would also be, I believe, an event with the Asia Society. At the dinner hosted by the Asia Society where Rashtrapatiji would get an opportunity to interact with lot of the leading intellectuals and other members of the society in the Philippines.

Turning now to Republic of Korea, this would be the first Presidential visit from India to the Republic of Korea. Less than a year and a half ago, it was in October 2004 President Roh of Republic of Korea had visited India on a State visit. It is a rapidly growing relationship that we have with the Republic of Korea. In the last year or so we have had many high-level exchanges and a meeting which the Prime Minister had with the President in Kuala Lumpur last December.

The economic dimensions of our relationship with Korea is very important. Tata has investment in Korea with Daewoo truck manufacturing plant. Many Korean companies like LG, Samsung and Hyundai have got
India as an important focus of their activities. It is a strategic decision which many Korean companies have taken. A little while ago, a few months ago, there was an agreement that Posco signed with the Orissa Government for setting up a new steel plant. So, all these development are in harmony with the long-term cooperative partnership of peace and prosperity that the two countries had signed during President Roh’s visit in October 2004.

One of the important outcomes of that visit was the decision to set up a Joint Study Group to look into the prospects of developing a Comprehensive Economic Partnership Agreement. We anticipate that the Joint Study Group which has finished its work will make its presentation to the two leaders and we expect that an important Ministerial-level Joint Statement setting up a task force to develop a CEPA over the next year and a half, say by the end of next year, would be signed during the visit. We also expect to sign on a couple of other agreements in customs, in science and technology. Our trade with the Republic of Korea is going well. It is about 5 billion dollars. Korea is also the fifth largest investor in India. Energy is a key area of cooperation. We are working with Korean companies in Myanmar, the Daewoo Myanmar. We have a mutually beneficial dialogue on cooperation on defence and security issues.

Of course, with the Republic of Korea, as indeed with the other two countries, Singapore and Philippines, India is cooperating within the framework of the East Asia Summit, the first meeting which place in Kuala Lumpur and the second East Asia Summit will take place in Philippines later this year. These are some of the highlights of Rashtrapatiji’s visits to these countries over the next ten days. Thank You.
249. Address by President Dr. A.P.J. Abdul Kalam to the Business Chambers of Korea.

Vision of Partnership

Chairman and members of Federation of Korean Industries
Chairman and Members of Korea Chamber of Commerce and Industry
Chairman and Members of Korea Federation of Small and Medium Business
Chairman and Members of Korea International Trade Association

Distinguished guests and Ladies and Gentlemen,

I am indeed delighted to participate and interact with the captains of industry and business leaders of Republic of Korea. I have studied the remarkable progress made by the Industries in Korea to establish a competitive advantage to the nation. I am sure that it would not have been possible without your contribution and vision. The famous economist Lord Keynes once said, “If business leaders think right, I think our societies and our polities can look to the future with hope and confidence.” I am happy to know that the Korean economy has changed immensely in the last decade and has recovered from the Asian financial crisis as a result of the economic restructuring and reform programme to emerge as the 11th largest economy in the world. It is forecasted the economy of Korea will further increase and will achieve 5th position in the world within two decades.

Law of development: Competitiveness

Last two years, I was studying the development patterns and the dynamics of connectivity between nations, especially in trade and business. As you all know the world has few developed countries and many developing countries. What is the dynamics between them and what connects them? Developed country has to market their products in a competitive way to different countries to remain as developed country. The developing country to get transformed into developed country; they too have to market their products to other countries in a competitive way. Competitiveness is the common driving factors between the two types of nations. Competitiveness has three dimensions: quality of the products, cost effectiveness and
availability just-in-time to cater to the demands. Indeed this dynamics of competitiveness in marketing of products by developing and developed countries is the law of development. There is a relationship between the core competence and the competitiveness of the country.

**Economic ambience of India**

The economies of India and Korea have significant complementarities which must be harnessed for our mutual benefit. The Indian economy has changed significantly since the early 1990s, with macro-economic stabilisation and pursuit of a reform programme aimed at enhancing efficiency, productivity and competitiveness. We have made trade virtually free, dismantled industrial and import licensing, liberalised foreign direct investment, and undertaken reforms in the public sector, infrastructure and the financial sector, with investor-friendly policies. This has enabled many economically progressive countries establishing business ventures with investments. The right decisions from Republic of Korea led to establishment of many industries in India. We will be seeing Indian industries also establishing ventures in Korean soil.

**India's Economic Intent**

Friends, over the past decade, our Government’s “Look East” policy has emerged as a major element of India’s foreign policy and economic engagement. It was also a strategic shift in India’s vision of the world and India’s place in the evolving global economy. It should be seen in the backdrop of India’s growing economic integration with East Asian economies that are emerging as large trading partners of India, as also large investors in India. With the agreement of long term cooperative partnership for peace and prosperity India and Korea will be strategic partners in trade, investment, energy, Science and Technology and several related items. Now we have decided to accelerate the process of arriving at a Comprehensive Economic Partnership Agreement (CEPA) between India and Korea. This will give immense opportunities for the business persons from both the countries.

**Pan Asian Free Trade**

As regional trading arrangements become important building blocks of multilateralism in an increasingly globalised world, it is heartening to see that the trend towards the pan-Asian framework for cooperation is becoming increasingly more pronounced. The recently concluded East Asia Summit has laid the foundations for a cooperative architecture in Asia on
an unprecedented scale and we hope, will potentially launch the process towards the possible creation of an East Asian Community. We feel confident that in the next few years, we may see the rise of a Pan-Asian Free Trade Area covering all major Asian economies, including India, Korea, China, Japan, ASEAN and possibly extending to Australia and New Zealand. This could be the third pole of the world economy after the European Union and the North Atlantic Free Trade Area and will open up new growth avenues for all our own economies. We believe that our economic partnership with Korea would significantly contribute to eventual emergence of such an economic community in Asia.

**Korean Presence in India**

Friends, you have established an impressive presence in the Indian market. Your acumen and foresight in investing early in India and keenly studying the Indian consumer have brought rich dividends for both our countries. Samsung, LG, Hyundai are all household names in India and have established a premium brand positioning. Korean products are known to offer “good value for money”?. Each of these companies has quickly cornered a significant share of the Indian market and actively sourcing from India for their regional and global operations. The Korean steel giant POSCO has begun implementing a US$12 billion integrated steel project in the State of Orissa in India, the largest inward Foreign Direct Investment for India and I understand, the largest outward Foreign Direct Investment for Korea. TATA DAEWOO executives met me yesterday and briefed me about the progress. I am happy to learn that their venture is working out very well and growing fast. Our bilateral trade has more than tripled over the last ten years. I would like to see that it grows to $20 billion on or before 2010. The conclusions of the Joint Study Group and the launching of the Joint Task Force mandated to develop a Comprehensive Economic Partnership Agreement (CEPA) between our two countries is a major step forward.

**Advantages of Partnership with India**

I see a great future for Indo-Korean economic cooperation in knowledge-based industries, in infrastructure development, bio-technology, automobiles and auto components, pharmaceuticals, steel, ship-building and IT hardware. Our coordination and joint ventures in energy including hydrocarbons, power generation, and refineries is of great importance. We need to enhance our cooperation in the fields of health, agriculture, tourism, and science and technology.
India’s cost-effective human resources will complement the rising wages and labour scarcity in Korea. India’s strategic location as an essential link between different sub-regions of Asia could be used by Korean business and industry for relocation, regional and global sourcing. Our knowledge-based service industry will complement the hardware and manufacturing-based economic structure of Korea. Moreover, in the competitive global trade India and Korea jointly can make highly advanced knowledge products with high market share. We also believe that our competencies in pharmaceuticals and research in bio-nano technology will ensure emergence of new healthcare devices and medicine utilising the rich biodiversity of both the countries. The need of the hour is to jointly create a suitable framework for enhanced bilateral trade, investments and other economic cooperation, including in e-governance, energy resources, agriculture, rural development, and science and technology.

New potential areas of growth have emerged and new areas of cooperation have opened up. Structural reforms and advances in science and technology have helped this economic cooperation. Indian firms are attaining global levels in quality and output and are venturing out to regional and global markets for production and for sales. India has become a production base and an outsourcing hub for a range of products from agricultural goods to automobile components to high-end IT enabled services. Indian firms are now part of global processing chains—importing, adding value and re-exporting. As a result, we are constantly redefining our standards. Our telecommunication, IT, bio-technology and pharmaceutical sectors are growing at a rapid pace.

Conclusion

Friends, in conclusion, I would like to invite the heads of Korean business and industry to avail of the opportunities in India and tap the vast array of complementarities that exist between our two countries to forge close and comprehensive economic relations. As you know India is a forward looking economy and coming closer to east asian countries. It is forecasted that India and Korea will become economically strong nations within 10 countries in the world through their own individual effort. Think of the cooperative effort of two nations with a common mission and forging missions combining with core competencies, like software of India and hardware of Korea, utilisation of large manpower resource from India and infrastructure etc. This cooperative effort will place both of our nations within top five economically developed nations.
I would also like to hear from you as to how we can accelerate the trade, investment and business between the two countries.

Thank you.

250. Address by President Dr. A.P.J. Abdul Kalam at Yonsei University.

UNIVERSITY EDUCATION AND NATIONAL DEVELOPMENT

I am delighted to be in this beautiful Yonsei University and interact with the student and faculty of this unique University of Korea which is celebrating its 120th anniversary. My greetings to the President, Vice Presidents, Council of Professors, faculty members, staff and students of Yonsei University. I was very happy to find that Yonsei has a mission of contributing to the society in the spirit of truth and freedom. Also Yonseians are educated of strong moral, ethical and humanistic values. One of the important things of the education here is the students learn to evaluate themselves throughout their education phase in this University and take corrective actions whenever necessary. The history of the university is intertwined with Korea's history.

Recently, I tele-addressed three Universities in India, namely University of Calcutta, University of Madras and University of Mumbai on the occasion of their completing 150 years. I shared the information of my planned visit to Yonsei University with them. They have asked me to convey their best wishes to the students and faculty of Yonsei University for completing of 120 years of successful education and research mission. These three universities are transforming into virtual Universities. I am sure, both Indian Universities and Yonsei University will become partners in the virtual education.

When I saw the University emblem, I learnt that the figures in the emblem represent ideal of a complete and well-rounded person and upward-looking strife for scholarly excellence. What a beautiful thought. I have chosen the topic “University Education and National Development” for today’s discussion. I would like to present some thoughts on the scientific
scene in pre-independent India, the pioneering work of some of our scientists, capacities which are required to be created among the students by the Universities for national development and the concept of Virtual University.

**Scientific scene in pre-independent India**

In India, science and technology took a two-phase progress with high scientific momentum created in 1930s, by the great scientists of international repute. They gave the country the confidence. We remember the pioneering contributions to science made by Sir CV Raman for his discovery of the 'Raman effect', Srinivasa Ramanujan for his contributions towards number theory, JC Bose in the area of microwaves, SN Bose, for Bose-Einstein statistics and Meghnad Saha for 'Thermo-Ionization Equation' and Chandrasekhar Subramaniam for his Chandrasekhar limit and black hole. Like this, many have contributed to Indian science. This phase, I consider the glorious phase of Indian science. The scientific foundation laid by them triggered the later generations. The unique similarity between all these scientists is that they had dedicated their entire life for the cause of scientific research and the spirit of inquiry for the fields that they have chosen amidst all the hurdles and problems in their life particularly in the environment of foreign rule. This is an important message for all students and faculty members. Science is a lifetime mission. It is a question of dedication, commitment and understanding and also the creative environment for research in science. They inspired many others in the later generation like GN Ramachandran, the originator of triple-helix.

Friends, recently I visited the Indian Association for the Cultivation of Science in Kolkata (Calcutta). CV Raman was working as an Assistant Accountant General in Calcutta. Indian Association for the Cultivation of Science attracted him and he carried out his scientific experiments early morning and late evenings beyond his regular office hours. That was indeed a great beginning for Indian physics leading to Raman's achievements. Later, he became a Professor of Physics at University of Calcutta from where he published the path-breaking Paper on ‘Raman Effect’. According to Raman, the colour of the sea is blue due to molecular diffraction which determines the observed luminosity and to a great extent its colour. I would like to share with you the Nobel Prize winning contribution of Sir C.V. Raman, which is relevant even today.

**Raman Effect and its multi dimensions**

Raman Effect has continuously impacted every field of science. Its
role in spectroscopy, medical diagnostics and material characterization had been phenomenal. The Raman Effect had been used in many new areas of science and the most recent being in the development of a continuous silicon laser. Instruments and techniques based on Raman Effect make a huge industry all over the world.

In a Paper published in February 17, 2005 in Nature, Intel researchers disclosed the development of the first continuous wave all-silicon laser using the Raman Effect.

They built the experimental device using the standard CMOS manufacturing processes.

Intel researchers incorporated a novel diode-like structure into the silicon cavity laser. This diode combined with the Raman Effect produces a continuous laser beam at a new wavelength. This breakthrough device could lead to many practical applications such as optical amplifiers, lasers, wavelength converters, and new kinds of high efficient optical devices. A low-cost all-silicon Raman laser could inspire innovation in the development of new medical sensors, and spectroscopy devices.

Over the next 5 to 10 years, the computing and communications industries would face increasing challenges to deliver more data and faster. Consumers will be downloading full-length movies, not just photos and music files. People will also require faster access to these large amounts of data. While microprocessors are projected to meet these future demands, the bandwidth of the interconnects needs to be increased to meet the speed of the microprocessors. With the new work of Intel using Raman Effect to produce continuous silicon laser, the material convergence will take place very soon and faster networks would emerge.

**Birth of Triple Helix**

Now, I would like to talk about another great Indian scientist, Dr. G.N. Ramachandran known as GNR amongst scientists. GNR’s life is indeed an example worthy of emulation by all scientists, which was a fusion of curiosity, creativity and problem solving ability for successful missions. GNR, was wondering how to go about with x-ray diffraction and x-ray crystallography base with application to biomolecules as a main theme. JD Bernal, the famous crystallographer and chemist who was on a visit to India in 1942 felt that all the structure proposed so far for collagen were unsatisfactory and suggested that GNR could take a look at that. GNR published the first innovative paper on the collagen structure, which gave
strikingly original triple helix – it appeared in the journal Nature in August 7, 1954. The proposed structure consisted of three separate helical chains, with their axis parallel to the fiber axis, stacked in a hexagonal array. This structure was not only innovative; it also provided better quantitative agreement with the X-ray data.

Collagen is today finding large-scale application in the treatment of third degree burn injuries, since it has been found to have extraordinary healing properties. Also collagen has led to a separate branch of biology named structural biology, which is being taught in many universities. GNR can rightly be called as the father of structural biology. The world will always be thankful to him, for giving the famous Ramachandran plot. G.N. Ramachandran is the first Scientist in India to foresee and make possible the birth of bio-informatics. Now, I would like to share with you friends, some of the predictions of Ray Kurzweil, written in his book "When Computers Exceed Human Intelligence -The Age Of Spiritual Machines".

**Can computer challenge the Brain?**

Most of the computers of the future and accessories will be of micro sized, wearable and will have wireless communications with each other. Moderately priced PCs capable of performing about a billion calculations per second today, will be able to perform about a trillion calculations per second within next 10 years. It is predicted that by 2019, the computational ability of an ordinary PC would exceed the capability of human brain. By 2029, the capability of a normal PC would be around 1000 times of the human brain. Definitely my view is: the creativity of the human mind will always be superior to even the most powerful computer in the horizon. This thought I would like the researchers who have assembled here to debate.

By the end of this century, there would be a strong trend towards convergence of human thinking with the world of machine intelligence that the human species initially created. When there would no longer be any clear distinction between human and computers, how the molecular biologists would help us to retain the supremacy of man over the machines? Computers are going to give us a challenge. It is not only for the biologists and bio-technologists; the entire scientific community would have greater responsibility of keeping the mankind above the man-made computers, creativity being the prime mover.

With the recent advancement in the computational capabilities and bioscience and also availability of large amount of clinical data, we were
stimulated to study the brain particularly in the conditions of mentally challenged children. Both India and Korea, in particular the Yonsei University have complimentary capabilities in Information and Biological Sciences to work together and make an everlasting contribution to the healthcare of the future generation. If this collaboration can be successfully orchestrated, the two countries would be remembered much the same way; today’s generation remembers Mahatma Gandhi and Kim Ku.

I would like to present some aspect of our research in healthcare. The subject interests me and I continue to pursue.

Research on Mentally Challenged Children

When I was with Anna University in Chennai (Madras) as a Professor of Technology for Societal Transformation, apart from my teaching, I was guiding a doctoral research student. The research was aimed at finding an integrated solution using software and hardware to achieve a near normal functioning of the brain of mentally challenged children. It is indeed recognized by the world peers as a complex problem both from the point of view of ICT application and neurological research. When I saw some of the mentally challenged children performing certain activities like singing, painting in Central Institute of Mental Retardation, Thiruvananthapuram (Trivandrum) in the State of Kerala, I got convinced that one day convergence of information and communication technology, medical electronics, bio-technology and mathematical simulation can find a solution for their problem. We have been studying the mentally challenged children in various research institutions, homes for mentally retarded and hospitals. We are confident that it will be possible to transform the functions of the damaged portion of the brain say left hemisphere to the normal portion right hemisphere of the brain by some triggering mechanism, or by implanting a bio-chip to carry-out those functions. This is a complex problem which needs an integrated approach involving medical scientists and technologists for a targeted permanent solution which can help children with this mental disability. I am still guiding the research student. Now I would like to discuss the capacities which are required to be built among students for enabling them to participate in national development missions.

Capacity Building

The modern economy is driven by knowledge and skill and not by established industries. There will be continuous innovation and enterprise. To realize this, special capacity need to be built in education and nurtured among the students. The capacities which are required to be built are
research and enquiry, creativity and innovation, use of high technology, entrepreneurial and moral leadership.

**Research and enquiry:** The 21st century is about the management of all the knowledge and information we have generated and the value addition we bring to it. We must give our students the skills with which they find a way through the sea of knowledge that we have created and continue with life long learning. Today, we have the ability, through technology, to really and truly teach ourselves to become the life-long learners. This is required for sustained economic development Creativity and innovation: The management of knowledge in the 21st century is beyond the capacity of a single individual. The amount of information that we have around is overwhelming. The management of knowledge therefore must move out of the realm of the individual and shift into the realm of the networked groups. The students must learn how to manage knowledge collectively. When the information is networked the power and utility of the information grows as squared as predicted by Metcalfe's Law. Information that is static does not grow. In the new digital economy information that is circulated creates innovation and contributes to national wealth.

**Capacity to use high technology:** Every student in our schools should learn to know how to use the latest technologies for aiding their learning process. Universities should equip themselves with adequate computing equipment, laboratory equipments, and Internet facilities and provide an environment for the students to enhance their learning ability. In the midst of all of the technological innovations and revolutions we cannot think that the role of the teachers will be diminished. In fact the teacher will become even more important and the whole world of education will become teacher assisted and would help in “tele-porting” the best teacher to every nook and corner of the countries and propagate the knowledge.

**Entrepreneurship:** The aptitude for entrepreneurship should be cultivated right from the beginning and in the university environment. We must teach our students to take calculated risks for the sake of larger gain, but within the ethos of good business. They should also cultivate a disposition to do things right. This capacity will enable them to take up challenging tasks later.

**Moral leadership:** Moral leadership involves two aspects. First it requires the ability to have compelling and powerful dreams or visions of human betterment. Moral leadership requires a disposition to do the right thing and influence others also to do right things.
In sum, inquiry, creativity, technology, entrepreneurial and moral leadership are the five capacities required to be built through the education process. If we develop in all our students these five capacities, we will produce “Autonomous Learner” a self-directed, self-controlled, lifelong learner who will have the capacity to both, respect authority and at the same time is capable of questioning authority, in an appropriate manner. These are the leaders who would work together as a “Self-organizing Network” and transform any nation into a prosperous nation. With the availability of connectivity through satellites and broad-band, fibre-optics and wireless networks and an universal tele-education package, the capacities which I have mentioned above can also be created amongst students through Virtual Universities in a virtual class-room environment.

**Virtual University GRID**

India and Korea may consider creating Virtual University GRID by networking the Universities from Korea and India for specific areas of Research and Development to meet the national mission requirements of our countries and also for capacity building in each country. This Virtual University GRID will provide, the best of education to its member countries from the universities based on their corecompetence. Hence it will ensure the best education will reach its member countries through universal tele-education delivery system. It will also ensure collaborative Learning leading to the creation of knowledge society in our countries. Such a Virtual University GRID will have the following tasks:

a) Act as a hub of all the Universities, related educational, and research and development centers in our countries.

b) Ensure collaborative learning and live interaction among the students and faculties of our universities.

c) Identify experts of national/international eminence in specialized areas and nominate colleges of eminence.

d) Coordinate, organize, schedule and broadcast the lecture of specialists at a mutually convenient time to all participants.

e) Impart education based on its core competence, any student from any university will be able to get the quality education at his desktop.

f) Network all the Teachers Training Programmes in the Universities to empower them with research inputs from all our universities and capacity building.
g) Record the live transmission of the lecture with interaction details in a data bank for easy access by participants for review learning.

h) Digitize all the University libraries and make it available for seamless access by all the faculty and students of the University.

i) The Universities need to become learner centric.

j) Collaborate with other Virtual Universities in India, Korea and partner countries through the network.

In the world of Virtual Universities, the equitable access to all its participants is the primary goal. This experiment in your University will provide a common platform for teaching in the University and its affiliated colleges and post-graduate departments in the entire region. This will give equal emphasis on theory and experiments in spite of the fact that it will be done in the cyberspace. Such is the power of the technology and our understanding of it. This facility would also help in expansion of telecommunication and IT services. All this would lead to synergizing the strengths of different colleges in the region by promoting quality education to all the students irrespective of their location in a cost effective manner.

**Attracting students to Virtual Universities:** While it is unarguable that the Virtual Universities provide us with technologies of the future and the economic way of scaling high quality education in the country, they are no substitute to the campusbased education. The challenge to the Virtual Universities is to provide the best of both the worlds. In this process, we could plan an optimum mix of direct contact hours between the students and the teachers and amongst the students themselves. These interactions should also be used as a platform to excite the students to take to learning in the new paradigm.

**Conclusion**

For realizing excellence in education, what we need is quality faculty, infrastructural facility, national and international high bandwidth connectivity, availability of knowledge sources. In addition, we need a good learning environment, collaborative environment, exposure to the international best practices and constant promotion of innovation and creativity. The higher the research intensity in a University environment better will be the teaching quality. The collaboration of universities between India and Korea should provide these features to all the participating institutions in different regions and become role models for both the countries in propagating attractive
and high quality virtual education. The capacity building in areas of importance to the national development is a primary role of the teachers.

Today science and technology are directly linked to the nation’s economic development and their sustainability is related to the applicability and relevance of education system. The attitude of sharing knowledge between the universities will enhance the efficiency in knowledge creation and speedy dissemination. Knowledge gets multiplied when connected and circulated. The momentum which you give to the Virtual University will soon spread to every university.

I wish you all success in your mission of promoting excellence in education and capacity building among students and finally evolving the creation of the knowledge society leading to national development.

251. Speech by President Dr. A.P.J. Abdul Kalam at the Banquet hosted by President of Republic of Korea, Roh Moo-Hyun.

Your Excellency Mr. Roh Moo-hyun,
President of the Republic of Korea,
Madame Kwon Yang-suk,
Excellencies and Friends,
Distinguished Guests, Ladies and Gentlemen

I greatly appreciate your warm welcome and your kind words. I am happy to be in Korea. The visit has been a rewarding experience with excellent arrangements and generous hospitality extended to me and my delegation. Despite the cold weather outside, the warm sentiments of the people of Korea that we have felt has made our stay comfortable and memorable.

Excellency, the chronicle of friendly contacts between India and Korea, two old civilisations of Asia, date back to ancient times. Our interactions begin with the arrival of the princess of Ayodhya to Korea in
the first century AD and move through the spread of Buddhism in the early centuries and later trade and cultural relations through the “Silk Route”. With such an impressive historical dimension, it is only befitting that our relations have steadily developed in recent years, based on the secure foundations of shared values of democracy and open society and the common desire to develop and diversify our mutually beneficial exchanges.

Both our countries have faced stupendous challenges in the past and both, against foreign rule, have emerged resurgent and confident. We are vibrant democracies with a free press and active civil societies. We both believe in the values of freedom, dignity and respect for the individual. While India and Korea are going through historic transformations, our Governments have kept in view the people’s aspiration for peace, reconciliation and prosperity. These shared experiences and objectives have helped us to understand each other’s concerns and aspirations, paving the way for broad-based cooperation.

Excellency, as I stand here, I warmly recall your landmark visit to India in October 2004, which marked an important milestone in India-Korea relations. It was during that visit that we agreed to forge a “Long-term Cooperative Partnership for Peace and Prosperity”, which signalled our commitment to look at our relationship beyond its bilateral dimensions and in a long-term and strategic perspective. We recognise today that India-Korea relations have an important bearing on the peace, stability and development of our region and the Asian continent. With the irreversible trend of regional integration in Asia, we increasingly look at Korea as a key element in our “Look East” policy and a trusted partner in our vision for a dynamic and vibrant Pan-Asian Community of peace and prosperity. We appreciate your active efforts to secure peace and reconciliation on the Korean peninsula.

We are encouraged by the current momentum in our relations with growing exchanges and cooperative ties in a wide range of areas. We are working together to expand and enrich the political and economic content of our relationship. It is our shared endeavour to foster closer people-to-people contacts and strengthen our exchanges in the cultural and scientific fields. As a result of our joint efforts, our bilateral trade volume has more than trebled in the last four years and I remain confident that this trend would further accelerate in the future. Korean companies have shown a perceptive understanding of the Indian market and have emerged as among the most profitable and fastest growing companies in India. On its part, the
Indian Government is earnestly endeavouring to make India an attractive investment destination by creating an investor-friendly environment. We have, together, taken several measures to provide an institutional framework to facilitate a deeper engagement between our two countries. We are happy that the Joint Study Group, appointed following your visit to India, has come up with a set of practical and far-reaching recommendations. We are now going to launch negotiations for a Comprehensive Economic Partnership Agreement. India attaches high priority to the successful conclusion of these negotiations, which we believe, would provide added momentum and a robust foundation for our growing economic partnership. I would also like to recall the launching of Korean satellites by Indian Space launch vehicles which should further enhance space cooperation between the two countries. The Republic of Korea has launched dynamic industrial enterprises in electronics and automobiles in India. And the steel industry will soon follow.

Excellency, it is heartening that since your visit to India a little over a year ago and in keeping with our shared vision of the future of our relationship, exchanges between India and Korea have become more multifaceted and acquired greater substance and maturity. We have developed mechanisms for regular, constructive dialogue and interaction on global and regional issues of mutual interest. While expanding our interaction in the existing areas, we are also constantly exploring newer avenues of cooperation, such as energy security, knowledge-based economy and cutting-edge technologies. I am sure that with our common commitment to raise the level of our partnership, we would not spare any effort to take full advantage of the vast economic complementarities and the remarkable convergence of values and interests between our two countries.

Excellencies and Friends, with this happy thought, may I now invite you to join me in a toast:
- to the personal good health and happiness of Your Excellency President Roh Moo hyun and Madame Kwon Yang-suk;
- to the well-being of our two friendly peoples; and
- to closer friendship and further strengthening of the multi-dimensional future-oriented and cooperative partnership between India and Korea.

F F F F F
252. Interaction by President Dr. A.P.J. Abdul Kalam with Scientists at Korea Research Institute for Biosciences and Biotechnology (KRIBB).

Seoul, February 8, 2006.

Evolutionary Biology : Technology for the 21st Century

Humans have been intervening in nature for as long as there have been humans. One of the big problems is how to establish a conversation between the biosciences and the human sciences. The way it's established now, the biosciences discover the truth, and the human scientists worry about the consequences. I was thinking what should I speak to this gathering of bio scientists and biotechnologists? Science has attempted to understand biology, particularly medicine, through physics and chemistry but could not proceed beyond a point. Today, understanding of evolutionary Biology is indeed providing new insights to scientists in various domains of knowledge.

Throughout human history, technology touched the core of the self-definition of mankind. The new tools, in every age, were the ultimate expressions of human control-helping mankind shape and define the way it would like to be and the way it would like the rest of living nature to be. Biotechnologies are “dream tools,” of the modern human beings giving them the power to create a new vision of mankind, its heirs, the living world and the power to act on it. I therefore selected the topic evolutionary biology driving the technology for the 21st century.

There are numerous ways in which biotechnology would be driven by evolutionary biology, most apparent among them being:

- prolonging the life of drug/chemical resistant compounds
- constructing evolutionary trees
- pathogen tracking
- industrial production of biochemical and other agents

It is important to recognize that evolutionary biology has implications for a new century of agriculture, medicine, and planetary life.

Second green revolution

Friends, India is preparing itself for the second Green Revolution. On 4 January 2006, I was in the Indian Science Congress. The architect of
India’s first green revolution and renowned Agriculture Scientist Prof MS Swaminathan was sitting by my side. Inspired by Noble Laureate Norman Borlaug, Prof Swaminathan spent nearly 20 years breeding high-yield dwarf wheat that resisted a variety of plant pests and diseases and yielded two to three times more grain than traditional varieties. The second green revolution would be based on evolutionary biology. Evolution underlies many improvements in agriculture such as the artificial selection of crop strains to create optimal combinations with the soil characteristics, availability of moisture and presence of insecticides and pesticides. It will also include identification of genes controlling salt tolerance, resistance to drought, flood, and extreme temperatures, and response to day length. Genetically modified crops would fix nitrogen with greater efficiency, thereby reducing the need for fertilizers.

**Stem cells**

Evolutionary principles have been successfully used to produce many of our best vaccines, particularly the polio vaccine. We are aware that different types of cells make up our body, such as, blood cells, skin cells, cervical cells. All of these different cell types arose from a single cell, the fertilised egg. Developmental biologists study the awesome events that occur between the fertilised egg and the formation of a new individual. Embryonic stem (ES) cells are not specialized and do not have a specific body function, and have both the capacity to self-renew and thus contribute to all of the organs in an individual. Recently, several examples have been reported which demonstrate that even adult stem cells, under certain conditions, can be induced to form other cell types. For example: neural stem cells (NSC) can give rise to blood and skeletal muscle and bone marrow cells can give rise to muscle and liver cells.

Stem cells offer the opportunity of transplanting a live source for self-regeneration. Bone marrow transplants (BMT) are a well known clinical application of stem cell transplantation. BMT can repopulate the marrow and restore all the different cell types of the blood after high doses of chemotherapy and/or radiotherapy, our main defence used to eliminate endogenous cancer cells. Potential targets of neural stem cell transplants include stroke, spinal cord injury, and neurodegenerative diseases such as Parkinson’s disease. Insulin production with the aim of providing a stem cell-based therapy is not very distant in future.

**Will the Brain Understand Itself?**

I am guiding doctoral work at Anna University on the study of mentally
challenged children. The aim is to pin-point the affected regions in the brain and look for compensatory connectivity of the adjoining regions. The extensive literature search done by my student Father George have brought me to almost every facet of mind, from mental images to the moral sense, from mundane memories to acts of genius, have now been tied to tracts of neural real estate. One challenge is that we are still clueless about how the brain represents the content of our thoughts and feelings.

There’s no doubt that physiological brain activity is the cause of experience. Thoughts and feelings can be started, stopped or altered by electricity and chemicals, and they throw off signals that can be read with electrodes and other assays. I also have little doubt that we will crack the mystery of consciousness, learning which brain events correlate with experience.

**Nanotechnology**

Manufactured products are made from atoms. The properties of those products depend on how those atoms are arranged. One of the basic principles of nanotechnology is positional control. Nanotechnology will play a key role in determining the shape of the future in challenging directions. It will:

- introduce hitherto unimagined materials and technologies which exploit quantum phenomena at the nano scale; and

- create revolutions in macro scale processes such as frictionless molecular scale machines leading to energy efficiencies in devices approaching perfection

Nanotechnology should let us make almost every manufactured product faster, lighter, stronger, smarter, safer and cleaner. The most pressing issue however is going to be public involvement. Nano technology is too important to be left to the scientists. It is important that citizens are engaged early in balanced discussion of issues around nano technology. Failure to do so could mean a slide into a counter culture of anti-nano science. A useful comparison is that of the United States ‘space race’ of the 1960s versus the genetically modified (GM) crop trials in the late 1990s. While the ‘space race,’ conducted in the public eye with some careful encouragement by presidential and government agencies, developed into a national infatuation; conversely, the secretive testing regime of GM food producers led to a public loathing of technologies that may produce food in less destructive ways than current farming methods.
Life from Space: An Emerging Paradigm

Ideas concerning the existence of life outside Earth have spanned many centuries and many different cultures. In most ancient philosophies of the orient, for instance in Vedic, Buddhist and Islamic traditions, the cosmic character of life are taken for granted. It is regarded as an inherent property of an infinite, timeless, and eternal Universe.

If space travellers had visited Earth during the first 3.5 billion years of its 4-billion-year existence, they would have seen large expanses of water, with smaller expanses of land, but no plants, insects, or animals. Moreover, if the spaceship had arrived during the first 2 billion years of Earth’s existence, its measuring devices would have reported that there was virtually no oxygen in the atmosphere and no ozone layer to protect the surface from UV radiation. Based on these observations, the space travellers might well have concluded that there was no life on Earth.

There is the very small chance that a replicative primitive cell will bear fruit somewhere and, when it does, replication will cause an enormous number of the first cells to be produced. It is here that the immense replicative power of biology shows to great advantage, particularly since we can distribute the products of such replication over millions of galaxies. Each minute innovative step in the development of life, every gene, can generate and disperse enough copies of itself the over a cosmic scale for a second highly improbable event to occur somewhere in one of the profusion of offspring. Indeed to a whole chain of improbable occurrences, which result at last in the magnificent range and variety of genes we have today, the genes that were already present at the formation of Earth.

With the genetic components of life distributed widely throughout the universe, it is a matter for each local environment to pick out arrangements that best fit the particular circumstances. In a case like Earth, a complicated fitting together of the components occurred over the last several hundred million years, by a process which biologists refer to as evolution. The science of evolution teaches us that by the end of 21st century we would meet life from another space-time.

Conclusion

We have surrounded ourselves with too much work, and there’s too much accumulation of goods. The whole developmental trip is an awful treadmill that’s extremely destructive. It needs to be balanced out. This is why values of Asian cultures hold the surest promise of 21st century —
promise of seeing mankind living in harmony. Let Nature and culture and science come together. This is what I refer to as the science of qualities instead of a science of quantities - that is, accumulating things, accumulating genes, accumulating gene products, balancing out your costs and benefits, always trying to accumulate more. Instead of those images, we have images of qualities, which include aesthetics, relationships, creativity, health, and quality of life. May God Bless you.

253. Address by President Dr. A.P.J. Abdul Kalam at the National Assembly of the Republic of Korea.

Seoul, February 8, 2006.

Vision for the Nation

Honorable Speaker, Honorable members of the National Assembly, ladies and gentlemen. I am honored and privileged to have this opportunity to address the National Assembly of Republic of Korea. Let me begin by conveying to you the fraternal greetings of the Government and the people of India on this occasion. Let me recall the Prophetic words of Nobel Laureate Rabindranath Tagore, stated in the year 1929, celebrating Korea. He states that “In the Golden Age of Asia, Korea was one of its lamp bearers And that lamp is waiting to be lighted once again For the illumination of the east” Today, the world knows that lamp has been lit by knowledge, hard work and sweat of people of Korea. I have great pleasure in informing you that I am bringing along with me special greetings to the Members of the National Assembly of Republic of Korea from both the Houses of Indian Parliament. My Parliament extends a cordial invitation to a delegation from the National Assembly of Republic of Korea to visit India. I, whole heartedly join them in their sentiments. From the time, I landed Korea, it was indeed a great experience for me to meet and discuss with Political Leaders, Government Officials, Industry Captains, University professors, researchers, faculty members and students, and intellectuals. During my interaction with the students I realized that the youth of Korea and the youth of India think alike. They all aspire to live in a peaceful, prosperous, happy and safe nation.

Common values of two nations

Republic of Korea is rich in its cultural and civilizational heritage.
India also has a long history of civilizational heritage with multiplicity of languages, religions and ancient cultures. We have attained freedom after a long drawn period of subjugation and non-violent resistance. We have been attempting to preserve our cultural heritage all along. Today, Republic of Korea has developed into one of the most prosperous nations in Asia. It is a great example and inspiration for many developing nations. Republic of Korean investors have brought many enterprises to India. Indian economy is in an ascending phase for the past decade particularly in GDP growth and Foreign Exchange Reserve. India has core competence in areas such as ICT, agriculture, industry, space, pharma and services sectors. India has a mission of transforming itself into a developed nation by the year 2020. Our task is to network these areas to spread prosperity for all citizens. There are many important areas which can form sustaining bondage between our two nations. These characteristics make our nations natural allies. During the visit of President Roh, to India in October 2004, India and the Republic of Korea had agreed to work together to create a Long-Term Cooperative Partnership for Peace and Prosperity. We have worked well in this direction. During our delegation level talks with the President of Republic of Korea and his team, we both have agreed to set up a Joint Task Force to start negotiation on Comprehensive Economic Partnership Agreement (CEPA), which not only includes Free Trade Agreement but goes well beyond.

**Working together**

I would like to share with you and the people of Republic of Korea whom you represent, our experience in our efforts to develop the nation socially and economically over the last fifty years. I do so in a spirit of understanding that we may learn from each other and strengthen our resolve to move our nations ahead to greater prosperity and happiness. Both our nations are free, independent nations in an increasingly complex and interdependent world where the values of friendship and mutual assistance are of paramount importance. Our banners of freedom are unfurled, by the sacrifice of our political leaders and people; we should contribute towards happiness and peace in the world. The economies of India and Korea have significant complementarities which must be harnessed for our mutual benefit. The Indian economy has changed significantly since the early 1990s, with macro-economic stabilisation and pursuit of a reform programme aimed at enhancing efficiency, productivity and competitiveness. We have made trade virtually free, dismantled industrial and import licensing, liberalised foreign direct investment, and
undertaken reforms in the public sector, infrastructure and the financial sector, with investor-friendly policies. This has enabled many economically progressive countries establishing business ventures with investments. The right decisions from Republic of Korea led to establishment of many industries in India. We will be seeing Indian industries also establishing ventures in Korean soil.

**Integrated action for developed India**

India has a vision for the nation to become a developed country before 2020, which involves rising of our GDP from the existing 7% to 10% and sustain it for a decade. During my visit here, I have discussed and experienced more of your vision and thoughts. I will share with you some of our own thoughts on our future. In order to realize developed India by 2020, five key areas have been identified for an integrated action: (1) Agriculture and food processing (2) Education and Healthcare (3) Information and Communication Technology (3) Infrastructure development (5) Self-reliance in Critical technologies and strategic industries. These five areas are closely inter-related and lead to national, food and economic security. A strong partnership among the R&D, academy, industry, business and the community as a whole with the Government departments and agencies will be essential to accomplish the vision. Foreign investors and partners too have an important role to play. Now, I would like to discuss about one very important component of national development which is PURA.

**The Mission of PURA (Providing Urban Amenities in Rural Areas)**

The number of PURA units for the whole of India is estimated to be 7000. This envisages integrated connectivities to bring prosperity to rural area. These are - physical connectivity of the village clusters through quality roads and transport; electronic connectivity through tele-communication with high bandwidth fiber optic cables reaching the rural areas from urban cities and through Internet kiosks; and knowledge connectivity through education, vocational training for farmers, artisans and craftsmen and entrepreneurship programmes. These three connectives will lead to economic connectivity through starting of enterprises with the help of banks, micro credits and marketing of the products. Each PURA cluster will connect about 20-30 villages depending upon the region and population and will cost about twenty million dollars. There are three types of PURA?s: Plain terrain PURA, Coastal PURA and Hill PURA. This is a viable and sustainable business proposition. After initial short-term employment during construction etc., we have to plan for initiating actions for providing regular employment
and self employment opportunities in nationally competitive small enterprises in agro processing, manufacturing and services sectors for about 3000 people. If the industrial/business parks are marketed well, they can generate employment opportunities in support and services sector for about 10000 people. This will provide sustainable economy for the rural sector. In this national mission, bankers can promote entrepreneurship in the rural areas. This will lead to the removal of urban-rural divide. We have successfully experimented this PURA concept through the establishment of 4 PURA?s in 4 States of India. We are progressing on this mission as a sustainable business proposition. Now, I would like to share two experiences of international technology partnership.

**International technology Partnership**

**Brahmos:** A Super Sonic cruise missile - a Joint Venture between India and Russia.  
**b. Pan African e-Network:** Connectivity solution between India and 53 Pan African countries for providing tele-education, tele-medicine and e-Governance services. An International Joint Venture - BRAHMOS: In order to achieve global competitiveness, the product must be world class with high quality, cost effective and must be available in time within the shelf life of the product. I would like to share a unique experience of design, development, production and marketing of a missile system - BRAHMOS, an Indo-Russian joint venture. What we have achieved through this venture is the development and realization of a world-class product using the synergy of technological competence and consortium of industries of partner countries. In addition, the product being internationally competitive, it is able to service a large market with availability in time and state of the art performance at reduced cost per unit. This will put India, a global defence exporter. Moreover, with minimum incremental investment the product has been developed and led to production and induction, at a relatively short time frame, well ahead of prescribed schedule. This has enabled early entry of the product into the world market well before any competitor could emerge. Therefore, I believe it is very important and urgent that we combine India?s natural, human resources and huge market with Korean capital, technology and entrepreneurial skills. If we use our respective core competences for mutual benefit, we will be successful. I would like India and Korea to jointly emulate this example and design and develop products for civilian application both in the national and international markets. This will lead to a win-win situation for both countries and enable availability of products at a low cost for the customer countries leading to nations? wealth generation. Let me now talk to you on the Pan African e-Network.
Pan African e-Network: I would like to recall my address to the Pan African Parliament on 16 Sept 2004, at Johannesburg, South African which was attended by Heads of 53 member countries of the African Union. There, I announced the willingness of Government of India to provide seamless and integrated satellite, fiber optics and wireless network connecting all 53 African countries. This will provide three Connectivities: (i) Heads of the State Network for e-governance (ii) Tele-education network for higher education, skill enhancement and capacity building and (iii) Tele-medicine for providing health care and super specialty medi-care. Government of India has already commenced the project in partnership with African Union and it will be completed by early 2007. African Union announced that this Pan African e-Network project is exactly meeting the Millennium Development Goals of United Nations and India is a partner to realize this mission in association with African Union. Now I would like to discuss two concepts namely World Knowledge Platform and e-Business Network which will take our both nations economy into a higher trajectory of growth.

1. World Knowledge Platform: In ASIA region, our countries have over the years established certain core competence in different areas. If we can pool these competencies, we will be delivering a synergetic performance for the world market. Hence it is necessary to an institutional mechanism called World Knowledge Platform. This platform will enable joint design, development, cost effective production and marketing of the knowledge products in various domains based on the core competence of two nations. Initially, the mission is to connect the R&D Institutions, Universities and Industries using fiber broadband network between the nations on a selected R&D Missions in the areas such as Energy; Nano Science and Technology; Manufacturing, ICT Hardware, Software and network; Sensors, Automobile embedded systems and software; Gene Characterization and stem cell research; herbal and natural products.

2. E-business network The future of business definitely will be Asia. Increasingly the western countries and other leading business groups in the western economy are focusing towards Asian countries. There are two reasons for this. One is the tremendous market that this region possesses with an economic ascend phase. The second is the availability of knowledge based human capital in this region. With the western markets getting saturated, this region provides a huge opportunity to businesses to expand their market share. In this, the regional businesses can provide competition and get their due of market share. One of the best ways to do it is to set up a good E-business infrastructure. Business and trade community of India
and Republic of Korea can make this region an economically developed with robust E-business framework. This would lead to increased information sharing, education programmes and Knowledge connectivity among the regional partners. It can also result in realizing technology upliftment, business development, Joint ventures, free trade zone, employment generation and over all prosperity of the region.

**Missions for our nations**

A great chapter in India-Republic of Korea relations has created after the visit of President Roh Mooh Hyun to India in 2004. Since then India-Korea economic relations have grown substantially. Honorable members, I would like to summarize the actions resulting out of three day deliberations with the Republic of Korea.

1. Working towards increasing the bilateral trade from the present $6 billion to $ 15 billion before 2010.
2. Formation of a Joint Task Force of CEPA (Comprehensive Economic Partnership Agreement) including deliberations of Free Trade Area agreement within the next 6 months.
3. Enhancing people to people contacts at various levels; Parliamentarians, business persons; artists; academicians; scientists and those who deal with culture and literature.
4. Strengthening of the Civilizational heritage of two countries along with promotion of trade, investment, science and technology cooperation and security cooperation.
5. Enhancing the India and Korea participation in the Small and Medium Enterprises (SME) setup.
6. India and Korea will work towards Energy Independence through the promotion of Bio-fuel and solar energy.
7. Our both nations will work on Convergence of Technologies such as Nano-Bio-Info technologies.

I enjoyed Republic of Korea so much the snow, the mountains, the people, the buildings, the roads, everything has entered into me. We need to build a strong bridge between our people with a vision to build peace and prosperity in the world.
Conclusion

Dear Members of the National Assembly, so far I have discussed about integrated action for economic development, PURA and international joint ventures, World Knowledge Platform and E-business network. I have discussed with you our national programmes and challenges. India and Republic of Korea, with rich civilizational heritage and their respective core competence, can definitely have productive partnership in all these missions.

Hence, I recall the great saying of the Saint Maharishi Pathanjali in Yoga Sutra at 500 BC:

“When you are inspired by some great purpose, some extraordinary project, all your thoughts break their bounds. Your mind transcends limitations, your consciousness expands in every direction, and you find yourself in a new, great and wonderful world. Dormant forces, faculties and talents come alive, and you discover yourself to be a greater person by far than you ever dreamt yourself to be.”

My best wishes to the Members of the National Assembly of Republic of Korea and the people of Korea for success in all their missions.
254. Memorandum of Understanding for Cooperation Between the Indian Coast Guard and the Korea Coast Guard.

The Indian Coast Guard (ICG) of the Republic of India and the Korea Coast Guard (KCG) of the Republic of Korea (hereinafter referred to individually as “the Side” and collectively referred to as the “Sides”);

Recognizing that transnational crimes at sea may pose a threat to the safety of navigation as well as the security of the two countries;

Recognizing also the need to ensure the safety of life at sea, safety of navigation and keeping the sea clean;

Have reached the following understanding;

Paragraph 1

1. The Sides will extend cooperation under this MOU within the area of their competence, in accordance with their respective laws and regulations and subject to the availability of appropriate funding.

2. The Sides will establish a communication link between the Indian Coast Guard and the Korean Coast Guard to facilitate exchange of information and enable expeditious cooperation on round the clock basis.

3. The communication link shall include telephone, fax and e-mail.

4. The Sides will cooperate with each other for the purpose of ensuring maritime safety and addressing transnational crimes at sea. The focus of the MOU will be on the following;

(i) Acts of transnational crimes at sea such as piracy, armed robbery, maritime crimes, trafficking in arms, drug trafficking, smuggling and illegal migration at sea.

(ii) Exchange of information concerning vessels, including persons, suspected of having involved in the activities falling within the scope of this MOU and travelling to or passing through the ports of the two countries.

(iii) Carrying out search and rescue operations at sea on the request of the other Side wherever feasible.
(iv) Exchange of information on combating marine pollution, as mutually agreed
(v) Exchange of expertise in areas falling within the scope of this MOU, as jointly decided upon

**Paragraph 2**
The Sides intend to cooperate in the following ways
1. Each Side will take expeditious action to assist the ships and crew of the other Side in its search and rescue region. The requested Side will inform the requesting Side of the results of the action taken.
2. The Side will cooperate in respect of the acts covered within the scope of this MOU which occur within the jurisdiction of the either Side

**Paragraph 3**
1. For the effective implementation of this MOU Sides will meet once in a year or as mutually agreed to discuss mutual concerns and ways to address transnational crimes at sea affecting the two countries. The meeting will be held alternatively in Republic of Korea and Republic of India.
2. The receiving Side will be responsible for conference facilities. Expenses for the visit will be borne by the visiting Side. Any other expense will be borne as jointly decided upon by the Sides

**Paragraph 4**
The visit of ships to each other’s country with a view to promoting cooperative activities may be held in accordance with the decision made by the two Sides during the annual meeting. The areas of cooperation during the visit will be worked out jointly on an operational level of the two Sides.

**Paragraph 5**
This MOU will not affect the rights and obligations of the Sides pursuant to other bilateral or multilateral treaties, agreements or arrangements.

**Paragraph 6**
Any amendment to or revision of this MOU will be in writing and will enter into force in accordance with the procedure stipulated for the entry into force of this MOU.
Paragraph 7

Any issue arising out of the interpretation or application of the provisions of this MOU will be settled amicably through consultations or negotiations between the Sides.

Paragraph 8

This MOU will enter into effect on the date of exchange of notification informing the other Side of the completion of formalities necessary for its implementation in the domestic law and remain in effect for an initial period of five years. Thereafter, this MOU will be automatically renewed for successive five-year periods unless one Side notifies the other Side in writing six months in advance of its intention to terminate it. In witness whereof, the undersigned being duly authorized thereto by their respective Governments have signed this MOU.

Done Signed in duplicate at the day of 13 Mar 2006 in the Hindi, Korean and English languages, all texts being equally valid. However, in the event of a divergent interpretation the English text will prevail.

255. Remarks by Official Spokesperson on the Nuclear Test by Democratic People’s Republic of Korea.

New Delhi, October 9, 2006.

We are deeply concerned at the reported nuclear test conducted by the DPRK. It is unfortunate that the DPRK has conducted such a test in violation of its international commitments, jeopardising peace, stability and security on the Korean Peninsula and in the region. The test also highlights the dangers of clandestine proliferation. We are monitoring the situation and are in close touch with several countries.

1. Asked by reporters on board the Prime Minister’s special plane traveling to UK and Finland for the India-EU Summit which “international obligations” North Korea had violated by nuclear testing senior officials speaking on background claimed the question of North Korea’s membership of the NPT was not yet settled and that the test, in any case, violated the country’s safeguards obligations with the IAEA. They said North Korea signed an “in perpetuity” safeguards agreement and this barred them from using any safeguarded material or facilities for a non-peaceful purpose. “In any case the North Korean test has happened not because they are outside or inside the treaty but because of clandestine proliferation,” officials said. The Defence Minister Pranab Mukherjee terming the NPT “discriminatory and flawed” did not think that the North Korean test would impact security in the region. Asked about the alleged link between Pakistan nuclear scientist A. Q. Khan and DPRK nuclear establishment, Mr. Mukherjee said: “We have already made it very clear that we are against proliferation. We did not sign the NPT because it was a discriminatory and flawed treaty but we do not have quarrel with its basic objective of non-proliferation. Therefore, we are against the clandestine proliferation of nuclear technology and other technology that leads to manufacture of weapons of mass destruction.” Mr. Mukherjee added that he did not think the Korean test would affect India – US civilian nuclear agreement as “our credentials in respecting non-proliferation are impeccable. I don’t think there is a threat to the stability of the region but let us wait and watch.” On December 7 in answering questions on the Korean test in the Rajya Sabha the Government reiterating its position added: “The United Nations Security Council unanimously adopted Resolution 1718 on October 14, 2006 imposing restrictive measures on transfers of certain categories of arms and related materials, luxury goods and weapons of mass destruction (WMD)-
relevant materials and technology. The Resolution also freezes financial assets, funds and economic resources related to the DPRK missile and nuclear programmes; and calls upon all Member States to take, in accordance with their national authorities and legislation, and consistent with international law, cooperative action including thorough inspection of cargo to and from the DPRK as necessary. A Sanctions Committee has been set up to monitor implementation and elaborate lists of banned items and entities.” Government of India did not think that the Korean test was going to impact in any way the India-US nuclear cooperation already in the pipeline. This was amplified in the Rajya Sabha on December 7 in answering a question. It was stated that: “The Indo-US nuclear understanding enjoys broad bi-partisan support reflected in the large majorities by which both Republicans and Democrats voted in favour of the Bills to enable full civil nuclear energy cooperation with India in the US House of Representatives and the Senate. Out of 201 Democrats in the House of Representatives, 140 voted in favour of the Bill. In the Senate, where the vote took place after the mid-term election results were announced, 32 out of 44 Democrats voted for the Bill. Support from the Democrats included senior Democratic leaders in both the Houses. The India-US nuclear understanding is based on its own merits with a view to addressing India’s growing energy requirements. It cannot be linked either to North Korea’s nuclear test or Iran’s nuclear policy.”
LAOS

256. Press Release of the Embassy of India in Vientiane on the visit of Minister of State E. Ahamed to Laos to attend the 5th India-Lao Joint Commission Meeting.

1. The 5th Indo-Lao Joint Commission Meeting was held on 27 May, 2006 in Vientiane. The Indian delegation to the 5th Indo-Lao Joint Commission led by His Excellency Mr. E. Ahamed, Minister of State for External Affairs of India was composed of senior officials from the Ministry of External Affairs, Ministry of Agriculture, Ministry of Commerce, Ministry of Finance, Ministry of Information Technology and Indian Council for Cultural Relations (ICCR), Government of India.

2. During his visit to Laos, His Excellency Mr. E. Ahamed, Minister of State for External Affairs, held discussions with his counterpart His Excellency Mr. Phongsavath Boupha, Vice Minister of Foreign Affairs of Lao PDR. Mr. Ahamed also called on His Excellency Mr. Bounnhang Vorachit, Prime Minister of Lao PDR.

3. The India-Lao PDR Joint Commission on Trade, Economic, Scientific and Technological Cooperation discussed cooperation between the two countries in the areas of agriculture, grant aid and credit, trade and investment, mining and industry, transport and tourism, education and culture and science and technology, ICT and defence.

4. Lao PDR has been a recipient of Indian grant and loan assistance for projects and technical cooperation under the ITEC programme. There was also an exchange of views on bilateral relations and the regional and international situations. At the conclusion of the Joint Commission Meeting, the two co-Chairmen of the India-Lao PDR Joint Commission, Mr. E. Ahamed and Mr. Phongsavath Boupha signed the Agreed Minutes of the Meeting.

5. Minister of State for External Affairs, Mr. E. Ahamed inaugurated the National Data Centre for the Lao PDR Government. The Data Center has been established by the National Informatic Centre (NIC), Government of India under the India-Lao bilateral Cooperation on Information and Communication Technology. It is the first State-of-the-Art Data Center set up in Lao PDR. This National Data Center
will be the hub centre of major e-governance activities of Lao PDR. The Data Centre will host and integrate all the proposed e-governance applications, which the Government of Lao will implement over the years. A full-fledged Messaging Server has been hosted in the data centre that can cater to all the messaging requirements of the officials of Lao PDR at different levels (Ministries/Departments/Provinces and Districts) for the exchange of information/data and email services. The Data Centre also hosts generic IT services like National level DNS, Database Servers, Web and application servers etc.

6. India and Laos enjoy long standing, friendly and mutually supportive relations. Our bilateral relations are based on profound historical and cultural linkages that take us back over 2000 years. Cultural contacts and exchanges between our two nations have been taking place for several centuries. Buddhism is amongst our oldest links. India looks forward to consolidating and further strengthening our ties with the Lao PDR.

7. The 5th Indo-Lao Joint Commission took place during the 50th anniversary of establishment of diplomatic relations between our two countries. Over the last 50 years, India and Laos have worked closely and bilateral relations have been strengthened with exchanges in the political, economic, educational, defence, cultural and other spheres at all levels.

8. The first Prime Minister of India, Pandit Jawaharlal Nehru visited Laos in 1954. People in Laos still fondly recollect this historic visit, which strengthened and formed the basis of our close ties after India’s independence.

9. During the last four years, there have been two Prime Ministerial visits from India. The most recent was that of Prime Minister Dr. Manmohan Singh, who attended the very successful 3rd India-ASEAN Summit. His Excellency Prime Minister of Laos and several high level Ministers from Laos have visited India during this period.

10. Our relations have been energized, and given greater impetus and substance and dynamic content with a number of concrete bilateral cooperation projects in the power, IT, entrepreneurship development, defence, human resource development and capacity building sectors.
MALAYSIA

257. Agreement on Cooperation between Malaysian Institute of Strategic and International studies and the Indian Council of Word Affairs.

Kuala Lumpur, May 30, 2006

The Indian Council of World Affairs (ICWA), New Delhi, and the Institute of Strategic and International Studies (ISIS), Malaysia hereinafter referred to as “the Parties”;

Intending to contribute to the further development and strengthening of traditional relations of friendship between the two countries; and

Recognising the importance of establishing mutual cooperation between the two institutions;

Have reached the following understanding:

1. The Parties shall cooperate in the fields of mutual interests which interalia include:

   a) Mutual exchange of delegations and persons for sharing of information and experience, for participation in conferences, seminars and symposia;

   b) Exchange of interns;

   c) Exchange of academic literature, public relations, text books and other materials;

   d) Promotion of joint research programmes; and

   e) Holding of joint symposia and conferences.

2. The Parties shall mutually agree on the financial and other terms of the above cooperation and determine such other mutually agreed programmes.

3. The present agreement shall come into effect from the date of the signature and shall remain in force for a period of five years, thereafter it can be extended automatically for a single period of time unless either party gives to the other six months advance notice in writing of its intention to terminate this Agreement.
IN WITNESS WHEREOF the undersigned, duly authorized thereto, have signed this Agreement.

Done at Kuala Lumpur on this 30th day of May 2006 in two originals in English language.

(Talmiz Ahmad)                                              (Dato’ Mohamed Jawhar Hassan)
Director General                        Chairman & Chief Executive Officer
Indian Council of World Affairs, Institute of Strategic and International Studies, Malaysia
Sapru House, New Delhi
MYANMAR

258. Press Briefing by Foreign Secretary Shyam Saran on the Visit of President Dr. A.P.J. Abdul Kalam to Myanmar and Mauritius.

New Delhi, March 7, 2006

Please See Document No. 373

259. Address by President Dr. A.P.J. Abdul Kalam to the Union of Myanmar Federation of Chambers of Commerce and Industry.

Yangon, March 10, 2006.

Partnership for growth of Commerce and Industry in Myanmar

I am indeed delighted to be here to participate in the Union of Myanmar Federation of Chambers of Commerce and Industry (UMFCCI). I attach special significance to the fact that this Chamber is a premier body of business and industry in Myanmar. My greetings and best wishes to the growth of industries particularly value added industries in Myanmar leading to the prosperity of the nation.

I am happy to note that the UMFCCI is participating in the implementation of the four economic objectives of the State namely: -

1. Development of all sectors of the economy keeping agriculture as the base.
2. Evolution of a market-oriented economic system
3. Development of the economy through technological and financial participation from multiple sources within the country and abroad.
4. Shaping of the national economy must lie with the State and the people.

With these objectives in view, your Federation is acting as a bridge between the State and the Private Sector through your vast network of affiliated chambers and association.
Volume of Trade and Business

As per the 2003-04 estimates the volume of bilateral trade between Indian and Myanmar is around US $ 470 million. We need to work out a method by which we can aspire to increase this volume to around US $ 2 billion within the next three years using MoUs signed by UMFCCI with the Confederation of Indian Industry (CII) and the Bengal Chambers of Commerce and Industry. To achieve this target, a systematic and synergetic policy needs to be drawn up, using the core competence of India and Myanmar. India has achieved a good standing in the international arena in the area of Information and Communication Technology. In addition, Indian pharmaceutical industries are producing cost effective drugs. India’s manufacturing industries are having a new resurgence in automobiles, textiles, machine tools etc. The automobile industry is producing competitive cars and automobile spare parts and the textile industry apart from producing textiles is manufacturing state-of-the-art textile machinery. The agro-food processing industries are on a growth path. The construction industry has made rapid strides in making excellent infrastructure like ports, roads etc. Our energy sector is also active in gas and oil exploration and its effective commercialization. Similarly, Myanmar has exhibited strength in the areas of agriculture, forestry, mining and energy sources. Vast areas of land particularly on the banks of the Irrawaddy River can be used for quality and quantity production of cotton and rice. I remember that Myanmar has had a history of supplying rice to many parts of Asia and has the potential to supply quality rice. We should make full use of the two border posts namely; Moreh-Tamu and at Zowkhathar-Rhi for providing an impetus for the growth of bilateral trade.

We are working seriously on the India-Myanmar-Thailand trilateral highway which is likely to commence soon. We are also, working towards the development of a hydro-electric power project at Tamanthi which has the potential of generating nearly 1000 MWs of power. Our two countries are also co-operating in the hydrocarbon sector near the Rakhine coast. Another major project is the Kaladan multi-modal transport project that aims to connect Mizoram with Sittwe apart from co-operation in the railway sector. Port facilities also may be energized for the mutual benefit of Myanmarese industry and agriculture, as well as India; especially our North-Eastern States. India is also willing to create an arrangement with Myanmar for supply of general medicines in a cost effective manner.
Ambience of the Nation

The Indian economy is an ascending trajectory. Our foreign exchange reserves are continuously growing, the rate of inflation is coming down and our technological competence is being globally recognized. With the energy of 540 million youth, umbilical connectivities of 20 million people of Indian origin in various parts of our planet, and the interest shown by many developed countries to invest in our engineers and scientists including the setting up of new R&D centers, India is in a position to embark on innovative projects. India with its one billion people with multi-cultural, multi-language and multi-religious backgrounds, has chosen the path of democracy since its independence in 1947. India’s technological competence and value systems with civilization heritage are highly respected. Foreign Institutional Investors (FII’s) also find investing in India attractive. Indians are also investing abroad and are opening new business ventures. Indian Foreign Direct Investment in British capital is second only to that of the USA and Indian FDI projects in Europe has increased from just 5 to 119 during the period 1997 to 2004. Indian industry is very keen to invest in Myanmar’s infrastructure projects. India’s GDP has grown at 8.1% in the year 2005-06 and we expect to reach a 10% growth rate very soon. We would definitely like to share our experiences with Myanmar in promoting economic growth of both our nations. It will be of special significance to the Indian people as we share a lot of common civilizational heritage.

India’s Look East Policy

We recognise today that India-Myanmar relations have an important bearing on the peace, stability and development of our region and the Asian continent. With the irreversible trend of regional integration in Asia, we increasingly look at Myanmar as a key element in our “Look East” policy and a trusted partner in our vision for a dynamic and vibrant Pan-Asian Community of peace and prosperity. We are encouraged by the current momentum in our relations with growing exchanges and cooperative ties in a wide range of areas. We are working together to expand and enrich the political and economic content of our relationship. It is our shared endeavor to foster closer people-to-people contacts and strengthen our exchanges in agriculture, industry, services, education, Science and Technology and in the cultural fields. We have initiated certain discussions for strengthening of the ASEAN, which has to be further reinforced by both India and Myanmar. The networking of ASEAN countries and India with physical and electronic connectivity will definitely bring a higher level of prosperity to the whole region through enhanced trade and business. We
can also make specialised interconnectivities between Myanmar and India suited to realize our mutually shared vision for our economic, trade and Human Resource Development relations.

**Skill Development and Capacity Building**

Skill development is integral for productive development of manpower in any economy, the scope and extent of skills prevalent in an economy contributes to its global competitiveness and is recognized as a key element in poverty reduction strategies, aimed at achieving social inclusion and equity. The Confederation of Indian Industry (CII) has prepared a roadmap for India to participate in the world skills competition. We have a robust programme of measuring skills on a global platform which will enable our industry to bench mark skills available with them on the global scale. CII will be very happy to share its experiences with the Union of Myanmar Federation of Chambers of Commerce and Industry and create a programme for development of skills amongst Myanmarese youth needed for the global economy. Here, I recall an interaction with a set of trained youth from Afghanistan who were trained in skills. We welcome such proposals.

**Information Technology (IT) Parks**

The addressable market for global off-shoring exceeds over US $300 Billion presently, which is expected to increase to $400 billion within the next 3 years. Presently, we are using only a fraction of this global off shoring business. What is needed is creating awareness among various prospective customers, about the win-win solution through the global off-shoring route. When we succeed in doing this, we have to create institutions, infrastructure and skilled human resources that can service the needs of industry competitively. It has to be of high quality in performance, it has to be cost effective and just-in-time delivery. One of the solutions through which we can achieve this goal rapidly is through the creation of industrial parks and IT Parks, where common facilities are provided to all participating units cost effectively thus ensuring competitiveness of these units, as they have to face severe global competition. India will help in establishing IT Parks on the lines of STPI (Software Technology Park of India). You may perhaps call them STPM (Software Technology Park of Myanmar) or some other such name. We would like to share our thoughts with Myanmar.

**PURA some experiences**

I will now address another important area. That is to reach the benefits of economic growth to all people. In addition to being a noble cause, it also
helps expand the domestic market for industry. Thus, it is also a good business proposition. In Myanmar, like in India, most people live in rural areas. It is essential to bring economic prosperity to people living in rural areas. We have a development programme called PURA (Providing Urban Amenities in Rural Areas) aimed at promoting Rural Prosperity and prevent migration from rural to urban areas. I am sure; this programme will be relevant to Myanmar also. I would like to share with you an operational PURA in one of the states of India through private initiative. PURA envisages four connectivities, which are Physical Connectivity, Electronic Connectivity, Knowledge Connectivity leading to Economic Connectivity. PURA is a business proposition.

Periyar PURA (Tamil Nadu): I have inaugurated the Periyar PURA complex pioneered by Periyar Maniammai College of Technology for Women a year ago. This PURA complex located near Vallam, in Thanjavur District of Tamil Nadu in Southern India has a cluster of over 65 villages with a population of 3 lakh. This complex has all three Connectivities - physical, electronic and knowledge - leading to economic connectivity. The center of activity emanates from the women’s engineering college that provides electronic and knowledge connectivity. Periyar PURA has healthcare centers, primary to post graduate level education and vocational training centers. This has resulted in large-scale employment generation and creation of number of entrepreneurs with the active support of 850 Self-Help Groups. Two hundreds acres of wasteland has been developed into cultivable land with innovative water management schemes such as contour ponds and water sheds for storing and irrigating fields. All villagers are busy in cultivation, planting Jatropha, herbal and medicinal plants, power generation using bio-mass, food processing and above all running marketing centres. This model has emanated independent of any government initiative. Committed leadership has been provided by the Engineering institution. Recently, 5 villages of Periyar PURA were connected through Wi-MAX Wireless and are having a minimum of 4 mbps connectivity with the Periyar PURA Nodal centre. This provides sustainable economic development in that region. This gives me the confidence that PURA is a realizable proposition and this movement can be multiplied by thousands of entrepreneurs, educational administrators, small-scale industrialists and bankers with the support of government agencies. In the climate of Myanmar, the Jatropha plantation which I have suggested will definitely grow well. UMFCCI may consider establishment of Jatropha enterprises as part of PURA in different parts of rain fed areas of the country from plantation to oil extraction and
esterification including processing of bi-products, such as oil cake and glycerin. The Tamil Nadu Agriculture University and Anand Agriculture University who have certain experience in Jatropha Plantation leading to bio-fuel extraction can definitely share their experience and knowledge with UMFCCI members.

**Conclusion**

In conclusion, friends, India has a mission of transforming itself into a developed nation before 2020. India has core competence in agriculture, agriculture products, large number of small and medium scale industries, ICT products, pharma products including traditional medicines. Also India has the capability of launching its own resource and communication satellites. Already in some areas, partnership and cooperation exists between India and Myanmar. My visit to Myanmar is to enhance this cooperation between the two countries.

There are tremendous potential in the areas of power generation, gas transportation, road connectivity and satellite communication. Above all there is a need for renewal of agriculture production in Myanmar as it was in the past. There are number of opportunities for cooperation between India and Myanmar in Commerce and Industry. I visualize a great future for Myanmar towards development and economic prosperity. India will be very happy to be a partner in the development of agriculture, manufacturing and services sector of Myanmar. Let us remember youth force is the most powerful resource, both our countries cherish. With a clear vision and missions, we can definitely progress in evolving a prosperous and happy world.

My best wishes to all the members of the Union of Myanmar Federation of Chambers of Commerce and Industry.

Yangon, March 9, 2006.

Bearing in mind the close cultural and historical relations between the two countries, and;

Desiring to strengthen these relations further with cooperation in education and culture related to Buddhism and to promote cooperation between the peoples of the two countries;

Have reached the following understanding:

1. The following Institutions, where Pali and Buddhism are taught and promoted as a subject, will be partner institutions under this MoU:

   In India:

   In Myanmar:
   (i) State Pariyatti Sasana University. Yangon and Mandalay. Department for the Promotion and Propagation of the Sasana, Ministry of Religious Affairs, Yangon (Kaba-aye) Tel.01-665677, 01-665385, Fax-01-660759.
   (ii) International Theravada Buddhist Missionary University-Yangon, Dhammapala Hill Mayangone, Myanmar, Ph. 01-650706.
   (iii) Sitagu International Buddhist Academy, Sagaing Hills, Sagaing, Myanmar, Tel. 072-21587 (Registrar's Office).

Education related to Buddhism

2. Identification and preparation of database of the traditional centres of Buddhist studies like monasteries, viharas etc. between the two countries where both theory and practice are taught. This database will help in identifying the students and traditional scholars for exchange programmes between the two countries.
3. Exchange of students and teachers for the study of Buddhism between the two countries specially in Pali and Abhidhamma.

4. Exchange of erudite monks and scholars of Buddhism between the two countries.

5. The two countries would cooperate to preserve and promote the words of Lord Buddha and commentaries thereon both in book form as well as electronically in the CD-ROM format.

6. Compilation and publication of glossaries of Buddhist terms in the languages of the two countries.

7. Translation and exchange of materials of the words of Lord Buddha (Tipitaka) and other relevant material connected with Buddhism and Indian Culture in English, Pali, Sanskrit, Hindi, Myanmar between the two countries.

8. Holding of Conferences and Seminars related to different aspects of Buddhism and Indo-Myanmar Culture between the two countries.

**Culture related to Buddhism**

9. Programme of conservation and preservation of old MSS between the two countries.

10. Establishment of data-bank providing information about Buddhism prevailing in both countries with reference to art and customs.

11. Exchange of Buddhist iconographical inscriptional material and knowledge between the two countries.

12. Joint exhibition of Buddhist art and architecture, iconography, literature etc. depicting development of Buddhism between the two countries.

261. **Framework Agreement for Mutual Cooperation in the Field of Remote Sensing between the Government of the Republic of India and the Government of the Union of Myanmar.**

**Yangon, March 9, 2006.**

The Government of the Republic of India and The Government of the Union of Myanmar (herein after referred to as the “Parties”),

**DESIRING** to strengthen the traditional relations of friendship and cooperation between the two countries;

**DESIRING** to establish effective forms of bilateral cooperation in the field of remote sensing that would promote social and economic development for the benefit of the peoples of their countries;

**AIMING** to encourage commercial and industrial cooperation between the private sectors of both countries for peaceful uses of outer space;

**HAVE AGREED AS FOLLOWS:**

**ARTICLE 1**

**Applicable Law**

In accordance with the legislation in force in each State and universally accepted norms and principles of international law, the Parties shall promote cooperation between the two countries in the field of outer space research and use of outer space for peaceful purposes.

**ARTICLE 2**

**Implementing Agencies**

1. The Parties hereby appoint the Antrix Corporation Ltd. (ANTRIX) and Myanmar Economic Cooperation (MEC) respectively as the Implementing Agencies responsible for the development, coordination and control of cooperation envisaged by the present Agreement.

2. The Parties or the Implementing Agencies within the limits of their competence may designate other institutions to develop cooperative programs in areas enumerated in the Article 3 below.
ARTICLE 3
Areas of Cooperation

1. Cooperation within the framework of the present Agreement may be carried out in the following areas:
   - Remote sensing data reception, processing and applications;
   - Operation of satellite ground station for receiving remotely sensed data from Indian Remote Sensing Satellites;
   - Organisation of training facilities and programs.

2. Additional areas of space cooperation shall be determined by mutual agreement between the Parties.

ARTICLE 4
Roles and Responsibilities of each Party

1. Responsibilities of MEC of the Government of the Union of Myanmar
   - Space for housing the facilities
   - Full local hospitality for visiting Indian experts
   - Expenditure for annual maintenance
   - Operation of the Reception and processing facility
   - Upgrade of the existing reception and processing facility to receive and process Resourcesat-1 and Cartosat-1 data of the Indian Remote Sensing satellite constellation.

2. Responsibilities of Antrix/Department of Space, Government of the Republic of India
   - Setting up the proprietary hardware and software systems enabling the reception of Resourcesat-1 and Cartosat-1 data at the ground station in the Union of Myanmar through Antrix as per separately agreed commercial terms, if the Government of the Union of Myanmar is interested to do so.
   - Providing on-site installation support as well as extended support for the processing of Resourcesat-1 and Cartosat-1 data through Antrix as per separately agreed commercial
terms, if the Government of the Union of Myanmar is interested
to do so.

Providing telemetry data as downlink to the Myanmar ground
station for Resourcesat-1 and Cartosat-1 as per the
commercial agreement with Antrix with a subsidy from the
Government of the Republic of India as agreed in Article 5.

ARTICLE 5
Subsidy for access of telemetry data

Government of the Union of Myanmar will receive a subsidy of USD
600,000 (US dollars six hundred thousand only) annually from the
Government of the Republic of India, for a period of 3 years on the access
fee US$ 1,600,000 (US Dollars One Million and six hundred thousand only)
payable to Antrix annually for the reception of Resourcesat-1 and Cartosat-
1 data using the facilities of Myanmar Ground Station available with MEC,
Union of Myanmar.

ARTICLE 6
Rights of Data

The Parties recognize that the rights in the IRS data down linked to
the MEC ground station lie with Antrix.

ARTICLE 7
Data Sharing

The Parties agree that the IRS data received at MEC ground station,
if required, will be made available to the Government of the Republic of
India in appropriate forms mutually agreed between MEC and Antrix.

ARTICLE 8
Intellectual Property

Unless otherwise agreed to by the Parties, the intellectual property,
created by using IRS data received at the ground station shall be shared
by both Parties and copyrights of the IRS data used to create such
intellectual property shall be duly credited to Antrix.

ARTICLE 9
Exchange of Information

1. Observing the conditions of confidentiality, the Parties, their
Implementing Agencies and other appointed institutions shall provide
access, on a mutual basis and within a reasonable time, to the results
of scientific research and work jointly carried out within the framework of this Agreement. To that end, they shall encourage the exchange of corresponding scientific and technical information and data, which cannot be transferred to third parties without prior mutual consent.

2. The Parties, through their Implementing Agencies, according to their national law concerning the information of limited access, shall facilitate the mutual exchange of information concerning the issues related to this Agreement.

ARTICLE 10
Customs Regulations and Exchange of Personnel

1. Subject to its national legislation, each Party will:

   a) Arrange for customs clearance and payment of duties, if any, for the entry of equipment required for the implementation of the Cooperative Programs carried out within the framework of this Agreement.

   b) Regarding the exchange of personnel, take necessary measures to facilitate the documentation for entry, stay and exit for the other Party’s nationals who enter, stay and exit within its territory in order to carry out activities under Cooperative Programmes established under this Agreement.

2. Such arrangements shall be fully reciprocal.

ARTICLE 11
Liability

The Parties and their respective Implementing Agencies commit to the establishment, as part of each Implementing Arrangement and Cooperative Programme, of a specific system of assuming responsibility for the respective losses and damages. The Parties shall ensure, consistent with their respective national laws, that contractors, subcontractors and other participating entities associated with the Parties take part in this particular system of responsibility.

ARTICLE 12
Settlement of Disputes

Any disputes concerning the interpretation and implementation of the present Agreement shall be settled by means of direct negotiations
ARTICLE 13
Entry into Force Provisions

1. The present Agreement shall enter into force on the date of last notification upon the fulfillment by the Parties of their internal legal procedures necessary for this purpose.

2. The present Agreement will remain in force for a period of three (3) years and may be extended for further periods on mutual agreement. Either Party through a diplomatic Note may terminate this Agreement. The termination shall take effect six (6) months following the date of the notification.

3. In the event of the termination of the present Agreement, its provisions shall continue to apply to all unfinished programs and projects if the Parties do not agree otherwise. The termination of the present Agreement shall not serve as the basis for the revision or termination of obligations of a financial or contractual nature still in force and shall not affect the rights and obligations of legal persons and citizens concerned, which have arisen before the termination of the present Agreement.

Done in Yangon on 9th March, 2006 in two originals in the English language.

FOR THE GOVERNMENT OF FOR THE GOVERNMENT OF THE REPUBLIC OF INDIA THE UNION OF MYANMAR

SHYAM SARAN U KYAW THU
FOREIGN SECRETARY DEPUTY MINISTER FOR FOREIGN AFFAIRS

Yangon, June 20, 2006.

The seventh round of Foreign Office Consultations between India and Myanmar was held in Yangon on 18 June 2006. The Indian side was led by Foreign Secretary Mr. Shyam Saran who was accompanied by senior officials of the Ministry of External Affairs. The Myanmar side was led by Deputy Foreign Minister Mr. U Kyaw Thu and senior officials and advisers of the Government of the Union of Myanmar.

The talks covered the entire gamut of India-Myanmar bilateral relations, with special emphasis on issues such as security, energy, trade & economic cooperation and infrastructure projects. While noting the excellent state of bilateral ties, both sides explored ways and means to exploit the immense potential for cooperation that exists in areas such as energy and trade. Both sides agreed to take expeditious steps to implement infrastructure projects which were in different stages of negotiation. The two sides also took stock of the common security challenges facing their respective countries and stressed the need for keeping their borders peaceful and tranquil.

Myanmar is a close and friendly neighbour of India which provides us a “gateway” to ASEAN. The strategic importance of our ties with Myanmar can therefore be hardly overemphasized. Rashtrapatiji’s state visit to Myanmar in March 2006 was an important milestone in bilateral relations. The present Foreign Office Consultations with Myanmar provided an excellent opportunity to take follow-up action on that visit and outline further steps that needed to be taken to enhance bilateral cooperation in various spheres.
263. Press Release of the Ministry of Home Affairs on the meeting between the Home Ministers of India and Myanmar.

New Delhi, December 21, 2006.

Various issues of mutual interest and concern to India and Myanmar including those relating to security, drug trafficking and effective border management were discussed here today at a meeting between the Home Minister of Myanmar, Major General Maung Oo and Union Home Minister, Shri Shivraj Patil. Both the sides assured full co-operation with each other in this regard. Shri Patil assured the visiting dignitaries of all possible assistance in the field of training and capacity-building of the Myanmar Home Ministry officials. The visit of Major General Maung Oo has provided a renewed impetus for widening and deepening of the India-Myanmar relations.

Major General Maung Oo has come to India along with a four-member delegation on the invitation of Shri Shivraj Patil. Prior to its arrival in New Delhi yesterday, Myanmar delegation visited Bangalore and Hyderabad from 17th to 20th December. The delegation visited the Indian Space Research Organisation (ISRO) and the Hindustan Aeronautics Ltd. (HAL) at Bangalore and the National Police Academy and the software development facility of a leading firm at Hyderabad. Major General Maung Oo yesterday visited a Compact Disc Manufacturing Unit at Greater Noida, UP. During these visits, the Myanmar delegation appreciated technological advancements made by India in space research, aeronautics and information technology fields.

Myanmar Home Minister also extended invitation to Shri Patil on his behalf and on behalf of the head of the Government of Union of Myanmar to visit Myanmar at his earliest convenience.
The Philippines

264. Statement to Media by Secretary (East) Ministry of External Affairs Rajiv Sikri on the Visit of President Dr. A.P.J. Abdul Kalam to Philippines.

New Delhi, January 30, 2006.

265. Presentation by President Dr. A.P.J. Abdul Kalam to ADB Team during his visit to Manila.

I am delighted to meet the team of the Asian Development Bank (ADB). My greetings to the President, ADB and all the team members. Today, I would like to present the PURA concept being followed by the Government of India for enhancing the quality of life of seven hundred million rural people living in six hundred thousand villages.

Economic Connectivity for PURA

Providing Urban facilities in Rural Areas (PURA) consisting of four connectivities: physical, electronic, knowledge and thereby leading to economic connectivity to enhance the prosperity of clusters of villages in the rural areas. The economic connectivity will generate a market and the production establishments for servicing the market. The PURA has all the dimensions to become a business enterprise, which has global dimensions but operating in every nook and corner of our country. The PURA entrepreneur has to have the skill for evolving a business plan with banks and also create infrastructural support such as educational institutions, health centres and small scale industries, transportation services, tele-education, tele-medicine, e-governance services in the region integrating with the governmental rural development schemes such as road, communication and transport and also with national and global markets to sell the products and services.
PURVA Model

Depending upon the region and the state of present development PURA can be classified in three different categories, namely Type A, Type B, Type C - PURA Clusters. The characteristics features of these types are given below: For example, Type A Cluster is situated closer to an urban area and having minimal road connectivity, limited infrastructure, limited support - school, primary health centre. Type B Cluster is situated closer to urban area but has sparsely spread infrastructure and no connectivity, Type C Cluster located far interior with no infrastructure, no connectivity and no basic amenities. In addition to this there are coastal PURAs and Hill PURAs.

Criteria for PURA Clusters

Type A Cluster may be with the Population of 30,000 to 1,00,000 in about 10 to 15 villages with adequate land for 4 lane circular road, without having Canals, Rail and Power line obstacles, ensuring minimum displacement of people, and preferably falls within the district jurisdiction. Similar criteria need to be worked out for B and C clusters.

PURVA Enterprise

The small and medium industry enterprises in India have experience in managing the small and medium scale industries of different types in various regions. This sector is widespread in the country and is a promising candidate for taking the leadership and managing the PURA complexes in an integrated way. Also major businesses in India with wide spread rural services have an experience of maintaining large rural-urban networks. PURA enterprises can undertake management of schools, health care units, vocational training centres, chilling plants, silos and building a market, building of local industrial / ICT parks, tourism services, banking system and the regional business or industrial units. A new management style has to emerge for managing such type of PURA enterprises. This new PURA enterprise needs partnership from the bank, educational institutions, Government and the private entrepreneurs. The management system should have the flexibility to be competitive and the country has to experiment several models depending on local needs. Now I would like to discuss some of the operational PURAs in India.

Periyar PURA (Tamil Nadu): I have inaugurated Periyar PURA complex pioneered by Periyar Maniammai College of Technology for Women, Vallam, Tanjore a year back. I thought of sharing with you the developmental concept of a cluster of over 65 villages near Vallam, Thanjavur district of Tamil Nadu that involves a population of 3 lakh. This
PURA complex has all the three Connectivities - physical, electronic and knowledge - leading to economic connectivity. The center of activity emanates from the women engineering college that provides the electronic and knowledge connectivity. Periyar PURA has health care centers, primary to post graduate level education and vocational training centers. This has resulted in large-scale employment generation and creation of number of entrepreneurs with the active support of 850 self-help groups. Two hundreds acres of waste land has been developed into a cultivable land with innovative water management schemes such as contour ponds and water sheds for storing and irrigating the fields. All the villagers are busy in cultivation, planting Jatropha, herbal and medicinal plants, power generation using bio-mass, food processing and above all running marketing centres. This model has emanated independent of any government initiative. The committed leadership has been provided by the Engineering institution. Recently, 5 of Periyar PURA villages are connected through Wi-MAX Wireless and having min 4 mbps connectivity with the Periyar PURA Nodel centre. It provides a sustainable economic development in that region. This gives me the confidence that PURA is a realizable proposition and this movement can be multiplied by thousands of entrepreneurs, educational administrators, small-scale industrialists and bankers with the support of the government agencies.

**PURA - Loni Model (Maharashtra):** Recently, I visited a place called Loni in Maharashtra where a participative model of integrated rural development has come up among 44 villages with the population of 80 thousand. The Loni PURA model has been pioneered by Pravara Medical trust. It is improving the productivity of the rural people through improved quality of life with healthcare, education and employment. The concept is people centric development for social transformation. The thrust area of development has been on comprehensive Medicare particularly for women and children, need based health education and e-connectivity to the farmers. The complex has created 27 educational and vocational institutions consisting of schools, colleges, polytechnic and ITI including medical and engineering colleges. They have created sugar factory, biogas plants, chemical plants and power projects. They have large number of self-help groups for providing low interest loan for the weaker sections in the society. Due to the co-operative effort of the people, literacy in these villages has gone up from 63% to 83%, birth rate has come down, infant mortality rate has decreased to 35 per 1000 from 70 per 1000 and the standard of living of the people has gone up by over 20% compared to other villages in the neighbouring areas.
Chitrakoot PURA (Madhya Pradesh): Recently I visited Chitrakoot in Madhya Pradesh, where I met Shri Nana Deshmukhji (Age 90) and his team members belonging to Deendayal Research Institute (DRI). DRI is a unique institution developing and implementing a village development model, which is most suited for India. DRI understands that people’s power is more potent, stable and enduring than political power. By becoming one with the oppressed and depressed, one gains the acumen of administration and governance. Social advancement and prosperity are possible only by injecting the spirit of self-reliance and excellence in the younger generation. Using this principle, DRI has plans to develop one hundred clusters of villages having approximately five villages each around Chitrakoot. They have already developed 80 villages in 16 clusters consisting of about 50,000 people. I witnessed one of the villages called Patni where the institute has promoted sustainable development based on indigenous and traditional technology, knowledge systems and local talents. The research work by the institute through field studies facilitates the development of replicable and tangible model for achieving self-reliance in villages. The programme aims at income generation through value addition, innovative agricultural practices, inculcating scientific temper among the villagers, improvement of health and hygiene, striving towards 100% literacy. As a part of integrated rural development, the villagers are doing water harvesting; effectively use it for cultivation of food grains, medicinal and aromatic and horticulture cultivation. Apart from all these development activities, the institute is facilitating a cohesive conflict free society. As a result of this, I understand that the eighty villages around Chitrakoot are almost litigation free.

The villagers have unanimously decided that no dispute will find its way to court. The differences will be sorted out amicably in the village itself. The reason given by Nana Deshmukhji is that if the people fight among each other they have no time for development. They can neither develop themselves nor the community. This message has been understood by the society and they have decided not to embark on any fighting. All these have been accomplished through DRIs “samaj-shil-pi dampati” (a graduate married couple) a new concept of counseling and intervention promoted by DRI. It was a great joy for me to take lunch with Patni village citizens. A new road connecting multiple villages in the Chitrakoot area is taking shape. In the same Chitrakoot environment there is another social organization called Shri Sadguru Seva Sangh trust is carrying out number of social activities including the running of quality eye care center. In a rural environment, I find a revolution is taking place due to the committed leadership to remove the human pain.
Byrraju PURA: Recently, on 9th January 2006, I visited Bhimavaram in Andhra Pradesh where I saw Byrraju PURA set up by Byrraju Foundation which is established by a software industry. This Foundation has undertaken the mission of establishing 32 Ashwini centers benefiting 116 villages with the population of around 500,000 people. It has provided the electronic connectivity and knowledge connectivity. It has skill enabled and knowledge enabled in multiple areas and created 3000 jobs with the minimum earning of Rs. 3,000 per month, this is 3 times that of their earlier earning potential. They have created a Gram IT BPO which has brought 10% reverse migration from Hyderabad to Bhimavaram (city to village). I would suggest the other industry captains to come forward with such PURAs with physical connectivity, electronic connectivity and knowledge connectivity leading to large scale employment and wealth generation in the region. This will enable emigration from cities to rural areas as I have noticed in Bhimavaram. This Foundation has also brought out an emergency medical service to the people of 5 districts in Andhra Pradesh in association with the Emergency Management and Research Institute. When a person dials 108, a toll-free number from any tele-phone, the Advanced Life support system ambulance reaches the spot and saves the life. They have saved more than 1000 lives. The service has been extended to two more districts. International Disaster Management Agencies can take note of this experience for propagating such type of services in different countries.

Suggestions for ADB

1. ADB can consider creation of eight ASEAN PURA Clusters in eight ASEAN countries namely Philippines, Myanmar, Laos, Cambodia, Vietnam, Malaysia, Indonesia and Thailand.

2. For each PURA, ADB can also create ten self-help groups who can fund the small cottage industries for creating self employment for the youth of the region.

3. As is being practiced in Taiwan villages, ADB can also consider creation of one village one product scheme based on the core competence of the villages in the respective ASEAN countries. The aim should be that the selected product must have a national and international market. India will be very happy to share the experiences in commissioning of these PURAs.

The Government of the Republic of India and the Government of the Republic of the Philippines (hereinafter jointly referred to as the Parties and separately as a Party);

ACKNOWLEDGING the mutual benefits inherent in defence between the parties;

RECOGNISING that the implementation of such cooperation shall be in accordance with the policies and priorities of the respective Parties, and in accordance with conditions as mutually determined from time to time between the Parties;

DESIRING to further strengthen the bilateral relations between the Government of the Republic of India and the Government of the Republic of the Philippines;

HAVE AGREED as follows:

ARTICLE 1
PURPOSE

The aim of this Agreement is to enhance defence cooperation through the exchange of experience and knowledge between the Parties.

ARTICLE 2
IMPLEMENTATION

The Parties entrust the implementation of this Agreement to their respective Ministry Department of Defence.

ARTICLE 3
DEFENCE COOPERATION

In the field of defence cooperation, the Parties may:

a. exchange military training expertise and information;

b. exchange military instructors /observers;

c. exchange military personnel for purposes of attending military and educational courses or programmes;
d. exchange visits of military aircraft and military naval vessels, including Operational Turn Around facilities thereof;

e. exchange information that is mutually beneficial; and

f. collaborate in other spheres of Defence Cooperation for purposes of mutual benefit.

ARTICLE 4
PROTECTION OF CLASSIFIED INFORMATION

Subject to their domestic laws, the Parties shall protect classified information exchanged between them pursuant to this Agreement by not disclosing any classified information other than to members of their own staff who have been cleared in the appropriate level by their respective Governments and to whom such disclosure is essential for the purposes of giving effect to this Agreement or to any other further agreements and only after having taken all reasonable precautions to ensure that such members of staff shall at all times maintain strict secrecy. The Parties shall not use any classified information obtained during any bilateral cooperation between them to the detriment or against the interests of the other Party.

ARTICLES 5
DEFENCE TECHNOLOGY COOPERATION

The Parties, in the field of defence technology cooperation, may:

a. facilitate contact between defense-related agencies in their respective countries;

b. encourage dialogue sessions between research institutes from their respective countries; and

c. work on such joint projects, as may be mutually agreed upon.

ARTICLE 6
OTHER ACTIVITIES

The Parties may cooperate in other defense-related activities not mentioned in Article 3 and 5, including:

a. reciprocal visits;

b. attendance in seminars, discussions and symposia; and

c. considering and undertaking any other activity which in their opinion
would promote closer cooperation between the Ministry of Defence of India and the Department of National Defense of the Philippines.

**ARTICLE 7**
**FINANCIAL ARRANGEMENT**

The financial implications in respect of cooperation in terms of this Agreement shall be dealt on case-by-case basis, based on the principles of mutual reciprocation.

**ARTICLE 8**
**DISPUTES**

Any disputes between the Parties arising from the interpretation or implementation of this Agreement shall be settled amicably through consultation and negotiation between the representatives of the respective Ministry/Department of Defence. It shall not be referred to any tribunal or third party.

**ARTICLE 9**
**FUTURE AGREEMENTS**

In regard to any particular matter covered by the provisions of this Agreement, the Parties may enter into such further agreements of general or a specific nature as would in their opinion promote the effective implementation of this Agreement.

**ARTICLE 10**
**VALIDITY AND DURATION**

This Agreement shall enter into force on the date of the later written notification by the Parties, through diplomatic channels, indicating that the domestic requirements for its entry into force have been complied with.

This Agreement shall remain in full force and effect unless one Party officially notifies the other Party, through diplomatic channels, of its desire to suspend or terminate this Agreement. In such a case, the Agreement shall remain valid until thirty (30) days after the date on which one Party receives an official notification from the other Party expressing the desire of the latter to suspend or terminate the Agreement.

Termination of this Agreement shall not be prejudicial to the implementation of the contracts and programmes already signed. Existing contracts and programmes shall be executed according to the principles previously established for each of them. Duties and obligations set forth in Article 4 shall be maintained in any case.
Any amendment or revision to the text of this Agreement shall be done by mutual consent of the Parties. This amendment or revision shall enter into force in accordance with the provision on entry into force of this Agreement.

IN WITNESS WHEREOF, the undersigned, being duly authorised by their respective Governments, have signed and sealed this Agreement in two originals in the English language.

DONE at Manila on the 4th day of February in the year Two Thousand and Six.

FOR THE MINISTRY OF DEFENCE OF THE REPUBLIC OF INDIA

(DR. RAGHUVANSH PRASAD SINGH)
MINISTER FOR RURAL DEVELOPMENT

FOR THE DEPARTMENT OF NATIONAL DEFENCE OF THE REPUBLIC OF PHILIPPINES

(AVELINO J. CRUZ, JR.)
SECRETARY OF NATIONAL DEFENCE

267. Speech by President Dr. A.P.J. Abdul Kalam at the Banquet hosted by President of the Philippines.

Manila, February 6, 2006.

Your Excellency, Gloria Macapagal-Arroyo, President of the Republic of the Philippines and Atty. Jose Miguel Arroyo

Hon’ble members of the Philippine Congress and Secretaries of the Government of the Philippines

Excellencies of the Diplomatic Corps,

Distinguished Guests, Ladies and Gentlemen.

At the start of the New Year for which I greet you most warmly it is indeed an honour and a delight for me to be in this beautiful country of majestic islands and people known for their warmth, graciousness and hospitality. Philippines is verily the “Pearl of the Orient Sea” as described
by your national hero, Dr. Jose P. Rizal. Permit me, Madame President, to express my most sincere thanks for the cordiality and courtesies extended to me and to my delegation during our visit.

Excellency, the countries of South East Asia, including the Philippines, constitute an extended neighbourhood with whom India’s links go back many centuries. There is a distinctive Indian impress in this part of Asia, a religious, cultural and linguistic stamp which our seafarers brought via Indonesia and the Malaya peninsula, well before the era of European colonisation. Over the years, the Western world brought in its own cultural baggage which overlies this matrix, changing earlier layers in interesting ways, but never entirely obliterating them. National heroes like Dr. Jose Rizal and Mahatma Gandhi, on return from long years of study in the West, fused modern scientific humanism with nationalistic yearnings and sowed thereby, the seeds of freedom in our countries. They showed us how it is possible to be ourselves, while taking pride in our wider connections, to keep the windows of our houses open as it were, to breezes of different cultures, while yet not getting blown off our feet!

In a rapidly globalising world, these lessons are again becoming relevant for countries like ours which today face a dual challenge. The domestic one of managing political, economic and social change in an environment of rising expectations and growing disparities and the global challenge of securing an international environment conducive to meeting our developmental aspirations. These challenges are interlinked and any individual success or failure has the potential to affect all of us.

Fortunately, India and the Philippines are demographically young countries, with an overwhelming percentage of people still below the age of 40. A nation’s wealth is its young generation and Governments’ role is best performed in energising our youth to achieve their dreams. In my country, this young generation, aided by early and massive Governmental support to Institutions of higher education and a heritage fortuitous in this case of English language proficiency, has enabled India to emerge as a world class service provider in Information Technology. We are now endeavouring to develop core competencies in selected critical technologies of a higher order, both to address our national priorities and to market our companies abroad.

Your country too, has worked hard and become a credible IT enabled service provider to the world and India is ready and willing to join hands in selective partnership with you. In some areas we are in competition with
each other for world markets: however, this should only make us more respectful of each others abilities and willing to engage in serious “co-optition”, a word coined, I believe, by a prominent Filipino gentlemen, Dr. Bernardo Villegas. However, in IT both our countries have to travel together to transform our nations as a knowledge powered society. On our part, we would like to learn from your animation and graphic skills and also to develop caring and nurturing services, such as Tourism and Nursing, for which the Philippino is justly renowned.

Madame President, it is matter of satisfaction that our bilateral relations are beginning, after a long period of stagnation, to deepen and diversify. Our trade last year grew by 30 percent to US$ 577 million and for the first time, exports from the Philippines to India grew faster than did our exports to you. Our companies have been showing interest in exploring, separately and jointly, opportunities for investment in IT, pharmaceuticals, steel, textiles, motorcycles and auto-parts, in mining and infrastructure. Prospects for technical cooperation between India and the Philippines are excellent in sectors such as dairy and other agro-based industry, CNG for public transport, bio-and thermal energy and in space and defence-related industries. We should work together to increase our bilateral trade to $ US 2 billion before 2010. With our common facility in English there is a world of educational opportunities to explore by institutionalising University level exchanges of students and faculty.

Convergence of our views on global trade issues under the WTO and our common resolve to combat Terrorism provide a valuable base for mutual understanding. Let us resolve to unleash the existing human resource for which our two countries are famous and enable easier access to each other’s shores. I am certain that in doing so, we shall find much gain. We are grateful to the Philippines for supporting our participation, in the first East Asia Summit, which we hope would lead to an Asian Economic Community over time. Our Prime Minister is looking forward to visiting the Philippines later this year when it assumes Chairmanship of ASEAN. We hope that you too Madame President will find an early opportunity to visit India as your father did as Vice President in 1960s.

Independent India has always viewed its destiny as inseparable from that of Asia. The quest at Bandung in 1955 to establish a peaceful, prosperous and equitable world, led India’s Government to unveil, a decade ago, its “Look East Policy”, which has today become a very dynamic part of our diplomacy. The rapid growth of trade and investment and multiple
The links today between India and East Asia, are witness to its positive results. The Philippines, which lies in the cusp of Southeast and East Asia, is of great interest to this strategic vision which remains incomplete without your country’s fullest participation in it.

The memory of Jawaharlal Nehru of India and Carlos P. Romulo of the Philippines, friends who played a major part in Bandung, at the least deserves that we pay attention to completing their unfinished task. Given our mutual commitment to democratic ideals, our talented diasporas, our shared history and geography and above all, our shared desire for national growth with dignity, it is logical that we work together, to realise our vital common stake in the emerging world order. May I request Your Excellencies, Ladies and Gentlemen, to join me in a toast:

- to the health and well being of the President Gloria Macapagal Arroyo,
- the prosperity and well being of the country and its friendly people
- to abiding friendship and cooperation between India and the Philippines

New Delhi, December 6, 2006.

The eastern part of Philippines was struck by typhoon Durian last week. The typhoon resulted in large scale devastation to the life and property. It is estimated that more than 1000 people died or are missing in the flooding and landslides following the typhoon.

As a token of our support of those who have suffered tragic loss of life and property, the Government of India has decided to donate a sum of US $ 250,000 for relief and rehabilitation work in the devastated areas in the eastern Philippines.
269. Statement to Media by Secretary (East) Ministry of External Affairs Rajiv Sikri on the Visit of President Dr. A.P.J. Abdul Kalam to Singapore.

New Delhi, January 30, 2006.

Please See Document No. 248

270. Speech by President Dr. A.P.J. Abdul Kalam at the banquet hosted in his honour by Singapore President S.R. Nathan.

Singapore, February 1, 2006.

Your Excellency Mr. S.R. Nathan,
President of the Republic of Singapore,
Hon’ble Ministers of the Government of Singapore,
Distinguished Singaporean Friends,
Ladies and Gentlemen,

It is a great pleasure for me and my delegation to be in this beautiful and vibrant Singapore. We are honoured, Mr. President, by the warm reception and the gracious hospitality extended to us by the Government and the people of Singapore.

Our countries have interacted for many years. We have maintained maritime, commercial and cultural exchanges for centuries. We have had common experiences under colonial rule and we have travelled together on the road to freedom and independence. Today, we enjoy the friendliest of relations and are engaged in forging a dynamic and multifaceted partnership. Over the past year, we have had unprecedented high level interaction with the Singapore leadership including visits of the Prime Minister Mr Lee Hsien Loong, Minister Mentor, Mr Lee Kuan Yew and most recently of the Senior Minister Mr Goh Chok Tong.
Singapore has always been a special place for us, in South East Asia. It is in South East Asia that the two great Asian civilisations of China and India met each other in history. It has led to great exchanges of knowledge and ideas. Singapore is in a sense a physical embodiment of that contact, as represented by the great communities who now call Singapore the home. Together they have forged a modern united nation. Singapore has emerged as a dynamic, stable and tolerant multi-racial, mutli-religious and multi-lingual society that can indeed be a model for the rest of Asia and for the world. Its economic achievements, the prosperity it has attained, in the short span of four decades is noteworthy.

Mr. President, India too has evolved as a stable pluralistic society. Our democracy binds a vast and diverse population into a coherent stable nation. We are proud of our achievement in nation building. Democracy, tolerance and secularism define the Indian ethos.

India has a mission of transforming itself into a developed nation. We have a vision and a road-map. We have many achievements in the area of agriculture, ICT, pharma, bio-technology, space, atomic energy and defence. Our GDP has been growing at over 7 percent per annum and we will soon cross the 8 percent mark. In my visits across the country, I have interacted with over one million youth. The ignited minds of the youth are a very important resource apart from bio-diversity and other natural resources. They all have an aspiration to be in an economically developed prosperous, happy and peaceful India. In this movement towards development and prosperity, we look upon Singapore as an important partner especially in economic and commercial cooperation.

It is a matter of satisfaction that our bilateral trade grew by over 100 percent in the last two years and today reflects a healthy figure of about US $ 10 billion. The signing of CECA during the visit of Prime Minister Mr. Lee Hsien Loong in June 2005 will give a further impetus to trade and commercial linkages and enhance the bilateral trade to US $ 20 billion before 2010. Our investment links are growing but the opportunities are far greater still. Many Indian nationals and Indian companies present in Singapore are contributing to its socio-economic development. Our educational and cultural links are strengthening and our defence cooperation is also growing satisfactorily.

We need to explore more areas for expanding our cooperation and in this respect I do believe that there is a very good potential for cooperation in aspects of science and technology particularly nano technology and
bio-technology. I am convinced that for entrepreneurial and creative societies like ours, who have placed great faith in using technology for development, the opportunities for cooperation are immense. Such cooperation will benefit not only our countries but also the people of the world, in tackling some of the major problems.

We look upon our cooperation with Singapore as the gateway to larger cooperation with South East Asia, East Asia and the Asia-Pacific. I would like to thank the Government of Singapore for the consistent support they have given to us for our association as a full dialogue partner of ASEAN and a member of ARF and their efforts to include India in the recently concluded Kuala Lumpur East Asia Summit.

Ladies and Gentlemen, may I now invite you to join me in a toast:
- to the health and well being of President Nathan;
- to the happiness and prosperity of the people of Singapore and
- to the friendship between India and Singapore.

F F F F F

271. President Dr. A.P.J. Abdul Kalam’s Address and Interaction with the Students of the National University of Singapore,

Singapore, 1 February 2006.

Virtual University and Capacity Building

I am indeed delighted to address eminent scholars and students of the National University of Singapore. My greetings to the researchers, teachers and students who have come for studies from various countries including India. The National University of Singapore has grown to become the hub for higher learning for students from the ASEAN and other countries. I am particularly very happy to see the type of networking the University has with multiple industries and research institutions. With advancement in technology, the University provides vital opportunities to the youth to acquire and enhance their knowledge in emerging fields and helps to undertake research in advanced systems. I was thinking of sharing some thoughts on Virtual Universities and Capacity Building with you. Let us start with our societal transformation from an agricultural economy to a Knowledge Economy using Indias core competence of knowledge workers.
Societal transformation

Societal transformation and economic growth are interlinked. A knowledge Society enriches an Information Society through innovation. An Information Society enriches agriculture and manufacturing through value addition. The whole purpose of education in a country is to develop and enhance the potential of our human resource and progressively transform it into a Knowledge Society. The Knowledge Society will be a society producing products and services that are rich in both explicit and tacit knowledge, thus creating value added products. The real capital of this Knowledge Society will be its knowledge components. The society will be highly networked to create a knowledge intensive environment along with enabling process to efficiently create, share, use and protect knowledge. Our education system should re-align itself at the earliest to meet the needs of present day challenges and be fully geared to participate in societal transformation through innovation, which is the key to competitiveness. It should also develop a global outlook. India has many strengths. It has to reach out and make our individuals and institution capable of succeeding in a competitive world.

Dimensions of Knowledge Society

I was studying the dimensions of a Knowledge Society and how will it be different from the industrial economy. In the knowledge economy the objective of a society changes from fulfilling the basic needs of all-round development to empowerment. The education system instead of going by text book, teaching will be promoted by creative, interactive self learning, formal and informal with focus on values, merit and quality. The workers instead of being skilled or semi-skilled will be knowledgeable, self-empowered and flexibly skilled and would adapt to newer technologies seamlessly. The type of work instead of being structured and hardware driven will be less structured and software driven. Management style will emphasize more on delegation rather than giving command. Impact on environment and ecology will be strikingly less compared to the industrial economy.

Knowledge Society Components

Knowledge Society has two very important components driven by societal transformation and wealth generation. Societal transformation is on in education, healthcare, agriculture and governance. These will lead to employment generation, high productivity and rural prosperity. How do we do that?
Wealth generation is a very important task for the nation, which has to be woven around national competencies such as Information Technology, bio-technology, space technology, weather forecasting, disaster management, tele-medicine and tele-education, technologies to produce native knowledge products, service sector and Infotainment. These technologies and management structures have to work together to generate knowledge society.

Evolution of policy and administrative procedures, changes in regulatory methods, identification of partners and most importantly creation of young and dynamic leaders are the components to be in place. In order to generate wealth, which is the second component for establishing a knowledge society, it is essential that simultaneously a citizen-centric approach to evolution of business policy, user-driven technology generation and intensified industry-lab-academy linkages have also to be established in every country.

The systematic process of finding, selecting, organizing, distilling and presenting information, improves an employee’s comprehension in a specific area of interest. Knowledge management helps an organization to gain insight and understanding from its own experience. Specific knowledge management activities help focus the organization on acquiring, storing and utilizing knowledge for problem solving, dynamic learning, strategic planning and decision making. It also prevents intellectual assets from decay, adds to firm intelligence and provides increased flexibility.

**Knowledge Management**

Knowledge creation has two dimensions, one is explicit knowledge and the other one is implicit knowledge. Explicit knowledge comes from published books, written materials, proceedings, presentations etc., whereas the implicit knowledge is derived through the systematic observation and capturing of data from the tacit knowledge available among the individuals in the organization, through their approach to problem solving, bottle-neck removal, goals setting, interactions etc. We need a systematic mechanism to capture this knowledge to make the organization a truly learning organization, which makes use of existing knowledge judiciously and efficiently.

The digital library is an important component for capturing the explicit knowledge. This has to be supplemented with implicit knowledge to the digital library system, which will eventually get transformed into a knowledge management system. This may be relevant to all countries.
Capacity Building

Hence the modern economy will be knowledge and skill driven and not by established industries. There will be continuous innovation and enterprise. To realize this, special capacity needs to be built in education and nurtured among students. The capacities which are required to be built are research and enquiry, creativity and innovation, use of high technology, entrepreneurial and moral leadership.

**Research and enquiry:** The 21st century is about the management of all knowledge and information we have generated and the value addition we bring to it. We must give our students the skills with which they find a way through the sea of knowledge that we have created and continue with life long learning. Today, we have the ability, through technology, to really and truly teach ourselves to become life-long learners. This is required for sustained economic development.

**Creativity and innovation:** The management of knowledge in the 21st century is beyond the capacity of a single individual. The amount of information that we have around is overwhelming. The management of knowledge therefore must move out of the realm of the individual and shift into the realm of networked groups. Students must learn how to manage knowledge collectively. When the information is networked the power and utility of the information grows as squared as predicted by Metcalfe’s law. An information that is static does not grow. In the new digital economy information that is circulated creates innovation and contributes to national wealth.

**Capacity to use high technology:** Every student in our schools should learn to know how to use latest technologies for aiding their learning process. Universities should equip themselves with adequate computing equipment, laboratory equipments, and Internet facilities and provide an environment for students to enhance their learning ability. In the midst of all of the technological innovations and revolutions we cannot think that the role of the teachers will be diminished. In fact the teacher will become even more important and the whole world of education will become teacher assisted and would help in tele-porting the best teacher to every nook and corner of the world and propagate knowledge.

**Entrepreneurship:** The aptitude for entrepreneurship should be cultivated right from the beginning and in the university environment. We must teach our students to take calculated risks for the sake of larger gain,
but within the ethos of good business. They should also cultivate a disposition to do things right. This capacity will enable them to take up challenging tasks later.

**Moral leadership:** Moral leadership involves two aspects. First it requires the ability to have compelling and powerful dreams or visions of human betterment. Moral leadership requires a disposition to do the right thing and influence others also to do right things.

In sum, inquiry, creativity, technology, entrepreneurial and moral leadership are the five capacities required to be built through the education process. If we develop these five capacities in our students, we will produce an Autonomous Learner a self-directed, self controlled, lifelong learner who will have the capacity to both, respect authority and at the same time is capable of questioning authority, in an appropriate manner. These are the leaders who would work together as a “Self-organizing Network” and transform any nation into a prosperous nation.

**My Experiences with 3 Virtual Universities**

This interactive session with these three great Universities was really the birth of a Virtual University in India and I would like to congratulate all the three Universities for initiating this step. Now I understand all the three Universities are working together to connect among themselves through high bandwidth network thus creating Virtual University GRID. This step will enable the students of these Universities and their affiliated colleges and post-graduate departments to have a collaborative and interactive learning experience with the faculties of any of the Universities on the fly. The benefits of the Virtual University which was demonstrated for the urban regions has to reach the rural areas especially to the two hundred and thirteen affiliated colleges and sixty five post-graduate departments located in Southern Districts of the State of West Bengal.

**Research-Teaching-Research:** Any University is judged by the level and extent of the research work it accomplishes. This sets in a regenerative cycle of excellence. Experience of research leads to quality teaching and quality teaching imparted to young in turn enriches research. Research brings transformation and development and also enhances the quality of education.

Technology is the non-linear tool available to humanity, which can affect fundamental changes in the ground rules of economic competitiveness. Science is linked to technology through applications.
Technology is linked to economy and environment through manufacture of knowledge products. Economy and environment are linked to technology, which promotes prosperity. We have to use innovation to generate high value added products for becoming a global player. Your university is traditionally known for scientific research and teaching.

**ASIA Virtual University GRID**

India and Singapore may consider creating ASIA Virtual University GRID by networking the Universities from ASIA. Specific areas of research and Development to meet the national mission requirements of ASIAN Countries and also for capacity building in each country. This ASIAN Virtual University GRID will provide, the best of education to its member countries from ASIAN universities based on their core-competence, hence it will ensure the best education of ASIA will reach its member countries through universal tele-education delivery system. It will also ensure collaborative learning leading to the creation of a knowledge society in the ASIAN region. Such an ASIAN Virtual University GRID will have the following tasks:

a) Act as a hub of all Universities, related educational, and research and development centers in the ASIAN region

b) Ensure collaborative learning and live interaction among students and faculties of ASIAN universities.

c) Identify experts of national/international eminence in specialized areas and nominate colleges of eminence.

d) Coordinate, organize, schedule and broadcast lectures of specialists at a mutually convenient time to all participants.

e) Impart education based on its core competence, any student from any university will be able to get quality education at his desktop.

f) Network all Teachers Training Programmes in the Universities to empower them with research inputs from all the ASIAN universities and capacity building.

g) Record the live transmission of lectures with interaction details in a data bank for easy access by participants for review learning.

h) Digitize all University libraries and make it available for seamless access by all faculty and students of the University.

i) Universities need to become learner centric.
j) Collaborate with other Virtual Universities in India and abroad through the network.

This experiment in your University will provide a common platform for teaching in the University and its affiliated colleges and post-graduate departments in the entire region. This will give equal emphasis on theory and experiments inspite of the fact that it will be done in cyberspace. Such is the power of technology and our understanding of it. This facility would also help in expansion of telecommunication and IT services. All this would lead to synergizing the strengths of different colleges in the region by promoting quality education to all students irrespective of their location in a cost effective manner.

**Attracting students to Virtual Universities:** While it is unarguable that Virtual Universities provide us with technologies of the future and economic ways of scaling high quality education in the country, they are no substitute for campus-based education. The challenge for Virtual Universities is to provide the best of both worlds. In this process, we could plan an optimum mix of direct contact hours between students and teachers and amongst students themselves. These interactions should also be used as a platform to excite students to take to learning in the new paradigm.

In the world of Virtual Universities, equitable access to all participants is the primary goal. Unlike in the real world, equitable access is always the democratic average, in Virtual Universities equitable access always means equitable access to the best resources? be it teachers, be it the library, be it the laboratory, available across the network. In effect, the network brings out the best out of its participants to every one of its participants.

**Indian Experiences:** India is now in the process of creating virtual universities and institutions for knowledge sharing, knowledge dissemination and knowledge reuse. While it is known that Virtual Universities provide us with technologies of the future and the most economic way of scaling high quality education in the country, they are no substitute to campus based education. The challenge before Virtual Universities is to provide the best of breed of both the worlds. In this process, we could plan an optimum mix of direct contact hours between students and teachers and also amongst students themselves. These interactions should also be used as a platform to excite the students to take to learning in the new paradigm.
In the world of Virtual Universities equitable access to all its participants is the primary goal. Unlike in the real world, equitable access is always the democratic average, in Virtual Universities equitable access always means equitable access to the best resources?be it teachers, be it the library, be it the laboratory, available across the network. In effect, the network brings the best of its participants to every one of its participants. The three phases of learning are lectures, library and laboratories. They require increasing bandwidth from a few 100?s of kilobytes for lectures to a few megabytes for formal digital libraries and the informal world of knowledge from the Internet, to gigabits of connectivity for remote laboratories in the world of high precision science and engineering. As the bandwidth becomes cheaper and available in abundance, universities should be able to run remote instruments and facilities as complex as NMR to Wind tunnels. These are applications that can make a difference in how we engage in teaching, learning, and research in higher education.

**Internet2:** The world is moving towards internet2 applications. Internet2 applications require advanced networks. That is, these applications will not run across commercial Internet connections. Internet2 applications require enhanced networking functionality?such as high bandwidth, low latency (delay), or multicast?not available on our commercial Internet connections. Internet2 is about everything we do in higher education. Therefore, we encourage and support applications development in all disciplines from the sciences through arts and humanities. Whether you're in the classroom, the laboratory, the library, or the dorm, you should be able to access Internet applications that provide benefit.

This will ultimately provide equitable access to the entire education system beyond just the lectures and the lecturers. Thus the bandwidth is the demolisher of imbalances and a great leveler in the Knowledge Society. We have rich knowledge institutions but what we have to add is connectivity. This connectivity today is technologically possible but would need creation of high bandwidth reliable network infrastructure to the extent of minimum 10 Gigabits per second all through the country to provide uniform access to knowledge in different regions leading to the creation of Knowledge GRID.

**Knowledge GRID**

India has established the Knowledge GRID. ERNET in the Educational and Research Network of India connecting 1500 institutions
for internet and intra connectivity for email and other collaboration. Presently ERNET is connecting around 45 institutions across the country in a high bandwidth network with 100 mbps connectivity under the GARUDA project. GARUDA will demonstrate the applications of GRID Computing to solve many grand challenge problems. Many academic Institutions of high repute in India are partners in this national initiative. This will become a part of the proposed Knowledge GRID. GRIDs know no political or geographical borders. Their only language is ‘connect?’ and languages like C, C++ etc which every one understands, their only mission is interoperability and their only motto is the optimal utilization of compute power and knowledge and their only goal is to make available the entire compute power of the world to every one in the network. If we can connect Kashmir to Kanyakumari through the network and share resources and knowledge, it should be easy to connect India to Singapore.

**Asian e-network**

In order to support the Asian knowledge grid, it is essential to establish an Asian e-network. Asian e-network comprises of satellites beaming to all the countries of Asia and India and linked using fiber optics Broadband network and Wireless (Wi-MAX) for last mile connectivity. These satellites can be launched and maintained in geo stationary orbit by Indian space scientists. Fiber broadband network across the sea connecting the ASIAN countries has their point of presence in almost all the countries. India’s core competence in software, teleeducation delivery system, satellite launching capabilities and above all capacity building will provide a win-win partnership to this mission. This can be a collaborative venture to spread knowledge in this region and make the Asian community a knowledge power. This will become a role model for global networked education. This ASIAN e-Network may be initially established between India and Singapore, later it can be extended to other ASIAN nations. India will certainly become a partner in this mission to build capacities of students and teachers and researchers, leading to the creation of a Knowledge Society in the ASIAN region.

**Areas of R&D Cooperation**

India has top class educational institutions such as the Indian Institute of Science (IISc), the Indian Institutes of Technology (IITs) and the National Institutes of Technology (NITs). More than 300,000 scientists and engineers pass out from Indian universities every year. Universities in Singapore and
India and other Asian countries can have networked R&D cooperation based on their core competencies. Some suggested areas for cooperation, which will find solution to our perennial problems such as energy, water and environment can be floating platforms for solar farming, desalination using solar energy, Hydrogen/Fuel Cell and Bio-fuels. These joint collaborations will accelerate the developmental efforts by pooling the best of minds and research experiences.

Conclusion

India and Singapore have many things in common. Both countries are in the ascending phase of economic growth. Our youth want to live in happiness and prosperity. Progress in technology has come handy to achieve these goals. A Developed India is becoming a reality. It is time that we join together with R&D collaborations involving multiple universities, industry partnerships and exchange programmes. This combined journey would lead both our nations to their rightful place in the world arena.

Ultimately, education in its real sense is the pursuit of truth. It is an endless journey through knowledge and enlightenment. Such a journey opens up new vistas of development of humanism where there is no scope nor room for pettiness, disharmony, jealousy, hatred or enmity. It transforms a human being into a wholesome whole, a noble soul and an asset to the Universe. Universal brotherhood in its true sense becomes the sheet anchor for such education. Real education enhances the dignity of a human being and increases his or her selfrespect. If only the real sense of education could be realized by each individual, and carried forward in every field of human activity the world will be so much a better place to live in.

India and Singapore can be a partner in the journey of building capacities among teachers and students through our Virtual Universities. Education is a continuous process, empowering young citizens, thereby enriching nations and their societies. My best wishes to the members of the Singapore National University for success in all their missions.
Evolution of Enlightened Societies

I am indeed delighted to participate in the Singapore Lecture organized by the Institute of Southeast Asian Studies. My greetings to the Members of the institute and distinguished personalities of Singapore from Industry, Educational and Research Institutions, Political Visionaries and eminent members from various fora. I also convey the greetings and wishes of one billion people from the largest democracy in the world. Our great countries have long standing traditional ties for centuries in trade, commerce and mutual knowledge sharing and transfer. Knowledge and skills empower individuals, institutions, companies thereby empowering the society and the nation at large. Both the countries are now marching towards a strong economy in our region. In this forum, I would like to share my thoughts on the topic “Evolution of Enlightened Societies”.

Law of Development

I was studying the development patterns and the dynamics of connectivity between nations, especially in trade and business. As you all know the world has a few developed countries and many developing countries. What is the dynamics between them and what connects them? Developed countries have to market their products in a competitive to other countries to remain as a developed country. The developing countries too have to market their products to other countries in a competitive way to get transformed into a developed country. Competitiveness is the common driving factor between the two types of nations. Competitiveness has three dimensions: quality of the product, cost effectiveness and availability of the product just-in-time in the market. Indeed, this dynamics of competitiveness in marketing of products by developing and developed countries is the “Law of Development”. There is a relationship between the core competence and the competitiveness of the country.

Profile of a Globally Competitive nation

Global competitiveness for any nation is indeed a big challenge. For achieving such a competitive edge for a nation, it is essential to have a vision. I would like to share with you my visualization of such a nation.
1. A Nation where the rural and urban divide has reduced from a separating line to a permeable membrane.

2. A Nation where there is an equitable distribution and access to energy and quality water besides livelihood and social security.

3. A Nation where agriculture, industry and service sectors work together in harmony in the common technology domain resulting in sustained wealth generation and leading to greater high value employment opportunities.

4. A Nation where education is not denied to any meritorious candidate because of societal or economic discrimination or because of constraints of rules.

5. A Nation which is the best destination for the most talented scholars, scientists, and investors from all over the world.

6. A Nation where the best of health care is available to the entire population and the communicable diseases like AIDS/TB, water and vector borne diseases and also the life style diseases such as cardiac diseases, cancer and diabetes are not allowed to become epidemics.

7. A Nation where the governance uses the ICT to be responsive, transparent, fully connected in a high bandwidth e-governance grid, easily accessible and also simple in rules, thereby corruption free.

8. A Nation where poverty has been totally eradicated, illiteracy removed and crimes against women are absent and none in the society feels alienated or left out.

9. A Nation that is secure, peaceful and happy and continues with a sustainable growth path.

10. A Nation that is one of the best places to live in, on the earth and brings smiles on the faces of its people. “When the mind is without fear and the head is held high,” as said by Rabindranath Tagore.

How the nations can realize the specified goals, I will give an example for our nation. Since India has a population of billion people, it represents 1/6th of the population of our planet. The ideas I am going to present may also be relevant and applicable to many developing and even developed countries, which are aiming to shape their growth and nurturing their development in an environment of peace and harmony with other nations. Many countries are joining as partners in the process of the development.
India’s National Missions - The Challenges

India’s current population is over one billion people. We are going through a major challenge of uplifting of 260 million people who live below the poverty line and also to give better life for many millions who are on the border line of poverty or just above the poverty line. They need a decent habitat, they need work with reasonable income, they need food, they need speedy access to health care, and they need education and finally they need a good life and hope for a better future. Our GDP is growing at more than 7% per annum on an average. Whereas, the economists suggest that to uplift the people below the poverty line, our economy has to grow at the rate of 10% per annum consistently, for over a decade.

Integrated action

To meet the need of one billion people, we have the mission of transforming India into a developed nation. We have identified five areas where India has a core competence for integrated action: (1) Agriculture and food processing (2) Education and Healthcare (3) Infrastructure Development (4) Information and Communication Technology (5) Self reliance in critical technologies. These five areas are closely inter-related and if properly implemented, will lead to food, economic and national security of our country. In each of these areas, there is wealth of opportunities awaiting nations who would like to work together for mutual benefits in a win-win situation. Each of these missions comprises many projects, investments, innovations, marketing and therefore many partnerships are possible.

Engines for Growth

Emphasis would be on full utilization of natural and human resources of the nation to meet the demands of the modern society. We should also remember that about 50% of our population are young people with aspirations for better living. Value addition in Agriculture, Manufacturing and Service sectors, building the national core competence and technologies will lead to additional high-income employment potential. The engines for growth will be accelerated by launching of the five national missions, which are common to all of us wherever we are on planet earth. The synergy of these five missions will enable India to achieve 10% GDP growth rate per annum. It is possible to do so with ecological and economic sustainability. It is not the mission of governments alone. It is the collective effort of big and small businesses, science and technology and academic institutions, foreign investors, and many others who have confidence about
India. With these aspects in view, we have already laid down the road map. This roadmap has been converted into various missions allowing a greater role for private enterprise and local initiatives. Now I would like to discuss the economic growth and societal transformation.

**Ambience in India**

In the Indian history, very rarely our nation has come across a situation where at the same time there has been an ascending economic trajectory, continuously rising foreign exchange reserve, reduced rate of inflation, global recognition of the technological competence, energy of 540 million youth, umbilical connectivities of 20 million people of Indian origin in various parts of the planet, and the interest shown by many developed countries to invest in our engineers and scientists including setting up of new R&D centers. The distinction between the public and the private sectors and the illusory primacy of one over the other is fading out. India, as the largest democracy in the world has a reputation for its democracy and for providing participative leadership for the one billion people with multi-cultural, multi-language and multi-religious backgrounds.

Our technological competence and value systems with civilization heritage are highly respected. Also, FIIs (Foreign Institutional Investors) find investing in India attractive. Indians are also investing in foreign countries and open new business ventures. As per the report titled ?From the Ganges to the Thames?, the Indian Foreign Direct Investment in British capital is second only to that of the US and Indian FDI projects in Europe has increased from just 5 to 119 billion dollars during the period 1997 to 2004. The Indian Government is committed to economic reforms and development by ensuring growth rate of 7% to 8% annually, enhancing the welfare of the farmers and workers and unleashing the creativity of the entrepreneurs, business persons, scientists, engineers and other productive forces of the society. We have moved from a largely agriculture society to a focused knowledge society. Enabling environment has been created by the government through various programmes like Bharat Nirman programme with the investments to the tune of $ 35 Billion for the period of 4 years, with rural development as focus.

**Evolution of enriched societies**

A national society captures the main occupation of its people. History of mankind records multiple societies in every nation starting from agricultural society, industrial society, and information society leading to knowledge society. During the 20th century, societies underwent a change
from the agricultural society, where manual labour was the critical factor to the industrial society, where the management of technology, capital, and labour provided the competitive advantage. The information era was born in the last decade. Networking within the country and with the other nations and the software products drove the economies. Some of the nations including India utilized this opportunity. In this decade we are just entering into knowledge society era.

The uniqueness of knowledge society is enriching the information society with innovation and value addition of products. The knowledge also enables value addition to the other three societies. In knowledge society, knowledge is the primary production resource instead of capital or labour. In India, I chaired a task team constituted by the Government of India sometime back for evolving a road map for transforming the Indian society into a knowledge society. I would like to discuss with you how we could work together to make our societies enriched by knowledge and transforming them into knowledge society.

Knowledge can create a comprehensive wealth for the nation and also improve the quality of life, in the form of better health, education, infrastructure, and other societal needs. The ability to create and maintain a knowledge society infrastructure, develop the knowledge workers, and enhance their productivity through the creation, growth, and utilization of new knowledge, will be the key factor in deciding the prosperity of this knowledge society. Whether or not a nation has developed into a knowledge society is judged by the way, it creates and deploys knowledge and skills in the sectors like ICT, Manufacturing, Agriculture, Healthcare and many other services.

**Changing Patterns of Society**

When the world was moving from the industrial to information and knowledge era, we witnessed a changing pattern in the sectoral share of GDP and the number of people employed in each sector. The sectoral share of Gross Domestic Product (GDP) percentage has undergone a considerable change. Contribution of agriculture to India’s GDP has reduced from 39% to 22% during the period 1979 to 2004. During the same period contribution of manufacturing sector has moved from 24% to 27% and whereas the contribution from the services sector has increased from 37% to 51%. There has been considerable change in the employment pattern also. The percentage of people employed in agriculture has come down from 64% to 54%. Simultaneously, the percentage of people
employed in manufacturing has gone up from 15% to 19% and in the service sector from 20% to 27%. This trend has to continue and by 2020 our employment pattern should aim at 44% in agriculture, 21% in manufacturing and 35% in service sectors. The displacement of 10% people from agriculture sector has to be facilitated through skill enabling for undertaking value added tasks in the rural enterprises so that migration to urban area is reduced. Instead of the person from the rural areas going to urban towns in search of jobs in manufacturing and services sectors, PURA (Providing Urban Amenities in Rural Areas) facilitates creation of employment in the rural areas itself. PURA achieves this by providing physical, electronic and knowledge connectivities to a cluster of villages thereby leading to their economic connectivity and prosperity. Knowledge creation and knowledge utilization is the key to the success of a PURA programme. PURA programme can generate many business opportunities. This model is applicable to many countries.

**Developmental Model : Providing Urban Amenities in Rural Areas (PURA)**

The number of PURA units required in India is estimated to be 7000. This envisages integrated connectivities to bring prosperity to rural India. These are - physical connectivity of the village clusters through quality roads and transport; electronic connectivity through telecommunication with high bandwidth fiber optic cables reaching the rural areas from urban cities and through Internet kiosks; and knowledge connectivity through education, vocational training for farmers, artisans and craftsmen and entrepreneurship programmes. These three connectivities will lead to economic connectivity through starting of enterprises with the help of banks, micro credits and marketing of the products.

The PURA is required to be run by enlightened citizens and people capable of giving moral as well as business leadership. Sustainability with humaneness are built in the business plan itself. This is where the concept of spiritual connectivity is seen as the foundation, which builds all the other four connectivities.

Each PURA cluster will connect about 20 villages depending upon the region and population and will cost about approximately $ US 20 million. After initial short-term employment during construction etc., we have to plan for initiating actions for providing regular employment and self employment opportunities in nationally competitive small enterprises in agro processing, manufacturing and services sectors for about 3000 people. If
the industrial/business parks are marketed well, they can generate employment opportunities in support sector for about 10,000 people in that cluster. This will provide sustainable economy for the rural sector. In this national mission, bankers can promote entrepreneurship in the rural areas. This will lead to the removal of urban-rural divide. This experience can become a universal model.

**PURA as an Enterprise**

A large number of banks have entrepreneurial development programmes. Banks have also been funding Small Scale Industries of different types in various regions. The small-scale entrepreneur is a promising candidate for becoming the chief executive for managing the PURA complexes in an integrated way. PURA enterprises can also undertake management of schools, health care units, vocational training centers, chilling plants, silos and building a market, banking system and the regional business or industrial units. A new mission mode management style has to emerge for PURA enterprises. It should not be looking for protective legislations to support them. Rather they should be efficient to compete with others. This new PURA enterprise needs partnership from the bank, from the Government and also from the private entrepreneurs. Banks can train the entrepreneur for managing the PURA in their training centers and also provide them loans for creating and running PURAs as a business proposition.

**International technology Partnership**

Here I would like to share two experiences of international technology partnership:

a. **Brahmos**: A Super Sonic cruise missile - a Joint Venture between India and Russia

b. **Pan African e-Network**: Connectivity solution between India and 53 Pan African countries for providing tele-education, tele-medicine and e-Governance services.

**An International Joint Venture - BRAHMOS**: In order to achieve global competitiveness, the product must be world class with high quality, cost effective and must be available in time within the shelf life of the product. I would like to share a unique experience of design, development, production and marketing of a missile system - BRAHMOS, an Indo-Russian joint venture. What we have achieved through this venture is the development
and realization of a world-class product using the synergy of technological competence and consortium of industries of partner countries. In addition, the product being internationally competitive, it is able to service a large market with availability in time and state of the art performance at reduced cost per unit. This will put India, a global defence exporter. Moreover, with minimum incremental investment the product has been developed and led to production and induction, at a relatively short time frame, well ahead of prescribed schedule. This has enabled early entry of the product into the world market well before any competitor could emerge.

I would like India and Singapore to jointly emulate this example and design and develop products for civilian application both in the national and international markets. At this stage, this is very important because the middle-class population in India is on the growth path and it will reach nearly 400 million within next three years. This will lead to a win-win situation for both countries and enable availability of products at a low cost for the customer countries leading to nations’ wealth generation. Let me now talk to you on the Pan African e-Network.

**Pan African e-Network:** I would like to recall my address to the Pan African Parliament on 16 Sept 2004, at Johannesburg, South African which was attended by Heads of 53 member countries of the African Union. There, I announced the willingness of Government of India to provide seamless and integrated satellite, fiber optics and wireless network connecting all 53 African countries. This will provide three Connectivities: (i) Heads of the State Network for egovernance (ii) Tele-education network for higher education, skill enhancement and capacity building and (iii) Tele-medicine for providing health care and super specialty medi-care. Government of India has already commenced the project in partnership with African Union and it will be completed by early 2007.

**Global Human Resources Cadre**

At present India has five hundred and forty million youth under the age of 25. The number of youth will be continuously growing till the year 2050. In the 21st century, India has embarked on a mission to empower the talented youth with higher education for the task of knowledge acquisition, knowledge imparting, knowledge creation and knowledge sharing. Keeping this in mind, our Universities and educational systems will be creating two cadres of personnel: (1) a global cadre of skilled youth with specific knowledge of special skills (2) another global cadre of youth with higher education. These two cadres will be utilized not only for powering
the manufacturing and services sector of India but also will be made available for fulfilling the human resource requirements of various countries. Our Universities are working towards increasing the output of the higher education system from the existing 6% to 20% by the year 2015, 30% by the year 2020 and 50% by the year 2040. The others who are not covered by the higher education system will all have skill sets in areas such as construction, carpentry, electrical systems, repair of mechanical systems, fashion design, para-legal, para-medical, accountancy, sales and marketing, software and hardware maintenance and service, software quality assurance personals etc. Each Indian youth will be with either a quality higher education or with demanding skills sets relevant to the present technological environment. This is the mission for all our educational institutions. India and Singapore can definitely be partners in this mission.

Friends, so far I have discussed about the international technological partnership and the development of Global human resource cadre. With this core competence, I would like to share with you a thought process on the evolution of “World Knowledge Platform”.

World Knowledge Platform

I am visiting Singapore, Philippines and Korea. All the three nations along with India can have a common vision to use Knowledge as a vehicle to propel them to become leading economies of the world. In the knowledge economy, networking between partners boosts the power of all participating partners. Robert Metcalf’s law states that the “value” or “power” of a network increases in proportion to the square of the number of nodes on the network. In other words, if the four nations? India, Singapore, Philippines and Korea, join to work as networked knowledge partners, our combined strength will not be just that of 4 Nations but it would be four squared (42), or 16. This is because knowledge multiplies when added. Hence, as part of the vision of our four nations becoming leading economies of the new world order, I propose the first mission to create a ?World Knowledge Platform? comprising of the 4 nations - India, Singapore, Philippines and Korea. The purpose of this platform is to facilitate knowledge creation, knowledge dissemination; knowledge sharing and knowledge reuse leading to coordinated design and delivery of complex systems in the knowledge domain. These systems would be directed towards those that improve the quality of life of our people and at the same time would reach the world market and improve our nations? wealth. In short, the Knowledge Platform would be launch pad for many innovations that are waiting to be unearthed only by the combined power of all the 4 nations. In essence, the World
Knowledge Platform is indeed an integrated capability of multiple core competence of partner countries.

Initially, the mission is to connect and network the R&D Institutions, Universities and Industries using fiber broadband from the 4 nations on a selected R&D Missions. The underground fiber cable infrastructure already exists between all the four partners. It is only waiting to be lighted up with state-of-the-art optical networks and to ignite the minds of the knowledge workers. This knowledge GRID will support multitude of seamless connections supporting both synchronous and asynchronous communication, carrying either text, or audio or video. We can then use this network in the academic environments to teach courses online and share expensive equipments remotely. In the Industrial environment, it can be used to design complex systems - even ones that are as complex as an aircraft in a collaborative way using virtual prototyping concepts in the cyber space.

Today, in any multinational company, it is common to see that many of the team members come from very different countries and cultures. For any one to be productive and competitive in such an environment and work with no clash of feelings, it is important that we all should understand each others culture thoroughly and learn to respect them. I am also of the firm opinion that when culture is embedded into our Knowledge Platform, all our productivity would enhance considerably. I propose that we should allocate adequate bandwidth in the Knowledge network for us to share and cherish each others culture - be it used as heritage learning, be it history or be it entertainment.

One possible use of this knowledge platform is to create a Digital Library of our heritage collections of manuscripts, folk lore, songs, movies and even pictures.

The future of scientific inquisitiveness would be based on the border areas between science and engineering - like we saw the birth of bio-informatics due to the convergence of biology and IT. Now the world is witnessing a great excitement in the impending convergence of Nano science and technology, Biotechnology and Information and Communication Technology. A concerted research and development in these areas would require high bandwidth connectivity such as the one proposed in the Knowledge GRID. This will then facilitate the design, development and production of knowledge products for international markets. The convergence of bio, Nano and ICT is expected to touch every
area of concern to the humanity. The World Knowledge platform will take up the missions, in some of the areas given below, which are of utmost urgency to all of us to make our world a safe, sustainable and peaceful and prosperous world:

1. Energy storage, production and conversion
2. Enhancing agricultural productivity
3. Water treatment
4. Disease diagnosis and screening
5. Drug delivery system
6. Food preservation and storage
7. Air pollution control and ventilation
8. Construction
9. Health Monitoring
10. Vector / pest destruction and control
11. Hardware, Software and Networking Products? design, development and production
12. Automobile Hardware, embedded software integration
13. Gene Characterization, Stem Cell research and molecule to drug towards the diagnostic and treatment of the diseases like Cancer and Diabetics

In addition to the areas mentioned above, areas such as electronics, ICT and Automobile Sector may also be focused especially in the areas of design, development leading to productionization for meeting the market demands of the respective countries and also for world market. The core competence of India is software and the core competencies of the other partner nations are hardware and software, it can lead to design, development and marketing of world class systems that is equally dominated by the software intelligence and hardware innovation. For example, initially the following specific missions may be identified:

1. **Tablet PC**
   Joint design, development and manufacture of a handheld tablet
PC with multilingual capability in a cost effective manner with open source operating system and software configured for the school students and the common citizen who wishes to benefit from our E-Governance initiatives to meet the requirements of Asia pacific and African countries. This PC will have the wireless connectivity so that it can take care of the communication needs and possibly even the Telephone and will have sufficient video capability to act as an entertainment platform and for tele-education and telemedicine and even a hand writing recognizer that will also permit authentication for secure e-business transactions. The challenging task will be to configure, develop and produce and market the tablet PC at a cost of $100 to $150, so that student, teacher to researchers will be in a position to utilize it.

2. Embedded electronics Systems

Design and development of embedded systems integrated with hardware, software, network in automobile sector, consumer electronics, aerospace systems, defence systems and precision manufacturing

3. Knowledge products for Societal Transformation

Design, development and customization of knowledge products in the field of Tele-education, Tele-medicine and e-Governance for Global business opportunities among the nations.

We may form initially an Asian consortium for the vertical missions of the World Knowledge Platform in the above mentioned areas with the public, private partnership. These missions with the India and Singapore Comprehensive economic cooperation agreement will have to be carried out using the Knowledge Technology Platform.

Economic Cooperation with Singapore: The comprehensive economic cooperation agreement signed between India and Singapore in 2005 has facilitated trade and investments for increased business opportunities in both of our countries. The bilateral trade, which is 7 billion dollar presently, is expected to reach 15 billion dollars for Singapore and 30 billion dollars with the whole of ASEAN countries. This economic cooperation will facilitate industries from both countries to come closer forming joint ventures and strategic alliances for capturing sizeable global market share.

I understand that there are many Indian Industries who already have windows of interaction as well as physical presence in Singapore. Singapore
on its part also has a very strong presence in India. There is the eagerness from both the Governments to cooperate and collaborate. We should ensure that the complimentary strengths of both the nations and their industrial base should be used to serve not only the local needs but also the needs of the entire world, atleast in a few chosen areas. The brand India and the brand Singapore must cohesively join to create an enviable brand Indo-Singapore. I think the entrepreneurs from Asian countries must work towards creating jointly owned and operated enterprises that have a global brand come out of the 'World Knowledge Platform'. It is such an innovative and adventurous partnership, which we need to create through this World Knowledge Platform. Here all are equal partners. We will be open to others who share the same objectives and values. India will be pleased to begin the process if all of you are interested.

**Conclusion**

Let us think together, what are the types of enriched partnerships possible between Asian nations based on my presentation. Three distinct areas can be identified which can increase the prosperity of the people of Singapore and India. They are, (i) Transforming the nation towards Knowledge society with innovation as the thrust area influencing the information society, industrial society and agricultural society. (ii) As I have indicated in my presentation, 540 million youth below 25 years is an important asset of India. This resource will have two components. One at the university level and another with secondary education supplemented by high quality vocational skill. Knowledge workers will come out of this Global Human Resource Cadre. Definitely, Singapore can participate in the evolution of this cadre. (iii) Evolution of 'World Knowledge Platform' which will empower the partner nations with the collective core competence as a base.

For success in all the missions, which we have discussed so far, we need creative leaders. Creative leadership means exercising the vision to change the traditional role from the commander to the coach, manager to mentor, from director to delegator and from one who demands respect to one who facilitates self-respect. I am sure creative leadership spearheads all the institutions and the future aspiring institutions. For a prosperous and developed nation, the important thrust will be on the growth in the number of creative leaders and innovative organizations that can create wealth through dedicated management system.

Such leaders in our countries will facilitate global competitiveness to both our nations and help in creation of knowledge societies on our
Planet. Particularly the mission of creative leaders will be the evolution of enlightened societies through the “World Knowledge Platform”.

Wish you all the best.

FF FFF

273. Address by Dr. A.P.J Abdul Kalam at Nanyang Technological University (NTU)

Singapore, February 2, 2006

TECHNOLOGY CONVERGENCE AND NATIONAL DEVELOPMENT

I am indeed delighted to address the eminent scholars and students of the Nanyang Technological University (NTU). My greetings to the professors, teachers and students of this great university. The Nanyang Technological University has grown to become a high technology institute with advanced research programmes. When I see your technological performance, I admire you for your sustained excellence in the last few decades, shaping the standards of world class technologies and making not only Singapore but whole Asia proud. When I see the vibrant technologists I thought of discussing with you on a very important development of Technology Convergence and National Development.

Technology Evolution

Throughout the last 120 centuries of mankind inhabiting this planet, unique cultures have come into existence due to advancement in technology. The first 118 centuries had a dominance of primarily stone, bronze & iron ages. The last two centuries have seen rapid development of chemical age. The advancements made in material science and technology gave the impetus for both nuclear and biological age to flourish. Succession of these technology periods has involved progression from simpler materials to more complex forms of science and engineering. We are today at the convergence of Nano, Bio and Information technologies. This age, I feel will create historical revolution and the nation like ours particularly a technological and academic institution have to launch a research and teaching programme on the convergence of technologies, that will have a tremendous societal impact.
Scientific Scene in Pre-independent India

In India, science and technology took a two-phase progress with high scientific momentum created in 1930s, by the great scientists of international repute. They gave the country the confidence. We remember the pioneering contributions to science made by Chandrasekhar Subramaniam for his Chandrasekhar limit and black hole, Sir CV Raman for his discovery of the ‘Raman effect’, Srinivasa Ramanujan for his contributions towards number theory, JC Bose in the area of microwaves, SN Bose, famous for Bose-Einstein statistics and Meghnad Saha for ‘Thermo-Ionization Equation’. This phase, I consider the glorious phase of Indian science. The scientific foundation laid by them triggered the later generations. The unique similarity between all these scientists is that they had dedicated their entire life for the cause of scientific research and the spirit of inquiry for the fields that they have chosen amidst all the hurdles and problems in their life. Science always gives lifetime missions to the scientists, and then only success comes. It is a question of dedication, commitment and understanding and also the environment for research in science, which gives birth to the scientists for the nation. They inspired many later generation scientists including GN Ramachandran, the originator of triple-helix.

Let me now discuss on how India had built the S&T base and drew the road map leading to national development using science and technology particularly in the field of defence, space and atomic energy in the post independent era. The science and technology had also fed critical inputs to reaching self-sufficiency in food through the Green Revolution and milk production through the White revolution.

The post-independence phase of Indian science and technology

In history, any country revolves itself initially around a few stout and earnest knowledge giants. Particularly I took interest to study the lives of three scientists, as I was interested in their scientific technological leadership qualities that focused the relationship of S&T and development of the nation. In the history of India, there may be many, but I was very close to these three great personalities for one reason or the other. They are founders of three great institutions. I worked in two of the institutions directly and one in partnership. Dr DS Kothari, a Professor in Delhi University was an outstanding Physicist and also an Astrophysicist. He is well known for ionization of matter by pressure in cold compact objects like planets. This theory is complementary to thermal ionization work done by Dr Meghnad Saha his
guru. Dr DS Kothari set a scientific tradition in Indian defence tasks when he became Scientific Adviser to Defence Minister in 1948; He created a Board of Advisors to the Scientific Advisor consisting of Dr. H.J. Bhaba, Dr. K.S. Krishnan and Dr. S.S. Bhatnagar. Later the Board was renamed as Scientific Advisory Board with enlarged membership.

He established the Defence Science Centre to do research in electronic material, nuclear medicine and ballistic science. He is considered as the architect of defence science in India. His race continued and followed up with momentum working and contributing in the areas of strategic systems, electronic warfare systems, armaments and life sciences.

**Pioneer in Indian Nuclear science**

Now, let me discuss about Homi Jehangir Bhabha. He did research in theoretical physics in Cambridge University. During 1930-1939, Homi Bhabha carried out research relating to cosmic radiation. In 1939, he joined Sir CV Raman in IISc Bangalore. Later, he was asked to start the Tata Institute of Fundamental Research with focus on nuclear science, mathematical science and established Atomic Energy Commission in 1948. Multi centers were born with his vision in nuclear science to nuclear technology, nuclear power, nuclear devices and nuclear medicine. These science institutions established multi technological centers with basic science as a vital component.

**Indian Space Visionary**

Prof Vikram Sarabhai, the youngest of the three, worked with Sir CV Raman in experimental cosmic ray research. Prof Sarabhai established Physical Research Laboratory (PRL) Ahmedabad with Space research as focus. PRL was the cradle of Indian Space Programme. Prof Vikram Sarabhai unfurled the space mission for India in 1970 that we should build Satellite Launch Vehicle capability, to put our communication satellites in the geo-synchronous orbit and remote sensing satellites in the polar orbit. Also, he envisaged that launch vehicles built in India should be launched from Indian soil. This one visionary thought led to intensive research and development in multiple fields of science and space technology. Many of us had the fortune to be part of Prof. Vikram Sarabhai’s vision. My team and myself participated in India’s first satellite launch vehicle programme to put the satellite in the orbit. Today, India with her 20,000 scientific, technological and support staff in multiple space research centres, supported by about 300 industries and academic institutions, has the capability to build any type of satellite launch vehicle to place remote
sensing, communication and meteorology satellites in different orbits and space application has become part of our daily life.

**Aerospace Technology Strength**

Due to various aerospace programmes, multiple state-of-the-art technologies got developed. Computational Fluid Dynamics (CFD) emerged as core strength for India with advanced software codes and super computing capability to optimize configurations for guided missiles, LCA and launch vehicles. CAD/CAM has become the order of the day for Aerospace systems and virtual reality systems have been developed which reduces the design and product realization time by as much as 40%. India has developed fibre optic and ring laser gyros with better accuracies, micro processors, microwave components and devices, phase shifters, onboard computers and foundries for making VLSI and MMIC components have also been set up thus making India self reliant. In the area of propulsion, ISRO’s large solid propulsion booster giving 500 tonnes of thrust, liquid propulsion in DRDO and ISRO, and the development effort of Cryogenic engine has enabled establishment of a sound base in propulsion technology.

**Convergence of Technologies**

The information technology and communication technology have already converged leading to Information and Communication Technology (ICT). Information Technology combined with bio-technology has led to bio-informatics. Now, Nano-technology is knocking at our doors. It is the field of the future that will replace microelectronics and many fields with tremendous application potential in the areas of medicine, electronics and material science. When Nano technology and ICT meet, integrated silicon electronics, photonics are born and it can be said that material convergence will happen. With material convergence and biotechnology linked, a new science called Intelligent Bioscience will be born which would lead to a disease free, happy and more intelligent human habitat with longevity and high human capabilities. Convergence of bio-nano-info technologies can lead to the development of nano robots. Nano robots when they are injected into a patient, my expert friends say, it will diagnose and deliver the treatment exclusively in the affected area and then the nano-robot gets digested as it is a DNA based product.

Convergence of ICT, aerospace and Nano technologies will emerge and revolutionize the aerospace industry. This technological convergence will enable building of cost effective low weight, high payload, and highly
reliable aerospace systems which can be used for interplanetary transportation.

**Bioinformatics:** The convergence of bioscience and IT into Bioinformatics has given the thrust to researchers for genomics-based drug discovery and development. Pressure is mounting over the pharmaceutical companies to reduce or at least control costs, and have a growing need for new informatics tools to help manage the influx of data from genomics, and turn that data into tomorrow’s drugs.

Bioinformatics data play a vital role and emerging as a business model for the medical and pharmaceutical sector. Key areas such as gene prediction, data mining, protein structure modeling and prediction, protein folding and stability, macromolecular assembly and modeling of complex biological systems are thriving and IT has major role to play in these areas in bringing the tools to manage the high throughput experiments and the data they generate, and sharing and integrating all the data in a meaningful way resulting into the detailed models of complex systems, particularly biological pathways.

**BioSuite:** When I visited Hyderabad on 14th July 2004, I launched the Bio-Suite which is an important software package that caters to all aspects of computational biology from genomics to structure-based drug design. It incorporates the latest publicly known algorithms, as chosen by a panel of academic partners, and has been coded entirely by the Tata Consultancy Services (TCS) team, using the software engineering practices. It can be used by academic and R&D institutions, small/medium and large biotechnology companies. This bio-suite was developed by TCS in collaboration with Council for Scientific and Industrial Research (CSIR) and academic institutions, for cost effective drug development in India.

**Gene Chip:** In 2004, I visited Dr. Cherian’s Medical Centre at Chennai. It is known as,

International Centre for Biomedical Sciences and Technology (Research & Applications). There I interacted with Dr. Emmanuel, who is working in the area of Gene Chip. They have developed a Gene Chip which can be used for finding the existence of genetic diseases including coronary artery diseases or neuro defect in the baby during a certain stage of pregnancy itself. The chip could also be modified to suggest to the patient’s system to develop those chemicals which in turn will help the patient recover from the present situation. The specialists assembled here
may like to debate whether gene chip can be used for identifying the susceptibility of the baby to the allergic diseases in the advanced stage of pregnancy. Can medical bio-informatics help in finding a treatment regime for the mother which may give immunity to the child from the allergic disease.

It is reported that gene differences between humans and most animals are very nominal. More than 90% of our DNA is similar. This property is a boon to researchers since animal models can be subsequently used for curing human diseases based on trial data. Medical researchers are progressing further in this area for finding the application of Gene Chip as a diagnostic tool and as a treatment regime for allergic diseases and asthma.

India can work with R&D labs in Singapore for maximizing the application of medical bioinformatics for diagnostics and determination of treatment regime.

**Nano Technology:** When I think of Nanoscience and Nanotechnology, I would like to discuss about three scientists who have laid the foundation on nanoscience and nanotechnology. Mr. Richard Feynman, who described the concept of ‘building machines” atom by atom in his talk at Caltech titled “There is plenty of room at the bottom”. Mr. Eric Drexler, who wrote the book titled ‘Nano Systems, Molecular machinery, manufacturing and computation”. Prof CNR Rao, who pioneered and fostered the nanoscience research in India. Molecular nano technology has enormous potential for future aerospace systems and health areas. Research has shown that newly discovered class of molecules, leading to the development of carbon nano tubes that they have multiple applications in the system developed in the areas of electronics particularly nano-electronics and power systems. Carbon nano tubes are normal form of carbon with remarkable electrical and mechanical properties. It is hoped that such materials could revolutionize electronic design and open the space frontier by radically lowering the cost of launch to orbit.

Carbon Nano tubes reinforced with polymer matrix will result in composites which are super strong, light weight, small and intelligent structures in the field of material science. This has tremendous aerospace applications.

Molecular switches and circuits along with nano cell will pave the way for the next generation computers. Ultra dense computer memory coupled with excellent electrical performance will result in low power, low cost, nano size and yet faster assemblies.
Energy for future generations: The era of wood and bio-mass is almost nearing its end.

The age of oil and natural gas would soon be over even within the next few decades. The world energy forum has predicted that fossil based oil, coal and gas reserves will last for another 5 - 10 decades only.

Hydrogen fuel and solar rays are the two modes to get clean power. The solar rays, when passed through presently available solar photovoltaic cells has an efficiency of less than 20%. I would like to discuss the latest research in the area of photo-voltaic cells using Carbon nano tubes which can give an efficiency of over 45%.

CNT based solar cells for higher efficiency

Conventional photovoltaic cells based on amorphous silicon has quantum efficiency of less than 20%. This low efficiency has restricted the use of solar cells for large application for power generation. Research has shown that the Galium Arsenide (GaAs) based PV cell with multi junction device could give maximum efficiency of 30%. Therefore, the present research trend is on the use of Carbon Nano Tube (CNT) based PV cell. Both single wall CNTs and multi wall CNTs have been used as electrodes, as electron acceptor which can split exciton into electrons and holes to produce electricity.

The CNTs provide better electron ballistic transport property along its axis with high current density capacity on the surface of the solar cell without much loss. Higher electrical conductivity and mechanical strength of CNT could improve the quantum efficiency to the order of 35%. But, this is not sufficient. But recently Scientists have established the fact that the alignment of the CNT with the polymer composites substrate is the key issue and this aligned CNT based PV cells would give very high efficiency in photovoltaic conversion. The polymer composites increase contact area for better charge transfer and energy conversion. In this process, the researchers could achieve the efficiency of about 50% at the laboratory scale. The optimum efficiency was achieved with the aligned CNTs with poly 3 – octyl thiophene (P3OT) based PV cell. P3OT has improved the property due to polymer – nano tubes junctions within the polymer matrix. High electric field within the nano tube splits the exciton to electrons and holes, and enables faster electron transfer with improved quantum efficiency of more than 50%. I am sure, scientific researchers in Nanyang Technological University will be excited to work in this area of
research in partnership with industries so that we can get large scale production of aligned CNTs with P3OT based high energy solar cells.

**Water for future generations:** More than 70% of earth surface is having water; but only one percent is available as fresh water for drinking purposes. By the year 2030 when the world population touches eight billion, as many as seven billion will be living under conditions moderate, high and extreme water scarcity. Space and Nano technology can provide solution for using effectively the solar energy for desalination of sea water employing CNT based membranes through reverse osmosis process.

**Emerging Aerospace Technologies**

Emerging technologies such as MEMS, Nano, Information technology, biotechnology, space research, Hypersonics and High power lasers and microwave will be dominating the future in every field and applications. The advancements in material science and technology will give a major thrust to the realization of advanced aerospace systems. As we have already discussed about the convergence of Nano, Bio and Information technologies, that will also lead to new generation aero space devices and products.

**MEMS & Nanotechnology:** The advances in the fields of microelectromechanical systems (MEMS) and nanotechnology have paved the way to the evolution in the ability to manufacture smaller and smarter products. MEMS bring together microelectronics with micromachining technology, allowing unprecedented levels of functionality and reliability to be placed on a small silicon chip. Nanotechnology, on the other hand, is the science of assembling atoms and molecules that respond to stimuli, with dimensions on the order of a nanometer (one in billion of a meter).

**MEMS Devices for aerospace application:** Micro Electro Mechanical Systems (MEMS) technology is having a profound impact in the aerospace field with the miniaturization of electronics. These tiny machines, often only a few micrometers in size, are already replacing conventional larger equipment. Given their microscopic size and weight, MEMS can use higher frequency and bandwidths and can be slipped into tighter and even more environmentally stressed locations. Once in production, unit prices are lower; once in operation, power consumption is negligible. Examples of which are pressure sensors, fluid flow sensors, magnetic sensors, gyros, accelerometers and more. MEMS is also expected to play a significant role in dramatically reducing the cost of space
exploration with substantial savings in weight and increased reliability and functionality. MEMS could lead to the development of extremely low cost micro satellites.

The Future Challenges

1. Reproducible mass production (kg levels) of identical high quality CNT.
3. Solution to Cancer, Parkinson and AIDS diseases: through biosensors, devices and drug delivery systems.

Technology to Society – Societal Grid

Such development of technologies and their convergence have significant influence on the society in terms of knowledge, health care, governance and economic development. To maximize the synergy between the various components of education, healthcare, egovernance, rural development we need to establish connectivities among them. These connectivities will certainly bring seamless access and information flow among the various domains leading to maximization of GDP and productivity; hence, there is need for establishing the GRIDs namely Knowledge grid, healthcare grid, e-governance grid and the PURA (Providing Urban Amenities in Rural Areas) knowledge grid. This interconnecting grid will be known as societal grid. Knowledge sharing, knowledge utilization and knowledge re-use is very vital by all constituents of the society for promoting non-linear growth. Societal Grid consists of:

1. **Knowledge GRID** - Inter connecting universities with socio-economic institutions, industries and R&D organizations.

2. **Health Care GRID** - Inter-connecting the Health Care institutions of Government, Corporate and Super specialty hospitals. Research institutions, educational institutions and ultimately, Pharma R & D institutions.

3. **e-Governance GRID** - Inter-connecting the Central Government and State Governments and District and Block level offices for G2G (Government to Government) and G2C (Government to Citizen) connectivity.
4. PURA Knowledge GRID - Connecting the PURA Nodal centers with the Village knowledge centres and Domain service providers.

We have, so far, discussed all the four connectivities required for the societal transformation. These connectivities can form the basis for providing platform for societal transformation leading to empowerment. This will blossom with the enabling environment of trust and confidence in the overall system.

ASEAN Passenger Jet

India has nearly 50 years of experience in aerospace industry having designed, developed, and manufactured both civilian and military aircraft, particularly the SARAS and Light Combat Aircraft (LCA). A very large infrastructure has been built in multiple locations in the country for Design, Development and Manufacture. In Singapore, the technology buildup in terms of electronics components, Simulators and Integration has reached a high level of maturity. Therefore, putting together our capabilities the aerospace community in India and Singapore must come out with the design of ASEAN passenger jet to support the huge demand of travel in various parts of the world in the coming decades. Hence ADA (Aeronautical Development Agency) and Hindustan Aeronautics Limited (HAL) of India and Singapore Technologies (ST) can come forward with a Joint Venture proposal for joint design, development, production and marketing of ASEAN Passenger Jet. They also can work out Joint programmes for aircraft maintenance, repair and overhaul to cope with the growing requirements of International Aviation Industry.

Conclusion

Both India and Singapore, in an integrated way, have a large technological resource in terms of Knowledge and human capital. Also, India has rich experience in major mission mode programmes and joint ventures. As the technologies are converging, a major collaborative effort in Nano-Bio-Info area between our nations will certainly result in new devices and systems which will benefit not only our two societies but entire mankind. Both Singapore and India should work towards using this convergence of major disciplines towards making the world healthier, prosperous, happy and peaceful.

My best wishes to all the members of Nanyang Technological University and the distinguished guests in your missions.
274. Address by President Dr. A.P.J. Abdual Kalam at Singapore-India Fine Arts Society.

I am delighted to visit the Singapore India Fine Arts Society. My greetings to the pioneers who conceived and established this institution for promoting music and dance in Singapore, music lovers, musicians and artists participating in this function. I am happy to note that this Fine Arts Society is propagating and preserving Pan Indian curriculum which reflects the cultural diversity of a vast country with an ancient heritage.

For promoting the cause of music and dance among the youth of Singapore, the Society is conducting full-fledged graduate and diploma programmes. I would like to congratulate the graduates and diploma holders who have excelled in various facets of music and dance. Music generates peace, happiness and harmony which I have experienced in my own personal life while playing Veena, an ancient string instrument. When I play certain ragas in Veena or listen to a great exponent Ustad Bismillah Khan, the bliss of music enters into my body and soul and creates a feeling of profound peace and happiness within. As a scientist, I am convinced that the nature functions as a rhythm whether it is a rhythm of heartbeat, movement of electron in the orbit or the high/low tides of the sea. Everything is rhythmic and musical.

Composite Culture Enriches our Tradition

During my visit to different parts of the country, I find that the rural folk and the tribal communities are nurturing the love for music and dance since ages. Many times they just need an opportunity to break into song and dance. It is here that I find our tradition and culture are being put to effective use by smoothening the rough edges of life in our countryside. Also, they are helping us in preserving, propagating and developing our cultural traditions since centuries. In fact, I might say that the evolution of our music, dance and theatre has been woven by our rural folk into the very history of our nation. It gives meaning to the life of our people. The intermingling of diverse streams which make up our composite culture has fully enriched our tradition of artistic expression and should be actively encouraged by Singapore India Fine Arts Society.

Music Unites

Music unites. What better proof we need than Carnatic music. Its trinity sang their kritis in Telugu and Sanskrit in Tanjore district;
Purandaradasa in Kannada. Annamacharya in Telegu. Arunagirinathar in Tamil. But for music lovers, the language never mattered. Music establishments at Travancore in Kerala, Tirupati in Andhra, Thanjavur in Tamil Nadu and Mysore in Karnataka; all of them dazzled like gems in a necklace. The thread of music united these beads. I believe that music itself is a great communication, and language can never be a barrier.

Here I am reminded of a famous poetry by RUMI. “Angel is free because of his knowledge, The beast because of his ignorance, Between the two remains the son of man to struggle” Music elevates the struggling mind and gives knowledge and wisdom.

**Kannada kritis in Carnatic music**

With their divine compositions, Purandaradasa and Sadasiva Brahmendra continue to uplift the minds of millions even this day. When I hear Balamurali Krishna sing ‘Cetaha Sriramam’ or when I hear MS Amma sing ‘Broohi mukendeti’ or when I hear ‘Neene doddavano’ of Madurai Seshagopalan, joy and elevated thoughts can only be experienced. Similarly, when we hear Kishori Amoankar sings nainanu neenuu bahe or a ballad of Bhojpuri; or when we hear, Papanasam Sivan’s Amba manam kanindhu or Anandanadamidum even if we do not follow the rhymes, we get an out of the world experience.

**Rashtrapati Bhavan Experience**

To pay a tribute to the India’s Cultural heritage we have started “Indradhanush” which organizes cultural events in the art theatre of Rashtrapati Bhavan. The aim of “Indradhanush” is to acknowledge the contribution of the renowned as well as the young budding artists. So far, we have organized twenty such programmes. Although most of the programmes are held in the Art Theatre, a flute performance by Maestro Pandit Hari Prasad Chaurasia organized in the Moghal Garden Lawns on a full moon night was an elevating experience. He was accompanied by Tabla Maestro Ustad Shafat Ahmed Khan, who is not with us anymore. I pay my tributes to this great artist.

We had a similar programme in November 2004 with Maestro L. Subramanian, a famous Violinist. Recently, a Ghazal performance by Shri Jagjit Singh received an overwhelming response from the invitees. When I interact with the audience after the programmes, they have expressed that it is a life time experience to listen to the maestros. It was an elevating experience to listen or witness the performance amidst their busy schedule,
especially in the Mughal Garden environment and peace descended on me. I would like to share with you my experience with two Nadaswaram Vidwans – Sheikh Mahboob Subhani and Smt. Subhani. They gave an excellent Nadaswaram performance to the Rashtrapati Bhavan audience. After the recital I requested the couple to perform for the differently abled children, whenever they get an opportunity. They made it a point to perform for some of our special children in Chennai and I understand that it gave lot of happiness to these special children. This is a very noble cause and I would request the artists assembled here to follow this example whenever they get an opportunity.

In addition, we have also organized five cultural programmes of young prodigies on various important occasions. I still remember the unique performance of Master Siddharth Nagarajan a seven year old boy who played the drums and I understand he holds the title of “Youngest Drummer of India” in the Limca Book of Records. Apart from this, sixteen year old L. Athira’s violin performance mesmerized the audience. Let us encourage our children and youth to participate in arts and culture and demonstrate their abilities which will not only motivate the other children to perform better in their field of expertise, but also bring in societal harmony.

**Fusion of Music**

When I visited South Africa I attended a cultural programme at Chatsworth. There I saw a fusion dance in which Zulu dance form, Bharatnatyam and Ballet was presented in an excellent fashion. The coordination between the artists and the rhythm of music stole the show. In the same programme, one native African Patrick sang a Carnatic music kriti in Hamsadwani raga. It was a beautiful rendering. Such fusion demonstrates the principle that music and dance do not have any borders. In Indian environment, I have seen such beautiful mingling of different art forms in fusion presented by Dr.L.Subramaniam, Raja Radha Reddy and Maestro Bismillah Khan.

**Conclusion**

Music, Dance, Drama for Unity of minds I had an opportunity of witnessing great exponents of music and dance. The experience of listening and seeing them leads me to the think that whether music and dance can be used as an instrument for ensuring global peace and act as a binding force. In recent years, terrorism is taking a heavy toll of many innocent lives. I was thinking whether there is any alternative solution other than military, economic and judicial approach to end this problem. I am now
convinced that one of the important tools in Asia could be music and dance for containing terrorism. Fortunately, we have a rich civilisational heritage of 5000 years blending literature, music, dance and dramatics.

I am happy to note the Singapore India Fine Arts Society has completed more than half a century in the service for music and dance. I wish you many more centuries in the service of fine arts. My best wishes to all the members of Singapore India Fine Arts Society in their mission of promoting music and dance among the youth living in Singapore.

May God bless you all.

275. President Dr. A.P.J. Abdul Kalam’s Interactive Session with Top Intellectuals of Singapore at Hotel Shangri-La

Singapore, February 2, 2006

DYNAMICS OF ECONOMIC GROWTH IN INDIA

I am indeed delighted to interact with the Intellectual community of Singapore. We honour the intellectuals of Singapore who have provided the leadership and vision for the development of the nation. I would like to talk on the topic Dynamics of Economic Growth in India.

Ambience in the Nation

In the recent history, very rarely India has come across a situation, all at a time, an ascending economic trajectory, continuously rising foreign exchange reserve, reduced rate of inflation, global recognition of the technological competence, energy of 540 million youth, umbilical connectivities of 20 million people of Indian origin in various parts of the planet, and the interest shown by many developed countries to invest in our engineers and scientists including setting up of new R&D centers. Above all India as the largest democracy in the world, has a reputation for its democracy and for providing leadership for the one billion people with multicultural, multi-language and multi-religious backgrounds. Our technological competence and value systems with civilizational heritage are highly respected. Foreign Institutional Investors find investing in India attractive. Indians are also investing in companies abroad and are opening new business
ventures. As per the report titled “From the Ganges to the Thames” which states that the Indian Foreign Direct Investment in British capital is second only to that of the US and Indian FDI project in Europe has increased from just 5 to 119 during the period 1997 to 2004. The Government is also committed to economic development by ensuring growth rate of 7% to 8% annually, enhancing the welfare of the farmers and workers and unleashing the creativity of the entrepreneurs, business persons, scientists, engineers and other productive forces of the society. We are using this opportunity for transforming India to a Developed nation before 2020. This calls for the agriculture, manufacturing and service sectors becoming globally competitive leading to economically competitive. Then a following competitive profile will emerge that will create more opportunities to the corporate sectors working in India and Singapore.

Profile of a Globally Competitive India

1. A Nation where the rural and urban divide has reduced to a thin line.
2. A Nation where there is an equitable distribution and access to energy and quality water.
3. A Nation where agriculture, industry and service sector work together in symphony, absorbing technology thereby resulting in sustained wealth generation leading to greater high value employment opportunities.
4. A Nation where education is not denied to any meritorious candidates because of societal or economic discrimination.
5. A Nation which is the best destination for the most talented scholars, scientists, and investors from all over the world.
6. A Nation where the best of health care is available to all the billion population and the communicable diseases like AIDS/TB, water and vector borne diseases and other stress diseases, cardiac diseases, cancer and diabetes are brought down.
7. A Nation where the governance uses the best of the technologies to be responsive, transparent, fully connected in a high bandwidth e-governance grid, easily accessible and simple in rules, thereby corruption free.
8. A Nation where poverty has been totally eradicated, illiteracy removed and crimes against women are absent and the society feels unalienated.
9. Nation that is prosperous, healthy, secure, peaceful and happy and continues with a sustainable growth path.

10. A Nation that is one of the best places to live in, on the earth and brings smiles on a billion plus faces.

It is indeed a big challenge of high magnitude. For achieving such a competitive profile for India, we have a vision of realizing this goal in a time bound manner.

**Our National mission - challenges**

Our nation is going through a major challenge of uplifting of 260 million people who are below the poverty line and also to give better life for many millions who are on the border line of poverty or just above the poverty line. They need a decent habitat, they need work with reasonable income, they need food, they need speedy access to health care, and they need education and finally they need a good life and hope for a better future. Our GDP is growing at more than 7% per annum on an average. Whereas, the economists suggest that to uplift the people from below the poverty line, our economy has to grow at the rate of 10% per annum consistently, for over a decade.

**Integrated action:** To meet the need of one billion people, we have the mission of transforming India into a developed nation. We have identified five areas where India has a core competence for integrated action: (1) Agriculture and food processing (2) Reliable and Quality Electric power, Surface transport and Infrastructure for all parts of the country. (3) Education and Healthcare (4) Information and Communication Technology (5) Strategic sectors. These five areas are closely inter-related and if properly implemented, will lead to food, economic and national security of our country.

**Engines for Growth:** Emphasis should be on full utilization of natural and human resources of the nation to meet the demands of the modern society. We should also remember that about 50% of our population is young people with aspirations for better living. Value addition in Agriculture, Manufacturing and Service sectors, building the national core competence and technologies will lead to additional high income employment potential. The engines for growth will be accelerated by launching of the five national missions viz. water, energy, education and skills, infrastructure and employment generation. The totality of these five missions will enable achievement of 10% GDP growth rate per annum. It is possible to do so
with ecological and economic sustainability. It is not the mission of governments. It is a collective efforts of big and small businesses, science and technology and academic institutions, foreign investors, and many others who have confidence about India.

With these aspects in view, we have already laid down the road map. The priority for the government is to convert the road map into various missions. It is to be done in a decentralized manner allowing a greater role for private enterprise and local initiatives. While converting the vision into different missions we seem to have many thoughts and variety of routes to reach the goal. This is where there is a need to have a coherent thinking among all the members of the society, including the legal and law and other agencies. All of us have to think that the nation is greater than an individual or an organization. All of us should believe, that “we can do it”. The key question before us is: How to create such an enabling environment?

**Changing Pattern of Society**

When the world was moving from the industrial to information and knowledge era, we witnessed a changing pattern in the sectoral share of GDP and the number of people employed in each sector. The sectoral share of Gross Domestic Product (GDP) percentage has undergone a considerable change. Contribution of agriculture to India’s GDP has reduced from 39% to 22% during the period 1979 to 2004. During the same period contribution of manufacturing sector has moved from 24% to 27% and whereas the contribution from the services sector has increased from 37% to 51%. There has been considerable change in the employment pattern also. The percentage of people employed in agriculture has come down from 64% to 54%. Simultaneously, the percentage of people employed in manufacturing has gone up from 15% to 19% and in the service sector from 20% to 27%. This trend has to continue and by 2020 our employment pattern should aim at 44% in agriculture, 21% in manufacturing and 35% in service sectors. The displacement of 10% people from agriculture sector has to be facilitated through skill enabling for undertaking value added tasks in the rural enterprises so that migration to urban area is reduced. Instead of the person from the rural areas going to urban towns in search of jobs in manufacturing and services sectors, PURA (Providing Urban Amenities in Rural Areas) facilitates creation of employment in the rural areas itself. PURA achieves this by providing physical, electronic and knowledge connectivities to a cluster of villages thereby leading to their
economic connectivity and prosperity. Knowledge creation and knowledge utilisation is the key to the success of a PURA programme. PURA programme generate many business opportunities.

National Missions and opportunities:

Let me discuss some of the national missions that India is giving thrust for achieving sustainable economic development for all the regions of the nation. I am sharing these missions with the Singapore Intellectuals so that you may like to participate in developmental process of India. First, I would like to discuss about PURA.

Providing Urban Amenities in Rural Areas (PURA)

The number of PURA units for the whole country is estimated to be 7000. This envisages integrated connectivities to bring prosperity to rural India. These are - physical connectivity of the village clusters through quality roads and transport; electronic connectivity through telecommunication with high bandwidth fiber optic cables reaching the rural areas from urban cities and through Internet kiosks; and knowledge connectivity through education, vocational training for farmers, artisans and craftsmen and entrepreneurship programmes. These three connectivities will lead to economic connectivity through starting of enterprises with the help of banks, micro credits and marketing of the products.

Each PURA cluster will connect about 20 villages depending upon the region and population and will cost about Rs.100 crores (~$20 Million). After initial short-term employment during construction etc., we have to plan for initiating actions for providing regular employment and self employment opportunities in nationally competitive small enterprises in agro processing, manufacturing and services sectors for about 3000 people. If the industrial/business parks are marketed well, they can generate employment opportunities in support sector for about 10,000 people in that cluster. This will provide sustainable economy for the rural sector. In this national mission, bankers can promote entrepreneurship in the rural areas. This experience can become a model for other countries to follow.

PURA as an Enterprise: A large number of banks have entrepreneurial development programmes. Banks have also been funding Small Scale Industries of different types in various regions. The small scale industrialist is a promising candidate for becoming the chief executive for managing the PURA complexes in an integrated way. PURA enterprises
can also undertake management of schools, health care units, vocational training centres, chilling plants, silos and building a market, banking system and the regional business or industrial units. A new mission mode management style has to emerge for PURA enterprises. It should not be looking for protective legislations to support them. Rather they should be efficient to compete with others. This new PURA enterprise needs partnership from the bank, from the Government and also from the private entrepreneurs. Banks can train the entrepreneur for managing the PURA in their training centres and also provide them loans for creating and running PURAs as a business proposition.

**Our growth focus in the ICT Sector**

Now let me discuss about the potential of ICT sector in India. Today the software industry in India is nearly 28 billion dollars ($18 Billion Export and $ 10 Billion Domestic Market) contributing to nearly 24% of nation’s exports. This is through IT Services and ITES-BPO Sector, which accounts for around 3.5 % of the global market. India’s core competence is in the area of IT services, IT Enabled Services (ITES) - Business Processing and Outsourcing (BPO). The business volume in these two sectors alone accounts for $850 Billion. India’s first aim is to capture at least 15% of the Global business volume in these two sectors, which is expected to be around 1.2 trillion dollars by 2008. The market share of the Indian Software industry in IT Services, ITES, and BPO alone should be around 200 billion dollars by 2008.

I consider this can be achieved, since our university system is contributing over three million graduates including Engineering graduates every year. This is a vital resource needed for growth in the IT Services, ITES and BPO. Now what is needed is the infrastructural establishment such as IT parks including call centres in large numbers for providing the services which can be established by our IT Companies and the state governments. We should aim at increasing the knowledge pool to 5 million Indian youth by the year 2008, which will enhance the existing efficiency by the factor of 2. Can the ICT Industry captains assembled here meet this challenge? Create BPO, Call Centres and ITES in rural sectors as a part of PURA Enterprises using the Electronic connectivity available in the form high bandwidth broadband connectivity as a dark fiber which has reached till the block level in India. India is planning to establish 2.5 lakh village knowledge centres. ICT industry can establish rural call centres in the model of Kisan Call centre established by the Ministry of Agriculture which can provide domain knowledge in the services, agriculture and manufacturing
sectors. This spread will increase the volume of users and automatically bring down the bandwidth cost and create a spiraling effect on efficiency and economy.

**Tourism**

In spite of all the variety of tourist destinations available, the present tourist arrival in India is 3.7 million. A strategy is getting evolved to increase the tourist arrival to at least 15 million within the next five years and 25 million within the next ten years in partnership with World Travel agencies and tourism specialists.

The specialists on tourism present here can study this model and suggest special island tourism packages for Lakshadweep and Andaman & Nicobar. In Lakshadweep, we can also provide hinterland tourist package due to its nearness to Kerala. This will be an additional promotional proposition for our tourism industry. The successful tourism needs quality infrastructure.

**Energy Independence**

Energy is the lifeline of modern societies. But today, India has 17% of the world’s population, and just 0.8% of the world's known oil and natural gas resources. We might expand the use of our coal reserves for some time and that too at a cost and with environmental challenges. The climate of the globe as a whole is changing. Our water resources are also diminishing at a faster rate. As it is said, energy and water demand will soon surely be a defining characteristic of our people’s life in the 21st Century.

Energy Security rests on two principles. The first, to use the least amount of energy to provide services and cut down energy losses. The second, to secure access to all sources of energy including coal, oil and gas supplies worldwide, till the end of the fossil fuel era which is fast approaching. Simultaneously we should access technologies to provide a diverse supply of reliable, affordable and environmentally sustainable energy.

As you all know, our annual requirement of oil is 114 million tonnes. Significant part of this is consumed in the Transportation Sector. We produce only about 25% of our total requirement. The presently known resources and future exploration of oil and gas may give mixed results. The import cost today of oil and natural gas is over Rs. 120,000 crores. Oil and gas
prices are escalating; the barrel cost of oil has doubled within a year. This situation has to be combated. Energy Security, which means ensuring that our country can supply lifeline energy to all its citizens, at affordable costs at all times, is thus a very important and significant need and is an essential step forward. But it must be considered as a transition strategy, to enable us to achieve our real goal that is - Energy Independence or an economy which will function well with total freedom from oil, gas or coal imports. Is it possible?

Hence, Energy Independence has to be our nation’s first and highest priority. We are determined to achieve this within the next 25 years i.e by the year 2030. This one major, 25year national mission must be formulated, funds guaranteed, and the leadership entrusted without delay as public-private partnerships to our younger generation, now in their 30’s, as their lifetime mission in a renewed drive for nation-building.

The Intellectuals assembled here can participate in a big way in alternative energy programmes and banking sector should financially support these programmes. Now I would like to talk about Power Mission.

**A. Power mission**

Currently, India’s power generating capacity is 100,000 mega watts of power. For meeting the development targets till 2020 our generating capacity has to increase to 300,000 mega watts. This additional power has to come from nuclear energy(20,000MW), hydroelectric systems(84,000MW), renewable energy(100,000MW) and thermal energy(96,000MW). The contribution from the renewable energy especially from solar energy and wind energy has to be increased to one hundred thousand mega watts. Urgent measures are needed to reduce the distribution loss to less than 5% from the existing 25%.

The country is to think in terms of sustainable clean power. India has abundant solar energy, thorium raw material and water resources. Let me now discuss about how we can harness these energy sources.

**Solar farms:** Solar energy in particular requires unique, massive applications in the agricultural sector, where farmers need electricity exclusively in the daytime. This could be the primary demand driver for solar energy. Our farmers demand for electric power today is significantly high to make solar energy economical in large scale.

Shortages of water, both for drinking and farming operations, can
be met by large scale seawater desalination and pumping inland using solar energy, supplemented by bio-fuels wherever necessary.

The current high capital costs of solar power stations can be reduced by grid-locked 100 MW sized Very Large Scale Solar Photovoltaic (VLSPV) or Solar Thermal Power Stations. In the very near future, breakthroughs in nanotechnologies promise significant increase in solar cell efficiencies from current 15% values to over 50% levels. These would in turn reduce the cost of solar energy production. Our science laboratories should mount a R&D Programme for developing high efficiency CNT based Photo Voltaic Cells.

We thus need to embark on a major national programme in solar energy systems and technologies, for both large, centralized applications as well as small, decentralized requirements concurrently, for applications in both rural and urban areas. This will be of particular interest to Singapore.

**Nuclear Energy:** Nuclear power generation has been given a thrust by the use of uranium based fuel. However there would be a requirement for a ten fold increase in nuclear power generation even to attain a reasonable degree of energy self sufficiency for our country. Therefore it is essential to pursue the development of nuclear power using Thorium, reserves of which are higher in the country. Technology development has to be accelerated for Thorium based reactors since the raw material for Thorium is abundantly available in our country. Also, Nuclear Fusion research needs to be progressed with international cooperation to keep that option for meeting the large power requirement, at a time when fossil fuels get depleted.

**Hydro Power Generation:** A typical hydro resource availability, which I would like to discuss with you as an example for the hydro power generation. Recently when I visited, Sikkim, I found that the innumerable streams and rivers flowing down the Himalayas provide Sikkim the potential of generating approximately 8000 MW of electric power through hydro electric process. I notice that work is progressing on hydel projects having installed capacity of over 700 MWs including one large hydel project with 510 MW capacity with financial support from state government, MNES and other agencies. In addition there are 21 schemes allotted to different private sector agencies and are in DPR or investigation stages. These schemes have a potential to generate over 4000 MWs of power. I have suggested that the Sikkim Government can take up these projects on mission mode, so that by 2010 all the additional 5000 MWs of power become available to
the state. This additional power will cater to the industrial and agricultural needs of the State and assist Sikkim in increasing the pace of development. The surplus power can be marketed to the main grid and can become a wealth generator for Sikkim.

Similarly, if we link the rivers across the nation, we will be able to generate over 65,000 Mega watts of hydel power. Public private partnership is required for this mission. The corporate executives assembled here can play a very important role in achieving this mission. This will be a very important infrastructural development project.

Apart from these missions, I would like to highlight how to make the environment clean and convert the municipal waste to generate the power.

Global Human Resources Cadre

In the 21st century, India needs a large number of talented youth with higher education for the task of knowledge acquisition, knowledge imparting, knowledge creation and knowledge sharing. At present India has five hundred and forty million youth under the age of 25 which will continuously be growing till the year 2050. Keeping this resource in mind, the Universities and educational systems should create two cadres of personnel: (1) a global cadre of skilled youth with specific knowledge of special skills (2) another global cadre of youth with higher education. These two cadres will be required not only for powering the manufacturing and services sector of India but also will be needed for fulfilling the human resource requirements of various countries. Thus, the universities will have to work towards increasing the throughput of the higher education system from the existing 6% to 20% by the year 2015, 30% by the year 2020 and 50% by the year 2040. The rest of the youth who are not covered by the higher education system should have skill sets in areas such as construction, carpentry, electrical systems, repair of mechanical systems, fashion design, para-legal, para-medical, accountancy, sales and marketing, software and hardware maintenance and service, software quality assurance personals etc. I would request Intellectuals of Singapore to be partners in this mission.

Conclusion

As you all belong to different specializations, I would like to talk to you about the linkage between the national economic development and creative leadership:
- Nation’s Economic development is powered by competitiveness.
- The competitiveness is powered by knowledge power.
- The knowledge power is powered by Technology and innovation.
- The Technology and innovation is powered by resource investment.
- The Resource investment is powered by revenue and return on Investment.
- The Revenue is powered by Volume and repeat sales through customer loyalty.
- The customer loyalty is powered by Quality and value of products.
- Quality and value of products is powered by Employee Productivity and innovation.
- The Employee Productivity is powered by Employee Loyalty, employee satisfaction and working environment.
- The Working Environment is powered by management stewardship and sound project management.
- Management stewardship is powered by Creative leadership.

For success in all the missions which we have discussed so far, we need creative leaders. Creative leadership means exercising the vision to change the traditional role from the commander to the coach, manager to mentor, from director to delegator and from one who demands respect to one who facilitates self-respect. I am sure creative leadership spearheads all the institutions and the future aspiring institutions. For development and prosperity of any country, the important thrust will be on the growth in the number of creative leaders and innovative organisations that can create wealth through dedicated management system. Singapore has definitely been enriched by intellectuals like you.

My best wishes.
276. Address by President Dr. A.P.J. Abdul Kalam at the Reception by High Commissioner of India in Singapore.

Umbilical Connectivity with India

I am delighted to meet and interact with the people of Singapore this evening. My greetings to all of you. Some of the people of Indian origin assembled here whose parents and grandparents left India’s shores many years ago to build a life and a home in Singapore; as well as more recent arrivals who represent the finest of India’s technical and professional talent. You are all inheritors of the great Indian tradition of assimilation, adaptation and creative genius and provide the best to the country in which you are living.

Stability in Pluralistic Society

Throughout my stay, I have seen numerous instances of your contribution to the socio-economic development of Singapore. You contribute not only to the economy but to the development and preservation of a stable multi-ethnic, multi-lingual, multi-religious society. These are values that Singapore and India share at a fundamental level. These are also values which define us as Indians, no matter which part of the world we live in. Singapore and India have a vital stake in ensuring that the world of tomorrow is one that protects the interest of all pluralistic societies. In the modern context, you are a vital link between India and Singapore, a country with which we enjoy the friendliest of relations. You have to play a crucial role in strengthening the strong multi-faceted relationship that Singapore and India are engaged in building, be it the political sphere or economic, commercial, academic and cultural fields. Today, India is one of the fastest growing economies of the world. I would like to discuss some of the developments taking place in India.

Ambience in the Nation

In the Indian history, very rarely our nation has come across a situation, all at a time, an ascending economic trajectory, continuously rising foreign exchange reserve, reduced rate of inflation, global recognition of the technological competence, energy of 540 million youth, umbilical connectivities of 20 million people of Indian origin in various parts of the planet, and the interest shown by many developed countries to invest in our engineers and scientists including setting up of new R&D centers. The
distinction between the public and the private sectors and the illusory primacy of one over the other is vanishing. India as the largest democracy in the world has a reputation for its democracy and for providing leadership for the one billion people with multi-cultural, multi-language and multi-religious backgrounds. And also our technological competence and value systems with Civilizational heritage are highly respected. Also, FII’s find investing in India attractive. Indians are also investing abroad and opening new business ventures. As per the report titled “From the Ganges to the Thames” which states that the Indian Foreign Direct Investment in British capital is second only to that of the US and Indian FDI project in Europe has increased from just 5 to 119 during the period 1997 to 2004. The Government is also committed to economic development by ensuring growth rate of 7% to 8% annually, enhancing the welfare of the farmers and workers and unleashing the creativity of the entrepreneurs, business persons, scientists, engineers and other productive forces of the society. We are translating this opportunity for transforming India into a Developed nation before 2020.

Technology for societal transformation

The transformation of India will need transformation of six hundred thousand villages. This would need creation of seven thousand PURAs (Providing Urban Amenities in Rural Areas) spread in different parts of the country with physical connectivity, electronic connectivity, knowledge connectivity leading to economic connectivity. I suggested in the recently held Indian Science Congress that a decision could be taken to allot Rs. 500 crore to develop 100 PURA Clusters by the local educational institutions in the rural areas. Each cluster, comprising of 20 to 30 villages, will have an educational institution as a nucleus. The development will comprise of setting up of village knowledge centres; agro-clinics; Tele-education and Tele-medicine centres; and other employment oriented schemes such as bio-gas plants; water treatment plants (brackish to potable water); bio-fuel esterification plant; cold storage; consumer product development; vocational training centres and setting up of business centres by the entrepreneurs for national and international marketing of the products from these rural enterprises. In all these cases, the educational institutions should plan the activities in consultation with local people who are the beneficiaries of this programme.

A Performance Challenge

These hundred PURA programmes originating from educational institutions and with public-private partnership will provide the experience
for taking up big programmes in future in an industrial scale. This undertaking will build the capacities of the villagers and encourage the Indian entrepreneurs to become an active partner in this development process. These activities should not be treated as mere experiments and scientific knowledge; it is the application of science and technology to societal transformation. The winners are the academic institutions and the rural people belonging to the PURA Clusters. Finally, there should be a clear assessment whether the villagers have been benefited. A joint team of the village members and the scientists/technologists can do this. This will lead to the birth of the Civic Scientists. This is the performance challenge, which I would like to pose to the experienced scientific community and to the Government officials. This mission I gave since I had seen three operational PURA projects: one in Tamil Nadu which I have discussed earlier in the last year, second in Maharashtra and the third in Madhya Pradesh. In building a developed India the overseas Indians can participate by establishing a PURA around a cluster of villages in a region of your choice.

**The Eternal Mother**

Overseas Indians have been successful, thanks to the foundation in education and the heritage their home country gave them, and also the opportunities that the country they have gone has given. I receive visitors settled abroad from all walks of life. Many of them have brought their children first time to their motherland. They look for the warmth of human relations in India. This society remains a loving mother to grown up sons and daughters who always return. This I will call umbilical connectivity between the mother and the children. We belong to same umbilical connectivity, whether you are in India or in any other part of the planet.

**Conclusion**

In building an India of our dreams, I see an increasing role for the overseas Indian community. There are tremendous business opportunities whether in establishing PURA, in the field of manufacturing and services, or in the areas characterized by high Science and Technology, Biotechnology, Pharmaceuticals, Space Technology. In all these areas, we welcome your cooperation. I once again bring to you greetings from people back home. I wish you all success in your missions. Your prosperity is our happiness. My good wishes to all of you.
THAILAND

277. Statement by Official Spokesperson on the situation in Thailand

New Delhi, September 20, 2006.

We have noted the evolving situation in Thailand¹ and the commitment of the “Administrative Reforms Council” to return power to the people at the earliest. The Indian Community in Thailand is safe. We attach great importance to our relations with Thailand, a country with which India has ancient civilizational affinities and strong bonds of friendship and cooperation.

¹ The Spokesperson was referring to the situation created by an army coup in which Prime Minister Shinawatra was ousted while on a visit abroad. However, the coup leader Gen. Sonthi Boonyaratglin assured the international community that a civilian government would be appointed in two weeks’ time and that the Constitution would be modified before elections scheduled in a year.

278. Press Release issued by the Ministry of External Affairs on Minister of State E. Ahamed attending the 18th Arab League Summit.

New Delhi, March 30, 2006.

Mr. E. Ahamed, Minister of State for External Affairs on his return from the Eighteenth Arab League Summit has commented that India’s policy on West Asia and our deep-rooted relationship with the Arab world has been acknowledged by the League of Arab States. Giving India an opportunity to express solidarity with Arab countries in the Plenary Session of Arab League Summit is a reflection of the importance attached to India by the Arab World and this gesture has been widely appreciated in India. He was delighted to say that as an Observer in the League of Arab States, India was the only country given the chance to read out the Prime Minister’s message and to make its remarks on the first day of the Summit.

During the Summit, Mr. Ahamed met President and Vice President of Sudan, President of Palestine, His Highness Emir of Qatar, Deputy Prime Minister of Qatar, Ruler of Dubai and Prime Minister of UAE, Deputy Prime Minister of Sultanate of Oman and Foreign Ministers of Algeria and other countries.

India had pledged 10 million US dollars for development projects in Sudan. Mr. Ahamed was happy to announce that President of Sudan has accepted his suggestion to establish a Peace Park on the banks of River Nile in the name of Mahatma Gandhi and a Cultural Centre in the name of Jawaharlal Nehru in Khartoum at a cost of half a million US dollars. The balance of 9.5 million US dollars will be distributed for the developmental projects in both North and South Sudan. In addition, US$ 100 millions line of credit will also be utilized for the various developmental projects in Sudan.

AFGHANISTAN

280. Joint Press Interaction by Prime Minister Dr. Manmohan Singh and Afghan President Hamid Karzai.

New Delhi, April 10, 2006.

Dr. Manmohan Singh: Your Excellency, Mr. President, Ladies and gentlemen of the press,

It is always a pleasure to meet President Karzai and exchange views and experiences with him. In our meeting just before this, we had very fruitful discussions on a wide range of bilateral issues and matters of mutual interest to the people of this region. I took the opportunity to compliment the President, and through him, the people of Afghanistan on the successful completion of Parliamentary elections in Afghanistan. This is an important landmark in Afghanistan’s progress in becoming a sovereign, democratic country.

During our talks, I reaffirmed India’s commitment to extending full cooperation to the people and Government of Afghanistan in their reconstruction efforts. I informed President Karzai that India will provide additional assistance valued at US$ 50 million to Afghanistan. This amount will thereby raise the total assistance we have committed to US$ 650 million; the amount of US$ 200 million has already been spent on various projects.

Three Memoranda of Understanding have been signed today, for promoting cooperation in Rural Development, Education Exchange Programme and on Standardisation. These are reflective of our broad-based involvement with Afghanistan’s development.

We also discussed the security situation in Afghanistan and expressed concern at the increased terrorist activities in some parts of the country.

The President of Afghanistan and I reviewed our cooperation in a regional setting as well. I welcomed Afghanistan’s entry into SAARC, as decided at the last summit meeting. It is a particular privilege for us that the first SAARC summit in which Afghanistan shall participate will be in India early next year. We have also agreed that India will host the second Regional Economic Reconstruction Conference for Afghanistan in New Delhi in November this year.
I should note that we are particularly happy to see the large business delegation for Afghanistan that is accompanying President Karzai. Its members will have a joint meeting with our Business Chambers later today. We would like to encourage such interaction and in order to encourage trade and investment ties, we shall consider establishing a Line of Credit facility of US$ 50 million. We have also decided to set up a Joint Committee of the Commerce Ministers of the two countries to review the implementation of the bilateral Preferential Trade Agreement and promote bilateral trade.

Before closing, I would also like to extend a warm welcome to the Afghan artisans who have come to India for the Festival of Afghanistan which will be inaugurated tomorrow by President Karzai.

Mr. President, may I now invite you to say a few words to the press after which we could invite some questions. Thank you.

Mr. Hamid Karzai: Thank you very much Mr. Prime Minister.

Bismillah Ar-Rahman Ar-Rahim. Mr. Prime Minister, as always it is a great pleasure for Afghans to visit India. Today for me and my delegation it is an honour and pleasure to be invited by you, people of India, to visit India.

We in Afghanistan have witnessed in the past four years the cooperation and the friendship of India going out of its way to help us with rebuilding our lives in Afghanistan. India’s help in Afghanistan has been in all walks of life. With emphasis I would mention India’s help in rebuilding the infrastructure of Afghanistan and in helping us in strengthening the institutions of democracy in our country. India’s building of our new Parliament is one immense project for us in Afghanistan.

We are very happy for India to give us scholarships for our young people - in education 500 and in vocational training another 500. And, as you mentioned Mr. Prime Minister, thousands of Afghans, the youth of our country, participated in the examinations in order to be able to come and study in India.

We, Mr. Prime Minister, thank India for helping us gain the membership of SAARC. Afghanistan will be a good, productive member of this organization.

The cooperation between us would definitely benefit our people and also I very much hope that the people of the region will benefit from this cooperation. Afghanistan is a democratic country. Afghanistan is happy to
be the newest democratic country and to be a friend with the greatest
democracy in the world.

Mr. Prime Minister, I am sure the cooperation between our two
countries will go a long way in bringing more stability and peace for
Afghanistan and will also bring definitely business exchanges between the
two countries.

Mr. Prime Minister, I have a big delegation with me. The reason is
that the Afghan people want to visit India and find excuses to visit India. I
have a business delegation with me that wants to seek opportunities in
India, that also wants to attract Indian businesses to Afghanistan to invest
and participate in the reconstruction of Afghanistan.

Tomorrow I will be visiting Hyderabad to see from close the Panchayat
system there and also to see the Hi-tech City and Tata consultancy. I will
also be exchanging views with some of the youngsters of India in Hyderabad
tomorrow.

Mr. Prime Minister, this visit, as other visits, would deepen our
relations, will take us further into the future, as two countries helping each
other and cooperating with each other. Mr. Prime Minister, I once again on
behalf of the Afghan people thank you for all that India has done and for
the three agreements that we signed today. I am sure this cooperation
would take the region further into prosperity and peace. In this, hope for
that better day. Thank you.

Question (Mr. Hossain Ali Yassa, Outlook Newspaper): My
question is to both the leaders, Excellency President Karzai and Excellency
Manmohan Singh.

As both of you addressed the issue of increased terrorist activities in
Afghanistan, my question is, in practical terms what are the measures both
the countries are taking to curb the terrorism?

Dr. Manmohan Singh: As you know, India has been a victim of
terrorism for nearly twenty years. Terrorism today is a menace which plagues
many countries and in our region both India and Afghanistan have suffered
a great deal. But terrorism today has acquired new dimensions and I find in
our region even Pakistan is not immune from terrorism. So, there is need
for pooling our knowledge, our experience, our intelligence gathering
activities in this region to deal effectively with this menace which constitutes
a great threat to civilized ways of living all over the world.
Mr. Hamid Karzai: I do not think I have much to add to the Prime Minister’s words. Indeed, terrorism is a menace affecting humanity as a whole across the world. We, in Afghanistan are among the worst victims of terrorism. We have been affected by terrorism in a massive way for so many many years. Afghanistan has every reason to work with India and the rest of the international community and our neighbours to get rid of this menace for the sake of Afghanistan, for the sake of this region and for the sake of people all over the world. Indeed, in the recent months parts of our country have been affected by bomb blasts and terrorist activities against our civilians, our teachers, our schools, our clergy, our reconstruction. But fortunately the Afghan people have decided resolutely to go ahead and to continue their path of reconstruction and to complete their journey which we have already completed in certain aspects. The rest of it will be completed too. We would cooperate with any nation that cooperates with us in curbing terrorism. Nobody is immune from it as the Prime Minister mentioned. All of us in this region are affected. And I very much hope that all of us this in this region will join hands to fight this menace.

Question (Mr. Amit Baruah, The Hindu): I have two questions – one to Mr. Karzai and one to Dr. Manmohan Singh. To Mr. Karzai, as a follow up on the issue of terrorism. You have had concerns about the role of Pakistan and there have been public statements from both Kabul and Islamabad about this issue. What specifically are your concerns about the role of Pakistan as far as terrorist activity in Afghanistan is concerned?

And my question to the Prime Minister is about transit. We have been talking about transit through Pakistan for Indian goods for a long time. This has been an issue on the agenda with Mr. Karzai and General Musharraf. Are you hopeful of any kind of breakthrough on this issue. Still on the issue of transit, the Chahbahar-Zaranj-Delaram route which India was building in Afghanistan, there have been some incidents there. Did you discuss this issue of security for Indian personnel? And does our relationship with Iran in any way impact on this route?

Mr. Hamid Karzai: Well, Sir, terrorism as I mentioned earlier, is affecting all the countries in the region. It has been affecting Afghanistan for the past many years. It is also now affecting our brothers in Pakistan. Afghanistan and Pakistan in the past four years have seen a massive jump, I should say, strengthening, I should say, in relations between the two countries. At the time of the Taliban there was a 25 million dollars of exports
to Afghanistan from Pakistan. Those exports in just four years time, today’s
time, from Pakistan to Afghanistan (stand) at 1.2 billion dollars. So, definitely
the dividends of peace and stability of Afghanistan are for the whole region
and especially for our neighbours. We have benefited from the friendship
and brotherhood of Pakistan for so many years while we were refugees in
Pakistan. We talk with our brothers in Pakistan regularly on all the questions.
Terrorism as it is affecting us and them and India as well as the rest of the
region is something that we also talk about regularly and I am sure as we
continue this dialogue and effort we will eventually find a more effective
way in fighting this menace across the region.

Dr. Manmohan Singh: Well, as regards the transit of Indian goods
to Afghanistan via Pakistan is concerned this is an issue which I have
raised with President Musharraf. I have also raised this issue with President
Karzai to use his good offices with our neighbours in Pakistan and I have
not given up hope that something concrete may come about in this matter.
As regards the Zaranj-Delaram road, it is under construction. There have
been some security concerns but I have the assurance of the Afghan
government and President Karzai that effective arrangements will be made
and that the terrorist threats will not be allowed to interfere with orderly and
timely completion of this very important highway.

Question (Mr. Asif Maruf, Afghanistan): Mr. President, India has
rich experience in rural development and we saw the contract signed by
the Ministers. What specific projects or programmes will be delivered by
India to Afghan side?

Mr. Hamid Karzai: The Prime Minister would like to know as to who
you represent, which paper.

Question (Mr. Asif Maruf, BBC Radio): BBC Radio.

Mr. Hamid Karzai: BBC Radio! Oh, very good! I would like to talk to
BBC.

As I mentioned, India has been helping us with the reconstruction in
almost all aspects. You heard earlier the reconstruction of Zaranj-Delaram
road, the reconstruction of the Salma dam, the reconstruction of schools,
the Habibia High School in Kabul, the construction of cold storage in
Kandahar, and many more projects among which one must also definitely
mention the transmission lines from northern parts of the country to Kabul,
the building of the Parliament. Today, the Prime Minister was kind enough
to announce an additional 50 million dollars of assistance to Afghanistan. That would take India's assistance to Afghanistan from 600 to 650 million. As you witnessed today, we signed three new agreements in the area of education, rural development in which India has achieved a lot of progress which will become a source of learning and inspiration for the Afghan people. The standards, question of standardization of Afghan products and industry in all other aspects, is another area where India can help us immensely. And I am sure this cooperation will go on.

**Question (Mr. Kamil Zaheer, Reuters):** Would you be taking up in future talks with President Musharraf the need for transit route through Afghanistan and till then would you be inviting Indian consumer companies which can supply to Afghanistan and beyond to Central Asia to come to Afghanistan?

**Mr. Hamid Karzai:** It looks like you have read my notes. Well, I should find out about that…(laughter)

Sir, the question of transit between Afghanistan, Pakistan and India and vice versa is of extremely significant importance to the three countries and also by extension to the region. We have discussed this with my brother President Musharraf in Islamabad and also on his visits to Kabul. As His Excellency the Prime Minister mentioned also it has been raised by India with President Musharraf. It is an issue that they understand; Pakistan has already allowed the transit of Afghan goods through Pakistan to India.

We hope very much that a day will come very soon that such transit would be allowed from India through Pakistan to Afghanistan as well, and beyond. And also that Pakistan will have access to Indian roads to send its goods to East Asia. It is an issue that benefits all. It is an issue that concerns us not as Governments or Presidents or Prime Ministers: it is an issue that concerns us as human beings, as individual citizens of this region. It concerns our future, the well being of our children and of the future generations. I believe and so does, I can speak with certainty about, Prime Minister Manmohan Singh. His view on this is that we as people deserve to live better. And on of the ways that we can seek to achieve that better life, all of us - one important way is trade and transit and the freedom of movement of people across countries, across barriers. I would very much hope that you will see that day soon in this region for the benefit of India, for the benefit of Pakistan, for the benefit of Afghanistan and other countries.
The question of companies from India investing in Afghanistan, this is why we have a strong business delegation visiting from Afghanistan with us. They will be talking to Indian businesses. I will be addressing the Indian business forums today in the afternoon. We are here to seek investment from India in Afghanistan. We are here to promote trade between India and Afghanistan. And if India is willing, we would be very happy to have India’s companies in Afghanistan to produce their goods and to then have Afghanistan as a hub, as a launching pad for those products in Central Asia. It will help Afghanistan, as it will help Indian companies as well. Thank you.

281. Joint Statement issued during the visit of Afghan President Hamid Karzai.

New Delhi, April 10, 2006.

1. At the invitation of His Excellency Dr. Manmohan Singh, Prime Minister of the Republic of India, His Excellency Hamid Karzai, President of the Islamic Republic of Afghanistan is currently paying a State visit to India (April 9-13, 2006).

2. During the visit, the two leaders held talks on a wide-range of bilateral issues as well as regional and international matters of common interest. They welcomed the progress achieved in bilateral relations since President Hamid Karzai’s visit to India, February 23-25, 2005 and Prime Minister Manmohan Singh’s visit to Afghanistan, August 28-29, 2005, and agreed to take this relationship further into a new paradigm of friendship and cooperation. They affirmed that the time-tested friendly relationship between the two countries, underpinned by historical and cultural ties, had overcome many challenges and were today based on a shared commitment to the ideals of democracy, peace and security.

3. India expressed full support to the goal of a sovereign, democratic and prosperous Afghanistan, which is also necessary for peace, security and stability in the region. It expressed admiration for the courageous steps taken by the Afghan people and Government under the leadership of President Hamid Karzai towards the adoption of a democratic polity, including the holding of the Parliamentary elections.
and convening of the new Parliament, while addressing the challenge of economic development and reconstruction.

4. President Hamid Karzai thanked India for its demonstrated commitment to Afghanistan by providing more than US $600 million for projects in all parts of Afghanistan, in different sectors - including infrastructure, human resource development, and humanitarian assistance. Prime Minister Dr. Manmohan Singh reaffirmed India's continued commitment to Afghanistan's reconstruction and pledged an additional US $50 million under India's Assistance Programme for Afghanistan. To broaden cooperation between the two countries, three cooperation agreements were signed today in the areas of Rural Development, Education and Standardization in the presence of President Karzai and Prime Minister Singh.

5. In the field of institutional and human resource development, both sides expressed encouragement at the ongoing process of annual award of 500 Scholarships for Afghan students for University education in India and 500 short-term ITEC Programme for Afghan nationals, as announced during Prime Minister Dr. Manmohan Singh's visit to Afghanistan in August, 2005. They agreed that this initiative had great potential of contributing significantly towards skills development of the Afghan youth, which could be expected to become the vanguard in tackling the challenge of institution building in Afghanistan.

6. Going beyond the core areas of government-to-government developmental cooperation, both leaders also explored the possibilities of expanding business-to-business cooperation, particularly between the small and medium entrepreneurs of the two countries. President Karzai is also accompanied by a strong business delegation on this visit, which will be interacting with Indian business and industry counterparts from CII, FICCI and ASSOCHAM this afternoon. Prime Minister Dr Manmohan Singh offered to consider extending a US $50 million Line of Credit facility to promote trade and investment between the two countries.

7. As provided for under Article 11 of the Preferential Trade Agreement signed between the two countries on March 6, 2003, the two sides agreed to constitute a Joint Committee at Ministerial level to review the progress in the implementation of the Agreement, thereby promoting mutually beneficial bilateral trade.
8. Tomorrow, President Karzai will be inaugurating a Festival of Afghanistan in India which would be displaying traditional Afghan products and having components of dance, music and cuisine, as a follow-up to the recently concluded MoU on Tourism.

9. Tomorrow, President Karzai will also go to Hyderabad where he will visit the Hi-Tech City, Tata Consultancy Services Ltd., the National Remote Sensing Agency and a Rural Development Pilot Project.

10. At the regional level, the two leaders reiterated their vision of Afghanistan regaining its strategic position at the cross roads of Central Asia and the Indian subcontinent. The need for greater regional cooperation by encouraging trade and people-to-people contact among the countries of the region was emphasized. President Karzai thanked Prime Minister Dr. Singh for India’s strong support for Afghanistan’s membership of SAARC and pledged to work together with the member countries in all fields to effect greater harmonization of political, economic, social and security policies.

11. President Karzai welcomed that India would host the Second Regional Economic Cooperation Conference for Afghanistan in New Delhi, November 18-19, 2006, with participation of all the regional countries, G-8 member States and international organizations. This Conference will also have a business-to-business component to promote private sector linkages.

12. Confronting the shared challenges of fundamentalism and terrorism, the two leaders condemned global terrorism as a threat to democracy and declared that there can be no compromise with its perpetrators. India expressed its support to the efforts made by Afghanistan in recent months in tackling the increased terrorist activities in certain provinces in the country.

13. The two leaders reaffirmed that India and Afghanistan have a common interest in reinvigorating the past ties and developing a new, strategic partnership for the 21st Century. The two leaders emphasized the importance of regular high-level exchanges between the two countries for taking this partnership to greater heights.
282. Speech by President A. P. J. Abdul Kalam at a banquet in honour of Afghan President Hamid Karzai.

New Delhi, April 10, 2006.

Your Excellency, Mr. Hamid Karzai, President of the Islamic Republic of Afghanistan, Excellencies, Ladies and Gentlemen.

It gives me great pleasure to welcome you Mr. President, and the distinguished members of your delegation to India, on the occasion of your State visit. We welcome you as a long-standing friend, given your long years of association with our country. More so, we welcome you and your delegation as representatives of a land with which we have had interaction for centuries. We both share a rich cultural and civilizational heritage which has been enriched by this interaction.

Mr. President, while sharing our civilizational heritage, we have also shared the pain and suffering of the Afghan people caused by years of conflict and destruction. We too felt the tragic consequences when the land was used as a safe haven for training terrorists. However, during the last four years, we have applauded the achievements of the Afghan people in re-building their nation.

In 2001, we took a pledge in Bonn to work with you to re-build Afghanistan so that it could emerge as a vibrant democratic country living in peace and prosperity. Since then, our partnership has become multi-dimensional. This partnership encompasses the fields of education, health, telecommunications, transport, civil aviation, agriculture and irrigation, industry, power, counter-narcotics and human resource development. I have no doubt that this cooperation will grow in the years to come.

We have admired the progress which Afghanistan has made over the last four years. A new Constitution has been adopted. The Afghan people have participated in the Presidential elections with enthusiasm. I understand that the 2005 elections have resulted in an active and vigorous Parliament in which 27 per cent of its members are women. All these developments demonstrate that the Afghan people welcome democracy, desire to achieve prosperity and seek to become a source of stability in the region.

We are concerned to see that in recent months, incidents of violence have increased in some of the provinces. We are also concerned at the
nature of these attacks. We know that the fight against global terrorism is not an easy one but we are also convinced that given the political will and commitment, this challenge will also be successfully met by the Afghan people.

Afghanistan’s admission into SAARC is a welcome development. This will give us yet another opportunity to work together to promote regional economic cooperation. When India hosts the next Regional Economic Cooperation Conference on Afghanistan in November this year, I have no doubt that it will give a further boost to promoting business-to-business relations in addition to strengthening relations between our two Governments.

Today, India is going through a process of transformation. This is an experiment without parallel because a change of such magnitude has never been attempted before in a democratic framework. The transformation is taking place in an open society which is ready to take decisions through participative processes under the scrutiny of an alert people, a vibrant media, and an independent judiciary.

For a plural society, it is necessary to adopt a developmental model that combines human progress with human freedom. The 21st Century is witnessing a knowledge revolution. Information connectivity and outreach have become instruments of modernization and change. India and Afghanistan both have a large percentage of their population which is young. The best way to give freedom and progress to our younger generation is through the gift of education and the field of Information and Communication Technology offers an ocean of opportunity for the young of our countries.

For any country to progress, it is very important that we empower the youth and the women-folk of our countries. Youth represents the future of a country and empowering them today would enable a country to face the challenges of tomorrow. Similarly, women’s education and their emancipation is the key-stone to a brighter future. Few things are as important as the empowerment of our youth and women-folk for a country to progress.

Tomorrow, I understand that you will visit Hyderabad, a city which is home to a large number of educational institutions, from old centers of learning like the Osmania University to the modern centers like the International School of Business; from scientific and technical establishments like the National Remote Sensing Agency to the Hi-tech
City for undertaking leading edge R&D. Hyderabad epitomizes today’s India which is proud of its history and is confident of its future. History is not a burden; it has become an energizing source of motivation. As a student in the hills of Shimla, I am sure you can appreciate that there is nothing more satisfying than to harness modern technology for the upliftment of the needy of our country. You will get a feel of this at Hyderabad.

Mr. President, on behalf of the Government and the people of India, I re-affirm our commitment in working together to support you in all your efforts in making Afghanistan a stable and prosperous country and in helping the people of Afghanistan achieving the dreams that you cherish for them.

Distinguished guests, may I now request you to join me in raising a toast to the:
- health and happiness of His Excellency President Karzai;
- progress and prosperity of the friendly people of Afghanistan; and
- abiding friendship and cooperation between India and Afghanistan.

283. Statement by Foreign Secretary Shyam Saran regarding the kidnapping\(^1\) of K. Suryanarayan in Afghanistan.

New Delhi, April 29, 2006.

We have received a report from our Embassy in Kabul that some international news agencies in the Afghan capital have been contacted telephonically by an individual claiming to be a spokesman for the Taliban. The message he has given is that Indian Government should announce by

---

\(^1\) on April 29 the Spokesperson of the Ministry of External Affairs gave details of the incident and said: “On 28 April 2006, a 41-year old Indian national, Shri K. Suryanarayan, working for a Bahrain-based engineering and IT company, Al Moayed, was kidnapped, along with his Afghan driver, while travelling towards Qalat, capital of Zabul province. The kidnapping which took place around 1800 hrs has been claimed by the Taliban in a call made to local media. Al Moayed is currently undertaking a project for Roshan Telecom, an Afghan mobile telephone service provider. According to company sources Shri Suryanarayan had gone to the site of the company’s work about 60 kms from Ghazni around 1330 hrs. The Indian Embassy in Kabul immediately contacted Afghan security authorities, the international security force deployed in the area and the Afghan mobile company, Roshan Telecom, to secure the release of the Indian national and to ensure the safety of the other Indians working in the company. Earlier this afternoon, the Cabinet Secretary took a meeting of senior officials to review the situation. The Indian Embassy in Kabul has been instructed to keep in close and constant touch with the local authorities.
6 PM tomorrow that all Indians in Afghanistan must leave the country failing which the hostage would be killed.

We are in touch with the Afghan authorities to ascertain whether this message is indeed from those who are responsible for the kidnapping of Shri K. Suryanarayan.

Despite this message, we have intensified our efforts to seek the early and safe release of Suryanarayan so that he can be re-united with his family. Our Ambassador is in constant touch with the Afghan National Security Adviser and other senior officials as also the employers of Suryanarayan and with the telecom company whose project was being executed. We have also contacted the international security forces deployed in the Zabul area, where the kidnapping took place. We would like to assure Suryanarayan’s family that no stone is being left unturned to obtain his release. We share their pain and grief and their anxiety and will continue with our efforts using all the resources at hand. As you are aware, Cabinet Secretary has reviewed the situation in a meeting held this afternoon and we are constantly monitoring the situation. Prime Minister is being kept briefed about the evolving situation.

Let me reiterate here that citizens of India who are working on various projects in Afghanistan are making a contribution to the much needed economic recovery and reconstruction of a friendly country. Our presence in that country is to promote the welfare of the people of Afghanistan and the vast majority of the Afghan people have welcomed Indians working in their midst as their friends and well-wishers. We wish to assure the Government and people of Afghanistan that India stands by them and will continue to fulfill its solemn commitments to Afghanistan’s development.

2. It was announced the same day that the Government of India has dispatched a team led Shri K.B.S. Katoch, Joint Secretary of the Ministry of External Affairs to assist our Embassy in Kabul in dealing with the hostage situation. The team included officials with experience in dealing with similar situations in the past. The team was authorized to establish contact with all concerned parties through appropriate channels in order to secure the safe and early release of Shri Suryanarayan.
284. Media Briefing by Foreign Secretary on the kidnapping of Indian engineer Shri K. Suryanarayan in Afghanistan.

New Delhi, April 30, 2006.

FOREIGN SECRETARY: Based on the statement which has been made by the Taliban and also on the report that we have now received from the site where the dead body of a person was found between Qalat and Ghazni this morning, it would appear that Shri K. Suryanarayan, an Indian engineer working for a Bahraini company, Al Moayed, on a telecom project in Afghanistan, has unfortunately been killed.

The Government of India is appalled by this dastardly and inhuman act of terror on the part of the Taliban and its sponsors, which has resulted in the tragic and untimely death of an innocent Indian citizen, who, like many of our other compatriots, had been making a contribution to Afghanistan’s reconstruction with dedication and diligence.

The Government of India extends its heartfelt condolences and sympathies to the bereaved family and shares its grief and deep sense of loss. We stand by the members of the family in their hour of profound sorrow and pledge our support to them to ease their pain and suffering. We assure them that every effort is being made to apprehend the perpetrators of this criminal act and bring them to justice swiftly.

As soon as the abduction of Suryanarayan took place, the Government of India left no stone unturned to seek his safe release. A crisis management team was convened by the Cabinet Secretary to monitor developments on a continuing basis and work out urgent measures to deal with the crisis. The Prime Minister personally followed developments in this regard. A team led by a senior MEA official, and including experts in handling hostage situations, was promptly dispatched to Afghanistan, to assist our Embassy in Kabul to deal with the situation. We had been in constant communication with the Afghan authorities, with the international security forces deployed in the Zabul area and with our network of contacts in the country, to make every effort possible to bring this unfortunate incident to a satisfactory conclusion. However, Suryanarayan was brutally murdered even before the MEA team landed in Kabul this morning. It is obvious that the kidnappers were not interested in negotiating for his release but had premeditated his killing. The outrageous demand that all Indians should leave Afghanistan within 24 hours testifies to the real motivation behind this act of terror.
The Government and people of India will never bow to such acts of terrorism and will continue their fraternal assistance to the people of Afghanistan in their endeavours to bring peace, stability and economic recovery to their country ravaged by years of conflict. Several measures have been taken in the past few months to increase the level of security for Indian nationals working on Indian Government-aided projects in Afghanistan. Private companies employing Indian personnel had also been advised to put in place comprehensive security measures. These measures would be further reviewed and strengthened and the special team now in Kabul has been mandated to make any further recommendations to Government after consulting Afghan authorities, our Embassy and the companies employing Indian citizens.

The Government of India regards Taliban a terrorist organization and calls upon the international community to recognize its true colours and join hands together to defeat this scourge to humanity.

**QUESTION (NIDHI RAZDAN, NDTV):** Sir, you talked about the Taliban as sponsors of terrorism. For the last few months the authorities in Kabul have been pointing fingers towards Islamabad and blaming them for the spiraling violence by the Taliban. Are you making an indirect reference to Pakistan and saying that Pakistan needs to do more to crack on the Taliban insurgents especially along the Pak-Afghan border?

**FOREIGN SECRETARY:** As you are aware there have been reports that Taliban elements have been operating in the areas which straddle the Pakistan-Afghanistan border and have been carrying out acts of terrorism. We have also witnessed their involvement in acts of terrorism within Pakistan itself. This only underscores the need to recognize the Taliban and other similar outfits who profess an ideology of extremism, an ideology of violence, as terrorist organizations. And these must be confronted and defeated by the international community acting together; I think this includes India and Pakistan as well.

**QUESTION (PRANAY SHARMA):** Mr. Saran, do we have any kind of leverage with the Taliban. And, did we ask Pakistan...

**FOREIGN SECRETARY:** I have just mentioned to you the need for both India and Pakistan as well as the international community to work together. Today there is really no tolerance for terrorism throughout the world. There is zero tolerance for terrorism. I think this act only underscores the need for all of us to work together to defeat this scourge.
QUESTION (PARUL MALHOTRA, CNN-IBN): Sir, what arrangements are being made to bring the body back?

FOREIGN SECRETARY: Well, we will be making whatever arrangements are required and as early as possible to bring the body back to India. These are details which are already being worked out. As soon as we have any confirmation about the arrangements to bring the body back to India we will, of course, keep you informed. Thank you.

285. Statement by Minister of State E. Ahamed at the Conference on “Drug Routes from Afghanistan”.

Moscow, June 28, 2006.

Mr. Chairman, Excellencies, Distinguished delegates, Ladies and Gentlemen,

At the outset, my delegation would like to congratulate the Government of the Russian Federation for taking this important initiative to address the complex issue of growth in narcotics trade from Afghanistan, and its spread through different routes from Central Asia and the Balkans to rest of the world. The high level of participation today confirms the importance international community attaches to combating this global menace.

I would like to compliment the Government of President Hamid Karzai for making sincere efforts to combat the drug menace. Its policy of weaning away farmers from poppy cultivation and taking stringent action against those who are engaged in narco trade is a sound combination of understanding and firmness in dealing with the problem. President Karzai has even started a new Ministry of Counter Narcotics to spearhead the fight. Tackling this menace and carrying it forward along with the complex and difficult task of nation building, is extremely challenging.

As has been brought out in the working group discussions, this issue is also inextricably linked to the security and stability of Afghanistan and of the region, which in turn is crucial for the economic reconstruction of Afghanistan. There will also be long-term social and economic effects, if the Afghan economy is not shielded from the influence of drug money.
The destructive nexus between narcotics cultivation and terrorism confronts the international community once again. One of the most destructive legacies of war-lordism in Afghanistan was the spread of poppy cultivation. The deadly crop is available again to finance terrorism in Afghanistan with ominous consequences for the country and the whole world.

In view of the magnitude and complexity of this problem, no country can fight it on its own. The problem has to be tackled at the supply end, as well as on the demand side. Further, drug routes traverse different countries from sources to destinations. Accordingly, bilateral, regional and multilateral cooperation has to be recognized as a key element of any strategy in combating the menace of drug trafficking effectively.

Mr. Chairman, India’s commitment to fight the menace of drugs remains steadfast. India is a party to the 1961 Single Convention, 1971 Convention on Psychotropic Substances and 1988 Convention on Illicit Traffic in Narcotics Drugs and Psychotropic Substances. India is also fully, committed to implement its commitments arising out of the Political Declaration and the resolutions adopted at the June 1998 Special Session of United Nations General Assembly. The Narcotics Drugs and Psychotropic Substances Act, 1985 constitutes the statutory framework for drug law enforcement in India. The Act also incorporates provisions for the control of precursor chemicals. Recognizing the need for financially throttling the terrorist organizations and organized crime groups, India has also enacted a comprehensive Anti-Money Laundering Law.

Combating opium cultivation is one of the projects India is working on in Afghanistan as part of its assistance programme. We have prepared a pilot project focusing on Community Development and Integrated Rural Development, in a select area, that will help people move away from production of narcotics. The Governments of both Afghanistan and India are keen to implement this project and are working early on its finalisation and implementation.

Afghanistan requires all possible international assistance in its fight against illicit narcotics production. The world has previously witnessed how drug money, through its linkages with terrorist activities could impact on the peace and stability of the region. Afghanistan cannot risk another round of instability. The international community must remain involved on a sustained basis in assisting the Afghan government in curtailing and eliminating this menace.
Ladies and Gentlemen, India is fully committed to working with the people and the Government of Afghanistan to rebuild their country. Our partnership today embraces a multi-dimensional cooperation programme, including education, health, telecommunication, transport, civil aviation, agriculture and irrigation, industry, power generation and transmission, human resource development and many other areas. Our total pledge for Afghanistan’s reconstruction is more than US $ 650 million and I am happy to announce that we have been progressing satisfactorily with all the projects undertaken by us. We believe that rapid economic development is the answer to the problems of not only narcotics but also terrorism. In addition the international community should synergise demand reduction and supply reduction in a more aggressive manner. I would like to reiterate our commitment to continue to work with the Government and the people of Afghanistan, the regiona1 countries along the trafficking routes and other members of the international community in achieving development and reconstruction in Afghanistan. Thank you.

286. Briefing Points by Official Spokesperson on the visit of Afghan Foreign Minister Rangin Dadfar Spanta.

New Delhi, June 30, 2006.

- Afghanistan Foreign Minister arrived India June 29. He has called on Prime Minister and held discussions with Minister of State for External Affairs Mr. Anand Sharma as well as Foreign Secretary. Mr. Anand Sharma hosted a lunch in his honour. Dr. Spanta is scheduled to speak in ICWA on July 1.

- During the extensive discussions with the Indian leadership, entire gamut of India-Afghanistan bilateral relations was discussed as also regional and international issues of mutual concern. Dr. Spanta conveyed his personal condolences on the recent attacks on Indians in Afghanistan. He also took the opportunity to personally thank the Prime Minister for the supportive role played by India for Afghanistan’s entry into SAARC.

- His Indian interlocutors reaffirmed India’s commitment to the goal of a democratic and stable Afghanistan and reiterated India’s
determination to assist in all possible ways for Afghanistan’s economic reconstruction.

- Dr. Spanta also briefed Indian leadership on his recent visits with President Karzai to the SCO and CICA Summits as well as on bilateral visit to Beijing and Dr. Condoleezza Rice’s visit to Kabul. He also conveyed that President Karzai look forward to visiting India in November for the Regional Economic Cooperation Conference on Afghanistan.

- It was agreed that there would be regular foreign office consultations between India and Afghanistan. In this context, Foreign Secretary will visit Kabul in the near future for which the dates will be worked out as per mutual convenience.

287. Joint Press Interaction by Prime Minister Dr. Manmohan Singh and Afghan President Hamid Karzai.

New Delhi, November 17, 2006.

Prime Minister (Dr. Manmohan Singh): Your Excellency, President Karzai, ladies and gentlemen of the press,

It is always a great pleasure to meet with President Hamid Karzai. Afghanistan has undergone a remarkable transformation over the last five years. From a country that was wrecked by violence and civil strife for nearly three decades, it has transformed itself into a country where democratic institutions are taking strong roots.

I told President Karzai that we in India marvel at what Afghanistan has become today. The newly constituted Walasi Jirga has emerged as a vibrant and assertive body. This would not have been possible without President Karzai’s strong and wise leadership these past few years.

The President and I had useful discussions on all aspects of our bilateral relations. We reviewed the progress achieved in the various bilateral assistance projects that we are associated with in Afghanistan. I have reiterated India’s commitment as a neighbour and friend to continue assisting Afghanistan despite the challenges posed by the security situation.
We also discussed in detail the security situation in the region. A strong India-Afghanistan relationship is not only beneficial to both countries, but it is vital for peace and stability in the entire region.

I have expressed the concern we in India feel about the increased activities of terrorist groups in Afghanistan.

The President and I also had an opportunity to review our cooperation in the regional setting. India looks forward to Afghanistan joining SAARC. We feel greatly honoured that Afghanistan’s first summit as a member of SAARC will be hosted by India.

We also discussed tomorrow’s Regional Economic Cooperation Conference. This is a very important initiative not just for Afghanistan but for the entire region. Regional economic cooperation is perhaps the best way for developing countries like ours and Afghanistan to cope with the challenges posed by the phenomenon of globalization. We are determined to pursue that this initiative succeeds.

Mr. President, may I invite you to say a few words to the press. Thank you.

Afghan President (Mr. Hamid Karzai): Thank you very much Mr. Prime Minister.

It is a tremendous pleasure and honour for me and my delegation to be visiting India again, and for me for having had the opportunity to visit Shimla, to visit my university and interact with students and walk around. It brought back to me the energy and memories of youthful times.

We are this time in India to attend the Second Regional Conference on Afghanistan hosted kindly by India, and also to receive the Indira Gandhi Award which the Government of India was very kind to award to what we have achieved in Afghanistan.

Mr. Prime Minister, India and Afghanistan, as you know, share a long history. Of particular importance in this history has been the past five years in which India stood among a few other nations at the forefront of assisting Afghanistan, from help to our parliamentary democratic process to the reconstruction of Afghanistan, to the education of Afghan youth, and to help Afghanistan in whatever other areas that Afghanistan might have needed.

As the Prime Minister mentioned today, we exchanged views on all issues relevant to the two countries from bilateral relations to regional
security, to the question of increased violence and terrorism in Afghanistan, and to the ways of trying to reduce terrorism in Afghanistan and the region.

We also discussed the Regional Conference in Delhi which the Prime Minister is kind enough to inaugurate tomorrow together with me, and future cooperations, and how best to work on the project that we have on hand.

We also exchanged views on how to have better investment opportunities in Afghanistan for Indian businesses and on how to facilitate that investment in Afghanistan and what the Afghan Government and Afghan business should do to make that investment easier in Afghanistan.

Trade was discussed and relations between the two countries generally were discussed.

I expressed once again the gratitude of Afghan people to the Government and people of India for the help that they have given to us and expressed a desire and hope of the Afghan people to grow this relationship in all areas where Afghanistan and India are already engaged in relation.

Afghanistan seeks a more prosperous India, a stronger India, and a region that lives in peace and prosperity for that is what Afghanistan needs for its own prosperity and peace to have.

I am grateful, Mr. Prime Minister, once again for having invited us to Delhi and for hosting the Conference tomorrow and for giving me that very important award of Indira Gandhi. Thank you very much, Mr. Prime Minister.

Question (TOLO TV): I have a question for Mr. Prime Minister. With due attention to the different political agendas of the region’s countries, how possible and realistic is an economic integration in the region from your point of view? As you are an economist, how do you analyse this economic integration?

Prime Minister: Economic cooperation does not function in a political vacuum. Therefore, a broad political understanding among the countries of the region would certainly be very helpful for promoting, propelling forward the movement for regional economic cooperation.

Question (The Hindu): My question is to President Karzai. Of late there have been concerns expressed by your Government about the role of Pakistan in fomenting terrorism in Afghanistan. I also understand that you have held discussions with the Pakistan leadership and you also have a joint mechanism with the United States. If you were to apportion blame for what has been happening, do you blame the Government of Pakistan
at all for the kind of situation that now exists in your country and in the border areas?

**Afghan President:** Sir, we are not blaming the Government of Pakistan: we are seeking help from the Government of Pakistan. Afghanistan is affected by terrorism. There is violence committed against our people; there is violence committed against our school children, against our clergy, against the reconstruction of Afghanistan; there is violence committed against those who have come to Afghanistan to help Afghanistan develop and become secure; and there is definitely that violence related to cross-border activity. Afghanistan has been seeking from our brothers in Pakistan more cooperation in handling that violence against Afghanistan. Security in Afghanistan is indeed security for the whole region. We have seen in the past many years that where Afghanistan suffered, not only the region suffered with us but the whole world suffered. As you have referred to, we had a very frank discussion with President Bush and President Musharraf at the invitation of President Bush. That really had some good results. We are hoping to move further on that on the results of that meeting. So, to put it in a nutshell, Sir, we are not blaming Pakistan, we are seeking cooperation from Pakistan in better handling of violence in Afghanistan.

288. **Opening Remarks by External Affairs Minister at the 2nd Regional Economic Cooperation Conference on Afghanistan.**

**New Delhi, November 18, 2006.**

1. Your Excellency Mr. Hamid Karzai, the President of Islamic Republic of Afghanistan; Honorable Prime Minister of India Dr Manmohan Singh; Your Excellency Dr Rangin Dadfar Spanta, the Foreign Minister of the Islamic Republic of Afghanistan; Honorable Ministers, Excellencies, Heads and members of delegations of the participating countries and of international organisations; participants of the Regional Business Conference; members of diplomatic community; media representatives, ladies and gentlemen.

We are indeed happy and honoured with your presence here this
morning. You are welcome to India and I wish you a very pleasant stay in our country. It is my privilege to welcome you all to the Second Regional Economic Cooperation Conference on Afghanistan.

2. I thank you for your participation, which is indicative of the high priority attached by your governments to activities relating to interactive regional economic cooperation. In particular, I would like to express my sincere appreciation to His Excellency Mr. Hamid Karzai, President of the Islamic Republic of Afghanistan, who is leading a strong Afghan delegation comprising of several key Ministers for this Conference, reflecting Afghanistan’s firm commitment to be more fully integrated with the region in all respects.

3. Regional cooperation is being increasingly seen as an important instrument to further economic development, impacting also on physical security, both in Afghanistan and the region as a whole. Regional cooperation has also been identified as one of the key principles of the Afghanistan Compact adopted at the London Conference on Afghanistan, January, 2006. Among the benchmarks it is stated that by end-2010, Afghanistan and its neighbours will achieve lower transit time through Afghanistan by means of cooperative border management and other trade and transit agreements; increase the amount of power available through power purchase agreements; and, reach agreements that will enable Afghanistan to benefit from greater mobility of goods and services. Fostering greater regional connectivity will, indeed, help countries improve productivity in conformity with natural comparative advantage, benefit from complementarities, and thereby increase output, trade and consumer welfare.

4. The present Conference is a follow-up to, and builds on the first Regional Economic Co-operation Conference held in Kabul on December 4-5, 2005. It also draws upon the important work of other regional gatherings in recent years, including inter alia, the Good Neighbourly Relations Declaration (2002), Berlin Agreement (2003), Dubai Declaration (2003), Bishkek Conference (2004), London Conference (2006), ECO Summit (2006), Shanghai Cooperation Organisation Summit (2006) and SAARC Ministerial Meeting (2006).

5. The themes of the conference, identified in consultation with all regional partners, are trade facilitation and transport; investment trade
and business potential; electricity trade and energy development, including renewable sources of energy and prospects for TAPI pipeline, as well as agriculture and agro-development. Capacity building will be taken up as a cross-cutting issue in all the themes. Alignment of policies in these areas is expected to lay a strong foundation for interactive economic growth and development of the region, with positive spin-offs for all.

6. In recognition of the importance of regional business linkages, Regional Business Conference is also being held concurrently, with the participation of top business leaders from the region. The business component is being led by the Federation of Indian Chambers of Commerce and Industry, Confederation of Indian Industry and Associated Chambers of Commerce, in partnership with the Afghanistan Investment Support Agency. Discussions will focus on measures to enhance trade, business and investment opportunities in Afghanistan and in the region. A number of practical, commercial projects of regional relevance, which can act as a vehicle for private sector investment, will also be discussed at the business Conference.

7. This Conference is expected to make an assessment of the progress of the outcomes of the Kabul Conference; take concrete decisions on the creation of the enabling environment for further strengthening cooperation in the themes of the Conference, with focus on projects that the public and private sectors in Afghanistan and the countries of the region can participate in; spur the business sector for enhanced trade and investment in the region; and promote interactive economic integration, as a vehicle for easing of regional political and security tensions.

8. I am confident that discussions of this Conference will be productive and lead to concrete outcomes, that can impact strongly on the growth prospects of the region in an incremental manner.
289. Address by Prime Minister Dr. Manmohan Singh at 2nd Regional Economic Cooperation¹ Conference on Afghanistan.

New Delhi, November 18, 2006.

It gives me great pleasure to welcome you all on the occasion of the Second Regional Economic Co-operation Conference on Afghanistan being co-hosted jointly by India and Afghanistan.

I would especially like to welcome H.E. President Hamid Karzai and the members of the Afghan delegation. We are, as always, happy to see you, Excellency, in India, and my colleagues and I look forward to working closely with you and your team to make this a successful Conference.

Afghanistan’s progress from years of war and civil strife towards a functioning democracy is truly remarkable. It is in no small measure, Mr. President, the result of your wise and enlightened leadership.

The Regional Economic Co-operation Conference is based on a vision that countries of our region must also contribute to the assistance programs in Afghanistan.

At the Kabul Conference, the regional countries had come together to adopt the Kabul Declaration, noting that a strategy of development for Afghanistan which is based on cooperation with regional countries created significant possibilities for reducing poverty and for achieving the London Compact benchmarks and Millennium Development Goals.

¹ On November 6, the Official Spokesperson at the media briefing gave a background to the conference and said: “The background is that RECC was envisaged to bring together all the important players in the post-war reconstruction of Afghanistan on to a single platform. The major players have been the G8 countries, neighbouring countries, and the other important donors to Afghanistan Reconstruction Programme, as well as major international organisations.

The first such conference was held in Kabul on December 4th and 5th last year. It was hosted then by the UK and Afghanistan. Eleven neighbouring countries and regional countries had participated in that conference besides representatives of G8 countries and international organisations. At the end of the Kabul Conference a declaration was adopted to increase the stake of the regional countries in the prosperity of Afghanistan. That declaration incorporated ten areas that were identified as potential areas of cooperation including the representatives of three technical working groups. The Conference which is now taking place, therefore, is a follow-up of that and a follow-up to all the thoughts that came out in that declaration.”
The present Conference must be an occasion for careful and honest stock-taking, assessing how far we have come since then and what further we can do. But in the larger sense, I do hope that as a result of the outcomes of this Conference we will be able to reaffirm the international community’s stake, responsibility and renewed commitment to the reconstruction and development of Afghanistan. And I wish to assure you of India’s commitment to play a leading role in this co-operative effort.

We believe that peace and prosperity in Afghanistan are of vital interest not only to the people of Afghanistan but for the wider region and the world as a whole.

India shares your vision of Afghanistan as a country at the crossroads of Central Asia, West Asia, China and the Indian sub-continent. The admission of Afghanistan to SAARC was, therefore, a natural development. We look upon Afghanistan not only as a valued member of the South Asian fraternity but also as our gateway to the west. This is yet another link of Afghanistan to what has traditionally been its largest market – India. As SAARC moves forward to developing a free trade area and other shared economic activities, Afghanistan will stand to gain considerably.

Notwithstanding the remarkable transformation that has taken place in Afghanistan over the last five-years, Afghanistan still faces many challenges. We are concerned at the increasing terrorist violence in certain parts of Southern and South Eastern Afghanistan, that has not only undermined the security of Afghanistan but hindered the ongoing development effort as well. Dealing with this challenge is a collective responsibility.

The themes identified for the present Conference covering energy, transport, business and agriculture are wide-ranging. The Conference must attempt to develop an integrated blueprint for reconstruction that builds on national capacities in these critical areas while developing beneficial linkages with the region at large.

A land-locked country with difficult terrain presents its own set of challenges. The development therefore of the transport sector and its regional linkages is vital for the opening up of the economy of Afghanistan. Simultaneously, measures will need to be taken to facilitate trade and cross-border movement of goods and services, to minimize transaction costs and to harmonise regulations and practices. These measures will not only increase legitimate trade, which today is over-shadowed by cross-border smuggling, but also enhance sense of security.
Agriculture, which is the mainstay of more than 80% of the people of Afghanistan, must be one of the key pillars in any reconstruction effort. Rapid development in agriculture through extension activities, technological inputs and efficient water management will undoubtedly revitalise the economy. It will also build up alternate livelihood opportunities. India has been active in providing technical and other assistance in this area and also assisting local communities with small development projects.

I sincerely hope that businessmen who have come here for the Regional Business Conference will recognise that Afghanistan’s business climate has vastly improved. I am confident that the Conference will highlight the country’s improved infrastructure, strategic location and resources and the pro-business environment that prevails in today’s Afghanistan. We keenly look forward to the outcome and recommendations of their deliberations tomorrow.

Nothing is more important in the reconstruction of Afghanistan, as President Karzai always reminds us, as human resources development. Institutional strengthening, capacity building and training must be stepped up in government, in other organs of democracy such as the legislature and the judiciary and in the economy. India has been contributing in this regard not only through traditional programmes of ITEC but also through innovative public private partnerships such as the “Skill Building Initiative” in cooperation with the Confederation of Indian Industry.

Our partnership with Afghanistan today embraces a multi-dimensional cooperation programme in keeping with the priorities fixed by the Afghan government themselves. We stand ready to respond to the needs of the Afghan people in a manner that reflects the fund of friendship and goodwill that exists and binds our two peoples.

Today, India is undergoing a process of transformation of its own and we hope to be able in the years ahead to sustain high growth rates of 8 to 10% per annum. Our vision of prosperity, however, is not limited to India but encompasses our region as a whole. I am convinced that sustained economic growth in India will have a positive impact on our neighbourhood and vice versa. The natural economic linkages, which once governed this region in the pre-colonial era, will be re-discovered and the process of economic development will transform the nature of political discourse in this region.

We have a vision of bringing freedom, dignity and prosperity to the
people of Afghanistan through a cooperative venture which unites together all countries in the region in a collaborative effort.

At the end, I would like to emphasize that whilst the focus of this conference is Afghanistan, the outcome of this Conference impacts us all throughout the region. India as a close and friendly neighbour of Afghanistan has a particular interest in the success of this process. I am hopeful that the decisions of the Conference will be directed at concrete issues that will provide templates for regional cooperation and help identify opportunities for the mutual benefit of all countries of our region.

We have shared a common past. In an age of globalisation, as borders begin to lose their relevance, we should pledge to work towards a shared future of economic cooperation and regional prosperity and a better life for the people of Afghanistan.

With these words, I wish the Conference all success.

---

290. Joint Press Interaction by External Affairs Minister Pranab Mukherjee and Afghan Foreign Minister Rangin Dadfar Spanta.

New Delhi, November 19, 2006.

Officail Spokesperson (Shri Navtej Sarna): Good afternoon ladies and gentlemen. I welcome you to this press conference to be jointly addressed by the External Affairs Minister of India Shri Pranab Mukherjee, and the Foreign Minister of Afghanistan Mr. Rangin Dadfar Spanta. After the opening statements by the two Foreign Ministers, we will take a few questions. I first request the External Affairs Minister to address the conference.

External Affairs Minister (Shri Pranab Mukherjee): Good afternoon, ladies and gentlemen: We have just concluded the proceedings of the Second Regional Economic Cooperation Conference on Afghanistan co-hosted by Afghanistan and India. This conference was a follow-up to the First Conference on Regional Economic Cooperation held in Kabul last December.

At the Kabul conference the regional countries had come together
to adopt the Kabul Declaration which called for a strategy for the
development of Afghanistan based on cooperation with regional countries. It was intended to create significant possibilities for reducing poverty and for achieving the London Compact benchmarks and the Millennium Development Goals. The present conference was intended to make the countries in the neighbourhood of Afghanistan, along with G8 countries and international organizations, aware of the stake they have in its prosperity and to provide them the opportunity to become stakeholders in this process.

At this conference, the countries of this region, the G8 countries, and various international organizations participated at a very senior level. His Excellency President Hamid Karzai and the Hon’ble Prime Minister of India Dr. Manmohan Singh jointly inaugurated the Conference. There was very active and constructive participation from all of the participants during this conference. I am pleased to inform you that the Conference adopted the decisions and recommendations of the ministerial meeting for Technical Working Group and the Regional Business Conference.

The theme of the Technical Working Groups included electricity trade and energy development, trade, transit and transport facilitation, agriculture and agro-processing as well as investment and business potential. All the Technical Working Groups evoked active interaction and concrete decisions were taken. This will benefit not only Afghanistan but also provide greater opportunity for interactive regional economic growth and development.

The ministerial discussions made recommendations for:

(1) A study on the setting up of a centre for regional economic cooperation in Kabul for in-depth and rigorous pursuit of constructive, practical and specific initiatives for regional development.

(2) Greater need for public private partnership for regional development, specially agriculture and investment fund.

(3) Effective coordination of regional initiatives and projects which are being implemented by existing facilities of regional organizations like Economic Cooperation Organisation and SAARC.

(4) Strengthening of Afghanistan’s capacity development.

(5) Enhancing connectivity through aviation links, trade and transit, energy and gas linkages, and financial services.
Ladies and Gentlemen, India remains fully committed to working with the people and the Government of Afghanistan towards its reconstruction and development. Our partnership today embraces a multidimensional cooperation programme in keeping with the priority of the Afghan Government covering education, health, telecommunications, transport, civil aviation, agriculture and irrigation, industry, power generation and transmission, human resource development, and many other areas.

We are committed to pursuing these programmes on a quick delivery, cost-effective basis with focus on training, maintenance and local ownership in conformity with the Afghan Government’s Aid Effectiveness principles. In doing all these, we have a mission of bringing freedom, dignity and prosperity to the people of Afghanistan through cooperative ventures which unites all countries in the region in a collaborative effort.

At the end, ladies and gentlemen, I would like to emphasise that while the focus of this conference is Afghanistan, the outcome of this conference is expected to have an enhanced developmental impact throughout the region. India is a close and friendly neighbour of Afghanistan and has a particular interest in the success of this conference. I am hopeful that the decisions of this conference will be directed at concrete issues that will provide templates for regional cooperation and would identify opportunities for the mutual benefit of all the countries of the region. Thank you. Now, may I request my colleague Dr. Spanta.

Afghan Foreign Minister (Mr. Rangin Dadfar Spanta): Thank you very much Mr. Minister of Foreign Affairs.

The main content of the Declaration of Delhi was explained by my colleague and friend, Minister of Foreign Affairs of India. But I would like to underline, and that is from our point of view very important, that relevance of Afghanistan as land bridge between Central Asia and South-East Asia and also Middle-East, was also a point in this conference.

The participants underlined that without Afghanistan and the centrality of Afghanistan as focal point between different regions of Asia, it is not easy to the world to be one continent in cooperation and peace and also harmony.

From other sides, the development and cooperation in this part of our world is not an isolated issue but it is an issue of stability, peace and also security. To work together to make our region secure, we are fighting
also the threats which are coming from the terrorist activities through the different parts of our continent.

Regarding debt issues, it is very important that the world has an inter-dependent economy. Interdependence between the countries of our region to have (will have) a common benefit of development because we know the experience in Europe and other parts of the world. It is very successful in reducing the tensions between different countries to find some solutions for regional conflicts, ethnic conflicts and also ideological interference and instrumentalisation of terrorism as an instrument of policy. To reduce all of this danger, it is eminently necessary to work together for prosperity and democracy and stability in our region. Thank you.

**Question (PTI):** I want to know if terrorism is posing a major hindrance to economic reconstruction of Afghanistan. Is there any commitment from Pakistan to curb these activities coming from across the border?

**Afghan Finance Minister:** Pakistan is one of the active participants in reconstruction of Afghanistan. Pakistan supported reconstruction in my country with more than 260 million dollars and we are very grateful for Pakistan’s cooperation in different fields, including development. It is not possible to have stability in this region. We hope that as soon as possible, Pakistan (would) open the road from India to Afghanistan for strengthened common cooperation and for the realization of the recommendation of the Delhi conference.

**Afghan Finance Minister:** I just want to make a point on that. The resurgence of violence in Afghanistan has certainly a negative impact on the development of Afghanistan. Of course, it is not our choice. We would rather have development in an environment free of violence and that will make development less costly for us and much faster. But that is the environment in which we live. We call upon all the states in this region that terrorism and violence hurts the entire region and that we will like all countries to cooperate with us to face this menace jointly. I am confident that we will eventually overcome this problem. But if we get international support in this regard, hopefully we would be able to deal with this problem much faster and much more effectively. But, with regard to the final outcome, I have no doubt that eventually the Government of Afghanistan, with the help of the international community, will overcome this problem and we will proceed with our development in Afghanistan as we have planned it. Thank you.

**Question (The Hindu):** I have two questions - one to Mr. Mukherjee and one to Dr. Spanta.
Mr. Mukherjee, there is a reference to the Turkmenistan-Afghanistan-Pakistan-India pipeline in the Declaration that has been issued. It talks about a commercially viable project. Can you give us some idea of what kind of timeframe and are there going to be some feasibility studies conducted? What is the status of that project?

To Dr. Spanta, yesterday in his speech Mr. Hamid Karzai referred to the fact that international forces are still needed in Afghanistan and the job is not yet over. Is there an impression that some sections of the international community want to cut and run from Afghanistan?

**External Affairs Minister:** I am first responding to the question in respect of TAPI. After the finalization of the detailed project reports, it would be possible to indicate the timeframe. (Presently) It is just not possible to indicate the timeframe by which the project will be completed. So far as economic viability is concerned, of course, the project has economic viability. That is why we are interested in it.

**Afghan Finance Minister:** The commitment of international community in Afghanistan is a long-term commitment. The job is not done. If the reason why the forces of international community are in Afghanistan and why they are active there is eliminated, our appeal is also that the international forces leave Afghanistan and go back home. But all of the members of the anti-terror coalition like ISAF and NATO are ready to continue their commitment in Afghanistan and we do not have any sign that they will leave Afghanistan. We are very happy and they have our confidence. They have the support and solidarity of Afghan people. An absolute majority of the people of Afghanistan are happy that the international forces are there in Afghanistan and that is our common goal to make our region secure.

**Question:** I have two questions. Dr. Spanta, in the region we have two important countries – Iran and Pakistan. Can you go into details whether what was their precise role in this session and what did they promise to do to enhance the possibilities for regional integration?

Mr. Mukherjee, you spoke of establishment of a Centre in Kabul. Is there a timeframe for that? What will be the job of this center?

**Afghan Finance Minister:** Since I participated a little bit more on those discussions, I will take this question.

Pakistan expressed its cooperation with regard to the three major
projects. This is with regard to the role of Afghanistan in facilitating transportation between Central Asia, and between South Asia. With regard to the power or energy trading, since Pakistan would be a beneficiary in that regard and also with regard to trade facilitation and harmonization of the custom procedures. On all of these three points, Pakistan expressed its cooperation. Although the representative of Iran did not go into great details, but in general the representative of Iran was also cooperative and said they have endorsed the New Delhi Declaration so that they were also cooperative in this regard.

**External Affairs Minister:** So far as the Centre is concerned, it is an Asian Development Bank Project. The major objective of the center would be to carry out studies for in-depth and vigorous pursuit of the constructive, practical and specific initiatives for regional development. We are trying to institute the Centre as early as possible. But certain preparations and detailed project reports are to be worked out.

**Question:** Mukherjee Sahab, do you foresee any possibility of Indian military engagement inside Afghanistan in peacekeeping operations, in anti-terrorist operations there?

**External Affairs Minister:** We have not received any such request and I do not see any feasibility in the near future.

**Question (DNA):** Mr. Mukherjee, with the resurgence of the Taliban, how worried are we about the security of our people working there in different projects in Afghanistan? And, are we planning to beef up security or anything of that sort?

**External Affairs Minister:** In fact we have already made some security arrangements with some of our paramilitary forces with the cooperation of Afghan Government. After all the objective of these people is to see that India withdraws from the developmental activity in Afghanistan. Therefore, we refuse to succumb to the pressure of these groups of people, these Taliban, and our commitment to engage ourselves in the development of Afghanistan is firm. Therefore, whatever is possible to ensure the security of the persons engaged in different developmental activities, is being carried on with the support and cooperation of the Afghan Government. To supplement that effort, we have also put some of our Central Paramilitary Forces engaged therein.
291. Statement by Permanent Representative at the UN Ambassador Nirupam Sen on Afghanistan at the Security Council.

Please See Document No. 603
IRAN

292. Press Release of the Ministry of External Affairs regarding response of Official Spokesperson to a question on comments made by Secretary, Supreme National Security Council of Iran regarding India in a recent interview.

New Delhi, January 16, 2006.

In response to a question on comments made by Secretary, Supreme National Security Council of Iran regarding India in a recent interview the Official Spokesperson said:

We have seen comments made by Mr. Ali Larijani, Secretary, Supreme National Security Council of Iran regarding India in a recent interview. We regret this reference to India1.

We have consistently maintained that it is a State’s sovereign right to enter into treaties and international agreements. Every State must fully comply with its international obligations and commitments and in a transparent manner.

India is a responsible nuclear weapon State and has always been in compliance with its obligations under international treaties and agreements.

F F F F F

1. In a CNN television interview Larijani said: In comparing American behaviour to Iran with countries that recently developed nuclear weapons, they are being harmonious now because they think that in ten years’ time we will develop nuclear weapons. But compare that to India, it does have nuclear weapons but they have extensive relations in the nuclear field. This dual standard is detrimental to international security.”

New Delhi, January 27, 2006.

During the past two weeks, India has been undertaking active consultations with all key members of the IAEA Board of Governors and with Iran, in order to avoid confrontation and to promote the widest possible consensus on handling the Iran nuclear issue. In all these consultations, India has urged:

i) that all concerned countries should avoid confrontation and work in the spirit of seeking a mutually acceptable solution;

ii) that Iran’s right to develop peaceful uses of nuclear energy for its development consistent with its international obligations and commitments should be respected;

iii) Iran’s willingness to work together with the IAEA to remove any outstanding issues, about its nuclear programme should be welcomed. In this regard, the Agency should be allowed to proceed according to its work programme and submit a detailed report.

India welcomes all initiatives, including from Russia, which could enable a consensus to be reached on this issue and urges further intensive efforts in that direction.

294. Reaction of the Official Spokesperson to questions on India’s vote on the Iran nuclear issue at the IAEA Board meeting in Vienna.

New Delhi, February 4, 2006.

- The Resolution is well-balanced. Several amendments suggested by Non-aligned countries were accepted by the EU co-sponsors. While there will be a report to the Security Council, the Iran nuclear issue remains within the purview of the IAEA.

- It has been our consistent position that confrontation should be avoided and any outstanding issue ought to be resolved through dialogue. The Resolution has won a period of six weeks, before the
march IAEA Board Meeting, for diplomatic efforts to continue and to get negotiations between the EU-3 and Iran back on track. It also provides an opportunity for serious consideration of the Russian proposal for a joint venture with Iran for uranium enrichment.

- Our vote in favour of the Resolution should not be interpreted as in any way detracting from the traditionally close and friendly relations we enjoy with Iran. It is our conviction that our active role, along with other friendly countries, enabled the tabling of a resolution that recognizes the right of Iran to peaceful uses of nuclear energy for its development, consistent with its international commitments and obligations, while keeping the door open for further dialogue aimed at resolving the outstanding issues within the purview of the IAEA.

- We call upon Iran to respond positively to the requests from the IAEA Board to restore the confidence building measures it had voluntarily adopted in the Paris agreement, and continue to cooperate with the IAEA in resolving any outstanding issues related to its nuclear programme.

295. Suo Motu Statement by Prime Minister Dr. Manmohan Singh in Parliament on Iran.

New Delhi, February 17, 2006.

Taking into account the concerns that have been raised about India’s vote on the Iran nuclear issue at the meeting of the Governing Board of the International Atomic Energy Agency in Vienna, on February 5, 2006, I rise to apprise this august House of the facts of this matter.

Let me begin by affirming that India’s vote on the IAEA resolution does not, in any way, detract from the traditionally close and friendly relations we are privileged to enjoy with Iran. Indeed, India-Iran ties, as we have repeatedly emphasized, are civilizational in nature. We intend to further strengthen and expand our multifaceted ties with Iran to mutual benefit.

Let me also state that the importance of India’s relations with Iran is not limited to any single issue or aspect. This relationship is important across a wide expanse of cooperation, both bilateral and multilateral. We also cooperate on regional issues. We value this relationship and intend to do
what we can to nurture our bilateral ties. Let me reiterate in this context that we are committed to the proposed Iran-Pakistan-India gas pipeline. The economics of this project is currently under professional investigation by internationally reputed consultants. This is a necessary step in taking the pipeline project forward.

On the specific issue of Iran’s nuclear programme, let me reiterate what I have said publicly on several occasions. As a signatory to the NPT, Iran has the legal right to develop peaceful uses of nuclear energy consistent with its international commitments and obligations. It is incumbent upon Iran to exercise these rights in the context of safeguards that it has voluntarily accepted upon its nuclear programme under the IAEA.

These rights and obligations must also be seen in context of developments since 2003, when IAEA began seeking answers to a number of questions arising from Iran’s nuclear activities, some of which were undeclared to the IAEA in previous years. Subsequently, in context of these demands, Iran did extend cooperation to the IAEA in investigations of its some of these activities.

In November 2004, Iran agreed with the EU-3 (France, Germany, and the UK) to voluntarily suspend all enrichment and reprocessing activities until questions relating to its past nuclear activities were clarified by the IAEA. However, since August last year, Iran has renewed production of uranium hexafluoride and thereafter, has resumed uranium enrichment.

Successive reports of the Director General of the IAEA have noted that while Iran’s cooperation has resulted in clarifying a number of questions, there remain many unresolved questions on key issues. These include the use of centrifuges imported from third countries, and designs relating to fabrication of metallic hemispheres. Hon'ble Members are aware that the source of such clandestine proliferation of sensitive technologies lies in our own neighbourhood, details of which have emerged from successive IAEA reports. This august House will agree that India cannot afford to turn a blind eye to security implications of such proliferation activities.

The objectives of upholding Iran’s rights and obligations and our security concerns arising from proliferation activities in our extended neighbourhood have shaped our position. Therefore, our approach has been consistently in favour of promoting all efforts to find a solution, based on acceptable mutual compromises, in which Iran’s interests and the concerns of the international community would be addressed. We have
consistently worked to promote a consensus in the IAEA towards this end. This has been the logic of our stand at the IAEA Board of Governors Meetings both in September 2005 and earlier this month.

I might remind Hon’ble Members that it is only on these two occasions that the Resolution that resulted has not been a consensus one, and a vote has been necessary. Despite that, in the latest vote this month, the Resolution not only had the support of all P-5 countries including Russia and China, but also of important NAM and developing countries such as Argentina, Brazil, Egypt, Ghana, Singapore, Yemen and Sri Lanka.

The resolutions passed in September last year and earlier this month underlined the need for time to be given for diplomatic efforts to continue. The recent resolution of February 5 asks the Director General of IAEA to inform the UN Security Council of the status of negotiations with Iran, and the steps that Iran needs to take to address these questions. It calls for continued diplomatic efforts including through exploration of the option provided by Russia, which we have supported. Hon’ble Members are aware that Russia had offered to locate a joint venture project on Russian soil to address Iranian needs for enriched uranium, provided Iran suspends its enrichment programme to increase international confidence regarding the unresolved questions of the last two decades. Russia and Iran are currently in discussions on the subject, and we remain hopeful of a positive outcome. It is our hope and belief that the issues that have arisen can still be resolved through discussion and dialogue.

Mr. Speaker, Sir, I have set out the background in which we have taken a position at the IAEA. I would like to reiterate our unshakeable conviction that such a sensitive issue, which concerns the rights and international obligations of sovereign nation and a proud people can only be addressed through calm, reasoned diplomacy and the willingness on all sides to eschew confrontation and seek acceptable compromise solutions. We are therefore deeply concerned by escalating rhetoric and growing tensions and the possibility of a confrontation over this issue. This is a matter of concern for us as tensions in this region ¾ where our vital political, economic and security interests are involved ¾ affects us directly. The region hosts 3.5 million Indian citizens whose welfare is a major concern of my Government.

We therefore call upon all concerned to exercise restraint, demonstrate flexibility and continue with dialogue, to reach an amicable
solution. As I mentioned, there will be another meeting of the IAEA Board in March this year at which a full and regular report will be presented by the IAEA Director-General. In the days to come, we will support diplomatic efforts in this regard, drawing upon our friendly relations with all the key countries involved.

The Government is conscious of the need to balance several important considerations in this regard. We have a strong and valuable relationship with Iran which we would like to take forward in a manner that is mutually beneficial. We have great respect and admiration for the Iranian people with whom our fraternal ties go back several millennia. We have every intention of ensuring that no shadow is cast on these bonds.

In the overall context that I have outlined in detail, I am confident that this august House will agree that the stance taken by this Government has been consistent and in keeping with our own well considered and independent judgment of our national interests. I am confident that this policy will receive the support of this House and our nation.

296. Reply by Prime Minister Dr. Manmohan Singh to the Lok Sabha debate on India’s vote at the IAEA on Iran’s Nuclear Programme.

New Delhi, March 6, 2006.

Mr. Speaker Sir, Hon’ble Members have raised several points in the debate following my suo motu statement on our vote at the IAEA on Iran’s nuclear programme. I respect the views voiced by Hon. Members on this important issue and I thank them for contributing to the debate in this august House.

Several members have made the point that our foreign policy should be guided by national interests, and that our positions on such issues should not be based on the position of other countries. My friends, Shri Gurudas Dasgupta and Shri Subroto Bose made these points, as did Shri Kharabela Swain. There can be no two opinions that Government should not take predetermined positions, or positions at the behest of other nations. No one can dispute that it is Government’s duty to take a position on such matters after a dispassionate examination of the facts, keeping in mind our
national interests. I respectfully submit that in the present case, the Government has done precisely this. We have considered the facts and have exercised our independent judgment before taking a position. This is also the very essence of the policy of Non Alignment, which my friend Shri Rupchand Pal exhorted us to follow.

Let me recapitulate the essential facts of the matter:

- Iran has the legal right to develop peaceful uses of nuclear energy, but it also has certain obligations and responsibilities, based on the Safeguards Agreement which it voluntarily undertook with the IAEA.

- It was in recognition of the existence of several unanswered questions that Iran agreed to start the process of assisting IAEA with investigations into several past activities.

- An important part of this process was the voluntary suspension by Iran of all enrichment and reprocessing activity in November 2004.

- However, since last August, Iran has renewed production of Uranium Hexafluoride, and since then, of uranium enrichment.

- Unresolved question regarding centrifuge imports and designs to make uranium metallic hemispheres remain. The origin of such procurement is an issue of direct concern for us.

Under these circumstances, our position was based on these facts, which emerged from an objective investigation by the IAEA, and through information disclosed by Iran itself.

Mr. Speaker Sir, There is also the question that several Hon. Members raised regarding the IAEA Board of Governors’ meeting today. Shri Chandrappan and Shri Owaisi spoke of this. I should inform Members that it is as yet not clear in what manner this issue will be taken up by the Board of Governors today. The Resolution adopted by the IAEA Board of Governors last month mentions certain steps that Iran and the IAEA will be taking. Discussions are taking place in Vienna on this matter. The Government’s approach will be based on our consistent policy of promoting efforts for a resolution of issues through dialogue and discussions. I would like to assure Hon. Members that Government will take into account the sentiments expressed in this House in this context.

Some points were also made regarding options that could have been
explored by the international community. There have also been discussions between Iran and Russia in this regard. We remain hopeful that solutions acceptable to all sides will be found. We do not favour confrontation, rhetoric or coercive measures as these only exacerbate tensions in the region and beyond. India has consistently stated that all sides must work to find mutually acceptable compromise solutions, and that confrontation should be avoided at all costs. For this to be possible, time must be given for diplomacy to work. I think there is consensus in Parliament and in our country that confrontation is not in the interests of India or of our region. Whenever the matter is taken up, we will work with all like-minded countries, including those from the NAM, for a mutually acceptable resolution of the issue.

Mr. Speaker Sir, Several Hon. Members, including Maj Gen Khanduri expressed concerns regarding our relations with Iran, and the effect of these developments on this important relationship. As I said in my suo motu statement, our Government is committed to widening, deepening and expanding our diverse and mutually beneficial ties with Iran. Only recently, my colleague the Minister of State for External Affairs, Shri E Ahammed, visited Tehran. He had meetings with the President of Iran, H.E. Mr. Ahmadinejad, as well as several Ministers of the Government of the Islamic Republic of Iran. Shri Ahammed emphasized our desire to remain engaged with Iran on all issues of mutual interest. Our desire to further deepen the friendly and productive ties between our two countries was fully reciprocated.

Government will continue to monitor the situation closely, and will deal with the Iran issue with the seriousness that it merits.

In dealing with this issue, we will pay due attention to our relationship with Iran, the need to maintain peace and stability in the Gulf region and safeguarding our own security.

I reiterate that this House can rest assured that we will also take into account the sentiments expressed in the House.
297. Response of Official Spokesperson to Reports of Sanctions Against Iran.

New Delhi, April 25, 2006.

India values its civilizational ties and traditionally close and friendly relations with Iran. We have repeatedly declared that issues relating to Iran's nuclear programme should be resolved through dialogue. Iran has the right to develop nuclear energy for peaceful purpose, but this must be consistent with its international commitments and obligations. India, along with other friendly countries, has continued to make efforts to reach an amicable resolution of outstanding issues through patient dialogue. Confrontation or the threat or use of force can only exacerbate tensions in a region which is of vital importance to India, and must therefore be avoided at all costs.

1. Nevertheless India was cautious in regard to Iranian nuclear programme. It suspected that Iran had nuclear ambitions and India could not close its eyes to that. When a delegation of Muslims met the Prime Minister on April 18 to discuss India's foreign policy particularly India's vote against Iran in the IAEA, the latter told the delegation that Iran has had a clandestine nuclear programme for several years and it is not in India's interest to have another nuclear weapon state in the neighbourhood. He felt that improvement in India-US relations was in the interest of all Indians. He assured the delegation that there was no question of India succumbing to any external pressure.
298. Press Release of the Ministry of External Affairs giving response of Official Spokesperson to a question on the report submitted by Director-General, IAEA on 28 April 2006, on Iran’s nuclear programme.

New Delhi, April 29, 2006.

We have seen the report submitted by Director-General, IAEA on 28 April 2006, on the Iran nuclear programme.

The DG, IAEA had also visited Iran on April 13 with the aim of enhancing Iran’s cooperation with the IAEA on all outstanding issues.

The Report elaborates the developments since the last Board meeting in March in a factual and objective manner. The Report provides a useful basis on which diplomatic efforts should continue to avoid confrontation and to promote an amicable solution.

We continue to believe that a solution ought to be found through dialogue and confrontation should be avoided at all costs. This will require flexibility on all sides. India, as always, will continue to contribute towards the exploration of all diplomatic efforts to resolve the issue in a manner that respects Iran’s right to peaceful uses of nuclear energy consistent with its international obligations and commitments.

299. Statement by Ambassador Sheel Kant Sharma, Governor for India at the IAEA on Agenda Item 8 (g): Report by the Director General on the Implementation of the NPT Safeguards Agreement in the Islamic Republic of Iran, at IAEA Board of Governors Meeting.

Mr. Chairman, My delegation commends the Director General for two noteworthy reports on this agenda item dated April 28 and June 8 which provide an impartial and factual account of IAEA’s verification work in Iran up to date. As stated by DG in his opening statement on June 12, the IAEA has not made much progress in resolving outstanding verification issues. Separately, reports point to promising diplomatic efforts under way
towards more broad-based negotiations among Iran and the Six, not only to address the nuclear issue but also Iranian genuine concerns. India has welcomed these diplomatic efforts. This is a significant opportunity to reach an amicable conclusion. All sides need to exercise restraint in words and actions at this sensitive juncture. At the same time the process may be facilitated by implementation of the requests made in the past resolutions of the Board.

We join the Director General of the IAEA in urging Iran to cooperate with IAEA to resolve all outstanding verification issues. We have consistently advocated that all outstanding issues be resolved through dialogue. We also underline IAEA’s central role in this process. It is imperative that IAEA’s work in Iran should continue with due cooperation as requested by the Board of Governors.

Thank you Mr. Chairman.

300. Press Release of Ministry of External Affairs on Prime Minister Dr. Mamohan Singh’s telephone conversation with the Iranian President Ahmadinejad.

New Delhi, April 28, 2006.

Prime Minister had a brief telephone conversation with President Ahmadinejad of the Islamic Republic of Iran this evening at Iranian request.

The leaders essentially discussed bilateral issues, including cooperation in the field of energy.

Prime Minister conveyed the good wishes of the Government and the people of India to the President and the people of Iran.

F F F F F
301. Press Release of Ministry of External Affairs on the visit of Iranian Deputy Foreign Minister Dr. Mehdi Safari.

New Delhi, August 29, 2006.

In keeping with the practice of regular high level exchanges between India and Iran, Iran’s Deputy Foreign Minister for Asia, Oceania and Commonwealth, Dr. Mehdi Safari, who arrived this morning, held talks with Secretary(East), Shri Rajiv Sikri. The discussions covered bilateral and regional issues, and focused in particular on the nuclear issue and cooperation in the energy sector.

Dr. Safari explained Iran’s response to the P5+1 package. He emphasised that Iran is open to negotiations and is willing to cooperate fully with IAEA but will insist on its rights under the NPT and on the issue being reverted to the IAEA. Secretary(East) underlined that India does not want confrontation and destabilization in the region. He said that India believes that as a signatory to the NPT Iran must enjoy all its rights and honour all its obligations. He emphasised that India wants all issues to be resolved through dialogue and discussion rather than coercion.

On energy India emphasised the importance of Iran honouring the LNG deal signed in June 2005. Both sides reaffirmed their commitment to the gas pipeline project.

Dr. Safari also called on the National Security Adviser, Shri M.K.Narayanan, and Foreign Secretary, Shri Shyam Saran.
302. Press Release of the Prime Minister’s Office on the telephonic conversation between Prime Minister Dr. Manmohan Singh and the Iranian President Mohamoud Ahmedinejad.

New Delhi, September 6, 2006.

The Prime Minister, Dr. Manmohan Singh, spoke on telephone with President of Iran, Mr. Mahmoud Ahmedinejad, today evening. The conversation was initiated by the Indian Prime Minister and lasted about 15 minutes.

Both leaders agreed that a strong and vibrant India-Iran relationship is of strategic importance for both countries, and would be beneficial for peace and prosperity of the entire region. In this context both Prime Minister and President Ahmedinejad reaffirmed the need to accelerate the implementation of all ongoing cooperation projects\(^1\) including those in the energy and transport infrastructure sectors.

Prime Minister Dr. Manmohan Singh and President Ahmedinejad expressed satisfaction at the current state of bilateral relations, which both leaders affirmed, are deeply rooted in centuries of shared history and culture\(^2\).

---

1. New Delhi was involved in discussions with Tehran and Islamabad concerning the proposed project to run a gas pipeline from southern Iran to India via Pakistan. India was also keen on importing 7.5 million tones of LNG annually from Iran though the contract for 5 million tones has been impacted following increase in oil prices internationally.

2. The Iranian President when interviewed by the daily Hindu on 8\(^{th}\) August spoke of historical and civilisational ties, and of deep cultural affinities that bind the two countries. Declaring that his government had put behind it the “dismay” it felt at India’s vote against Iran at the IAEA, Ahmadinejad said that he was looking forward to a “promising horizon” as far as bilateral relations with India were concerned. “Ours is not the kind of relationship that will be affected by one mistake,” he said.
303. Briefing points by Official Spokesperson on the visit of Foreign Minister of Iran.

New Delhi, November 16, 2006.

- Visiting Foreign Minister of Iran Mr Manouchehr Mottaki held detailed discussions with External Affairs Minister Shri Pranab Mukherjee. The discussions continued over a dinner hosted by the EAM. The Foreign Minister of Iran also called on the Prime Minister this evening.

- During the discussions, the two sides reviewed the bilateral relationship with its close, traditional and historical linkages, frequent high level political contacts and economic cooperation. It was felt that the economic potential of the relationship needed to be actualized to the maximum. In this context, the possibilities of closer cooperation in the field of energy, including the status of IPI pipeline were reviewed. EAM pointed out that Indian companies were keen to invest in Iran and the early conclusion of a Bilateral Investment Promotion and Protection Agreement as well as an agreement for Avoidance of Double Taxation would provide the necessary juridical basis for promoting such investment.

- The two sides also discussed regional issues, including Iraq, Afghanistan, the Gulf etc.

- Mr Mottaki also extended an invitation to PM Dr Manmohan Singh, on behalf of President Ahmedinejad, to visit Iran.

---

1. Apart from the pipeline, India is also interested in buying LNG from Iran for which a specific agreement had been concluded. However, Iran is interested in renegotiating the price. In this connection there was a meeting between the Iranian Foreign Minister and Minister for Petroleum Murli Deora. After the meeting the latter told the press that “they (Iranians) gave us a new offer and we will start working on that.” According to him Iranians indicated that the earlier price offered by India was very low and needed to be renegotiated. A price slightly higher than the one quoted originally by India was acceptable but it could not be much higher than the formula. Deora said that the talks for the renegotiations of the price would be held “very soon”. He further hinted that India might ask for raising the volume of imports from the original level of 7.5 million tones of which price was negotiated for five million tones last year. The increase in volume however, would be taken up only after the deal was finalized. On the gas pipeline, Murli Deeora said that the trilateral meeting with Pakistan and Iran would be held in Tehran in December, 2006. The Iranian Foreign Minister said the report of the consultants was awaited, while both the bilateral and trilateral negotiations would continue to reach common ground and implement the huge project.
304. Response of Official Spokesperson to questions on adoption of UNSC Resolution\(^1\) on Iran.

New Delhi, December 24, 2006.

Iran has the right to pursue its nuclear programme for peaceful civilian use. It has undertaken certain obligations that its nuclear programme is exclusively for peaceful purposes. We have noted the passage of the UN Security Council Resolution and are studying its implications. We continue to feel that all possible efforts should be made to address the Iranian nuclear issue by peaceful means through dialogue and negotiation and that the IAEA should play a central role in resolving outstanding issues.

\(\text{F F F F F}\)

---

1. The Spokesperson was referring to the Resolution adopted unanimously by the Security Council on December 23 imposing non-military sanctions on Iran for failure to end its nuclear enrichment programme.
IRAQ

New Delhi, May 22, 2006.

The Government of India welcomes the formation of a new Government in Iraq headed by Prime Minister Mr. Nouri K. Al-Maliki, which represents all sections of the Iraqi society.

The Prime Minister has sent a message of congratulations to Prime Minister Al-Maliki wishing him success in carrying out his new responsibilities and wishing the people of Iraq success in their efforts to bring peace, prosperity and stability in Iraq. Prime Minister has conveyed that India looks forward to further strengthening the traditionally close and friendly relations between the two peoples and countries in all fields, and has reiterated India’s willingness to continue its assistance in the reconstruction of Iraq and to cooperate with Iraq in areas of mutual interest.

306. Statement by External Affairs Minister Pranab Mukherjee on reports of the sentence to former President Saddam Hussain of Iraq

New Delhi, November 5, 2006

“We have seen reports that former President Saddam Hussain of Iraq has been sentenced to death by a Tribunal in Iraq. We understand that there is an automatic appeal procedure. Such life and death decisions require credible due process of law, which does not appear to be victor's justice and is acceptable to the people of Iraq as well as the international community. We have always stood for a peaceful resolution of the problems in Iraq. We hope that this verdict will not add to the suffering of the people of Iraq.”
307. Statement by Official Spokesperson on confirmation of death sentence on former President of Iraq Saddam Hussein.

New Delhi, December 26, 2006.

We have seen reports that the Appeals Court in Baghdad has confirmed the death sentence on former President Saddam Hussein of Iraq. It is our hope that the sentence will not be carried out and that the former President’s life would be spared. We would also hope that no steps are taken which might obstruct the process of reconciliation and delay the restoration of peace in Iraq.

Statement issued by the External Affairs Minister Pranab Mukherjee when Sadam Hussein was hanged on December 30th.

"We had already expressed the hope that the execution would not be carried out. We are disappointed that it has been. We hope that this unfortunate event will not affect the process of reconciliation, restoration of peace and normalcy in Iraq.”
ISRAEL

308. Press Release of the Ministry of External Affairs containing briefing points by Official Spokesperson on the visit of National Security Advisor of Israel.

New Delhi, February 1, 2006.

- The Israeli NSA, Maj. Gen. (Retd.) Giora Eiland is visiting India from January 31 to February 2, 2006, at the invitation of our NSA, Shri M.K. Narayanan. Both NSAs had delegation level talks on February 1, 2006.

- Israeli NSA also called on Hon’ble Minister of Defence on January 31, 2006, and had a meeting with Foreign Secretary on February 1, 2006. He shall call on Special Envoy on West Asia and MEPP, Amb. C.R. Gharekhan on February 2, 2006.

- The issues covered during the meetings were bilateral, security perspectives (regional and global) and developments in South Asia, West Asia and North Africa, and the Gulf.
Your Majesty King Abdullah the Second Bin Al-Hussein of the Hashemite Kingdom of Jordan, Your Majesty Queen Rania Al Abdullah, Your Royal Highnesses, Excellencies, Distinguished Guests, Ladies and Gentlemen,

On behalf of the Government and the people of India and on my own behalf, it gives me great pleasure to extend to Your Majesties a very warm and cordial welcome on your first State Visit to our country. I also extend a very warm and cordial welcome to all the distinguished members of your delegation. This visit comes at a time of increasing India-Jordan interactions and is a testimony to the importance that India attaches to our relations with Jordan under your stewardship, and through Your Majesty’s visit to the whole Arab world.

The linkages between India and the Arab world date back many centuries. Just as Jordan has served as the crossroads of many cultures and civilizations down the ages, India also has been home to many immigrations, ethnicities and traditions. The steady interchange of our thoughts and culture over centuries across land and sea with West Asia is a wonderful feature of our relationship. The city of Petra today, is testimony to the many great trading posts and centres of interaction between different peoples of our region. Culture and ideas from the Arab world that came to India more than 14 centuries ago and have become part of our indigenous composite civilization heritage.

India and Jordan became independent within a year of each other. India held its first Afro-Asian Conference in 1947 and signed its first bilateral agreement for cooperation and friendly relations with Jordan in the same year. This was formalized in 1950 with the establishment of full-fledged diplomatic ties. Thus, Jordan was one of the first countries with which India established full diplomatic relations. Since then, our friendly relations have been further consolidated and India became the first non-Arab country to welcome the signing of Jordan’s peace treaty with Israel.

Your Majesty, I wish to recall the visits of your late distinguished
father His Majesty King Hussein to India in 1963 and later in 1983 when he led the Jordanian delegation to the 7th Non-Aligned Summit. He visited us again on a State Visit in October 1986. In September 1997 Queen Noor led a 14-member Jordanian delegation to attend the revered Mother Teresa’s funeral in Calcutta. Our late Prime Minister Rajiv Gandhi visited Jordan in July 1988 when crucial decisions were taken to consolidate and diversify our economic and industrial cooperation and to work together in areas of science and technology.

Your Majesty, I would particularly like to commend the initiatives taken by you for the promotion of modernism combined with moderation, tolerance of pluralism and equality in stressing interaction among different faiths. The Petra initiative started by Your Majesty by bringing together Nobel Laureates to suggest remedies for modern problems – economic, political and social – is noteworthy and innovative. The enthusiasm and dynamism of Your Majesty Queen Rania Al Abdullah in taking forward the objective of rapid development of women and children under several initiatives including the Personal Status Code was seen during Your Majesty’s visit to India and your address at the India Today Conclave last February. Like Jordan, India too has reserved seats for women in some of its elected bodies.

Your Majesty, it was refreshing this year to see our bilateral relations activated in the trade and economic sectors. India was happy to host a 57-member joint delegation of the Jordanian Business Association and the Federation of Arab Businessmen who interacted with the Federation of Indian Chambers of Commerce and Industry. Later in August 2006, the Indo-Jordan Joint Trade and Economic Committee was re-activated after a 10-year hiatus. Key areas for cooperation including trade, industry, agriculture, education services, technology, tourism, shipping, aviation and investment have been identified. While phosphates remain the major item of our bilateral trade, it would be useful to diversify this into a basket of mutually beneficial sectors and we should try to double our trade to $1 Billion by 2008. In this context, we look forward to joint ventures along with Jordanian companies in the fields of fertilizers, petroleum and railway sectors for the mutual benefit of both countries. India and Jordan have some economic advantages including markets and shipping lanes, which we could suitably utilise in a win-win situation.

Your Majesty, Jordan has been an active supporter of the Palestinian cause and for its statehood much like India. You have taken bold initiatives
to revive the dialogue between Israel and Palestine by bringing together leaders of both countries, initially at Sharm-El-Sheik in February 2005 along with President Mubarak and in June 2006 at Petra. The international community should do its utmost to end the suffering of the Palestinian people and to re-start the peace process on all fronts. Jordan has played a key role in channeling aid not only from Jordan but from other countries both to Palestine and Lebanon. I would like to take this opportunity to thank the Jordanian Government for the assistance given to us during the Gulf Crisis when about 150,000 Indian nationals from the region were evacuated through Jordan. During the current crisis in Lebanon too, some Indian citizens have been evacuated through Jordan.

India like Jordan has suffered from the scourge of terrorism and we condemn terrorism in all its forms. Terrorism which kills innocent civilians cannot be justified under any circumstance. India and Jordan can work with each other in battling this global menace.

In your brief stay in India, Your Majesty, you are meeting a wide cross section of our leadership and our people. You will find a clear message in all your interactions – a message of India’s total commitment to everlasting friendship and cooperation with Jordan, based on mutual trust and understanding. Together, we are working for a better future for our two peoples and indeed our whole continent.

In conclusion, I hope that Your Majesties and the distinguished members of your delegation have had a very pleasant and useful stay in India.

Thank You!
KUWAIT

310. Press Release issued by the Presidential Secretariat on the passing away of Amir of Kuwait.

New Delhi, January 16, 2006.

The President Dr. A.P.J. Abdul Kalam has condoled the passing away of the His Highness Sheikh Jaber Al-Ahmad Al-Jaber Al-Sabah, Amir of the State of Kuwait.

In a condolence letter to the new Amir of the State of Kuwait Sheikh Saad Al-Abdullah Al-Salem Al-Sabah Dr. Kalam said “it is with a sense of great sorrow and deep regret that we learnt of the passing away of His Highness Sheikh Jaber Al-Ahmad Al-Jaber Al-Sabah, Amir of the State of Kuwait.

Sheikh Jaber’s contribution to the development and prosperity of the State of Kuwait was considerable. His farsighted vision steered Kuwait through difficult times. He will always be remembered for the vital role he played in securing the future for the coming generations and for the tireless efforts he made for the well-being of the Kuwaiti people. In his passing away, India has lost a good friend and the large expatriate Indian community in Kuwait has lost someone who enjoyed his care and benevolence.

India is united in grief with the Ruling Family of Kuwait, its leadership and its people in mourning the demise of His Highness Sheikh Jaber Al-Ahmad Al-Jaber Al-Sabah. On behalf of the Government of India and the people of India and on my own behalf I convey to you my sincere condolences1.”

1. The previous day the Government of India declared a day’s State Mourning on January 16 in memory of the late Amir. Mani Shankar Aiyar, Minister for Petroleum and Natural Gas and Panchayati Raj was deputed to visit Kuwait on January 16, 2006 to pay condolences on behalf of the Government and the people of India on the passing away of His Highness Sheikh Jaber Al-Ahmad Al-Jaber Al-Sabah, the Amir of the State of Kuwait.
311. Speech of President Dr. A. P. J. Abdul Kalam at a banquet in honour of the Amir of the State of Kuwait Sheikh Sabah Al-Ahmad Al-Jaber Al-Sabah.

New Delhi, June 15, 2006.

Your Highness Sheikh Sabah Al-Ahmad Al-Jaber Al-Sabah, The Amir of the State of Kuwait, Excellencies, Ladies and Gentlemen,

On behalf of the Government and people of India, it gives me great pleasure to welcome Your Highness and the distinguished members of your delegation on the occasion of your State Visit to India. It is a matter of great joy for us to receive you as a good friend from a great country. We are very happy to note that India is among the first countries visited by you outside the Gulf after you assumed the office of the Amir of Kuwait.

As the world’s largest democracy, India rejoices in the fact that Kuwait also enjoys strong democratic traditions. We are pleased to note Your Highness’s contribution towards empowerment and enfranchisement of women in Kuwait. Your Highness’s interest in providing for a strong and vibrant Kuwait which moves ahead with the times is a factor of stability for the region and for peace and prosperity of the friendly people of Kuwait.

India and Kuwait have a shared history. We have known each other for centuries and since the independence of both our countries, our relationship has flourished to mutual benefit. India has been a centre of higher education for Kuwaitis, particularly of the older generation. After the discovery of oil and particularly since the 1970s, our links have been nurtured and developed not only through our traditionally close and historical ties but also through the active presence of the half a million members of the Indian expatriate community, who have made Kuwait their home. This community forms an umbilical link with India and acts as a strong bond in the furtherance of our partnership. While the Indian diaspora in Kuwait has contributed to the welfare and development of your great country, we appreciate the care and assistance, which has been extended by Your Highness to the members of the Indian community.

Political relations between our two countries have never been stronger than now and they are free from any problems or issues. This should enable us to provide a strong platform for the further consolidation and development of our mutually beneficial cooperation in other areas.
However, Your Highness, the economic and commercial cooperation between our two countries is not commensurate with its true potential. It is in this context, that we are happy to note that Your Highness’s delegation includes a strong business component. I hope that during your visit, the captains of our industry would be able to identify areas where they could cooperate and participate in each other’s development. The opportunities are immense and the time is right.

We also see Kuwait as an important partner in providing for India’s energy security. Kuwait is India’s second largest source for crude oil imports. As India rapidly expands its economy in the coming years, our cooperation in the energy and related sectors will be an important area underpinning our partnership. We could also be a partner in the exploration of your Oil and Natural Gas Resources.

India would be happy to share its experience with Kuwait as also its expertise in the fields of Science and Technology, Information Technology, Biotechnology, healthcare and higher education. The specific areas of cooperation could include Agriculture - especially desert cultivation and collaborations between our higher institutes of Technology. We would be happy to welcome investment by Kuwaiti agencies in various sectors including energy, infrastructure development and manufacturing. While there are many challenges, the opportunities are immense and there are no barriers, which should come in the way as we consolidate our cooperation in the economic, commercial, and investment related areas.

Your Highness’s discussions during the visit would have confirmed the mutuality of our interests and the identity of our views on various issues confronting humanity in the 21st century. We share a similar outlook on matters relating to economic development, environment protection, non-proliferation and the war against terrorism. Both India and Kuwait are sincerely interested in seeing peace and stability return to Iraq in the interest of its people and the region. We both support the establishment of an independent and viable State of Palestine. India and Kuwait would like to see the issues relating to Iran being settled through dialogue and consultations with respect for international law and obligations by each and every party concerned. India and the Gulf Cooperation Council have been working together towards a Free Trade Arrangement, which would provide greater cooperation between India and the region and between South Asia and the Gulf Cooperation Council. We look forward to working very closely with Your Highness to provide a greater enrichment and content to our bilateral partnership as also for the betterment of our people.
In conclusion, let me wish you, Your Highness, and the distinguished members of your delegation a very pleasant and useful stay in India. Thank You!

312. Joint Statement issued on the occasion of the State visit to India by His Highness Sheikh Sabah Al-Ahmad Al-Jaber Al-Sabah Amir of the State of Kuwait.

New Delhi, June 19, 2006.

The Amir of the State of Kuwait His Highness Sheikh Sabah Al-Ahmad Al-Jaber Al-Sabah paid a State Visit to India from June 14-19, 2006.

During the visit, His Highness the Amir held wide ranging and very fruitful talks with the President of India His Excellency Dr. A.P.J. Abdul Kalam and the Prime Minister of India His Excellency Dr. Manmohan Singh. In their meetings, the leaders of the two countries recalled the historical ties between India and Kuwait and noted that the mutually beneficial and traditionally close interaction, which has existed between the peoples of the two countries over several generations, had stood the test of time. They stressed the need for consolidating this relationship and building a strong partnership for the 21st century between the two countries in keeping with their responsibility for promoting peace, stability and security in the region and the world. The leaders of the two sides expressed satisfaction with the current state of bilateral relations and, recognising the considerable existing mutual goodwill, underlined the need for its continuance by the new generation of the two countries.

They welcomed the conclusion of various agreements during the visit of His Highness the Amir of the State of Kuwait to India. They acknowledged that these agreements and those already existing would strengthen the framework for the consolidation of friendship and cooperation between India and Kuwait.

They noted with satisfaction the steady progress being made in bilateral economic and commercial cooperation between the two countries and expressed the confidence that the considerable potential that exists would be fully utilized to mutual benefit. To achieve this they agreed that Ministerial and official level exchanges between India and Kuwait would
be intensified. It was also agreed that the India-Kuwait Joint Commission for Economic and Commercial Cooperation would hold its next session in the last quarter of 2006 and take stock of the current state of bilateral economic cooperation and identify avenues for further strengthening it. The two sides agreed that the Commission would meet regularly and frequently. They agreed to set up Working Groups on investment; energy and petrochemicals; labour and manpower development and other areas as necessary. The Working Groups would meet in the second half of July 2006 in New Delhi and would submit their reports to the Joint Commission.

Both sides noted that there were considerable opportunities for the development of bilateral economic, trade and investment cooperation and that steps would be taken to actively promote investment cooperation in all sectors including petroleum and petrochemicals, fertilizers, energy, civil aviation and infrastructure in each other's countries. They would encourage private and public sector participation in this regard. The Indian side welcomed the proposal of the Kuwaiti side to establish a holding company to promote investment in both countries.

The State of Kuwait as a major oil producer with substantial hydrocarbon reserves and the Republic of India as a major and growing consumer of hydrocarbons recognized the potential for mutually beneficial energy partnership based on complementarity of interests. They intend to develop and expand cooperation between their respective oil companies for encouraging, promoting and establishing a long-term relationship in the supply of crude oil and petroleum products, upstream and downstream joint ventures, refineries, petrochemical industries and marketing, both in Kuwait and India and internationally, as permitted by their respective laws and regulations.

In New Delhi, His Highness the Amir addressed a luncheon meeting of representatives of apex Indian chambers of commerce and industry, drawn from the ASSOCHAM, CII and FICCI. His Highness the Amir also visited Mumbai where the accompanying business delegation met their counterparts.

They agreed that the two countries would work for closer cooperation in the field of technology, in particular in the field of information and communications technology; agriculture; biotechnology; and non-conventional energy technologies. Exchange of experts would take place for developing cooperation in these areas.
The two sides agreed that cooperation would be enhanced between them in the education sector.

The two countries would work towards enhancing cooperation in the health sector, including health services, exchange of health personnel, health education and pharmaceuticals.

The Kuwaiti side appreciated the role and contribution of the Indian community for the development and progress of the State of Kuwait. The Indian leaders expressed their appreciation for the care and benevolence provided by the State of Kuwait towards the Indian community. The Kuwaiti side briefed the Indian side on the proposed reform in labour laws which would protect the interest of skilled and unskilled labour in Kuwait.

The two sides denounced terrorism in all its forms and manifestations and reaffirmed their intention to strengthen their cooperation in combating terrorism at the bilateral level and within the multilateral system of the United Nations.

India and Kuwait welcomed the formation of the new Government in Iraq headed by Prime Minister Nouri Al-Maliki, which represents all sections of the Iraqi society and wished the Prime Minister and his Government success in their efforts to bring peace, prosperity and stability to Iraq. Both sides expressed their willingness to continue their assistance for the reconstruction of Iraq.

Both sides reiterated their support for the establishment of a sovereign, independent, united and viable State of Palestine within a reasonable timeframe through a negotiated settlement within secure and recognized borders as envisaged in the Quartet Roadmap and relevant UN Security Council Resolutions. Both sides condemned the killing of innocent civilians. India and Kuwait emphasized the importance of reinvigorating the Peace Process in the Middle East in accordance with the Arab Peace Plan of 2003 and the Quartet Roadmap and pledged to continue their developmental and humanitarian assistance to Palestine.

They took note of the current situation around the Gulf and mentioned that while Iran had the right to develop nuclear energy for peaceful purposes, it should be done in consonance with its international obligations. They also underlined that the resolution of the current issues should be through dialogue and consultations, giving diplomacy a chance and that confrontation should be avoided at all costs.
The leaders of the two countries agreed that regular exchanges of high level visits between India and Kuwait would help sustain the momentum of bilateral relations. His Highness Sheikh Sabah Al-Ahmad Al-Jaber Al-Sabah, Amir of the State of Kuwait thanked the President and the Prime Minister of India for their hospitality.

His Highness Sheikh Sabah Al-Ahmad Al-Jaber Al-Sabah, Amir of the State of Kuwait extended a formal invitation to His Excellency Dr. A.P.J. Abdul Kalam, President of the Republic of India and His Excellency Dr. Manmohan Singh, Prime Minister of the Republic of India to visit the State of Kuwait at a mutually convenient time. The invitations were warmly accepted.

New Delhi, August 16, 2006.

The Government of the Republic of India and the Government of the State of Kuwait (hereinafter referred to as the “Contracting Parties”);

Being desirous of strengthening the bonds of friendship between the two countries and promoting fruitful cooperation in the judicial and legal spheres;

Recognizing the need to facilitate the widest measure of legal and judicial assistance in civil and commercial matters;

HAVE AGREED as follows:

SCOPE OF APPLICATION

Article 1

1. The Contracting Parties shall grant each other under this Agreement the widest measure of mutual legal and judicial assistance in civil and commercial matters in accordance with their national laws.

2. Assistance under this Agreement shall apply to:
   a) service of summons, court notices and other judicial documents, or processes;
b) taking of evidence by means of Letters of Request or Commission;
c) execution of decrees.

3. This Agreement shall be without prejudice to any rights and obligations of the parties pursuant to other treaties or arrangements.

4. This Agreement shall apply to any requests for mutual legal and judicial assistance relating to any civil or commercial matters arising either prior to or after its entry into force.

CENTRAL AUTHORITIES AND AUTHENTICATION OF DOCUMENTS

Article 2

1. Requests for legal and judicial assistance shall be made through the Central Authorities of the Contracting Parties.

2. In the Republic of India, the Central Authority is the Ministry of Law & Justice (Department of Legal Affairs). In the State of Kuwait, the Central Authority is the Ministry of Justice (International Relations Department).

3. Unless otherwise stated, all the documents in connection with the legal and judicial assistance shall be officially signed by the court under its seal, which shall be authenticated by the Central Authority of the Requesting Party.

4. All requests and supporting documents shall be furnished in duplicate and shall be accompanied by a translation into one of the official languages of the Requested Party, or in English.

SERVICE OF SUMMONS, COURT NOTICES, AND OTHER JUDICIAL DOCUMENTS

Article 3

1. Service of summons, court notices and other judicial documents shall be effected in accordance with the procedure provided for in the laws of the Requested Party, or by a particular method desired by the Requesting Party, unless such a method is incompatible with the law of the Requested Party.

2. Summons, court notices and other judicial documents served in pursuance of this Agreement shall be deemed to have been served in the territory of the Requesting Party.
3. The provisions of paragraph 1 of this Article shall not preclude the right of the Contracting Parties to effect such service through its diplomatic or consular representatives, of summons, court notices and other judicial documents on its nationals residing in the territory of the other Contracting Party without application of any compulsion. Service in such cases shall entail no responsibility for the other Contracting Party.

4. Service of summons, court notices and other judicial documents may be effected in special manner by an express request from the Requesting Party provided that it shall not be incompatible with the laws of the Requested Party. Summons, court notices and other judicial documents, served in accordance with the provisions of this Agreement shall have the same legal effect as if they had been served in the territory of the Requesting Party.

5. Any claim about the addressee being a national of the State in whose jurisdiction the service is to be effected shall be determined in accordance with the law of that State.

Article 4

Any request for the service of summons, court notices and other judicial documents shall be accompanied by all particulars concerning the name and title, place of residence or business of the addressee and a list of documents to be served on that person. Where any special mode of service is desired, this should also be indicated in the request.

Article 5

1. A request for service of summons, court notices and other judicial documents, which is in conformity with the provisions of this Agreement, may not be refused, unless the Requested that compliance with the request would infringe its so sovereignty security, public order or national interest.

2. Service may not be refused on the ground that the request doesn’t show sufficient legal grounds supporting the merits of the case.

3. Whenever the service is not effected, the Requested party shall forthwith notify the Requesting Party of the reasons therefore.
Article 6

1. The competent authority in the Requested Party shall serve the judicial documents and papers in accordance with the laws and rules applicable in this regard. No fees and costs may be levied for effecting, such service.

2. Service may be effected in a special mode or manner specified by the Requesting Party, provided that it does not contravene the laws of the Requested Party.

Article 7

1. The powers of the competent authority in the Requested party shall be limited to the delivery of the judicial documents and papers to the addressee.

2. Delivery shall be proved either by the signature of the addressee on the copy of the judicial document or paper, or by a certificate issued by the competent authority stating the name of the addressee, the date and the mode of delivery, and where such delivery could not be effected, the reasons for such non-delivery.

3. A copy of the judicial document or paper signed by the addressee or a certificate proving delivery shall be sent to the Requesting Party through the Central Authority.

TAKING OF EVIDENCE

Article 8

1. The judicial authorities of a Contracting Party may in accordance with the provisions of the law of that Party, request for the taking of evidence in civil and commercial matters by means of Letters of Request addressed to the competent judicial authorities of the other Party, through the channels stated in Article 2 of this Agreement.

2. For the purpose of this Agreement, taking of evidence shall be deemed to cover:
   a) taking of statements, on oath or otherwise, of a witness;
   b) submission of oath to a witness, with regard to any legal proceedings; and
   c) production, identification or examination of documents, record, samples relevant to the evidence requested and submitted
by the person whose evidence is taken under sub-paras (a) & (b) above.

3. A Letter of Request shall specify:
   a) judicial or other competent authority requesting the evidence;
   b) nature of the proceedings for which the evidence is required and all necessary information related thereto;
   c) names and addresses of the parties to the proceedings;
   d) evidence to be obtained; and
   e) names and addresses of the persons to be examined.

4. Where deemed necessary, the Letters of Request shall be accompanied by a list of interrogatories to be put to the witnesses or other persons involved or a statement of the subject about which they are to be examined and the documents relevant to such evidence or statement.

5. The Letters of Request shall indicate whether the evidence required is to be taken on oath or affirmation.

Article 9
The judicial proceedings performed by way of a Commission in pursuance of the provisions of this Agreement shall have the same legal effect as if performed by a competent authority in the Requesting Party.

Article 10
1. The competent authorities of the Requested Party shall execute the Letters of Request in accordance with the provisions of its own laws and obtain the evidence required by applying the methods and procedures as are permissible under its laws, including appropriate methods of compulsion.

2. The Requested Party shall follow any special method or procedure, which has been expressly specified by the Letter of Request insofar as it is not incompatible with its laws and practices.

3. The Letters of Request shall be executed as expeditiously as possible.

4. The Requesting Party shall, if it so desires, be informed of the time when, and the place where, the proceedings will take place, in order
that the parties concerned, and their representatives, if any, may be present. This information shall be sent directly to the parties or their representatives when the Requesting Party so requests.

5. When the Letter of Request has been executed, the necessary documents establishing its execution shall be sent to the Requesting Party.

6. In every instance where the Letter of Request is not executed in whole or in part, the Requesting Party shall be informed immediately and advised of the reasons.

**Article 11**

1. The execution of a Letter of Request may be refused only to the extent that,
   
   a) the execution of the Letter does not fall within the functions of the judiciary; or
   
   b) the Requested Party considers that its sovereignty, security, public order or national interest would be prejudiced by its execution.

2. Execution may not be refused solely on the ground that under its internal laws the Requested Party claims exclusive jurisdiction over the subject matter of the action or that its internal laws would not admit a right of action on it.

**Article 12**

The execution of Letters of Request and taking of evidence by the Requested Party shall not give rise to any reimbursement of charges, expenses or costs, under whatever description, by the Requesting Party. However, the Requested Party shall have the right to seek reimbursement of:

a) any expenses and charges paid to the witnesses, experts or interpreters,

b) any costs incurred to secure the attendance of witnesses who have not appeared voluntarily, and

c) any costs and expenses occasioned by the use of a special procedure on request.
Article 13
1. A witness or an expert, whatever his nationality, appearing on a summons before the judicial authorities of the Requesting Party shall not be prosecuted or detained or subjected to any other restriction of his personal liberty in the territory of that Party in respect of acts or omissions prior to Party his departure from the territory of the Requested party.

2. The immunity provided for in this Article shall cease when the witness or the expert, having had for a period of 30 consecutive days from the date when his presence is no longer required by the judicial authorities an opportunity of leaving, has nevertheless remained in the territory, or having left, has returned thereto.

Article 14
A diplomatic officer or consular agent of either Contracting Party may, in the territory of the other Party take the evidence, without compulsion of nationals of the Party which he represents, in aid of judicial proceedings commenced in the courts of the Contracting Party which he represents.

Article 15
A person duly appointed as a Commissioner by the courts of either Contracting Party may, without compulsion, take evidence in the territory of the other Contracting Party, in accordance with the laws of that Party.

RECOGNITION AND EXECUTION OF DECREES
Article 16
1. Each of the Contracting Parties shall, in accordance with its laws, recognize and execute conclusive decrees passed by the courts of the other Contracting Party in civil, commercial or personal matters and by criminal courts in civil matters.

2. The term “Decree” as used in this Agreement, whatever its designation, means any decision or order rendered in judicial proceedings by a competent court or arbitral tribunal or other quasi-judicial authority of the Contracting Parties.

3. The provisions of this Agreement shall also apply to interim or provisional measures.
**Article 17**

In disputes involving the question of capacity or status of a person, the courts of the Contracting Party of which that person is a national at the time of institution of the suit shall be competent in those matters.

**Article 18**

The courts of the Contracting Party where immovable property is situated shall be competent to determine the rights connected with such property.

**Article 19**

In matters other than capacity or status of a person or immovable property, the courts of a Contracting Party shall have jurisdiction in the following cases:

a) the defendant has his domicile or residence in the territory of that Contracting Party at the time of institution of the suit; or

b) the defendant has at the time of institution of the suit, a place or a branch of commercial or industrial nature or works for gain in the territory of that Contracting Party and the suit relates to such activity; or

c) by an express or implied agreement between the plaintiff and the defendant, the contractual obligations giving rise to the litigation are or have to be performed in the territory of that Contracting Party; or

d) in case of non-contractual liability the act is committed in the territory of that Contracting Party; or

e) the defendant expressly or impliedly submitted to the jurisdiction of the courts of that Contracting Party, and the law of that State allows such submission; or

f) or any application for interim or provisional measures, if the courts of such Contracting Party are deemed competent to hear the principal dispute, by virtue of the provisions of this Agreement.

**Article 20**

Subject to the provisions of this Agreement, the court of the Contracting Party requested to recognize and execute a decree shall, when examining the grounds of jurisdiction exercised by the courts of the other Contracting Party, be bound by the facts stated in that decree and on which jurisdiction is based, unless the said decree had been passed *in absentia.*
Article 21

A decree shall not be recognized or executed in the following cases:

a) if it is not conclusive and executable; or
b) it has not been pronounced by a court of competent jurisdiction; or
c) it has not been given on the merits of the case; or
d) it appears on the face of the proceedings to be founded on violation of the international law or the applicable law; or
e) the proceedings in which the judgment was obtained are opposed to natural justice; or
f) it has been obtained by fraud; or
g) it sustains a claim founded on a breach of any law in force, or is contrary to the constitutional rules or the principles of public order or national interest in the Requested Party; or
h) it contravenes the rules concerning the legal representation of persons suffering from lack of capacity in the Requested Party; or
i) it is passed in absentia and the defaulting party was not duly summoned in accordance with the rules applicable in his country; or
j) the dispute in which the decree was passed is pending in a suit before one of the courts in the Requested Party, between the same parties and involving the same cause of action, and that suit was raised before one of the courts of the latter Contracting Party, at a date prior to the raising of that dispute in the court of the Contracting Party which passed the decree, and provided that the court before which the suit was raised, is competent to hear and decide upon it.

Article 22

Procedures relating to recognition or execution of a decree shall be subject to the laws of the Requested Party.

Article 23

1. The competent judicial authority in the Contracting Party requested to recognize or execute a decree shall, without reviewing the merits of the case, confine itself to ascertaining the compliance of the decree with the conditions provided for in this Agreement.

2. The competent judicial authority in the Requested Party shall, when necessary, in executing the decree, take the necessary action to
notify the decree in the same manner as it would have done had it been passed in its own territory.

3. The order for execution may be made for the whole or part of the decree, if the execution of such part of the decree is severable.

Article 24

The Central Authority of the Contracting Party requesting recognition or execution of a decree in the other Contracting Party, shall submit the following:

a) an official copy of the decree;

b) a certificate showing that the decree is final and executable, unless that is provided for in the decree itself;

c) in case of a decree in absentia, an authenticated copy of the summons or any other document showing that the defendant was duly summoned; and

d) if the request is only for execution of a decree, an official copy in properly executable form.

Article 25

1. The judgment passed for the settlement of a claim which is made and filed before a judicial authority of either Contracting Party competent to consider the claim according to its national law shall be recognized and enforced in the territory of the other Contracting Party, after ascertaining that it is executable in the Party in which it was rendered and that it does not contain any provisions contravening the constitutional rules, public order or national interest of the requested Contracting Party.

2. The Contracting Party requesting recognition or execution of a judgment must submit an official copy and a certificate from the judicial authority stating the extent, if any, to which the decree has been satisfied or adjusted.

ARBITRAL AWARDS

Article 26

1. Arbitral awards given in the territory of either Contracting Party shall be recognized and enforced in the other Party provided that:

a) the award of arbitrators is based on a written agreement of the parties to the dispute to submit to arbitrators for
determination of any specific or future dispute arising out of legal relations; and

b) the award is made on matters arbitrable according to the law of the Party requested to recognize and enforce the award, unless it is contrary to the public order or national interest of the Requested Party.

2. The Contracting Party requesting the recognition and enforcement of an award shall produce a copy of the award accompanied by a certificate of the competent judicial authority in the Requesting Party to the effect that the award is executable.

3. A certified copy of the agreement between the disputant Parties empowering the arbitrators to decide the dispute shall also be produced.

RATIFICATION AND TERMINATION

Article 27

This Agreement shall be subject to ratification in accordance with the constitutional procedures in force in both Contracting Parties. It shall become effective from the date of the last intimation, by which either Contracting Party shall inform the other that all the necessary legal procedures for the enforcement of the Agreement have been fulfilled.

Article 28

This Agreement has been concluded for an indefinite period of time. Either of the Contracting Parties may terminate this Agreement by giving six months notice thereof through diplomatic channels. Upon the expiry of such notice, the Agreement shall cease to have any force or effect.

IN WITNESS WHEREOF, the undersigned, being duly authorized thereto by their respective Governments, have signed this Agreement.

Done at New Delhi on 16th day of August 2005 in two originals each in Hindi, Arabic and English languages, each text being equally authentic. However, in case of difference, the English text shall prevail.

For the Government of the Republic of India

For the Government of the State of Kuwait
LEBANON

314. Response of Official Spokesperson to a question on the escalating tension in West Asia.

New Delhi, July 1, 2006.

We regret that Israel should have chosen to give a military response to the capture of an Israeli soldier last week, rather than afford time and opportunity for diplomatic action to resolve the matter. The actions of the Israeli Defence Forces, such as the bombing of a power plant and several bridges in Gaza, have affected the lives of ordinary citizens. This will only contribute to a deterioration of the already existing humanitarian crisis there. Our grave concern over these developments has already been conveyed to the Israeli Ambassador yesterday by Shri Rajiv Sikri, Secretary (East) in the Ministry of External Affairs.

315. Statement by Official Spokesperson on the tension at the Israel-Lebanon border.

New Delhi, July 13, 2006.

We are seriously concerned about the escalating tension in West Asia as a result of developments on the Israel-Lebanese border since yesterday which have the potential to inflame the region further and widen the conflict. India condemns the abduction of two Israeli soldiers on 12 July 2006 by Lebanese militants and calls for their immediate release. We equally strongly condemn the excessive and disproportionate military retaliation by Israel which has targeted civilian infrastructure, including Beirut airport. We are particularly concerned that the actions of the Israeli Defence Forces have resulted in the killing and suffering of innocent civilians, including women and children, that is likely to exacerbate an already tense situation.

India calls upon all parties concerned to eschew violence, de-escalate the situation, and return to the path of negotiations. It is our firm conviction that lasting peace and security in the region, which is in the interest of not only the countries of the region but of the whole world, can be achieved only through peaceful dialogue and not through use of force.
316. Press Briefing by Secretary (East) in the Ministry of External Affairs Rajiv Sikri on Advisory to Indians in Lebanon.

New Delhi, July 17, 2006.

Secretary (East): As you are aware, the crisis in Lebanon has been escalating over the last few days and it is our expectation that it is likely to worsen in the coming days particularly in Southern Lebanon which may come under heavy Israeli attack. The Israeli air strikes are taking place and it is not ruled out that there could be some ground forces also that could cross over from Israel to Lebanon. Of course, this is a matter on which we have already expressed our concern and a statement was issued a few days ago but in view of the emerging situation, we are concerned about the welfare of about 12,000 Indian nationals whom we estimate are living in Lebanon. They are mostly unskilled or semi-skilled laborers working in factories, farms and industrial units. Some of them have been in Lebanon for over two decades and they continued to lived there even in the time of the earlier crisis in 1980s.

Naturally, we are concerned that should the crisis worsen then their welfare and their possible evacuation is something that we have to be concerned about. For the moment we have facilitated the evacuation of all the families of India-based personnel in the Embassy there, as well as some Indian nationals in and around Beirut who wanted to leave Lebanon. This morning a couple of buses were organized by our Embassy and we have just received information that they have safely arrived in Syria. They had crossed over the border and as we speak it’s probable that they may have reached Damascus where our mission will look after their welfare. Two buses, a total of 49 people have been sent out of Lebanon today.

Our Embassy in Beirut has been constantly in touch with the Indian nationals, who, as I mentioned, are scattered all over the country on the telephone, through associations, gurudwaras and temples, and we have issued an advisory to the nationals in view of the deteriorating situation in Lebanon. All Indian nationals living there, particularly in southern Lebanon, should take suitable precautions regarding their personal safety. I would advise them to remain in contact with our Embassy in Beirut and have given the contact telephone numbers and address of the Embassy which is being manned on a round-the-clock basis. The Embassy will give them the necessary advice and updated information on the evolving situation. It is possible that some of them may not have travel documents, or may need
other consular assistance, so our Embassy would assist in this regard. Those Indian nationals who may wish to leave Lebanon and are able to cross into Syria, have been advised to contact the Embassy of India in Damascus, which is also running a 24-hour help line and is being manned round the clock, so that they can also give advise and assistance to the Indians to get back to India.

As you are aware, there is a naval blockade by Israel, and the airport is damaged and out of commission. So the options for evacuation are quite limited, should such a situation arise. There are only a couple of roads from Lebanon to Syria, and these have also been damaged, but they are operative as the successful evacuation of the Indians in two bus loads this morning from Lebanon to Syria has brought out.

The Cabinet Secretary held a meeting this evening to review the situation. We are putting in place a contingency plan for assisting and possibly evacuating our nationals should the need arise. We have in the vicinity, four ships of the Indian Navy. They were in the Mediterranean, and they had just crossed the Suez Canal; they are being asked to go back to the Mediterranean, and position themselves off the Lebanese coast. Meanwhile, we are in touch with Israel to see what assistance they can give. We will need some clear period and slot so that the ships can dock and evacuate the people if necessary—some windows would be required.

We are also looking at other possibilities of evacuation by air from Damascus, should the need arise. So we just wanted to alert that we are taking all the precautions and making the arrangements for the welfare of our citizens who find themselves in Lebanon in this very difficult situation.

We also have the peacekeeping force in Lebanon—the UNIFIL—where 672 soldiers, including many officers are there. They are actually in the war-zone and yesterday one of the soldiers was wounded when a stray Israeli shell ricocheted off a rock or something hit him. We have protested to the Israelis and asked them to make sure that this kind of incident does not recur. We are also in touch with the UN to ascertain the future of this peace-keeping mission in the light of the hostilities that are beginning. We are awaiting word from the UN in this regard.

That in brief is the situation, and I would be happy to take any questions that any of you may have.

**Question:** Is our Embassy functioning normally?
Secretary (East): Yes, our Embassy is functioning normally. As I said, only the families have been evacuated. All our staff and the Ambassador are there. Obviously, the Embassy is not functioning in easy conditions because the communications are disrupted. It is sometimes very difficult to get through to them or for them to get through to us. As a result of the attacks and hits on the power stations, the power situation is quite bad. All the banks are closed so there is problem of finances also. But we are doing whatever is possible to tackle the situation.

Question: You mentioned the ascertaining of the future of the UN force. Are we also considering pulling out our troops?

Secretary (East): Well, the safety of our soldiers is obviously very important. It is not ruled out that the UN themselves could decide that they want to wind down this Mission. So, we are in touch with the UN in New York.

Question: You mentioned that the options for evacuation are very limited. What happened the last time? Did people leave?

Secretary (East): No, they didn’t leave actually. They all stayed on. So, it is quite possible that many of them may decide to stay on. We don’t know; we are ascertaining from the associations and the Gurudwaras/Temples. We are contacting them to find out who would like to leave. This is a general problem, which is affecting all nations, and as you may be aware there are people from all nationalities in large numbers in Lebanon. They are from western countries, Arab countries, European countries. These countries are also making arrangements to see if they can evacuate. Nobody is quite sure how it will work out because it depends whether ships can get there or aircrafts can get there, whether roads are passable or not. The information that we have is that so far only a few dozens of people or may be a hundred per country have managed to get out. We have also managed to get across about 50 people in two busloads today.

Question: Will the evacuation continue tomorrow?

Secretary (East): If there is a demand, yes we will continue with the evacuation subject to the availability of the buses. Today the buses were available but what the situation is like tomorrow I can’t say.

Question: Which are the other countries that are evacuating people. Does that include UK, US? Are we in touch with them?
**Secretary (East):** We will be touch with them also. But in the first instance we are in touch with the Israelis because they are controlling the situation and we would need their cooperation to ensure that the convoys or the ships or any aircrafts that we send there are not attacked. When we sent these two buses from Lebanon to Syria we had given the coordinates to the Israeli side including the details about buses, their numbers and people who were traveling. So they facilitated. We also got confirmation from the Israeli side that they have crossed over into Syria safely.

**Question:** Have the Israelis regretted yesterday’s incident?

**Secretary (East):** Yes, they have regretted that. That is orally what we have heard from them.

**Question:** So far how many families have…

**Secretary (East):** I was just going to give you those details: from the Indian Embassy officials’ families we have 26 people - the wives and children of our staff members and officers, and from the Indian community we have 6 families. If you want I have the names. They are: Mr. and Mrs. Sanjeev Agrawal and family, Mr. and Mrs. Dipen Modi and family, Mrs. Nirmala Fernandes and family, Mr. and Mrs. Rohit Garg, Mr. and Mrs. Ahmed and family, Mr. and Mrs. Francis and family. The Lebanese government did provide an escort up to the Lebanese border.

**Question:** Is there any plan to move out all the staff from the Embassy?

**Secretary (East):** At the moment no, because we have to have our staff there to take care of the thousands of Indians. They may have problems; they may want to move out. So at this point there is no plan to evacuate the staff.
317. Media briefing by Official Spokesperson on the situation in Lebanon.

New Delhi, July 19, 2006.

Official Spokesperson: …an update on the issue of possible evacuation of Indians from Lebanon, on which we have been getting several questions. As you know there are four Indian navy ships, which should be reaching Lebanese waters right now, and they will be berthing in the harbor as soon as they get place. As you can appreciate, there is considerable congestion building up there. So it might not be immediate, but hopefully soon enough—over the next day or so, they should be in position. And then, they will be moving the people who would want to leave the country. There are about, by present counts, a thousand people, and they will be moving them. You may well ask me if they will be moving them directly into India or somewhere else. I cannot tell you at the moment, but if the numbers remain at 900-1000, it is quite possible that the ships would bring them directly back to India. However, if the numbers are more, then like other countries, there is a possibility that we would be doing the shuttle to Larnaca in Cyprus, from where eventually an airlift would be organized.

Of course, other countries such as Nepal, Sri Lanka—there are requests from them for their citizens also to be put on the ships and that also, space permitting, will be done. This is the update on that issue.

Question: Is India applying enough diplomatic pressure to facilitate the docking of our ships?

Official Spokesperson: All diplomatic steps necessary for ensuring that our ships are given a berth under safe conditions have been taken.

Question: what are the specific steps?

Official Spokesperson: Whatever is necessary. We have to talk to the two countries involved, and that is being done.

Question: What specific steps have been taken by the Indian government to ensure the safety of the remaining Indians?

Official Spokesperson: the Indian government is not in a position there to take steps to ensure the safety of the people. We have issued an advisory to the people who are there, for instance, in South Lebanon, that they should move from there, and many of them have moved. It is an evolving situation, and the hostilities are taking place there. Naturally it is a
dangerous place, so people who are wanting to move, we are facilitating (their movement). Some people have already moved via Damascus, and now these ships have reached the place.

**Question:** So one would presume that the others who are there will not want to move?

**Official Spokesperson:** It is difficult to predict, because it is an evolving situation; it depends which direction the situation takes, what perception the people there have of the danger levels.

**Question:** Is there any proposal to withdraw the peace troops which are there?

**Official Spokesperson:** There are UN peace troops, so this is something that the UN has to take care.

**Question:** Apart from Sri Lanka and Nepal, has any other country asked for assistance?

**Official Spokesperson:** So far, I only have these two countries on my brief.

**Question:** Have we contacted the Syrian government to get them via Syria?

**Official Spokesperson:** As I said, some people have already come via Syria. About 100 people or so have already come on the highway from Beirut to Damascus, and have left.

**Question:** You said the ships can take only about 800-1000 people. Considering the number of Indians there, will that be adequate?

**Official Spokesperson:** I just said that this is the capacity of the ships; if the numbers increase, then we are planning to do a shuttle to Larnaca in Cyprus, from where an airlift will be organized. There is only a certain kind of ships which can go there, through the Suez Canal.

**Question:** There is a talk about international stabilization force. What is our view on that?

**Official Spokesperson:** This is a very rapidly evolving situation, and when there are some matters of concern to us, or matters in which we can contribute, to the international community’s thinking on the subject, then we will.
318. Media Briefing by Official Spokesperson on the evacuation of Indian nationals from Lebanon.

New Delhi, July 20, 2006.

Official Spokesperson: We will now brief you on Lebanon, and I will invite Admiral Chauhan from Naval Headquarters to also join us, in case you have any questions later on the specific technical aspects of the operation.

Official Spokesperson: The evacuation of Indian nationals from Beirut by INS Mumbai commenced earlier today. Approximately 700 Indian nationals, some Nepali nationals and a few other nationals were taken in buses arranged by the Indian Embassy to Beirut port and are boarding the naval vessel.

The evacuation follows the Advisory issued by the Government of India to all Indian nationals in Lebanon to contact the Indian Embassy in Beirut in view of the evolving situation in Lebanon. Approximately 1,000 Indian nationals had contacted the Embassy for assistance to leave Lebanon. Most of them are leaving by INS Mumbai. Today’s evacuation by INS Mumbai is one of the largest single evacuation operations from Lebanon carried out during the current crisis.

The INS Mumbai is scheduled to depart this evening from Beirut and is likely to reach Larnaca in Cyprus by early Friday morning. The High Commission of India in Nicosia in consultation with the Cyprus authorities has made arrangements for the evacuated Indian nationals to be moved from the port to the airport from where Air India aircraft will bring them back to India.

The Embassy of India in Beirut continues to receive requests for evacuation from Indian nationals and is processing them in consultation with the local authorities. The evacuation operations will continue in the coming days as required.

Question: The Indian nationals who were evacuated from within Israel…

Official Spokesperson: I don’t have any information on Israel. What I do have is that our Embassy in Israel is in touch with nodal persons in the Indian community, and getting their feedback. There has not been any request for assistance so far.
**Question:** Can all the 1000 evacuees be taken on in the INS Mumbai?

**Admiral Chauhan:** No, all of them can’t embark on INS Mumbai but the four ships put together in a single wave can lift about a 1000 odd personnel and if there are more than that number then obviously we will run a series of shuttle services so as to be able to disembark them and return.

**Question:** So today how many people will be lifted?

**Official Spokesperson:** Today we are expecting 700 people…

**Admiral Chauhan:** Yes but this will keep on changing. INS Mumbai will take the largest number in any case, because she is one of the largest ships and has a through-deck. INS Shakti which is a tanker can also absorb a largish number, but INS Shakti being a tanker will have a harder time berthing alongside. So, the next proposal is for us to send in INS Brahmaputra tomorrow morning and continue with the process of disembarkation. We don’t want to put more than one ship alongside at any given time because the period of time the ships are alongside reflects their larger risk factors.

**Question:** Why did it take so long for the Navy to send the ships?

**Admiral Chauhan:** I am quite surprised at the question. Of the reactions that were possible, the Indian naval reaction was about as quick as you can get. Remember that the ships were on deployment in any case, as you quite correctly say. But the Navy will be a subset of Government orders. We do anticipate trouble breaking out in these troubled times in many parts of the world. The ships were on overseas deployment in the Eastern Mediterranean had already transited half way down the Suez Canal, and were at Great Bitter Lakes when they were told to turn around and go back. So there is no way you can move them faster in terms of time.

**Question:** Can you elaborate on the risks that you mentioned?

**Admiral Chauhan:** Yes, there are two kinds of risks: one is simply the fact that a large number of warships and merchant vessels of various kinds milling around in a relatively close area, and second as day gives way to night, obviously the risks of navigation themselves increase. The disembarkation of the personnel requires that the ships finally unberth from their existing berths alongside the jetty. This is an operation, which at night
in a port is best avoided when there are a large number of other movements
taking place. So a large chunk of the risk is really in navigation terms. In so
far as risks of military nature are concerned, at the moment the ships
themselves are pretty well prepared and force-protection that are in-force
alongside become easier to effect when the ships are actually at sea, because
it is at sea that you can utilize the mobility that you actually possess.

Question: Does safe evacuation involve a certain degree of
coordination with Israel?

Official Spokesperson: As I told you yesterday, we have taken the
necessary diplomatic steps to be in touch with the countries involved.

Question: Have there been any more requests for evacuation since
yesterday?

Official Spokesperson: The figure I gave you yesterday was 900.
Today the figure I am giving you is a 1000 requests out of which 700 are in
the process of being evacuated. And I also said that our Embassy is
continuing to receive requests, so it is an evolving situation and it is difficult
to give an exact figure at any particular moment.

Question: Have you received requests from other nationals also?

Official Spokesperson: Well, primarily Indians. Although we expect
that others will come in, but primarily the majority of people who are
addressing the Indian Embassy are Indians.

Question: The Indians that were taken by road to Damascus, are
they still there?

Official Spokesperson: To Damascus, it has not been a one-block-
movement. They have been going in ones and twos. There are some people
who have reached, some people who have moved on. There is not one
major movement for Damascus.

Question: Any further casualties in the Lebanon crisis?

Official Spokesperson: No; there were three people injured. One
of them has been picked up by our staff car from our Embassy in Damascus,
he is being taken to Beirut, from where he will join the sealift. Two others
are currently hospitalized and are expected to be discharged in the next 3-4
days, and are expected to leave via Damascus.
**Question:** Were these people injured in the Israeli bombings?

**Official Spokesperson:** Yes, there was a bombing of the Maliban glass factory in the Bekaa valley.

**Question:** Can you give us an idea about how the berthing was done by the ships? I am asking this because it is a war-zone and there would be a shortage of port staff. So how were the formalities done? Did you do it yourself, or did you take local help?

**Admiral Chauhan:** Actually all three. It is true there was a shortage of port staff, it is true that there was a war-zone declared around the area and the Mumbai prior to berthing would have sent a contingent ashore both for force protection measures to secure the jetty in the immediate area plus to assist in the berthing. So Mumbai wasn’t a traumatic experience, but it required all three steps to be taken i.e. the port, the navy and the assistance by the Embassy.

**Question:** You said that the ships can take only 1000...

**Admiral Chauhan:** I said that a 1000 people could be moved in a single wave, that means all four ships put together would be able to lift a 1000. This is a round figure; if there are 1100, we will take them. It will just make it more difficult for the administrative conveniences which are already going to be stretched, to be extended to all 1000, and as you move form 1000 upwards, it would become progressively more uncomfortable.

**Question:** Right now, it is only INS Mumbai...?

**Admiral Chauhan:** We are berthing only one ship at a time in that region. Today, it is INS Mumbai, tomorrow we expect it will be INS Brahmaputra. Remember that the operations themselves are being controlled locally by the western fleet commander Rear Admiral Anup Singh who is on the scene and naturally is in a better position to actually decide the pitch of the nut and the pitch of the bolt, if you don’t mind my saying so.

**Question:** How many days do you think it will actually take to evacuate all 1000?

**Admiral Chauhan:** We have been receiving extraordinarily good assistance from the Embassy, and the Embassy has been doing wonderful job vis-à-vis the port authorities. At the moment we anticipate being able to put the next ship alongside tomorrow, and depending on how, as has already
been explained the situation is somewhat dynamic, as the numbers increase, the next ship will then be programmed to go alongside the next day. We are only doing the disembarkation, for the reasons that I have already stated, by day.

The next day the Official Spokesperson gave an update on the evacuation and said the following:

“the INS Mumbai reached Larnaca this morning in Cyprus with over 600 evacuees. These people are being brought back through Air India planes back to India. These planes are likely to land at Chennai and the second one at Mumbai and possibly on to Delhi depending on how many belong to which city. Our embassy in Beirut is continuing to receive requests for evacuation and this operation is therefore likely to continue over the next few days. When we have the next movement we will tell you.”

Question: Of the 600 evacuees, how many are foreign nationals? Has the Nepalese government formally requested India to help in the evacuation?

Official Spokesperson: Out of the 600 odd that were moved on the INS Mumbai, I have confirmed figures that there were six Nepalese. There may have been 1-2 others from different countries, but I do not have a confirmed figure. Yes, we have received a request from the Government of Nepal seeking assistance in evacuating Nepalese citizens from Lebanon and bringing them back. We will render whatever assistance we can. Six people have already been taken on the ship.

Question: What is the total number of people who have asked Indian embassy for evacuation?

Official Spokesperson: This is a very difficult question at a given moment of time as it is a fast evolving situation. I think going by the counts in the morning there are at least 400 odd requests but these are coming in all the time.

Question: When will be the next round of evacuation?

Official Spokesperson: In the next few days. This depends upon a variety of logistical factors on the ground. So it is difficult to give a date and time as to when the ship will actually be in a position to take on people when the processes that are required to be completed will be completed.

Question: Meantime has any other Indian been wounded or dead?
Official Spokesperson: As I told you yesterday, an Indian national Devesh Kumar had been missing. Now we have been informed that he is dead.

Question: Are the three naval ships still berthed at the Beirut harbour?

Official Spokesperson: The ships are at hand but they actually have to move in to berth to be in position to pick up passengers. That obviously happens when they are ready to get the berth and people are ready to be moved.

Question: Is India planning to protest the death of its citizen to the Government of Israel?

Official Spokesperson: At the moment we have just got news. This is about people in a hostile environment and of a person who has been killed as a result of the bombing. This is not exactly a diplomatic incident. It is a very, very unfortunate incident and a person has lost his life. Let me not say anything now more than the facts of the case. If there is anything further on the lines that you have suggested and mentioned in your question, I will get back to you.

Question: Is he a glass factory worker?

Official Spokesperson: Yes.

Question: Will India hold government of Israel liable for……..

Official Spokesperson: I think I have just answered that question to the best of my ability at the moment. I am reporting to you the fact of an unfortunate death of an Indian citizen in a situation of war. Let us wait to see what happens in terms of completing the formalities of his death. What you are talking of is largely a political question. I do not want to get into this question at the moment.

Question: Do you have any antecedents of this person who died?

Official Spokesperson: No, I don’t have any details. I just have the name. One must understand it is a very difficult situation on the ground. Indian citizens are spread all over the country in thousands. Most of them are not even registered with the embassy. The communications are very difficult. We are trying to get whatever information we can at the moment. The embassy is completely besieged with the evacuation effort.
**Question:** By when will the aircrafts reach India?

**Official Spokesperson:** Pretty soon. I don’t have the exact schedule but I am sure that Air India or Ministry of Civil Aviation will be able to give you this information. They were already boarding in the afternoon.

---

**319. Media Briefing by Official Spokesperson on the evacuation of Indian citizens from Lebanon.**

**New Delhi, July 25, 2006.**

**Official Spokesperson:** Good evening everybody, I would like to welcome you to this briefing on the evacuation of Indian citizens from Lebanon. I have with me like on the last occasion, Rear Admiral Pradeep Chauhan of the Indian navy and Mr. Bharat Chaturvedi from Air India to help us respond to queries relating to their area of work which you may have.

I begin by giving you a full update on the situation and then we can move to specific queries.

We have kept you informed as we have gone along of the well-coordinated efforts of the various agencies of the Government which have been mounted to ensure the safety and welfare of Indian citizens in Lebanon in the face of deepening crisis in that country and to ensure the safe evacuation of all our nationals who have desired to leave Lebanon. These efforts have been monitored at the highest levels in the government. Regular meetings have been taken by the Cabinet Secretary to keep the fast evolving situation under close review.

What has happened is that due to the efforts of various wings of the government acting in unison, a ‘sea-air corridor’ has effectively been set up for the benefit of Indian citizens leaving Lebanon. This corridor has proved to be extremely useful in view of the fact that the air fields in Lebanon have remained out of operation and the routes leading to Damascus have not been reliable on account of aerial bombings. Except for the evacuation of around 100 Indian nationals via Damascus at the beginning of the crisis, the major evacuation effort has involved the movement by Indian Naval ships from Beirut to Cyprus and air lifting from there to India by Air India. Besides the Ministry of External Affairs, the other agencies principally involved in this effort have been the Indian Navy, Air India and the Ministry of Overseas Indian Affairs.
As far as numbers go, a total of 1383 Indian nationals were evacuated by ship from Lebanon, from Beirut to Larnaca in Cyprus before being flown back to various destinations in India. In addition 47 Nepalis, 58 Sri Lankans and 8 Lebanese were also evacuated making a total of 1496 evacuated in the current operations.

In the first phase of the evacuation on July 21, 2006 a total of 599 Indians, 6 Nepalis, 3 Lebanese and 1 Sri Lankan were evacuated. In the second phase, on July 24, 2006 a total of 784 Indian nationals along with 41 Nepalis, 57 Sri Lankans and 5 Lebanese were evacuated. Arrangements for sending the evacuated Indian nationals to their final destinations from the initial arrival points within India at Mumbai, Chennai and Delhi were made by the Ministry of Overseas Indian Affairs.

As I said earlier, the entire operation has been the result of well-coordinated functioning of various organisations besides our Missions in the region, especially those in Lebanon and Cyprus which have been spearheading the diplomatic efforts and effectively liaising with the concerned local authorities to ensure that the necessary authorizations and other support which has been forthcoming very promptly from the authorities of Lebanon, Cyprus and Israel. We would also like to record our deep appreciation of the cooperation that we have received from the countries concerned in this regard. This entire exercise has been particularly difficult given the fact that our Missions in this area are very short-staffed. The Embassy in Beirut continues to be in regular contact with the Indian nationals who are still in Lebanon through various Indian organizations and our Naval ships also remain in the region for the present.

Tomorrow, we expect to evacuate another 300 Indian citizens and possibly some others, but we donot have details. Further evacuation would be carried out as necessary given the situation on the ground. So this was just an update to tell you how the various agencies have worked together and how not only Indian citizens but citizens from Nepal and Sri Lanka who have requested for help have also been evacuated through this air-sea corridor that has been set up. This help will continue to be extended as required.

**Question:** Can you give us more details of the air-sea corridor?

**Official Spokesperson:** As you know various ships have been working from Beirut to Larnaca and thereafter Air India has been carrying the evacuees. That is what the air-sea corridor is about. You do not have a
physical situation there but you have a movement by ship from point A to point B and then a well-coordinated air lift from point B to point C. So effectively we have obviated the need to use Lebanese airports which are not functional in any case, as well as the road routes to Damascus.

**Question:** At your last briefing I had asked you about the death of an Indian national who was killed in an Israeli air strike. Have you raised this issue at all with the Israelis?

**Official Spokesperson:** I am glad that you raised this question. I do not know if this information you already have about the body of the deceased that has come. The evacuation of the body was via Damascus and the Mission there assisted in embalming, legal formalities and transport. As far as the three injured persons are concerned, the details are: the first is Ms. Kalpana Singh Yadav, lightly injured and transported by the staff car of the Embassy of India in Damascus from Zahle (in Lebanon) to Beirut on July 20 and evacuated by INS Mumbai to Larnaca and onward by special flight to India on July 21. The second person is Mr. S.K. Virdi who was injured in his leg, was operated in Lebanon and is presently admitted at the Italian Hospital, Damascus, with the help of the Embassy and he is due to fly back by Syrian Airlines directly to Mumbai directly for his onward movement to his home town Bangalore. The third is Mr. Dilip Kumar Manna, presently in coma and the doctors have advised against any physical movement for the present and further action will depend on his physical condition. Mr. Manna is being attended to in a place called Zahle in Lebanon by fellow employees of the Maliban glass factory.

**Question:** When is Mr. Virdi flying back?

**Official Spokesperson:** I do not have a date but his flight is Syrian Airlines Flight No. 503.

**Question:** Two Indian soldiers were injured earlier. Do you have more details on them?

**Official Spokesperson:** We could get you those details because we did have them in the beginning of the discussions. Essentially, the UNIFIL is taking care of them.

**Question:** What about compensation for them?

**Official Spokesperson:** All this is covered by UN Peacekeeping operations, so they are looked after.
**Question**: Have we announced any compensation for the Indian citizen who was killed?

**Official Spokesperson**: I have not yet seen anything.

**Question**: What diplomatic efforts are being made to bring this crisis to an end?

**Official Spokesperson**: This is a crisis on which the entire international community is looking at and we have already made our diplomatic stand clear in our earlier statements.

**Official Spokesperson**: If there are no other questions, I will request Admiral Chauhan if you have anything to add from your side.

**Rear Admiral Pradeep Chauhan**: Not really, except to say that the ships will be back on station at Beirut tomorrow. At this very moment they are off Larnaca and we anticipate being able to lift the requisite Indian citizens plus whoever else needs to be lifted across and bring them across to Larnaca and maintain the sea segment of the corridor. The situation will continue to be reviewed dynamically.

**Question**: How many ships have you stepped in?

**Rear Admiral Pradeep Chauhan**: We had four ships and we continue to have four ships in the area. That is a largish number compared to most of the other navies.

**Question**: Tomorrow which ships will be able to get berthed?

**Rear Admiral Pradeep Chauhan**: Tomorrow, we will start with Mumbai and as the numbers sort themselves out, either Betwa or Brahmaputra will be used. As I mentioned the last time, the actual details of which ship goes in and what sequence is in function is a decision to be taken by Rear Admiral Anup Singh who is the Fleet Commander and is the man on the scene.

**Official Spokesperson**: Anything from your side, Mr. Chaturvedi.

**Mr. Chaturvedi**: Nothing much to add except that we are expecting two aircrafts day after tomorrow, the 27th of July which are on stand by. Subject to whatever the information is, the passengers from Larnaca will be transported back to India. Depending on numbers, they (aircrafts) will go either to Chennai or to Delhi. Thank you.
Suo Motu Statement by Prime Minister Dr. Manmohan Singh in Parliament regarding the situation in Lebanon.

Hon. Members are aware of the current situation in Lebanon. Taking into account the concern that Members may have on this score, I rise to apprise the House of the current situation and our responses to the evolving situation, especially the efforts made by us to aid and assist Indian nationals who have become victims of the escalating crisis in Lebanon.

West Asia is our extended neighbourhood and tensions in that region affect our security and our vital interests. We are seriously concerned about the escalation of the conflict between Israel and the Hezbollah extending across the Lebanon-Israel border. These developments have inflamed an already tense and delicate situation in the region.

On July 12, India had condemned the abduction of two Israeli soldiers by the Hezbollah cadres and called for their immediate release. Simultaneously, we had condemned in the strongest possible terms the excessive and disproportionate military retaliation by Israel. We had particularly expressed concern that the actions of the Israeli Defence Forces had resulted in the killing and suffering of innocent civilians, including women and children, that is likely to exacerbate an already tense situation. We also condemn the attacks that led to the deaths of 4 UN Observers in Lebanon.

India had also condemned the wholly unjustified arrest and continuing detention of Ministers of the Palestinian National Authority and members of the Palestinian Legislative Council. There can be no justification whatsoever for taking such action against the duly elected representatives of the Palestinian people.

The virtual destruction of a country which has been painfully rebuilt after two decades of civil war, can hardly be countenanced by any civilized state. In response to the appeal issued by the Government of Lebanon, I would like to inform the House that the Government has decided to contribute Rs. 10 crores to humanitarian and relief efforts to rebuild Lebanon.

In our view, there should be an immediate ceasefire so that the destruction of Lebanon is ended and humanitarian assistance could be provided. All sides must immediately halt the violence and give diplomacy a chance. Diplomacy to succeed should have a long-term solution that
involves and addresses the legitimate concerns of all parties in the region, leading to a comprehensive and negotiated solution.

The safety and welfare of Indian nationals who were residents in that country has been our foremost concern. On July 17, anticipating a further deterioration in the security situation an advisory was issued to all Indian nationals, particularly those living in Southern Lebanon, to take suitable precautions regarding their personal safety. Consultations were initiated to work out solutions on how to facilitate the return of those of our nationals in Lebanon desirous of doing so. All Indian nationals have been advised to remain in contact with the Embassy of India in Beirut, who has been instructed to render necessary advice and updated information on the evolving situation.

Since Beirut airport remained closed and the land route between Beirut and Damascus was unsecure, it was felt that the best way to evacuate Indian nationals was through Beirut port. Four Indian Naval ships INS Mumbai, INS Brahmaputra, INS Betwa and INS Shakti which were in the Red Sea area, were redirected to Beirut to assist in the evacuation.

The first evacuation effort was undertaken on July 21, 2006. 598 Indian nationals, and as a humanitarian gesture, nationals from Nepal, Lebanon and Sri Lanka, were evacuated by INS Mumbai from Beirut to Larnaca in Cyprus. From Larnaca, Air India arranged two aircraft to ferry the evacuated Indians to Mumbai and Chennai.

A second evacuation out of Beirut was undertaken on July 24. This comprised 887 people including 784 Indians, 41 from Nepal, 57 from Sri Lanka and 5 Lebanese nationals. All Indian nationals, and nationals from Nepal and Sri Lanka were air-lifted from Larnaca to India and have arrived safely. A third phase of evacuation was completed on July 26 bringing the total number of those evacuated to 1870, including 1687 Indian nationals.

It is our estimate that approximately 12,000 Indian nationals were in Lebanon at the time of the outbreak of hostilities. They are mostly semi-skilled and unskilled workers who were working in farms and factories. Of these, a large number have not indicated their desire to leave Lebanon. Some of them appear to have decided to stay back, others may have been unable to reach Beirut because of the disruption in communications. We have so far received confirmation of the death of one Indian national in an air strike on a glass factory in Bekka valley.
Our Embassy continues to function in Beirut, and is in touch with various organizations and agencies with which Indian nationals were associated. For the time being, our naval vessels will continue to be in the region in case they are required to be used in the service of our nationals. Any further evacuations will be planned taking into account the ground situation in Lebanon.

We also have a contingent of 672 Indian officers and soldiers as part of the UN peace-keeping forces in Lebanon (UNIFIL). Our peacekeepers are safe, though currently confined to their barracks.

I would like to place on record appreciation for the efforts of various Ministries, Departments and agencies of Government for the swift and successful manner in which they have responded to the task of helping our fellow citizens in distress.

New Delhi, July 30, 2006.

India strongly condemns the continued irresponsible and indiscriminate bombing of Lebanon by the Israeli military, ignoring calls for restraint. Particularly outrageous is the bombing this morning of a building in Qana in south Lebanon, which has resulted in the deaths of dozens of innocent civilians, mostly women, children and old people who had taken shelter there. India expresses its deep condolences to the Government and people of Lebanon over this tragic incident.

We also condemn the air strikes on UN peacekeeping troops deployed on the Israel-Lebanon border, which has resulted in two Indian soldiers getting wounded yesterday. It will be recalled that earlier an Indian soldier had also been hurt, and four UN peacekeeping observers had been killed as a result of Israeli bombing. We demand that such targeting of UN peacekeepers is stopped forthwith.

India is deeply concerned over the escalation of this conflict, and reiterates its call for an immediate and unconditional cease-fire, so that further loss of life and property can be prevented and humanitarian aid can
reach the affected people. A ceasefire should be followed by negotiations leading to a peaceful and comprehensive solution to the problems of this region that would take into account the legitimate interests and grievances of all parties.

322. Resolution Adopted by Lok Sabha (Lower House of Indian Parliament) on 31st July on Situation in West Asia.

New Delhi, July 31, 2006.

This House unanimously expresses its deep concern over the growing tension in India’s extended neighbourhood of West Asia that has exacerbated an already complex and delicate situation in the region. It unequivocally condemns the large-scale and indiscriminate Israeli bombing of Lebanon that has been under way for many days, which has resulted in the killing and suffering of large number of innocent civilians, including women and children, and caused widespread damage to civilian infrastructure in Lebanon. This House conveys the deepest condolences, sympathy and support of the people of India to the people of Lebanon at this difficult time. The people of India are ready to make their contribution in providing humanitarian relief to the victims of this tragic conflict.

Deeply concerned over the escalation of this conflict which affects India’s security and other vital interests, this House calls for an immediate and unconditional ceasefire, so that further destruction of Lebanon is prevented, and urgently needed humanitarian assistance can reach the affected people. We urge all parties to the conflict to eschew violence and return to the path of dialogue. This House is of the firm view that lasting peace and security in the region, which is a matter of interest and concern not only to the countries of the region but to the whole world, can be achieved only through a negotiated and comprehensive solution to the problems of this region that takes into account the legitimate interests and grievances of all the parties concerned.
323. Media Briefing by Official Spokesperson on the situation in Lebanon.

New Delhi, August 1, 2006.

**Question:** The cessation of air strikes by Israel could last for only two hours. In this context, what is the Government of India doing other than issuing statements and sending medicines?

**Official Spokesperson:** The Indian Government like the rest of the international community is deeply concerned by these developments. We have issued very clear and strong statements, including in the Parliament. I would refer you to the Defence Minister’s statement as also a resolution of the House which has been passed. That is an expression of India’s concern. We have already taken all adequate action that is required to ensure the safety and secure return of all the Indians who wanted to come out of Lebanon and the affected areas.

**Question:** What is India doing diplomatically? Is India in touch with any of the P-5 or the UN?

**Official Spokesperson:** We are a member of the United Nations as you are aware. We are part of the discussions that would be taking place in the United Nations. We are naturally not part of the UN Security Council so we cannot be part of the discussions there. I understand your question, but you must also understand the difficulties in formulation of an answer to that question. There is a hostile situation and the entire international community is deeply concerned. There are some immediate countries who are trying to handle the crisis. There are other countries which are building up international opinion. Our statements and diplomatic efforts are aimed towards that.

**Question:** MEA statement has condemned the attacks on Hezbollah as well as Lebanon, while the resolution in Parliament does not condemn the attack on Hezbollah? Is that a deviation in policy?

**Official Spokesperson:** Ministry of External Affairs is very much a part of the Government of India. Government of India has one considered policy. The situation is evolving. The statements that you see coming out from day-to-day, if they differ in nuance they only reflect the reality on the ground.

New Delhi, August 19, 2006.

Prime Minister of India announced on 27th July 2006 in Parliament, humanitarian aid worth Rs. 10 crores for the relief efforts to rebuild Lebanon.

The first batch of India’s aid to Lebanon is being airlifted by Indian Air Force plane today. The aid comprises tents and blankets which are urgently required for hundreds of displaced citizens of Lebanon. The aid is a gesture of solidarity by the Government and the people of India with the Government and people of Lebanon and a measure of India’s concern for the people of Lebanon.
PALESTINE

325. Press Release on the Government of India’s humanitarian assistance to Palestine.

New Delhi, May 13, 2006.

India is seriously concerned at the hardships and sufferings of the Palestinian people as a result of the evolving situation in Gaza and the West Bank. In response to a request from the Palestinian authorities, and in keeping with India’s traditional and consistent policy of extending sympathy and support to the people of Palestine, the Government of India has decided to give humanitarian assistance worth Rupees 100 million to the Palestinian people in order to alleviate the difficult situation in which the Palestinian people find themselves. The assistance will be primarily in the form of medicines and medical supplies as requested by the Palestinian authorities. Our Representative in Ramallah is in touch with the Palestinian authorities to work out the detailed arrangements in this regard.

---

1. The first consignment of life-saving medicines, under the humanitarian assistance programme for the people of Palestine was handed over to the Palestinian Presidency by the Indian Representative to Palestine in Ramallah on August 10, 2006. This is part of the medical aid worth rupees 10 crores announced by Government of India following developments in Gaza and the West Bank. Dr. Younis Al-Khatib, Advisor to the Palestinian President Mahmoud Abbas on health affairs who received the aid was highly appreciative of the timely supply of desperately needed life-saving drugs and profusely thanked the Government and the people of India for their unwavering support to the Palestinian people and lauded India’s firm stand with the Palestinians at this critical time. The solidarity of the Government of India with the Palestinian people and to the Palestinian cause was reiterated on the occasion.

The second batch of Medicines weighing 8500 Kgs was handed over to Dr. Rafiq Hussein, Chief of Cabinet of President Mahmoud Abbas in Ramallah on 28th September by India’s Representative to Palestine. The medicines consisted of anti-cancer drugs, drugs to treat cardiac arrest, hypertension, shock and depression, skin, bone and internal infections, kidney failure, coma, Parkinson disease, schizophrenia, pneumonia and respiratory infections and drugs to be used along with Radiotherapy, Chemotherapy. India reiterates on the occasion its unwavering and continued support to the cause of Palestine as symbolized by this gesture of solidarity with the Government and the people of Palestine.
326. Statement by Official Spokesperson on the killing of innocent civilians in Gaza by the Israeli Defence Forces.

New Delhi, June 12, 2006.

India condemns the killing of innocent civilians, including women and children, in Gaza by the Israeli Defence Forces in an unprovoked attack on Friday. The end of the ceasefire and the escalation of tensions that this tragic incident has triggered could have negative implications for the already volatile and fragile situation in the region. We urge all sides to desist from starting a new spiral of violence and counter-violence. It is our firm conviction that there can only be a peaceful negotiated resolution to the Palestinian problem that results in the establishment of a sovereign, viable, independent State of Palestine living in peace and prosperity within secure borders in peaceful coexistence with Israel.

327. Statement by Official Spokesperson on the arrest of Palestinian Ministers and Legislators.

New Delhi, July 20, 2006.

India remains deeply concerned that Israeli Armed Forces have continued to maintain their large-scale operation mounted in West Bank and Gaza in Palestine in disproportionate retaliation for the abduction of an Israeli soldier. India condemns the wholly unjustified arrest and continuing incarceration of Ministers of the Palestinian National Authority and members of the Palestinian Legislative Council. There can be no justification whatsoever for taking such action against the duly elected representatives of the Palestinian people. We call upon Israel to release them immediately. We also reiterate our call for all parties to renounce violence and resolve their differences through peaceful means.

The next day the Spokesman referred to this question again and made the following observation:

I saw some report on a statement that I had made yesterday on the situation in Palestine and the arrests of Palestinian leaders. The reports seemed to argue that perhaps this was a question of too little too late. And the statement was made when they have already been freed. I just wanted
to clarify the fact that on the 28th of June, eight cabinet ministers of the Palestinian National Authority were arrested and 21 members of Parliament. On the 1st of July we had made a statement which regretted that Israel should have chosen to give a military response to the capture of the Israeli soldier rather than afford time and opportunity for diplomatic action to resolve the matter. During the ensuing weeks to my information only one to the Ministers Mr. Sameer Abu Eisheh, Minister for Planning was released on 18th of July. So what we said yesterday and I would like to underline those words, was that India remains – and that means it is a continuing process – and we condemned the continuing incarceration of the Ministers. So I would like to put that statement in perspective given the facts on the ground and our earlier statement.

328. Statement by Member of the Indian Delegation to the UN Iqbal Ahmed Saragdgi on Agenda Item 31: United Nations Relief and Works Agency for Palestinian Refugees in the Near East at the 4th Committee of the 61st session of the UN General Assembly.

New York, November 1, 2006.

Please See Document No. 582

329. Statement by Member of the Indian Delegation to the UN Shatrughan Sinha on Agenda Item 32: Report of the Special Committee to Investigate Israeli practices affecting Human Rights of the Palestinian People and other Arabs of the Occupied Territories at the 4th Committee of the 61st session of the UN General Assembly.

Please See Document No. 587
330. Statement by Deputy Permanent Representative at the UN Ajai Malhotra on Agenda Item 14: The Question of Palestine at the 61st session of the UNGA.

Please See Document No. 600.

331. Statement by Permanent Representative at the UN Ambassador Nirupam Sen at the 10th Emergency session of the UNGA to discuss the Establishment of a Register of Damages Arising from Israeli’s Construction of a Separate Wall in the Occupied Palestinian Territory.

Please See Document No. 608.
SAUDI ARABIA

332. Interview of Prime Minister Dr. Manmohan Singh with the Saudi daily ‘Okaz’

January 24, 2006

Question 1: The planned visit by King Abdullah to India in January is a high point in the recent upswing in Indo-Saudi relations. In fact, you were instrumental in reviving Saudi-Indian relations through your visit to Saudi Arabia in 1994 and subsequent meeting with the then Crown Prince Abdullah, which led to a resumption of dialogue and frank exchanges on difficult issues. What is your broad vision of the scope of this newly found relationship that is developing a strategic dimension, especially in the area of energy security?

Answer: India and Saudi Arabia are neighbours, united by the Arabian Sea. The bilateral relationship between India and Saudi Arabia is historic, nurtured and sustained by people-to-people exchanges over many centuries. As a result, the ties have acquired a multi-dimensional nature. They derive their strength from time-tested interaction between the two countries and the peoples. Regular visits at high levels impart a positive direction and impetus to our relationship. I had the privilege of calling on His Majesty King Abdullah, the then Crown Prince, when I visited Saudi Arabia in 1994. I was deeply impressed by his knowledge and by his regard for the people of India.

By taking full advantage of our complementarities and synergies, Saudi Arabia and India have the opportunity to create a strategic partnership in the field of energy, including through joint projects and mutual investments in our respective countries. I envision that our relationship would remain dynamic and broad-based, acquiring greater depth and diversity, with both countries actively cooperating in promoting peace, prosperity and security in the region.

Question 2: What are the difficult issues remaining in Saudi-Indian ties. What are the areas do you think that needs to be more explored. How do you view the importance of King Abdullah’ visit to India since its his first visit abroad since taking over as the King of Saudi Arabia?

Answer: Islam is part and parcel of India’s civilizational and cultural heritage. Therefore, we are very happy to welcome the Custodian of the
two Holy Mosques, King Abdullah, to India. We are honoured that he will be the Chief Guest at our Republic Day celebrations this year. Many years have passed since His Majesty King Saud bin Abdul Aziz had visited India in 1955. His Majesty King Abdullah’s visit is long overdue and we are pleased it is taking place now. There remains an immense untapped potential in our relationship. It is in our mutual interest to explore all ways and means to develop and strengthen our multi-faceted ties. India welcomes greater investment by the Saudi business community in India as many new opportunities have opened up as a result of rapid economic growth, including in the key area of infrastructure development. India would be happy to share with our Saudi friends our experience in the knowledge economy, including in the field of Information Technology. The two sides could also benefit from strengthening educational, academic and cultural exchanges. The 1.5 million strong Indian community which has found a second home in the Kingdom has created durable, long-term linkages between our two countries. Using the fund of political goodwill existing between the two countries, I am confident that we will succeed in our joint endeavour to qualitatively upgrade and expand our relationship.

**Question 3:** King Abdullah’s initiative has led to the recent declaration by the 57 nation organization of the Islamic Conference (OIC) of Islamic moderation and tolerance of other faiths. The declaration which was announced in the Islamic extra ordinary summit held in Makkah in December was aimed at countering extremism. Since India shares this same objective as well, do you envision a strategic partnership developing in the global war against terrorism?

**Answer:** India is home to people of many religions and faiths who live in peace and harmony, including the second-largest population of Muslims in the world. We have a tradition of moderation and tolerance that continues to be sustained by our secular and democratic polity, and the deep-rooted conviction of our people that this is the only way to ensure peace and stability in our country and ensure the welfare and prosperity of our people. We greatly welcome His Majesty King Abdullah’s initiative at the OIC Summit to promote the cause of moderation and tolerance of other faiths.

India stands firmly against all forms of extremism. Lasting solutions to problems, be they political, economic or social, require understanding and sympathy on the part of all sides.
India has for long been a victim of terrorism and was among the first countries to call for enhanced international cooperation to combat the menace of terrorism. India participated in the Counter-Terrorism International Conference held in Riyadh in February 2005. We would like to join hands with Saudi Arabia to fight terrorism and extremism. The conclusion of the MOU on Combating Crime between India and the Kingdom of Saudi Arabia, which is close to finalization, would contribute to our efforts to combat this evil.

**Question 4:** It's said in some circles that India's strained relations with Pakistan have long impacted Saudi-Indian ties for various reasons. But now, with Indo-Pakistan relations breaking new grounds, do you envision a wider partnership involving the three countries, especially in the context of the OIC declaration?

**Answer:** India's relationship with Saudi Arabia stands on its merit and has its own importance, based on objective factors and mutual interest. India remains committed to living in peace and harmony with all its neighbours, including Pakistan. The interests of all the people in our region require that we cooperate in working together for our common welfare and development, and in cooperating sincerely in combating terrorism and extremism.

**Question 5:** With the positive atmosphere between India and Pakistan and the ongoing confidence building measures, are you optimistic that the Kashmiri issue can be resolved soon?

**Answer:** Bilateral relations between India and Pakistan have been improving steadily in the last couple of years. The dialogue process has been moving forward within the framework of the composite dialogue, which has completed two rounds and the third phase has just started. All outstanding issues, including Jammu and Kashmir, are being addressed through this dialogue.

Bilateral relations between two neighbouring countries cover a broad agenda and can move forward in an environment of mutual trust and confidence and an atmosphere free from terrorism and violence. We on our part are committed to doing everything that would further good neighbourly ties so that the people of India and Pakistan can work together to utilise the immense potential for human development and economic growth in our region.
Question 6: India has been known for its support for the Palestinian issue, however there is a feeling in some circles in our region that New Delhi is getting more closer to Israel. What is your comment?

Answer: India’s relationship with Palestine is a historic one, going back to the days of our own freedom struggle, before India itself gained independence. We have consistently supported the struggle of the Palestinian people for their independence. India was the first country outside the Arab world to recognize the PLO as the sole and legitimate representative of the Palestinian people. India’s interaction with Palestine and the Arab countries has grown considerably in terms of political, commercial and cultural interactions over the last few years. The Common Minimum Programme of our Government underlined its commitment to the Palestinian cause and an independent State of Palestine, and enhancement of relations with the Arab States. In international forums such as the UN and the NAM, the Government of India has maintained its well-known and traditional empathy and support for the Palestinian cause. Our position in support of a viable and independent State of Palestine, living in peace and prosperity within secure boundaries in peaceful coexistence with Israel, remains unshaken. President Mahmoud Abbas’s visit to India last year was an important landmark in our close, friendly and steadily expanding relations with Palestine.

Our relations with Israel do not affect or impact on our relations with Palestine or any other Arab State in any way.

Question 7: How do you view the situation in Iraq, from your view who is responsible of bloodshed of Iraqi nation?

Answer: India stands for early restoration of sovereignty to the Iraqi people and the right of the Iraqi people to determine freely their political future and control their natural resources. We condemn the senseless acts of terror in Iraq. The elections held in January 2005, the constitutional referendum in October 2005 and elections in December 2005 will help in this process. We hope a broad-based inclusive government representing all sections of Iraqi society will be established on the basis of this election, and that peace and stability will return to the country. India has traditionally enjoyed close and friendly relations with the people of Iraq. We remain committed to making our contribution to the reconstruction of the country and to the re-emergence of a peaceful, stable united and prosperous Iraq.

Question 8: King Abdullah has suggested the formation of the
international center to fight terrorism. How do you find this suggestion, what is your view on terrorism?

**Answer:** India has always unequivocally condemned terrorism in all its forms and manifestations. There can be no justification whatsoever for any acts of terrorism, wherever they may occur. The international community must have a policy of zero tolerance towards acts of terrorism. India had introduced a draft Comprehensive Convention on International Terrorism (CCIT) in the United Nations as far back as in 1996. The Outcome Document of the World Summit held in New York in September 2005 has called upon the member states to conclude the CCIT during the current session of the UN General Assembly. Discussions on this issue have been going on and we hope that all member states of the UN would make concerted efforts to achieve this objective.

We appreciate the initiative of the Kingdom of Saudi Arabia to convene an International Counter Terrorism Conference in Riyadh in February 2005, in which India had participated. We have conveyed our support to His Majesty King Abdullah’s proposal for setting up an International Counter Terrorism Centre as a follow up of the conference.

**Question 9:** There are some 1.5 million Indians working in Saudi Arabia, all of them not quite Non Resident Indians but instead Overseas contract Workers (OCWs) for whom many of the benefits announced for NRIs don’t apply. In 2004, at the 2nd Pravasi Bhartiya Divas, then Prime Minister A B Vajpayee had announced a 15 % supernumerary reservation quota in all the Government colleges and institutions- except medical colleges- all over India for the children of Gulf based Indians. However, at the 2005 Pravasi Bhartiya Divas, your Government made no mention of this reservation. When will this reservation come into effect? Does your government have any plan to address the various issues of Gulf based Indians separately from those of NRIs?

**Answer:** The millions of Indians who work in Saudi Arabia and other parts of the Gulf are a vital and most important link between India and the countries of this region. Not only do they contribute to the growth and prosperity of their host countries but, equally they make a huge contribution to the Indian economy through their remittances, and act as a valuable catalyst for promoting business, cultural and people-to-people contacts between the Gulf region and India. They constitute a unique category of Indians living abroad, to whose needs and welfare India gives special attention. We greatly appreciate the hospitable treatment extended to
members of the Indian community. We greatly appreciate the hospitable treatment extended to members of the Indian community by the Government and people of Saudi Arabia.

The Government of India has reserved one-third of the 15% supernumerary seats across different disciplines in educational institutions for children of NRIs in the Gulf and South East Asia at the fee applicable to resident Indians. Necessary instructions and notifications have already been issued by Ministry of Human Resource Development, University Grant Commission and AICTE respectively. Other areas where measures are being taken for their welfare include the provision of easier, affordable and efficient remittance facilities; a more liberal compulsory insurance scheme; streamlining and modernizing emigration processes; initiatives to develop workers’ skills; starting budget flights for the Gulf region. A few days ago, at the 4th Pravasi Bhartiya Divas, I had announced that the right to vote will be provided to the Gulf Indians in the near future. This proposal is currently at an advanced stage of consideration by the Government.

333. Speech by President Dr. A. P. J. Abdul Kalam at a banquet in honour of the Custodian of the Two Holy Mosques King Abdullah bin Abdul Aziz Al-Saud.

Your Majesty The Custodian of the Two Holy Mosques, King Abdullah bin Abdul Aziz Al-Saud, of the Kingdom of Saudi Arabia, Distinguished Guests, Ladies and Gentlemen,

On behalf of the Government and people of India, it is a matter of great privilege and honour for me to extend a very warm welcome to Your Majesty and to the distinguished members of your delegation on your first State visit to India. Your visit marks a significant step in strengthening the age-old ties of our friendship and brotherhood. We have been eagerly looking forward to your visit and I am particularly happy to receive Your Majesty, as a representative of a people with whom India has interacted since times immemorial.

Your Majesty, it is an honour for us that you have chosen India as one of the first countries to visit after you ascended the throne of the Kingdom
of Saudi Arabia. It is nearly 50 years since a Saudi King visited India and we are truly privileged to have you amongst us tonight. It signifies the importance and love that you have for India in your heart.

Your visit is a long awaited one and it assumes significance in the context of the momentous and far reaching changes taking place in the world and in our region. It also signals a new impetus to our political dialogue and economic partnership.

The friendship between our two peoples goes back many centuries. Trade, culture, religion and philosophy have bound the people of our countries. Our two countries have given two great religions of peace to the world. It is a matter of deep satisfaction for us that the over 1.5 million strong members of the Indian expatriate community have found a second home in your Kingdom and continue to make a significant contribution to reinforcing our friendly ties. We deeply appreciate the support extended by Your Majesty to the wellbeing of the Indian community.

Your Kingdom constitutes an integral part of India’s extended neighbourhood, a region of critical importance to the entire world in political, strategic and economic terms. Peace and stability in the Gulf are therefore vitally important for all of us. We share a common threat from terrorism and there is a need to enhance our cooperation to combat this global problem. We appreciate your initiative in convening the Counter Terrorism International Conference in Riyadh in February 2005 and the call for setting up of an International Centre to combat terrorism. We look forward to comprehensive cooperation between Saudi Arabia and India towards enhancing the security of our region.

The Kingdom of Saudi Arabia has always been a very important partner for India and it is gratifying indeed that the friendly bonds existing between our countries since time immemorial have been revitalised in recent years. Our trade is rapidly expanding and this creates exciting opportunities for cooperation. We are now close partners in the energy sector. Nearly a quarter of India’s crude oil imports are sourced from your country. The demand for energy is expected to grow with the rapidly expanding Indian economy. Indian and Saudi Arabian companies are progressively forming joint ventures, which are operating in both the countries. The holding of the 6th meeting of the Indo-Saudi Joint Commission in April last year in Riyadh is a mutual reaffirmation of the vital importance of the economic dimension of our relationship.
Your Majesty, India and the Kingdom of Saudi Arabia have always had friendly relations. However, the relations have yet to realise their full potential. The time has now come to further strengthen and broaden this relationship and take it to new heights. In particular, we would like to increase our engagement in the field of trade, investment and commerce. Our two economies are complementary. India’s rapid economic growth provides new opportunities for important partnerships in a variety of sectors, including energy, infrastructure, manufacturing, Information and Communication Technology and Science and Technology.

We need to create a strategic partnership in the field of energy, developing a long-term partnership, including through joint ventures in the areas of gas and power both in Saudi Arabia and India. We welcome Saudi investments in our economy and look forward to a new era of cooperation for the mutual benefit of our two nations.

India is prepared to share with our Saudi brethren its experience and expertise in institution and capacity building, governance, science and technology including Information Technology, biotechnology, healthcare and higher education. One area of potential is the development of desalination technology through the solar energy route. This will be cost effective through non-conventional energy sources. The economic reforms launched by our two countries and our vast and growing markets offer fresh openings for mutually beneficial ventures. The era of globalisation has created fresh opportunities and new challenges which India and Saudi Arabia can jointly face through enhanced cooperation for mutual benefit. Broad-based economic relations will further strengthen our close political and strategic relationship based on centuries of historical and cultural links.

The discussions that Your Majesty had with us today have confirmed that we share a great similarity of outlook on many of the important issues of the world at large and our region in particular. We both support the establishment of a sovereign, independent and viable State of Palestine and the return of peace and prosperity to that land. We would like to see a stable, peaceful, prosperous and united Iraq. We have similar interests in maintaining a secure and peaceful environment in the Gulf for the development of the countries of the region.

I am very happy to note that we have signed a number of bilateral agreements today and some are on the anvil. These will strengthen our friendly ties. I am confident that these discussions and our continued close
relationship will be a constructive factor for stability and cooperation in the face of rapid changes taking place throughout the region. I look forward with confidence and trust to working together with Your Majesty for a better future.

Distinguished Guests, may I request you to join me in a toast to the:

- health, happiness and long reign of The Custodian of the Two Holy Mosques, King Abdullah bin Abdul Aziz Al-Saud of the Kingdom of Saudi Arabia;
- prosperity and development of the Kingdom of Saudi Arabia and its friendly people; and
- abiding friendship and cooperation between India and the Kingdom of Saudi Arabia.

334. Media Briefing on India-Saudi Arabia discussions during the visit of His Majesty the King of Saudi Arabia.

Official Spokesperson: Good afternoon. As you know this morning the discussions have taken place, both one-on-one, and also between the delegations (of) His Majesty the King of Saudi Arabia and Prime Minister. The one-on-one discussion carried on for about 45 minutes. I do not have details of that, but I understand that they consisted of a full review of bilateral relations as well as an overview of regional issues, international issues, global concerns which are of interest both to India and to Saudi Arabia. India’s relations with its neighbours were also discussed. Energy security was another theme which was discussed in the one-on-one.

In the delegation-level talks the Prime Minister underlined the importance that India attaches to this visit and to India’s relations with Saudi Arabia which are deeply rooted in civilizational links and also have tremendous potential of trade and economic possibilities. He also mentioned the impact that this relationship can have on many issues of global concern. In particular, he said that we look at Saudi Arabia as a very important partner in combating global terrorism and in that context this particular MOU which has been signed on combating crime will further strengthen
cooperation in this regard. Other agreements which have been signed will lay the groundwork for a closer economic relationship. He (Prime Minister) briefed the Saudi delegation on current economic status and the direction of our reforms and said that he would invite the Saudi business community to take advantage of this situation particularly in gas, petroleum, infrastructure, fertilizer industries. He also mentioned that India has one of the largest group of pilgrims which go for Haj in Saudi Arabia and expressed his gratitude for the care that is taken for their pilgrimage by the Saudi Arabian government. The quota we understand for Indian pilgrims has now been increased from 137,000 to 147,000 and for this too Prime Minister expressed his appreciation.

His Majesty also underlined the special nature of this relationship and said that this is a relationship which should be strengthened, which should continue to move in this direction and (said) the agreements that are being signed today will be important steps in this process. He said that there is a need to work together on terrorism, to combat it and that they have declared a war on terrorism. This is a long-term struggle but this was one which will be carried on until this scourge is completely eliminated. He said that they were also against any support to terrorism whether it be of a financial nature or a moral nature. He underlined his and his country's sincere desire to move this special relationship forward for the benefit of both countries as well as for the impact that this has on other aspects at the global level.

This is as far as one-to-one and the delegation level talks (are concerned). I also understand that in the discussions between the Finance Minister and Secretary, Department of Economic Affairs one of the points that came up was the possibilities of funding of infrastructure projects in India. This was discussed and they decided that this would be further explored by experts from both sides and they will find appropriate mechanisms to carry this discussion forward.

**Question:** Were India-Pakistan relations discussed?

**Answer:** India-Pakistan relations were discussed and there it was mentioned by them that they are naturally interested in a better relationship between India and Pakistan. They were also briefed on the current process.

**Question:** The Saudi King had said in an interview to an Indian TV channel that Saudi Arabia favours Observer status for India at OIC. Did that come up?
Answer: This did not come up in the delegation level talks. I do not know if it came up in...

Question: Energy security...

Answer: Energy security was discussed.

Question: When they discussed terrorism, did they talk about extradition treaty?

Answer: This was a very broad brush discussion. But, now we have an MOU on Combating Crime.

Question: Did India propose strategic long-term energy partnership with Saudi Arabia?

Answer: I do not have the details. I know energy security was discussed. What were the specific proposals made, I do not know that.

F F F F F

335. Address of Prime Minister Dr. manmohan Singh to India-Saudi Arabia Business Meet.

I am truly delighted to be here in your midst, in the gracious presence of our most Honoured Guest, the custodian of the Two Holy Mosques, His Majesty King Abdullah Bin Abdul Aziz Al-Saud. I am equally delighted that we are here to talk about business and the opportunities for business between our two great countries.

Saudi Arabia is a country of very special significance for us in India. Our two countries have very close and complementary relations for centuries. We are, in a matter of speaking, civilisational neighbours. Today, we have become an important factor in each other’s strategic neighbourhood.

It is a matter of deep satisfaction that our multi-faceted ties are developing steadily. They cover a widening spectrum including economic, commercial, political, educational, cultural and other fields. We have shared interests in peace, stability and economic progress in our region.

Trade relations between India and Saudi Arabia go back several centuries. Both countries have always been close and important trading
partners. In another time this relationship represented the knowledge economy of the day. Traders from the Arabian peninsula who carried India’s ancient Mathematical science far and wide were the knowledge workers of their age.

Today, we have re-discovered and re-invented our bilateral relationship. The presence of His Majesty as the Chief Guest at our Republic Day is a manifestation of the new wind of change that is now blowing in our relations with Saudi Arabia. India is Saudi Arabia’s 4th largest trading partner and the total India-Saudi Arabia bilateral trade reached about US$ 9 billion in 2004. I am sure this visit of His Majesty King Abdullah bin Abdul Aziz Al-Saud to India will impart a fresh new dimension and added thrust to enhancing the content and quality of the economic and commercial relations between our two countries.

Since 1991, the Indian economy has, undergone profound changes not only in its direction but also in its fundamental structures and underpinnings. Our economic liberalization programme is reflected across the Indian economic landscape and it has led to an economy that is growing faster, with increasingly more stable fundamentals. Our economy has also been able to integrate itself with the global economic mainstream.

I am happy that today there are around 49 India-Saudi joint ventures in India and that Saudi authorities have approved 82 fully Indian owned entities or joint ventures in the Kingdom of Saudi Arabia. Similarly, more Indian companies are investing in Saudi Arabia, especially in the fields of Oil, Natural Gas and Petrochemicals, Information Technology, Telecommunications and Science & Technology.

I am sure the signing earlier today of the Bilateral Investment and Promotion and Protection Agreement and Double Taxation Avoidance Agreement will be a very important step forward in providing a more favourable legal and institutional framework for the promotion of bilateral investments in our two countries. I believe this would also infuse greater confidence among the members of the business community and that it would encourage them to make further investments.

Today, India’s economy is rapidly on the move. For three years, we have witnessed growth rates of between 7% and 8.5%. A growing market, with a large middle class, abundant raw materials, highly trained and skilled manpower, especially in the field of science and technology, is eagerly seeking new investment.
The Indian economy will now need massive doses of investment in every conceivable area. Our requirements of foreign investment are particularly large in the field of power, telecommunications, roads, ports and housing sectors. Investment needs for the power and telecom sectors alone are estimated at over $100 billion over the next five years! Transportation infrastructure, including airports and railways, will require another $55 billion over the next 10 years. I therefore invite the business community of the Kingdom of Saudi Arabia to take advantage of these opportunities to further establish mutually beneficial Joint Venture projects.

We in India greatly welcome Saudi Arabia’s membership of the World Trade Organization. We hope that this will help in further enhancing and strengthening our bilateral economic ties as I believe this will lead to new opportunities for boosting the commercial and economic interaction between our two countries.

The scope for mutually beneficial cooperation is vast. We will be happy to share our capabilities and expertise with Saudi Arabia in the fields of health, Information Technology, small-scale industries. The economies of both countries are undergoing rapid economic liberalisation. Therefore, in this era of globalization, we must encourage our private sectors to establish closer linkages through concerted and sustained interaction aimed at long-term cooperation.

I am confident that this historic visit of the Custodian of the Two Holy Mosques, His Majesty King Abdullah Bin Abdul Aziz Al-Saud will be a pacesetter, a harbinger for more intensive and wide ranging engagement between our two countries. I wish the participants in this business meet profitable and beneficial interaction. I thank His Majesty from the core of my heart for gracing this function with his august presence. I hope all this will be the start of a very productive and more intensive phase in our bilateralies.

The Republic of India and the Kingdom of Saudi Arabia (hereinafter referred to as the Two Parties), in the spirit of their friendship and brotherly relation, and desirous of improving such relations through security cooperation in combating organized crime and crimes perpetrated by individuals, as well as crime in all its forms, particularly international terrorism, illicit trafficking of narcotic drugs and psychotropic substances, illegal trafficking in items of historical value and artifacts, and aware of the mutual benefits accruing from cooperation in this field;

Agreement has been reached on the following:

1. The Two Parties shall cooperate and exchange assistance in the following areas:
   a) Combating of international terrorism in accordance with laws and regulations prevailing in both countries and with international laws and conventions concluded by international bodies.
   b) Combating of illicit production, manufacturing, trading, and distribution of narcotic drugs and psychotropic substances and precursor chemicals and their illicit use.
   c) Combating the counterfeiting of currency and securities and the falsification of travel documents and visas.
   d) Combating of crimes pertaining to the smuggling of weapons, ammunitions and explosives and their illicit trafficking.
   e) Combating the smuggling of items of historical and cultural value as well as precious stones and metals and other luxury articles.
   f) Searching for properties and monies derived from crimes and international terrorism as well as the seizure and confiscation thereof.

2. The Two Parties shall conduct studies and scientific research in the
aforementioned fields and shall convene meetings of experts when necessary to deal with urgent or special matters connected with aspects of cooperation

3. In order to achieve the above, the following security measure shall be taken:

a) Exchange of information related to technical and general data which assist in preventing organized crime between the competent authorities.

b) Mutual cooperation within the permissible scope and extent provided for by this Memorandum of Understanding in matters related to techniques used in interrogation and investigation.

c) Exchange of the results of experiments connected with general techniques for preventing and combating drug smuggling.

d) Exchange of documents, publications, and the results of scientific research on combating crimes in accordance with the laws and regulations prevailing in each country.

4. The Two Parties, through diplomatic channels, shall exchange samples of their seals and visa stamps in order to prevent illegal entry to either country.

5. The Two Parties shall seek to draft separate agreements in areas that strengthen the security of both countries in accordance with the rules of international law and provisions of international conventions to which they are both parties.

6. Provisions of this Memorandum of Understanding shall not invalidate the rights and obligations arising from other bilateral or multilateral agreements signed by either party.

7. This Memorandum of Understanding shall expire after three years from the date of ratification unless the Two Parties agree to renew it for a similar period or periods. Either party shall have the right to terminate this Memorandum of Understanding at any time after thirty days of informing the other party of such termination, in writing, and through diplomatic channels.

8. Ministry of Home Affairs and the Narcotics Control Bureau (NCB) in the Republic of India are the agencies designated to receive all
communications connected with implementation of this Memorandum of Understanding; their counterpart in the Kingdom of Saudi Arabia is the Ministry of Interior (Department of International Police Communication “Riyadh-INTERPOL”).

9. This Memorandum of Understanding is subject to ratification and shall enter into force thirty days after the date of exchange of Instruments of Ratification.

10. Done at New Delhi on 25/01/2006, corresponding to 25/12/1426 AH, in two originals each in Hindi, Arabic and English Languages; all texts being equally authentic. In case of any differences in interpretation of the Hindi or Arabic texts, the English version shall prevail.

For the Republic of India

Foreign Minister

337. Delhi Declaration signed by King Abdullah bin Abdulaziz Al Saud of the Kingdom of Saudi Arabia and Prime Minister Dr. Manmohan Singh.

New Delhi, January 27, 2006.

The Custodian of the Two Holy Mosques King Abdullah bin Abdulaziz Al Saud of the Kingdom of Saudi Arabia held historic meetings with the President of the Republic of India, His Excellency Dr. A.P.J. Abdul Kalam and the Prime Minister of the Republic of India, His Excellency Dr. Manmohan Singh during his State visit to the Republic of India from 24 – 27 January, 2006. The two sides exchanged views and had in-depth discussions that touched upon the mutual interests of both countries as well as the security, stability, peace and prosperity in the whole region.

Realizing that this visit heralds a new era in India-Saudi Arabia relations and constitutes a landmark in the development of increased understanding and cooperation between the two countries and creation of a mutually beneficial partnership,

Reflecting the view that both countries are developing a broad
strategic vision, and are determined to work together closely for the welfare and benefit of their peoples and for peace and stability in the region and the world,

Desirous of building upon and expanding the close ties and friendship and the many commonalities between the two countries and peoples,

Affirming their commitment to the ideals of tolerance, harmony and diversity between societies and the importance of dialogue and peaceful resolution of disputes,

Conscious of their responsibility for promoting peace, stability and security in the region and the world,

Recognizing the close inter-linkage of the stability and security of the Gulf region and the Indian sub-continent and the need for maintaining a secure and peaceful environment for the development of the countries in the region, Desirous of further strengthening people - to - people ties,

The two sides have agreed as follows: Exchanges of high-level bilateral visits and consultations should be intensified in order to give an impetus to and expand the scope of bilateral cooperation and understanding.

Terrorism is a scourge for all mankind and there is a need to intensify and coordinate bilateral, regional and global cooperation to combat and eradicate the menace of terrorism.

The two Governments would closely and actively cooperate to fight the menace of terrorism and other transnational crimes like money laundering, drugs and arms smuggling in a sustained and comprehensive manner. The signing of the Memorandum of Understanding between Saudi Arabia and India on Combating Crime will help in the fight against terrorism, extremism and criminal elements. The two countries shall make concerted efforts for an early realization of the proposals to conclude a Comprehensive Convention on International Terrorism which is before the UN General Assembly, and the setting up of an International Counter- Terrorism Centre as called for by the International Conference on Counter- Terrorism held in Riyadh in February 2005, in response to the idea proposed by King Abdullah bin Abdulaziz Al Saud.

To expand and diversify mutual trade and investments and, noting with satisfaction the signing of agreements regarding Promotion and
Protection of Investments and Avoidance of Double Taxation, called for the exploration of investment opportunities in all sectors, including infrastructure, in both countries.

Both sides affirmed the importance of stability in the oil market for the world economy. The Indian side expressed understanding and appreciation of the balanced petroleum policy of Saudi Arabia which is considered a trusted and reliable source of oil supplies to international markets in general and the Indian market in particular. In this context, the Saudi side appreciated the Indian initiative to initiate a regional forum for dialogue among Asian oil and gas producers and consumers.

Both countries will develop a strategic energy partnership based on complementarity and interdependence. The elements of this partnership would include, inter alia:

- Reliable, stable and increased volume of crude oil supplies, through “evergreen” long-term contracts.
- Cooperative and joint ventures, both in the public and private sectors, in the upstream and downstream oil and gas sectors in India and Saudi Arabia as well as in third countries.
- Saudi investments in oil refining, marketing and storage in India, subject to commercial viability.
- Setting up of India-Saudi ventures for gas-based fertilizer plants in Saudi Arabia.

The two governments would encourage and support entrepreneurs in both countries to harness each other’s strengths for mutual benefit and promote economic cooperation actively.

The two countries would work for closer cooperation in the field of technology, in particular in the field of information and communication technology, agriculture, bio-technology, and non-conventional energy technologies. India will assist in setting up an ICT Centre of Excellence as well as institutes of higher learning, involving both education and research, in the field of technology in Saudi Arabia. India would offer opportunities for Saudi students to pursue Post-Graduate and Doctorate level studies in technical institutions in India, and enhance cooperation in human resource development related to telecommunications. It was agreed that an Educational Exchange Programme between the two countries should be
finalized and concluded at an early date.

The two countries would explore the prospect of cooperation in the health sector to realize the promising possibilities for enhancing cooperation in this sector, including health services, exchange of health personnel, health education and pharmaceuticals.

It was agreed that cooperation in the field of science and technology, tourism, youth affairs and sport, agriculture research and education, technical education and vocational training and other fields of mutual benefit should be intensified through signing of agreements and memorandum of understanding as necessary.

The two sides agreed to cultivate and encourage cultural exchanges between the two countries, both at official and popular levels.

The meetings of the bilateral Joint Commission will be held frequently and regularly, and the next meeting of the Joint Commission to be held later in 2006 has been tasked to ensure follow-up and implementation of the decisions taken by the two leaders during King Abdullah’s visit to India.

In the field of political cooperation, both sides exchanged views about international developments, especially those related to the Middle East, and affirmed their commitment to the principles of international legality and the importance of maintaining international peace and stability. The two sides agreed to work together towards resolving outstanding conflicts in the world through peaceful means.

Both countries emphasized the importance of the Beirut Arab Peace Initiative and the Road Map. They realized that the complementarity between the two plans would invigorate the peace process in the Middle East, and lead to the establishment of a viable and independent State of Palestine living in peace and prosperity within secure borders side by side with Israel.

With regard to the Iraqi situation, both sides expressed their hope that Iraq would turn a new page in history that would assure its security, unity, territorial integrity and prosperity, and respect for its sovereignty and independence.

The two sides welcomed the ongoing dialogue between India and Pakistan and their continued efforts aimed at settling the outstanding issues between the two countries.
338. Briefing points by Official Spokesperson on the visit of Foreign Minister of Saudi Arabia.

New Delhi, February 22, 2006.

-  His Royal Highness Prince Saud Al-Faisal, Foreign Minister of Saudi Arabia visited India February 21-22, 2006 as a follow-up to the very successful visit earlier to India by His Majesty King Abdullah bin Abdulaziz Al-Saud.

-  He called on Prime Minister and a dinner was later hosted in his honour by the National Security Adviser. Among the dignitaries present were Shri Murli Deora, Minister of Petroleum & Natural Gas.

-  His Royal Highness Prince Saud Al-Faisal, Foreign Minister of Saudi Arabia conveyed the greetings of His Majesty to the Indian leadership and expressed his appreciation and gratitude for the very warm and fraternal reception that he had received in India, and his determination that Saudi Arabia would follow through expeditiously on various items of cooperation agreed upon by the two countries. Saudi Arabia felt that it would be important for the two countries to take practical steps and the visit of the Foreign Minister, Prince Saud Al-Faisal to India was in that context.

-  During the discussions it was agreed that a high-level economic delegation from India would visit Saudi Arabia at an early date to promote early implementation of agreed projects including in the energy sector.

-  The two sides also exchanged views on regional and international issues of mutual interest.
TAJIKISTAN

New Delhi, August 4, 2006.

1. The Second meeting of the Indo – Tajik Joint Working Group on Countering International Terrorism was held in New Delhi on 03 – 04 August 2006. The Indian delegation was led by Shri KC Singh, Additional Secretary (International Organisation) in the Ministry of External Affairs, Government of India. The Tajikistan delegation was led by Mr Abdullo Uldoshev, Deputy Minister of Foreign Affairs. Both delegations included representatives of relevant Ministries and agencies.

2. The two sides reviewed the developments in the respective regions. They shared concern on cross border terrorism and emphasised the importance of action by all States to deny safe haven to terrorists.

3. The Indian and Tajikistan delegations reiterated that cooperation in combating terrorism constitutes an important part of partnership between the two countries. They unequivocally condemned terrorism in all its forms and manifestations and reiterated their commitments to further strengthen counter – terrorism cooperation.

4. The two sides expressed their concern regarding the increase in the spread of narcotics in the region and agreed that this directly threatens the security of both the countries.

5. The Joint Working Group emphasised the strengthening of bilateral mechanisms and agreed to continue to exchange information and share experience in the fight against terrorism.

6. The two sides also shared concern regarding financing of terrorism in the region underlining this as crucial in the counter terrorism strategy.

7. To bolster capacity building the Indian side offered training courses in various aspects of counter – terrorism. The Tajik side agreed to study the offer.
8. The two sides also discussed cooperation in the international fora and agreed to enhance cooperation through mutual consultations. They also urged the early finalisation of a Comprehensive Convention on International Terrorism at the United Nations which India has sponsored and Tajikistan has supported.

New Delhi, August 7, 2006.

The President of the Republic of Tajikistan H.E. Mr. Emomali Rahmonov paid a State visit to India from 6-10 August 2006 at the invitation of the Prime Minister of the Republic of India, H.E. Dr Manmohan Singh.

The Republic of India and the Republic of Tajikistan (henceforth called the Parties),

Considering the close historical ties of culture and traditional friendship of their people,

Confirming their adherence to the ideals of peace, democracy, multiculturalism, multi-ethnicity and secularism,

Realizing that the present visit marks the strengthening of India-Tajikistan relations, opens up new prospects for deepening mutual understanding and cooperation between the two countries and widens the basis for mutually beneficial partnership,

Noting that the Parties realize the necessity for pooling their joint efforts for the welfare and interests of their people, and for peace and stability in the region and the world,
Desirous to widen multifaceted contacts between the two countries and their people,

Affirming their commitment to the principles of tolerance, harmony and diversity in society and importance of dialogue and peaceful resolution of disputes,

Conscious of their responsibility for promoting peace, stability and security in the region and the world,

Recognizing the close inter-linkage between stability and security of the Central Asian region and the Indian sub-continent and the need for maintaining a secure and peaceful environment for development of the countries in the region,

Desirous of further strengthening people-to-people ties,

Have agreed as follows: The Parties noted with satisfaction the increased bilateral contacts and the frequency of exchanges at political and senior official levels and expressed confidence that the signing of a Memorandum of Understanding on Consultations between the Ministry of External Affairs of the Republic of India and the Ministry of Foreign Affairs of the Republic of Tajikistan will further promote bilateral contacts and exchanges;

Expressing its outrage at the barbaric terrorist acts carried out on 11 July 2006 in Mumbai and Srinagar in India, Tajikistan conveyed its solidarity with the Government and the people of India and expressed its deepest condolences to the victims and their families. They expressed readiness to undertake all necessary measures to bring to justice perpetrators, organizers, sponsors of terrorist acts, and those who incite the perpetrators;

Recognizing that terrorism is a scourge for all mankind, the two Parties agreed to closely and actively cooperate to fight the menace of terrorism and other transnational crimes such as money laundering, drugs and arms smuggling in a sustained and comprehensive manner. The two countries shall make concerted efforts for an early realization of the proposal to conclude a Comprehensive Convention on International Terrorism which is before the UN General Assembly. The Parties expressed satisfaction at the results of the second meeting of the Joint Working Group on Counter Terrorism, that was held in New Delhi during 3-4 August 2006, and expressed confidence that the Joint Working Group would intensify their cooperation and exchange of information directed at thwarting terrorist acts and trafficking in narcotics.
The two Parties expressed satisfaction that meetings of the bilateral Inter Governmental Commission are being held regularly and noted that the third meeting was held in New Delhi on 31 July – 1 August 2006. They stressed the need to enhance efforts to increase bilateral trade and economic relations. At the request of Tajikistan, India agreed to extend technical assistance to support Tajikistan’s accession to the World Trade Organization;

To expand and diversify mutual trade and investments, the two Parties confirmed their interest in studying investment opportunities in all sectors and particularly hydro energy in Tajikistan. The Parties welcomed the signing of a Memorandum of Understanding between the two Governments on Cooperation in the Energy sector. India offered to rehabilitate the Varzob 1 hydropower plant in Tajikistan;

The two countries would work for closer cooperation in the field of technology, particularly in information and communication technology, agriculture and exploration and development of mineral resources. The Parties welcomed the signing of a Programme of Cooperation between the Academy of Sciences of Tajikistan and the Department of Science and Technology of the Government of India for the period of 2006-2008;

Tajikistan conveyed its appreciation for the establishment of the Bedil Tajikistan India Centre for Information Technology, which was set up in Dushanbe with India’s assistance. India expressed the hope that the Centre would play a key role in training the youth of Tajikistan enabling them to actively participate in the economic development of their country. In this context, India further agreed to assist in setting up a Tool Room and Training Centre attached to the Tajikistan Technical University at Dushanbe;

Both Parties noted with satisfaction the expansion of cooperation in the sphere of the personnel training within the framework of Indian Technical and Economic Cooperation (ITEC) Programme and other programmes. India agreed to offer greater opportunities for Tajik nationals to pursue learning of the English language and other courses in India. India would also provide facilities for scholars from Tajikistan to undertake research and academic activities at the Centre for Central Asian Studies at the Jawaharlal Nehru University, Delhi;

The Parties agreed to develop and encourage cultural exchanges at both official and popular levels. They expressed confidence that with the signing of the Cultural Exchange Programme for 2006-09 between the
Governments of the two Parties, cultural exchanges between the two countries would be intensified. Tajikistan appreciated India’s initiative to restore the monument of eminent 18th century poet of India, Mirza Abdul Qadir Bedil, whose works during that century promoted development of Tajik-Persian poetry and are popular in Central Asia;

Both Parties expressed satisfaction at the development of institutional relations between the defence forces of the two countries and agreed to build closer defence ties including capacity building;

Both Parties exchanged views about international developments, particularly those related to developments in Central and South Asia;

The two Parties expressed their support to the Government of the Islamic Republic of Afghanistan for a sovereign, stable, democratic and prosperous Afghanistan. They expressed confidence that the present democratic process in Afghanistan would lead to the establishment of a strong and vibrant Afghanistan. They also reaffirmed their commitment to the economic reconstruction and rehabilitation of Afghanistan. While expressing concern over the escalation of violence in recent months in Afghanistan, both Parties expressed their confidence that the Government of Afghanistan will be able to overcome this threat. They also expressed support for the efforts of the Government of Afghanistan in combating the menace of opium cultivation and drug trafficking;

The two Parties, highly valuing the role of UN in guaranteeing peace, stability and in creation of favourable conditions for development of the world, confirmed the need to reform the structure and increase the effectiveness of the activities of this universal organization. Tajikistan reaffirmed its support for India’s permanent membership in an expanded UNSC;

The Parties expressed the hope that India would associate itself comprehensively with the activities of the Shanghai Cooperation Organization (SCO), directed at promoting greater economic and energy cooperation, cultural exchanges, and countering terrorism. India expressed appreciation of SCO’s role in promoting peace and stability in the region and for building a common front against terrorism, extremism and separatism;

The President of the Republic of Tajikistan invited the President of the Republic of India and the Prime Minister of the Republic of India to pay
official visits to Tajikistan. The invitations were accepted with pleasure. The dates of the visits would be decided through diplomatic channels.

Done in New Delhi on Monday, the Seventh day of August of the year 2006.

Dr. Manmohan Singh
Prime Minister in the Republic of India

Emomali Rahmonov
President Republic of Tajikistan

341. Speech of President Dr. A. P. J Abdul Kalam at a banquet in honour of the President of the Republic of Tajikistan Emomali Rahmonov.

New Delhi, August 7, 2006.

Your Excellency, Mr Emomali Rahmonov, President of the Republic of Tajikistan Excellencies, Distinguished Guests, Ladies and Gentlemen

It gives me great pleasure to welcome you, Mr President and all the members of your distinguished delegation to India. India and Tajikistan are countries bound by age old links from the days of the Avesta and Indo-Aryans of the Rig Vedic period. The inclusion of the people of the North Western part of the Indian subcontinent and the Tajik people of Bactria and Sogdih regions in a common State of Kushanas further strengthened the cultural and linguistic ties between us. Indian history is replete with achievements of many luminaries of Central Asian origin who lived and made their contributions on Indian soil.

The works of great souls like Rumi and Amir Khusrau reflect the cultural synthesis that developed between India and Central Asia. Similarly, the life and works of great Tajik literary figures such as Sadruddin Ayni and Rudaki show the closeness between our two cultures and people. Bobojon Gafurov’s monumental work “History of the Tajik People” brings out clearly the civilizational grandeur of the Tajik people and our common heritage. Your visit to the resting place of a famous son of India - Mirza Abdul Qadir Bedil, who is revered in Tajikistan and India must have been an enriching experience. Bedil inspired countless people of India and abroad and amongst them was none other than the literary genius Mirza Ghalib.
Excellency, the contours of world politics and economy have been redrawn over the last two decades. Rapid globalisation has brought us fruits of development. Our peoples have found prosperity in new endeavours which were not well known even a few years ago. Science and Technology have shown us potential of development which is in harmony with society and the environment. At the same time, serious issues of trans-national nature have come to the fore such as terrorism, cultivation of illegal narcotics, drug trafficking, HIV/AIDS etc. Countering these scourges can only be effectively done through cooperation and joining of hands across states and continents as no nation today can isolate itself from their ill-effects.

The recent terrorist strikes in Mumbai and Srinagar have once again tragically brought to our attention the need for a strong resolve and cooperation to defeat the terrorists and their ideology of intolerance and sectarianism. We have been touched by the words of solidarity, support and strong condemnation that we received from the world over and from Tajikistan and I take this opportunity to reiterate our resolve to win the fight against terrorism.

At the same time, Excellency, feelings of hope and the satisfaction of achievement burn brighter than ever before. Economic growth in Asia and the rest of the world, the emergence of a global middle class, exponential growth in communications have all meant that economic development and the ability to harmonize actions for the good of mankind have never had a better chance to succeed. It is this aspiration that guides us to cooperate and work towards building a better tomorrow for our peoples.

Excellency, India and Tajikistan have over the years, cooperated and interacted in a variety of bilateral and multilateral areas. I am tempted to state that our countries today enjoy a special relationship for mutual benefit. The potential for further development of people-to-people linkages and relations is high. We could collaborate in the areas of alternative and clean sources of energy, in exploitation of and value added technology to minerals and metals like aluminium and uranium etc. India could be involved in development of agricultural technology and in areas such as dairy sciences. Our remote sensing technology may also be of interest to you.

With an installed capacity of 33,000 MWs of hydro-power, India has developed vast expertise in the installation, generation, transmission and distribution of hydro-power. This is the area which offers great potential for
close cooperation between our two countries. Since your country has a vast potential of hydro-power, it can be made good use of for a fuller development of the energy sector.

We have, over the years, played a modest, but significant role in building Tajik capacity through instruction in computer sciences and other disciplines. I am told that an Information Technology Centre established with Indian assistance and named after Bedil has just been inaugurated in Dushanbe. I am confident that this Centre will be a symbol of the constructive relationship between our countries.

The youth of our countries are our most precious asset. In both Tajikistan and India, there is a vast reservoir of young minds, waiting to be ignited. We have to give them challenging opportunities, a suitable framework of governance and enough elbow room for their talent to bloom. It is only through young people that constructive change can be brought about. Excellency, as the great poet Firdausi wrote “he will be powerful who has knowledge. The old man who has knowledge has a young heart.” I feel that it is not only the old people who have knowledge and who can bring about change, but young people who have knowledge and dynamism have enormous capacity for bringing about greater change.

Excellency, you will soon be celebrating the 15th year of your Independence. Over these last 15 years, progress and developmental achievements of Tajikistan are commendable and noteworthy. I would like to convey the warm good wishes of the people and the Government of India for continued peace and prosperity of the people of Tajikistan. I take this opportunity to reaffirm our commitment to be an active partner in your developmental endeavours.

Excellencies, Ladies and Gentlemen, may I now request you to join me in raising a toast:

- to the health and well being of His Excellency President Rahmonov;
- to the progress and prosperity of the people of Tajikistan; and
- to the abiding friendship between our two people.

New Delhi, August 7, 2006.

The Ministry of External Affairs of the Republic of India and the Ministry of External Relations of the Republic of Tajikistan, hereinafter called “The Parties”.

DESIROUS of increasing the mutual understanding and cooperation between both Ministries:

CONSIDERING the benefits of the consultations and the exchange of opinion at all the levels of the bilateral relations, as well as in the regional and international issues of mutual interest, and

HOPING to facilitate the mutual cooperation for the benefit of both countries,

AGREE on the following:

1. The Parties will hold periodic consultations and will exchange information regarding all aspects of the bilateral relations, especially, in the areas of political, commercial, scientific, technological, cultural, educational and defence cooperation. In the same way, they will exchange opinions regarding the regional and international issues of mutual interest.

2. The Parties will hold meetings, which will be presided at the level of Secretary in the Ministry of External Affairs of India and Deputy Foreign Minister in the Ministry of Foreign Affairs of Tajikistan. The date, venue and agenda of the meetings will be determined between both Parties, by the diplomatic means.

3. The MOU will come into effect on the date it is signed by both the Parties. It will continue to remain in force unless either Party notifies the other, six months in advance about its intention of terminating the same.

IN WITNESS WHEREOF, the present Memorandum of Understanding is signed in the city of New Delhi, on the seventh day of the
343. Memorandum of Understanding on Cooperation between The Indian Council of World Affairs, Republic of India and Academy of Sciences, Republic of Tajikistan.

New Delhi, August 8, 2006.

The Indian Council of World Affairs (ICWA), New Delhi, and Academy of Sciences, Republic of Tajikistan hereinafter referred to as “The Parties”

Intending to enhance mutual understanding and friendship between the peoples of the Republic of India and the Republic of Tajikistan through the promotion of friendly institutional relations;

Have reached the following understanding:

Article 1 – General Guideline

The Parties agree to develop exchanges and cooperation on the basis of mutual respect, equality and mutual benefit.

The Parties agree to establish a non-government group of eminent persons, from both sides from the fields of diplomacy, culture, economy and trade, academics, sciences, social sciences, communications and the media to facilitate an Annual India-Tajikistan Dialogue and cooperation between the civil societies of India and Tajikistan.

With a desire to make such dialogue and exchange fruitful, the Parties shall, through mutual understanding, decide upon the number of participants from each side, and shall each nominate their respective Co-Chairpersons. The list of eminent members from both sides shall be communicated through mutual exchange of letters.

The Annual Dialogue will be hosted alternately in India and Tajikistan.
by the ICWA and the Academy Sciences respectively. The first dialogue will be hosted by Academy of Sciences in Dushanbe in early 2007.

**Article 2 – Contents of Cooperation**

Cooperation under this Memorandum may include;

1. Promotion and support of those activities contributing to better understanding and relations between India and Tajikistan;
2. Promotion and support for the exchange of visits by eminent persons in the fields of diplomacy, culture, academics, economy and trade, education, sciences, social sciences communication and the media;
3. Co-sponsoring of bilateral seminars, symposiums and panel discussions on issues of common interest;
4. Exchange of publications;
5. Other forms of cooperation as may be agreed upon by both parties through consultations;

**Article 3 – Sharing of Expenses**

On the basis of reciprocity, the sending Party shall cover international travel expenses while the receiving Party shall cover local transportation and hospitality expenses of the participants as well as local organizational costs.

**Article 4 – Others**

Other issues not covered in this Memorandum shall be decided through mutual consultation between the Parties.

**Article 5**

The Memorandum shall come into effect from the date of its signature. This Memorandum of Understanding may be amended by mutual agreement whenever necessary.

Signed in New Delhi on the 8th day August of the year 2006 in three originals each in the Hindi, English and Tajik languages, all texts being equally authentic. In case of any divergence in interpretation, the English text shall prevail.

(Talmiz Ahmad)                     (M.Ilolvo)
Director General         President of the
For Indian Council of World Affairs Academy of Sciences
Sapru House, New Delhi Dushanbe
TURKMENISTAN

Ashgabat, October 4, 2006.

Shri E. Ahamed, Hon’ble Minister of State for External Affairs and co-chair of the India-Turkmenistan Inter-Governmental commission on Trade-Economic Scientific and Technological Cooperation led the Indian delegation for the 1st meeting of the Inter-Governmental Commission held in Ashgabat (Turkmenistan) on 2-3 October 2003. Hon’ble Minister was accompanied by a high level delegation with representatives from Ministries of External Affairs, Petroleum and Natural Gas, Departments of Commerce and Science and Technology, State Trading Corporation and Public Sector Oil and Gas companies, namely ONGC Videsh and Gail India Limited.

On his arrival in Ashgabat Shri Ahamed was received by his counterpart and co-Chair of the Turkmen side of the Inter-Governmental commission Mr. Rashid Meredov, Minister of Foreign Affairs of Turkmenistan. Shri Ahamed had extensive discussions with Mr. Meredov on all aspects of the bilateral relationship as well as issues of regional cooperation such as India’s participation in the Turkmenistan-Afghanistan-Pakistan (TAP) gas pipeline project. The Turkmen Foreign Minister conveyed the support of H.E. Mr. Saparmurat Niyazov, President of Turkmenistan to greater Indian involvement in various sectors in Turkmenistan, notably in the hydrocarbon sector. Mr. Meredov informed Shri Ahamed that Turkmenistan supports India becoming a member of TAP.

Shri Ahamed addressed the plenary session of the Inter-Governmental Commission wherein he stressed the need for India becoming a development partner for Turkmenistan. The Inter-Governmental Commission meeting was conducted through meetings of various sub-groups including the 1st meeting of the India-Turkmenistan Joint Working Group (JWG) on Hydrocarbons. The JWG on Hydrocarbons discussed possible areas of bilateral cooperation such as India’s interest in participation in prospecting and eventual exploration and production in the offshore Caspian blocks of Turkmenistan.
India also agreed to facilitate the issue of permission for Turkmenistan’s designated carrier to fly to additional points of call in India namely Ahmedabad and Kochi. India also offered to establish in Ashgabat an India-Turkmenistan Centre for Information Technology for capacity building of nationals of Turkmenistan in the information technology area.

Both sides resolved to make efforts for intensifying commercial relations through trade related joint ventures. The Turkmenistan side agreed to facilitate imports of Indian pharmaceutical products in Turkmenistan. Cooperation in science and technology particularly in seismic studies as well as in combating desertification was also agreed upon. A joint protocol outlining the specific areas of cooperation was signed at the conclusion of the Inter Governmental Commission by the two Co-Chairs.

345. Condolence Message of External Affairs Minister to acting President of Turkmenistan on the sad demise of Saparmurat Niyazov, President of Turkmenistan.

New Delhi, December 22, 2006.

Excellency,

It is with a deep sense of sorrow that I have learnt about the sad demise of H.E. Mr. Saparmurat Niyazov, President of Turkmenistan. At this moment of sorrow, on behalf of the Government and people of India, I convey our sincere and heartfelt condolences to the family of the deceased leader and the Government and people of Turkmenistan. I hope and pray that the people of Turkmenistan will be granted the strength and fortitude to overcome this tragedy with courage and determination.

India and Turkmenistan have mutually benefited from close ties through history. I take this opportunity to renew India’s commitment to further strengthening the warm and friendly ties between our two countries.

Sd/-
(Pranab Mukherjee)

H.E. Gurbanguly Berdymukhamedov,
Acting President of Turkmenistan, Ashgabat
New Delhi, December 25, 2006.

Prof. Saifuddin Soz, Union Minister of Water Resources led the Indian delegation to the state funeral of H.E. Mr Saparmurat Niyazov, the late President of Turkmenistan, held on 24 December 2006 at Ashgabat. A large number of world leaders, including President Hamid Karzai of Afghanistan, President Nursultan Nazarbayev of Kazakhstan, President Emomali Rahmonov of Tajikistan, Prime Minister Shaukat Aziz of Pakistan and Prime Minister Mikhail Fradkov of Russia attended the funeral.

Prof. Soz laid a wreath at the coffin of the late President, who lay in state at the Turkmenbashy Presidential Palace in the heart of the city. Prof. Soz was accompanied by Shri R.P. Kaushik, Ambassador of India to Turkmenistan and other senior officials of the Government of India. He conveyed India’s deepest condolences on the sad demise of the Turkmen President to the family members of the late President. Prof. Soz also met the acting President of Turkmenistan, H.E. Mr Gurbanguly Berdymuhamedov and other members of the Cabinet and offered India’s condolences. He assured the acting President that India looked to Turkmenistan as a trusted friend and was interested in promoting and strengthening the traditional bonds of friendship that bind us. Mr. Berdymuhamedov reciprocated Prof. Soz’s sentiments.

During the visit to Ashgabat, Prof. Soz had a meeting with President Rahmonov of Tajikistan. President Rahmonov conveyed his appreciation of the strong relationship enjoyed by India and Tajikistan. President Rahmonov and Prof. Soz discussed possibilities of India’s involvement in the proposed project of export of electricity from Central Asia to South Asia.
Statement of Condolences by Vice President Bhairon Singh Shekhawat on the demise of Sheikh Maktoum bin Rashid Al Maktoum, Vice President and Prime Minister of the UAE and Ruler of Dubai.

Dubai, January 6, 2006.

I have been deeply saddened about the sad and untimely demise of His Highness the Late Sheikh Maktoum bin Rashid Al Maktoum, Vice President and Prime Minister of the UAE and Ruler of Dubai.

On behalf of the Government and people of India, I have come to Dubai to personally convey our sincere condolences and to share the grief of His Highness General Sheikh Mohammed bin Rashid Al Maktoum, Ruler of Dubai, other family members and the people of UAE.

Under the leadership of Sheikh Maktoum, Dubai made great strides and has emerged as a business, financial, tourism and travel hub not only in the region but also globally.

The UAE is one of India’s most important trading partners and Dubai is the fulcrum that drives our intensive economic engagement. India and the UAE, and Dubai in particular, are bound by links that stretch back centuries. These symbiotic links have been further strengthened in recent times by the presence of a large number of my compatriots in this great country. Dubai is a home away from home for them and their Emirati brothers and sisters have welcomed them into their midst. This is a tribute to the wise and sagacious leadership of this land. We are proud that we have been able to contribute our might to the growth and progress of this country.

On behalf of the Government and people of India and on my own

---

1. A press release issued by the Ministry of External Affairs the previous day said: “Sheikh Maktoum was one of the eminent leaders of the region whose contribution to the United Arab Emirates and Dubai in particular has indeed been immense. He will always be remembered as a great benefactor by the people of Dubai and the UAE. The loss is even more poignant for all Indians, particularly those residing in Dubai, who greatly benefitted from his affection and generosity. India is united in grief with the ruling family of Dubai and the leadership and the people of UAE, in mourning the passing away of Sheikh Maktoum.”
behalf, I would like to convey our best wishes for the continued growth and prosperity of the friendly people of this great land.

I also convey my best wishes to His Highness Sheikh Mohammed bin Rashid Al Maktoum, Vice President and Prime Minister of the UAE and Ruler of Dubai, for his visionary and dynamic leadership.
348. Media briefing by Secretary (East) Rajiv Sikri on Prime Minister’s Visit to Uzbekistan.

New Delhi, April 20, 2006.

Please See Document No. 477.

349. Opening Remarks by Prime Minister Dr. Manmohan Singh at the Joint Press Conference with Uzbekistan President.

Tashkent, April 26, 2006.

Dr. Manmohan Singh: President Karimov and I have had very fruitful discussions this morning, continuing upon our last meeting in New Delhi one year ago. We are satisfied with the steady growth in our multi-dimensional relationship.

Central Asia is strategically an important region and has historically been at the cross roads of the Eastern and Western worlds. We wish for continued stability and economic prosperity for our friends in Uzbekistan.

We have had very close political and economic relations and are cooperating in activities for training of defence personnel. Both our countries face the common threats of terrorism, fundamentalism and religious extremism and President Karimov and I have resolved to continue to work together to combat these dangers.

During the talks we have decided to qualitatively enhance our commercial and economic relationship.

India’s strengths are in the service industry and human resources development. The Jawaharlal Nehru India Uzbekistan Centre for Information Technology to be inaugurated this afternoon would be a symbol of our commitment to support Uzbekistan in training qualified personnel for emerging industries.
I am happy that President Karimov has accepted our offer to set up an Entrepreneurship Development Centre in Tashkent which would be an important training ground for young businessmen and would lead to generation of employment.

We are also taking an initiative to provide satellite based tele-education and tele-medicine connectivity between India and Uzbekistan which would be a demonstration of cutting edge technological and human resource cooperation between our two countries.

I am also happy to note that we have agreed to cooperate in the fields of oil and natural gas exploration and production. We see Uzbekistan as an important element in any effort to optimally utilize the energy resources of Central Asia. India will also cooperate with Uzbekistan in exploration and development of its vast geological and mineral resources.

I thank President Karimov and the people of Uzbekistan for their traditional warmth and affection for India. Both our countries are committed to regional stability, world peace and economic growth and prosperity of our peoples. We will continue to work together to achieve our common objectives.

350. Remarks by Prime Minister Dr. Manmohan Singh at the inauguration of Jawaharlal Nehru India-Uzbekistan Centre for Information Technology.

Tashkent, April 26, 2006.

I am deeply honoured to be in your midst today for the inauguration of the India Uzbekistan Centre for Information Technology named after the illustrious son of India, Pandit Jawaharlal Nehru, who had the vision to lay the foundations of India’s scientific and technological advancement.

Investment in education and training is an investment in the future of the country. It is a tool for generation of employment and improvement in the quality of life of the people. Progress is linked to fully exploiting the opportunities created by the use of Information and Communication Technologies.
India has made considerable strides in the sphere of Information Technology. The fruits of Information Technology are now being harvested in rural India as well. We are also working to take connectivity to the remotest corners of India. Modern technology has reduced the barriers of time and space and enables countries to leapfrog stages of development.

Countries, therefore, must redouble efforts to bridge the knowledge gap, both within themselves and with advanced countries. It is only then that our youth and scientists can participate fully in the global market place of ideas, knowledge and information. I am confident that this Centre will train knowledge workers in Uzbekistan to enable them to compete with confidence in the global market place.

Friends, it gives me great pleasure to join your Prime Minister in inaugurating this Centre which symbolizes the modern and dynamic face of India-Uzbekistan friendship and cooperation. I thank you.

351. Joint Statement issued at the end of the visit of Prime Minister Dr. Manmohan Singh to Uzbekistan.

Tashkent, April 26, 2006.

1. At the invitation of the President of the Republic of Uzbekistan, H.E. Mr. Islam Karimov, the Prime Minister of India H.E. Dr. Manmohan Singh, paid an official visit to the Republic of Uzbekistan on 25-26 April 2006.

2. The Prime Minister of India Dr. Manmohan Singh held discussions with the President of the Republic of Uzbekistan Mr. Islam Karimov. The talks were held in an atmosphere of friendship and trust. The two Sides had detailed exchange of views on the issues of further development of bilateral relations in political, trade and economic, scientific and technical, cultural and humanitarian and other spheres of cooperation, as well as on regional and international issues of mutual interest.

3. The two Sides positively assessed dynamic development of India-Uzbekistan relations, reviewed in detail the follow up on decisions taken during the visit of the President of Uzbekistan to India in April
2005 and in this context noted the significant potential for further cooperation between the two Sides for the benefit of the peoples of two countries as well as peace and stability in the region.

4. Both Sides agreed on the importance of maintaining regular political dialogue, including at the highest level, on bilateral relations as well as on regional and international issues. The importance of greater contacts between the ministries, departments and economic entities of the two countries was emphasized. The two Sides agreed to take active measures to promote people- to-people contacts.

5. Uzbekistan and India noted that there exist vast opportunities for the development of cooperation in the spheres of education, information technology, oil and gas sector, light industry, agriculture, aviation, tourism, entrepreneurship, mineral resources and pharmaceuticals.

6. The two Sides noted with satisfaction the signing of the following documents during the visit:

i) Memorandum of Understanding between the Government of the Republic of India and the Government of the Republic of Uzbekistan on establishing the Uzbekistan India Entrepreneurship Development Centre at Tashkent;

ii) Memorandum of Understanding between the Ministry of Petroleum and Natural Gas of the Republic of India and the National Holding Company “Uzbekneftegaz” of the Republic of Uzbekistan on Cooperation in the field of Oil and Natural Gas;

iii) Memorandum of Understanding on Cooperation between the Ministry of Coal and Mines of Republic of India and the State Committee of the Republic of Uzbekistan for Geology and Mineral Resources;

iv) Memorandum of Cooperation between GAIL (India) Limited and Uzbekneftegaz;

v) Work Plan for 2007 under the Memorandum of Understanding for Cooperation in the field of Agricultural Research and Education between the Department of Agricultural Research and Education of the Ministry of Agriculture of the Government of the Republic of India and the Ministry of Agriculture and
Water Resources of the Government of the Republic of Uzbekistan;

vi) Memorandum of Understanding between State Trading Corporation of India and O’zbekyengilsanoat State Joint Stock Company of Uzbekistan;

vii) Memorandum of Understanding between Delhi University and Tashkent State Institute of Oriental Studies.

7. The Sides while recognizing the need to enhance the trade-economic and investment cooperation, agreed to facilitate contacts between the representatives of business circles of the two countries.

8. The Sides expressed satisfaction with the results of the Sixth meeting of the India- Uzbekistan Intergovernmental Commission on Trade, Economic, Scientific and Technological Cooperation held in New Delhi on 7 March 2006 and underlined the importance of early implementation of the provisions of the signed Protocol.

9. The Republic of Uzbekistan highly appreciates the inauguration of the Jawaharlal Nehru Uzbekistan India Centre for Information Technology in Tashkent.

10. The Indian side offered to set up satellite based tele-education and tele-medicine connectivity between India and Uzbekistan to strengthen cooperation in the area of communications and information technology. The Republic of Uzbekistan accepted with pleasure the Indian offer.

11. The Sides noted with satisfaction the extension of cooperation in the sphere of the personnel training within the framework of Indian Technical and Economic Cooperation (ITEC) programme and other programmes. India offered an increase in the ITEC training slots for Uzbekistan from 100 to 120 from the current financial year. The Sides have agreed to continue intensive interaction in this direction.

12. India offered to provide financial support to establish the Uzbekistan India Entrepreneurship Development Centre in Tashkent. Uzbekistan agreed to provide necessary support to facilitate the establishment of the Centre.

13. The Sides expressed confidence that the rich historical and cultural heritage of the two countries provides a strong foundation for
enhancement of all round cooperation and intensification of contacts between scientists, teachers, students as well as artistic and creative personalities.

14. The Republic of Uzbekistan accepted with pleasure the offer of the Indian side to establish the Mahatma Gandhi Centre for Indian Studies at the Tashkent State Institute of Oriental Studies.

15. The two Sides noted the similarity or coincidence of their respective positions on major global and regional issues. Uzbekistan and India, while resolutely condemning international terrorism in all of its forms and manifestations, once again underlined their resolve, on a long term basis, to fight against terrorism, which is one of the most serious threats to international peace and security. In this regard, the two Sides emphasized the need for expeditious adoption of the Comprehensive Convention on International Terrorism within the framework of UN.

16. The two Sides expressed satisfaction with the results of the Second meeting of the Joint Working Group on Combating International Terrorism held in October 2005 in New Delhi and expressed the intention to continue consultations between the corresponding authorities of both states with the aim of coordinating their anti-terrorist efforts.

17. The two Sides expressed their support for the efforts of the Government of Afghanistan to build a strong, united, prosperous and independent country.

18. Both Sides, while considering the current changes in global and regional level stressed the urgent need for reforms of structure and activity of the United Nations Organisation and enhancement of its efficiency in countering new threats and challenges. Uzbekistan once again reiterated its support to the permanent membership of the Republic of India in an expanded UN Security Council. India expressed its appreciation for Uzbekistan’s support.

19. The Republic of Uzbekistan noted that the accession of India to the Shanghai Cooperation Organisation as an observer is an important factor in raising the importance of the Organisation and expansion in its abilities to impact positively on regional and global processes.

20. Both Sides shared the opinion that the intensification of cooperation
within the framework of SCO in countering contemporary challenges would promote the development of effective mechanisms in strengthening regional security.

21. The two Sides noted with satisfaction that the discussions and meetings held in Tashkent have made an important contribution to the steady development of mutually beneficial –India-Uzbekistan cooperation, which would serve the cause of further strengthening traditionally friendly relations and multi-faceted cooperation between the two countries.

22. The Prime Minister of the Republic of India H.E. Dr. Manmohan Singh invited the President of the Republic of Uzbekistan, H.E. Mr. Islam Karimov to pay an official visit to the Republic of India. The invitation was accepted with pleasure. The dates of the visit would be decided through diplomatic channels.

352. Memorandum of Understanding for Cooperation In the field of Oil and Natural Gas between the Ministry of Petroleum and Natural Gas of the Republic of India and the National Holding Company Uzbekneftegaz of the Republic Of Uzbekistan

Tashkent, April 26, 2006

The National Holding Company Uzbekneftegaz of the Republic of Uzbekistan and the Ministry of Petroleum and Natural Gas of the Republic of India (hereinafter referred to as “the Parties”):

Recognizing the opportunity for cooperation created by the long term mutual relationship and joint economic projects;

Noting the importance of a sound energy policy for the stable development of their respective economies, for ensuring the security and well being of their peoples, for fostering greater cooperation in the region and for strengthening their mutual commitment to protecting the environment;
Acknowledging the importance of developing an energy policy that meets the needs of today without compromising the ability of future generations to meet their own needs, that maximizes energy productivity to strengthen their economies and that prevents pollution by reducing the adverse environmental impacts associated with oil and natural gas production, delivery and use;

Noting the opportunities for enhanced economic and commercial cooperation created as a result of economic reforms in India and Uzbekistan designed to give their people opportunities for better jobs and increased trade and investment from around the world;

Recognizing the importance of regional cooperation in achieving the economic, energy and environmental goals of India and Uzbekistan;

Desiring to strengthen the friendly relations existing between the two countries;

Have agreed as follows:

**Article I**
*(Objectives)*

The Parties shall, based on the principle of mutual benefit, establish the basis for a cooperative institutional relationship and encourage and promote bilateral cooperation in oil and natural gas industry.

**Article II**
*(Joint Working Group)*

With a view to coordinating the cooperation envisaged by this Memorandum, the Parties shall establish a Joint Working Group (hereinafter referred to as the JWG) within one month, which will be headed by Secretary of the Ministry of Petroleum & Natural Gas of the Republic of India and the First Deputy Chairman-General Manager of National Holding Company Uzbekneftegaz of the Republic of Uzbekistan.

The JWG shall consist of representatives designated by the two Parties and shall meet at least once a year alternate in each country on mutually convenient dates. The first meeting of the JWG will be held within 3 (three) months from the date of execution of this MOU.

The JWG may establish committees, for dealing with specific tasks and exchanging of opinions on the overall perspectives of the bilateral cooperation.
The JWG shall be responsible for implementing the action plans to be drawn up by the Group or by the committees, as defined in Articles III & IV.

Article – III
(Areas of Cooperation)

In accordance with this Memorandum, the areas of cooperation between the Parties may include, but are not limited to, the following:

1. Establishment of cooperation between Indian and Uzbek companies in undertaking E&P initiatives with subsequent development of newly discovered oil and gas fields and production of petrochemical products in Uzbekistan and bidding by Uzbek companies in various New Exploration Licensing Policy (NELP) rounds for participating in the Indian E&P sector;

2. To undertake joint studies and partnerships to secure oil and gas supply of the two countries by investments in third countries. The Parties agree that opportunities in Central Asia, Southeast Asia, the Middle East and Africa constitute the high priority areas for such cooperation;

3. To encourage execution of large engineering and construction contracts including Oil and Gas Pipeline Projects by Uzbek and Indian companies;

4. To encourage taking up of LPG and LNG Refinery projects by Uzbek and Indian companies in Uzbekistan, India and third countries;

5. Basic and applied research and development in oil and natural gas areas:

6. Research, designing, construction, commissioning, operation and maintenance, and as well as engineering and management in the area of oil and gas related industries;

7. Cooperation for manufacture, upgrading and supply of drilling rigs and petrochemical processing units;

8. Training of specialists, sharing of expertise and technical assistance;

9. Environmental protection including oil spill emergency response systems;
10. Other areas as may be agreed upon by the Parties.

**Article IV**
**(Forms of Cooperation)**

Cooperation may take the following forms:

1. Exchange and training of scientific and technical personnel, development of joint activities for the personnel;
2. Exchange of available scientific and technical information and data;
3. Opening of economic missions, organization of seminars and setting up working groups;
4. Design, construction, operation, maintenance and management of projects;
5. Transfer of equipment, know-how and technology, on commercial basis;
6. Provision of necessary technical consultancy and services;
7. Joint research or projects in areas of mutual interest;
8. Implementation of projects in third countries;
9. Other forms as may be agreed upon by the Parties.

**Article V**
**(Information)**

The Parties shall freely use any information exchanged in conformity with the provisions of this Memorandum and Confidentiality Agreement, except in the cases where the Party or authorized persons providing such information have previously made known the restrictions and reservations concerning its use and dissemination.

The Parties shall take appropriate measures in accordance with their respective national laws and regulations to observe the restrictions and to reserve the right to information and to protection of intellectual property rights including commercial and industrial secrets transferred between authorized persons within the jurisdiction of the State of either Party.

**Article VI**
**(Settlement of disputes)**

The representatives of the Parties shall meet from time to time and consult with each other, at the request of either Party, to review the
implementation of this Memorandum of Understanding or to consider matters arising from its implementation.

Any dispute concerning the interpretation or application of this Memorandum of Understanding shall be settled amicably by negotiations or consultations between the Parties.

**Article VII**
(Entry into Force and Duration)

This Memorandum of Understanding will be valid for a period of 3 (three) years and shall come into force on the date of signing of the MOU.

The validity of this MOU shall be automatically renewed for another 3 (three) years unless either of the Parties give written notice of its intention to terminate the MOU, 6 (six) months before the expiry of this period.

This Memorandum of Understanding may be amended with the written consent of the Parties. Any such amendment shall enter into force in accordance with the procedures stipulated in paragraph 1 of this Article.

**IN WITNESS WHEREOF** the undersigned, being duly authorized thereto, for this purpose by their respective Government have signed this Memorandum of Understanding.

**Done** at Tashkent, Republic of Uzbekistan on this 26th day of April 2006, in two originals each in Russian and English languages, all texts being equally authentic. In case of any divergence in interpretation, the English text shall prevail.

On behalf of The Ministry of Petroleum and Natural Gas of the Republic of India

On behalf of National Holding Company UZBEKNEFTEGAZ

353. Speech of Prime Minister Dr. Manmohan Singh at the banquet hosted in his honour by Uzbek President.

Tashkent, April 26, 2006.

I would like to express my deep appreciation to the Government as well as the friendly people of Uzbekistan for the very warm welcome and hospitality extended to me and my delegation.

A visit to Uzbekistan is for me an experience that is both moving and replete with a sense of history. We have civilizational ties with Uzbekistan dating back to the dawn of history.

Even up to the early years of the last century in the major cities of Uzbekistan – Samarkand, Bukhara, Khiva – there were communities of Indian traders who lived and worked in harmony with the Uzbek people.

Tashkent is immortal in our memories because of its association with a great son of India – Shri Lal Bahadur Shastri. While paying my respects at Shastriji’s memorial this afternoon, I felt a deep sense of gratitude towards the Government and people of Uzbekistan for their enduring tribute to our Late leader.

India was among the first countries to establish diplomatic relations with Uzbekistan in 1992. Of course, even as early as April 1987 we had opened an Indian Consulate in Tashkent.

Mr. President, we applaud the achievements of Uzbekistan in facing multifarious challenges. Your success is important not just for the people of this country, but for Central Asia as a whole. Your visit to India in April last year was an important milestone in consolidating our ties. Uzbekistan has registered 7% increase in its GDP last year. Your plans to attract foreign investment for rapid growth are impressive. India stands ready to be your partner for mutual benefit in sectors ranging from agriculture and science & technology to mining and hydrocarbons. Our trade and economic ties are growing but we must do more. The Jawaharlal Nehru India Uzbekistan Centre of Information Technology in Tashkent, inaugurated today, heralds a new beginning of cooperation in this field.

Our common objective is to seek peace and prosperity for our peoples. Terrorism is a menace that must be fought collectively. Stability and prosperity of Central Asia is in the interests not just of India, but the
world community as a whole. This goal cannot be reached without Uzbekistan, which must lead the way.

I was deeply touched by the popularity of our dances, music and films in your country. We draw inspiration from our unique and enormously rich heritage. Here, I would like to quote from the great Uzbek philosopher and poet, Alisher Navoi, who said 565 years ago:-

“May the Earth be an abode of delight, pleasure, songs and orchards, May peace ascend to the throne of the world, And let all the peoples gather for its feast” I thank you once again for your warm hospitality.

I now invite you to join me and raise your glasses in a toast:

- to the good health and happiness of President Islam Karimov and Madam Karimova
- to the well-being and prosperity of the people of Uzbekistan,
- to the ever-lasting friendship between India and Uzbekistan.

INDIA’S FOREIGN RELATIONS - 2006
SECTION - VI
AFRICA
Press Release of the Ministry of External Affairs on the meeting of Minister of State Anand Sharma with the African Heads of Mission in New Delhi.

New Delhi, February 10, 2006.

Mr. Anand Sharma, Minister of State for External Affairs, today hosted a lunch for all African diplomatic Heads of Mission in New Delhi. Ambassadors, High Commissioners and other senior representatives of all major countries attended the lunch.

Addressing the distinguished gathering, the Minister referred to India’s steadfast support for Africa’s freedom struggle and recalled Mahatma Gandhi’s comment that India’s own independence would remain incomplete until Africa had been liberated from the yoke of colonialism. The Minister recalled his own long-standing association with Africa when it was struggling against colonialism and apartheid and drew attention the Government’s continued engagement with the continent.

Highlighting the assistance provided to a number of countries in Africa under the ITEC and Aid to Africa Programmes of the Ministry of External Affairs, he drew special attention to the Hon’ble President’s initiative to establish a Pan African e-network, which would help African countries in bridging the digital divide. He also emphasized on the need to develop a regular India-African Union dialogue and to create an appropriate institutional structure for the same.

Thanking the Minister for his initiative to host this interaction with African diplomats so soon after assumption of office, H.E. Mr. Abdalmahmood Abdalhaleem Mohammad, Ambassador of Sudan and Dean of African diplomats acknowledged Mr. Sharma’s unflinching commitment to Africa. The UPA Government, he said, deserved compliments for this brilliant appointment, which had sent an extremely positive signal to Africa about the importance that India attached to its ties with the continent. Africa, he said, was genuinely appreciative of all the help that it had received from India during its struggle against colonialism. It was also grateful for India’s multifaceted assistance to Africa’s economic development. In this context, he said that the Honourable President’s Pan African e-network Project would emerge as a major new landmark since this was the first time that any country had attempted to reach out to all countries in the African continent through a single initiative. He emphasized
that this project could have an enormous impact on Africa’s efforts to bridge the digital divide in the critical areas of education and healthcare. He also applauded the important role being played by Lines of Credit extended by India to Sudan and to a number of other countries in Africa to enable them to bridge the financial gap for important projects.

355. Joint Press Conference by Minister of State Anand Sharma and the Leader of ECOWAS Delegation\(^1\), Madame Aichatou.

New Delhi, April 5, 2005.

MINISTER OF STATE FOR EXTERNAL AFFAIRS (SHRI ANAND SHARMA): Good evening friends! I am very happy to inform you that the ECOWAS delegation which is present here led by Minister Aichatou of...

1. Members of the delegation were: 1. Mme Aichatou Mindaudou, Minister of Foreign Affairs and African Cooperation of Niger and Chairperson, Council of Ministers of ECOWAS – Leader; 2. Dr. Mohamed Ibn Chambas, Executive Secretary, ECOWAS; 3. Senator Lawan Gana Guba, Minister of Integration and Cooperation in Africa of the Federal Republic of Nigeria; 4. Mr. Abdou Aziz Sow, Minister of Integration and NEPAD of Senegal; 5. Dr. Kofi Konadu Apraku, Minister of State for Regional Cooperation and NEPAD of Ghana; 6. Mr. Christian Adovelande, President, ECOWAS Bank for Investment and Development; 7. Mr. Barthélemy Drabo, Managing Director, ECOWAS Regional Investment Bank; 8. Mr. Bachir IFO, Acting Managing Director, ECOWAS, Regional Development Fund; 9. Mr. Remi Gbaguidi, Protocol Assistant to Executive Secretary, ECOWAS.

The Official Spokesperson a day earlier briefed the journalists on the importance of the ECOWAS. He said: “...it was founded in 1975 by 15 West African countries. Its principal objective was to establish Customs Union and a common market to promote free movement of goods and people within West Africa. It also later on evolved into a forum which takes an interest in regional security issues. We have close ties with a number of countries in the ECOWAS region and this relationship has received a boost over last year through the implementation of a number of high profile projects funded through bilateral lines of credit under TEAM-9 and NEPAD initiatives. Bilateral trade with the ECOWAS region currently stands at 2.11 billion USD and it accounts for 27 percent of India’s total exports to Africa and 18 percent of our total imports from the continent. India is an Observer to ECOWAS, we became Observer in 2004. Our High Commissioner in Nigeria is concurrently accredited. So, it is the first high level visit from EWCOWAS and I think it would be very interesting visit in terms of defining the roadmap of future relations between India and the organization and West African states and possible development of initiatives for closer political cooperation, closer trade cooperation and of course cooperation in multilateral fora.”
Niger is the largest ECOWAS delegation to visit India and the first ever high-level delegation, which includes four Ministers and also the Executive Secretary of the ECOWAS.

This is a delegation which has been mandated by the ECOWAS’ Heads of States to engage India and expand the relations between ECOWAS and India. It is also indicative of the deepening of relationships between India and ECOWAS countries and also expansion of the areas of cooperation.

The delegation has met with the President today, and also the Finance Minister. We have just concluded the delegation-level talks which were substantive, comprehensive and covered a wide range of areas of cooperation ranging from energy to small-scale industries to cooperation in financial institutions, banking, IT, agriculture and energy.

I am also very happy to share with you that India has the largest lines of credit with ECOWAS countries. We have the TEAM-9 Initiative also. These lines of credit cover a number of countries and also important projects in some of the countries. It is 500 million US dollars. We have agreed today for another 250 million dollars line of credit for the ECOWAS Investment Bank.

During the delegation-level talks we have had presentations from both the sides. Our delegation also included representatives of various Ministries besides our own Ministry of External Affairs, Ministry of Finance, Ministry of Commerce, Ministry of Agriculture, the Advisor of Railway Board, IRCON, RITES, and also the small-scale industries, which is an important area again.

I need not go into the details of the various projects which are under way in countries right from the irrigation projects, the power projects, the tractor assembly projects, or the machine tool projects. As I referred specifically also to the IT, much progress has been made.

Most of you are aware of the visit by our President in 2004 and the offer which the President of India had made to assist Africa in overcoming the digital divide. Now we have reached a stage when it can be operationalised. We have identified five hubs one of which will become operational soon. We heard details of the same in our meeting. On the other four also progress is being made. It will help enormously in the field of telemedicine and tele-education.
This visit is also significant in improving understanding, as I was mentioning, between ECOWAS and India through interaction, because the delegation is a high-level one, with senior leadership of this country. Tomorrow they will also be meeting with the hon. Prime Minister which underscores the importance which India attaches to its relationship with Western Africa and Africa in general.

We have also discussed other issues which include the UN reforms. The outcome has been very reassuring. Both ECOWAS and India are of the shared view that UN is in need of comprehensive reforms. We will be giving a statement listing the areas which we have discussed. I would now request the leader of the ECOWAS delegation Madame Aichatou to address.

LEADER OF ECOWAS DELEGATION (MADAME AICHATOU):
Thank you, Excellency. Ladies and Gentlemen, good evening to all of you. As His Excellency the Hon’ble Minister indicated, we are a high-level delegation from the ECOWAS region in Western Africa. At the summit of the Heads of State of our region last year we were mandated to come to India as a delegation and to have discussions with India on ways of diversifying economic cooperation between India and the ECOWAS region. As you know, political and historical links have always existed between India and Africa. As my colleague the Minister had mentioned, India has always been by the side of Africa where its political liberation was concerned. It has also been at the side of African countries individually and collectively for their economic development. As part of the TEAM-9 Initiative, many members of the ECOWAS countries have also benefited from this TEAM-9 Initiative. They have benefited from both technical and financial assistance from India. And the projects that were started under the TEAM-9 Initiative have started to show a very significant impact in development in the countries. And that is one of the reasons the Heads of State of our countries have mandated us to come to India to discuss various ways of cooperation to look at fighting poverty in our countries. So, we are looking at various projects in infrastructure, telecommunications, agriculture, energy and cooperation in various sectors.

It is our first day here today and I must say it has been a very productive day. We have met some high-level Indian authorities. I am grateful for their availability to meet us for this reason. We are also happy to be informed that there is a line of credit of US 250 million dollars that has been made available to us. This is a very good beginning. The ECOWAS
Investment Bank, which is in charge of all the development projects, will start working very soon on the implementation of these projects and on consuming this line of credit. So, we would very much like to benefit from Indian expertise, the expertise of the Indian private sector in all the projects that are in the various fields that we would like to define together.

Our discussions also related to policies of common interest. We spoke about the reforms of the United Nations and also the enlargement of the Security Council. As the Hon’ble Minister said, we noted that we had a convergence of views on all these issues. Both ECOWAS and India feel the need to have reforms of the United Nations and to enlarge the Security Council so that it is more representative and it is better adapted to the current world configuration.

As far as the ECOWAS is concerned, we support the candidature of India as a permanent member of the Security Council. The member-countries of the ECOWAS have done all that they can within the African Union in order that India achieves this objective as soon as possible. We have also felt the need to have a more comprehensive dialogue between ECOWAS and India and we will formalize a structure for this soon. To conclude, on behalf of the delegation I would like to express my gratitude to the Indian authorities for the warm welcome that has been accorded to us and for all the facilities made available to us during our stay. Once again, I would like to be the representative for the Heads of State of our region and express our gratitude to India for being once again by our side in our struggle against poverty and for the development of our region.

**QUESTION (INDIAN MEDIA):** It is heartening to know that ECOWAS countries are supporting India on UN reforms and India’s candidature for Security Council. But there is a long way to go before G-4 and AU synthesise their position on UN reform. What else can ECOWAS countries do for India to get a seat in the Security Council?

**LEADER OF ECOWAS DELEGATION (MADAME AICHATOU):** As you know, the process of reforms of the United Nations or the process of reforming the Security Council is going to be a long process. Each of the member-countries of the ECOWAS region has bilateral contacts with India. Each country has expressed its will to do whatever is required to support India’s candidature. ECOWAS is a sub-region of the African Union. In the African Union there is no country that is opposed to the candidature of India for a permanent position in the Security Council. However, there is a
procedure that needs to be followed. In different regions of the world discussions have taken place on arriving at a consensus. In some regions it takes a little longer than in others. However, I am sure that we will find a position in collaboration with India on this issue.

(The comments by Madame Aichatou are as translated simultaneously at the Joint Press Conference from French)

356. Agreed Minutes of the South Africa Development Community (SADC)–India Forum.

Windhoek (Namibia), April 28, 2006.

OFFICIAL OPENING

1. The inaugural session of the Southern African Development Community (SADC) and the Government of India Forum was launched in the Republic of Namibia on 28 April 2006. It was launched in the spirit of a Memorandum of Understanding (MOU) signed between SADC and the Government of India in 1997 to provide a framework for promoting technical co-operation between SADC and the Government of India in all fields of economic activity.

2. The underlying principle for cooperation between SADC and India is based on the mutual political, economic and social history. India has gained positive experience in the development of indigenous technology aimed at utilising Indian resources for the empowering of the people of India. To this end, the key priority for the relationship between SADC and India is aimed at the empowerment of the people in the SADC region and in India through skills exchange and direct foreign investment from the private sector in both India and SADC. This partnership further enhances South-South cooperation.

3. The Forum was co-chaired and addressed by the Chairperson of the SADC Council of Ministers and Minister of Finance and Development Planning of the Republic of Botswana, Honourable Baledzi Gaolathe and the Minister of State for External Affairs of the Republic of India, Honourable Anand Sharma. The Executive Secretary of SADC, Dr Tomaz Salomao made welcome remarks.
4. The inaugural Forum was attended by SADC Ministers and Senior Officials from SADC Member States and the Government of India.

AREAS OF CO-OPERATION

5. SADC and the Government of India have agreed on the following priority areas of co-operation:
   a) Agriculture, in particular irrigation and dry land farming; agro-engineering; and seed technology;
   b) Promotion of small and medium scale enterprises and entrepreneurial development; including enhancing trade and investment;
   c) Health including Drugs and Pharmaceuticals;
   d) Human Resources Development;
   e) Water Resources Management; and
   f) Information, Communications Technology (ICT).

AGRICULTURE

6. The Forum acknowledged that agriculture which provides employment to well over 70% of the population in the region, remains the most important sector for supporting economic growth, poverty alleviation and development for the majority of the SADC Member States. The Forum noted that given this scenario, improvements in the performance of agricultural sector, in line with the Maputo and Dar Es Salaam Declarations on Agriculture and Food Security, can have a positive impact in the betterment of the livelihoods of the majority of the people in the region.

7. Concerning irrigation, the Forum observed that inadequate and inappropriate water utilisation is widely considered to be a key factor in contributing to food insecurity. In order to improve food production of the majority small scale farmers in the SADC region, the Forum called for the empowerment of small scale farmers with appropriate irrigation equipment and infrastructure to enable farmers to capture, store and utilize water for crop production in a bid to improve food security.

8. The Forum agreed on the need to provide individual small scale farmers with low cost affordable technologies. The Forum also agreed
that support in irrigation will also include technical assistance where through an appropriate partnership between engineering companies, such irrigation equipment or their components would be made locally in the SADC region to ensure sustainability of these efforts. Experts from India will work with local counterparts in both private and public sectors.

9. On training, the Government of India agreed to train artisans and technicians from the SADC region in the maintenance and use of irrigation infrastructure and equipment. SADC welcomed the support and will identify suitable candidates.

10. The Forum acknowledged that India is host to the International Centre for Research in Semi-Arid Tropics (ICRISAT) which would facilitate in the exchange of knowledge and technology on dryland farming.

11. The Forum recognised that in much of the SADC region, farmers lack appropriate agro-engineering and industrial skills that can enhance their productivity and add value to their products to improve their income status. In this regard, the Government of India committed to support the SADC region in industry development to develop agro-engineering products including milling/dehalers, textiles, oil extractors, tillage, bio-fuel, etc.

12. The Forum noted that achieving increased crop productivity availability and access to quality seed is crucial as seeds are an important input in all plant based agricultural systems and development because they determine the parameters for yield as well as the productivity of other inputs. SADC welcomed the support of the Government of India in strengthening small scale farmers to become seed growers and entrepreneurs to produce and market seed in their own communities. The Forum further welcomed the Government of India assistance in off-season seed production, community credit schemes and training in seed technology.

TRADE, INDUSTRY, FINANCE AND INVESTMENT

13. The Forum recognized intra-regional trade as the key driver for development and deeper integration within the SADC region and that this process must be supported by sound macroeconomic policies, vibrant financial services, increased investments and industrial development. The Forum further recognised that the SADC
Trade Protocol, which came into force in 2000, is a key element of the SADC programme for regional trade and market integration and industrial development.

14. The Forum noted that the Regional Indicative Strategic Development Plan is proposing an acceleration of the implementation of the SADC Trade Protocol in order to achieve a fully-fledged free trade area by 2008 and to move to a customs union by 2010.

15. The Forum further noted that SADC has consolidated its Finance and Investment Protocol which is due for signature by the SADC Ministers of Finance. The Protocol will lay a firm basis for attracting investment into the SADC region.

16. On trade relations between SADC and India, the Forum agreed to cooperate on specific areas of interest with a view to ensuring that all the sectors are covered in the context of the SADC-India relationship. The Forum further agreed that the immediate sector of interest is the pharmaceutical sector where SADC would like to access quality and affordable drugs and investment in the production of such drugs in the region over time. SADC indicated its interest to access the Indian market in respect of the following products; textiles and clothing, leather products (footwear, clothing and travel ware), fish, processed and semi-processed and dimension stones, agricultural products such as meat, vegetables and fruit, fruit juices and alcoholic beverages, machinery and equipment, steel and other metal products to mention but a few.

17. On trade promotion, the Forum agreed to establish a SADC–India Business Forum to spearhead promotion of trade and investment on both sides. The Forum further agreed that the Government of India facilitates the participation of SADC businesses in India’s trade fairs and other exhibition activities.

18. With regard to Cooperation in Multilateral Trade Negotiations, the Forum agreed that SADC and India face common challenges in this area. Therefore, there is need to collaborate in Multilateral Trade Negotiations in order to ensure that common interests are effectively safeguarded and promoted.

19. Concerning the promotion of small and medium scale enterprises, the Forum observed that India over the years has thrived on the
operations of SMEs to generate employment and economic activity. SADC further noted that India has capacity in the development of small machinery and equipment that are suitable for small production purposes. Given the fact that India has experience in agro-industry development, and in particular, in small ginneries and textile mills; wheat and maize millers, oil extraction and food canning, the Forum endorsed the promotion of SMEs and entrepreneurship development in this area.

SOCIAL AND HUMAN DEVELOPMENT

20. The Forum noted that SADC was pursuing a broad and developmental integration agenda that accords priority to social development in view of its crucial role both as a factor and as a more comprehensive measure of development. To this end, policies, strategies and programmes have been put in place in the relevant priority areas of human resources development, education, health, social protection, nutrition, water supply, employment/income generation, culture, gender equality and empowerment of women.

HUMAN RESOURCES DEVELOPMENT

21. On Capacity Building in Education Policy Development, Planning and Management, the Forum noted that SADC Region continues to accord priority to addressing challenges faced in meeting critical human capital needs and developing capacities for promoting access to quality and relevant education in line with Millennium Development Goals (MDGs) and regional commitments such as the Dakar Goals and the NEPAD Education Initiative. With the support of SIDA, Netherlands Government and World Bank, the SADC region has been implementing the Education Policy Support Initiative (EPSI), which aims at building and improving capacities for educational policy development, planning and management in Member States. The major conclusion of the first phase of the project is that the Project has created a basis for addressing capacity constraints in the area of education policy development and management in the region. In this regard, the Forum endorsed SADC/India cooperation in the following areas:

- Development and Strengthening of Education Information Management System;
• Strengthening of the three Centres of Specialisation at Universidade Pedagogica, University of Dar-es-Salaam and at Wits in South Africa established by the EPSI Project;

• Improving research and the promotion of education policy dialogue through policy forums

22. On Capacity Building in Public Administration and Management, the Forum noted that limited capacities and shortage of managerial skills in the key sectors of the region are some of the major challenges faced by the SADC Region. In order to address this problem a training programme is being implemented under the Centre of Specialisation in Public Administration and Management (CESPAM). To augment this initiative, the Forum endorsed SADC/India cooperation in human resources development to provide training in priority areas through scholarships and exchange programmes.

23. On post-graduate and specialist training the Forum noted that the main challenges in the SADC Region include limited access to higher education and training, insufficient supply of skilled labour, lack of comparable standards and qualification across the region, shortage of critical specialist skills, which are vital for productivity and competitiveness, high cost of required infrastructure and exodus of post graduates and specialists to countries outside the region. In this regard, the Forum endorsed SADC/India cooperation through scholarships and exchange programmes.

24. On knowledge networking and capacity building, the Forum noted the proposed regional Multidisciplinary Centre of Excellence (RMCE) in which three main ICPs namely IMF, World Bank and EU are involved. The RMCE would consist of a network of private and public institutions in and outside the region that would deliver training, research and technical assistance. The aim of the initiative is to build capacity for the policy reform agenda of African countries i.e. empowering African countries to design and implement their own development strategies with the assistance from development partners.

Health

25. The Forum took note of the burden of communicable and non-communicable diseases in the SADC region and also noted that
India shares a similar disease profile. It was agreed that priority will be in the following areas:

a) **Malaria**

The Forum resolved that in the control of Malaria, the development of combination therapy for treatment and the use of IRS and ITNs in vector control be pursued.

b) **Tuberculosis**

India and SADC should share experiences in MDR-TB as well as improve the development of fixed dose therapy in order to reduce the pill burden on the patient.

c) **HIV and AIDS**

Collaboration to improve the availability of affordable ARVs.

d) **Non Communicable Diseases**

In this area, India and SADC will share experiences in the management of non-communicable diseases. Furthermore, there should be collaboration in the use of IT especially in Telemedicine in health care delivery.

e) **Drugs and Pharmaceuticals**

The Forum acknowledges that the SADC region needs to be self sufficient in the supply of essential medicines. However, India can collaborate with the region in building capacity in the production of essential medicines and other pharmaceuticals. In addition, India would provide platform for technology transfer, research and development in traditional medicines as well as protection of local ownership and protection of indigenous rights.

**WATER RESOURCES MANAGEMENT**

26. The Forum noted the SADC Regional Strategic Action Plan on Integrated Water Resources Management and Development (RSAP-IWRMD) whose objectives are to provide a framework for sustainable, effective and efficient planning and management of shared river basins at regional and related national levels; promote and support strategic infrastructure development for regional integration, socio-
economic development and poverty alleviation; develop, promote and facilitate best practices regarding effective participation by various stakeholders in water resource development and management; and strengthen human and institutional capacity for sustainable management of water resources at basin, national and regional level.

27. In this regard, the Forum endorsed the SADC/India cooperation in sharing best practices in the management and development of shared watercourses; strengthening of the newly established river basin organizations (RBOs); implementation of the Regional Strategic Water Infrastructure Development Programme; and capacity building in the various aspects of IWRM through experiential learning and staff exchange programmes.

INFORMATION, COMMUNICATIONS TECHNOLOGY (ICT)

28. The Forum noted the challenges faced under the implementation of the SADC Declaration on ICT which include regulatory aspects, capacity building and ICT for development.

29. The Forum also note that the Government of India was participating in a VSAT (Very Small Aperture Terminal) based Tele-medicine & Tele-education Infrastructure project for Pan African Countries. The objective of the project is to connect all the 53 nations of the African Union by Satellite, microwave, terrestrial and Fiber Optic network to provide better and broadband connectivity among the African nations. In addition, the project will be coordinated with other broadband communication infrastructure initiatives on the African continent. The proposed network infrastructure would primarily be used for Tele-medicine, Tele-education, Internet and Video conferencing. In addition the network can be expanded to support e-governance, e-commerce, infotainment, resource mapping and meteorological services.

30. In this regard, the Forum endorsed the SADC-India cooperation to include exchange of expertise to strengthen and support the development of regional and national ICT policies.

WAY FORWARD

31. The Forum agreed on the following way forward:
a) Experts from India would visit the SADC Secretariat to agree on the scoping of the specific projects that have been endorsed for cooperation between the two parties;

b) Specific project proposals would be developed for each priority area of cooperation;

c) Supplementary to the existing MOU between SADC and India, agreements regarding specific projects in the areas of cooperation would be concluded between the two parties, which shall make provision for the extent of participation by each party in such projects and financial, administrative and other aspects of the projects as required.

CONCLUSION

32. The Forum agreed to maintain the momentum gathered by making follow-ups to ensure that projects are implemented. To this end, The Forum recognized the importance of meeting at least once a year at a mutually agreed time and place to pursue issues of mutual interest. The Forum also agreed that a Joint Senior Officials Meeting will precede the Forum to prepare documentation for the Forum.

33. The Forum thanked the Government and the people of the Republic

1. On April 21 Official Spokesperson briefed the media on the importance of India’s relations with the SADC and said: “SADC constitutes one of the most important regional organizations in Africa and its 14 member countries are Angola, Botswana, Democratic Republic of Congo, Lesotho, Malawi, Mauritius, Mozambique, Namibia, South Africa, Swaziland, Tanzania, Zambia, Zimbabwe and Madagascar. India attaches utmost importance to further strengthening its relationship and ties with SADC in different sectors. SADC believes that the Indian success in tackling the problems of development through democracy is a paradigm of considerable importance and interest to its members. India’s commercial and economic links with SADC member countries have registered a marked improvement in recent years with trade more than doubling from US$1.5 billion in 1997 to over US$4 billion in 2004-2005. It is essential to keep up this pace of growth and to deepen our links in the economic and other arenas. In order to further strengthen the already close ties between India and SADC member states, the India-SADC Forum meeting will identify the following areas for special focus:

- Food, agriculture and natural resources
- Water resources management
- Trade, industry, finance and investment
- Small and medium enterprises and entrepreneurial development
of Namibia for their generous hospitality. It expressed appreciation for the excellent facilities made available that indeed contributed to the successful deliberations. The Forum also thanked Ministers and their delegations from the SADC region and from the Republic of India, the SADC Secretariat for its tireless efforts and contribution to the success of the Forum.

- Human resources development
- Drugs and pharmaceuticals
- Information and Communications Technology

With the launch of the India-SADC Forum, India will be formally included in the select club as an International Cooperating Partner (ICP) of the SADC.

India looks forward to increased cooperation with member countries of SADC, both bilaterally and multilaterally, as a part of our policy to fostering close links with Africa as a whole."

Several countries of Africa have shown interest to bring benefits of healthcare and higher education to their people by making use of the Indian offer of tele-medicine and tele-education through the Pan African e-Network programme. In the past one week, three countries have signed agreements with the Telecommunications Consultants India Limited (TCIL), a government of India enterprise, to participate in the programme. The Ambassador of Cote d’Ivoire signed the agreement in New Delhi on 15th June, while for Gambia it was signed by Her Excellency Ms. Neneh Macdouall-Gaye, Secretary of State for Communications, Information and Technology on 16th June in Addis Ababa. The Ambassador of Djibouti in Addis Ababa signed on behalf of his country on 21st June 2006 in the presence of Ambassador H.E. Mr. Gurjit Singh. With this, eleven countries in Africa have signed the agreements with the TCIL: Burkina Faso, Burundi, Cote d’Ivoire, Djibouti, Ethiopia, Gambia, Ghana, Mauritius, Tanzania, Senegal and Seychelles. Many other countries of Africa have expressed interest to participate in the programme.

The hub for the Network is to be located in Africa, for which Senegal, Mauritius and Ghana had submitted their proposals for hosting it to the African Union Commission. On the basis of recommendations made after detailed evaluation including visit by experts to the three countries, the Chairperson of the AU Commission has decided that it would be located in Senegal. Bids have also been received by the AU Commission to host the five Regional Leading Universities and five Regional Super Speciality Hospitals (SSHs) of the Network in Africa.

A high level Indian delegation had made a detailed presentation of the proposal in May 2005 to the Chairperson of the AU Commission and representatives of various Pan-African organizations in Addis Ababa. The Commission found the Indian proposal in line with the means and objectives of the African Union, with tremendous potential for achieving the Millennium Development Goals (MDGs) through use of innovative Information Communication Technology.
The Pan African e-Network Project is an initiative of H.E. Mr. A.P.J. Abdul Kalam, the President of India, to use the Indian expertise in information technology to bring benefits of healthcare and higher education to all countries of Africa, including in remote areas. He made this proposal and offer at the inaugural session of the Pan-African Parliament in Johannesburg on 16th September 2004.

The Network will be connected by a satellite/fibre optical network to provide tele-medicine, tele-education and VVIP connectivity to these countries. The current total project cost is about US$ 105 million, which will be a total grant from the Government of India. The Ministry of External Affairs, New Delhi is responsible for the project, while the TCIL is the implementing agency. Each country of Africa is required to sign a Country Agreement with the TCIL to participate in this project. The Network will consist of 5 regional universities, 53 learning centers, 5 regional Super Speciality Hospitals and 53 remote hospitals in all countries of Africa. There will be 6 universities and 5 Super Speciality Hospitals from India linked into the Network. The six Indian educational institutions include the Indian Institutes of Science, Indira Gandhi National Open University (IGNOU), Universities of Madras, Mumbai and Calcutta, and the Indian Institutes of Technology (IITs). The Indian government has already provided a list of courses offered by these six institutions to the AU Commission, which range from Diploma level to the Post-Graduate studies in different disciplines and can be chosen by each country in accordance with its priorities and national education strategy. The tele-medicine connectivity will enable the SSHs to provide expert services to the 53 remote hospitals that are equipped with the required medical equipments like ECG, ultrasound, pathology and X-ray at each location. India will also provide tele-medicine facility at the AU Medical Centre in Addis Ababa.

Ethiopia will be the first beneficiary of the project in Africa, for which a pilot project is already in an advanced stage of implementation. The nodal centers for tele-education and tele-medicine will be located at the Addis Ababa University and the Black Lion Hospital respectively, with remote centers at Alemaya University and Nekempt Hospital. It is intended to start the tele-education component of the project in Ethiopia in July 2006. The cost of the pilot project for Ethiopia is US$ 2.13 million, which will come fully as a grant from India.
358. Interview of Minister of State Anand Sharma with the Statesman on relations with Africa.

New Delhi, May 20, 2006.

[In his first stint as a minister in the Union government, Anand Sharma made a blistering start, starting off the blocks with a trip to Brazil just 48 hours after taking his oath of office as minister of state for external affairs. Before his ministerial debut, Mr Sharma had been senior AICC spokesman for many years and was recognised as an important Congress face. Even during his long involvement in party organisational affairs, Mr Sharma’s forte was known to be foreign affairs.] [The articulate Rajya Sabha MP has now been provided with a platform at the central government level to deliver the goods in his preferred domain. He has mostly visited countries in Africa and South America so far, regions that have languished in the backwaters of Indian foreign policy till now. A visible difference after Mr. Sharma’s first 100 days in office was the increase in visits by delegations from African nations to New Delhi. In an exclusive interview, Mr. Sharma spoke to Devirupa Mitra on various foreign policy issues, particularly India’s growing engagement with African nations. Excerpts.]

How has your tenure in office been?

It has been absorbing and interesting. At the same time, it has been a very hectic period as there were high-level visits by President Bush, Mr Jacques Chirac, the Australian Prime Minister and by several foreign ministers’ delegations.

A major thrust of your tenure so far has been Africa...

It’s not just Africa, even Latin America is on my radar. But it has certainly been my effort to re-energise our engagement with Africa, based on our traditional links and shared experience.

So you do admit that our efforts in Africa had not been up to the mark before?

No, I cannot take credit for this (the current focus on Africa). But the right way to describe this (my efforts) is the intensification of our engagement. Wherever I have gone, we have convened a meeting of the heads of missions. This gives us a first-hand account of the regional situation and sorts out the priority areas. In South Africa, we had bilateral meetings,
at which I met the President and senior Cabinet ministers. There, I also met the heads of missions of SADC countries. Later, I went to Chile, where I met South American ambassadors in Santiago. I was also the first foreign minister from Asia to meet the new Chilean President (the first woman head of state in South America). Then, I went to attend the IBSA in Rio, which also included a business conclave. An important visit to India was that of the ECOWAS (Economic Community of West African States) ministerial delegation. They came at my invitation to India and were armed with the mandate of the heads of states. Then, we have so many projects with Team-9, Nepad (New Partnership for Africa’s Development), Comesa (Common Market for Eastern and Southern Africa), et al. Recently, I went to Windhoek (Namibia) for bilateral meetings and to meet the SADC. We launched the SADC-India forum. Soon, I will go to Accra to attend the second ministerial meeting of Team-9. From there, I will go straight to Kuala Lumpur to attend a preparatory meeting of the non-aligned movement.

You have a personal rapport with African leaders...

Africa does accept me as a friend. As the chairperson of India’s anti-apartheid association, I do have personal relations with some African leaders like President Mbeki.

The Chinese President, Hu Jintao, recently visited three African countries in a very visible tour. It seems that China has taken away the limelight in Africa...

We have nothing to do with China’s forays (in Africa). We have genuine relations with Africa. We are not going there to take away business, but to participate in their development process, through projects in food security, agriculture, health service training programmes and ICT. We have proactively supported their anti-colonial liberation struggle. There is a fund of goodwill for India in Africa.

How are you addressing the concerns of India Inc in doing business in Africa? For example, there had been some problems in registering pharma companies in some countries at one time.

I don’t think pharmaceutical companies face such problems today. The African nations are aware that their quality control is of international standard. Also, we are taking up the matter of registration of companies, wherever it comes up. We want to encourage Indian companies to set up manufacturing and production units there.
One of the issues that has come up is that several of the African countries do not have Indian missions...

It is true that especially in West and Central African nations, we are not adequately represented. For a start, we are re-opening our mission in Kinshasa. We have plans for opening five more missions in that region. Also, we may increase our presence in Latin America, if required.

What about any high-level visits to the continent?

The Prime Minister will visit South Africa and Tanzania later this year to mark the centenary celebrations of the Satyagraha movement. We are planning the PM’s visit to some other southern African nations and to West Africa.

(The interviewer is Special Representative, The Statesman, New Delhi.)

359. Press Release of the High Commission of India in Ghana on the visit of Minister of State Anand Sharma to Ghana for the meeting of Foreign Ministers of TEAM-9 countries.

A meeting of Foreign Ministers of TEAM-9 countries was held at the Conference Centre at India-Ghana Kofi Annan Centre of Excellence in ICT in Accra on 26 May 2006. Mr. Anand Sharma, Minister of State for External Affairs, Government of India as well as Ministers or their representatives from TEAM-9 countries and senior officials participated in the meeting. Ministers took stock of the various projects that are under execution under the credit provided by the Government of India under TEAM-9 and discussed other related issues.

The closed door meeting was followed by a briefing session in which the Indian Business delegation briefed TEAM-9 Ministers and senior officials of the TEAM-9 member countries about the status of various projects and issues relating to them.

TEAM-9, a Techno-Economic Approach for Africa-India Movement, was set up between India and eight Western African Countries namely Ghana,
Burkina Paso, Chad, Cote d’Ivoire, Equatorial Guinea, Guinea Bissau, Mali and Senegal in March 2004 to accelerate economic, social and cultural development of the member countries through transfer of technology, know-how and knowledge management involving governments, experts and entrepreneurs. Niger was subsequently included in TEAM-9. Under this initiative, India has announced concessional Line of Credit of US$ 500 million for the priority projects and cooperation schemes in nine member countries in areas such as agriculture, industry, infrastructure, science and technology and training etc. Agreements amounting to US$ 282 million have already been cleared for various projects with the member countries, of which two agreements worth US$ 60 million, relating to the ‘Construction of Seat of Governance and the Presidential Office Complex’ and ‘Rural Electrification’ have been signed with Ghana and are under execution.

H.E. President of the Republic of Ghana laid the foundation stone of the new ‘Seat of Government and the Presidential Complex’ as a symbol of India-Ghana Friendship on 26 May 2006 at Flag Staffhouse. Minister of State for External Affairs of India Mr. Anand Sharma was also present at the ceremony. Other dignitaries present on the occasion included Ministers of Ghana Government, Chiefs, Senior Officials and members of Diplomatic Corps.

360. Interview of Minister of State Anand Sharma with the daily Deccan Herald on the theme: “Africa, Latin America have remained on Indian radar”.

June 11, 2006.

Deccan Herald: There is a general perception that India has shed its traditional role as a leader of the developing world, now that it is beginning to get into big league in international diplomacy. How do you look at this perception?

ANAND SHARMA: The perception is not correct. It is based on uninformed inputs. India has fully energised its relations with our traditional friends in the developing world, especially in Africa and Latin America. During the last four months, we have institutionalised India’s partnership with all major sub-regional groups of Africa and Latin America. On our initiative, we had meeting with Team-9, Southern African Development Community (SADC), Economic Community of West African States
(ECOWAS), and Common Market for Eastern and Southern Africa (COMESA). We have committed close to US $1 billion in socio-economic developmental assistance in Africa. In the last four months’ alone, we have received here Foreign Ministers from 25 African and Latin American countries. I can also say with confidence that our abiding commitment to NAM was acknowledged even as recently as a few days ago when I attended the pre-summit NAM Ministerial meeting in Kuala Lumpur.

DH: But isn’t it a fact that last year we could not mobilise the support of African countries for the G-4 (India, Germany, Japan and Brazil) resolution in the General Assembly on UN Security Council expansion?

ANAND SHARMA: That is not correct. The impression that we could not garner support among African countries is based on wrong premises. We were in constant touch with AU members. Unfortunately, there are internal dynamics in the AU. They could not bring out an internal consensus on the nature of the Security Council expansion. We have since engaged a large number of African countries. I myself have visited Africa thrice since I took charge four months ago. We hope that the forthcoming AU summit in Banjul (Gambia) on July 1-2 will reach a consensus on the Security Council expansion.

DH: Perhaps, for more than a decade, no Indian Prime Minister has undertaken a bilateral visit to any African country. What does that suggest? Relative neglect of the continent?

ANAND SHARMA: As I have said we are intensifying our engagement with Africa. This year South Africa will celebrate the completion of 100 years of Gandhiji’s satyagraha launched in that country. There is a proposal for the Prime Minister to visit South Africa to take part in functions to mark the historic occasion. Besides this, we are also working on proposals for Prime Ministerial visits to some other African countries. You will see our engagement with Africa gaining further momentum in the coming months.

DH: At a wider level, haven’t we also lost to some extent our traditional leadership position in the NAM that brings together developing countries from all continents?

ANAND SHARMA: Look, there is neither any deviation nor dilution of our traditional foreign policy. True, we are engaging major powers in all regions of the world to build strategic partnerships with them. That can be
only expected as our foreign policy initiatives are primarily guided by our objective of promoting India’s national interests and our long-term objectives. But I can tell you from my recent interactions at the NAM foreign ministers meeting that we continue to be important in NAM. We are involved in every critical NAM fora.

DH: Did you take up our case for Security Council membership in the NAM meeting?

ANAND SHARMA: UN Security Council reform agenda was one of the core subjects of discussion in Kuala Lumpur. UN reforms, democratisation of the world body’s various institutions will prominently figure at the NAM summit at Havana in mid-September. Our Prime Minister will attend the Havana summit. We hope the summit outcome would create a favourable atmosphere for this year’s General Assembly session which will start soon after the summit.

DH: Will the G-4 be relevant for pushing the Security Council expansion issue again since Japan had distanced itself a bit late last year?

ANAND SHARMA: G-4 is till relevant. Japan has come back to its ambit.

361. Press Release of the Embassy of India in Gambia on the visit of India’s Candidate Shashi Tharoor for the post of UN Secretary General to the AU Summit in Banjul.

Banjul (Gambia), July 3, 2006.

Mr. Shashi Tharoor, Under Secretary General at the United Nations and India’s candidate for the post of the UN Secretary General visited Banjul (The Gambia) from June 29 – July 1, 2006 to interact with African leaders during the African Union (AU) Summit in Banjul, and seek their support for his candidature.

Mr. Tharoor addressed an Informal Session of the AU Executive Council at the level of Foreign Ministers on 30 June, in both French and English. He presented his candidature at this august gathering in the
framework of India’s traditionally close relations with African countries and his impeccable credentials. Spelling out his vision for the United Nations, he emphasized that both continuity and change were important. He recalled Mahatma Gandhi’s exhortation that those who want change should become a part of it. Mr. Tharoor’s address was received with overwhelming acclamation. Mr. Tharoor was a special invitee at the State Banquet hosted by the President of The Gambia.

Mr. Tharoor met with Heads of State/Government, Foreign Ministers and other dignitaries from a large number of African countries. African leaders responded to Mr. Tharoor’s candidature in highly supportive terms, underlining the warmth and friendship characterizing the relations between India and African countries. They appreciated that Mr. Tharoor had chosen the AU Summit to launch his campaign after his candidature was officially announced by Government of India.

Government of India’s delegation to the AU Summit, led by Mrs. Shashi U. Tripathi, Secretary (West) coordinated the programme of Mr. Shashi Tharoor’s visit and requested support for his candidature during their meetings with African leaders.

362. Non Paper given by India to the G-8 Summit: “India’s Partnership with Africa”.

St. Petersburg, July 16, 2006.

India’s relations with Africa are built on the strong political foundation of the past. We were close partners with Africa in the fight against colonialism and apartheid. The goodwill of the past is evident in the close relationship that India has today with the countries of the African continent.

2. India is today looking at the more contemporary challenges of economic and social development in its relationship with Africa. The relationship is not one of donor-recipient but of partnership for mutual benefit.

Technical assistance:

3. The Indian Technical and Economic Cooperation Programme (ITEC) is almost four decades old. It has enabled us to share a wide range of training facilities and project expertise with our friends from Africa. India’s
development experience has a special relevance for African requirements. Over the last five decades, through an incremental process of trial and error, we have forged a development paradigm that – within the context of a diverse, pluralistic democracy – is truly unique. Our approach has focused on strengthening ‘South-South’ linkages and promoting self-reliance through transfer of technologies appropriate to the needs of our partners. In monetary terms, we have spent over a billion dollars on our cooperation programmes with Africa and continue to provide training annually to almost 1,000 officials in various capacity-building programmes. This is apart from the over 15,000 African students who join Indian Colleges and Universities every year.

**Lines of credit:**

4. We recognize that technical assistance alone is not enough. The process of economic development also requires access to low cost capital. We are not a rich country in terms of per capita income but the accumulation of a relatively comfortable level of foreign currency reserves has enabled us to offer concessional lines of credit. Taken together with our lines of credit to individual countries, our offers of $200 million for the New Partnership for Africa’s Development (NEPAD) and $500 million for Team 9 [Techno-Economic Approach for African Movement – an initiative that brings together India and 9 countries of West and Central Africa] add up to almost $1 billion. This is being used as a catalyst to build genuine, productive and sizeable partnerships in sectors like railways, construction, electrification, irrigation, food-processing, agricultural machinery and cotton spinning.

**Pan-African Satellite-based connectivity:**

5. Our scientists have placed us in a leadership position in a wide range of satellite-based technologies, Our communication, educational, remote sensing and meteorological satellites are enabling us to bring the benefits of tele-medicine, tele-education, resource mapping and weather forecasting to some of the remotest parts of our country. During the visit of our President to Africa in September, 2004, we announced our willingness to share the benefits of these technologies with our friends in Africa. The Indian Space Research Organisation has developed an ambitious plan to connect the 53 countries of Africa through a network that uses satellite, fiber optic and wireless links. We would, in partnership with the African Union and individual countries of Africa, be establishing a network that links learning centers, Universities and hospitals in every country of Africa with counterpart institutions in India that have a proven expertise in these fields. After many rounds of extensive discussions, the Government of India
and the African Union signed the MOU for the project on October 27, 2005. Project execution is presently underway.

Projects:

6. India provides assistance for project related activities, such as feasibility studies and consultancy services, apart from actual project implementation. The assistance provided is comprehensive and includes training as well as deputation of Indian experts. India has contributed to a very large number of projects in Africa. An illustrative list of projects established with Indian assistance is as follows:

- Lilongwe Water Supply System in Malawi
- Ebene Cyber City Project in Mauritius
- Kofi Annan IT Centre for Excellence in Ghana
- Entrepreneurship Development Centre in Senegal
- Nigeria Machine Tools in Nigeria
- Plastic Technology Centre in Namibia
- India Farmers Project in Burkina Faso
- Village Electrification Projects in Soune and Touly in Senegal
- Gandhi Memorial Hospital in Ethiopia

Peace-Keeping Operations:

7. We fully recognize the importance of a stable polity as a pre-requisite for economic progress. The legacy of longstanding conflicts has left its scars on many parts of Africa. We hope that the vision and determination of the African Union and of Africa’s contemporary leaders will soon make such conflicts a thing of the past. From our side, we will continue to support peace-keeping efforts wherever required. We have done so from the time of the conflict in Biafra. In more recent times, the contribution of our troops has been widely recognized in Ethiopia, Somalia, Sierra Leone and Eritrea. Even now we have over 3500 soldiers in the Democratic Republic of Congo and and over 1500 Indian soldiers on the Ethiopia-Eritrea border. Our defence personnel have not only worked with troops from other nations to bring peace but have also distinguished themselves for the exemplary fashion in which they have contributed humanitarian assistance and participated in development activities in the areas where they have been deployed.

New York, August 9, 2006.

Please See Document No. 555.

New Delhi, October 6, 2006.

1. On invitation of Government of India, a twelve-member high level delegation from COMESA (Common Market for Eastern & Southern Africa) led by the current Chairman of the COMESA Council of Ministers, H.E. Mr. Mitali Kabanda Portais, Hon’ble Minister of Industries, Commerce & Investment Tourism and Cooperation, Republic of Rwanda arrived in Delhi on 4th October, 06. Official level delegation talks were held between the COMESA delegation and the Government of India representatives from various ministries led by Secretary, MEA, Shri N. Ravi on October 5, 2006.

2. This was followed by ministerial level meeting at Hyderabad House on October 6, 2006. The Minister of State for External Affairs, Shri Anand Sharma chaired the event.

3. COMESA has identified India as its strategic partner to assist it in its ambitious development programme. COMESA, with 405 million people encompassing 20 countries stretching from Egypt and Libya, to Zambia, to Mauritius and Seychelles, is the single largest economic grouping in Africa. The organization has set ambitious goals to achieve economic integration through development of vital sectors like Agriculture & irrigation, mining, infrastructural inputs like rail, road, water linkages and power. They are also moving towards forming a common market, a customs union and other steps to create a truly integrated regional grouping.
4. COMESA has had linkages with developed countries to help it achieve its goals. However, lately it has expressed some dissatisfaction at the conditionalties imposed that tend to slow down the whole process.

5. It is in this context that COMESA has now come to identify India as a natural partner, based on a long record of association, assistance and shared ideals and experiences. The rapid progress made by India in the recent times has attracted the COMESA member countries who would like to replicate that success in their region.

6. The region is very rich in resources including oil, minerals and extensive land which can be used for commercial farming. It is keen to attract investors from India in all sectors.

7. Presently, relations between India and COMESA have been established firmly by signing of MOU for cooperation in February, 2003. Since then, India has been extending assistance to COMESA countries including deputation of experts on irrigation to study the irrigation potential of some of the COMESA member countries.

8. Two sides have recently expressed desire to enhance and upgrade the bilateral relations. The present ministerial level delegation reflects the desire of the two sides to upgrade the partnership and to explore areas of mutual cooperation. COMESA has expressed its strong desire to seek India’s assistance in various fields including irrigation, enhancement of trade and investment, infrastructure projects like Railways and power project. They have also sought India’s assistance in capacity building in various fields including education, science & technology, low cost housing, agriculture, SMEs etc. Following this, a concrete plan of action is to be formulated to carry out the various proposals that emerged in the course of discussions.

9. Besides the Minister from Rwanda, the COMESA delegation also included Ministers from Zimbabwe, Uganda and Mauritius, the Secretary General of COMESA and senior officials from the Secretariat. The Vice President of Burundi who is in New Delhi on bilateral visit also joined the COMESA Meet.

10. At the end of official talks, a joint communiqué was signed, a copy of which is attached.¹

¹ Please See Next Document.
11. The delegation will also be participating at CII Africa- Partnership Conclave, New Delhi (October 9-11, 2006), along with delegations from several other African countries. The Conclave will provide the private sector linkages to this emerging partnership between India and COMESA.

New Delhi, October 6, 2006.

The Government of the Republic of India and the Common Market for Eastern and Southern Africa (hereinafter referred jointly as :the Parties”) and Southern Africa (hereinafter referred jointly as “the Parties”) held a bilateral meeting in the City of New Delhi, India on the 6th day of October 2006 to enhance cooperation and consolidate the partnership established through the Memorandum of Understanding signed in 2003.

Prior to the bilateral meeting, the COMESA delegation paid a courtesy call on His Excellency Dr. Abdul Kalam, President of the Republic of India who outlined his vision for increased India – Africa trade and investment cooperation.

The Delegation of the Government of India was led by Hon. Mr. Anand Sharma, Minister of State for External Affairs.

The Ministerial Delegation of the Common Market for Eastern and Southern Africa was led by the Chairperson of the COMESA Council of Ministers, Hon. Protais Mitali who is also the Minister of Industry, Tourism and Cooperative of the Republic of Rwanda.

The full list of the delegations is given in the annex to this Communique¹.

At the end of the meeting the Parties:

1. Not included here.
Observed the strong historic levels of cooperation in the political, economic, cultural and social fields between the Government of India and COMESA Member States;

Noted with appreciation the role of India played in the liberation struggle of the people of Africa and in particular the COMESA Region;

Appreciated that the people of India and the people of COMESA Region share vision and principles regarding cooperation as a basis of a just and equitable political, social and economic global system;

Acknowledged the emerging trade and investment opportunities in COMESA and shared interests for mutual benefits with the deepening of regional integration;

Further noted with appreciation the ongoing support extended to the Eastern and Southern Africa Trade and Development Bank (PTA Bank) by Exim Bank of India through the provision of various credit lines to the private sector in the COMESA Region;

Noted Exim Bank’s offer to take up a modest equity in the PTA Bank;

Witnessed with appreciation the proposal for concluding of a Memorandum of Understanding between the COMESA Business Council and the Indian Chambers of Commerce and Industry to enhance trade and investment between India and COMESA Member States; and the agreement to establish the COMESA – India Business Council.

Acknowledged the need for continued support by India to COMESA in the development of low cost building material, pharmaceuticals and irrigation;

Agreed to advance Institutional Capacity Building through twinning of COMESA centers of excellence in member states with similar institutions/centers in India in the field of science and technology, ICT, engineering, medicines including ARVs and HIV vaccine.

Agreed to further explore the possibility of Government of India’s participation in the PTA Bank and the African Trade Insurance Agency;

Agreed to consider assisting the COMESA Regional investment Agency in capacity building;
Agreed to consider modalities for the Government of India and the Indian Private Sector to participate in the business activities of COMESA Institutions such as the COMESA Re-insurance Company (ZEP – RE), the leather and Leather Products Institute and COMESA Metallurgical Industry Association (COMESAMIA);

Agreed to cooperate in production of agro-in-puts, specifically seeds, fertilizers; in agro-processing and in the area of small, medium and micro enterprises;

Agreed to cooperate in the development of common position on issues of common interest to both parties in multilateral negotiations;

Agreed to commence discussions towards the conclusion of a Comprehensive Economic Partnership agreement (CEPA) between India and COMESA;

Agreed to establish COMESA – India Joint Commission in different sectors that will review cooperation issues at Ministerial level biannually and

Agreed to exchange drafts for conclusion of a Double Taxation Avoidance Agreement and Investment Promotion and Protection Agreement.

Done and signed at New Delhi, in the Republic of India on the 6th day of October 2006.

For and on Behalf of the Common Market for Eastern And Southern Africa (COMESA)

For and on Behalf of the Government of India
ANGOLA

366. Joint Statement issued during the visit of Angolan Foreign Minister João Miranda.

New Delhi, May 10, 2006.

1. As part of the ongoing efforts to strengthen bilateral co-operation between India and the Republic of Angola, Mr. Joao Miranda, Foreign Minister of Republic of Angola is paying an official visit to India from May 10 - 13, 2006. His programme includes meetings with Shri Anand Sharma, Minister of State for External Affairs, Shri Kamal Nath, Minister of Commerce and Industry, and Shri Murli Deora, Minister for Petroleum and Natural Gas. He will also meet a cross-section of businessmen at an interaction arranged by the Confederation of Indian Industry and will visit the facilities of several leading companies engaged in the software, automobiles, agricultural equipment, transportation, railways, energy and mining sectors.

2. Official talks have been held today with a composite Indian delegation led by Shri Anand Sharma, Minister of State for External Affairs. The wide-ranging discussions were held in a friendly and cordial atmosphere and both sides exchanged views on various bilateral, regional and international issues of mutual interest.

3. Both sides noted with satisfaction the warm and friendly relations between India and the Republic of Angola and recalled their partnership in the struggle against colonialism and apartheid. They reiterated their desire to further strengthen the close and friendly ties between the two peoples and to provide a strong impetus to bilateral co-operation. A Protocol for Consultations between Ministry of External Affairs of the Republic of India and the Ministry of External Relations of the Republic of Angola was signed by the two sides. The two sides also agreed in principle to sign the agreements for the Promotion and Protection of Investments and Creation of Bilateral Commission for Cultural, Technical, Scientific and Economic Cooperation and between the Government of the Republic of Angola and the Government of the Republic of India.

4. Their Excellencies Mr. Joao Miranda and Shri Anand Sharma recognized the immense potential for increased economic
cooperation between the two countries. The Indian side briefed the Government of Angola about the Pan-African Network Project which would establish a VVIP network and bring the benefits of tele-medicine and tele-education to all 53 members of AU. The Government of Angola acknowledged the importance of the project which reiterates India’s continued commitment to South-South cooperation and which will help Africa bridge the digital divide.

5. The two sides reiterated their commitment to deepen and diversify the scope of their economic, trade and cultural exchanges and to promote investments. H.E. Mr. Joao Miranda conveyed the deep appreciation and gratitude of the Angolan Government for the various Lines of Credit extended by India, including $40 million for rehabilitation of Angolan Railways by RITES, $10 million for purchase of tractors and $5 million for the agriculture sector. He also conveyed the appreciation of the Government of Angola for the gift of five ambulances by India.

6. The two sides reiterated the need to reform the United Nations and to expand the UN Security Council. They stressed, in particular, the need for equitable balance in the expanded Security Council to provide a constructive voice to the aspirations of the developing countries. In view of India’s growing economic stature, its position as the largest democracy in the world and its track record of contributing to the promotion of international peace and security, Republic of Angola promised its strong support to India’s candidature for permanent membership of the UN Security Council.

Done at New Delhi, the 10th of May 2006, in both English and Portuguese, the two texts being equally valid.

Joao Miranda
Foreign Minister
Republic of Angola

Anand Sharma
Minister of State for External Affairs
Republic of India

New Delhi, May 10 2006.

The Ministry of External Affairs of the Republic of India and the Ministry of External Relations of the Republic of Angola hereinafter referred to as the “Parties”.

IN THE SPIRIT of the friendly ties and cooperation between the two countries;

WITH THE PURPOSE OF promoting bilateral relations in various fields;

PROCEEDING FROM the common interests for strengthening international peace and security;

ACKNOWLEDGING the usefulness of exchange of opinions and consultations between the two countries at different levels;

HAVE AGREED as follows:

1. The parties shall hold regular consultations to review the implementation of agreements reached between the two States and to strengthen the process of wide ranging exchange of views on international and bilateral issues and interaction in the international arena.

2. The above-mentioned consultations shall cover all important issues affecting the interests of both parties, such as

   - Issues under discussion at the United Nations and other international fora.

   - Issues connected with the prevention of conflicts and peaceful settlement of international disputes.

3. Consultations shall be carried out, in principle, annually at different levels and alternately in New Delhi and Luanda and also, if necessary, at the United Nations and other international fora.

4. The Parties shall also cooperate on matters of mutual interest at the level of diplomatic (Consular) missions in third countries.
5. The Parties shall facilitate cooperation in research on foreign policy issues, exchange of archival documents and preparation of compendia of documents and materials pertaining to their bilateral relations.

6. The provision of this protocol shall be without prejudice to any other treaties or agreements to which any of the parties has obligations.

7. The Protocol may be modified or amended by mutual consultations. These amendments shall come into force after the exchange of notes between the parties.

8. This agreement shall enter into force on the date of signature and shall remain in force for a period of five (5) years. After the expiry of this period it shall automatically be renewed for successive periods of one (1) year each unless either party notifies the other in writing of its intention to terminate this Protocol prior to the expiry of any such period.

IN WITNESS WHEREOF the undersigned being duly authorized thereto by their respective Governments have signed this Protocol.

DONE AT New Delhi on this 10th day of May, 2006 in duplicate in English and Portuguese language, both texts being equally authenticated.

BOTSWANA

368. Briefing Points by Official Spokesperson on the visit of President of Botswana Festus Mogae.

New Delhi, December 4, 2006.

India established diplomatic relations with the Republic of Botswana soon after its independence in 1966; a resident mission was opened by India in Gaborone in 1987.

Botswana is an important ITEC partner country, and currently utilizes 25 slots for civilian training and 5 slots for military training. Several of Indian experts and teachers are on deputation to Botswana.

At the UN, Botswana and India share commonality of views on UN Reform, particularly the reforms of the UNSC. Botswana has strongly supported India’s candidature as the permanent member of the UNSC; it also supports the G-4 initiative.

With Botswana’s active support, India was unanimously selected as the co-chair for 2007, of the Kimberely Process Certification Scheme (KPCS), a 71-member body designed to keep the conflict diamonds outside legitimate international trade. Botswana is currently its chair. India will automatically become chair in 2008.

India also cooperates with Botswana in the framework of its relations with the Southern African Customs Union with which India will soon launch negotiations for a Preferential trade Agreement (PTA); Botswana is also the founding member of Southern African development Community (SADC)-India launched India-SADC Forum in Windhoek in April 2006, offering cooperation in agro-engineering, irrigation and seeds technologies, water resources management, HRD, Drugs and Pharmaceuticals, SMEs, trade, industry and finance. Botswana is in a unique position to facilitate implementation of the Forum decisions which are of direct interest to the country.

Bilateral trade currently stands at US$ 12 million, comprising largely of Indian exports of engineering goods and textiles. Botswana is the largest producer-exporter of diamonds by value, and India one its largest importers. However, the diamond trade does not figure in trade figures as diamond trade is conducted through London and
Botswana is trying to diversify its diamond based economy and counts on India’s support and assistance to tackle poverty and unemployment, by concentrating on education, health, rural development, SMMEs etc. Drugs and pharmaceuticals is another area of collaboration.

New Delhi, December 8, 2006.

PREAMBLE

The Government of the Republic of India and the Government of the Republic of Botswana (hereinafter jointly referred to as “the Parties” and in singular as “a Party”);

Desirous of promoting and strengthening closer bilateral relations and other forms of co-operation;

Aware of the role of the private sector and its contribution in strengthening closer relations between the two countries;

Conscious of India’s experience in socio-economic and political transformation and its relevance to Botswana in the spirit of partnership and South-South co-operation;

Hereby agree as follows:

ARTICLE 1

The Parties shall support each other for purposes of the upliftment of their peoples.

ARTICLE 2

The Parties shall promote and intensify bilateral relations in their
countries in the spirit of partnership with a view to effecting concrete cooperation in the economic, educational, technical, human resources development (training), social, legal, political, information and communications technologies and cultural fields.

ARTICLE 3

The Parties further agree that the implementation of sectoral cooperation shall be done by means of separate and specific agreements to be concluded between the relevant counterpart sectors.

ARTICLE 4

The Parties shall create and promote a conducive environment for growth and development of the public, as well as the private sectors, to play an effective role as instruments for the enhancement of close cooperation.

ARTICLE 5

The Parties undertake to cooperate in the areas of human resource development, scientific and technological exchange.

ARTICLE 6

The Parties shall cooperate in the promotion of good governance, gender, youth, human rights and environmental matters.

ARTICLE 7

The Parties further agree to cooperate in the areas of Immigration, Defence, and Security. The Parties will also consider how they can best cooperate in various regional as well as International organisations like the African Union, the Southern African Development Community, the World Trade Organisation and the United Nations among others.

ARTICLE 8

The Parties agree to hold regular consultations between the two Foreign Ministries to monitor and implement this Agreement.

ARTICLE 9

A Joint Commission, hereinafter referred to as “the India-Botswana Joint Permanent Commission for Cooperation” shall be established for the purposes of follow-up and implementation of this Agreement. A separate agreement shall be negotiated and concluded in order to provide in more

**ARTICLE 10**

This Agreement shall enter into force on the date of signature and shall remain in force for a period of five (5) years, thereafter it shall be renewed automatically for further periods of five (5) years at a time, unless terminated by the either Party by giving six (6) months written notice in advance through diplomatic channels.

**ARTICLE 11**

Termination of this Agreement shall not affect the implementation of any programmes, projects and or other activities that have been undertaken in pursuance of this Agreement, and which have not yet concluded, unless the Parties decide otherwise in writing.

**ARTICLE 12**

This agreement may be amended by mutual consent of the Parties through an exchange of notes between the Parties through diplomatic channels.

In witness whereof, the undersigned, being duly authorised by their respective Governments, have signed and sealed this agreement.

Done at New Delhi on this 8 day of December 2006, in two originals each in English, both texts being equally authentic.

M. TIBONE
Minister for Minerals, Energy & Water
370. Briefing Points by Official Spokesperson on the visit of Foreign Minister of Congo Rudolphe Adada.

New Delhi, October 27, 2006.

External Affairs Minister, Shri Pranab Mukherjee met the Foreign Minister of Republic of Congo, Mr. Rudolphe Adada (RA), this afternoon.

(i) EAM and RA agreed on the need to build on the strong foundation of political friendship between the two countries and develop ties in trade, education, investment and other fields.

(ii) The two leaders agreed on the need for the reform of the UN system, including the Security Council, expressing similarity of views and the need to press ahead in this difficult task.

(iii) EAM offered to extend cooperation for capacity building and specialized training. He also agreed to look into the possibilities suggested by RA in agriculture, railways and technical training.

(iv) It was agreed that agreements to set up an institutional framework for promoting bilateral cooperation would be finalized in preparation for the visit of the President of Republic of Congo in 2007.
EGYPT

New Delhi, December 16, 2006.

1. As part of the ongoing exchanges to strengthen bilateral cooperation between India and the Arab Republic of Egypt, His Excellency Mr. Ahmed Aboul Gheit, Foreign Minister of Egypt, paid an official visit to India. His programme included meetings with His Excellency Shri Pranab Mukherjee, Minister of External Affairs. His delegation included senior officials of the Egyptian Ministry of Foreign Affairs and other Ministries of the Government of Egypt. He met a cross-section of Indian businessmen at an interaction arranged by Federation of Indian Chambers of Commerce & Industry (FICCI).

2. During the visit, H.E. Mr. Ahmed Aboul Gheit handed over a written message addressed to Hon’ble Dr. Manmohan Singh, Prime Minister of India, from H.E. Mr. Muhammad Hosni Mubarak, President of the Arab Republic of Egypt.

3. Mr. Gheit and Shri Mukherjee co-chaired the 5th session of the India-Egypt Joint Commission on 16th December. The wide-ranging discussions were held in a friendly atmosphere and both sides exchanged views on various bilateral, regional and international issues of mutual interest.

4. Both sides noted with considerable satisfaction the warm and friendly relations between India and the Arab Republic of Egypt. They recalled their partnership in the foundation of Non-Aligned Movement; struggle against colonialism and racial discrimination and in the struggle for preserving the independence and sovereignty of nations emerging from the colonial yoke. They reiterated their desire to further strengthen the close and friendly ties between the two peoples and to provide a strong impetus to enhance bilateral cooperation.

5. A number of agreements were signed between the two sides. These included the Partnership Agreement; Executive Programme under the Agreement on Cultural Cooperation; Executive Programme under the Agreement on Cooperation in Science and Technology; the Work
6. Mr. Gheit and Shri Mukherjee recognised the immense potential for enhancing bilateral cooperation between India and Egypt. The two sides reiterated their commitment to diversify and deepen the scope of their economic, trade and cultural exchanges. They identified the promotion of investment flows, as a means to strengthen bilateral commercial exchanges in this day and age of globalization/economic diplomacy.

7. The two sides took note, with satisfaction of the increasing exchange of visits between officials and businessmen of the two countries. In particular, they welcomed the visit by the Minister of Communications and Information Technology of Egypt to India from 27 November to 02 December, 2006 during which a Memorandum of Understanding on Cooperation in the field of Information Technology was signed with the Minister of Communications Information Technology of India and several agreements were signed between training institutions in India and Egypt in the field of Information and Technology.

8. The two sides also took note of the visit of Minister of State for Administrative Development of the Government of Egypt to India from 07-11 December, 2006 during which specific areas of cooperation were identified with Indian institutions in the field of Administrative modernization and e-government.

9. The two sides exchanged views on the situation in West Asia/Middle East. India reiterated its consistent support for the Palestinian cause and called for early resumption of negotiations under the Middle East Peace Process. Both sides agreed that use of excessive force and violence would not lead to peace in the region, which requires sustained and substantial negotiations among the parties.

10. Mr. Gheit invited Shri Mukherjee to visit Egypt. The invitation was accepted with pleasure.

11. On behalf of the Arab Republic of Egypt, Mr. Gheit expressed sincere appreciation to the Government of India for the warm hospitality extended to him and the accompanying delegation.

New Delhi, December 16, 2006.

The Government of the Arab Republic of Egypt and the Government of the Republic of India, hereinafter referred to as the “Parties”;

Desirous of strengthening and consolidating their traditional relations of friendship and cooperation between their two countries and peoples;

Recognising the emerging trends in the economic policies in the two countries as well as the opportunities and challenges that are now emerging from international trends of liberalization and globalization of trade and economy universally;

Have agreed as follows: -

Article (1)

The Parties agree to cooperate and develop their relations on the basis of mutual benefit, by fully exploiting the economic potential of the two countries, thereby increasing and diversifying bilateral trade.

Article (2)

The Parties shall undertake to increase bilateral investments, and develop and promote comprehensive industrial cooperation in various sectors.

Article (3)

The Parties shall endeavour to encourage the establishment of joint ventures through investment and trade promotion measures, including exchange of commercial information, technical exchanges by way of training and expertise and experience sharing in mutually agreed sectors.

Article (4)

The Parties shall support the development of private sector linkages, with special emphasis on small and medium enterprises, through various institutional mechanisms such as Joint Business Committee, Joint Business Group, participation in each other’s trade fairs and exchange of visits of delegations of entrepreneurs on a regular basis.
Article (5)

The Parties agree to strengthen exchange of market information through electronic data interchange, internet, etc. In this context, the two sides recognize the immense future potential for cooperation in the sectors of environment, tourism, banking, insurance, information technology and other services.

Article (6)

The Parties agree to enhance existing levels of cooperation in various regional and multilateral fora such as G-15, WTO, etc., by mutual discussions and consultations.

Article (7)

The Parties agree to establish a forum to be known as the India-Egypt Partnership Council (IEPC) to be composed of members representing the respective Governments and the private sectors in both countries.

Article (8)

The Egyptian Minister of Trade and Supply will nominate the members of the Egyptian side in the IEPC and the Indian Minister of Commerce will nominate the members of the Indian side in the IEPC. The IEPC will be reconstituted after every two years. There will be no restriction on the renomination of members of IEPC. The IEPC will establish sub-committees in the various sectors of mutual cooperation, if considered necessary.

Article (9)

The IEPC will meet annually or at mutually convenient dates in New Delhi and Cairo alternately to review the progress in the implementation of this Agreement and issue an Annual Report indicating its achievements as well as recommendations identifying ways and means of achieving the objectives of this Agreement.

Article (10)

This Agreement shall remain valid for a period of 5 years. It shall be automatically extended for the subsequent period of 5 years, unless either of the Parties gives to the other a written notice, six months in advance, of its intention to terminate the Agreement prior to its expiry.

The termination of this Agreement shall not affect the projects and programmes already executed or in progress, under this Agreement.

This Agreement may be modified or amended by mutual consent.
Article (11)

This Agreement shall enter into force on the date on which the two Parties have notified each other in writing through diplomatic channels, that the required legal procedures have been completed.

In witness whereof the undersigned being duly authorized thereto by their respective Governments have hereto signed this Agreement and affixed thereto their seals.

Done at New Delhi on this day of 16th December 2006 in six originals two each in English, Arabic and Hindi languages.

All the texts being equally authentic, in case of divergence of interpretation, the English text shall prevail.

MAURITIUS

373. Press Briefing by Foreign Secretary Shyam Saran on the visit of President Dr. A.P.J. Abdul Kalam to Myanmar and Mauritius from 8-13 March 2006.

New Delhi, March 7, 2006.

Official Spokesperson (Mr. Navtej Sarna): Good evening everybody. We welcome the Foreign Secretary for the briefing on Rashtrapatiji’s forthcoming visit to Mauritius and Myanmar. We also have here Press Secretary to President Shri S.M. Khan and the Joint Secretaries concerned with the two Divisions. I would first request the FS to speak.

Foreign Secretary (Mr. Shyam Saran): Thank you very much and good afternoon to all of you. As you know, Rashtrapatiji will be visiting both Myanmar as well as Mauritius in the next few days. The visit to Myanmar will be from the 8th of March to the 10th of March, and to Mauritius it would be from the 11th of March to the 13th of March.

President is going to Myanmar in response to a longstanding invitation from the Head of State of Myanmar. As you know, he had visited India sometime back. This would be the highest level visit from India in a long time. It is a very significant visit. It is a visit which will have considerable amount of substantive content. We will be taking forward our ongoing cooperation in fields like space. We have been assisting Myanmar with our remote sensing capabilities. We have been sharing with them data on Myanmar from our IRS satellite. In fact there will be an agreement which would be signed during the visit for the setting up of a ground station in Myanmar for receiving directly the IRS data.

This data is of great importance to Myanmar, to its economy. It has, as you know, uses in agriculture, crop forecasting, soil surveying, mineral surveys, and watershed management. So, there is a whole series of uses that this technology can be put to. This is something which we have been involved in for the last several years, building up capacities in Myanmar. So, a stage has now been arrived where they can actually receive this data directly and analyse this data to their advantage. The other area, as you know, we have been working together with Myanmar is on the energy side. We are already involved in a couple of exploration ventures essentially on the Arakan coast which is just opposite our own eastern seaboard. What
we are looking at is an agreement between the two sides for the evacuation of natural gas which would be produced in these exploration blocks. There can be various ways of doing it. We can do it either directly by pipeline from Myanmar directly into our North-East. As you know we have been looking at the possibility of a pipeline from Myanmar through Bangladesh to India. But we also have an option to look at some other routing for the pipeline.

And we also have the option of converting this into LNG and shipping it to India. Since the distance is really not very much, in fact this could be quite cost effective. So, there are various options we are looking at. But during this visit we would be tying up an arrangement whereby the evacuation of gas to India would be something which would be agreed upon. Then we have, of course, been helping Myanmar in the telecom sector, in the transportation sector. In the transportation sector another project which we would be really now inaugurating in a sense the execution of the project is the Kaladan multimodal transport project. This is very important because this is really a transport artery again going through the Arakan Province of Myanmar from the ancient port of Sitwe which was in the old days used to be known as Akyat.

Those of you who are familiar with the earlier trade routes in this region, Akyat used to be very important for the rice trade. You know, rice and other commodities from Myanmar using the sea route going down to Kolkata, to Chennai and back again. So, this used to be a very important at one time. What we are really involved in is a project which would upgrade this port and use both river transportation as well as a highway which would enter southern Mizoram. So, you would have Kolkata to Sitwe shipping route and then this would link up with a river and highway route straight into southern Mizoram. It gives a kind of an alternative access to our North-East and also an exit from our North-East. So, it is very important, both economic as well significance in terms of increasing the economic viability of projects that we do in our North-East. That is something which has now reached a point where we are about to start working on the project actually. All the initial work has been done. We also have, between Myanmar and India, a very strong cultural link.

As you know, Myanmar is a country where Buddhism enjoys very great reverence among people. That link, Buddhist link, between our two countries is really a very strong bond. We have a project for promoting exchanges in the field of Buddhist studies between the two sides. We have
a special programme for Buddhist pilgrims to visit from Myanmar to India. The groups of pilgrims who come to India, we have a visa free entry for those groups. This is something which is very much appreciated by Myanmar. I would also like to inform you that the President would, during his stay in Yangon, will be visiting the much revered Shwedagon pagoda which is a very ancient pagoda. Legend has it that there were two traders from Myanmar who were visiting India during the life time of Lord Buddha himself and they were privileged to have two strands of hair of Buddha which they brought to Myanmar and the original Shwedagon pagoda was actually built around these relics which were enshrined. Another very strong historical link between the two sides, one of the other places Rashtrapatiji would be visiting is the mazaar of Bahadur Shah Zafar.

Those of you who are familiar with history would recall that Bahadur Shah Zafar, the last emperor of India, was exiled to Yangon and the last king of Burma was exiled to Ratnagiri in Maharashtra. So, there is also that very strong historical link. We have contributed a great deal to the upkeep of the Bahadur Shah Zafar mazaar. And it has become a point of a must-visit place for those of us who go to Yangon. So, Rashtrapatiji would also be visiting the mazaar when he is in Yangon. Rashtrapatiji will also be visiting Mandalay which is one of the most important cities of Myanmar. He would be having talks with Senior General Than Shwe. We will cover a whole host of bilateral as well as regional issues. So, a very important visit because this is a very important neighbour for us. As you know, Myanmar is in a sense our gateway to ASEAN. It is also an important country because we have 1400 kilometres long land boundary with Myanmar.

And this land boundary really straddles the four most important and sensitive North-Eastern States of India starting from Arunachal Pradesh, you have Nagaland, you have Manipur and you have Mizoram. So, from that point of view a very important neighbour for us. We also share the Bay of Bengal - another strategic stretch of sea for both our countries. So, this is as far as Myanmar is concerned. The visit to Mauritius, Rashtrapatiji will be the Chief Guest at the Republic Day Anniversary of Mauritius, which is on the 12th of March. I do not think I really need to say very much about the very close relationship which exists between India and Mauritius. And not merely because 70 per cent plus of the population is of Indian origin. Mauritius enjoys an importance for India from several points of view. Of course, it is one of the most strategically located islands in the Indian Ocean. So, it has a significance because of that. Even though Mauritius is a very small island, you would be amazed that the Exclusive Economic Zone of
Mauritius is probably not much smaller than that of India because of the island territories that Mauritius covers. Over the past several years Mauritius has also become very important to India from the economic and trade point of view. As you know, we have a very unique double tax treaty with Mauritius. As a result of this Treaty, Mauritius has become a very favoured, very privileged conduit for investment into India. So, a lot of the foreign funds which come to India come through the Mauritius route. So, in a sense, Mauritius has played an important role in terms of the liberalized investment environment which has been created in India. In addition to that, more and more Indian companies are looking at Mauritius as a kind of base to access the African mainland because of its location and because of its own linkages with Africa being an African country, being a member of the African Union. It is also a very important member of the South African Development Cooperation Organisation (SADC). So, because of those linkages, whatever India is able to do in Mauritius, it can also leverage that into access into Africa. Mauritius has another advantage that it is bilingual - they are both English-speaking as well as French-speaking - because of historical reasons. So, there is a certain advantage also that Mauritius offers for our companies for entry into French-speaking Africa. Over the last few years Mauritius has become an important place for our information technology companies. We helped Mauritius set up a Cyber Tower, like our cyber city.

A large number of the firms which are operating from the Cyber Tower are in fact Indian information technology companies. So, this relationship is going to grow. Currently, Mauritius is facing a challenge. You know there are three legs of Mauritian economy - one is tourism, the other is sugar and the third is textiles. Mauritius’ prosperity has really been built on these three pillars. While Mauritius is doing really well as far as tourism is concerned, and in fact Indian tourism is contributing to the prosperity of this sector, sugar is losing its concessions in the European market because it had a certain privileged access, that is being eroded. With the multifibre agreement, whatever quota entry that it had into the European market, that advantage is no longer there. So, the country is undergoing a certain transition.

Essentially what it is trying to do is to try to develop its service sector, the financial sector, the information technology sector, trying to create Mauritius as a kind of a regional center for education, for health. These are precisely the areas in which we have certain strengths. In fact Indian
companies and Indian organization are taking advantage of that and helping Mauritius make that transition successfully. So, Rashtrapatiji’s visit is coming at a very important time. It is not just a ceremonial visit for being a Chief Guest at the Republic Day Anniversary, but also an occasion to revisit some of these very important elements in bilateral cooperation between our two countries. While in Mauritius, Rashtrapatiji will have an occasion to visit the Cyber Tower which has been built, as I mentioned to you, with our assistance. He will also have a chance to visit the Rajiv Gandhi Science Centre, again something set up by India, with Indian assistance. It is for the popularization of science, especially among young people. He will have an occasion to interact with university students in the University of Mauritius. Of course, he will have the opportunity to meet his counterpart, President Anerood Jugnauth, who used to be Prime Minister earlier of Mauritius, and of course other Mauritian leaders including Prime Minister Ramgoolam. So, both these visits of Rashtrapatiji will be very important visits in terms of our bilateral relations. Mauritius and India have a very privileged relationship and this visit will go a very long way in consolidating and promoting these relations. I will now stop and maybe I can spend a few minutes taking your questions.

**Question:** George W. Bush said he and the Indian Prime Minister agreed … to seek Aung San Suu Kyi’s release. May I know if the Indian President will be conveying this message to the Burmese military head?

**Foreign Secretary:** We have stated quite publicly that we have welcomed the commitment which has been made by the leadership of Myanmar to the restoration of multiparty democracy. This is something that we support and we hope that this can be achieved sooner rather than later. We have also welcomed the national convention process but we have also said that for a national convention process which would be looking at final political arrangements in the country it needs to be as inclusive as possible. So, its credibility would be furthered if it was a more inclusive process. As far as Aung San Suu Kyi is concerned, you know that she enjoys a lot of respect and admiration not only in India because in India, of course, she had been a student here, she had lived in India, she has a very large network of friends and admirers in India, but she also has a certain international standing. Therefore, we do believe that her welfare and her release would be very helpful in terms of the process of democratization that Myanmar itself is engaged in. Being the daughter of General Aung San who in a sense is regarded as the father of modern Myanmar, she has a certain standing and I think due respect and position should be given to
her. We believe that she can contribute to the emergence of Myanmar as a
democratic country, as a member of the international community.

**Question:** Sir, President Bush also said and I quote on Burma “we
agree on the deplorable state of human rights in Burma and all nations
should seek the release of Aung San Suu Kyi”. This is the joint statement
at the joint press conference. Does India really agrees with this?

**Foreign Secretary:** I am afraid, I think you are making a mistake,
there is nothing on it in the Joint Statement. You are referring to what President
Bush said in his remarks. The issue of Myanmar did come up and the Prime
Minister of India explained the importance of the relationship between India
and Myanmar. I gave you a sense of why these relations are important. India
and Myanmar are very close neighbours. I mentioned to you that the
Myanmar-India border straddles the four of our most sensitive North-Eastern
States. We are looking at Myanmar as a bridgehead to South East Asia. So,
there are various reasons for which it is important for India and Myanmar to
remain engaged. Now, while we remain engaged, does it mean that we do
not care about democracy in Myanmar? No. As I just explained to you, in the
meetings that our leaders have had with leaders of Myanmar, as a friend we
have made known also our view on the current situation.

**Question:** … (inaudible) ….

**Foreign Secretary:** I do not think it is accurate to look at India-
China rivalry in Myanmar just as I think it is not appropriate to look for
India-China rivalry at every nook and corner of Asia. I do not believe that is
the real situation. India-Myanmar relations stand on their own, again for
the reasons that I mentioned. The fact is that this is a very important
neighbour to India. We have very long historical and cultural associations
with this country. We have important economic stakes in this country. I
mentioned the energy factor. So, there are very good reasons why India
must remain engaged with Myanmar. Now, as far as what pressure other
South-East Asian countries may be putting on Myanmar, really that is not
for me to comment on. I have given you a sense of where we stand on the
issue. With regard to your second question, yes, we do have defence
relationship, a normal defence relationship in the sense that there are
Myanmar trainees who come to India for training in our institutions. Some
equipment has been made available to Myanmar because we are also
cooperating together with one another in dealing with insurgency that
sometimes has a cross border dimension.
Question: Mr. Saran when you were Ambassador in Myanmar you made it a point to visit Bahadur Shah Zafar mazaar on Independence Day and Republic Day. I just wanted you to ask what you saw as the significance of those visits?

Foreign Secretary: The significance of those visits is that this is part of your history. Bahadur Shah Zafar has a certain role that he played in our independence struggle and I think it is important for us as Indians to remember that role that he played and pay our respects and admiration for him.

Question: The 150th year of the 1857 revolt is coming, would there be anything that might be done there or in association with Myanmar?

Foreign Secretary: We have not given that any thought yet.

Question: …deep sea port on the Arakan coast, will it be used by China against India for military purposes?

Foreign Secretary: Number one, I am not aware that China is actually making a deepwater port. In fact, we ourselves have been involved in doing a survey. If I am not mistaken you are referring to the port of Chokyu which is on the Arakan coast. We ourselves have done a survey. It is in fact a port which can be of great commercial significance for Myanmar. Certainly being a port which is opposite to our eastern seaboard we have considered it to be a very important infrastructure project which can promote trade between India and Myanmar. There are a lot things that we can do together. The development of this port is something that we ourselves can look at.

Question: The Chinese are also interested in the natural gas. Have they started supplying natural gas to China?

Foreign Secretary: Just as India is interested in energy supplies from wherever we can get it, I am not surprised that China too is interested in these supplies. But we believe that since we have been involved in at least two exploration projects on the Arakan coast, we believe that we can have access to some quantities of gas from Myanmar. How to evacuate the gas is one of the issues that we need to look at. I mentioned to you that there are several alternatives that we are looking at. We can have a pipeline through Mizoram. We can have a pipeline through Bangladesh if that is possible. We are also looking at the possibility of LNG option for this gas. Thank you very much indeed.
374. Speech by President Dr. A.P.J. Abdul Kalam at the Banquet hosted by the Prime Minister of Mauritius.

Port Louis, March 11, 2006.

Your Excellency, Dr. Navinchandra Ramgoolam, Prime Minister of the Republic of Mauritius, and Smt. Veena Ramgoolam, Hon'ble Ministers, Excellencies, Ladies and Gentlemen,

At the outset, permit me, Excellency, to convey my appreciation for the exceptional warmth and affection with which I and my delegation have been received within Mauritius. I would also like to thank you for inviting me to be part of the National Day celebrations of the Republic of Mauritius. I consider it an honour to share the joy and pride of Mauritian citizens on this auspicious day. On behalf of the billion people of India, I convey my best wishes to the people of Mauritius on their National Day.

Apart from the exquisite loveliness of your country, Excellency, what I have been most struck by is the amazing similarity between our people. The waves of the Indian Ocean, which embrace both our countries, must be surprised to find such a close identity of sentiments, values, customs, traditions, languages and sensibilities across such a vast distance. The large part of the credit for this must go to those brave sons and daughters of India who left their motherland in the 19th and early 20th Century, and set sail for Mauritius in search of a livelihood. By maintaining this spiritual and umbilical connection with their civilisational roots, they gained the strength to resist the oppression of the colonisers and preserved their intrinsic sense of dignity.

Momentous emancipation was brought about in Mauritius by the efforts of many exceptional men and women whose memories continue to light up the corridors of history. The most illustrious name in this luminous gallery, Excellency, is none other than that of your esteemed leader, Sir Seewoosagur Ramgoolam. The unrelenting battle he waged - with dignity, pragmatism and moderation — to secure the rights of the Indian community against the prevailing inequities of the times, deservedly makes him the Father of the modern Mauritian nation.

Relations between India and Mauritius have always been warm and special and are a reflection of the historic civilisational links between our societies. Nurtured by regular visits of leaders at the highest levels, the special cultural, linguistic and ethnic ties between our countries have been further
complemented by a vibrant and sophisticated architecture of institutional cooperation. It is important to ensure that our younger generations do not drift away from these sacred bonds that have been so carefully forged and preserved by our forefathers. Government of India is keen to see an ever increasing number of Mauritian students enter Indian universities and educational institutions. Tourism also holds tremendous potential for keeping the vital links between our young populations alive, and we are happy to note that your Government is launching initiatives to augment the already increasing trend of tourist arrivals from India.

We are also aware of the new challenges that the Mauritian economy faces in the present global context, particularly in the key sugar and textile sectors. I am aware of the many efforts that your Government is making to diversify the Mauritian economy for developing alternative poles of development, and also for increasing competitiveness and efficiency in existing sectors. We are firmly committed to helping Mauritius overcome this temporary phase and India can be a partner and can fully share its experience, particularly in the areas of sugar and textile with you. The finalisation of the Comprehensive Economic Cooperation and Partnership Agreement, in a few months’ time, will go a long way in helping us tap promising avenues of collaboration, and will allow our economic relationship to catch up with our privileged political and cultural ties.

India has always attached great importance to the exigencies of Mauritian Defence, and has supported your legitimate claims of sovereignty over all your lands. Mauritius is fortunate to possess a vast Exclusive Economic Zone. Its potential for bringing prosperity to its people is very high. India can be your close partner in exploring and jointly developing these areas, particularly in the hydrocarbon and fisheries sectors and in other areas of sea wealth. It is equally important, however, to keep these natural bounties safe from theft and illegal incursions, and for this, Mauritius must develop the means to effectively monitor and police its marine borders. Our long-standing defence cooperation is aimed precisely towards this end.

Mauritius has taken the conscious decision to develop itself as a hub of knowledge and excellence in the wider African region. Its past record and its international standing make this ambition eminently realisable. Over the years, India has been successful in developing its own know-how in knowledge industries like Information Technology, Fisheries, Pharmaceuticals, biotechnology and nanotechnology and we stand ready to put these core competencies at the disposal of Mauritius to help it emerge as a true Centre of Excellence. Recently, India has launched a large programme
called PURA (Providing Urban Amenities in Rural Areas) for rural development in plain, coastal and hill areas. We will be very happy to share our experience and participate in the development of your lovely Island.

Excellency, I must make a special mention of the enduring support that Mauritius has always extended to India at the various international fora. India’s rightful ambition to see itself as a permanent member of the expanded UN Security Council is not just meant to give a voice to one-fifth of the world’s population, but also to project the unique cultural traits of tolerance and inclusiveness that countries like India and Mauritius share. We are grateful for the steadfast support that Mauritius has always extended to this legitimate cause. I am confident that this unique friendship between our countries will continue to inspire the world in centuries to come.

Excellencies, Ladies and Gentlemen, may I request you to join me in raising a toast:

- to the health and well being of Prime Minister Dr. Navinchandra Ramgoolam and Smt. Veena Ramgoolam;
- to the continued peace, prosperity and happiness of the Mauritian people;
- and to the abiding friendship between India and Mauritius.
375. Address by President Dr. A.P.J. Abdul Kalam to Ministers, MPs, Members of the scientific community and leaders from various walks of life from Mauritius.

Port Louis, March 13, 2006.

Evolution of Enlightened Societies

I am delighted to address and interact with the Hon’ble Ministers, Members of Parliament, Scientists and Technologists, Educationist and Eminent Personalities of Mauritius. I am happy to be with such an enlightened audience and I am sure that it will usher in a new interest and understanding between Mauritius and India. Both our countries got independence during the 20th century from colonial rule. Now we are marching towards achieving economic prosperity for our people. I convey the greetings and wishes of one billion people of India. Our two great countries have long standing traditional ties for centuries in trade, commerce and mutual knowledge sharing and transfer. Knowledge and skill power empower the individual and institutions, thereby society and nations.

When I was entering into your great country surrounded by sea, I remembered my home on a tiny island, Rameswaram on the East coast of India. We have a common bond, not only people to people, above all the waves of the same Ocean embrace both of us.

Common values of two nations

Mauritius and India have a historical umbilical connectivity. Let me recall a famous thought of the Father of Mauritius, Dr Seewoosagur Ramgoolam, in his UN address on 24th April 1968:

“..... Thus this remote island in the Indian Ocean will become one of the most important meeting places of East and West.”

“..... We in Mauritius, have a long tradition of mutual respect, tolerance and understanding, despite the occasional evil exploitation of our diversity. Our social customs and habits have transcended racial and cultural differences....”

Let me also share with you, particularly the youth of your great country, the advice of Mahatma Gandhi’s mother to him:

“Son, in your entire life time if you can save or better someone’s life, your birth as a human being and your life is a success. You have the blessing of the Almighty God”.

These profound thoughts from two great human beings, as voices of Asia and Africa, bring out how citizens of a nation have to be transformed into citizens of tolerance and service. It is indeed a great mission for both our nations. I have selected for this meeting, of eminent personalities, the topic “Evolution of Enlightened Societies”.

**Global Ambience**

All of us are witnessing a new situation throughout the world. Economically prosperous nations with their mighty security forces are under different forms of threat. Developing countries with certain value systems are under fear about their future. In this global environment I would like to share my personal experience based on visits to all the States in my country. I have met over one million children below seventeen years of age and I have also met thousands of young students in thirteen countries. All the youth, during my interactions, unanimously shared their dream with me to live in a happy, prosperous and safe nation. To give our youth, a peaceful nation, a happy nation, a prosperous nation and a safe nation is indeed an important mission for any nation and its leaders. For achieving this, I have evolved a three dimensional doctrine. This has three components (i) Education with a value system (ii) Religion transforming into spirituality and (iii) Economic development for societal transformation. All these three components have to be progressed in an integrated way throughout the world. Friends, let us discuss.

**Education with Value System**

The best part a person’s life is his or her childhood and the learning period in school. The prime learning environment is five to seventeen years’ of age. Of course, at home, love and affection are imparted. But again most of the time during the day, is spent in completing homework given by the school and studying, eating, playing and sleeping. A student spends approximately 25,000 hours in the school campus. Hence school hours for children are the best time for learning and need the best of environment and mission oriented learning with a value system. During this stage, they need value based education in school and at home for them to become good citizens. This reminds me of the echo of a great teacher’s saying, “Give me a child for seven years. Afterwards, let God or devil take the child. They cannot change my child.” For parents and teachers, the school campus and home have to have an integrated mission, that is education with a value system. They must inculcate moral leadership amongst children, which involves two aspects. First it requires the ability to have compelling and
powerful dreams or visions of human betterment. A state of things in which human beings could be better off in the future than they are now. Secondly, moral leadership requires a disposition to do the right thing and influence others also to do the right thing. If the child misses value based education in the school, no government or society can establish a transparent society or a society with integrity.

**Elevating Young Minds:** While I was in college, I remember lectures given by the highest authority of the Jesuit institution in which I studied, Rev. Father Rector Kalathil of St. Joseph’s college, Trichirappalli, Tamil Nadu. Every Monday, he would take a class on moral science for an hour. He used to talk about good human beings, present and past, and what makes a good human being. In this class he used to give lectures on personalities like Buddha, Confucius, St. Augustine, Califa Omar, Mahatma Gandhi, Einstein, Abraham Lincoln including some scientific personalities and moral stories linked to our civilizational heritage. It is essential in secondary schools and colleges to have lectures by a great teacher of the institution once a week for an hour on the civilizational heritage of the nation. This class can be called as a Moral Science Class. That will elevate young minds to love the country, to love other human beings and elevate the young to higher planes. Throughout the world in every school it is essential that moral science is taught. We need a forum to promote moral science class as a part of the curriculum in all schools around the world. Now I would like to share an experience that I witnessed, that of religion transforming into a dynamic spiritual force.

**Religion Transforming into Spirituality: Universal Mind**

I would like to recall an incident which happened four decades ago. Prof. Vikram Sarabhai is the visionary of the Space Programme in India. He is well known for his cosmic ray research, an area that led to evolving the space research programme for India. Prof. Vikram Sarabhai was looking for a site to establish space research stations in the equatorial region. He visited a number of places. Thumba in Kerala in Southern India was selected by the scientific community for space research as it was near the equatorial region and was ideally suited for ionospheric research in the upper atmosphere apart from the study of atmospheric structure. When Prof. Vikram Sarabhai visited Thumba, the locality had series of villages, and thousands of fishermen folk were living in that area. It also had a beautiful ancient church, St. Mary Magdalene Church and a Bishop’s House. Prof. Vikram Sarabhai met many politicians and bureaucrats to get the place for space science research. It did not move further because the nature of the
place. He was asked to see the Bishop of Trivandrum, at that time in 1962, Rev. Father Dr. Peter Bernard Pereira. It was a Saturday when Prof. Vikram Sarabhai met the Bishop. The Bishop smiled and asked him to meet him the next day in the church, which was a Sunday. After the morning Service, the Rev. Bishop invited Prof. Sarabhai to come to the dias. The Bishop introduced Prof. Sarabhai to the congregation and told them, “My children, I have a famous scientist with me who wants our church and the place I live for the work of space science research. Dear children, science seeks truth by reasoning and results into things like electricity, what we are using, or even our fishing boat and net construction, and our children’s teaching tools, and what I do as a preacher, I pray for all of you to have peace and happiness in life. Dear Children, Prof. Vikram Sarabhai and myself want to have a prosperous people with peace. In one way, science and spiritualism seek the same divine blessings for doing good for the people. Now, dear children Prof. Vikram Sarabhai says he needs God’s habitat that is our church, my habitat that is the Bishop’s house, and your habitat, your houses. He promises he will give us back all what he takes. Dear children can we give, can we give? There was pin drop silence. All of them spontaneously stood up. A single voice reverberated in the holy St. Mary’s Church, Amen-Amen-Amen. Subsequently, the big event took place in 1962. His Excellency Ret. Rev. Dr Peter Bernard Pereira, the Bishop of Trivandrum, took the noble decision to dedicate the church in recognition of the national goal for the establishment of the Indian Space Research Organisation at Pallithura, Thumba. That was the church where we had our design centre, started rocket assembly, design of filament winding machine for FRP product and the Bishop’s House was our scientists’ place. Later, the Thumba Equatorial Rocket Launching Station (TERLS) led to the establishment of the Vikram Sarabhai Space Centre (VSSC) and multiple space centres throughout the country.

When I think of this event, I can see how enlightened spiritual and scientific leaders, all converge towards giving reverence to human life. New church and new schools were established in record time. Of course the birth of TERLS and then VSSC gave the country the capability of design, development and produced a world class huge rocket system and subsequently, India got the capability of launching geo-synchronous, sun-synchronous and meteorology spacecraft, communication satellites, remote sensing satellites thereby provided fast communication, weather forecasting and also locate water resources for the country.

Today, among us, Prof. Vikram Sarabhai is not there, Rev. Dr. Peter Bernard Pereira is not there, but those who are responsible for creation
and make the flower and blossom will themselves be a different kind of a flower as described in the Bhagwat Gita: “See the flower, how generously it distributes perfume and honey. It gives to all, gives freely of its love. When its work is done, it falls away quietly. Try to be like the flower, unassuming despite all its qualities”. What a beautiful message for all generations of this nation, on integration of minds and the universal mind. It is a great message to be spread. The message is, the best component of religion can be transformed into a spiritual force that will shape society.

So far I have discussed, the necessity of education with a value system for world youth and also best elements of religion transforming into a spiritual force.

Let me now discuss with you the third component of enlightened society for transforming a developing nation into a developed nation through achieving economic prosperity, so that large societal imbalances can be removed leading to a poverty free world. In this connection, let me take the example of India. With one sixth of the global population, a movement has commenced, for transforming India into a developed nation.

**Economic Development: Transforming to a Developed Nation**

Economic development is a vital requirement for any nation. I would like to present the strategy followed by India. This experience may be useful to Mauritius. Of the over one billion population of India, 260 million are living below the poverty line. In your country, I came to know that only 10 percent of the people are below the poverty line. They need education, they need habitat, they need health care, and creation of employment potential. Presently, India’s GDP is growing at an average rate of 8 percent whereas economists suggest that to remove the poverty of 260 million people we have to grow at the rate of 10 percent consistently for over a decade.

To enable this situation, India has a vision of transforming into a developed nation by the year 2020. Five areas have been identified as missions based on India’s core competence for integrated action: (1) Agriculture and Food Processing (2) Education and Healthcare (3) Infrastructure including quality electric power and a rural development programme called PURA (Providing Urban Amenities in Rural Areas) (4) Information and Communication Technology (5) Self reliance in critical technologies. These five areas are closely inter-related and being implemented in a mission mode that will lead to social, economic and national security.
One of the components through which the rural-urban divide will be bridged and prosperity will be brought to the seven hundred million people living in six hundred thousand villages is Providing Urban Amenities in Rural Areas (PURA).

The Mission of PURA (Providing Urban amenities in Rural Areas)

The number of potential PURA units for the whole country is estimated to be 7000. This envisages integrated connectivities to bring prosperity to rural India. These are - physical connectivity of village clusters through quality roads and transport; electronic connectivity through tele-communication with high bandwidth fiber optic cables reaching rural areas from urban cities and through Internet kiosks; and knowledge connectivity through education, vocational training for farmers, artisans and craftsmen and entrepreneurship programmes. These three connectivities will lead to economic connectivity through starting of enterprises with the help of banks, micro credit and marketing of the products.

Each PURA cluster will connect about 20-30 villages having a population of 30,000 people and will cost about twenty million dollars.

There are three types of PURA's: Plain terrain PURA, Costal PURA and Hill PURA. For example for Mauritius Coastal PURA and plain terrain PURA are relevant. This is a viable and sustainable business proposition. After initial short-term employment during construction etc., we have to plan for initiating actions for providing regular employment and self employment opportunities in nationally competitive small enterprises in agro processing, manufacturing and services sectors for about 3000 people. By creating industrial/business parks employment opportunities in the support and services sector will increase to about 10000 people. This will provide sustainable economy for the rural sector. In this national mission, bankers can promote entrepreneurship in rural areas. This will lead to the removal of the urban-rural divide. PURA complexes should also have spiritual connectivity in addition to the four connectivities which I have described. I have personally come across four operational PURAs in my country, which demonstrates the viability of the PURA concept through private enterprises. India will be very happy to share this experience of a societal transformation mission of economic development, with Mauritius. While discussing with various leaders and experts during the last two days, I have realized that there are certain possibilities of partnership between Mauritius and India on certain common development programmes, which I would like to discuss.
Mauritius - India Partnership

Mauritius is acknowledged all over the world as one of the remarkable success stories in the history of nation building. Its rapid economic development, its ability to reconcile demographic diversity with social harmony and its solid institutional strengths are a model for other countries. We are also aware of the new challenges that the Mauritian economy faces in the present global context, particularly in the key areas of sugar, textiles and fisheries. Since Mauritius has a comprehensive 10 year plan for nurturing the sugar industry, particularly diversification we in India have certain experiences in the sugar industry, particularly successful cooperative movements and exploitation of bye-products like power generation and ethanol production. We would also like to share with you the research experience of the Vasantdada Sugar Institute of Maharashtra in Western India. Important results arising from the research are (a) less water cultivation (b) 12-18 months growth cycle (c) reduction of input cost for sugarcane cultivation and also sugar production and (d) regulated growth cycle of sugarcane so that factories can get continuous supply of sugarcane.

Regarding textiles, I would suggest using the cooperative model which is in practice in Tirupur in Tamil Nadu in Southern India. We have also some models in Punjab in Northern India where a collaborative effort between farmers, industrial representatives, extension workers and research scientists has resulted in doubling per hectare seed cotton productivity. In respect of fisheries, there will be a need for promoting an integrated approach in deep sea fishing, processing, packaging and marketing at high seas as is being presently done in Iceland, whose economy thrives mainly on fish export. Our institutions will share their individual experiences with your experts for finding innovative solutions to the challenges faced by you. This will definitely give further thrust to your economic growth.

Conclusion

In conclusion, I would like to refer to my address to the Pan-African Parliament on 16th September 2004 in Johannesburg. We suggested the establishment of a Pan African e-Network for providing tele-education, tele-medicine and Heads of the State network to 53 Pan African nations. This programme has commenced and will provide connectivity to the whole of Africa. We have signed an MoU for the Pan African e-network for Mauritius. I am very happy that tele-medicine connectivity has just been established
at Port Louis and will be extended to other places. We have great missions for transforming our nations into economically developed nations; above all our two countries have to join hands in the evolution of enlightened societies which I have discussed in detail. We need a joint world forum: “Organization for Evolution of Enlightened Societies”, for realizing this purpose.

The type of mission in front of us is very complex and challenging. Let us share a great thought propounded by Saint Maharishi Patanjali in the Yoga Sutra in 500 BC:

“When you are inspired by some great purpose, some extraordinary project, all your thoughts break their bounds. Your mind transcends limitations, your consciousness expands in every direction, and you find yourself in a new, great and wonderful world. Dormant forces, faculties and talents come alive, and you discover youself to be a greater person by far than you ever dreamt yourself to be.”

My best wishes to the people of Mauritius.
MOROCCO

376. Media briefing on the visit of Foreign Minister of Morocco Mohammed Benaissa.

New Delhi, June 26, 2006.

As you know the Foreign Minister of the Kingdom of Morocco, Mr. Mohammed Benaissa is on an official visit to India from 25-27 June 2006. India’s relations with Morocco are marked by warmth and friendly cooperation, and are multifaceted and significant. Both India and Morocco are pluralistic societies with diverse cultural trends.

During the visit Foreign Minister had discussions with Minister of State for External Affairs Shri E. Ahamed and discussed bilateral, regional and multilateral issues of national interest. He also called on the Prime Minister and other dignitaries. This evening, I understand he is calling on the Agriculture Minister as well as Tourism and Culture Minister.

The bilateral relations between the two countries have witnessed significant growth over the last decade as underlined by the exchange of high-level visits. Our former Prime Minister Shri Atal Bihari Vajpayee visited Morocco in February 1999. Minister of State for External Affairs Shri E. Ahamed visited Morocco in May 2005. Former Moroccan Prime Minister Abderrahmane Youssoufi visited India in 2000. King Mohammed VIth visited in 2001 and also paid private visits in 2003 and 2005.

The bilateral relations cover many aspects and sectors encompassing political, commercial and cultural cooperation. On the bilateral economic and trade relations, the growing sectors of mutual interest are phosphates, pharmaceuticals, agriculture, power, IT, education, telecommunications and tourism. Bilateral trade saw a steady growth and reached US$ 575 million in 2005. Indian companies are taking increasing interest in Moroccan market for investment and trade. Morocco investment is also flowing into India, particularly in the phosphates sector.

During the visit, also the Foreign Minister who also happens to be a former Culture Minister underlined the possibilities of closer cultural cooperation between the two countries and a number of cultural exchange activities are planned. Indian films are a major hit in Morocco and an annual weeklong festival is held in Morocco. The Cultural Exchange Programme is likely to come into effect next year which will focus on youth exchanges.
as well as bringing together not just Indian and Moroccan but Asian and African cultures.

Morocco also reiterated its support for India’s candidature to UN Security Council.

New Delhi, March 6, 2006

The Government of the Republic of India represented by the Ministry of Defence and the Government of the Republic of Mozambique represented also by the Ministry of National Defence (hereinafter individually referred to as “Party” and jointly as “Parties”);

Desirous to promote and expand bilateral relations in the field of defence between the two countries.

Conscious of the advantages to be derived by their armed forces and people from the promotion of such cooperation;

Have agreed as follows:

ARTICLE I

1. The Parties shall promote development of cooperation in fields of defence, which inter alia may include:
   (a) Army;
   (b) Navy;
   (c) Air Force;
   (d) Training;
   (e) Logistic support; and
   (f) Military technical cooperation

ARTICLE II

1. The Parties shall define the programme of activities and procedures of implementation.

2. The joint activities may include:
   (a) Maritime patrolling of the Mozambican Coast by mutual agreement between the Parties;
   (b) Training in Mozambican and Indian centres and military
training institutions in various military specialities, including in peace-keeping forces;

(c) Supply of defence equipment/services to Mozambique as per their requirement on mutually agreeable terms;

(d) Establishment of partnerships and transfer of know-how and technology for assembling and repairing of vehicles, aircraft and ships, as well as rehabilitation of military infrastructure.

ARTICLE III

1. The Parties shall promote cooperation in short, medium and long term ranges within the framework of joint activities mentioned in Article-I.

2. Biennial Cooperation Plans will be drawn up by mutual agreement between the Parties to give effect to the objectives of this Memorandum of Understanding (MOU).

ARTICLE IV

The sending Party will bear the cost of to and fro air transport and the receiving Party will facilitate the necessary means of local transport and other logistical arrangements.

ARTICLE V

1. Activities pursuant to this MOU are subject to the availability of funds and personnel, and to the laws and regulations of the respective Parties,

2. The parent country may withdraw personnel covered under this MOU from the programme for appropriate disciplinary action if they violate any applicable rules or regulations.

ARTICLE VI

1. A Joint Defence Working Group shall be formed to coordinate the implementation of the activities under this MOU.

2. The Joint Defence Working Group shall meet once every two years alternatively in India and in Mozambique.

3. The composition, venue and date of the meetings of the Joint Defence Working Group shall be determined by mutual agreement.

ARTICLE VII

1. Both Parties shall take necessary measures to ensure confidentiality
of information, obtained in the course of implementation of this MOU. This information shall not be used by either Party to the detriment of the interests of the other Party. Neither Party shall divulge such information to any third party without prior written consent of the other party.

**ARTICLE VIII**

1. All disputes arising from this MOU as regards its interpretation, application, or implementation shall be settled amicably based on mutual consultation or negotiation between the Parties.

**ARTICLE IX**

1. This MOU shall not, in any way, affect the commitments of the Parties under existing agreements between the two countries.

**ARTICLE X**

1. This MOU shall enter into force on the date of its signing and shall remain in force for a period of five (5) years and shall be automatically extended for two years at a time unless terminated earlier by either Party upon six (6) months prior written notice to the other Party of its intention to terminate this MOU.

2. Notwithstanding the termination of this MOU, the activities already in progress shall continue until completed.

**ARTICLE XI**

1. The Memorandum of Understanding may be amended at any time by mutual agreement of the Parties or through exchange of notes.

**IN WITNESS WHEREOF,** the undersigned, being duly authorized thereto by their respective Governments, have hereafter signed this Memorandum of Understanding in two originals each in Hindi, Portuguese and English languages, all texts being equally authentic. In case of any divergence of interpretation, the English text shall prevail.

**Done** in English on this Sixth day of March 2006.

For the Government of the Republic of India  For the Government of the Republic of Mozambique

(Shri Pranab Mukherjee)  (Mr. Tobias Joaquim Dai)
NAMIBIA

378. Briefing Points by Official Spokesperson on the visit of Minister of State Anand Sharma to Windhoek, Namibia.

New Delhi, April 27, 2006.

- Mr. Anand Sharma is currently visiting Namibia to attend the SADC (South African Development Community) Consultative Conference where India has been invited to attend as one of its international cooperation partners; at the conclusion of this conference, he will attend the first ever meeting of the Indo-SADC Forum on April 28.

- On his first day in Windhoek on April 26, he attended the inaugural session of the SADC Consultative Conference which was opened by the Namibian President, Mr. Pohamba. Besides calling on his ministerial colleagues, he also paid a courtesy call on the President of Namibia. President Pohamba, a veteran leader of the Namibian freedom struggle, very warmly recalled India’s close and staunch support to it. He remembered his own meeting with late Smt. Indira Gandhi in Dar es-Salaam in early 70s. He also referred to MOS’s own close personal association with the Namibian freedom struggle and welcomed him as a friend of the Namibian people.

- Thanking the President for his sentiments, MOS discussed with him several issues in the ongoing bilateral cooperation, including the India-AU e-connectivity project. He also conveyed the Government’s decision to help set up a faculty of engineering and management at the University of Namibia’s northern campus: the first such project anywhere for capacity-building in the education sector. Before the conclusion of a warm exchange of views on a wide range of bilateral and international issues. MOS invited President Pohamba to pay a visit to India. Thanking the Minister for the invitation, the President remarked jokingly that his colleagues can not believe that he has never been to India!

- The Namibian President conveyed that India could count on Namibian support at the UN and other forums including support for Indian candidature in the HRC.

- MOS also called on the Namibian Minister for Mines & Energy during which both sides agreed that India should play an active role in joint
exploration and exploitation of minerals and energy sector in Namibia. It was agreed that Indian side would propose draft MOUs in this connection.

- MOS met Mauritian Foreign Minister Mr. Madan Dulloo for in depth discussions on how to energize India-SADC cooperation, apart from reviewing bilateral relations including action points arising out of exchange of high level visits including recent visit of President Dr. Kalam to Mauritius. It is the expectation of the Mauritian side that the proposed PTA between India and Mauritius would be signed soon.

379. Briefing Points by Official Spokesperson on the visit of Foreign Minister of the Republic of Namibia Marco Hausiku.

New Delhi, October 26, 2006.

- Within a day of assuming charge as External Affairs Minister, Shri Pranab Mukherjee received H.E. Mr. Marco Hausiku, the foreign Minister of Namibia who arrived in New Delhi on 26th October, 2006 on a 3-day official visit.

- During their discussions, both sides, while reflecting on traditional and historical relations, discussed a broad agenda of bilateral cooperation in areas like education, agriculture, trade, mines and energy, technical training and defence. This agenda will facilitate Namibia’s development priorities as well as provide new content to our bilateral relations suited to the ideals of the South-South cooperation. Namibia is one of the largest recipients of ITEC training. EAM also offered training for Namibian diplomats on WTO issues, trade and development, diplomacy and international relations. It was mentioned that our mission in Geneva had already requested for applications for training on WTO issues at the Institute of Foreign Trade (IIFT), New Delhi.

- During the discussions, ongoing negotiations for finalizing bilateral MOUs on agriculture, cooperation in mineral resources and energy, education, on Cultural Exchange Programme, IT kiosks’ project, Pan
African eNetwork, were reviewed. Besides, discussions regarding the fixing of the date for the second Joint Trade Committee meeting and cooperation in the field of defence are taking place between the two sides.

- EAM also underlined the importance of cooperation with Namibia in the context of the launch of the India-SADC Forum in Windhoek in April, 2006. The areas identified for cooperation include HRD, Agricultural, Water resources management, Small & Medium Enterprises, Drugs & pharmaceuticals, ICT, trade, industry and finance which have considerable significance for Namibia as well. Namibia is well placed to host the SADC Projects given its excellent infrastructure and a pool of skilled people.

- EAM also pointed out that India will very soon launch negotiations with the Southern African Customs Union (SACU), of which Namibia is also a member. This will give a fillip to bilateral trade relations. Currently main Namibian imports from India are drugs and pharmaceuticals and its major exports to India are non-ferrous metals.

- Both sides exchanged views on the urgent need for UNSC reforms and Namibia once again conveyed its strong support for India’s candidature for Permanent membership of UNSC. Namibia sought close consultations with India in the context of ongoing cooperation in the multilateral fora.
SOUTH AFRICA

380. Press Release of the High Commission of India on the visit of Minister of State Anand Sharma to South Africa.

Pretoria, March 26, 2006.

En-route to Rio de Janeiro for the third IBSA Ministerial Commission meeting, Minister of State for External Affairs of India Mr. Anand Sharma paid an official visit to South Africa from March 24 to 26 – among his first bilateral visits abroad since assuming this office.

Relations between the two countries are at an all-time high; with hectic political contacts and a dramatic 74% increase in the value of bilateral trade in 2005. Tourism is also increasing in both directions. India has been selected as a key partner in South Africa’s efforts to improve public service delivery through capacity building and skill formation. The two governments will be collaborating to celebrate this year the centenary of the launch of Satyagraha (loosely translated to Passive Resistance) in Johannesburg by Mahatma Gandhi, the icon that the liberation struggles of the two countries share in a unique bond.

The undoubted highlight of the present visit was when in an extraordinarily gracious gesture, illustrating both the close bonds prevailing between India and South Africa and the very special regard in which Minister Mr. Anand Sharma is held in this country for his contribution to the struggle against Apartheid, President Thabo Mbeki invited him to lunch on March 25 taking time off from a session of the National Executive Committee of the African National Congress for this meeting. Other members of the South African Government present at the lunch were the Defence Minister and the Deputy Foreign Minister. The visiting Minister briefed President Mbeki about the plans to institutionalize a regular India-Africa Dialogue to tackle the challenges of democracy and development, particularly in the context of globalization. President Mbeki warmly welcomed the idea. The President underlined the need to invigorate IBSA. The talks also covered various bilateral issues and other issues of common concern in the global context; including UN Reforms and the NAM Summit later this year.

On March 24, Minister Anand Sharma had a meeting with his counterpart, Deputy Foreign Minister of South Africa, Mr. Aziz Pahad in Johannesburg. The two Ministers discussed issues of bilateral, regional
and international interest, including preparations for the forthcoming Ministerial meeting of IBSA.

The Minister of State also met Dr. Essop Pahad, Minister in the Presidency to discuss the programme for the celebration of the Satyagraha centenary.

The South African Minister of Public Services & Administration, Mrs. Geraldine Fraser Moleketsi and Minister for Public Enterprises Mr. Alec Erwin also met the Minister on March 25. During these meetings, the Minister discussed collaboration in the area of capacity building in the public service sector and co-operation among public sector enterprises of the two countries.

Mr. Sharma’s links with South Africa are many decades old. His personal commitment to the struggle against Apartheid here is widely recognized. In addition to being Chairman of the Indian Anti-Apartheid Movement, he also chaired the World Youth Action Against Apartheid. He was appointed to observe the South African Transition Process and Elections in 1994 by the Commonwealth Secretary-General. He was the only ‘foreigner’ invited to share the podium at the ceremony to mark the 50th anniversary of the adoption of the Freedom Charter at Klip Town in June last year.

381. Special Media Briefing by Secretary (West) Ministry of External Affairs Smt. Shashi Tripathi on Prime Minister Dr. Manmohan Singh’s visit to South Africa.

New Delhi, September 28, 2006.

OFFICIAL SPOKESPERSON: Good afternoon everybody and welcome to this briefing by Secretary (West) Mrs. Shashi Tripathi on the forthcoming visit of the Prime Minister to South Africa.

SECRETARY (WEST): Ladies and gentlemen, distinguished members of the press, as you know, our Prime Minister will be paying an official visit to South Africa from September 30 to October 3 at the invitation of President Thabo Mbeki, President of South Africa.
The last visit to South Africa by an Indian Prime Minister was in 1997. This visit is a reinforcement of the strong ties between India and South Africa at the bilateral level and at the multilateral level.

The visit is also aimed at strengthening these ties and taking the relationship to a level higher than at present and giving it the content of a strategic relationship that has been talked about by both President Mbeki and by our own Prime Minister.

As you would recall, President Mbeki paid a visit to India in 2003. At that time he had used this phrase ‘strategic relationship with India’. This was further reinforced when our President, President Dr. Abdul Kalam, visited South Africa in 2004.

Given the history of our relationship with South Africa where India had given very strong moral and material support to South Africa’s liberation struggle and its struggle against apartheid, it is perhaps understandable why we have such a close relationship.

Again you would recall that India was among the first countries to sever trade relations in 1946 with the apartheid regime of South Africa. Throughout that era it played a very important role in bringing the issue of apartheid to the front burner of world attention until apartheid was dismantled. Also, the fact that Gandhiji launched his Satyagraha movement in South Africa and his journey as a freedom fighter began in South Africa accounts for the emotional ties that we have had with this country.

Our diplomatic ties with South Africa were established in 1993 after the country became independent. Since then we have had excellent bilateral relations. We have about 30 bilateral agreements in various diverse fields and some more are going to be signed during Prime Minister’s visit this time, which I will tell you as we go along.

Prime Minister will reach on the 30th of September. On the 1st of October he will participate in the Satyagraha Centenary commemoration. This event will take place at a stadium. The highlights of this event will be: an address by President Mbeki, an inter-faith service and introduction of relatives and colleagues – those who are still alive – of the original Satyagrahis. There is going to be a cultural element to this commemoration. There will be one aspect from India and one from South Africa. From our side, Ustad Amjad Ali Khan Sahab will perform.
On the 2nd, on the programme is homage paid at what is called Umbilo Road Resistance Park where 40 years after the birth of Satyagraha, South Africans put into practice the principles of Mahatma Gandhi and offered passive resistance against apartheid laws, especially with regard to segregation of certain areas. This park was meant for whites only. So, these Satyagrahis went there and did a dharna there to protest against that law.

Prime Minister will also visit the Phoenix Settlement which was set up in 1904 by Mahatma Gandhi. This has since been reconstructed and renovated with the help of the two Governments.

The 2nd of October is devoted to bilateral discussions and bilateral talks. These will involve the Heads of Government and the delegations. Also, the President will address the CEOs Forum where leading CEOs from both India and South Africa participate. I suppose you do know that the CEO’s Forum had been set up a couple of years ago and the Chairman of that is Mr. Ratan Tata. He is also the Advisor to President Mbeki in his own personal capacity.

Apart from this, various agreements will be signed - one is on railways, another one is on education, and the third one is on cooperation in science and technology. There are some agreements which are being negotiated and these are in the pipeline. These are: a framework agreement for preferential trade agreement (PTA) with South African Customs Union (SACU) between five countries of South Africa; the Bilateral Investment Promotion Agreement (BIPA) in Agriculture and Sports. These are being negotiated by the two countries. They may or may not be reached by that time but these are being worked out. This is work in progress, as it were.

On the 2nd of October, the Prime Minister will inaugurate an exhibition of Mahatma Gandhiji’s photographs in the Old Fort. This is Prison Number Four where Gandhiji was incarcerated at one time and he spent time in that prison. So, this is another emotional kind of engagement that he is participating in and inaugurates that exhibition. This exhibition will take place in Johannesburg: the talks will take place in Pretoria. The CEOs Forum also will take place in Johannesburg. As you know, Pretoria and Johannesburg are twin cities. So, the distance is not very great.

I know you are going to ask this and I will tell you anyway. A meeting with Mr. Nelson Mandela is on the cards. Where and when is being worked out. This is the nuts and bolts of the programme. Those of you who are
coming along with the Prime Minister’s delegation would be given your booklets on the flight. So, you will know the details.

If there is anything else you wish to know, please do ask me. If you wish to know anything about South Africa, I will do my best to answer.

QUESTION: Is there going to be a visit to Pietermaritzburg?

SECRETARY (WEST): Yes, there is a visit to Pietermaritzburg on the programme. That was the railway station where Gandhiji was evicted from the train, and that changed the course of his life and the course of world history.

QUESTION: Can you elaborate a bit on the strategic content of the relationship between India and South Africa and as to how this visit would help in that?

SECRETARY (WEST): Over these years, as I said, we have built this relationship. The underpinnings of this relationship are formed by trade and investment.

Our bilateral trade with South Africa at the moment is to the tune of four billion US dollars which is quite considerable if you think of the rest of Africa or many other countries. But we think that this is only a fraction of the potential which exists of trade which should exist between India and South Africa, given the kind of resources that South Africa has – mineral resources, the skills resources – and the kind of resources India has and the strengths that India has. That is what we wish to develop.

The new trend and the encouraging trend has been investments. There have been an increasing number of investments from India into South African market. The areas which have been found more attractive for investment are: pharmaceuticals, infrastructure, telecommunications and even breweries. We have United Breweries present there, we have the Mahindras present in South Africa and, of course, Tatas. We have Banks which are present in South Africa. The NIIT has an office in South Africa. So there is presence in IT, telecommunications, pharmaceuticals and infrastructure. Science and technology is now coming up because South Africa is also in some ways at the cutting edge of technology especially in fuel technology. As you might have heard, their technology which is coal to gas and coal to liquid is a unique kind of technology which we also would like to access and we would like to cooperate in.
On their part, they are very keen to get from India skills because that is a shortage which they feel extremely acutely. There are two programmes which South Africa has started. President Mbeki has homed in on the problems besetting the South Africa. These problems have been identified as poverty and unemployment. The way to overcome these two problems they feel, is through creation of skills and creation of infrastructure which will lead to delivery of services to society.

Black empowerment has been taking place. They have an affirmative action programme in South Africa but they want to accelerate that. Naturally the less-privileged sections of the society are now waiting to see the fruits of development go down to the grassroots, as it happens in every developing country. So, there is this need to hasten the process of development. In that they find that India can be a very important and useful partner.

In fact, recently we had our Joint Commission meeting a couple of months ago. Their Minister for Human Resources Development and Capacity Building and some other Ministers were here. They were very keen on knowing from us how to build skills. We have signed with them an MoU on assistance in capacity-building. That programme of action is being worked out on that score. These are the things which are adding content to our already strong relationship.

With regard to science and technology, as you know, they have one of the most important telescopes called SALT. They also have other programmes. Through our science and technology agreement now, that cooperation we want to move forward. These are some of the things. When our President had gone to South Africa in 2004 he had made a proposal at the Pan-African Parliament. He had suggested that India could share with Africa its knowledge of technology, especially of information technology and give to Africa - 53 countries of Africa - satellite connection and fibre optic connection to enable African countries to bridge the digital divide and also to assist in giving the benefits of tele-education, e-education, distance education and the tele-medicine to different countries. This was received extremely well.

Since then we have been working on this proposal. ISRO prepared a project report. We signed an MoU with the African Union after which we began to discuss this proposal bilaterally with different countries of Africa. The position today is that this project is very much on board. Fifteen countries have signed these MoUs to be on board for the first clutch of countries which will take advantage of these services. A pilot project is being set up
in Ethiopia in Addis Ababa. This is going to go on stream from the first week of October. So, it is absolutely ready. The hub for this e-satellite project as it is called is being set up in Senegal, which means the earth station is going to be located there and from there connections are going to be given to different countries. So, that also will be discussed with South Africa. So, these are the various components of bilateral interaction.

Thank you.

---

382. Statement by Prime Minister Dr. Manmohan Singh on Departure for South Africa.

**New Delhi, September 30, 2006.**

I am visiting South Africa to participate in the Satyagraha Centenary Celebrations being organized by the Government of South Africa. The philosophy of Mahatma Gandhi of resisting injustice and oppression by pursuing the path of truth and non-violence was born in South Africa and is a powerful legacy that is shared by the people of India and South Africa.

I will also visit places which mark some milestones in the Mahatma’s remarkable life; the Pietermaritzburg station where he was thrown out of an all white train compartment, Phoenix Settlement and the Constitution Hill prison where he was incarcerated. I will also visit the Umbilo Park Memorial where several years later, brave South Africans opposed the injustice of the apartheid regime.

I also hope to have the opportunity to meet Dr. Nelson Mandela whose life and work bear Gandhiji’s deep influence.

I will have the opportunity to review bilateral relations and the India-South Africa Strategic Partnership with President Mbeki. I hope to discuss with President Mbeki measures that both countries can take to further deepen our partnership.

South Africa is India’s biggest trading partner in the African continent. Many Indian companies are expanding their business presence there.
Similarly, I think that there is much that South Africa can offer India. I hope we will be able to identify steps to enhance our current commercial and economic relationship.

I will also take this opportunity to discuss with President Mbeki current international issues. Our two countries share a common vision of a cooperative, rule-based multi-polar world order. I think that South Africa and India have a major role to play in carrying forward the agenda for reforms at the UN, including the expansion of permanent membership of the UN Security Council, so that the interests of the developing world are better reflected and realized in this organization, and in newer initiatives such as IBSA.

383. Joint Press Conference of Prime Minister Dr. Manmohan Singh with South African President Thabo Mbeki.

Johannesburg, October 2, 2006.

PRIME MINISTER: Ladies and gentlemen, this has been the most satisfying visit for me, particularly, since it coincides with Gandhiji’s 137th Birthday today. I take this opportunity to thank President Mbeki and the people of South Africa for their traditional warmth and affection for India. I would also like to express my sincere appreciation to His Excellency the President and to the South African Government for the warm welcome and hospitality extended to me and my delegation.

President Mbeki and I have had very fruitful discussions this morning continuing upon our meet in Brasilia and in Havana last month. We are satisfied with the steady growth in our multidimensional relationship and this is reflected in the Joint Declaration that we have just now signed.

India and South Africa enjoy excellent bilateral relations. I mentioned to His Excellency the President that developing our strategic partnership with South Africa is something which unites all shades of political opinion in our country. We are, therefore, keen to work with South Africa to enhance and give more meaning and content to our strategic partnership.

We have decided to maintain active contact at all levels to deepen our mutual understanding on bilateral and international issues. Both our
countries face the common problem of ensuring that the fruits of development reach those who need them most. President Mbeki and I discussed how we can exchange experiences and best practices to achieve this objective.

India’s strengths are in the service industry and human resources development. We have offered to be a partner in South Africa’s accelerated and shared growth initiative. President Mbeki and I have asked our officials to draw up a concrete programme of cooperation to implement this. South Africa is India’s biggest trading partner in Africa. Many of our Indian companies are present here and are expanding their business presence. The rapid growth of the Indian economy offers excellent opportunities to both sides.

President Mbeki and I have decided to qualitatively enhance our commercial and economic relations. The India-South Africa CEOs’ Forum, which is holding its third meeting today, will provide a further momentum to our economic cooperation in the jointly identified priority sector.

India and South Africa have active cooperation in the field of science and technology. We welcome the recent signing of a new programme of cooperation between our two countries in this vital sector.

Our two countries share a common vision of a cooperative, rule-based multipolar world order. During our discussions, we decided to strengthen our cooperation in the reform of the United Nations system and in particular reform and expansion of the United Nations Security Council without which the overall reform of the United Nations will remain incomplete.

I have invited President Mbeki to visit India at his earliest convenience. I look forward to continue to work with His Excellency the President to enhance our strategic partnership to give it more meaning, content and thrust.

Thank you.

**QUESTION:** …(Inaudible)… Are you in fact supportive of South Africa’s aspiration to be a permanent member of the United Nations Security Council?

**PRIME MINISTER:** Yes, very much. South Africa, by virtue of its standing, by virtue of its role in Africa and in the international system, is eminently entitled to that place.
QUESTION: This question is addressed to both of you. I heard several mentions of the strategic partnership between the two countries. Could you tell us a little more about the details of that, specifically with regard to the civilian nuclear programme that India is pursuing as well as the other issues of military and intelligence cooperation?

PRIME MINISTER: We discussed the possibilities of cooperation in civilian nuclear power utilization. I explained to His Excellency President the agreement that we have reached with the United States which is now before the US Congress. After it is passed by the Congress, it will go before the Nuclear Suppliers Group. South Africa is a member of the Nuclear Suppliers Group. I express the hope that when it reaches the Nuclear Suppliers Group, South Africa will take a sympathetic view of India’s concerns.

SOUTH AFRICAN PRESIDENT: I must mention also that this issue is a very important issue of the struggle against terrorism. It can be very important indeed with this element of the need to have this convention approved by the United Nations and India must work on that to really to push for that. But also cooperation at this level indeed between the two countries to share information and so on, act together on this matter is very important.

QUESTION: I wonder if you could give us your response to the Indian Prime Minister’s request for South Africa’s support at the Nuclear Suppliers Group.

SOUTH AFRICAN PRESIDENT: We have discussed the matter as the Prime Minister says and indeed we all are awaiting the outcome of the processes at the US Congress. The matter has been discussed by the Nuclear Suppliers Group already. There was a meeting earlier this year in Brazil where the matter was discussed. Of course, it could not be resolved until the other processes are finished. South Africa would have no problem with that. So, when the matter has formally to be decided, surely South Africa will support that.

QUESTION: Mr. President, you have referred to the issue of terrorism. As you know, India has faced and continues to face this terrible menace. I was wondering whether you could tell us specifically what your assessment is about the war on terror. Do you think it is succeeding, or do you think it is failing? In particular, as far as India is concerned, how will ...(Inaudible)... to the struggle against the terrorist activity?
SOUTH AFRICAN PRESIDENT: I am not sure that one would be in any position to say the war against terrorism is succeeding or not succeeding. I suppose to the extent that any act of terrorism occurs, it must mean that war has not been won. Surely I do not think anybody would say it has been. One of the matters, we are talking here is about international terrorism, people who move across borders and do whatever it is that they may act. The sharing of information, therefore, I think is kind of inherent to that because you never know it may be that somebody wants to commit a terrorist act ...(Inaudible)... flown in from here or something. So, the sharing of information becomes important with regard to this fight as extensively as possible so that if we are able to warn one another or to advise watch this, watch the other, that should be done. Certainly, we ourselves would want to share India’s experience with regard to dealing with this matter. For instance, I am sure you have been following the investigations with regard to the act of terrorism in Mumbai and Indian police, law enforcement authorities have arrested people and so on, of course, who will then go to court. But you see that kind of an act becomes very important for our own law enforcement authorities to gain experience as to how to deal with this kind of a challenge. So, it is like a partnership so that in the end we empower each other with regard to capacity to deal with this. But also with regard to intelligence, forewarning, ability to act in particular ways, preferably to stop these acts of terrorism before they occur, surely we have to do this.

QUESTION: Mr. President, did the issue of UN reform come up in the discussions with our Prime Minister? Secondly, is anything being done on telemedicine because there are certain difficulties both countries face particularly HIV/AIDS? Has that been discussed?

SOUTH AFRICAN PRESIDENT: As the Prime Minister indicated, yes indeed we did discuss UN reform and in particular the reform of the Security Council and the need really to bring maximum pressure to bear on this matter so that there is movement forward. Of course, you would appreciate the fact that India and South Africa agree about this but in the end we have got to act with other countries to bring in the critical weight and mass of support for really some speedier movement. ...(Inaudible)... discussed and we agree fully about the issue. I referred to the matter of India’s cooperation in satellites, e-communication in the continent One of the issues that (this) infrastructure would address is the matter of e-medicine, telemedicine. So, yes, indeed it is very much on the agenda. As I was saying, what is happening now practically is implementation of this. In fact it is a matter that was announced by the President of India when he was
here, and he has repeated again in a lecture that he gave now on the 27th by satellite, to help the continent to have the infrastructure to be able to deal with telemedicine in order to meet the challenges of weaker infrastructure within the African continent. So, it is very much on the agenda.

**QUESTION:** Mr. President, yesterday you poignantly invoked the spirit of Mahatma Gandhi’s concept of Satyagraha when you said, “To act together, to contribute to the emergence of a just global order across the developing world and moving forward from the South African-Indian paradigm”.

**SOUTH AFRICAN PRESIDENT:** I suspect that we have got, India and South Africa, other ways by which to make our voices heard. I do not think, therefore, that it is necessary for the Prime Minister and I to mobilise India and South Africa to run a campaign of civil disobedience in order to get it changed in the Security Council of the UN. We will use other means. But the critical point really is, to the extent that anyone of us here has understood Satyagraha, is the inherent principles in it. It is the example that Mahatma Gandhi gave to see how we use the fact of the centenary, today is his birthday, to kind of try to re-infuse those ideas, that vision, that value system, both in our own countries particularly among the youth but also in terms of the ordering and restructuring of international relations. It is important in a situation such as you can see. We are talking just now about terrorism. All the conflicts in the world, the re-emergence – the Prime Minister was saying to me just now that - you see you have a process of globalization and yet you can see many instances of the reemergence of ethnic tensions which lead to conflicts and so on. So, to say there needs to be a response to all of this so that indeed we do construct a better world - and to construct that better world must mean not only more houses, that is important, and more clean water, that is important, and roads and jobs, they are all important, but - it also means the soul of the people. I am saying that Satyagraha in addition to the action of civil practice values and these principles it contains I think are critically important in terms of the reconstruction of the world so that it is more peaceful, more inspired by human solidarity, more inspired by concern for the interest of the ordinary people and so on, (and is) implementation of Satyagraha to that extent.
Remarks of Prime Minister Dr. Manmohan Singh at the India – South Africa CEOs’ Forum.

Johannesburg, October 2, 2006.

Ladies and Gentlemen,

I am delighted to be here at the inaugural Session of the third meeting of the India-South Africa CEOs’ Forum. I thank President Mbeki for the personal interest and commitment he has shown in the creation and functioning of this forum. An important aspect of India’s changing relationship with the world, and with our key partners, is the growing role of business-to-business interaction. Indeed, in many instances it is closer and deeper people-to-people and business-to-business relations that are driving our bilateral government-to-government relations.

I know that all of you share my enthusiasm for closer business and trade relations between our two countries. The CEOs’ Forum is an excellent vehicle for our business communities to forge useful linkages and to add dynamism to our bilateral commercial engagement. While it is true that South Africa is India’s foremost trading partner in Africa, in terms of global trade of both countries, our bilateral trade is negligible. However, it has shown an impressive increase over the last couple of years. We must work hard to sustain it.

This growing interaction between the business communities of India and South Africa has been driven by the growing confidence of Indian business. The Indian private sector has emerged as the engine of growth in the Indian economy. It has also gone global in a big way. Some Indian companies are already present in South Africa and I hope that more will follow.

Businessmen from both India and South Africa should feel much more at home in each other’s countries. English is widely spoken in both countries, and we share values of democracy and pluralism. The presence of a large number of people of Indian origin in South Africa should also help cement our business relationship.

The fundamentals of the Indian economy are strong and robust. We are confident of sustaining our high economic performance.

We have been able to register a economic growth rate of 8.0% for four years in a row. Most analysts now believe we can sustain this rate of growth into the medium term. Indeed, we aim to raise the growth rate to the 8-10% bracket in the near future.
Corporations from all over the world are establishing themselves in India. They seek to take advantage of the pool of high quality scientific talent and skilled work force in the manufacturing and services sectors. They see India as a vibrant marketplace and a growing market. They all find India a productive and profitable business destination.

South African companies can also exploit these opportunities and advantages. It should be an incentive to them that several Indian subsidiaries of prominent multinational corporations have out-performed their parent companies!

There is immense scope for India-South Africa cooperation. For example, many global companies have successfully leveraged the advantage India offers to set up R & D facilities and business process outsourcing operations. Infrastructure and power are other areas with excellent potential for collaboration.

Other corporations are planning to expand their operations in India, not only to exploit the enormous opportunities that a market of over a billion consumers offers but to use India as a hub of their activities in the region. With the South Asian Free Trade Agreement in place and India-ASEAN Free Trade Agreement under negotiation, the potential is unlimited. I would not like South African companies to miss the bus.

Another avenue which holds excellent potential is not just two-way investment but pooling together of the strengths of the two economies for joint exploration of third markets. I would like you to explore this avenue actively.

Let me conclude by sharing with you the task that President Mbeki and I have set for you! This is to double the trade turnover as well as two-way investment by 2010. With the growth paths on which our two economies are set, this should be feasible. You must put your weight behind it and be willing to explore hitherto uncharted territories. We assure you that both our Governments stand ready to assist you in any way that you may require to achieve this ambitious target.

In conclusion, I would like to wish the Forum all success. I invite you to contribute to the enhancement of the strategic partnership between India and South Africa.

Thank you.
Remarks by Prime Minister Dr. Manmohan Singh at the inauguration of the exhibition “M. K. Gandhi: Prisoner of Conscience”.

Johannesburg, October 2, 2006.

President of the Republic of South Africa Mr. Thabo Mbeki, Chief Justice of the Constitutional Court Mr. Justice Pius Langa, Executive Mayor of the City of Johannesburg, Your Worship Councillor Amos Masondo, Distinguished guests, ladies and gentlemen, 137 years ago today a man was born in India about whom Albert Einstein said that “generations to come will scarce believe that such a one as this ever in flesh and blood walked upon this earth”. This Indian, who often said that it was South Africa that transformed him – was, of course, Mohandas Karamchand Gandhi, whom the world has come to call Mahatma – the great soul. This exhibition which has been opened today will go a long way in ensuring that generations to come will remember that there was indeed such a man, who rose to greatness, without seeking it, in this country. I hope they will come to understand his life and work, and be inspired to follow his ways, though the Gandhian path is not an easy path. This exhibition makes that obvious.

Gandhiji would be elated to see the fulfillment of his aspirations for peace and reconciliation in the transformation South Africa underwent under the leadership of Madiba, on whom, in the eyes of the world, the mantle of the Mahatma seemed to have descended.

Another follower of the vision of the apostle of peace South Africa can boast of proudly is, Archbishop Desmond Tutu. I have great pleasure in announcing that in recognition of his invaluable contribution towards social and political transformation through dialogue and tolerance – truly Gandhian values – the Government of India has decided to award the 2005 Gandhi Peace Prize to him.

As a prisoner in South Africa, Gandhiji made a pair of slippers for General Smuts, who had sent him unjustly to jail. I believe those slippers are in the exhibition today. They symbolize so effectively all that the Mahatma stood for, refusing to demonise even the oppressor. The Mahatma never compromised in the fight against injustice, or in pursuit of the truth. But there was no room in his credo for hatred or violence.

Ladies and Gentlemen, this year is the centenary of the movement, which the Mahatma launched in South Africa, which contributed to India’s
freedom, influenced many liberation struggles in Africa, gave inspiration to the American civil rights movement. But the question is sometimes asked—are the Mahatma and the practice of satyagraha relevant today?

The answer was given five years ago when the date on which satyagraha was launched became known almost universally as 9/11. That day thousands of innocent persons lost their lives in the terrorist attack that brought down the World Trade Towers in New York. 9/11 has come to symbolize the twin evils of violence and hatred that the Mahatma rejected. September 11 therefore now symbolizes a choice that the world has to make. Which is the path we should take— the path of a peaceful struggle for justice, or the path of a brutal violence that targets innocents?

As always, the Mahatma summed it up. “An eye for an eye”, he said, “will make the whole world blind.” On Constitution Hill, we must remember that only justice should be blind. The rest of the world must learn the lesson of Gandhiji’s life of non-violent, peaceful struggle in the service of humanity.

This is the legacy that the City of Johannesburg has sought to preserve in this permanent exhibition and I would like to thank all those who have been involved in this initiative.

386. The Tshwane Declaration on Reaffirming the Strategic Partnership between South Africa and India.

Johannesburg, October 2, 2006.

1. In commemorating the centenary of the launch of Satyagraha, and in the spirit of the strategic partnership that was established during the historic visit of South Africa’s first democratically elected President, Nelson R Mandela to India in March 1997 and carried further by the visit to India by President TM Mbeki in October 2003 and the visit to South Africa by President APJ Abdul Kalam in September 2004, South Africa and India reaffirm their commitment to a global order of peace, equality and justice.

2. President Thabo Mbeki and Prime Minister Manmohan Singh paid
tribute to the global role played by Mahatma Gandhi through the implementation of the principles of truth, non-violence and self-sacrifice, as enshrined in the philosophy of Satyagraha. Gandhi’s influence was felt throughout the world and inspired numerous leaders and renowned personalities like Martin Luther King, Albert Luthuli, Oliver Tambo, Nelson Mandela and Desmond Tutu. It was the unflinching spirit of Mahatma Gandhi that contributed decisively towards the demise of the British Raj; similarly it inspired the struggle against apartheid, particularly during the Defiance Campaign. Above all, it was the strong message of non-violence contained in Gandhi’s Satyagraha that helped to bring about a peaceful transformation in South Africa and the realisation of truth and reconciliation between the destructive human divisions that had been spawned by apartheid.

3. In sharing the fundamental values espoused by Mahatma Gandhi, President Mbeki and Prime Minister Singh stress their continued and unflinching belief in the peaceful resolution of disputes and the recognition of the rights of nations to self-determination and freedom.

4. President Mbeki and Prime Minister Singh express their belief that South Africa and India draw their strength and inspiration from the diverse, multi-cultural societies constituting their respective nations; and that the best assurance for continued peace and prosperity lies in the adherence to democratic governance that is rooted in the respect for human dignity and the fundamental rights of all people, as laid down in the Universal Declaration of Human Rights.

5. The two national leaders furthermore reaffirmed their belief in the growing partnership with the signing of the following bilateral agreements/MOUs:
   - Co-operation in the Field of Education
   - MOU between Spoornet and Railways
   - Exemption of Visa Requirements for Holders of Diplomatic and Official Passports
   - Programme of Co-operation in Science and Technology.

6. Conscious of the need to make the partnership more result-oriented and of greater direct benefit to the peoples of South Africa and India,
President Mbeki and Prime Minister Singh have today decided to intensify co-operation and committed themselves to raise the existing level of friendship and partnership between South Africa and India to even higher levels.

7. Both leaders noted that the political interaction between India and South Africa, marked by an exceptional degree of understanding, mutual trust and confidence, had gathered further momentum and substance. The number of Ministerial visits exchanged had increased significantly since the milestone visit of President Mbeki to India in 2003. They expressed their satisfaction at the continued and steady consolidation of bilateral relations. Besides the deep political bond that was first forged more than a century ago, the partnership now extends to the economic, human resources development, public administration and governance, urban and rural settlement, health, defence, cultural and science and technology fields.

8.1 Recalling that the Red Fort Declaration had recognised that the economies of South Africa and India have certain comparative advantages, complementarities and resources which can be exploited to mutual benefit through trade, investment and transfer of technology, they noted with satisfaction the progress that had taken place in these areas, resulting in more than doubling of the total bilateral trade since 2003 and a significant increase in investments in both directions. They acknowledged, however, that the full potential in this regard was yet to be tapped and reaffirmed their determination to explore these opportunities to their optimal extent, particularly in the following priority sectors: energy, tourism, health, automobiles and auto components, chemicals, dyes, textiles, fertilisers, information technology, small and medium enterprises and infrastructure.

8.2. They urged the private sectors of both countries to gain better awareness of each other’s strengths and to set themselves ambitious targets. It should be possible at least to treble the volume of bilateral trade by 2010. In this context, they welcomed the scheduled third meeting of the India-South Africa CEOs’ Forum in Johannesburg on 2 October 2006, which would contribute towards this goal.

9.1 Recognising the major priority attached to the health sector in both countries, they agreed that the Agreement on Co-operation in Health and Medicine should be implemented expeditiously.
9.2. Further, South African and Indian companies providing health services, including diagnostics and medical care, would be encouraged to work jointly to provide affordable health care to nationals of both countries as well as in third countries.

10. Recalling the important Agreements, which were signed in October 2003 to promote co-operation in the fields of hydrocarbons, electricity and power, they agreed that these should be implemented at the earliest.

11. They noted the progress made in bilateral defence co-operation as reflected in the report of the India-South Africa Defence Committee, which met in June 2006 in Pretoria. They agreed that South Africa and India should work towards closer co-operation in the defence sector, including the possibility of joint research and development. Furthermore, the South African Government expressed appreciation for the training provided by India on UN Peacekeeping and operations of modern submarines.

12.1. Lauding the efforts of the South African Government for promoting broad-based economic and social development through the Accelerated and Shared Growth Initiative of South Africa (ASGISA) and the Joint Priority Skills Acquisition Initiative (JIPSA), Prime Minister Singh reaffirmed that the Indian Government was ready to be a partner in these initiatives and to provide assistance in building up scarce and critical skills identified by the South African Government.

12.2. President Mbeki welcomed the growing co-operation within the framework of the Indian Technical and Economic Cooperation (ITEC) Programme and Prime Minister Singh’s indication that India would increase the number of ITEC slots allocated to South Africa from 55 to 100, with 50 of these slots earmarked specifically for the JIPSA Initiative.

12.3. Noting with satisfaction that the visit of the Deputy President of South Africa to India from 9 to 13 September 2006 had helped identify further avenues through which India could contribute to ASGISA and JIPSA, the two leaders decided that a Programme of Co-operation addressing growth and skills would be drawn up by designated co-ordinators from both sides.
12.4. To identify means of co-operation in capacity building and skills enhancement in the key ICT sector, they requested the Working Group set up under the MOU on Information & Communication Technologies to convene as a matter of priority.

13. They expressed satisfaction at the increasing cultural exchanges between the two countries and decided that the Cultural Exchange Programme, which expires in 2006, would be renewed; and that academic exchanges between the two countries, particularly through University-to-University linkages, would be promoted.

14. President Mbeki and Prime Minister Singh expressed their satisfaction on the opening of the South Africa Tourism office in Mumbai in 2005 and reaffirmed their belief that increased tourism would not only bring commercial benefits to both countries, but also enhance the warm people-to-people relations between South Africa and India. In this context, they welcomed the imminent opening of an office of the International Marketing Council (IMC) of South Africa in Mumbai.

15. In the critically important field of Science and Technology, President Mbeki and Prime Minister Singh agreed that a more extensive and active network between relevant institutions of the two countries would be promoted by the concerned Departments. They noted that President Abdul Kalam had delivered the second Philip Tobias Lecture at the invitation of President Mbeki and had called for greater co-operation between scientists of South Africa and India in meeting the challenges of development, including in partnership in the Pan African e-Network and the World Knowledge Platform.

16. In addressing wider areas beyond the bilateral realm, the two leaders agreed that every effort would be made to conclude the India-Southern African Customs Union (SACU) Preferential Trade Agreement as soon as possible since it would provide a significant incentive to the business communities of the two countries to explore mutually beneficial commercial opportunities and contribute to the growth in bilateral trade.

17. President Mbeki and Prime Minister Singh welcomed the launching of the Southern African Development Community (SADC)-India Forum in the Republic of Namibia on 28 April 2006 to promote technical co-operation between SADC and the Government of India
in all fields of economic activity with the empowerment of the people in the SADC region and in India as a key priority.

18. The two leaders agreed that the consolidation of the African Union (AU) held the key to the development of the continent. South Africa welcomed India’s willingness to support the objectives of the New Partnership for Africa’s Development (NEPAD), the AU’s primary programme aimed at consolidating the African agenda.

19. The two leaders expressed satisfaction at the outcome of the first IBSA Summit held in Brasilia on September 12, 2006. They welcomed the emergence of IBSA as an effective instrument for promoting ever-closer co-ordination on global issues between these three influential and diverse democracies of Africa, Asia and South America. Both sides also agreed to intensify consultations and co-operation at multilateral forums such as NAM, Commonwealth, G-77, G-20 and the New Asian-African Strategic Partnership (NAASP) with a view to jointly addressing global challenges.

20. The two leaders shared the view that international economic relations continue to be characterised by inequities and inequalities with large sections of the world yet to reap the benefits of globalisation, which has led to economic crises and instability in several developing countries. The two leaders agreed that to be sustainable and successful, the globalisation process must address, not perpetuate or aggravate the existing inequalities. They, therefore, deeply regretted that the Doha Development Agenda negotiations had been suspended which had pitted the interests of corporate agriculture and large industrial enterprises of the developed countries against those of small and the vulnerable producers that predominate in developing countries. This constituted a grave setback to the development promises of the Round and a serious disappointment for developing countries. Failure to conclude the negotiations in accordance with the mandate will deprive developing countries of fair and equitable conditions for fully realising their comparative advantages across agriculture, industry, and services. Both leaders emphasised that substantial and effective reductions in all forms of trade-distorting domestic support provided by the major subsidisers is an unfinished agenda and must be secured to meet the agreed aim of establishment of a fair and market-oriented trading system in the global agricultural sector.
21.1. Convinced of the vital importance of the role of the United Nations in promoting world peace, stability and development, the two leaders welcomed the creation of the Peacebuilding Commission and the Human Rights Council, as well as the progress made in the areas of UN Secretariat and management reform. The leaders noted the importance of increased focus on development and the alleviation of poverty.

21.2. They reaffirmed the need for a decision regarding the expansion of the Security Council, without which no reform of the United Nations would be complete. They reiterated their conviction that the Security Council must be expanded to include developing countries from Africa, Asia and Latin America in both its permanent and non-permanent categories, so as to reflect contemporary realities and make it more democratic and representative, and resolved to continue to pursue a decision in this regard.

22. The two leaders expressed their deep concern over international terrorism, extremism, trans-border organised crime and illicit trafficking in humans and in arms and drugs. They viewed terrorism as a serious threat to sovereign states, international peace, security and development. They agreed that counter-terrorism efforts by the international community under the auspices of the United Nations should be global, comprehensive and in conformity with international law, human rights and humanitarian law. The ultimate objective is the total eradication of this scourge, so that barbaric attacks, such as the ones carried out on 11 July 2006 in Mumbai and other parts of the world, do not recur. To this end, South Africa and India would continue to work towards the early adoption of a Comprehensive Convention on International Terrorism (CCIT) in the UN General Assembly.

23. President Mbeki and Prime Minister Singh reiterated the unwavering commitment of South Africa and India to the goal of the complete elimination of nuclear weapons in a comprehensive, universal, non-discriminatory and verifiable manner and expressed concern over the lack of progress in the realisation of that goal. They emphasised the necessity to start negotiations on a phased programme for the complete elimination of nuclear weapons with a specified framework of time to eliminate nuclear weapons, to prohibit their development, production, acquisition, testing, stockpiling, transfer, use or threat of use, and to provide for their destruction.
24. They agreed that nuclear energy could play an important role in ensuring safe, sustainable and non-polluting sources of energy to meet the rising global demands of energy, particularly in developing countries. They reaffirmed the inalienable right of all States to the peaceful application of nuclear energy, consistent with their international legal obligations. They agreed to explore approaches to co-operation in the peaceful uses of nuclear energy under appropriate IAEA safeguards. They further agreed that international civilian nuclear co-operation, under appropriate IAEA safeguards, amongst countries committed to nuclear disarmament and non-proliferation objectives could be enhanced through acceptable forward-looking approaches, consistent with their respective national and international obligations.

25. In conclusion, President Mbeki and Prime Minister Singh reiterated their deep conviction that peace and development are indivisible and that good governance was the best-known way to ensure both. They emphasised that under-development could not be addressed in isolation, but that its eradication was a factor of numerous social and environmental influences, including education, health care, basic infrastructure and amenities, capacity building and skills enhancement, political participation at all levels, advancement of indigenous culture and social organisation and access to natural resources, clean water and air for all. They emphasised further that the right to freedom had an important economic dimension, as it embraced not only political freedom but also the freedom to lead a life with dignity, unfettered by domination and discrimination. They noted that the strategic partnership between South Africa and India was guided by the common vision of a global order marked by peace, security and equity. To tackle these multiple challenges, they reaffirmed their commitment to enhance their co-operation bilaterally as well as multilaterally, to build a better, safer and more prosperous world for present and succeeding generations.
INDIA’S FOREIGN RELATIONS - 2006
SECTION - VII AMERICAS
(i) NORTH AMERICA
387. **U.S. and India Conclude First Workshop of the Civil Nuclear Working Group aimed at Fostering Cooperation on Peaceful Uses of Nuclear Energy.**

**Mumbai, January 12, 2006.**

The U.S. and India concluded a four-day workshop on civilian nuclear energy, building on the U.S.-India Energy Dialogue initiated by President George W. Bush and Indian Prime Minister Manmohan Singh in September 2004, and launched by Secretary of Energy Samuel Bodman and India Deputy Chairman of Planning Commission Dr. Montek Singh Ahluwalia in May, 2005.

The U.S. was represented at the first workshop of the Civil Nuclear Working Group by R. Shane Johnson, acting director of the U.S. Department of Energy’s Office of Nuclear Energy, Science and Technology. India was represented by Dr. R. B. Grover, director of India’s Strategic Planning Group of the Department of Atomic Energy.

“These discussions are an important step in establishing a foundation for cooperation on civil use of nuclear energy,” Johnson said. “As the populations and economies of India and the United States continue to grow, we look forward to working together to meet our increasing energy needs in safe and environmentally friendly ways.”

India hosted the first workshop of the civil nuclear working group, which took place in Mumbai. The workshop afforded the two countries the opportunity to convene experts to initiate discussions and share information on the global demand for nuclear energy today and in the future; on safety, emergency response, security, physical protection, and current practices for safeguarding nuclear facilities; on production and use of medical isotopes; and on research in such areas as fusion energy, high energy physics, and nuclear physics.

The U.S. delegation included senior officials and technical and policy experts from the U.S. Embassy, the Nuclear Regulatory Commission, DOE’s National Nuclear Security Administration, DOE’s Nuclear Energy and Science Offices and several DOE national laboratories. The workshop concluded with a tour of a commercial nuclear power plant in Tarapur, located in the vicinity of Mumbai.
In his closing remarks, Johnson extended an invitation to the host country members of the civil nuclear working group to participate in a reciprocal meeting to be hosted by the U.S. in 2006.

388. Joint Press Interaction by Foreign Secretary Shyam Saran and US Under Secretary of State Nicholas Burns.

New Delhi, January 20, 2006.

OFFICIAL SPOKESPERSON (SHRI NAVTEJ SARNA): Good evening ladies and gentlemen. I welcome you to this joint press interaction by Foreign Secretary Mr. Shyam Saran and US Under Secretary of State Mr. Nicholas Burns. This has to be a quick press interaction. After the two opening remarks have been made, we have time only for a few questions because the Under Secretary of State has to catch a flight and Foreign Secretary has another engagement at five o’clock. I request the Foreign Secretary first to address the press.

FOREIGN SECRETARY (SHRI SHYAM SARAN): Good evening to all of you.

First of all let me take this opportunity of welcoming Under Secretary Nicholas Burns. We have spent the last couple of days in very friendly and very intensive discussions on a whole range of issues.

Let me begin by saying that a part of the discussions, a very important part of the discussions, was focused on the forthcoming landmark visit of President Bush and Mrs. Bush to India, which we expect to take place sometime in the first week of March this year. I conveyed to Under Secretary Burns and his delegation that a very warm welcome awaits President Bush and Mrs. Bush to India.

In our discussions we looked at the itinerary, both the protocol aspects as well as the substantive aspects of the visit; it is really reflective of the very significant transformation that has taken place and is taking place in India-US relations. We had a preliminary and broad discussion on that agenda. Of course, it will be for the advance team that will be coming from Washington and further discussions that we have with our American friends to really get a fix on that itinerary for that very important visit. We
both attach a great deal of importance to this visit. It would be really another defining moment in Indo-US relations.

As you are aware, we have also had another meeting of the Joint Working Group on Civil Nuclear Energy Cooperation. As you know, this Group is headed by Under Secretary Burns on the US side and myself on the Indian side. You would recall that when I had gone to Washington sometime back I had shared with Under Secretary Burns some preliminary ideas about the kind of separation plan of our civil and military facilities that we were contemplating on the Indian side. We also discussed some other components of that proposed agreement to which also we attach a lot of importance. For example, we had a preliminary discussion about the kind of safeguards that we are looking at; we had a discussion about what is the kind of scope of our cooperation. A number of issues were discussed but this was really the first time that we were going into some of the substantive aspects of the proposed agreement.

This current meeting that we had of the Joint Working Group enabled us to carry forward our discussions in much greater detail on all aspects of the proposed agreement. It would be fair to say that I think we have today a much better understanding of the kind of perspectives that the United States has with regard to various aspects of this proposed agreement, and we have a much clearer perspective as well. I think we have come to the conclusion that we need to discuss this in greater detail in the coming days and weeks and this particular dialogue between us will be continued.

In the course of these discussions we have for example, shared with the United States our plans for a very significant expansion of our civilian nuclear energy capability over the next few years and what kind of scope of international cooperation that we envisage for meeting the targets that we have in the civil nuclear energy sector. So, this has been an extremely useful discussion. It would, as I said, be fair to say that we need to have more discussions on this particular subject.

We have also had occasion to exchange views on a number of regional issues. As you know, this aspect of our relationship has really developed in the recent past. We have been exchanging views and trying to coordinate our views on issues like Iran, Nepal and Sri Lanka. A number of these issues were discussed. Although there was not so much time to go over the entire spectrum of regional issues, we had a very useful discussion on some of these items.
Under Secretary Burns will be visiting Pakistan, I believe, as well as Sri Lanka. So, this was a good occasion for us to exchange notes particularly since recently we have had the visit of President Rajapaksa to India and, as you know, a couple of days back I myself had a round of discussions with my Pakistani counterpart. So, this was a very opportune moment for us to exchange notes on our relations with these countries.

So, once again this has been a very productive, very useful exchange of views, as always. It has always been a pleasure to engage Nick in these very very friendly and very productive discussions. I look forward to having an opportunity to resume our dialogue in the none too distant future. Thank you very much indeed.

OFFICIAL SPOKESPERSON: May I now request Under Secretary Burns to address the press please.

US UNDER SECRETARY OF STATE (MR. NICHOLAS BURNS): Thank you very much. Ladies and gentlemen, good afternoon. It is a pleasure to be here. I want to thank Foreign Secretary Shyam Saran for his hospitality to myself and to our delegation. We have had a very good two days of discussions here in Delhi. I was in Mumbai the day before that. I believe that President Bush is going to have a very interesting and very successful visit here when he comes later this year.

We believe that the character and the quality of US-India relations have been transformed by the last several years, particularly through the leadership of the Prime Minister and our President. They have identified a strategic partnership on a global basis between India and the United States that is qualitatively different than any relation that our two countries have had going back to the founding and the independence of India in 1947. So, it is our strong, strong impression that across the board the foundations have been laid for a new relationship both on the bilateral economic, science and technology, agriculture and energy and educational initiatives that the Prime Minister and President laid out in the July 18 statement and, of course, to the cooperation on regional and global foreign policy issues that Foreign Secretary Saran outlined for you. On that score, we do consider India to be global partner.

It is important that we talk about the situation in Sri Lanka. We are concerned about the situation there, concerned about the level of violence, concerned about the breakdown in the ceasefire. In my trip to Colombo a couple of days I will certainly be meeting with the Sri Lankan Government,
meeting with the Norwegian colleagues as well and try to make sure that we are standing on the side of the preservation of the ceasefire and of peace, and of peaceful resolution of disputes there.

In Nepal, the United States is very concerned by the actions of His Majesty the King and arresting and detaining of members of the political establishment in the last couple of days. We have issued a statement frankly very critical of that. We are equally critical, of course, of the Maoists. We believe that they should not be using violence as a political weapon. So what India and the United States can do together is to try to assert a joint appeal for peace and for democratic reconciliation in Nepal, (which) is very important.

We had a very good discussion on Iran. You all know the position of my Government. We believe that Iran is a threat to peace, both in its own region and globally. Iran has overstepped the bounds of international law in seeking to use its facility at Natanz for centrifuge research and enrichment. You have heard what our President and Secretary of State had to say on Iran during the last week. We had a thorough discussion of the situation with Foreign Secretary Saran. We are hopeful that when the President visits, we will see a fruition of many of the joint initiatives that we have undertaken to strengthen the US-India relationship. I have mentioned some of them.

I would say on the question of our future agreement on civil nuclear energy cooperation, we remain hopeful that we will be able to achieve this agreement. It is a very difficult undertaking and it is a unique undertaking. I am not sure any two Governments have actually had a negotiation quite like this because the situation is unique, India’s position is unique, and there is a complexity and a difficulty to these talks which is inherent in the subject. And yet we worked very well together for two days here. We listened to each other. I believe the American delegation learned a lot from what we heard from the Indian Government about its own perspective. Both Foreign Secretary Saran and I have committed to each other that we will continue these talks hopefully towards an agreement in the not too distant future.

So, I am very pleased by the visit here. I think we have a great friend in India, we Americans. We are very grateful for the role that India is playing in the world today. We are hopeful that this new relationship is getting around to even greater heights in the future. I myself and my delegation want to thank my good friend Foreign Secretary Shyam Saran for his hospitality and for the welcome that he has shown.
QUESTION (NEW YORK TIMES): This is to Secretary Saran. You just heard him say, ‘I think we have a great friend in India, we Americans’. Do you think that US Congress might be inclined not to give India the nuclear technology that it wants if India does not also stand with the west on Iran?

FOREIGN SECRETARY: As far as India is concerned, the civil nuclear energy cooperation agreement stands on its own merits. Whatever interaction we have had in the recent past with visiting Congressmen, visiting Senators and the interaction that we have also had ourselves with Congressmen and Senators in Washington leads us to believe that there is a fund of goodwill for India in the US Congress, that there is a very pervasive feeling of friendship and support, a bipartisan support for a much stronger Indo-US relationship. Therefore, we remain hopeful that the civilian nuclear energy cooperation agreement - once it has been negotiated between the two administrations, when it goes to the Congress - will receive a positive response.

QUESTION (NDTV): This is to Under Secretary Burns and Foreign Secretary Saran. You yourself have termed this entire agreement as very difficult and unique. The papers that presented to you by Foreign Secretary Shyam Saran, do you find them credible and defensible? Mr. Saran, do you think that India shares the concerns of US, UK and EU-3 on the Iran issue?

US UNDER SECRETARY OF STATE: Thank you very much. In July, the Prime Minister and the President set out to undertake something new in international politics, that is, the United States made a commitment to India and India made some commitments to the United States that we would try to overcome thirty years of division and disagreement on the civil nuclear issue and the United States will commit to make the argument to the Nuclear Suppliers Group as well as to the United States Congress that both US law and international law and practice should be overturned to permit the international community to engage in trade, in technology transfer, in investment, in India’s civil nuclear energy. We think that proposition is an important one and will further the nonproliferation objectives of the international community because the largest democracy in the world, India will no longer be outside the system but will be inside the system. Of course, that has enormous potential benefits for India. The benefits for the United States and the world community are that we will be working with India and engaging India on an equal basis. So, there will be benefits for both sides. It is a very attractive proposition.
What is unique and difficult, of course, is that this kind of thing has not been done before. India is a unique country and its position on this particular issue and this industry is unique obviously. So, President Bush has taken the position that this is in the interest of the United States, it is in the interest of the other countries of the Nuclear Suppliers Group.

We have had very good discussions in many different cities, in New York, in Washington, in Delhi and I think we have met in some European capitals. We have talked a lot on the phone. I think what we have been able to do is establish a framework for how this agreement can work. We have now had a thorough discussion with the competent nuclear authorities of each Government by the way, in Foreign Secretary Saran’s delegation and in my own delegation, about the intricacies and the details of this. There is no question that we have made some progress over the last six months but much further progress has to be made, and that there are some difficulties ahead of us. I have spent twenty-five years in diplomacy thinking that with goodwill and with dedication, countries can reach agreements and I have the same feeling about this agreement.

FOREIGN SECRETARY: We remain very supportive of the initiative taken by the EU-3 to engage Iran in finding an amicable solution to some of the issues which have been raised with regard to the Iranian nuclear programme. We have been extremely supportive of that process. It stands to reason that India - which has, with Iran a very long-standing, close and what we call civilizational relationship with its people – would not like to see a situation of confrontation developing in a region that is very close to India. Therefore, our advice has always been that confrontation should be avoided. This is a message that we have given to our friends. This is a message that, by the way, we have also given to our Iranian friends that an effort needs to be made in order to avoid a situation of confrontation from developing. We also believe that in dealing with this issue it is important to develop as broad an international consensus as possible. Much of our effort over the last several weeks has been directed towards developing that international consensus. That is the spirit in which we have also discussed this matter in the last couple of days both with the United States of America, as also representative of the EU-3 who was on a visit to India recently, as well as with Iran.

QUESTION (ASSOCIATED PRESS): Mr. Burns, you mentioned difficulties in working out with the nuclear deal. Can you elaborate what these difficulties are?
US UNDER SECRETARY OF STATE: I wish I could have the luxury of taking you into the inside of these negotiations and telling you all the details. But I am afraid that would violate all rules of diplomacy if I did that. Suffice to say, I talked about the unique nature of these negotiations given the history of the nonproliferation regime, given India’s own history in the nuclear sphere. I think that has added to the complexity of the negotiations just by definition. There is no question that we believe, and we have said many times, that for any agreement to be credible with United States Congress and with Nuclear Suppliers Group (it) is going to have to be a detailed agreement, it is going to have to be substantial. Despite the fact that we have been at this for six months I think there is still a further way to go. We, both sides, realize that and we realize that we have our work cut out for us over the next several weeks. But we are dedicated, as a friend of India, to work on a respectful and equal basis with the Indian Government.

We will have to see if we can be successful. I hope we can because it is very important that this agreement be realized. It is an agreement made between the President and the Prime Minister. It would have enormous benefits for India. It would really allow India to engage in international trade, in technology, in research and development with other countries who have scientific institutions in a way that has not been possible for thirty years. It would allow the nonproliferation community internationally, the regime that has been established internationally, to have the benefit of India meeting the same standards and practices in the civil sphere (as) the rest of us have been meeting for a long time. So, we are negotiating on that basis. We have to see what happens in the future. We would be working hard. But there are difficulties ahead.

QUESTION (ASSOCIATED PRESS): A quick follow-up. ...(Inaudible)... before the President arrives so that the deal can be concluded and presented to the Congress?

US UNDER SECRETARY OF STATE: I do not know for sure. Our goal, of course, would be to have an agreement before President Bush arrives in India. We would hope for that. Of course, nothing is ever certain in these types of negotiations. But ... we have going for us, there is a lot of trust between the Government of United States and the Government of India. We feel that trust. We feel that we are negotiating with a highly professional set of diplomats on the Indian side. We know we have the goodwill of the Indian Government and they have ours. In diplomacy that goes a long way. Both of us want to see the end of these negotiations and want to see it move forward. So, we are proceeding on that basis.
QUESTION (HINDUSTAN TIMES): Secretary Burns, this question relates to the Iranian National Security Advisor recently equating the Indian nuclear programme with that of Iran’s and saying that this was an example of international double standards on the whole nuclear issue. What do you have to say on that?

US UNDER SECRETARY OF STATE: Well, I saw Dr. Larijani’s remarks which asserted this kind of double standards. Frankly I was, I think everyone was, surprised by them. They were outrageous remarks from my perspective because how is it possible to compare India with Iran in the nuclear sphere? On the one hand you have a country, India, that has never been a proliferator, that has been very responsible in safeguarding its nuclear technology; on the other hand you have a Government and a regime in Iran which the IAEA says for eighteen years conducted secret nuclear research without revealing it to the IAEA, a Government that has just last week unilaterally lifted the seals placed by the IAEA on the centrifuge facility at Natanz, lifted it off unilaterally, ... violate its agreement in essence with the European Union by proceeding in nuclear research, a Government that has earned the criticism of Russia, of China, of the European countries, of my own country over the past two weeks.

I was in London earlier this week meeting with the EU-3 Governments, with the Russian and Chinese Governments. While we do not have identical views on this, I cannot speak for those other Governments, I can tell you what united us. Each of the Governments that I mentioned, that met in London this past Monday, just a couple of days ago, believes that Iran has crossed the line it should not have crossed, that it should heed the advice of Dr. El Baradei and the IAEA and return to negotiations, it should suspend its nuclear activities, it should not engage in centrifuge research much less enrichment. My own Government would say it should not engage in uranium conversion at the plant at Esfahan. So, Iran has clearly miscalculated. The United States believes that there should be a vote of the IAEA Board of Governors on February 2, and there should be referral to the Security Council because since Iran has crossed so many international red lines, Iran has to know that there is going to be a penalty to be paid for such actions. That is the American view on Iran. But for Dr. Larijani to assert somehow of some equality between India and Iran by asserting a double standard is quite outrageous and it is quite off the mark.
389. Statement by Official Spokesperson on the remarks made by the U. S Ambassador David Mulford regarding India’s vote on the nuclear programme of Iran at the IAEA.

New Delhi, January 26, 2006.

Foreign Secretary called in the US Ambassador this afternoon to convey to him that the remarks¹ made by him in an interview to the PTI were inappropriate and not conducive to building a strong partnership

1. In an interview American Ambassador Mulford sought to convey to India that if New Delhi did not vote for the resolution “the effect on members of the US Congress with regard to (Indo-US) civil nuclear initiative will be devastating….I think the Congress will simply stop considering the matter. I think the initiative will die in the Congress not because the Administration would want it.........,” Mulford said. On the same day in a late evening statement the American Embassy said the Ambassador had been quoted out of context. New Delhi indeed was incensed. The next day Spokesperson for the State Department in Washington referring to the Ambassador’s remarks said: “Let me be clear. Ultimately, how India votes on this matter is going to be a decision for the Indian Government. They voted to find Iran in non-compliance that last time around,” Spokesperson McCormack said. “But I think what the Ambassador was doing was talking about and reflecting the view on Capitol Hill...there are very strongly held feelings about Iran and the need for the international community to act decisively and firmly and with a single voice concerning Iran’s pursuit of a nuclear weapon programme.” He went on to say that we continue to encourage the Indian Government to vote for the referral. Ultimately, that is going to be their decision. Asked what would happen to the civilian nuclear accord if India did not vote for referring Iran to the Security Council, McCormack said the Administration would continue to work with the Government of India on the implementation of the agreement with the hope that progress could be made on the issue in time for President George W. Bush’s visit to India in March. Before the comments of the Spokesperson came, Indian Ambassador in Washington had made a demarche with the State Department. On January 26, Under Secretary of State Burns attending the reception at the Indian Embassy to mark the Republic Day of India, said the United States expected India to vote on Iran based on its self-interest at the February 2 meeting of the IAEA and Washington had “no desire” to interfere in this process. “I think the record is clear that the United States considers India to be a great country and great countries make their own decisions based on their interests. We have the highest respect for that process. We would never want to interfere in it,” Burns said. In New Delhi the Prime Minister told journalists on January 29 that the Government would not be pressed into doing anything that hurt the national interest. “We will do what is right for our country. India’s national interest is our prime concern. Whether it is domestic or international policy, we will not act under pressure on anything,” the Prime Minister said. It is important to note that New Delhi considered the remarks of the American Ambassador serious enough that he was summoned to the Foreign Office on an important national holiday, which marked the Republic Day of India. It may be recalled that a day earlier on January 25 the Official Spokesperson had in response to questions regarding the Ambassador’s remarks had said: “...The position India will take on this issue at the IAEA will be based on India’s own independent judgement. We categorically reject any attempt to link this to the proposed Indo-US agreement on civil nuclear energy cooperation, which does stands on its own merits.”
between our two independent democracies. Foreign Secretary informed the Ambassador that India’s vote on any possible resolution on the Iran nuclear issue at the IAEA would be determined by India’s own judgement of the merits of the case. Concerning the proposed India-US civil nuclear energy cooperation agreement, the Foreign Secretary reaffirmed India’s stand that both countries needed to work in the spirit of the 18 July 2005 Joint Statement and in strict conformity with the reciprocal commitments contained therein. The Ambassador expressed his sincere regrets, saying that his remarks had been taken out of context. It was not at all his intention to question India’s right to take decisions on various issues on the basis of its own national interests. The Foreign Secretary and the Ambassador agreed that the two sides would work closely together for a successful visit by President Bush to India.

New Delhi, February 1, 2006.

The fourth meeting of the Indo-US Global Issues Forum was held in New Delhi on February 1, 2006. The Indian side was led by Foreign Secretary Shyam Saran and the US side by Under Secretary of State for Democracy and Global Affairs Paula Dobriansky.

After the visit of Prime Minister Manmohan Singh to the United States in July 2005, the Global Issues Forum continues to be an important vehicle for dialogue on issues of global interest and for the development of joint projects which have broadened and deepened the US-India partnership. Our cooperation is based on shared values as longstanding democracies and global leaders.

The Global Issues Forum, held prior to President Bush’s upcoming visit to India, focused on initiatives and enhanced international cooperation on several key areas including democracy and human rights promotion, health, environment, science and technology, humanitarian assistance and refugees, and combating trafficking in persons.

New Delhi, February 8, 2006.

The second meeting of the Steering Committee of the India-US Energy Dialogue took place in New Delhi on 8 February 2006. It was chaired by Foreign Secretary and US Under Secretary of Energy David Garman.

Issues considered by the Steering Committee included:

- A workshop on civil nuclear energy cooperation that will take place in the US later this year building on the successful event in Mumbai in January 2006.

- Efforts to ensure a strong US participation at the Natural Gas Conference in India in May 2006.

- Three MoUs to be signed on various aspects of cooperation in the oil and natural gas sector.

- Priority to be given to US collaboration in drilling for gas hydrates.

- Pilot projects to be considered in coal preparation and coal liquefaction.

- A clearing house to be set up for coal bed methane and coal mine methane.

- A major energy efficiency conference involving industry of both countries to take place in India in mid-2006.

- Solar-thermal and wind energy to be priorities in the non-conventional energy sector.

The US side gave a briefing on the recently unveiled Global Nuclear Energy Partnership (GNEP) that focuses on commercial recycling technologies designed to expand nuclear power production while addressing environmental concerns with regard to waste management and minimizing proliferation risks.
392. Briefing points by Official Spokesperson on the discussions between US Under Secretary of State Nicholas Burns and Foreign Secretary Shyam Saran.

New Delhi, February 23, 2006.

- There was an informal exchange of views on the Indo-US Civil Nuclear Energy deal.

- A more detailed discussion is expected to be held tomorrow during the formal meeting of the Working Group.

- The itinerary of the forthcoming visit of President George Bush was also discussed along with possible outcomes of the visit.

393. Briefing points by Official Spokesperson on talks between Foreign Secretary Shyam Saran and US Under Secretary of State Nicholas Burns.

New Delhi, February 24, 2006.

- The two sides had detailed and productive discussions.

- There was greater clarity on the issues under discussion.

- Progress has been made in the talks.
394. Interview of Prime Minister Dr. Manmohan Singh on Charlie Rose Show.

February 27, 2006.

CHARLIE ROSE: Mr. Prime Minister, thank you very much for letting us visit you here at the official residence.

MANMOHAN SINGH: It was a great pleasure and great privilege to have you interviewing me at my residence.

CHARLIE ROSE: Thank you very much. Anybody who comes here from America always comes back and says it’s really a remarkable experience. The last time I was interviewing you, you quoted Victor Hugo saying, as you had said to the Parliament, “Nothing can stop an idea whose time has come.”

MANMOHAN SINGH: Whose time has come.

CHARLIE ROSE: In terms of the United States and India, you think that applies today? An idea whose time has come?

MANMOHAN SINGH: I sincerely believe that. And that’s what I—said in my address to the US Congress. I said there are partnerships based on principle. There are partnerships based on pragmatism. And fortunately, when it comes to Indo-American’s relations, both kind of situations point to a new robust phase of relationship, a multi-faceted relationship, which I believe is just in the interest of both our countries.

CHARLIE ROSE: Can it be transformational?

MANMOHAN SINGH: It could be transformational, which I hope it will be transformational.

CHARLIE ROSE: Said signaling a new what?

MANMOHAN SINGH: A new India which realizes its destiny in the framework of an open society, in the framework of an open economy, respecting all fundamental human freedoms—great respect for pluralistic, inclusive value system. I think that’s what unites India and the United—India and the United States. And I do hope that working together, our two countries can write a new chapter in the history of our relationship.

India has, of course, aspirations of getting out of its poverty,
ignorance, and disease which still afflict millions of people. But I do believe that we have something to offer to the rest of the world, including the United States. Nowhere else you will find a country of India’s diversity, of India’s complexity, one billion people trying to seek their social and economic salvation in the framework of democracy, in the framework of an open economy. I sincerely believe what happens in India has I think lessons, morals for a future evolution of humankind in the 21st centuries.

CHARLIE ROSE: What are those lessons?

MANMOHAN SINGH: I do believe that the future of civilization belongs to those who (UNINTEL) emphasis on working together instead of talking about clash of civilization. We— what we need is a dialogue among civilizations. And we need multiculturalism, respect for diversity, tolerance, respect for diverse— faiths. And that’s what we are doing in our country. And if we succeed, and if we succeed in doing all this in the framework of a democratic policy, I believe large part of humanity will draw appropriate lessons from what is the wave of the future in the 21st century.

CHARLIE ROSE: And you’re prepared— in this new strategic partnership with the United States to use that— to help in terms of bridging and creating dialogue with the rest of the world where it might be necessary to have that kind of background involved.

MANMOHAN SINGH: We have— yes. I think— what we are trying to do is, I— I believe, has lessons for what happens to the rest of the developing world. But not only developing world. With the revolution in information technology, with the revo— revolution in transport technologies, I think this geography has lost its old significance. I believe whether it is the United States or Europe, they will all end up as multicultural societies. So India’s this great experiment of a billion people of such great diverse persuasion, working together, seeking their salvation in the framework of a democracy. I believe it will have some lessons for all the multicultural societies. And I believe all societies, all thriving societies of the future are going to be multiculturals.

CHARLIE ROSE: So on Wednesday, March 1st, the President of the United States, representing the world’s oldest democracy, comes to see you representing the world’s largest democracy. How did that happen? Because it is said that the president saw you at the United Nations, one story, and pulled you aside or asked for a moment and said, “I understand your country’s demand for oil. I understand China’s demand for oil. I
understand our demand for oil. I wanna help you— with the nuclear issue. And let us work on that. And let us try to get past what has been an obstacle.”

MANMOHAN SINGH: Well, I don’t recall his telling me at the United Nations. But I do recall his telling me at the very first meeting that I had with him. And we were together also at Glen Eagles— at the G8 Summit. We had extensive— dialogue. We were sitting side by side. And this is exactly how he described the— the global energy scenes, India’s requirements. And he said to me, “If the oil prices go up to $100, that hurts India, but it also hurts the United States. So we must work together to help India to get its— nuclear security by increased emphasis on the availability of nuclear power.”

CHARLIE ROSE: So that puts this nuclear deal at the centerpiece of this new relationship.

MANMOHAN SINGH: In a way, yes. But ours is a multidimensional relationship. But at the present state, energy has emerged as a major constraint on our development. At the present, 70 percent of India’s imports of oil and oil products are imported from abroad. There is uncertainty about supply. There is uncertainty about prices. And that hurts India’s development. We have large reserves of coals. But extensive use of coal, unless they use clean coal technologies, I think has environmental hazards global— or global warming and all that. But in all this, if we have access to nuclear energy, that is a— a— that— adds to our maneuverability in ensuring energy security as our country marches on, on the path to accelerated development.

CHARLIE ROSE: It’ll also mark, too, a new access to technology and to fuel, you know, and future reactors in the civilian sphere. It also seems to give acceptance within the global community to the responsible— your— your sense of responsibility in handling— new— nuclear weaponry.

MANMOHAN SINGH: Well— we have an impeccable record. We have never been the source of unauthorized proliferation of these sensitive technologies, even when the provocations were there. We have a very tight system of export control. In fact, before going to the United States, I got parliament to pass a latest legislation which puts our export controls— on the same footing as most of the developed countries— when it comes to export of sensitive technologies. So I do believe we— we are a nuclear weapons state. But we are a unique in the sense that we still believe that the salvation of the world ultimately lies in moving towards universal nuclear
disarmament. But that’s a long distance away. And Indians (UNINTEL) we would like to be a part of the nuclear world orders— accepting all the responsibilities that go with being a nuc— a responsible nuclear power, but at the same time, enlarging— our options with regard to energy security of our country.

CHARLIE ROSE: The president arrives on Wednesday. Will you have an agreement before he arrives, do you think?

MANMOHAN SINGH: Well, I— I sincerely hope— that— that’s my hope. That’s my prayer.

CHARLIE ROSE: Right now there seems to be a separation in terms of what reactors will be in the civilian field and what will be considered military and this separation. Is that the dividing issue? What goes where?

MANMOHAN SINGH: Well, I wouldn’t call it a dividing issue. It is— it is an important issue. I think the United States— I recognize that the United States has to sell this deal to the Congress. But we have also Congress. And I always told— our parliament, as I mentioned to the president, this deal is not about India’s strategic program. That is not under discussion. What is discussion is our civilian nuclear program. And there are concerns. And we had agreed that we will have a credible separation between our strategy program and the civilian program. That we are committed to— whatever we have committed in July 18’s statement in letter and spirit, we will fulfill our obligations.

CHARLIE ROSE: It’s more than 90 percent likely that we’ll have an agreement.

MANMOHAN SINGH: I certainly hope that.

CHARLIE ROSE: You think it’ll happen before the president arrives or once the president arrives?

MANMOHAN SINGH: Well, I think there’s only a few days (LAUGHTER) our officials have with that work. They will— work— ‘til I think early morning yesterday. I think (UNINTEL) has gone back. I sincerely hope that we can clinch this issue. And that would be a great contribution of President Bush to ending India’s isolation from the world nuclear orders. I mentioned to the president last time I met, “Mr. President, the people of India, particularly the thinking part of our population, our scientists, our technologists, have rightly or wrongly nursed this grievance a— against
the United States. That the United States has joined with other countries to erect a system of controls which denies our country access to dual-use technologies to prevent us from leapfrogging in the race for social and economic development.” And I said, “I appeal to you I think to look at India-US nuclear cooperation in that grand setting.” I look upon it as an act of historic reconciliation.

**CHARLIE ROSE:** The president has Congress to deal with.

**MANMOHAN SINGH:** Well, we have also a parliament. And our parliament is also very sensitive about these issues. I have promised our parliament that I will do nothing which will hurt India’s strategic program. And our program is a modest program. Also, although we are not a— (UNINTEL), we abide by most of the guidelines that— operate with regard to export of sensitive technologies. And, therefore, I do believe that India is a unique case. And you need I think exceptional skills I think to incorporate Indian into the world nuclear order.

**CHARLIE ROSE:** Some say the United States, if you— go ahead with this as you plan to do, the United States, it’s hypocritical because of your objection to Iran having a nuclear weapon.

**MANMOHAN SINGH:** No. I— I— our relations with Iran, we relish a great deal. We have civilizational links. We are in the same region as Iran. And our concern with regard to Iran is that Iran is a signatory to the NPT. Iran must, therefore, have all the rights— which go with its being a member of the NPT. But it— it has also certain obligations, which it has voluntarily taken. And, therefore, it is appropriate that Iran also fulfills those obligations. Now there have been doubts about an arms program. The International— Atomic Energy Agency has gone into this. The Iranians themselves have admitted that certain— elements of their program they had not reported to the International Atomic Energy Agency. Our hope is that it is not too late in the day to resolve these differences— through dialogue, through diplomacy. And I— I hope that the world community will have the sagacity to give diplomacy, dialogue the full scope to reconcile these so-called irreconcilables.

**CHARLIE ROSE:** Why do you think the president— or do you believe he views this relationship with you and your country, between the United States and India, as a major foreign policy initiative. Some have even said, as you know, that for this president it’s equivalent to President Nixon going to China.
MANMOHAN SINGH: Well— well— well, I have met the president now three or four times. And I have been deeply impressed by his commitment to the cause of democracy. He sincerely believes that democracy is good for everybody, that democracy—is good for world peace, democracies don’t go to war. And the fact that India is a functioning democracy despite its extreme poverty, India has stayed the course. It has remained a full-functioning democracy. I suspect that weighs with the president a great.

CHARLIE ROSE: The idea of democracy and being able to have a strategic relationship with the world’s largest democracy is important to him.

MANMOHAN SINGH: That’s what I feel. I think he— he’s always told me, and in his address to the HS Society a few days ago.

CHARLIE ROSE: Few— days ago, yes.

MANMOHAN SINGH: He led, again, I think great emphasis on that—the solid relationship—well, is based on values as well as interest, as the president put it. The values are the values of democracy, the values of pluralism— the value of tolerance of differences. And interests are that of the two countries, if they work together, this is a win-win game. India’s growth rate will be accelerated. But in the process, medical would also benefit. Outsourcing information technology revolution, the access to India’s— human resources, India’s— pool of scientists. It will also help American companies to become leaner, meaner, more efficient. And they become more competitive both in the United States and in dealing with the rest of the world.

CHARLIE ROSE: I wanna talk about all those economic issues. Let me stay with the strategic issue for a second. There are those who say the president would like to have a counterbalance to— to China. That India serves— because of all these interests, economic as well as— cultural and as well as the— sharing democracy, as the best way for the United States to have a counter-availing relationship— for China.

MANMOHAN SINGH: Well, we are not in competition with China. I had a very good discussion with the president— on this subject. And I think there was a complete unanimity of views. Both of our countries believe China is very important. The future growth of China— China’s influence is bound to rise. And we all believe that we must remain engaged with China. We have differences with China with regard to the border issue. We are
making a sincere effort to resolve— resolve those differences. And the president told me that’s precisely what we should do I think. He says the United States also wants to remain engaged with China. But I also believe that without looking— at each other as rivals or as competitors, in a democratic India operating in the framework of an open economy, an open society, has I think some significance for developed— developing countries not only in Asia but outside Asia.

CHARLIE ROSE: President said he didn’t want to— I think his words were, “I don’t want to— contain China.” But he doesn’t think that one country should dominate in the region. Do you share that idea?

MANMOHAN SINGH: I think— it’s— looking at history, I think that would be an appropriate model I think.

CHARLIE ROSE: Does— does India— want to help contain China if that’s America’s policy?

MANMOHAN SINGH: As I said, we are not in— competition with China. We are not part— are not going to be a part of any alliance against China. And I do believe that the present Chinese leadership wants to make a success of its modernization. I don’t believe the present leadership of China threatens India or, for that matter, other countries. We would like to have I think warm, friendly relations with China. We would like to resolve our border dispute. Our economic— relations are growing. And both of our countries need peace and cooperation I think to make a success of our ambitious— plans to get rid of our— get rid of poverty that afflicts millions of people in both countries.

CHARLIE ROSE: What do you think China’s ambitions are?

MANMOHAN SINGH: Well, as of now, certainly I think modernization of Chinese economy and Chinese society— is a prime concern. But also I think the Chinese do have visions of being a great power. And I think it’s legitimate. And— I— I don’t see that that’s a danger to us.

CHARLIE ROSE: India wants to be a great power.

MANMOHAN SINGH: Yes. As I said, I— when I— when you quoted— me when I quoted Victor Hugo in ’91, I said precisely, I said the emergence of India as a major— global power is an idea whose time has come. This is a legitimate ambition for China. This is a legitimate ambition for India. And the challenge for the humanity is to— to evolve a world
system—in which the legitimate ambitions of both our countries can find constructive expression without threatening anybody else.

CHARLIE ROSE: Secretary Rice has said, you know, that what the United States goal is, is to assist in any way it can India becoming a global power in the 21st century.

MANMOHAN SINGH: That’s what she came here and last year. And she for the first time— made that formulation. And I rang her up a few days ago and I said to her— “Madam, you were the one who planted this idea that the United States would like to help India to become a major power. Well, this nuclear deal is one what a concrete expression of US interest. So I hope we will have your blessings to conclude this deal before the president comes.”

CHARLIE ROSE: As India becomes a global power with its economy, with its population, with its democracy—with its trade—how can the United States, in a strategic sense, help India?

MANMOHAN SINGH: Well—there are diverse ways—in which right now terror and all that goes with it is a prime concern. It’s a concern of the United States. It’s the concern of India. Joint strategies, cooperation, joint sharing of intelligence in controlling terrorism, in making the world free from terror. I think that’s the fundamental I think consideration if our development aspirations are to be fulfilled. And I think our two countries can cooperate in—

CHARLIE ROSE: In the battle against terrorism.

MANMOHAN SINGH: Yes. Well—in our neighborhood, we have the nascent democracy of Afghanistan. We have been engaged in helping Afghanistan to the best of our ability. We have a development assistance program for Afghanistan of nearly $650 million. Our program covers all the—basic—human needs—the—and requirements of Afghanistan. So working together in helping nascent democracies in the task of reconstruction, in the task of development is another area where our two countries can work together. And the president himself mentioned our cooperation in making the world—secure—with—against—epidemics like HIV/AIDS, malaria—of tuberculosis. These are our major problems. The United States and India can work together. We can pool our research capabilities—to find vaccines which will provide effective answers to the problems posed by these epidemics.
CHARLIE ROSE: It’s already happening in the private sector with Bill Gates coming here and—and being involved.

MANMOHAN SINGH: Yes—Bill Gates is very—I think intimately involved in these programs, and we welcome his involvement. And I mentioned about energy securities.

CHARLIE ROSE: When you think about agriculture—there is this idea that’s being promoted, which is a second green revolution.

MANMOHAN SINGH: Yes. I did mention myself in my address to the joint session of the Congress. The first green revolution in our country, which came in the early-'60s, although greatly took the cooperation between Indian authorities, Indian scientists, and the land grant qualities of the United States, the Rockefeller Foundation, the Ford Foundation. I think that’s a—a—a growing chapter in the history of cooperation between our two countries.

CHARLIE ROSE: And it can be reigned.

MANMOHAN SINGH: It can be reigned. And that’s what the president and I have some very good ideas. We have discussed that, how—the knowledge initiatives to give a big boost to the second green revolution in our country.

CHARLIE ROSE: There is also military cooperation. Some representatives of your military went to see Secretary Rumsfeld. There is an agreement there.

MANMOHAN SINGH: Yes. There is a framework agreement.

CHARLIE ROSE: What are the implications of that?

MANMOHAN SINGH: Well, I think—we would like to diversify sources of our purchases of weapons. Also, we would like to have a cooperative arrangements where some of these things, joint research, joint—joint production. And also I think the—the cooperation between the military of two—two—countries, we have already I think in place arrangements where the air forces—of the two countries have joint exercises. So I would like I think to expand—the relationship with the United States in all these diverse fields.

CHARLIE ROSE: Is in any way it difficult to be a friend of the United States in 2006?
MANMOHAN SINGH: Well, let me say that— events in Iraq, events in Iran I think do— create some anxieties, particularly among the Muslim— population of our country. And I sincerely hope that the difficulties that are there in Iraq and Iran can be resolved, that Iraq will see a new era of hope in which its people will enjoy a full sovereignty. And also the problems that there is with Iran— can be resolved through dialogue— through giving diplomacy a chance. Otherwise, I don’t see I think there are any problems between India and the elected states.

CHARLIE ROSE: No significant foreign policy differences other than—

MANMOHAN SINGH: No— no—

CHARLIE ROSE: —Iraq, and you’re prepared to help there in terms of—

MANMOHAN SINGH: Well, in terms of reconstruction, we have offered, for example, to train their police, to train their civil service, train their election officials. And just as what we are doing in Afghanistan.

CHARLIE ROSE: The UN membership— permanent membership on the UN Security Council. France was here, said, “We’re in favor of you.”

MANMOHAN SINGH: I would very much like the United States I think to— (LAUGHTER) when the president comes here—

CHARLIE ROSE: You’ll remind him.

MANMOHAN SINGH: —I think that he would announce that the United States is also of the same view. But I recognize the United States as a superpower. It has various interests. It’s balanced various things. But I do believe that India’s case for permanent membership of the Security Council is very strong.

CHARLIE ROSE: But you’ll remind the president when he comes.

MANMOHAN SINGH: Well— this matter was raised with— with Secretary Rice when she came here. And I— if I get a chance, I will raise that again with the—

CHARLIE ROSE: So if this nuclear— if this nuclear agreement can’t be reached, your national security advisor says that the relationship will go into the stratosphere, is the way he described it. I— I just wanna make
sure I understand your vision of the stratosphere in terms of how the United States and India can cooperate. Certainly in terms of— using— India and the Middle East as you suggestion, as a sense of a voice for where there is a secular— society of diverse religious and ethnic backgrounds. How else would this be manifest? This strategic relationship that’s possible with the United States?

**MANMOHAN SINGH:** Well, in areas of cooperation, giant working, giant thinking, and that— cooperation for us, is regional for us, bilateral for us, I think there are— enormous— enormous possibilities. And today there are no, I think, barriers to— increased cooperation between India and the United States in any field. But as I said, what— what goes on in Iraq, what goes on in Iran, it does— (UNINTEL) significant proportion of our population.

**CHARLIE ROSE:** Do they believe it’s somehow moving away from— India’s position of a non-aligned nation or have you long ago moved away from that idea?

**MANMOHAN SINGH:** I have always regarded non alignment as— a statement that India’s policies— foreign policy, will be guided by what I describe as enlightened national interest. That means we will make judgments— on an independent basis with the sole concern being what is enlightened India’s national interest. In that sense, non alignment remains as relevant today as it was in the 1950s.

**CHARLIE ROSE:** Who opposes— in your political community— this coming of the United States and India closer together.

**MANMOHAN SINGH:** Well, my opinion is that— it has— it’s— wide support (UNINTEL), in fact the major of our population— wants— closer— involvement between India and the United States. There was a research— I think— team which conducted a survey about what Indians think of Americans. And 71 percent I believe said, “Well, I think all the nice things about our working together with the United St”— with the Iraq people I think that there are old mindsets— who— still— I (UNINTEL) remain my heart in the Cold War ideology. There are— I think— the left parties of our coalition, they— still regard the United States as a hegemonic power. But— I think the— the new Indians of tomorrow, our young people, our businessmen, our scientists, our technologists, I think they are not— I think— held back— by these— cold time think (PH).

**CHARLIE ROSE:** I’ve been visiting this week in India. And they all tell
me that with respect to China, there’s an increasing economic relationship in respect to China. And that that is good, that China sees India as a market, that China has a manufacturing base, India has a service base. They have all kinds of trade developing between India and China.

**MANMOHAN SINGH:** I agree with that, I agree with that.

**CHARLIE ROSE:** And where does that go, and what’s the benefit of that?

**MANMOHAN SINGH:** Well, I think our two countries— if our trade grows, I hope that out of that will come a new attitude of coexistence. We had this unfortunate— incidents of 1962.

**CHARLIE ROSE:** The border.

**MANMOHAN SINGH:** Of the border. If we resolve that, the image to cooperation between India and China would not— between there, I think. We are both countries located in Asia, and the Chinese economy grow at the rate of nine percent, the Indian economy growing at the rate of eight percent. Enormous, I think, opportunities for flow of trade, technology, an investment.

**CHARLIE ROSE:** Is the— the United States relationship with Pakistan— an issue for you?

**MANMOHAN SINGH:** No. We want Pakistan to prosper. Pakistan should be a model Islamic moderate state. It should be a prosperous country. It is in India’s interest, it is in the world’s interest. I sincerely hope that whatever influence that the United States has in Pakistan, it will convince Pakistan that— using television as an instrument of state policy has no place in the world. That we want to build. If Pakistan— honors an electorate and the commitment in 2004, the Pakistan territory will not be used— for— promoting terrorist acts against— India. The sky is the limit of cooperation between our two countries. This basically— we are— the same people. There are ties of religion, there are ties of language, there are ties of culture.

**CHARLIE ROSE:** You were in fact born in— (UNINTEL) in Pakistan.

**MANMOHAN SINGH:** Yes. President Musharraf was born here, I was born on the other side of the border. And— my vision is— to wait for the relationship between India and Pakistan, it will be like the relations
between Canada and the United States. We want Pakistan to— flourish as a modern Islamic state. That is in India’s interest, that is in the interests of the world as a whole.

**CHARLIE ROSE:** You mentioned your economy, you mentioned China’s economy. You’ve been growing at a rate of seven percent. You are the former finance minister and people give you a lot of credit for what has taken place. They also raise this question. Is it sustainable?

**MANMOHAN SINGH:** Well, I think the— proof of the pudding is in the (UNINTEL).

**CHARLIE ROSE:** You’re using an American expression.

**MANMOHAN SINGH:** So the last 16— 15 years now— when we opened up the economy, I think the economy has sustained a growth rate of six percent. We are (UNINTEL) the profits of (UNINTEL). The last— four— three, four years of our economy now is increasing at the rate of seven— percentage. And I do believe that— our growth rate in years to come will go up. We have now a record savings rate of 29 percent of our GDP, it has gone up by five to six percent in the last five, six year. We have a record investment flow rate of 31 percent of our GDP. In years to come, savings rate will go up. Because we have— a— a very young— working population profile. In years to come, if we can find jobs for all these, I think they would need to— they would— be a source of increased income, they would be a source of increased savings. I see India inching in the next five or six years, to a growth rate of close to ten percent.

**CHARLIE ROSE:** In the next two or three years.

**MANMOHAN SINGH:** Next— ten years. I— not two years.

**CHARLIE ROSE:** What has to take place in terms of liberalization— and— privatization for that to occur?

**MANMOHAN SINGH:** Well, I think— liberalization, by and large, we are— we are there. Our principle right now is the infrastructure. India’s infrastructure has to be modernized, has to be expanded at the rate which will— I think— with consist— which will be consistent with the growth requirements. We— we need to modernize our (UNINTEL) system, we need to modernize our road system, post system, airport system. We need— to move towards a (UNINTEL) which will ensure energy and security. And then we will have to— relook at the way our government
systems function. I think our government has gone out of business. Many—many things we’ve got out. But still I think, there is an old—old—(UNINTEL) hand. The government considers itself as—what we call, as the MadaPedha, the father and mother.

**CHARLIE ROSE:** Yeah.

**MANMOHAN SINGH:** I would like government to have greater concern as a facilitator rather than as a regulator. There, I think, we have some distance to go. We have also problems in modernizing our political system. There are several states in our union where—I think—the politicians are not preoccupied with the great dynamics as I believe they should be. They’re still mired (PH) in the old—the—religious controversies, the past controversies. So India’s political system also would need to be modernized.

**CHARLIE ROSE:** Do you have the political will to make sure that happens?

**MANMOHAN SINGH:** Well, I think it is happening. There, I think—it—could have happened at a much faster pace. But I sincerely believe that this—is—now an inescapable—inevitable part. Things are moving in that direction.

**CHARLIE ROSE:** For example, I mean I’ve had conversations with business leaders about—you know—the retail segment. And some have said that’s gonna be a kind of ticking point. I mean if there’s modernization in the retail area that would be clear evidence.

**MANMOHAN SINGH:** Well, we have, I think, taken the first steps. We—we—this—this year’s—we have opened up to trade with regard to majority ownership of foreign—companies. Single (UNINTEL) area have been opened up. There are—in all these matters, there are concerns. There’s such a thing as the fear of the unknown. And—in a country where—employment opportunities are not growing fast enough, the fear of change tends to be very acute. I have to create in our country, a macroeconomic environment where the employment in aggregate can go up—at—a handsome rate. Once that happens, people lose their job in one sector (UNINTEL) not mean that they become perpetually unemployed. From one sector, they could move on to other sectors. I have, therefore, to wait until that time when the employment situation in our country is such that jobs are increasing. In such numbers—that we can take risks with regard to
retail. I don’t think we could do it overnight. But I do recognize that I (UNINTEL) all sectors should be open to foreign direct investment.

CHARLIE ROSE: There’s a dramatic difference between foreign investment into China and into India. And— and people say that they’re deducing the— regulations will dramatically change that.

MANMOHAN SINGH: Well China is not— or— I think— a country— which— does not regulate. But there is a difference between the Chinese system and our system. The Chinese are much more as— I think— centralized. We have— three tiers of government. We have the central government, we have the state government, we have the local authorities. The central government gives approvals for certain investment. But there are certain things that the central government cannot do. If they want to get land, if they want to get water, if they want to get electricity they have to go to the state government. If certain facilities, local facilities, have to be— (UNINTEL), the— local authorities have to come. And that makes the Indian system slow moving— Indian administrative system slow moving. I do believe that we have a problem here and we must find ways and means in which I think businessmen who want to set up enterprises here can get all clearances in without too much loss of time running from one person, one sector, to another. One authority to another. That— I think we have made substantial progress in the last 15 years but we need to (UNINTEL) up—

CHARLIE ROSE: There is no turning back.

MANMOHAN SINGH: There is no turning back.

CHARLIE ROSE: From liberalization—

MANMOHAN SINGH: No—

CHARLIE ROSE: From foreign—

MANMOHAN SINGH: No.

CHARLIE ROSE: From change.

MANMOHAN SINGH: Really, I think— I— I just— said— the proof of the pudding is in the eating. When we launched this sort of farm program in ’91, I was opposed by both the extreme left as well as the extreme right. In fact, when I— in ’92 when I lived— when I raised in Parliament to present the budget of the government of India. All the opposition (UNINTEL) wait and said the want to wave breach of privileged motion because what I’m
doing is nothing else but carrying out the dictate of Washington and the IMF. Now from that day, lots of things have changed. Since then, there have been three changes of government. From 6/96 to 1998, there was a united front government. The left party was— part of that. That government did not change the direction of policies that we set. Then we had a coalition government from ’98— they— wrote viciously against liberalization, that we were selling India to foreigners. But when they came to office, they also did not change. In fact, they— they expanded what we had done. So I think we have seen three changes of government— right, left, center, but direction of economic policies has been toward progressive liberalization. That made no difference of the pace at which India moves. But it should be made out what’s ever about the direction in which India is going to move in years to come. The— it is truly an area of civil shift in our policies.

CHARLIE ROSE: And it has led you to— you know— a global position that— that everybody talks about.

MANMOHAN SINGH: Well— in ’92, even big business was against liberalization. I— the CII, for example, big captain of industrial against liberalization. The Indian industry had been thrown to dogs. (UNINTEL) becomes here’s the woods and (UNINTEL) water, that the Americans would come and take over our country. We will all— we will all end up saluting them. Now— Indian industry is much more confident. Not only it welcomes competition here, it wants to go and compete abroad, I think. Mr. Mittal has become the world’s steel czar, I think.

CHARLIE ROSE: He— he certainly has. Now what did you want to be— you said in this respect to Mr. Mettal, I think you said to Chirac, “Be kind to him.”

MANMOHAN SINGH: I said, well, this is an issue which should not be— I think— allowed to be influenced by too much— sentiment. But all stakeholders much have an assurance that their interests, respective interests, will be taken care.

CHARLIE ROSE: Why do you think the French were opposed to this merger?

MANMOHAN SINGH: Well, in our countries, I think there is such a thing of the fear of the unknown, loss of jobs.
CHARLIE ROSE: Yeah.

MANMOHAN SINGH: I don’t— blame governments if they get worried about these things.

CHARLIE ROSE: Yeah. With— with— tell me why you were so wise about this economic picture for India? I mean we did you know that— that even industry didn’t know and that so many politicians didn’t know when you took over as finance minister in ’91?

MANMOHAN SINGH: Well, I don’t— claim that I had— any— extraordinary vision. But I had been associated—

CHARLIE ROSE: But you’ve been right—

MANMOHAN SINGH: But I have been associated with the management of the Indian economy. Ever since 1971. Even my work as an economist— when I was in the academic field, was also about economic management of. And— I’ve seen— administration in our countries from several angles. I saw in the ministry of commerce, I saw it in the ministry of finance. I went to Reserve bank of India. I was on the planning commission. There’s a whole— service I got. And I would like to give credit to Rajiv Gandhi. Because he saw when he became the Prime Minister in 1985 that India has to change. So a lot of work was done. There was a broad consensus among the thinking segment of our population that India has to liberalize. That the old command economy cannot I think— give India the mileage, the dividends that we need in terms of growth. And so my task in ’91 was relatively easy.

CHARLIE ROSE: But when you took over the Indian economy was in terrible shape.

MANMOHAN SINGH: Well, the— in— inside I find democracies sometimes a crisis is a blessing. That it concentrates the mind.

CHARLIE ROSE: Like the hang man’s noose.

MANMOHAN SINGH: And there were Americans saying don’t fix it.

CHARLIE ROSE: If it ain’t broke don’t fix it.

MANMOHAN SINGH: If it ain’t broke— so if things are moving alright I think— you do not get the momentum to get a cohesive consensus built in favor of change. In ’91 I said to my colleagues and I said to the leaders
of the opposition that if you don’t cooperate with me I will have to declare
India bankrupt and hand over the economy to the IMF and international—

CHARLIE ROSE: That got their attention didn’t it. (LAUGHS) Based
on that your— let me put— think about the year 2050. Tell me what will be
the— not in terms of— of—

MANMOHAN SINGH: Twenty?

CHARLIE ROSE: 2050, two thousand— two thousand fifty, 44 years
from now. Tell me what will be the first and the second and the third largest
economy in the world.

MANMOHAN SINGH: Well, I— I really don’t know. I— I can’t I think
predict because of human evolution or economic evolution. But I do believe
whatever order you have India would figure in the first four or five countries.

CHARLIE ROSE: Most people think three. Goldman Sachs has his
famous report—

MANMOHAN SINGH: Yes.

CHARLIE ROSE: —as you know, that says three by maybe 2025.

MANMOHAN SINGH: Well, I hope they’re right. But I— I— as I said
I— I’m not very good at making these projections. But I do know the
processes that we have unleashed in our country we I think insure that
India is there in the first four or five.

CHARLIE ROSE: And what about, as many people say, how are
you gonna take care of the poor? How are you gonna make sure that the
agricultural population finds a way to live?

MANMOHAN SINGH: Well, let me say— I’ve always believed that
the ultimate purpose of economic policies and development policy is to meet
the basic needs of our people. And for that we needed fast expanding
economy. Meaningful solutions to the problems of mass poverty that prevails
in our country I believe can really be found in the framework of an expanding
economy. If the economy is not expanding redistribution of income becomes
a zero sum gain. And therefore all the class struggle and it becomes much
more vicious. If the economy is growing fast there is scope for redistributing
incomes from the rich to the poor to place— to put in place social safety net.
For example we have done that this year. We have said that in rural areas
there will be guaranteed employment 400 days in public works for whoever
wants to come make minimum wages. Now this is not a very revolutionary program but it will put a flow on income in rural areas. It is a program of the type which has probably few other counterparts in the rest of the world. So out emphasis is if the economy grows enough, fast enough, the tax system should be modernized so that the tax revenues rise fast enough also. And we should put more money in education. We should put more money in health. We should put more money in devising credible social safety nets for the poor.

**CHARLIE ROSE:** What is it about the Indian people that have enabled with these change in policies to have come to this moment?

**MANMOHAN SINGH:** Well, I’ve always believed India is a country blessed by—of—blessed by God with enormous entrepreneurial skills. Now this entre—entrepreneurial spirits were kept suppressed by the command and control system. That started off well with good intentions, maybe it served us well in the beginning. But after time it became a factor on further progress. I believe if we remove these factors the—the flowering of the entrepreneurial spirit of India would I think bring about a dramatic change in the way our economy works and function. And that is happening. In ’91 where was the IT industry? I think Mr. Naryanamurthy, Mr. Premji they were all I think insignificant entities.

**CHARLIE ROSE:** Now they’re giant global concerns.

**MANMOHAN SINGH:** With one single thing I—I think Naryanamurthy is (UNINTEL) about. When I became Finance Minister in ’91 I discovered that the wealth tax rates, the taxation of wealth, there was taxation on wealth. It was so atrocious and so high that actually nobody could accumulate money in an honest way. I removed that tax. And the result was that Indian companies for the first time acquired an incentive to grow big, to grow rich. And you see the results of that in Bangalore, you see it happening elsewhere. So I am convinced the entrepreneurial spirit of the Indian people if allowed to express themselves freely in the market place India will be alright.

**CHARLIE ROSE:** What is the impact of your demographics? You’re very different say from China.

**MANMOHAN SINGH:** Well, I think our demographics is going to help us the grow at a faster pace. Because the Chinese insistence on one
child norms I think the proportion of older non working age population is going to rise sharply in China. Our age profile is much younger. The proportion of working population to total population will rise for another decade. And if we can find jobs for this population that is going to be a source of wealth creation. And they are saying that it will go up. India’s investment rate will go up. And I believe that’s a plus point.

CHARLIE ROSE: India and the United States seem to have beyond the oldest democracy and the largest democracy this special relationship period. You have a daughter that lives in New York. Your National Security Advisor has a son who lives and works in New York. Your Finance Minister went to Harvard Business School. There has been this tradition, there’s a large Indian population in New York. Is that gonna continue? Is that a central part of this relationship?

MANMOHAN SINGH: Well, let me— so in the evolving global economy the transport revolution, the IT revolution.

CHARLIE ROSE: The death of distance.

MANMOHAN SINGH: The death of distance. There is hardly any middle class family in India who doesn’t have a son, a daughter, a son-in-law, a brother, a brother-in-law in the United States. That is a very powerful new bond. And what is more is that— I should like to express our profound gratitude to the— Americans of Indian origin. The way they have conducted themselves, the way they have worked hard to carve out a niche for themselves in the Silicone Valley, I think this has also given American a new idea about what India is capable of. Our challenge is as I often say is to do what the Indian Americans have done in the Silicone Valley without going there. That we can reproduce a system here.

CHARLIE ROSE: When you look at India today it’s moment, tell me what you think it’s destiny is.

MANMOHAN SINGH: Well, India’s destiny is what I described in ’91 quoting Victor Hugo. The emergence of India as a major global power is an idea whose time has come. And I would only modify it by what Nehru said. He said the sudden rise of India means the service of those steaming millions steeped in poverty, ignorance and disease. To see that in my lifetime we can soften these harsh edges of extreme poverty and unleash a new economic and social revolution which will bring out the latent creativity and entrepreneurial spirit of our people I think that’s what I feel I think.
CHARLIE ROSE: And if that’s the destiny of India how do you— what do you think your legacy is?

MANMOHAN SINGH: Well, I’m a small person put in this big chairs. What— I have to do my duty, whatever task is allotted to me. I— I think— well, for me it’s enough I think since ’91 I have been in part of the process of— actually in the reform movement. Of course no single person can take credit for that. I mentioned the role— the role of Rajiv Gandhi. But I think whatever I’ve done I hope I earned a footnote in India’s long history.

CHARLIE ROSE: And you certainly have, and it will be even more likely if the President comes on Wednesday and says we have a nuclear agreement, and I’m full supportive of India’s desire to be— have a permanent seat on the UN Security Council. That would be a great gift.

MANMOHAN SINGH: Well, it will be a great gift. And I pray for that moment in which I think we can acclaim to the world that we are now in a different new era of Indo American relationship of trust, of working together, partnership. Strengthened both by our commitment to common values and also the identity of interests.

CHARLIE ROSE: Mr. Prime Minister, thank you for taking this time. It’s been a pleasure—

MANMOHAN SINGH: Thank you Mr. Rose.

CHARLIE ROSE: —to be in your company. And a pleasure to see you. And I look forward to many, many visits back.

MANMOHAN SINGH: Well, please do. And it has been a great pleasure for me talking to you.
395. Briefing by Foreign Secretary Shyam Saran on the visit of President Bush.

New Delhi, February 28, 2006.

FOREIGN SECRETARY (SHRI SHYAM SARAN): Thank you very much for coming this afternoon on what I know is an extremely busy day for all of you and a very special day. But I thought before the President of United States comes to visit India perhaps it might be worthwhile for me to share with you what we have in store for the visit.

This is the first visit of President Bush to India. This is only the fifth visit by a US President to India. There is a great deal of anticipation regarding this visit. Of course, a very warm welcome awaits President Bush and for good reason because here is a President who has been personally very supportive in advancing India-US ties and particularly giving a certain strategic dimension to India-US relations.

President Bush will be accompanied by Mrs. Laura Bush. Secretary of State Condoleezza Rice will also be a member of the delegation, (as also) Chief of Staff Andrew Card, National Security Advisor Steve Hadley, and the US Trade Representative Rob Portman. What we have on the agenda are delegation-level talks with the Prime Minister. The Prime Minister will be hosting a luncheon in honour of both President and Mrs. Bush. There will also be a banquet by the President, the traditional banquet, at the Rashtrapati Bhawan. There will be, of course, meetings with the Chairman of the UPA, Shrimati Sonia Gandhi and also with the Leader of the Opposition Mr. L.K. Advani.

President Bush and Prime Minister will also be receiving the much-awaited report from the Indian and American CEOs. If you recall, when Prime Minister had visited Washington last year in July, the two leaders had set up a CEOs forum with ten of the top industry and business leaders on the US side and ten similar top leaders of Indian business and industry on our side. This Forum has been meeting and also they have been working on a common report to the two leaders on how the economic and trade relationship between India and the US could be taken forward, in particular focusing attention on the investment aspect, particularly for example the areas of interest to us like investment in infrastructure and certainly in high technology areas. So, there will be a presentation of this report to the two leaders.
Prior to that there will be also separately a meeting between the National Economic Advisor to the US President, Allan Hubbard and Dr. Montek Singh Ahluwalia who is the Deputy-Chairman of our Planning Commission and also the US Trade Representative. The Trade Representative, of course, will be having also a separate meeting with the Minister for Commerce and Industry. So, this will provide during the visit an occasion for the economic dialogue, the India-US Economic Dialogue, to also have a meeting and also the US Trade Representative and our Minister for Commerce and Industry to have a meeting in a sense to add to the CEOs Forum report, in terms of our economic trade and investment objectives. So, there will be a very strong economic and trade content to this visit.

In the itinerary that the President has there will be a visit to Hyderabad. It will be a brief visit but it will be a visit which will have both substantive as well as some symbolic significance. The visit to Hyderabad will include a visit to the N.G. Ranga Agricultural University. As you know, we have been working with the United States on a very ambitious Knowledge Initiative on Agriculture whose objective is nothing short of kicking off a second Green Revolution in India, a phase of modernization, a phase of upgradation, a phase of commercialization of Indian agriculture.

Here in Hyderabad there will be an occasion to the President to look at what India has achieved in the field of agriculture in the past several years. It has been a very impressive story of success, a success which we can now build upon to bring about a second Green Revolution in the country. I think he would have a chance also to interact with Indian farmers. There will also be an occasion to interact with some of the self-help groups, especially of women who have been involved in many self-help activities, at the N.G. Ranga University. So, that is one part of the Hyderabad agenda.

Then there will be an occasion for the President to interact with young entrepreneurs at the Indian School of Business in Hyderabad. As you know, Hyderabad has now been developing into a multi-industry kind of center of excellence of high technology. This would be an occasion for the President to interact with some of the industry leaders in this metropolis.

When the President comes back from Hyderabad to Delhi, he will be addressing a representative gathering at Purana Quila at a function which is being hosted by the Indian apex organizations, business organizations. Essentially what the President is looking at is an address
which will be his sort of main message to the people of India from the United States. So, this is in nutshell what the content of the visit would be.

As you know, this visit comes after the landmark visit of Prime Minister Dr. Manmohan Singh to Washington last year in July. You are aware of the July 18 Joint Statement which was a very substantive agenda for India-US relations. Some aspects of that agenda have already been implemented and some are still a work in progress. Essentially the vision that was put forward for India-US relations was one of strategic partnership based on a convergence of interests in several areas as also shared values of democracy, recognition that our two countries' need to work together to jointly address some very important global issues which are of mutual concern. These, of course, include certain strategic and security issues but they also include areas like energy, agriculture, science and technology, environment, health, counter terrorism, trade and commerce, space-related activities as well as high technology. So, a very extensive and a rather substantial agenda had been put forward for India-US relations.

During President Bush's visit to India there will be occasion to review how far we have gone in terms of fulfilling some of the elements of the agenda. As I said, we have actually made progress in several areas. Since July 18, 2005 the two countries have been engaged in a rather intensive dialogue across the board to give substance to, and to give content to some of the ideas which were expressed in the Joint Statement. Civil Nuclear Energy is, of course, the area which has occupied a great deal of attention of our media as well as the US media. I can only report that we have managed to make considerable progress. We still have some distance to go. This is a complicated issue; a complex issue. Our effort has been not to leave unfinished business which could create difficulties for us later on. So we need a certain degree of clarity on our mutual commitments. We need to make sure that there are no ambiguities which may create difficulties for us in the future. So, as I said, we still have a short distance to cover. If necessary we will continue the negotiations beyond the forthcoming visit.

We also had the mandate given to the CEOs forum that they should produce a document with very concrete recommendations, I understand that this report does have those concrete recommendations, which would be very useful to both our Governments in terms of our economic relationship. On the broader issue of economic cooperation, again there has been a great deal of work. Working Groups on some of the specific areas of cooperation have met. There has been video conferencing between
the concerned departments in India and the United States. I am very happy to report that we can expect some important announcements as far as the energy initiative is concerned.

You would recall that in the Indo-US Energy Dialogue there is a Steering Committee which is headed by David Garman, Under Secretary in the Energy Department in the US by the Foreign Secretary in India and we have met twice. We met in December 2005 in Washington and then recently David Garman was here in New Delhi in February and we went over a number of areas where India and US could cooperate. For example, in working together on zero emission, coal-based thermal power plants. That is an area of great interest to us. We have talked how we could cooperate together in certain non-conventional energy sources. We have already been having in the past some cooperation between the two countries and things like bio fuels. We have been talking about the hydrogen fuel economy. These are areas which are of great promise for the future.

You would recall in this connection that the Joint Statement had also spoken about India’s participation in the International Thermo-Nuclear Experimental Research project. We are very happy to that that has become a reality. India is now a full participant in the ITER project. On the energy side we have in fact a very broad menu. There will be some important announcements, as I mentioned to you.

In terms of the agriculture knowledge initiative, again there has been a lot of interaction between the Indian side and the American side. Here also we have a very substantial menu relating to virtually every important aspect of agriculture, things like water management, introduction of new technologies into agriculture, very important area of post harvest management, and also of agricultural processing. Agricultural processing is a particularly important area for India because there is considerable amount of wastage. This is one area which cannot only bring great value addition to agriculture but also has great potential for employment creation. So, we are really looking at cooperation in areas which would have a very direct impact on a sector of India’s economy which still gives occupation to a very large part of our population. This is one of the areas which will be a key area for cooperation, long-term cooperation, between the two countries.

Then we have the high technology. The High Technology Cooperation Group met in November-December 2005. We have action plans on nano-technology, biotechnology, defence technology, as well as on IT. These work plans which have been developed will be implemented
during the year. As a result of our efforts, licensing for high technology products has become much more liberal as well as predictable. A fairly important segment of the American high technology exports to India have been now freed from licensing requirements. Approval rates have climbed from about 80 per cent in the past to more than 90 per cent now. The licence processing time has also significantly dropped from about 44-45 days which used to be the average before to about 34 days now. So, there is a trend towards a more liberal high technology trade.

Here also we expect that there would be announcement for further liberalization of high technology licences during the visit. Science and Technology agreement was signed, as you know, between our Minister of State for Science and Technology, the Secretary of State of the US in September 2005, this was a direct follow-up to the visit of Dr. Manmohan Singh to Washington. Both sides have regarded science and technology as really a critical area for cooperation between us. We are looking at broadening the framework of science and technology cooperation between the two sides, and provide greater and more predictable funding so that the two sides can undertake joint projects on a much more predictable and a longer-term basis. This is something which is also ready for announcement during the visit.

On space, we have significant progress. There has been cooperation on space launch, the inclusion of US payloads on India’s Chandrayan mission, the Moon Mission. These have been talked about in great detail and I think we are very near to making announcements in the space area.

Amongst other areas we have global issues such as clean development partnership. We have cooperation on pandemics like HIV-AIDS and Avian Flu. Avian Flu is something which is a very current challenge and we are certainly looking forward to working together with the US on this very important area as well as how do we build upon our previous experience in dealing with natural disasters and build up a framework of cooperation for responding to natural disasters. This is something which would also figure in the list of outcomes for the visit.

As you can see, there is a very substantial agenda for the visit. A very natural sort of taking forward of the initiatives which once announced in July last year and also building upon that base looking at a much broader relationship in virtually all the important areas which were identified then, as I said, a very significant dimension being the economic, trade and investment relationship.
We have no doubt that this would be a very successful visit and a visit which will really mark a further maturation and a further development of our strategic partnership with the US.

Thank you very much. I would be ready to take your questions.

**QUESTION:** Sir, last week in an interview with Indian journalists in Washington, President Bush said in response to a question on Kashmir dispute that it should be settled between India, Pakistan and “citizens of Kashmir”. Do you have any comment on that?

**FOREIGN SECRETARY:** Our position is very clear. The issue of Jammu and Kashmir, insofar as it relates to the relationship between the State of Jammu and Kashmir, which is an integral part of India, and the Government of India, that is being is already addressed in the dialogue that is taking place. The Prime Minister recently had a roundtable on Jammu and Kashmir. As far as the issue between India and Pakistan is concerned, that issue too is being addressed. We have a Composite Dialogue taking place in which the issue of Jammu and Kashmir is being addressed. So, if this matter is raised in the talks between our Prime Minister and President Bush, this is the position which will be explained to him.

**QUESTION:** He has called them citizens of Kashmir.

**FOREIGN SECRETARY:** Citizens of Kashmir are citizens of India.

**QUESTION:** It is quite apparent that US is very keen on India dropping out of the proposed India-Iran gas pipeline project. You have said that we should expect some very important announcements during the visit. Should we expect some announcement which is going to balance the loss of energy that we are going to have in case India drops out of India-Iran gas pipeline project?

**FOREIGN SECRETARY:** India has no intention of dropping out of the Iran-Pakistan-India gas pipeline project.

**QUESTION:** A question on the nuke deal. The Prime Minister told Parliament yesterday that the fast breeder reactors will not be a part of separation plan. But he did not actually indicate whether the Americans have accepted this. Have they accepted our position or does it continue to be a stumbling block?

**FOREIGN SECRETARY:** As I said, we have not concluded the negotiations yet with the United States of America. We still have some
distance to go. So, what the Prime Minister spelt out in his statement was the Indian position.

**QUESTION:** Has there been any kind of response to the Prime Minister’s statement yesterday from Washington?

**FOREIGN SECRETARY:** The response has been that we need to continue to negotiate and we need to tie up various loose ends before we can announce that we have a deal. As I mentioned to you, while we have come fairly close but we still are not there yet.

**QUESTION:** Of late there have been three case of visa denial to Indian scientists. I was just wondering that has the Ministry of External Affairs taken up the issue of the kind of treatment that has been meted out to an Indian scientist by the US Consulate in Chennai?

**FOREIGN SECRETARY:** The American Ambassador has spoken to, I think, at least one of the scientists and, if I am not mistaken, has also approved the visa to him. We have, as a matter of course, taken up with the United States of America the need to have a very liberal and creditable visa policy with regard to exchange of scientists between the two countries because without such a visa regime it is difficult to see how we can promote our scientific and technical exchanges.

**QUESTION:** Before coming to India Mr. Nicholas Burns last week said that 90 per cent of the deal has been concluded. How do you describe it now - Ninety-five per cent, ninety-six per cent?

**FOREIGN SECRETARY:** I do not like to get into the percentages or a numbers game. The fact is that until we have all the loose ends tied up, unless we have a deal, we do not have a deal.

**QUESTION:** The American Ambassador yesterday again expressed confidence that we will be able to clinch this deal before Bush comes to India. Similar, is a message from Washington also. What are the sticking points twenty-four hours before he comes here, and forty-eight hour before the two leaders talk?

**FOREIGN SECRETARY:** Let me begin by saying that there is a very keen interest not only on the part of India but also a very keen interest on the part of the United States of America to have this deal as early as possible. That is because this is an agreement which has very far-reaching benefits for both countries, not just for India. Therefore, there is a very
strong commitment to try and get this agreement through quickly. But, at the same time, there is a recognition that this is a very complex issue. There are many complicated elements to this agreement. It is not at all surprising that in sitting down and negotiating on each one of these elements we find that it is complex. So, we have to continue to work hard, continue to see how we can bridge some of the remaining gaps. What are these gaps? These gaps are on a number of technical issues which relates to, for example, the nature of the separation to be carried out, the nature of the safeguards that would be applied. There are these kind of issues which we need to still find closure on.

**QUESTION:** I just wanted to know about two particular issues. Keeping in view that US is not ready to consider India a nuclear power, and is not ready to let India enter into the Security Council as a permanent member, and at the same time compelling India to bring its fast breeder reactors under the safeguards, what is India going to do if the nuclear agreement is not signed? Secondly, yesterday evening Mr. El Baradei has given his final report on Iranian nuclear activities. He has certified that all the activities in Iran have been considered peaceful and there has not been single evidence to show that Iran is intending to produce nuclear weapons or that technology. Keeping that view, what would India be doing if there is a voting on the 6th March?

**FOREIGN SECRETARY:** Let me take your last question first. How India will vote if a certain Resolution comes up before the IAEA on the 6th of March will be determined by the contents of the Resolution which is brought up for vote. I do not think it is worthwhile for us to speculate on how India will vote without India knowing what the contents of the Resolution are. So, let us wait and see. There will be an occasion for the Board of Governors to debate and to consider the report which is being put forward by the Director General, and then the Board will take a decision. When the time comes, and if and when there is a draft Resolution, we will, as always, judge it on its merits.

With respect to what will we do if the India-US Civil Nuclear Energy Agreement is not concluded, as I explained to you, there are very many other aspects of cooperation between India and the United States. Therefore, while we would certainly like to see the Civil Nuclear Energy Cooperation Agreement also concluded, if for whatever reason they cannot be concluded before the visit, we will, I presume, continue to negotiate on them and then move ahead with the other areas of cooperation on which there is no difference of opinion or no doubts in our minds.
**QUESTION:** You have been ...(inaudible)...negotiations. How do you personally feel that there is not an announcement that you can make ...(inaudible) ... simply evidence that the two sides are doing very hard bargaining?

**FOREIGN SECRETARY:** I think you would not need evidence. It is true that we are doing very hard bargaining. And it is the nature of the subject which requires very hard bargaining between the two sides. It is, as I said, at the risk of repeating myself, a very complex issue. So, it was always obvious that it would be difficult for both sides. We are making a lot of effort. Let me say we have made a considerable amount of progress as well. But we are not there yet. We need to still put in some hard work.

**QUESTION:** The Prime Minister in his statement yesterday admitted that the US is yet to translate its commitment into reality about the supply of fuel to Tarapur Nuclear Thermal Power Plant. What are the chances of the US meeting this commitment in the forthcoming visit? Is an announcement on that topic expected?

**FOREIGN SECRETARY:** I do not think so because I think what the US has said is that as soon as US laws are adjusted, it would become possible to make the supply of fuel to Tarapur.

**QUESTION:** Yesterday the Prime Minister’s statement said ... (inaudible)... assurances ...

**FOREIGN SECRETARY:** The Joint Statement if you recall, after setting out the commitments that the US will adjust its laws and it will work together with friends and allies in the Nuclear Suppliers Group to bring about a change, then said in the meantime the US will... Our interpretation of ‘in the meantime’ was until the above has been achieved there would be an effort made to supply fuel to Tarapur. There is a difference of opinion on that interpretation. What the US says is that it would be not possible for them to make that exception without bringing about a change in the law because a supply of fuel to Tarapur without that law being changed would in a sense be illegal.

**QUESTION:** You talked about announcements that will be made. How many agreements are going to be signed?

**FOREIGN SECRETARY:** These are not agreements which are going to be signed in the format of the two principals sitting and various agreements being signed. Essentially what we would be doing is there are certain MOUs
or certain agreements which will be signed amongst concerned agencies at
the time of the visit. Some of them will be reflected in the Joint Statement
which we hope to also announce. There will be also fact-sheets which will
be released giving details of the various decisions which have been arrived
at. As I mentioned to you, there are several in the works.

**QUESTION:** There was a mention in the July 18 document about
the US including an Indian astronaut in the training programme. Has there
been any progress? If there has been no progress, why has there been no
progress? Do you think you have embarked on this separation plan business
a little too late in the day?

**FOREIGN SECRETARY:** Training of the Indian astronaut, or putting
an Indian astronaut on a US mission entails a certain cost to us. Therefore,
we have to determine whether or not for our space programme and for our
space agency this was something which we should be making a financial
outlay for. Given the priorities for their space plans, they came to the
conclusion, our space agency came to the conclusion, that this was not
something which really could fit into their perspective plans for our space
programme. Therefore, we have not pursued this.

Your second question was, ‘Did we embark on the separation plan
at a very late stage?’ No, we have been working on it since July 18,
immediately after that. We have been working on all aspects of the Civil
Nuclear Energy Cooperation Agreement between the two sides since then.
As I mentioned to you, a considerable amount of progress has been made
on all aspects of this proposed agreement. Separation plan is only one
aspect. There are many other aspects of the agreement. We have been
having very intensive negotiations on each and every aspect. But, we still
have some distance to go as I said.

**QUESTION:** …Inaudible… (On Civil Nuclear energy, President
Bush’s second term)?

**FOREIGN SECRETARY:** As I mentioned, it would certainly have
made us very happy if we had the agreement in place for it to be announced
during President Bush’s visit to India. This initiative is not something which
is episodic. It is not something which is a sort of an event. Its significance
lies in terms of the process that it sort of opens up. If it is a process, and if
it is something which is of long-term significance, then I think its relevance
will remain even after the visit has been concluded.
QUESTION: My question pertains to the five talking points which President Bush had listed out at the Asiatic Society speech. Interestingly he was pretty okay with the rest of the talking points apart from the one on agricultural products and services. According to him, India should raise all its subsidy on agricultural products and services. Services was not the main agenda. How are we posturing ourselves on this particular demand which might come up?

FOREIGN SECRETARY: Our position on these issues is very well known. We have taken certain very well considered positions in the WTO. I think we will continue to take those positions. There is a certain logic to the position that we have taken on agricultural products. So, with regard to the issue of subsidies, with the exception of what applies to a country like India which has a very large population engaged in agriculture, where there is still a component of subsistence agriculture, there is a need for certain defence measures. If that is conceded, then we are looking at much freer trade in agriculture. We have no ideological sort of resistance to that.

But I think the reality of where our agriculture stands today still remains. In fact, if we really make success of the Knowledge Initiative in Agriculture, to which the United States is willing to contribute, we will see in the years to come a much freer access to the Indian market as far as agricultural products are concerned. Already I think there is a considerable amount of liberalization in this respect, something which would have been unthinkable a few years ago. I think people should appreciate that we have come this far. But our ability to go forward has to be in fact related to the reality of the Indian economy and Indian agriculture. I think we can explain this very persuasively to President Bush.

QUESTION: The Prime Minister was supposed to have spoken to the Secretary of State Condoleezza Rice last night. What did he speak to her? What was the conversation about?

FOREIGN SECRETARY: There was a conversation between the Secretary of State Condoleezza Rice and Prime Minister last night. I think the conversation, if I am not mistaken, related to how President Bush and the Secretary of State were looking forward to President Bush’s visit to India, that there was great expectation and anticipation with regard to this visit. On the specific issues, of course, they touched upon...

QUESTION: Did she refer to the Prime Minister’s speech?
FOREIGN SECRETARY: She did refer to the Prime Minister’s speech but she also said that with regard to the Civil Nuclear Cooperation Agreement that we are close and we need to work hard in order to close whatever gaps there are. And she said that the Foreign Secretary Mr. Shyam Saran should put extra effort with Under Secretary Burns in order to achieve closure.

QUESTION: You just said that you will take sometime to cover this. How much time do you think both sides will take to cover and come to the deal?

FOREIGN SECRETARY: As long as it takes.

QUESTION: Hamas movement has won in the Palestinian elections and formed the Palestinian Government. The US has stopped the financial assistance to the Palestinian Authority and Palestinian people. What role India can play in the peace process in the Middle East? Would you support the Hamas movement forming the Palestinian Government?

FOREIGN SECRETARY: It is for the people of Palestine to decide how they are governed. We will respect the wishes of the people of Palestine. That is our position. We have always supported the legitimate struggle of the Palestinian people and we will continue to do so. Thank you.
science and technology, trade and investment, high technology, health and clean environment. This is a highly ambitious agenda, one that is befitting our growing strategic partnership. When implemented, they will make a real difference to the lives of our people.

The President and I had an opportunity to review the global situation in our talks. As you are all aware, India and the United States are working together increasingly on global issues. This is not just good for our two countries but also benefits the international community, as we can complement each other’s capabilities and shared responsibilities.

President Bush is admired for his strong position on terrorism and I was particularly pleased that we agreed on the need to root out terrorism of which India has been a major victim. I am particularly pleased that we have reached an understanding on the implementation of our agreement on civil nuclear cooperation of July 18, 2005.

I have conveyed to the President that India has finalized the identification of civilian facilities to which we had committed. I was also happy to hear from the President that he now intended to approach the US Congress to amend US laws and the Nuclear Suppliers Group to adjust its guidelines. We will discuss with the International Atomic Energy Agency in regard to fashioning an appropriate India-specific Safeguards Agreement. You will appreciate I cannot say more now while our Parliament is in session.

Before concluding, I would like to express my warm appreciation for the personal interest shown and the leadership role that President Bush has played in the transformation of our ties. I have met the President a number of times and on each occasion I have admired his vision, his resolve and his commitment to strengthening our bilateral relations.

Our discussions today make me confident that there are no limits to the Indo-US partnership. May I invite you Mr. President to now make your remarks.

**PRESIDENT BUSH:** Mr. Prime Minister, thank you very much. It is a joy to be here. Laura and I are really thankful for your hospitality. I appreciate the lengthy and constructive dialogue we just had on a wide range of issues. I particularly thank the CEOs from both the United States and India who have worked hard to help develop a way forward to make sure our relationship is constructive and long-lasting. India and America have built a strategic partnership based upon common values.

Our two democracies respect religious pluralism and the rule of law.
We seek to foster economic development through trade and advancing the entrepreneurial spirit in both countries. We are working as partners to make the world safer. India and America both suffer from terrorist attacks on our home soil. Terrorists attacked New Delhi. We are sharing information to protect each other. We have a common desire to enhance the security of our peoples. We are cooperating on the military front. We worked as partners in responding to the tsunami. I was struck, and so are the American people, that the Indian Air Force delivered the Hurricane Katrina aid to an Air Force Base in Little Rock, Arkansas. For that, Mr. Prime Minister, thank you.

We are committed to promoting democracy worldwide. We are leaders in the United Nations Democracy Fund, which provides grants to help young democracies develop civil institutions in a free society. I particularly want to thank the Indian people and the Indian Government for supporting the new democracy in their neighbourhood, that being the democracy in Afghanistan, where you have pledged USD 565 million in reconstruction aid plus USD 50 million for their new National Assembly building.

On Burma, we agree on the deplorable state of human rights in Burma and all nations should seek the release of Aung San Su Kyi. On Nepal, we agree that the Maoists should abandon violence, and that the King should reach out to the political parties to restore democratic institutions. In other words our discussions are more than just friendly handshakes. We discussed important international relations. We are partners in peace and that is in the interests of our own peoples as well as the interests of people around the world.

Our trade and investment ties are growing. We are partners in expanding global trade. The United States is India’s largest trading partner, and India is one of the United States’ fastest-growing export markets. That is one of the reasons we met with the CEOs today is to how to further trade, and how to further commerce, and how to further opportunities. By the way, Mr. Prime Minister, United States is looking forward to eating Indian mangoes. Part of liberalizing trade is to open up markets, and as a result of your leadership and our hard work we are opening up markets.

Our Agricultural Knowledge Initiative is an important initiative for both countries. We will fund joint agricultural research projects. Prime Minister Singh and I established a Trade Policy Forum to address bilateral trade issues. One of the areas we discussed today is how we can work together
to make sure that the Doha negotiations end on a positive note. Trade is important; trade is important for our peoples, trade is important to help nations develop ways forward, help nations overcome poverty. I appreciate your understanding of that, Mr. Prime Minister, I am looking forward to working with you.

As the Prime Minister mentioned, we concluded a historic agreement today on nuclear power. It is not an easy job for the Prime Minister to achieve this agreement, I understand. It is not easy for the American President to achieve this agreement but it is a necessary agreement. It is one that will help both our peoples. I applaud you for your courage and your leadership. I am looking forward to working with our United States Congress to change decades of law that will enable us to move forward on this important initiative.

Also, we talked about the Advanced Energy Initiative that I am proposing to my own country. The whole purpose of the Advanced Energy Initiative is to end our dependence on oil. As we develop technologies that will enable us to do so, we look forward to working with India so that we can achieve the same objectives. Dependency on fossil fuels causes, particularly during times of shortage, prices to rise in both our countries. And it is in our interest that we share technologies to move away from the era of fossil fuels.

India and Pakistan have a historic opportunity to work towards lasting peace. Prime Minister Singh and President Musharraf have shown themselves to be leaders of courage and vision. And I encourage them to continue to making progress on all issues including Kashmir.

India and America are partners in addressing other global issues like HIV AIDS and pandemic flu. In other words, this partnership of ours is substantive and it is important, and it is strategic. And I thank the Prime Minister for working with me to advance this relationship in such a way that we can define our previous meetings and today’s meeting as historic in nature. I am confident that the relationship between India and the United States is good for the United States of America. I hope it is good for the people of India and I know it is going to be good for laying the foundations of peace in this world of ours. Mr. Prime Minister, thank you very much for having me.

PRIME MINISTER MANMOHAN SINGH: It is a great honour, Mr. President, to have you with us.
QUESTION (SHEILA BHATT): Mr. Prime Minister, since you have said that Indo-US Nuclear Cooperation Agreement is on, we would like to know from you how you are going to ensure India’s concerns and Indian scientific community’s concerns regarding non-stop supply of fuel and also protecting India’s three-phase nuclear research programme. Mr. President, I have a question for you too, Sir. Everybody is saying that India and the United States are natural allies. You have also said many times that our strategic partnership is based on common values, shared values. Then why is the oldest democracy of the world reluctant or not forthcoming to support the largest democracy of the world to have permanent membership of the United Nations Security Council? This is an issue on which India would like to hear from you more, Sir.

PRIME MINISTER MANMOHAN SINGH: You have asked me about the nuclear agreement. As I mentioned, we have reached a mutually satisfactory understanding with regard to carrying forward the process which was outlined in the July 18 statement which I and President Bush signed. An important step forward is the preparation of a separation plan, a separation plan which separates the civilian nuclear programme from the military programme. That phase has been successfully completed. Now it is for the United States to go to the Congress for necessary amendments in US laws. Also, the US will approach the members of the Nuclear Suppliers Group and thereafter we will also have to go to the International Atomic Energy Agency for India-specific safeguards. So, we have made very satisfactory progress and I thank the President for his initiative. But for his leadership, this day would probably have not come so soon.

PRESIDENT BUSH: Thank you for your question on the UN Security Council. I am not surprised you asked it. As a matter of fact I gave an interview to a person from the Indian media in Washington DC prior to my trip and that was one of the questions asked. My answer has not changed by the way, which is this. We support United Nations Security Council reform, and we are interested in different ways to reform the United Nations Security Council. My concern all along, however, is that if we only stick to the United Nations Security Council reform we miss an opportunity to reform the United Nations overall. So, our position is let us make sure reform overall moves forward as we think about the best way to reform the Security Council. United Nations is a very important international body. It is one that does however require better accountability, accountability on how we spend the money, accountability on getting results. One such area for example is the Human Rights Commission.
needs to be reformed in a way that actually is able to achieve significant results on behalf of the world. So, we are open-minded and we are listening. But what we do not want to do is have a Security Council reform measure that causes other reforms not to go forward.

**QUESTION (SUZANNE):** There are reports of multiple bombings at Karachi, Pakistan, outside of the US Consulate as well as the Marriott hotel. What can you tell us about this? Will it impact your trip, your visit to that country? And how does this speak to Pakistan or even Musharraf’s ability to contain terrorists?

**PRESIDENT BUSH:** First of all, I have been briefed on the bombings. We have lost at least one US citizen in the bombing, a Foreign Service officer. I send our country’s deepest condolences to that person’s loved ones and family. We also send the condolences to the people from Pakistan who lost their lives.

Terrorists and killers are not going to prevent me from going to Pakistan. My trip to Pakistan is an important trip. It is important to talk with President Musharraf about continuing our fight against terrorists. After all, he has had a direct stake in this fight. Four times the terrorists tried to kill him.

Prime Minister and I talked about the need to continue working together to fight the scourge of terrorism. People - these terrorists will kill innocent people just like that. They have no conscience. You cannot negotiate with them; you cannot reason with them. They must be brought to justice. The bombing that took place prior to my trip is an indication that the war on terror goes on, and that free nations must come together to fight terrorism.

The way to defeat terrorism in the short run is to share intelligence and to take action. The way to defeat terrorism in the long run is to defeat the ideology of hate with an ideology of hope, and that is democracy. The great thing about being here in India is it is a perfect opportunity to remind the world that it is possible for people of different religions to live peacefully together. That is precisely what this grand democracy has shown to the world.

My resolve has never been stronger about protecting our own people by working with other nations, to answer the call of history. And the call of history now is to stand strong in the face of these terrorist attacks. And we will.
QUESTION (INDRANI BAGCHI): President Bush, two questions for you. First, on the nuclear deal. How do you plan to sell the agreement to a very powerful nonproliferation lobby in Washington which is opposed to the deal? Second, on the issue of terrorism in the context of today’s bomb blasts in Karachi. How do you propose to work with India on terrorism considering India considers that the epicenter of terrorism is in Pakistan?

PRESIDENT BUSH: One way we work together on terrorism is to make sure intelligence services share information. The way you defeat terrorists in the short term is you anticipate and react to their motives and their actions through good intelligence.

We are involved in a different kind of war. This is a war where people hide and plot and plan and all of a sudden emerge and kill and so it requires a different response. A part of the response is to commit our intelligence services to sharing information. We spent some time talking about that issue today.

As well, I would bring the same message to President Musharraf that we would continue to work with the President sharing information to bring terrorists to justice. Terrorism is not prevalent only in this part of the world. It is prevalent in the Middle-East as well. In the long run terrorism will be defeated by giving people hope and opportunity as opposed to the systems of Government which breed resentment and as a result of that resentment provide opportunities for these killers to recruit.

In terms of convincing the Congress, first thing I will say to our Congress is that our relationship is changing to the better. Sometimes it is hard to get rid of history and short term history shows that the United States and India were divided. We did not have much of a relationship. As a result there are laws on the books that reflect that. Now the relationship is changing dramatically. People in the United States have got to understand that trade with India is in our interests, that diplomatic relations with India is in our interests, that cultural exchanges with India are in our interests.

One of the things that helps make that case, of course, is, as you know, there are a lot of Indian Americans making important contributions to our country and we welcome those contributions. I think there need to be more student exchanges between our countries. I think we ought to expand H1B visas for Indian scientists and engineers and physicists and people in our country.
What I am trying to explain to you is that it is a changing relationship and part of that change is going to be how to deal with the nuclear issue. Proliferation is certainly a concern and a part of our discussions and we have got a good, brave gesture by the Indian Government that I will be able to take to the Congress. But the other thing that our Congress has got to understand is that it is in our economic interests that India have civilian nuclear power industry to help take the pressure off of the global demand for energy.

Obviously, nuclear power is a renewable source of energy. The less demand there is for non-renewable sources of energy like fossil fuels, the better of it is for the American people. Increasing demand for oil from America, from India and China relative to a supply that is not keeping up with demand causes our fuel prices to go up. And so to the extent that we can reduce demand for fossil fuels, it will help the American consumer. So, there are several ways for me to make the case which I am kind of laying out for you now, so that – but this is what I will be telling our Congress.

QUESTION (AMERICAN MEDIA): Mr. President, Mr. Prime Minister, following up on this just to touch, what kind of message does it send to the world that India, which has been testing as late as 1998, nuclear testing, and has not signed Nuclear Non-Proliferation Treaty. Is this a reward for the bad behaviour as some critics suggest? And what kind of message does it send to other countries that are in the process of developing nuclear technology? Why should they sign the NPT if India is getting a deal without doing so, Sir?

PRESIDENT BUSH: What this agreement says is things change, times change, that leadership can make a difference, and telling the world - sending the world a really different message from that which is – what used to exist in people’s minds. Listen, I have always said this was going to be a difficult deal for the Prime Minister to sell to his Parliament. But he showed great courage and leadership. It is difficult for the American President to sell to our Congress because some people just do not want to change and change with the times. I understand that. But this agreement is in our interests. And, therefore, I am confident we can sell this to our Congress as in the interest of the United States, and at the same time make it clear that there is a way forward for other nations to participate in a civilian nuclear power in such a way as to address non-proliferation concerns.
India has charted a way forward. You heard the Prime Minister talk about going to the IAEA. That group exists to help safeguard, safeguard the world from proliferation. Listen, I proposed reprocessing agreements - that stands in stark contrast to the current nuclear theology that we should not reprocess, for proliferation concerns. I do not see how you can advocate nuclear power, in order to take the pressure off of our economy, for example, without advocating technological development of reprocessing, because reprocessing will not only – reprocessing is going to help with the environmental concerns with nuclear power. It will make there – to put it bluntly, there will be less material to dispose.

So, I am trying to think differently, not to stay stuck in the past and recognize that by thinking differently, particularly on nuclear power, we can achieve some important objectives, one of which is less reliance on fossil fuels and second is to work with our partners to help both our economies grow, and thirdly, is to be strong on dealing with the proliferation issues. Well, Mr. Prime Minister, it has been a joy.

PRIME MINISTER MANMOHAN SINGH: Thank you very much, Mr. President, we have made history today, and I thank you.

PRESIDENT BUSH: Thank you, Sir. Thank you.

F F F F F

397. Joint Statement issued at the end of the visit of the President of the United States of America George W. Bush.

New Delhi, March 2, 2006.

President George W. Bush and Prime Minister Manmohan Singh today expressed satisfaction with the great progress the United States and India have made in advancing our strategic partnership to meet the global challenges of the 21st century. Both our countries are linked by a deep commitment to freedom and democracy; a celebration of national diversity, human creativity and innovation; a quest to expand prosperity and economic opportunity worldwide; and a desire to increase mutual security against the common threats posed by intolerance, terrorism, and the spread of weapons of mass destruction. The successful transformation of the U.S.-India relationship will have a decisive and positive influence on the future international system as it evolves in this new century.
Reviewing the progress made in deepening the global partnership between the United States and India since their Joint Statement of July 18, 2005, the President and the Prime Minister reaffirm their commitment to expand even further the growing ties between their two countries. Consistent with this objective, the two leaders wish to highlight efforts the United States and India are making together in the following areas, where they have:

**FOR ECONOMIC PROSPERITY AND TRADE**

(1) Agreed to intensify efforts to develop a bilateral business climate supportive of trade and investment by:

1. Welcoming the report of the U.S.-India CEO Forum, agreeing to consider its recommendations aimed at substantially broadening our bilateral economic relations, and directing the Chairs of the Indo-U.S. Economic Dialogue to follow up expeditiously with the CEO Forum;

2. Endorsing the efforts of the U.S.-India Trade Policy Forum to reduce barriers to trade and investment with the goal of doubling bilateral trade in three years;

3. Agreeing to advance mutually beneficial bilateral trade and investment flows by holding a high-level public-private investment summit in 2006, continuing efforts to facilitate and promote foreign direct investment and eliminate impediments to it, and enhancing bilateral consultations on various issues including tariff and non-tariff barriers to trade in goods and services, and preventing the illicit use of the financial system.

(2) Sought to expand cooperation in agriculture by:

1. Launching the Knowledge Initiative on Agriculture with a three-year financial commitment to link our universities, technical institutions, and businesses to support agriculture education, joint research, and capacity building projects including in the area of biotechnology.

2. Endorsing an agreed workplan to promote bilateral trade in agriculture through agreements that: lay out a path to open the U.S. market to Indian mangoes, recognize India as having the authority to certify that shipments of Indian products to the United States meet USDA organic standards, and provide
for discussions on current regulations affecting trade in fresh fruits and vegetables, poultry and dairy, and almonds.

(3) Reaffirmed their shared commitment to completing the WTO Doha Development Agenda (DDA) before the end of 2006, and agreed to work together to help achieve this outcome.

FOR ENERGY SECURITY AND A CLEAN ENVIRONMENT

(1) Welcomed the successful completion of discussions on India’s separation plan and looked forward to the full implementation of the commitments in the July 18, 2005 Joint Statement on nuclear cooperation. This historic accomplishment will permit our countries to move forward towards our common objective of full civil nuclear energy cooperation between India and the United States and between India and the international community as a whole.

(2) Welcomed the participation of India in the ITER initiative on fusion energy as an important further step towards the common goal of full nuclear energy cooperation.

(3) Agreed on India’s participation in FutureGen, an international public-private partnership to develop new, commercially viable technology for a clean coal near-zero emission power project. India will contribute funding to the project and participate in the Government Steering Committee of this initiative.

(4) Welcomed the creation of the Asia Pacific Partnership on Clean Development and Climate, which will enable India and the U.S. to work together with other countries in the region to pursue sustainable development and meet increased energy needs while addressing concerns of energy security and climate change. The Partnership will collaborate to promote the development, diffusion, deployment and transfer of cleaner, cost-effective and more efficient technologies and practices.

(5) Welcomed India’s interest in the Integrated Ocean Drilling Program, an international marine research endeavor that will contribute to long-term energy solutions such as gas hydrates.

(6) Noting the positive cooperation under the Indo-U.S. Energy
Dialogue, highlighted plans to hold joint conferences on topics such as energy efficiency and natural gas, to conduct study missions on renewable energy, to establish a clearing house in India for coal-bed methane/coal-mine methane, and to exchange energy market information.

FOR INNOVATION AND THE KNOWLEDGE ECONOMY

(1) Emphasizing the importance of knowledge partnerships, announced the establishment of a Bi-National Science and Technology Commission which the U.S. and India will co-fund. It will generate collaborative partnerships in science and technology and promote industrial research and development.

(2) Agreed that the United States and India would work together to promote innovation, creativity and technological advancement by providing a vibrant intellectual property rights regime, and to cooperate in the field of intellectual property rights to include capacity building activities, human resource development and public awareness programs.

(3) Agreed to continue exploring further cooperation in civil space, including areas such as space exploration, satellite navigation, and earth science. The United States and India committed to move forward with agreements that will permit the launch of U.S. satellites and satellites containing U.S. components by Indian space launch vehicles, opening up new opportunities for commercial space cooperation between the two countries.

(4) Welcomed the inclusion of two U.S. instruments in the Indian lunar mission Chandrayaan-1. They noted that memoranda of understanding to be signed by ISRO and NASA would be significant steps forward in this area.

(5) Welcomed the U.S. Department of Commerce’s plan to create a license exception for items that would otherwise require an export license to end-users in India engaged solely in civilian activities.

FOR GLOBAL SAFETY AND SECURITY

(1) Noted the enhanced counter-terrorism cooperation between the two countries and stressed that terrorism is a global
scourge that must be fought and rooted out in every part of the world.

(2) Welcomed the increased cooperation between the United States and India in the defense area, since the New Framework for the U.S.-India Defence Relationship was signed on June 28, 2005, as evidenced by successful joint exercises, expanded defence cooperation and information sharing, and greater opportunities to jointly develop technologies and address security and humanitarian issues.

(3) Reaffirmed their commitment to the protection of the free flow of commerce and to the safety of navigation, and agreed to the conclusion of a Maritime Cooperation Framework to enhance security in the maritime domain, to prevent piracy and other transnational crimes at sea, carry out search and rescue operations, combat marine pollution, respond to natural disasters, address emergent threats and enhance cooperative capabilities, including through logistics support. Both sides are working to finalize a Logistics Support Agreement at the earliest.

(4) Welcomed India’s intention to join the Container Security Initiative aimed at making global maritime trade and infrastructure more secure and reducing the risk of shipping containers being used to conceal weapons of mass destruction.

(5) Reiterated their commitment to international efforts to prevent the proliferation of weapons of mass destruction.

(6) Building on the July 2005 Disaster Relief Initiative, noted the important disaster management cooperation and their improved capabilities to respond to disaster situations.

(7) Recognized the importance of capacity building in cyber security and greater cooperation to secure their growing electronic interdependencies, including to protect electronic transactions and critical infrastructure from cybercrime, terrorism and other malicious threats.

DEEPENING DEMOCRACY AND MEETING INTERNATIONAL CHALLENGES

(1) Recalled their joint launch of the UN Democracy Fund in
September 2005 and offered the experience and expertise of both Governments for capacity building, training and exchanges to third countries that request such assistance to strengthen democratic institutions.

(2) Welcomed the decision of India and the United States to designate a representative to the Government Advisory Board of the International Centre for Democratic Transition (ICDT) located in Budapest to facilitate cooperative activities with ICDT.

(3) Agreed that the Virtual Coordination and Information Centres set up in September 2005 should be further strengthened and a bilateral meeting aimed at developing a practical programme for utilization of its services be held soon.

(4) Expressed satisfaction at the expedited USFDA drug approval processes that strengthen the combat against HIV/AIDS at the global level and encourage greater corporate participation to meet this challenge, including the establishment of the Indo-U.S. Corporate Fund for HIV/AIDS.

(5) Agreed to expand bilateral efforts and continue cooperation in the area of medical research and strengthen technical capacity in food and drug regulation in India as well as address the concern on avian influenza, including agreement to reach out to the private sector, develop regional communications strategies, and plan an in-region containment and response exercise. The President welcomed India’s offer to host the International Partnership on Avian and Pandemic Influenza meeting in 2007.

(6) Welcomed India’s membership in the Coalition Against Wildlife Trafficking, a partnership through which we will collaborate in the fight against illegal trade in wildlife and wildlife parts; we also welcome the opportunity to strengthen longstanding work together on the conservation of wildlife through cooperation on park management and ecotourism.

President Bush thanked Prime Minister Singh and the people of India for the warmth of their reception and the generosity of their hospitality.
398. Speech by Prime Minister Dr. Manmohan Singh at the banquet hosted in honour of the US President George W. Bush.

New Delhi, March 2, 2006.

I am delighted to welcome you and your distinguished delegation to India. We are pleased to have you in our midst.

It is our privilege to return your warm hospitality at the White House. The people of India have great regard and affection for the American people, as they have had for centuries. Ours has long been a two-way relationship. Long years ago, the Father of our Nation, Mahatma Gandhi, acknowledged the influence of Henry David Thoreau when he launched a movement for civil disobedience against foreign rule. In our own generation, a great son of the United States, Martin Luther King, acknowledged the influence of Gandhiji, when he launched a non-violent struggle for civil liberties and racial equality.

Close to half a century ago President Eisenhower said on a visit to India: “We who are free – and who prize our freedom above all other gifts of God and nature – must know each other better; trust each other more; support each other.” Today those words have a new resonance. Your people and ours have come to regard democracy and peaceful political mobilization as legitimate and civilised instruments of social change. Our passionate commitment to democracy and human rights, our respect for equality of all before the law and our regard for freedom of speech and faith place us on the same side of history.

Today, in India, we are engaged in a Himalayan adventure of pursuing development, improving the quality of life and modernizing one of the world’s oldest civilizations. We seek to provide a social and economic environment at home that will unleash the creativity and enterprise of every Indian, thus enabling our people to live a life of dignity, fulfillment and self-respect. The United States has long been a partner in our journey of progress. I am therefore happy that on this visit you will renew an old association between our countries in the field of agriculture. Our farmers greatly benefited from American help in the past, and they will now do so again through the knowledge initiative that you will launch.

In India, we admire the creativity and enterprise of the American people, your excellent institutions, the openness of your economy and your ready
embrace of diversity. These have attracted the brightest Indian minds, thereby creating a bridge of understanding that transcends distance and differences between us. Tomorrow, you will meet young Indians who fuel the engines of our knowledge economy. Your own country has made it possible for the talent and abilities of our people to become more visible to all.

We seek a world free of poverty, ignorance, disease and the threat of terrorism. The United States and India must work together in all possible forums to these ends. We must fight terrorism wherever it exists, because terrorism anywhere threatens democracy everywhere.

India seeks a neighbourhood of peace and prosperity. Our sub-continent of ours has been home to all the great religions of the world. It is a powerhouse of human creativity, where knowledge is worshipped as the gift of our creators. With wisdom and farsightedness, we South Asians can transform not just this region, but the whole world. In our journey of modernization and development, social change and empowerment, we see the United States as a partner, a friend and a well-wisher.

In particular, Mr. President, we see you as a true friend of India. I have always been touched by your warm praise for India and the Indian people. We sincerely acknowledge your deep personal commitment to a closer economic and strategic partnership between our two countries. Indeed, I recall that at our very first meeting you paid tribute to our efforts to achieve economic and social salvation in the framework of an open society and an open economy. I was deeply touched by your admiration for Indian democracy and our commitment to pluralism and modernism.

We in India greatly appreciate the firm stand you took against the upsurge of protectionist forces in your country and the farsighted approach you adopted on the issue of outsourcing. In taking this stand you have not only cemented closer relations between our two countries but also helped America retain its edge in the global market.

Madame First Lady, my wife and I recall with gratitude your warm hospitality at your home. You have a deep and abiding interest in learning and education. I hope you will return to India to spend time with our students and teachers and discover a new India in the making. I am truly sorry that the President is not taking you to Taj Mahal this time! I hope he will be more chivalrous the next time you are here!

I now request you to join me in a toast:
To the continued good health and happiness of the President and First Lady;

To ever-lasting friendship between our great nations.

399. Joint Statement on Trade issued during the visit of U. S. President.

New Delhi, March 2, 2006.

India and the United States agree that trade is essential to promoting global economic growth, development, freedom and prosperity.

We fully share the goal of completing the WTO Doha Development Agenda (DDA) before the end of 2006, and agree to work in partnership to help achieve this outcome.

During our discussions, we agreed to meet the task with ambition, determination and a readiness to contribute, consistent with our roles in global trade, and to keep the development dimension in focus. The system of trading rules to which our two great democracies have contributed immensely must be strengthened. Towards this global cause, we recommit ourselves and invite all key participants to demonstrate their leadership.

We agree that a successful Round depends upon progress in all areas of the negotiations if we are to meet our goal of promoting development through trade. We are committed to a DDA result consistent with the mandates already agreed that realize a substantial outcome in all three pillars of the agriculture negotiations (domestic support, export competition and market access); significant improvements in market opportunities in manufacturing and services; and appropriate disciplines, including transparency of regulatory practices in services. We also believe we should strengthen the rules that facilitate trade, where we have jointly made proposals. Work in all these areas must go hand in hand.

We agree to pursue an ambitious agenda for the first half of 2006, consistent with the important milestones that were set at the Hong Kong Ministerial for agriculture, manufacturing, services and other issues, and continuing to press for the goal of concluding the negotiations by the end of 2006.
We will continue to work to promote reform, respond to the concerns of developing countries, and create opportunities for growth for all. We are building the trading system of the future, where progressive liberalization and reform result in improvement in standards of living for all, in particular for the millions of poor across the developing world.

While working for a successful Doha Round, we also reaffirm our commitment to strengthen and deepen bilateral trading ties. We note with satisfaction the successful implementation of our initiative to create the U.S.-India Trade Policy Forum and the CEO Forum to this end, and in particular the achievements in the areas of agricultural trade, investment, trade in services, the reduction of tariff and non-tariff barriers to trade, and spurring innovation and creativity. We agree to promote innovation, creativity and technological advancement by providing a vibrant intellectual property rights regime. As two dynamic economies with many complementary interests, the U.S. and India will seek to enhance bilateral trade and investment ties by expanding private sector contacts, dismantling barriers to trade, building trade capacities and strengthening trade-promoting institutions.

400. US-India: A New Vision for Economic Partnership

New Delhi, March 2, 2006.

A new era of cooperation between the US and India was ushered in on July 18, 2005 in Washington DC when President George Bush and Prime Minister Manmohan Singh concluded a set of far reaching initiatives which will pave the way for a closer economic and strategic partnership between the two countries at Government and at industry levels.

One of the initiatives taken was to form a US-India CEO Forum, comprising selected CEOs from both countries, with a mandate to develop a road map for increased partnership and cooperation between the two countries at a business level. It was also envisaged that this joint Forum could identify issues which might be included in the Agenda for discussion between President Bush and Prime Minister Singh when they meet in New Delhi in March 2006.
The US and India share common values based on their democratic, multi-cultural, multi-ethnic and multi-religious societies, as well as a strong entrepreneurial spirit, all of which support the bilateral Strategic Partnership.

Both the US and India are committed to full exploitation of the mutual benefits of globalization, which is an irreversible process driven by technology and the development of human resources in an increasingly knowledge-based world. Through mutual harnessing of technology and human capital, the US and India can forge a unique partnership to achieve greater competitiveness and prosperity for the citizens of both nations.

The Forum believes the new Economic Partnership will present the US and India with substantial opportunities to increase trade and investment activity, enhance market access for goods and services and develop greater competitiveness in both countries by leveraging their respective strengths.

Following the “Priority Initiatives” outlined here, this document sets out the 6 Major Areas for Cooperation identified by the Forum, with initiatives that should be undertaken by the two Governments and/or by industry partnerships. These Areas would have the greatest impact on Economic Cooperation, as they impact multiple sectors.

In addition, and detailed later in this document in the Appendix, the Forum has recommended specific action in 15 business sectors with the potential for significantly enhancing trade and investment by policy initiatives by the two governments. And finally, also in the Appendix, are summarized the measures to create an “Enabling Environment”.

The Forum has defined 6 Priority Initiatives, drawn from within the report for consideration, as these could be implemented expeditiously:

1. Promotion of Trade and Industry – encompassing greater freedom to invest in services sectors, freer movement of people, removal or reduction of tariff and non-tariff barriers and subsidies in agriculture and manufactured goods, on both sides. India and the US can partner to make the Doha Round of the WTO a success by showing leadership to support an ambitious outcome and making strong offers in all the key areas of negotiations.

2. Creation of an Infrastructure Development Fund – This could act as a vehicle for US investment into Indian infrastructure. It is proposed
that a corpus of $5 billion be targeted, with minority Indian Government participation, and leveraging the expertise of the World Bank/IFC/ADB and other financial institutions in the selection and monitoring of investments.

3. Promote Technology Exchange in Agriculture, Biotechnology and Nanotechnology – through a combination of exchange of scientists between Universities/Labs in the two countries and by setting up Centres for R&D in these fields supported by the two Governments.

4. Partner in Skills Development – US and Indian companies could work together for joint sponsorship of select Industrial Training Institutes (ITIs) in India and/or in the setting up of new institutes.

5. Set up an Indo-US Centre for Industrial R&D in product design and development – with support from US and Indian industry and government.

6. Establish a Dispute Resolution Mechanism - a dispute settlement mechanism that has the power and jurisdiction to resolve commercial and contractual disputes quickly could be set up by India. Continued government focus at both center and state levels is also required to resolve legacy issues.

The US and Indian economies continue to show strong growth despite facing complex challenges. The new Vision of Economic Partnership is one of promise and mutual benefits combined with challenges which can be met, squarely, and overcome.

The members of the CEO Forum would like to record their appreciation for the trust reposed in them by President Bush and Prime Minister Singh.
Civil Space cooperation between India and US is a significant aspect of the emerging high technology and strategic cooperation between the two countries. This is one of the areas identified under the now completed Next Steps in Strategic Partnership (NSSP) and has advanced through discussions within the ambit of the India-US High Technology Cooperation Group and the India-US Space Conference in June 2004 in Bangalore. With a view to expand further the scope of cooperation, a Joint Working Group (JWG) on Civil Space Cooperation has been established and it held its first meeting at Bangalore in June 2005. The next meeting of the JWG is expected later this year. The JWG serves as a permanent platform for joint review and formulation of policy, for monitoring and review of joint programmes and to create, establish and modify mechanisms for smooth collaboration in the field of civil space cooperation between both the countries.

In an important step forward and one that opens up a wide array of opportunities on both sides for cooperation in outer space exploration, US has authorized its entities for export of two US scientific instruments enabling their inclusion in the first Indian instrumented lunar mission Chandrayaan-1. These two US instruments are - (1) Miniature Synthetic Aperture Radar to map the polar landscape and deposits of water ice in these cold traps up to a depth of a few metres and (2) a Moon Mineralogy Mapper (M3) to assess the mineral resources of the Moon and to characterise and map the composition of the surface at high spatial resolution. These NASA funded instruments were selected from 16 firm proposals from all over the globe received by ISRO against its announcement of opportunity and are expected to contribute to the advancement of scientific knowledge about the moon. Towards this end, ISRO and NASA have formulated two MoUs which define the scope of the experiments and sharing of responsibilities and data.

Further, to facilitate the launching of US licensed satellites and also foreign satellites carrying US controlled items, as envisaged under the NSSP, a Technology Safeguard Agreement has now been mutually agreed to safeguard protected technologies of the either side associated with such a mission.

The two sides continue to explore the possibilities of cooperation in earth observation, satellite navigation and its application, space science, natural hazards research and disaster management support, and space education.
President George Bush and Prime Minister Manmohan Singh announced the intention to establish a Bi-National Science and Technology Endowment Fund and a standing Science and Technology (S&T) Joint Commission. These initiatives will accelerate cooperation in many technical fields of mutual interest to India and the United States and benefit the economy and well-being of citizens of both countries. These initiatives build on the S&T Cooperation Agreement signed October 17, 2005.

India and the US have a highly-developed educational and research and development capacities. Scientific and economic links between India and the United States have remained strong since the early 1960s, first in agriculture, and then spreading into a broad range of areas involving most U.S. government technical agencies.

The United States and India will each contribute to start the Bi-National S&T Endowment Fund. Additional contributions are anticipated to be added from private sources. Income from the Fund will support the joint research and the development of India-U.S. S&T projects selected through a competitive process. Projects considered for funding will span a broad spectrum of topics of mutual priority, particularly those with potential to jump from the laboratory into the private sector. Topics include: biotechnology; health and infectious diseases; advanced materials and nanotechnology science; climate science; clean energy technologies; clean water technologies, hydrology and watershed management; cyber-security; natural resource and wildlife conservation management; basic space, atmospheric and earth sciences; and marine sciences.

Recognizing the unique and expanding role of Science and Technology in Indo-U.S. relations, the Prime Minister and the President also agreed to form a Binational S&T Joint Commission that would provide a framework for a vigorous public-private partnership aimed at:

- Serving as a bridge and forum for dialogue between the government science and technology agencies in both countries;
- Fostering R&D and scientific exchanges between government, universities, research institutions, and the private sectors;
- Encouraging the joint research and development of fast and medium S&T projects for commercial products for mutual benefit of both countries through mutually agreed mechanisms.

- Overseeing Indo-US cooperation in Science and Technology implemented through existing and emerging arrangements, including the Indo-US S&T Forum and the Binational S&T Endowment Fund, and;

- Encouraging commercialization of new technologies and identifying and promoting reduction of regulatory and bureaucratic barriers in both countries.

The Joint Commission will be appointed and serviced by the Department of State of the Government of the United States of America and the Government of India, co-chaired by senior leaders from each country, and composed of representatives from the scientific community, government and industry.

Taken together, these activities herald a new era in S&T cooperation between the two countries.

New Delhi, March 2, 2006.

1. Consistent with their global strategic partnership and the new framework for their defence relationship, India and the United States committed themselves to comprehensive cooperation in ensuring a secure maritime domain. In doing so, they pledged to work together, and with other regional partners as necessary, to protect the free flow of commerce and to counter threats that could undermine maritime security.

2. The two countries reaffirmed their commitment to support existing multilateral efforts to enhance maritime security, including initiatives undertaken by the International Maritime Organization and other relevant UN programs. They noted the contribution to maritime security of the ongoing Indo-U.S. cooperation on disaster relief.

3. India and the United States will address, in a joint and combined manner as necessary, consistent with respective national legal
authorities and relevant international law, maritime threats, including: piracy and armed robbery at sea; threats to safety of ships, crew, and property as well as safety of navigation; transnational organized crimes in all dimensions; the illicit trafficking in weapons of mass destruction, their delivery systems, and related materials; environmental degradation; and natural disasters.

4. In pursuance of the above objectives, the two countries will:
   - Hold regular maritime security policy and implementation discussions in the Defense Policy Group, the Naval Executive Steering Group, and Military Cooperation Group. They will discuss current policies and emerging maritime issues to develop new avenues of cooperation, including exercises.
   - Pursue cooperation in the following areas:
     - Prevention of, and response to, acts of transnational crime at sea such as piracy, armed robbery at sea, smuggling, and trafficking in arms and drugs.
     - Search and rescue operations at sea.
     - Exchange of information and facilitation of technical assistance on combating marine pollution, as mutually agreed.
     - Enhancement of their cooperative capabilities in the maritime domain through technology cooperation and defense trade, as well as an appropriate agreement on logistic support.

404. Fact Sheet on Wildlife Trafficking.

New Delhi, March 2, 2006.

On September 23, 2005 United States announced the formation of the Coalition against Wildlife Trafficking (CAWT). This global coalition focuses political and public attention on growing threats to wildlife from poaching and illegal trade. Seven major U.S.-based environmental and business groups with global interests and programs have joined the Coalition: Conservation International, Save the Tiger Fund, the Smithsonian Institution, Traffic International, WildAid, Wildlife Conservation Society, and the American Forest & Paper Association. Membership of CAWT is open
to Governments, NGOs and corporations committed to combating wildlife trafficking.

Wildlife trafficking is a global problem with trading in animals, animal parts and exotic species fueling a $10 billion trade. Wildlife trafficking problem is compounded because of a global nexus with criminals operating in the areas of drugs and weapons and needs to be tackled by a multilateral effort. In order to address the problem both the supply and the demand side issues need to be addressed simultaneously. Whereas US, China and Europe are the major markets, a lot of wild animals and illegal wildlife parts/products are sourced from Asian countries. CAWT is focusing its initial efforts on Asia, a major source of illegal wildlife and wildlife parts to the world, including North America, Europe as well as the US. CAWT aims to support the initiatives of the countries in the region, including the Regional Action Plan on Trade in Wild Flora and Fauna, an ASEAN initiative.

India and United States have been collaborating in the area of wildlife conservation. The US Fish and Wildlife Service (USFWLS) and Wildlife Institute of India have had collaborative projects since 1989. USFWLS has also supported projects with Bombay Natural History Society and other organizations for implementation in various States of India to train specialists of international repute in wildlife management and conservation. Given the diversity of wildlife in our two countries, India and US have been exploring new areas of possible cooperation. Discussion between our officials have focused on exchanges of National Park and Customs Officials, educating public about this illegal trade, wildlife and national park management, sharing of best practices and eco-tourism. A clearer and scientific understanding of reasons of human-animal conflict, habitat degradation and animal behaviour is also required to manage this conflict as well as drafting of local people to promote eco-tourism.

An effective strategy requires media and public participation as well as curbing wildlife crime with strong investigation and prosecution regimes. India will join the CAWT in coherence with its national legislations as well as the International Conventions to which it is a party.

New Delhi, March 2, 2006.

1. Pursuant to the understanding on cooperation in Agriculture reflected in the Joint Statement of US President George Bush and Indian Prime Minister Dr. Man Mohan Singh on July 18, 2005 during the visit of Dr. Man Mohan Singh to the USA, the Ministry of Agriculture, Government of India and U.S. Department of Agriculture (USDA) agreed to work together for a new India – US Knowledge Initiative on Agriculture Education, Research, Services and Commercial Linkages, identified the objectives of this Initiative and created the Board of the Knowledge Initiative on Agriculture (AKI) who have, after identifying areas of priority focus, agreed on Work Plan which includes:

   (i) Under Education, learning resources, curriculum development and training, building of human and institutional capacity with the objective of preparing graduates to harness science and technology for the pursuit of attaining and sustaining the ‘Evergreen Revolution’. It has been agreed that a critical mass of faculty and scientists in subject domains and need-based niche/strategic/emerging areas will be developed through post-doctoral programs, faculty exchange, trainings and workshops. These select faculty and scientists, in turn, would serve as catalysts for further change and improvement.

   Mechanisms include establishing a standing Indo-US Joint Working Group, sharing the US experience in curriculum development to benefit the ongoing curriculum revision exercise in India, identifying the number of slots for training and faculty exchange during 2006 with consideration of additional slots in the coming years and organizing a range of collaborative activities such as conferences, exchange of visits and workshops. With regard to building institutional capacity, the focus will be on extension and outreach activities, library resources, networking and leadership development through sharing of experiences to take the knowledge initiative forward.

   Modalities for implementation of the training and other activities were also finalized.
(ii) Under Food-processing and Marketing, the Work Plan targets training, capacity building and joint research, including quality assurance and food safety, reduction of post harvest losses, market information systems, value addition, strengthening grades and standards, facilitation of agro-business investment, advanced processing technologies, byproduct utilization and bio-fuels from bio-mass.

(iii) Under Biotechnology, a strategic alliance has been envisaged for training and research on development of transgenic crops with resistance to economically important viruses, tolerance to drought, heat and salinity and micro-nutrient utilization efficiency; molecular breeding and genomics in crops and animals, molecular approaches in plants and animal health protection have been agreed.

(iv) Under Water Management, research and training proposals on sustainable use of water resources, water quality management and remediation, use of modern tools in water management, integrated nutrient management and precision agriculture have been decided.

2. Funding: The proposed Work Plan, which includes scholarships, exchange programmes, training and collaboration of scientists, will be supported by a financial commitment of the Governments of India and USA over a period of three years. About 40 premier agriculture research universities, many of whom already have US linkages, have been identified for the programmes-including the Indian Agricultural Research Institute, Veterinary Research Institute, Punjab Agricultural University, National Dairy Research Institute, G.B.Pant University of Agriculture and Technology, Tamil Nadu Agriculture University, University of Agricultural Sciences, Bangalore and the Haryana Agriculture University. The US partners will be identified on a competitive basis by the US Department of Agriculture with the concurrence of GOI.

3. The initiative aims at attaining excellence in agricultural education, to enhance employability of the graduates, developing human resources to fulfill commitments towards the Millennium Development Goals, and improving quality of life through sustainable rural development including innovative agricultural extension, agri-business programmes and wider participation of women. The AKI is
expected to significantly re-invigorate the US-Indian partnership in agriculture and offer a win-win situation for both the countries and will trigger benefits in perpetuity.

4. A Framework Equivalency Plan has been signed between India and the USA that outlines the fundamental requirements to allow bilateral trade of commodities treated by irradiation as phyto-sanitary measure. With this, the regulatory process for export of irradiated mangoes from India to the USA may be initiated and hopefully completed in about a year.

5. The assessment system used by APEDA for accreditation of agencies for certification of organic products has been recognized by US Department of Agriculture Marketing Services enabling export of organic agricultural products from India with effect from February 16, 2006.

New Delhi, March 2, 2006.

The India-U.S. Energy Dialogue, launched on May 31, 2005, is aimed at increased India-U.S. trade and investment in the Indian energy sector by working with the public and private sectors to further identify areas of cooperation and collaboration and build on the broad range of existing cooperation between India and the United States to mobilize secure, clean, reliable and affordable sources of energy, focusing on (i) oil and natural gas (ii) coal (iii) power and energy efficiency,(iv) new technologies and renewable Energy and (v) civil nuclear energy. Short and longer-term work plans have been formulated and several bilateral Agreements are ready to be signed or under finalisation below:

(1) FutureGen Project : India has accepted the U.S. government’s invitation to participate in the Future Gen project, an initiative to build the world’s first integrated sequestration and hydrogen production research power plant. FutureGen, a billion dollar project to which India is contributing $10M and the U.S. government and industry are responsible for funding the balance will create the world’s first zero-emissions fossil fuel plant, drawing upon the best scientific talent
to pursue an innovative ‘showcase’ project focused on the design, construction and operation of a technically cutting-edge power plant. Indian companies are also expected to participate in the private sector segment.

(2) India has sought membership in the Integrated Ocean Development Program (IODP), an international drilling programme for scientific deep-sea research led by Japan and the USA which aims to study, inter alia, the unknown deep biosphere by studying core samples and monitoring boreholes, an important first step towards harnessing gas hydrates as a source of energy. The National Gas Hydrate Program (NGHP) has identified specific areas in Indian deep-sea waters for conducting further geo-scientific surveys/studies. It is believed that commercial exploitation of gas hydrates may start sometime in the period 2015-2020.

(3) ITER: ITER is a multi-billion dollar international project that seeks to make use of fusion energy for electricity production a reality. The main ITER facility will be built in Cadarache, France, and all ITER partners will participate in its construction, research and development. Pursuant to the nuclear understanding of July 18, 2005, the USA supported India’s membership in ITER. India was invited on December 6, 2005 to join the initiative as a full partner by the USA, and its other ITER partners - the European Union, Russia, Japan, South Korea, and China - at the ITER negotiations meeting in Jeju, South Korea. India will join the international team that will work on this project.

(4) In the area of Oil and Natural Gas, it has been decided:

- To hold a Natural Gas Conference - with focus on /Coal-Bed Methane in New Delhi in April /early May 2006,
- to hold a Natural Gas Conference in New Delhi-in early May 2006, with focus on , gas infrastructure development and operations, LNG and non-conventional gas, including coalbed methane, and gas sector regulation
- MOU's are ready on (i) offshore drilling for gas hydrates and (ii) safety, standards, codes of practice and procedures
- Dialogue continues on a proposed MOU between IOC and the U.S. National Renewable Energy Laboratory on hydrogen.
Possible co-operation is being discussed in treatment of (i) residues from refineries and production and (ii) storage, safety regulation of hydrocarbons.

**USTDA is funding an Oil and Gas Refinery Orientation Visit for nine representatives from the Indian public and private sectors to visit the U.S. in late summer 2006 to provide an introduction to U.S. expertise and equipment in downstream oil and gas manufacturing, and introduce small and medium size U.S. companies to opportunities in India.**

India and the USA have just signed an MOU on exchange of Information between India and US relating to the Hydrocarbon sector.

A High-level Work Plan on Coal has been prepared which provides for exchange of visits by experts – starting with:

- a series of on-site studies, workshops and conferences on (i) coal beneficiation/waste coal utilization, fine coal recovery (ii) Coal Bed Methane/Coal Mine Methane resources estimation and block delineation (iii) in-situ coal gasification, (iv) prevention of overburden dump failures, (v) exploitation of reserves of steeply dipping coal seams in north eastern coalfields, (vi) mine safety – practices, training and regulatory regime.

- Coal related information relevant to coal technologists, US coal industry partners and investors has been shared with the US side.

- A Business Advisory Council will be established by March 31, 2006.

- U.S. members of the India-U.S. Coal Working Advisory Group visited in January this year and agreed to have several workshops in 2006.

- U.S. experts in coal preparation and coal liquefaction will visit India in March 2006 to discuss pilot projects with Indian coal companies. India will host the 3rd Working Group Meeting in New Delhi in the first week of April 2006 which will focus on (i) Coal reserve exploitation, (ii) washing of high ash coal, (iii) development of expertise for estimation of reserves of coal bed methane, (iv) exploitation of coal locked up due to underground fires, and (v) development of a new technology showcase project of 250-270 MW.

- A three-day meeting of the Carbon Sequestration Leadership Forum also would be held in early April 2006.
India and US are also finalizing an Agreement for the setting up an information center, the Coal Bed Methane (CBM) and Coal-mine Methane (CMM) ‘clearing house’ in India with joint funding by the U.S. Environmental Protection Agency (USEPA) and U.S. Trade Development Agency (USTDA) and Government of India.

An Agreement on USTDA funding of a feasibility study of alternate mining technology for Neyveli Lignite Corporation (NLC) is also under finalisation.

(6) In the co-operation for Power and Energy Efficiency, it has been decided to:

- A “Clean Coal Technology Partnership” between the National Energy Technology Laboratory (NETL) of the USA and the National Thermal Power Corporation of India (NTPC) is being discussed to advance R&D in clean and efficient power generation using Indian coal.

A Clean Coal Business Development Council is being established to expand participation of well-known service providers for R&M of old thermal plants and a conference on this theme is proposed for June 2006.

(7) In the area of New Technology & Renewable Energy, a delegation from India led by the Ministry of Non-Conventional Energy Sources will visit the US National Renewable Energy Laboratory (NREL) in spring, 2006 to explore co-operation with the USA in (i) standards and testing of solar thermal and photovoltaic systems, (ii) development of concentrating collectors, and (iii) energy efficient buildings.

(8) Under co-operation on civil nuclear energy, a workshop was held in January 2006 on a range of topics including best practices for nuclear power plant design, new concepts in construction, commissioning, operations, safety, life extension and regulatory oversight. The next workshop will be held later this year in the USA. The ongoing cooperation in high-energy and nuclear physics continues. With India joining the ITER project, both Governments have agreed to
correspond on establishing a mechanism for cooperation between scientists working on fusion science. Similarly, the ongoing cooperation between India’s Atomic Energy Regulatory Board and the U.S. Nuclear Regulatory Commission will continue in an autonomous manner.

New Delhi, March 2, 3006.

The India-US Cyber Security Forum was established in 2001 pursuant to a decision taken during the visit of the then Indian Prime Minister to the United States in 2001. The Forum, which grew out of our counterterrorism dialogue, is dedicated to protecting the critical infrastructure of the knowledge-based economy. Government agencies and private sector participants from India and the United States, working under the Forum’s auspices, have identified risks and common concerns in cyber security and crafted an action-oriented work plan on securing networked information systems.

The Forum focuses on cyber-security, cyber-forensics and related research and works towards enhancing co-operation among law enforcement agencies on both sides in dealing with cyber crime.

CERT-In and US National Cyber Security Division will share expertise in artifact analysis (i.e. analysis of traces of virus / worm software), network traffic analysis, and exchange of information.

Defence services of both the countries will enhance their interaction through exchange of experience in organizational, technological, and procedural aspects.

Ongoing co-operation between India’s STQC and the US National Institute of Standards and Technology (NIST) will expand to new areas including harmonization of standards.

CII and their US counterpart have decided to set up an India Information Sharing and Analysis Centre (ISAC) and India Anti-Bot Alliance (‘bot’ refers to software that can be tasked to invade computers and undertake malicious activities remotely on behalf of hackers).

The January 2006 3rd Plenary in New Delhi resulted in ambitious
action plans for the Forum’s five Working Groups, which include seminars, workshops and expert level exchanges. Two additional areas of cooperation (i) transportation and (ii) financial sectors are being discussed to be included in the scope of IUSCSF – and safeguards for sub-outsourcing by India are also under discussion.

A draft Protocol on cyber security, between the NSCS and the State Department is under discussion.

408. India-US: Health Fact Sheet.

New Delhi, March 2, 2006.

In the Joint Statement of July 18, 2005, Prime Minister Manmohan Singh and President George Bush committed our two countries to strengthen cooperation and combat HIV/AIDS at a global level. Under this initiative they agreed to expedite FDA review of generic Indian ARV drugs, collaboration in basic sciences, product development and clinical trials, establishment of a private sector capital, fund and expansion of HIV/AIDS workplace programme.

**HIV/AIDS-Expedited FDA approval:** Since 2005, 12 ARVs and 5 APIs have received expedited FDA approval within 3 months as compared to 1-2 years earlier (10 other applications are currently under advanced stages of FDA review). With WHO granting pre-qualification to all such FDA approved Indian drugs, they can be distributed by WHO and other UN agencies in Asia and Africa where the AIDS epidemic is raging.

**COLLABORATION WITH US FDA:** US supports India’s plan to raise the capability of its drug approving agency to those comparable with US FDA. The introduction of Internationally accepted FDA testing standards, would lead to greater confidence and marketability of Indian drugs and foods.

**HIV/AIDS-Collaborative research and product development:** Institutions in the two countries have been identified for collaborative research and product development. Vaccine Development and clinical trials for new HIV/AIDS drugs are taking place in India. Two senior US researchers have been deputed by US Department of Health and Human Services (DHHS) for joint product development/clinical trials with ICMR, DBT and NACO. Joint efforts are on to develop capacities to conduct Phase III clinical
trials in India. Centres of Excellence in clinical trials are being planned in collaboration with US counterparts.

**HIV/AIDS-Corporate Effort:** An India-US Corporate Fund for HIV/AIDS, which is managed by GIVE Foundation and ICICI Bank has been established. President Bush has announced a contribution of US$ 7 million to this fund. With the help of contributions from Indian and US businesses, the fund seeks to increase resources to support prevention, treatment and control of HIV/AIDS in India. CII has also established the Indian Business Trust (IBT) for expansion of HIV/AIDS workplace programmes.

**PUBLIC HEALTH:** India and US are also exploring opportunities to establish two Schools of Public Health in India.

**AVIAN FLU:** Avian Flu represents a real danger to mankind and the sides are united in their resolve to work with world institutions in preventing or mitigating a potential pandemic. India has agreed to host a regional meeting, funded and technically supported by WHO and the US on Avian Flu pandemic preparedness in New Delhi in 2006. ICMR has also agreed to host a meeting of International Partnership on Avian and Pandemic Flu in 2007. India welcomes US plans to increase its participation in the Avian Flu sector to enable US and India to work together.

**COLLABORATION IN PREVENTION OF STDs AND HIV/AIDS:** Prime Minister and President are pleased to note that US and India have agreed to renew for a period of five years their collaboration in this sphere, which first began in 2000.

**FUTURE DIRECTIONS:** Health Tourism from US to India is an area with enormous potential for collaboration. With Indian offering world-class medical care facilities at reasonable costs, the two countries could leverage Indian expertise for their economic and social benefit. India and US would continue to work on harmonization of Indian and US healthcare systems, development of specialized medical insurance and legal packages for US patients and accreditation of Indian Health Care institutions/professionals in the US.
“Indo-US Relations: An Agenda for the Future” - Foreign Secretary Shyam Saran’s Address to the Heritage Foundation

March 30, 2006

1. I am privileged to have this opportunity to address such a distinguished audience at the invitation of the prestigious Heritage Foundation. The Foundation enjoys the reputation as a zealous sentinel of the core values and principles that have made the United States a great nation. It is known for its passionate attachment to the heritage of freedom, to the celebration of diversity and for an enduring belief that sound policies require reasoned debate. I am given to understand that the Heritage Foundation is proud to begin its positions with the words, “We believe”. These are qualities that, what Nobel Laureate Amartya Sen, has called “the argumentative Indian”, could easily identify with.

2. India and the United States have, in the past, been referred to as ‘estranged democracies’. Today, we can declare with confidence that we are engaged democracies. How has this happened? I will not go into the familiar history of the Cold War and the various factors that prevented the emergence earlier of an enduring partnership between us despite a healthy and genuine mutual admiration. In recent years, our shared values have been strengthened by the realisation of shared interests, leading to what Prime Minister Manmohan Singh described as a congruence between principle and pragmatism. This is key to an understanding of our unfolding strategic partnership. I will attempt today to share an Indian perspective of the international backdrop to this emerging congruence.

3. India perceives the world today as one where the global agenda is being set by a constellation of nations including the United States, the EU, Russia, China, Japan and India. The United States is, and for the foreseeable future, will remain a pre-eminent power. However, no single nation can bear global burdens alone and the current international situation is characterised by the willingness of major nations to work together on issues and challenges where they perceive strong convergence. The era when global politics was a zero-sum game is now decisively behind us. Leading nations, even when they compete, have inter-dependencies and linkages amongst themselves that they ignore at their own peril.
A second aspect of the current global polity is that power is judged by a much broader criteria that includes economic, technological, managerial and knowledge capabilities in addition to military capabilities.

A third characteristic is that globalisation has thrown up challenges that are trans-national and cross-cutting in nature. They require coordinated responses. These challenges include terrorism, energy security, pandemics, natural disasters and environment degradation.

Finally, there is now a wide spread perception that non-state actors are an important factor to be reckoned with, and will have a particular relevance to many of the key challenges faced by the international community. In this framework, the degree of convergence of values and interests between the major nations becomes the driving force of their bilateral relationship. The transformation that has characterised Indo-US relations in recent years has been made possible precisely because these convergences have been expanding steadily, allowing us to now contemplate an agenda for our future.

The security convergence between two major democratic powers like the United States and India is a natural one. Its scope has been broadened by a realisation in both nations that our cooperation can not only advance our respective interests but prove beneficial to the regional and global situation as well. Whether there is the threat of terrorism or piracy, the challenge of natural calamities like tsunamis or earthquakes, the dangers of WMD proliferation or the problems of pandemics, India and the United States have been able to work together increasingly closely because they both bring important and often complementary contributions to the table. Our cooperation on tsunami relief in Asia is a case in point.

I hope that Americans would increasingly appreciate that when an open society like India pursues its own interests, this is more likely than not to be of benefit to the United States. The most telling example we have before us is in Afghanistan, where India is engaged in a massive development and reconstruction programme to stabilise that society. The success of our efforts in bringing electricity to Kabul or empowering Afghan women or fostering entrepreneurship and building an Afghan civil service are also all critical to the achievement of your own goals.
9. Our new defence framework is another reflection of this vision and the expansion of our military contacts and the prospects for equipment procurement and co-production are two important signs of the future direction of our ties. As our compatibility and comfort level in working together increase, our relationship will come to be viewed as a positive force in ensuring security and peace in the broader region. It will have particular value to a continent whose energies would be focussed on rapid economic growth and improving the living standards of our peoples.

10. The economic convergence between us has accelerated since the opening of the Indian economy a decade and a half ago. India’s integration with the global economy created greater opportunities and prospects for Indo-US trade, investment and technology transfers. A more prosperous India with a growing middle class - already estimated at 300 million plus - will inevitably make more demands of US goods, technology and services. Accumulation of foreign exchange reserves is not viewed by us as an end objective by itself. We have also allowed our exchange rates to adjust to reflect changing economic fundamentals.

11. Our greater purchasing power has already led India to currently become the fastest growing export market for the US, rising at an estimated 30% annually. In the civil aviation sector for example, domestic liberalisation coupled with the conclusion of an Open Skies agreement, has seen massive purchases of US aircraft. The demand for industrial machinery, that already constitutes one-third of total US exports, and of high technology, is bound to increase as the Indian economy becomes more sophisticated. We are currently focussed on making major investments to modernise our infrastructure including airports, ports, railways and roads, and to ensure greater energy availability. Many of these areas are traditional American strengths and should certainly generate greater business for US companies. India is already an attractive destination for US companies and becoming more so as we further liberalise our investment policies. The profitability of foreign companies operating in India is among the highest in the world. A well-established stock market reflecting a booming economy has also become the subject of interest for American institutional investors. The point I wish to stress is that there are growing opportunities that have just begun to unfold and are likely to last for many generations. In fact, trends
indicate that the growth of agricultural prosperity in India would bring many more rural consumers into the market. The demographics of India are the clearest proof that the demand pattern would continue to grow exponentially in the future.

12. The long-term nature of our economic partnership is further strengthened by the convergence based on skills availability in India and human resource needs of the U.S. An English speaking, pluralistic society with an open economy that produces graduates by the millions and engineers, and scientists and doctors by the hundreds of thousands, will be a natural long-term partner for the United States in the era of the knowledge economy. The 2020 Report on Mapping the Global Future brought this out very graphically last year. In assessing the strength of this convergence, we have to also take into account that a pluralistic ethos and an open economy are ideal conditions for promoting the kind of creativity that is a must to sustain knowledge processes. As we look into the future and make judgements on where vital skills are best located, US security would be well served if its major partner is another democratic society like India. It goes without saying that in a competitive society like India, investments in scientific research are likely to be cost effective for US companies.

13. The decisions made today on key research and technology initiatives will help shape the nature and politics of our inter-dependent world. It is, therefore, of particular satisfaction that in areas like fusion energy, clean coal and gas hydrates, the US has supported Indian participation in international research projects. This trend is only likely to accelerate further. Indian companies are already moving up the value chain in the knowledge economy. A leading American tech-trend forecaster recently commented to the Business Week magazine that millions of engineering, business and medical graduates in India are becoming enmeshed in the global new economy in ways most people are only now beginning to fathom.

14. I find it striking that the vast majority of initiatives that we have recently undertaken with the United States are technology driven. Their impact will be far reaching and the Knowledge Initiative on Agriculture, for example, can bring about second generation reforms that would build on our heritage of the Green Revolution. Equally, I would point to the US payloads on our own Lunar Mission as an example of India’s relevance to US needs.
15. Underpinning all this is the fundamental convergence in our values and ethos. We are not just democracies but societies with truly composite, assimilative and inclusive cultures. In a world where the value of an open society and an open economy is increasingly apparent, India & the United States have a particular responsibility to uphold our commitment to our shared values.

16. India and the US are also in the forefront of the global effort to meet the challenge of terrorism fuelled by intolerant and fundamentalist ideologies. Our very existence as plural and secular societies, poses the most effective challenge to such ideologies. Neither can we afford to make tactical compromises, pursuing the war on terror in either a selective or segmented manner. This is a long-term effort and we are bound together by the conviction that democracy is the best defence against terrorism.

17. In July 2005, when Prime Minister Manmohan Singh visited Washington, India and the United States agreed on a very broad range of initiatives that underlined the transformation of our ties. The visit of President Bush to India this March witnessed the further evolution of our partnership. Several initiatives announced in July 2005 were developed into concrete policy decisions; some were actually implemented, even as new areas for cooperation were identified. We succeeded in meeting the high expectations generated by the July 2005 visit and surprised observers in both countries by our ability to make major decisions in important and difficult areas. If the President and the Prime Minister expressed satisfaction at the progress that we had made, it was more than mere diplomatic ritual. Allow me to highlight some of the landmark announcements that defined the strength of our relationship:

- Our efforts to promote economic prosperity and trade was underlined by the recommendations of the CEOs Forum contained in their first report. We agreed on an investment summit to take place in 2006 to promote FDI and expand bilateral trade.

- In the key sector of agriculture, which lags significantly behind industry and services in its growth rate, steps were finalised to link our universities, technical institutions and businesses to enhance productivity and prepare the Indian farmer for the era of agricultural commerce. Certainly, there could be no
better signal for this than the US opening its markets to Indian mangoes.

- Our energy agenda was advanced through an agreement for Indian participation in the FutureGen clean coal near-zero emission research project, and an important international initiative on drilling for gas hydrates. Our quest for full civil nuclear energy cooperation also moved forward through the finalisation of the separation plan for India’s civil nuclear energy programme that has allowed the introduction of relevant legislation to this end in the US Congress.

- The growing importance of the knowledge economy to both societies was demonstrated by the establishment of our Bi-national Science and Technology Commission, the launch of an industrial R&D initiative, progress in commercial space launch arrangements, the carriage of US payloads in an Indian lunar mission and the announcement of high-technology license exceptions for civil end users in India.

- The global character of our cooperation was reiterated through a reaffirmation of our cooperative approach on counter terrorism and defence, the conclusion of a cooperation framework to enhance security in the maritime domain, a commitment by India to participate in the Container Security Initiative, and a range of joint programmes on disaster relief, cyber security, democratic capacity building, combating HIV/AIDS and avian flu and on wildlife trafficking.

18. The issue that encapsulates all these convergences today is the prospect of resumption of full civil nuclear energy cooperation between India and the United States. This is an initiative that will determine – for good reasons – the direction of our future ties. It has a strong security rationale, as it would enable India to make a fuller contribution to global non-proliferation efforts. India has already significantly strengthened its export controls and put in place measures to effectively deter leakage of sensitive technology. This builds on an exemplary non-proliferation record of four decades and more. We have also made a commitment to refrain from transferring enrichment and reprocessing technologies to nations that do not have them, and to support international efforts to limit their spread. But India cannot be a partner and a target at the same time. If there
is an expectation that we should play a greater role, particularly in combating the twin threats of WMD proliferation and terrorism, then it is only reasonable that the energy requirements of a country with such strong credentials is recognised.

19. The economic rationale for this initiative is very compelling. Energy scarcity is the single biggest constraint on the Indian growth rate. An acceleration in India’s progress will not only have dramatic anti-poverty consequences but would significantly strengthen the global economy. Rapidly increasing the civil nuclear component of our total energy mix has a particular urgency when its emission implications are taken into account. The technology rationale for our cooperation is also a powerful one. Indian scientists now have much to bring to the table, especially in areas where they have established technology leads. Even in fields like reactor refurbishment, we are extremely innovative and competitive, and our activities outside India can expedite the global revival of the nuclear industry. The issue of values is not an irrelevant one either as we need to ask ourselves whether the world would not be more secure if key technologies, operational experiences and skills reside in open societies like India.

20. I am, of course, aware that the nuclear initiative has been the subject of vigorous debate here, as it has been back home. We respect this debate, and indeed believe that our case will come out stronger after it is subjected to the rigorous scrutiny characteristic of democratic processes. I am confident that at the end of the day, it will be recognised that India has large energy needs and that its responsible record makes it a reliable partner for the United States and the international community. Some surprise has been expressed that an initiative of this ambitious nature was undertaken with such confidence. Let me underline that the nuclear initiative is a critical component, but at the same time, a natural evolution of the broader agenda that I have outlined earlier. It has been made possible only because Indo-US relations as a whole have developed so rapidly. If it is ambitious, that too reflects the larger goals that we have set for ourselves. The question has been asked why, if Indo-US relations have progressed so well, is it necessary to undertake this particular initiative. Some have argued that the relationship is doing quite well without the need to do more. May I point out that a nuclear technology denial regime has a larger restrictive implication across the entire technology spectrum. Some years ago, India faced difficulties in
procuring a super-computer even for weather forecasting because of the nuclear driven export controls. The continuation of the status quo, therefore, constitutes a major impediment to realise the full potential of our knowledge economy partnership that is so important to the future of our two countries.

21. It has been asked why India, with only 3% of its energy production currently from nuclear sources, has put so much emphasis on civil nuclear energy cooperation. This begs the question whether the present quantum and mix in energy is currently satisfactory. The answer clearly is that it is not. If the nuclear element of the present mix is limited, it is only because of restrictive technology practices. In a more open market, it may be reasonably expected that we would undertake additional nuclear power projects, as we have in other facets of energy production.

22. There have been comments that our separation plan leaves open the possibility of a massive increase in our nuclear weapons programme. I would like to remind all of you of our record of responsibility, restraint – and I would even say idealism - in this regard. We were reluctant to exercise our nuclear weapon option to begin with. Having felt compelled to do so, we remain committed to a credible minimum deterrent. If our posture so far has been one of restraint and responsibility –not disputed even by our critics – there is no reason why we should suddenly change now. Some aspersions have been cast on our technology control record. I would like to strongly underline that not only our non-proliferation record but even our export control record has been exemplary and includes the 1984 MoU with the U.S. itself.

23. Doubts have been expressed whether making an exception for India would weaken the non-proliferation system and encourage other non-nuclear states that may harbour nuclear weapon ambitions. This is a false analogy. No other state has the responsible record that India does and is denied access to civil nuclear energy technology. Surely, a serial proliferator cannot warrant the same treatment as a law-abiding and responsible nation. It is for that reason that our case for greater energy access has garnered so much support. To those who may still be weighing the merits of the nuclear understanding, I would urge them to think seriously: Does it serve global security if India remains outside the non-proliferation system? Will India’s rising demands for oil and attendant implications for global oil prices help
the world economy? What would be the emission consequences of greater consumption of fossil fuels?

24. Enacting legislation to reflect policy changes is not an easy process in any polity. We, in India, appreciate that having ourselves gone through the painstaking process of creating the political consensus for the passage of export control legislation last year. In fact, additional legislative measures will have to be contemplated by the Indian Parliament to realise the full potential of civil nuclear energy cooperation. The nuclear understanding has not been without controversy in India but responding to the vision of the relationship before us, we have demonstrated the ability to make difficult decisions, in the course of extraordinarily challenging and complex negotiations. Our US interlocutors have been tough negotiators and the deal that we finalised on March 2, 2006 has been a fair one. I hope that when the Congress examines this issue, they will have before them a vision of the scope and breath of our possible relationship – one based on the congruence of principles and pragmatism that our Prime Minister has articulated – and will link that to the nuclear agreement. The remarkable progress that we have made in so many facets of our relationship in recent years makes me confident that this vision will prevail.

Thank you for your attention. I would be delighted to respond to your questions.

Question: ....Indian ambassador in Washington in an interview to India Abroad has said that India will accept no amendment...and there are indications that several United States Congressmen want some changes...

**Foreign Secretary Shyam Saran:** Well as I mentioned that the understanding that we have reached between India and United States has been a result of painstaking and complex negotiations so the understanding is a rather carefully balanced one and it is a rather delicate balance and therefore it stands to reason that whatever legislative change that is contemplated, should be lying within the parameters of that understanding. As long as that legislation is within the bounds of that understanding I think we will have no problem, but it is really a hypothetical question at the moment because we will have to wait and see what precisely is the legislative change that has been brought about after it has been considered by the Congress.
Question: Many countries have shared at least some of India’s concerns and reservations about the Nuclear Proliferation Treaty and if you recall at the Nuclear Proliferation Treaty review conference a month ago, a number of Non Governmental Organizations share some of India’s concerns, my question is if you are looking into the crystal ball tell us what more is there as a result of what is now being done between India and United States, India and France, between United States and NSG in this regard? What hope is there that a discriminatory treaty like Nuclear Test Ban Treaty will eventually be buried or at least a mandate in the long run will take into account some of India’s reservations?

Foreign Secretary Shyam Saran: I don’t think we are in the business of being undertakers for any treaty involved or any agreement. I think it is important to make a distinction between our problem with the Nuclear Proliferation Treaty as a treaty and the concept of non-proliferation. I think people forget that India was one of the original sponsors of the negotiation on non-proliferation and the reason why India didn’t eventually sign the Nuclear Proliferation Treaty was because we felt that while concrete commitments were being imposed on non-nuclear weapon states there was no such commitment to nuclear disarmament on the part of nuclear weapon states. It was a rather vague and an open-ended one and it has always been our position that the cause of non-proliferation will be better served if there was a balance of obligations.

So as far as the concept of non-proliferation is concerned India has always been in a sense in the non-proliferation mainstream. Although it didn’t sign the Nuclear Proliferation Treaty, but India has always been very careful as well not to rubbish the non-proliferation treaty. We have our reservations on the nature of the treaty but we have never rubbed the treaty either looking at the kinds of changes taking place at this time or will take place as a result of the understanding between India and the United States. Let us see where it takes us. Whether this is conveyed to a broader and a newer international consensus on non-proliferation, we believe that such an international consensus is perhaps overdue.

Question: I was hoping you might respond to a critics’ claim that Congress is being asked to consider a deal that has not being completely settled.

Foreign Secretary Shyam Saran: I think if you look at the detailed separation plan which India has provided after a very difficult and complex
negotiation with the United States side I am not quite sure what is going to be done, unless there is a change of law in the United States which makes it possible for India and United States to engage in energy cooperation then we can’t proceed further ahead. Of course that cooperation will be subject to India’s negotiation and India specific safeguards agreement with the IAEA which we will have to do and that is something which is clearly understood by both sides. We also know that if there has to be a broad international cooperation between India and the international community in civil nuclear energy cooperation then there will have to be an adjustment of the NSG guidelines and I think on both these fronts there is considerable amount of activity taking place. These will have to move in tandem

**Question:** There is a provision in the legislation which the Bush administration sent up to the hill which says that India has to permanently forego future nuclear weapons testing or United States - India nuclear trade will be curtailed. My question: is that something the Indian government had signed onto? As part of the agreement have you agreed to never again test nuclear weapons?

**Foreign Secretary Shyam Saran:** As you know, the July 18th joint statement has a clear provision that India will continue to maintain its moratorium on nuclear tests. That is part of United States law - that if there is a state which is exploding a nuclear device then that will trigger off an end to cooperation with that country. As part of United States law that is fine. It is not part of Indo-United States treaty core understanding

**Question:** Yesterday some of the Congressmen and Senators, as well as the state department officials, had given views about the nuclear cooperation. Viewing these things it gives us an impression that this is a very long term process to solve this issue and time frame given to any suggestions when it can happen. I think the way the lawmakers express the reason as well as the state department officials it seems it is a very very long process.

**Foreign Secretary Shyam Saran:** I think as I stated in my own opening remarks that we come from a democracy and we have seen in India itself how much debate and controversy there has been on this issue and we are not at all surprised that there would be debate and the doubt should be expressed and clarification should be sought. In another great democracy the implied thing for us is that we believe that they do have answers, very satisfactory answers to many of the reservations and many of the questions that have been raised and if people look at this particular
agreement in the larger context of India - United States relations, and that is why I spelt out for you the very broad ranging partnership that is evolving between India and United States, because it is only in terms of that broad evolving partnership that this agreement makes sense. If you take it out of context then perhaps it will give rise to certain misgivings and doubts but the agreement itself has become possible essentially because there is a broad ranging strategic partnership which is evolving between the two countries and the other point I would like to make is this is not something which is a sudden and a kind of a rabbit out of the hat agreement, it is the culmination of a process which began several years ago, straddling both Democratic as well as Republican administration. It is a culmination of efforts made across the political spectrum both in India as well as United States. I think the fact that it has been a process supported by virtually the entire political spectrum in both the countries testifies to the strength of the relationship and testifies to the great potential of the relationship

**Question:** If this agreement is not ratified how big a shock will this be on a broader Indian - United States partnership?

**Foreign Secretary Shyam Saran:** Well I don’t think that it is really necessary for us to already start predicting its demise. We have the sense that in Washington amongst the Congressmen there is a very, very broad support for India - United States partnership. I think if that aspect of India - United States partnership is kept in view there is no reason why this agreement can’t go through. But actually there is a very broad ranging relationship between the two countries. If it doesn’t go through it doesn’t mean that everything else will fall by the way side. We must also recognize that for good reason or bad there is an intense focus on this particular agreement. Look at today I have talked about many other aspects of India – United States relations but every question I have been fielding has been on the nuclear issue, therefore whether related or not this has become symbolic of what we want to do with Indo - United States relationship. Therefore, if this particular agreement doesn’t go through there is no doubt that there will be, in international terms of the expectation that have been created and in terms of the enthusiasm that has been created, there will be some falling back.

**Question:** You have been to Dharamsala lately and seat of the Dalai Lama’s Tibetan Government. Does that mean your Government’s policy towards Dalai Lama has been changing…?
Foreign Secretary Shyam Saran: I am not aware of any change in government of India’s policy on Tibet. We have taken a consistent position for a very long time that Tibet is an autonomous region of the People’s Republic of China. But we respect the Dalai Lama as a very important religious figure and a very highly respected figure. There is a reality that the Dalai Lama is in India and that there is a large Tibetan community in India and for historical reasons the welfare of the Dalai Lama and the Tibetan community is handled by the External Affairs Ministry of the Government of India of which I am the Civil Service head, so my visit to Dharamsala was essentially in that capacity.

Question: As you know one of the big criticisms that a lot of people have here, or disagreements, is the fear that the Civil Nuclear Energy Cooperation will allow India to greatly accelerate its nuclear weapons production. What assurances have you given/ can you give the American public that India will not rapidly accelerate its weapons production? I realize that the government has the policy of minimal deterrence but this frankly doesn’t have a lot of resonance here, people really don’t know what it means.

Foreign Secretary Shyam Saran: Number one, I think it should be recognized that the deal with United States is about Civilian Nuclear Energy Cooperation. It is not about India’s strategic program. About nuclear weapons however - we recognize as India that if our partners engage with us in Civilian Nuclear Energy Cooperation they have legitimate expectations that whatever technology comes to India as a part of this cooperation, should not leak to other countries. There should be very strong export controls. That assurance we are prepared to give and we have already given in terms of the very comprehensive export control legislation that we adopted last year. We have also harmonized our export control list with the NSG and MTCI.

Second expectation is that if a partner is engaging with us in cooperation, that should not in anyway advance our strategic program, and if we have a need for separation between our civilian and strategic program its because of this reason. Because we have to take action in order to give an assurance to our partners that whatever they do with us in the civil nuclear energy field will not have any kind of impact as far as our strategic program is concerned, that we have already provided as part and parcel of this agreement.

Now as to whether or not India will engage in a nuclear arms race. Frankly this has no connection with the strategic program. I have also stated that for a very long time India’s record in this aspect has not been one of
restraint but has been one of responsibility. We have not indulged in a nuclear arms race. There is no reason why it should be expected that merely because we have an agreement on Civil Nuclear Energy Cooperation that suddenly the floodgates will be opened by India for larger and larger nuclear weapons. That is certainly not how we see our intention. It must also not be forgotten that India’s direction on nuclear disarmament, infiltration of nuclear weapons hasn’t changed, for example, with respect to non-proliferation, we continue to believe that the most effective non proliferation measure would be total elimination of nuclear weapons all together.

We have felt that in respect of another category of weapons of mass destruction, that is, chemical weapons, we need to arrive at negotiations to a multilateral non discriminatory international instrument for the cessation of the production use of chemical weapons. We are prepared to enter negotiations for a similar instrument at the conference on disarmament. In fact, we are one of the strong supporters of commencement of negotiations of nuclear disarmament in Geneva. If that is our stand and yet we have said we will have a policy of non-first use, for example, we have for many years advocated a convention on the non use of nuclear weapons and outlawing the use of nuclear weapons. I think you could look at the record. Therefore there is really no reason for anyone to believe that merely because India and United States are going to engage in Civil Nuclear Energy Cooperation that it is going to mean that this is going to lead to an arms race.

410. Press Conference by Foreign Secretary Shyam Saran at the Embassy of India.

Washington (D.C), March 31, 2006.

Foreign Secretary Shyam Saran: Thank you very much and Good Afternoon to all of you. I have had a very productive three days in Washington. The main objective for my visit to Washington was to follow up on President Bush’s extremely successful visit to India this month. Of course the civil nuclear agreement was one of the important subjects that I had to take up, but in addition to that, there are a number of other areas where we need to take our relationship forward and in that connection I would like to mention that I had meetings this morning with the Under
Secretary of the Department of Commerce, Mr. McCormick. As you know, with him, I head the High Technology Co-operation Group. We also talked about the economic dialogue between our two countries. Also the plans for holding a United States – India Investment Summit later on during the year, probably towards the end of the year.

I also had a meeting with Mr. David Garman, who is the Undersecretary in the Department of Energy. As you know, in addition to the Civil Nuclear Energy Cooperation agreement, we have a very broad ranging cooperation in the energy field. We have agreed, for example, to be partners in the Future-gen Project which is a research project devoted to creating technology for a zero emission, cold based thermal plant. We are talking about the exploitation of gas hydrates in off shore areas. We are looking at heat/cold technology. We are also talking about the sub fuel areas like the hydrogen fueled economy. So there is a very broad ranging energy relationship that is developing between the two countries and one of the very important objectives of this visit was to try and take that forward. At the Department of State as you know, I had two or three important sessions with my counterpart Mr. Nicholas Burns. There was also a meeting with Secretary of State, Condoleezza Rice.

In these meetings we of course took stock of where we were, especially with regards to the Civil Nuclear Energy Agreement. I was given an assessment by my U.S. interlocutors as to what is the current state of play after the legislation has been now put on the table in the office in the congress. A general sense that was given to me was that in the United States Congress there was great and wide spread support involving India and United States partnership. There is very strong support for the economic relationship as well as the science and technology relationship and the energy relationship. As far as the concerns that are there, they relate to, as we know, to the non proliferation idea; Whether or not this agreement would in any way undermine the objective of non proliferation. So, we took stock of where we were with regards to Civil Nuclear Energy Cooperation Agreement. We have also been provided a draft of the Civil Nuclear Energy agreement, the bilateral agreement and that of course will require further examination on our part. We will be engaging in negotiations on that at an appropriate time.

Taking the assessment from the administration, yesterday I spent most of the time on the hill and met a number of Congressmen. These meetings were extremely useful. The meetings included Chairman Henry
Hide of the House International Relations Committee, Senator Joseph Biden who is the ranking democrat in the Senate Foreign Relations Committee, representative Tom Lantos who is the ranking democrat on the house side, Senator Obama who is also on the Foreign Relations Committee and Congressman Ackerman, Wilson and Eni Faleomavaega. In all these meetings again what really impressed me was as the administration has pointed out to us that there is very strong support for the India - United States partnership. All the Congressmen I met said that they saw a great future in the India - United States relationship. They were very excited by the very broad ranging relationship which is emerging and they were very pleasantly surprised at how quickly transformation in the relationship has come about. So this was a running theme in virtually every meeting that I had at Capitol Hill.

There was a point made: While everyone recognizes the importance of this Civil Nuclear Energy deal, there should be a debate about the various aspects of this proposed agreement. I pointed out that it was quite normal to have a debate on such an important issue. I also conveyed to them that I had just come from India where, in fact, a very intense debate has been raging over this agreement for the past several weeks. So we are not surprised that there is debate and we are not surprised that there are questions that may be raised, clarifications which may be sought. But the most important thing is that we believe that we have very satisfactory answers to the questions that have been raised or the other concerns that have been expressed. So after these meetings, I feel very encouraged that once this agreement goes through in a sense of debate and discussion what will actually emerge is a much stronger support for this initiative.

Some people refer to the fact that this seems to be quite a major departure in our relationship, and I pointed out the fact that there are several major departures in our relationship. This was just one of the other major departures. I also pointed out that in looking at this agreement, we should put it in the context of the overall India – United States relationship, and I think that just this aspect was appreciated by all the interlocutors whom I met.

So all in all, this has been a very productive visit, as I said, and I go back with a much better sense of where we stand on the agreement. I also had an opportunity to touch base with my other interlocutors on some other very important aspects of our relationship, as I mentioned to you, on the
nergy side, on the economic and commercial side, and in the coming months we will see very great things happening in the bilateral relationship. Thank you very much.

**Question:** You met Mr. Henry Hyde and Tom Lantos, and Mr. Hyde is someone, while introducing the deal on behalf of the president has said that he may have to have certain possible conditions, and your diplomatic vis a vis has said that the ideas are fine if they could strengthen the agreement. If you could speak to that, what Mr. Hide gave you a sense of what these ideas are, you did say that you were encouraged and also Mr. Lantos’s continuing conversation on Iran. On the Senate side you met with two of the Democrats, two of the Democrats who could probably make a difference, but none of the Democrats have still co-sponsored the legislation, it has been just a few Republicans, if that’s the kind of sense got from Barrack Obama and Joe Biden.

**Foreign Secretary Shyam Saran:** That’s a tall order. I think I am lost somewhere. First of all, let me say that none of the meetings I went into a negotiation war, in the sense that this, unless this is researched it will not receive support, or this particular aspect should be added. Nobody in fact referred to that. What people did say was that they attached great importance to India – United States relationship. They also appreciate that this particular agreement is very important. But they have some concerns. Those concerns relate to for example non proliferation. What would it do to the non proliferation regime? In some cases there was a sense: Does this mean that India’s strategic program will somehow get a boost? So there were general concerns of this kind expressed. Nobody mentioned to me that they were contemplating any amendments or contemplating improvements. They did say that this is something that is important and requires debate, which I conceded immediately, because I think that in democracies there should be debate. As far as those concerns that have been raised, I gave them our perspective. I do not believe that this undermines in anyway our goal of promoting non proliferation. I pointed out India’s long standing record of restraint, of responsibility and therefore, there should not be any apprehensions of this kind.

I would also like to mention that these are early days yet. Whether or not there would be co-sponsors from the democratic side or not, I think results we have is - yes, there would be, as we go further into the debate.

**Question:** And did you .... Lantos’s concerns on Iran?
Foreign Secretary Shyam Saran: The concern expressed is about the visit to one of the Southern Indian Ports, and somehow, somebody has given the impression that India has engaged in training Iranian Navy, or there was some exercise which took place, which was completely misleading. This was one of several courtesy visits which take place from countries all over the globe. This was an Iranian naval training ship which made a port call which is a very normal activity, and so I, so I pointed out to Mr. Lantos that such apprehensions were completely misplaced.

Question: Also about Iran. Was there any concern raised by members of Congress or the Indian Administration about energy links between India and Iran? Never came up?

Foreign Secretary Shyam Saran: They never came up in the discussions I had.

Question: India applied for membership to the Nuclear Suppliers Group (NSG) more than a year ago and subsequently there was a visit by NSG Troika to Delhi sometime at the end of 2004. At what stage is this application?

Foreign Secretary Shyam Saran: There is no application from India to join the NSG

Question: But the visits of the Troika...

Foreign Secretary Shyam Saran: We have been having visits from the Troika for the informal exchange of views, but that doesn’t lead to our applying to the NSG.

Question: This debate on the nuclear agreement here in United States, seems to also be getting mired in the domestic political debate. Congressmen are looking to the Congressional re-election this year, and the Democrats are looking at candidates for 2008. Supposing this drags on, what kind of time frame is India thinking of stretching towards United States Congress legislation on the nuclear deal and assuming that it is not ratified, how does that impact the bilateral relationship which is strengthening right now?

Foreign Secretary Shyam Saran: As I mentioned to you, whether it was a Congressman from the Democratic side, or the Republican side, across the political spectrum here, there is very strong support for the India - United States partnership. Even with regard to the Civil Nuclear
Energy co-operation agreement. I also pointed out to some of my interlocutors that this was not something which had been sort of just pulled out as a rabbit out of a hat. This is really the culmination of a process which has straddled both Democratic as well as Republican administrations. So there is ownership of this process by both the parties. I think that we feel this particular bi-partisan consensus which is behind the India – United States partnership is something that will also apply to the Civil Nuclear Energy Agreement. And I have also pointed out to my interlocutors that the Indo United States Nuclear Agreement should be seen as part and parcel of the much larger relationship which has developed between the two countries. It should not be taken out in isolation. So I am encouraged by the fact that there is such strong support on both sides for developing this relationship, and I see no reason why only the Civil Nuclear deal should be a casualty in terms of parties and politics. With regard to the timeline, obviously we would like this to be done as quickly as possible, but I have no means of knowing how the political processes here will work themselves out, so let us remain optimistic and hope that this will happen as early as possible.

Lastly, what would happen if this does not go through? As I think I pointed out in the talk that I gave to the Heritage Foundation, that the India - United States relationship is very broad. It encompasses many areas of interaction in which considerable progress is already being made, so if this deal does not come through it is not as if everything else will fall by the wayside, but there is not doubt about the fact that because of the intense focus on this agreement, and because it has sort of come to symbolize the new partnership between India and the United States, obviously if it does not go through, there will be a loss in terms of the expectations which have been built up, the kind of enthusiasm which has been built up. There will be a loss. We should be cognoscent of that.

Question: I believe India has the bragging rights in Washington for having the largest caucus of some 180 lawmakers. Isn't it astonishing that so few lawmakers have come forward to support this thing, even from the India caucus? Particularly after you have mentioned that this is the child of two administrations which has come through after several years of discussion – It’s almost as if nobody wants to be associated with this. Why is that?

Foreign Secretary Shyam Saran: Number one, I don’t have that impression that nobody wants to be associated with this deal. I think that
we have to meet with the members of the caucus and explain to them the importance of this deal, and I see no reason why we cannot mobilize enough support for this deal. So we are working on them. My visits have been part of that process, so give us time.

**Question:** You said that debate should be encouraged on this nuclear deal, but both sides effectively have closed the doors to any revamping of the frame of the agreement which they say is very complexly built in a very compact space.

**Foreign Secretary Shyam Saran:** Yes that's true. I have already pointed out that what we have right now has emerged from exceedingly complex and tough negotiations. Therefore there is a very, very delicate state of balance. Now if you start making revisions and changes that balance is likely to be offset. So considering the fact that so much time and energy has been spent in reaching this point, I think that should be appreciated and the concerns which have been expressed in the congress, if those concerns are successfully met and answered, I think the deal should go ahead as it is.

**Question:** You did say that your visit here was very productive and from here on the debates and discussions are only going to be intensified. Now do you think that there would be a possibility of you having to come back again and speak with people on the Hill to clarify any further doubts that might come up as these debates go on, or are you fairly…?

**Foreign Secretary Shyam Saran:** I like coming to Washington so… (Laughter). We will wait and see. I would not like to say that another round is necessary. If it is necessary, and if I feel that it will be useful for me to come again, I will.

**Question:** I am sure you are aware that the Pentagon recently completed a mass review called the Quadrennial Defense Review and then just a few weeks ago White House put out the National Security Strategy. Both these documents referred to “countries at a strategic crossroad” and they include India in that category of countries, and Russia and China being the other two. They also make the statement that the United States can shape the choice of these countries. I am wondering whether you agree with the notion that the United States can “shape the strategies” of countries like India.

**Foreign Secretary Shyam Saran:** Well let me say categorically that the only country that will shape India’s strategy is India itself. However, we
do believe that choices that India will make or actions that India will take in its own best interest, given its own assessment of the global situation will in certain cases be in certain cases, convergent to the United States interest. Now in those areas, we can work together. But inevitably there will be areas where interests are differences in perception, but that is normal. But in balance it would appear that there are greater areas of convergence emerging between the two sides and we can work together on those areas.

**Question:** What is your overall sense about the concerns and misgivings of lawmakers? Is it psychological or is it focused more on specific details?

**Foreign Secretary Shyam Saran:** No specific details were mentioned. As I said, the focus was on non-proliferation. That there is a global non-proliferation regime and it has been an article of the faith for the United States to support that regime all these years, and would this agreement in some way or other undermine that regime. That is one of the most important concerns. And the second is whether or not this agreement would in some way lead to expansion of India’s nuclear weapons program in a manner that might have other implications.

**Question:** There are concerns, but these concerns could possibly turn round into conditions. One gets that impression from speaking to the lawmakers from both Senate and Congress. In that scenario, would the Government of India be willing to compromise and reconsider, or would you stick to the original draft of the agreement?

**Foreign Secretary Shyam Saran:** As I mentioned time and again, what has emerged out of these negotiations has been a very delicate balance. We have been through extraordinarily difficult and complex agreements, I should know, because I have been involved in these negotiations, and therefore I would very strongly hope that that balance is not disturbed.

Thank you very much ladies and gentlemen.
411. Media briefing by Official Spokesperson on the visit of the U. S Assistant Secretary of State Richard Boucher.

New Delhi, April 7, 2006.

- Richard Boucher, Assistant Secretary for South and Central Asia in the US State Department is currently on an official visit to India.

- He has held talks on Indo-US bilateral relations with Dr. S. Jaishankar, Joint Secretary (AMS) in the Ministry of External Affairs. There was also an exchange on regional issues over lunch with Joint Secretaries heading the Northern, Eurasia, PAI and BSM Divisions.

- The Assistant Secretary called on the Foreign Secretary and had an exchange of views on the current consideration of India-US nuclear cooperation in the US Congress. They also reviewed progress in other important areas of cooperation between the two countries as a follow-up to President Bush’s landmark visit to India in March this year.

412. Response of Official Spokesperson to a question regarding a statement by US Assistant Secretary of State Richard Boucher.

New Delhi, April 8, 2006.

Our attention has been drawn to a speech by the visiting US Assistant Secretary for South and Central Asian Affairs, Richard Boucher, who is quoted as stating that “we have pushed for India to further define its ‘minimum credible deterrent’.”

1. The US Assistant Secretary while speaking at the meeting organized by the Confederation of Indian Industry (CII) wanted India to “further define its minimum credible deterrence.” At the Congressional hearing in Washington on April 5, Secretary of State Condoleezza Rice noted that “the Indian strategic programme is more a factor of the military and political factors which India confronts”. On April 8 itself Foreign Secretary told a TV channel (NDTV); “What our credible minimum deterrent would be is really for India to decide” and added that India had on various occasions pointed out this to the US. “Certainly there is no responsibility on part of India to declare what its minimum deterrent is,” he said. He further clarified that when Mr. Boucher met him on April 7 he did not raise this issue with him. “We have
Credible minimum deterrent is a self-explanatory term that requires no further elucidation. It reflects our response to a dynamic and changing security environment. We note that at a recent US Congressional hearing, US Secretary of State Rice herself noted that the Indian strategic programme is more a factor of the military and political factors which India confronts.

2. On the same day in Washington Kapil Sibal Minister for Science and Technology asserted that US acceptance of India’s nuclear separation plan was “a recognition of our security concerns.” He said the designation of 22 nuclear reactors for military purposes thus out of IAEA ambit was to meet “security needs”. The India – US civilian nuclear initiative was “neither about non-proliferation nor proliferation, it is simply about helping India overcome its energy needs for peaceful purposes,” he said. “If our record as being a country outside the NPT is better than the record of countries that are part of the NPT, I don’t see how anybody can object to our being concerned about our security,” Mr. Sibal said, adding “just as we understand the security concerns of the US, so does Washington realize India’s security needs.”
Clarification provided by Official Spokesperson to the media report that India would sign an agreement with USA on ‘no further nuclear testing’.

New Delhi, April 17, 2006.

Question: It has been reported that India is having an agreement with the US on ‘no further nuclear testing’…

Official Spokesperson: You are referring to the Telegraph report? As far as that is concerned let me clarify the position. USA has shared with India some weeks ago a preliminary draft Agreement on the Indo-US civil nuclear cooperation under article 123 of the US Atomic Energy Act. Among the elements suggested by the United States there is a reference to cooperation being discontinued were India to detonate a nuclear explosive device. In the preliminary discussions on these elements so far India has already conveyed to the United States that such a provision has no place in the proposed bilateral agreement and that India is bound only by what is contained in the July 18 Joint Statement, that is continuing its commitment to a unilateral moratorium on nuclear testing. India’s position on CTBT, that you mentioned, is well known and continues to remain valid.

1. According to media report the US had handed over to the Foreign Secretary draft of an agreement which inter alia included a clause stating that the United States would cease all cooperation with India in civilian nuclear energy if India decided to detonate a nuclear explosive device. The relevant clause No 11 read: “If India at any time, following entry into force of this agreement detonates a nuclear explosive device, the US will have the same rights as specified in Paragraph 1.” And this explained that the US “shall have the rights to cease further cooperation” with India if New Delhi violated its commitments.

The 7th meeting of the India-US Joint Working Group on Counterterrorism, which was established in 2000, was held in Washington on April 19-20, 2006. The Indian delegation was led by Ambassador K.C. Singh, Additional Secretary (International Organizations), Ministry of External Affairs, Government of India, The U.S. delegation was led by Ambassador Henry Crumpton, Coordinator for Counterterrorism, Department of State.

The discussions advanced US-India cooperation in areas of common concern such as bioterrorism, aviation security, advancements in biometrics, cyber-security and terrorism, WMD-terrorism, terrorist finance and money laundering and violent extremism. Both sides agreed to share information on a real time basis, respond to counterterrorism assistance requests expeditiously and collaborate to upgrade preparedness and capability to deal with acts of terrorism.

Joint counterterrorism exercises will be scheduled and specific training programs in priority areas developed. The delegations also focused on improving the current mechanisms for extradition and legal cooperation.

The two sides agreed that the next session of the Joint Working Group would be held in New Delhi later this year.

415. Press Report of Foreign Secretary Shyam Saran’s briefing after his meeting with the U. S. Under Secretary of State Nicholas Burns on the question of Civilian Nuclear Energy agreement with the United States.

Foreign Secretary Shyam Saran acknowledged that the India – US civilian nuclear deal is taking longer than New Delhi would have liked but said that the outlook was “positive”. Speaking to media persons after discussions with U. S. Under Secretary of State Nicholas Burns in London on May 25, Shyam Saran said that there was still work to be done. He suggested that India had done its bit ad the ball was in the U. S. court now.
Asked whether there was concern in India that the deal was taking too long to be approved by the American Congress, Mr. Saran said the “worry” was on both sides. Both were keen on seeing it through as quickly as possible and in fact, India had done most of the work it was obliged to do as part of the agreement. Mr. Saran said it was now for the U. S. Congress to approve the deal and reiterated, in response to a question, that it was the “responsibility” of the U. S. government to make sure that it was approved by Congress.

He said Mr. Burns gave him an account of where the process now stood in Congress. “Our sense is that while work still remains to be done, the outlook is positive,” he added, pointing that both sides saw the “merit” of wrapping up the deal quickly. Asked whether India had a timeframe in mind, Mr. Saran said he wished it was in “our” hands to do it. He emphasized that the U. S. Government was committed to the deal and the efforts was now on to see that the necessary legislation was adopted by Congress “sooner than later”. There was a “general perception” on both sides that they were on track. Mr. Saran said that he gave to Mr. Burns India’s own draft on bilateral nuclear cooperation but did not give details. Other issues that came up for discussion included Iran, Sri Lanka, and the situation in Nepal. On Iran, Mr. Saran said India wanted the controversy over Tehran’s nuclear programme to be settled through diplomatic means and warned that a confrontation would have “disastrous consequences”.

---

1. Meanwhile IAEA chief El Baradei hailed India – US nuclear deal as a “win-win” proposition and expressed the hope that the Congress will see it way to approve it. “We have a number of very important issues on our agenda, ranging from making sure that India become a partner in the non-proliferation framework. To me, this is a win-win agreement and I hope it will be also for the Congress.” This came up in the discussions between El Baradei and Condoleezza Rice in Washington. Ms. Rice who confirmed the discussions said “we have also talked about the U.S. – India deal and Dr. El Baradei has been very supportive—not because he is trying to intervene in U. S. - India relations, but as we have talked about it because we need to broaden our concept of non-proliferation regime to deal with such anomalies like the Indian situation.”
416. Response of Official Spokesperson to questions on US readiness to join in the dialogue between EU-3 and Iran.

New Delhi, June 1, 2006.

India has all along advocated that issues relating to Iran’s nuclear programme ought to be resolved through dialogue and that confrontation should be avoided. Against this background, the readiness of the US to join in the dialogue between EU-3 and Iran, which India has all along supported, is to be welcomed.

We believe that with all sides displaying flexibility and adopting a constructive and forward looking approach, the on-going diplomatic efforts should reach successful conclusion.

New Delhi, June 6, 2006.

Government’s attention has been drawn to the US State Department’s Report on Trafficking in Persons, which has placed India in the Tier 2 Watch List.

The US has a practice of issuing global reports on a wide variety of subjects, from human rights and religious freedom, to narcotics and trafficking in persons. Such reports are, by their very nature based on US viewpoints and preconceptions. On the subject of trafficking in persons, as with other areas, we reject judgemental and prescriptive approach by a foreign Government.

India and the United States have an ongoing dialogue on the subject of trafficking in persons and other trans-national challenges. These subjects are also discussed in the Global Issues Forum. The approach of the 2006 Report does not reflect the active cooperation on this subject between the two countries. It certainly is not helpful to furthering our dialogue in that regard.
Response of Official Spokesperson to questions on talks with the US on Civil Nuclear Cooperation.

New Delhi, June 15, 2006.

**Question:** Talks between India and US concluded yesterday. What was the result?

**Official Spokesperson:** Yes, the talks were held for three days. Let me give you the framework of these discussions. If you recall, Foreign Secretary had met his counterpart Nicholas Burns in London in end-May 2006 for a review of progress in finalizing the Indo-US Civil Nuclear Cooperation Agreement. The Indian side had also provided its counter-draft of the “123 Agreement” or the bilateral agreement on peaceful uses of nuclear energy, for consideration of the US side. This was in response to an initial draft text that had been handed over to the Indian side, during Foreign Secretary’s earlier visit to Washington in March 2006.

The Indian counter-draft takes as its staring point, the Indo-US Joint Statement of July 18, 2006 and the elements contained in India’s Separation Plan, which was laid on the table of the Houses of Parliament on May 11.

Foreign Secretary and Mr. Burns had agreed in London that a US negotiating team would visit India at an early date in order to carry forward our negotiations on the draft with a view to achieving an agreed text. This would enable the two sides to conclude the “123 Agreement” once the US Congress has passed appropriate legislation enabling full civilian nuclear energy cooperation between India and the US.

The two negotiating teams held intensive discussions over three days, from June 12-14, 2006 and were able to narrow their differences on a number of draft provisions of the proposed agreement. As a result of their detailed discussions, the officials of the two sides now have a much better appreciation of their respective legal and political positions. Pending issues will now require internal consultations on both sides with a view to jointly formulating a draft which meets with the approval of both sides.

The two sides have agreed to meet at an early date once their follow-up internal consultations have been completed.

It may be mentioned that the two sides covered a range of issues in their discussions in a forward looking and constructive spirit. The progress we have achieved so far makes us confident that we would be able to
arrive at a text that conforms to our well-known positions, which are reflected in the July 18 Joint Statement and in India’s Separation Plan.

**Question:** Since you talked of political issues, was there any sense of when the Congress is going to bring any statement or legislation...

**Official Spokesperson:** That is a matter of the US Congress and its own dynamics. I was talking of the political and legal issues involved in the draft 123 Agreement.

---

**419. India - US Joint Statement following the third Ministerial level meeting of the Trade Policy Forum.**

**Washington (D.C), June 22, 2006.**

India’s Minister of Commerce and Industry Kamal Nath and U.S. Trade Representative Susan C. Schwab met for the third Ministerial-level meeting of the U.S.-India Trade Policy Forum (TPF). Minister Nath and Ambassador Schwab agreed on a number of initiatives to strengthen and deepen the bilateral trading relationship. With India already among the United States’ fastest growing major bilateral trade relationships, the cooperative steps endorsed today will serve to further trade and investment, with the goal of doubling two-way trade in three years. They also discussed the Doha negotiations, agreeing that the U.S. and India share a commitment to conclude a successful, far reaching Doha Round by the end of 2006.

“Under the Trade Policy Forum we continue to make steady progress on key issues to improve the bilateral trade and investment climate,” said Ambassador Schwab. “We remain committed to doubling bilateral trade over the next three years, and improving the regulatory, customs and intellectual property protection climate is key.”

Minister Nath said, “The Trade Policy Forum has, within a short time emerged as a very effective forum for the two sides to enhance bilateral trade and investment. It was encouraging to see both sides engaged in intensive discussions at the expert level on a variety of issues of mutual interest.”

The United States and India agreed to a number of actions, including:
Cooperation on an action plan and technical assistance to promote innovation, creativity and technological advancement by providing a vibrant intellectual property rights regime;

Initiation of a Bilateral Infrastructure Investment Program that will focus on identifying investment opportunities, incentives and challenges in key infrastructural sectors;

Various steps to address several sanitary and phytosanitary (SPS) issues including Indian mango exports to the United States and U.S. almond, wax covered fruit and wheat exports to India;

Progress toward selecting participants for a working group on legal services to discuss market access and other relevant issues;

Continued discussions on tariff structures to facilitate wine and spirits trade as well as discussions on emissions standards for large motorcycles; and

The creation of a senior-level private sector adjunct to the Trade Policy Forum that will provide strategic direction, input and support to the TPF.

BACKGROUND

The US-India Trade Policy Forum is an institutional arrangement between the two governments to discuss trade and investment issues. The Trade Policy Forum (TPF) was launched during the visit of Indian Prime Minister Dr. Manmohan Singh to Washington, DC, in July 2005. The inaugural, ministerial session of the Forum was held in November 2005 in New Delhi, the second session was in February 2006 in Washington, DC. Additional meetings at the Deputy level were held in March 2006 in New Delhi and again when Deputy USTR Karan Bhatia led a 25 member US Government delegation to New Delhi on May 30, 2006.

“There have been a number of US Senators and Congressmen who have expressed different views concerning the Indo-US nuclear agreement.

We have been negotiating the nuclear deal with the US Administration on the premise that it is an agreement about civil nuclear energy cooperation on the basis of mutual benefit. The agreement would have to be based on the reciprocal commitments incorporated in the Indo-US Joint Statement of July 18, 2005 and the elements contained in India’s Separation Plan, which was submitted to Parliament on March 11, 2006. This is our understanding with the US Administration, which has the responsibility for bringing about a change in US legislation to enable full civil nuclear energy cooperation between our two countries.”

**421. Speech of Foreign Secretary: “The India-US Joint Statement of July 18, 2005 - A Year Later”: at India Habitat Centre, New Delhi.**

New Delhi, July 14, 2006.

1. I am delighted to join you this evening to share my thoughts on a theme that has been the focus of considerable debate in both India and the US over the last year. At the outset, let me express my thanks to the India Habitat Centre, Shri Lieberhan and to Commodore Uday Bhaskar for their initiative in organising this event today. On my part, I will try and share my assessment with this distinguished gathering in as candid a manner as possible and later, I would be happy to answer any queries you may have.

2. It is a little unusual to revisit a Joint Statement agreed upon a year ago. More often than not, Joint Statements recede rapidly from public memory. I can think of very few other Joint Statements that have been dissected in as much detail as this one. What is so special about the July 18 Joint Statement that it warrants an analysis even a year later? Is it in any way a defining document of our contemporary
diplomacy? Does it have a significance beyond the subject matter it addresses? Does it depart from our orthodox positions on important issues? The answer is yes to all of the above queries, in greater or lesser measure.

3. Before we get to the Joint Statement itself, let us spend a little time understanding how we got there in the first place. July 18, 2005 was not an overnight happening. Nor was it conceived in a vacuum. It, in fact, represents a culmination of steps, spanning a number of Governments, and made possible as a result of the trust and confidence that had been incrementally built up between the two countries. The broad range of cooperation that it offers reflects a larger engagement over many years between our two societies.

4. There were six key developments that merged to create the basis for July 18. First and foremost, an India growing at the rate of 8% per annum has led to a very different attitude on the part of the US towards India. This may be stating the obvious, but I am not sure how many of us appreciate its consequences. Ambassador Blackwill’s erstwhile description of our trade being “as flat as a chapatti” is now a distant memory. Bilateral trade, in fact, has been growing at a healthy 20% plus annually and we are now the fastest growing export market for the US. An India of high growth rates creates new demands for goods, services and technologies that a global trading nation like the US cannot ignore. The experience of companies already operating in India has been positive, as indeed has been their profitability. Those already in are expanding, while those still not in are wondering why not. Global US companies now require a mandatory ‘India strategy’. Consider the impact, for example, of the enormous orders placed on the US aircraft industry last year by a number of our airlines. Turn your attention then to investment opportunities, and recall some of the recently announced decisions by IBM, Microsoft, Cisco Systems or Intel. Read the latest BRICs monthly report by Goldman Sachs. It has taken us some time, but we have clearly caught America’s attention; and not merely as an investment destination. There is recognition that India too can produce world-class companies — in manufacturing as well as in services. If The Economist leads with ‘Can India Fly?’, that is a message in itself. India is today being invariably equated with China in terms of potential and possibilities.
5. Let me turn to a second significant element of the new calculus — India as a nuclear weapon power. 35 years ago, Richard Nixon justified the US opening to China on the grounds that you cannot ignore 600 million people with nuclear weapons. Double the number and you have an even stronger rationale. This has made a compelling case for greater engagement with India. We saw that manifested, for example, in the ‘Next Steps in Strategic Partnership’ initiative of January 2004. The acknowledgement, on July 18, of India as a country with an impeccable record in non-proliferation of weapons of mass destruction and as a responsible state with advanced nuclear technology should be noted in this context.

6. A third development is the larger strategic canvas that argues in favour of raising the quality of Indo-US ties. As a pluralistic and secular democracy in a world where fundamentalist violence is on the rise, India’s emergence as a model of stability, modernization and predictability, has begun to impact on international consciousness. To this has been added a healthy respect for our capabilities that have been steadily growing across the board. We have become a major interlocutor on key global challenges — from environment and pandemics, to counter-terrorism and disaster relief. The US strategic assessment of India is articulated both in its National Security Strategy of March 2006 and the Quadrennial Defence Review Report of February 2006. The NSS speaks of India as a major power shouldering global obligations. Similarly, the QDR refers to India, along with China and Russia, as key factors in determining the international security environment for the 21st Century.

7. A fourth element in the US approach to India has been its awareness of the potential that our partnership holds in respect of the knowledge economy. Interestingly, the majority of our current initiatives, in one form or the other, are strongly knowledge-based — be it S&T, agriculture research, energy issues, space, atomic energy, health or high-technology. We have heard from the highest levels in the US how much importance they attach to cooperating with a society that produces graduates by the millions and engineers, technicians and doctors by the hundreds of thousands. There is growing awareness as well of our demographic advantages. We note this in the US National Intelligence Council’s 2020 report on Mapping the Global Future that argues that new service sector jobs in India (and China) could exceed availability of similar skills in advanced
economies. The report predicts that this would lead to a surge in technology applications, which in turn could lead to new international alignments. If 100 of the ‘Fortune 500’ companies have R&D centers in India, if Boeing wishes to undertake joint research with the Indian Institute of Science, if ISRO carries US payloads on its Chandrayaan Mission or if our scientists are invited to play a role in cutting edge international research projects - these are anecdotal examples of a much broader trend.

8. A fifth point to be noted is that these developments are part and parcel of India opening up to the world. The impact of India integrating with the global economy cannot be underestimated, least of all on its leading player, the United States. This is not just in terms of business, services or even connectivity. Indians are making a visible impact on the rest of the world and certainly in the US, this is symbolised by the success of the Indian-American community. Two million Indians have not only established an enviable professional reputation but have a median income 50% more than the national average. Their image, over the years, has helped to shape ours.

9. And sixth, as an open society and an open economy, the growth in India’s capabilities has been welcomed by the world. Our record and our worldview give no cause for apprehension in any quarter. At the same time, there is no reason to remind us that we have an obligation to the world from which we all draw sustenance. Even in the past, when our resources were less, India has contributed towards addressing global challenges to the best of its ability, including the use of its military forces in UN peacekeeping missions. As the 2004-05 tsunami relief efforts demonstrated, this approach stands reaffirmed with greater capacities at our command. That was why the July 18 Joint Statement envisaged the establishment of a global partnership as part of the transformation of our ties.

10. Against this background, as we envisage a new basis for greater cooperation with the US, it is legitimate to ask: what is in it for us? How do we stand to gain by enhancing our ties with the US? It is equally reasonable to ponder whether in the light of past experience, are we widening our risk exposure in striving for better ties? There are good answers to these questions, many of which have been articulated as part of our domestic political discourse. The United States is clearly the pre-eminent power of our times. There can be
no argument that better relations with the US are in our national interest. It is our largest trade partner, investor and technology source. Equally important, as the pre-eminent power, the US helps shape global sentiment. From the economic perspective, initiatives with the US can advance our development processes and accelerate our growth rate. Technologically, a partnership with the US would enormously benefit a country like India whose future is so tied to the knowledge and service industries. There are strong security convergences between us, be it on terrorism, maritime security or other threats from non-State actors. From the political perspective, stronger ties make themselves positively felt on our relations with third countries. Domestically, India is seeking to leapfrog in its development process. In foreign policy, we require adjustments in the international order so that our aspirations are accommodated. A stronger relationship with the US can offer benefits on both fronts. The challenge to Indian diplomacy, of course, is to maximise the gains while minimising the costs, and create an international environment that is supportive of our developmental goals.

11. It was with this approach that we embarked on a process that led to the July 18 Joint Statement. In doing so, we sought to synchronize our diplomacy much more closely with the changes that have taken place in India over the last 15 years. Our objective was that the India, which was making such strenuous efforts domestically to catch up with the world, should craft a foreign policy which supported and acted as a multiplier on those efforts. Rising expectations are as relevant to diplomacy as they are to impelling an improvement in the quality of life. India’s diplomats have to do their share in ensuring, for example, that our energy security was effectively met. It was important that we were not left out of global research initiatives. Or that our access to global natural resources was not hindered in any way. And, that the interests of our industry and our services sector were well served by creating expanding opportunities for our talented professionals worldwide. Because, in the US, we were engaged a global power, this provided us an opportunity to review our established positions. We asked ourselves whether these positions are as relevant as they were earlier. Were there new opportunities that we may have ignored? Were there emerging Indian strengths that could be leveraged? What is it that we are now able to bring to the table that we could not earlier? Were we getting the best returns for our efforts?
July 18, in retrospect, marks our determination to put behind us an era of defensive diplomacy. If India is to become a credible candidate for permanent membership of the Security Council, then we must adjust our traditional positions. Our foreign policy must reflect our national aspirations and express our confidence as an emerging global player. We cannot duck the difficult issues of the day and display an aversion to risk taking. July 18 is, in some ways, an effort to usher in a change in mindset.

The Joint Statement covers three clusters of issues: (i) those that directly address our national development goals and reflect the leveraging of Indo-US ties to advance those goals, (ii) the dismantling of the technology denial regimes that constrain Indo-US cooperation and the medium term emergence of India as the leading knowledge-enabled power, and (iii) the key global responsibilities that India and the United States need to address. I will also include, in the course of this summary, those initiatives announced during President Bush’s visit on 2 March 2006 that represent a further development of the July 18 understanding.

The three key constraints on the further growth of the Indian economy are that we are woefully behind in our lack of a modern infrastructure, in agricultural productivity and commerce, and in energy security. These three concerns form the tripod on which the Indo-US developmental agenda currently rests. On July 18, we agreed to set up a CEOs Forum to harness private sector energies and ideas to revitalize our economic cooperation. The very composition of this Forum, that includes ten key CEOs from each country, reflects how differently we regard each other today. The Forum has presented its report to the Prime Minister and President Bush in March 2006 and its recommendations are currently being examined. Infrastructure modernization through a dedicated fund is among them, and we should expect to hear more from the planned Investment Summit at the end of the year.

In agriculture, we have embarked on an ambitious knowledge initiative that seeks to revive the traditions of the Green Revolution by linking our educational institutions. We have, by now, worked out a detailed three-year work-plan that covers agricultural education and training, biotechnology, water management, and food processing and agro-business.
16. On energy, our dialogue has catalyzed activity across the entire spectrum. As a result of post-July 18 discussions, we have been able to finalise Indian participation in the FutureGen Initiative dealing with clean coal and the Integrated Ocean Drilling Programme, dealing with gas hydrates. A number of energy efficiency activities and programmes have also been initiated. Indian participation in the ITER fusion energy initiative was another important result of the July 18 commitments, catapulting India into a select group of advanced countries, namely the EU, France, Russia, China, Japan and South Korea to collaborate in an area of science of enormous promise for meeting our future energy needs.

17. The dismantling of the technology denial regimes, led by the US — but imposed by other advanced countries as well — has been a key objective of the Indo-US nuclear deal. For historical reasons, what began as the imposition of limitations on India’s access to nuclear technology and equipment after our PNE in 1974, steadily expanded over the ensuing years to cover virtually the entire high-tech field on grounds that most advanced technologies have dual uses. You would recall that in the eighties, a Cray supercomputer India had sought from the US for better weather forecasting was denied, since it could conceivably be used in our nuclear programme as well. In dismantling these denial regimes and enabling our business and industry to access dual use technologies, the nuclear deal will really be the key which will open this lock. While it may be true that the denial of such technologies has, in some cases, encouraged indigenous innovation and led to outstanding achievements by our scientists, an increasingly globalised and competitive world demands a different response. As the Indian economy matures, and moves towards an ever more sophisticated knowledge and technology driven society, the importance of dismantling these technology denial regimes cannot be under estimated. This will also create opportunities for our scientists and technologists to benefit from regular interaction with their counterparts in the rest of the world and bring to the table their own considerable achievements in several fields.

18. Even as we seek to put the era of technology denial behind us, parallel initiatives have been undertaken to build a more durable S&T partnership between us. In July 2005, we agreed to sign an S&T framework agreement, which was done that September, along with a protocol that addressed IPR generation issues. By March
2006, we were ready to announce a Bi-National S&T Commission that is now under implementation. We need to nourish exchanges and build capacities that would strengthen technology innovation and applications. As many of you are aware, India lags far behind in its generation of patents, which is the hallmark of a competitive industrial culture. Certainly, participation in international S&T exchanges and initiatives, not only with the US, but other partners as well, will be one of the key priorities for our diplomacy.

19. Global issues of common concern are an intrinsic aspect of the emerging Indo-US strategic partnership. An important initiative was the promotion of democratic capacities in emerging democracies. India has valuable experience through the ITEC programme in building civic society and contributing to the strengthening of democratic institutions. We have joined the US to launch the UN Democracy Fund last September. Combating terrorism is another important shared goal and we have ongoing exchanges and activities in that direction. Pandemics are yet another common challenge that we have chosen to address and our cooperation on HIV/AIDS and avian flu has yielded beneficial results. We have also agreed upon a disaster relief initiative and a maritime cooperation framework that draws upon the new Defence Framework that we finalized in June 2005.

20. Understandably, the nuclear issue has dominated the public discourse on Indo-US relations since July 2005 and I would like to take this opportunity to share our reading of the state of play. In March 2006, we completed discussions with the US Government on a range of issues including supply assurances, that allowed us to finalise the Separation Plan. These discussions were based on a clear understanding that the nuclear deal was about civil nuclear energy cooperation between India and the US and not about India’s strategic programme. In pursuing such cooperation, India was, however, willing to provide assurances that what it received as part of international cooperation from the US and other partners would not be diverted to third countries, and would not be diverted to non-civilian uses within India. We reject any limitation on our strategic programme, but we do not expect our partners to, in any way, assist that programme either. Our part of commitments having been delivered upon, the US is now engaged in adjusting its laws to enable full civil nuclear energy cooperation with India. Bills were introduced to that effect in both the House and the Senate at the instance of the
US Administration. These were considered by the Committees concerned and fresh texts were finally marked up, by the House Committee on 27 June and the Senate Committee on 29 June, 2006. The Bills are likely to be voted upon by the two chambers in the coming days, and if all goes well, we may see the text of final legislation fairly soon.

21. It would be inappropriate for us to comment on the legislation before the final text emerges. We are, however, quite clear that India cannot undertake any obligations going beyond the July 18 Joint Statement and the Separation Plan. Obviously, the legislation will be the product of an American political process and could well include some references that we may find unpalatable. While making our views quite clear, we must focus on what is essential. India’s obligations will only be those that we undertake in the bilateral 123 cooperation agreement and the safeguards arrangement with IAEA. When we assess the legislation, we should scrutinize carefully the binding provisions that will find their way into the 123 agreement and safeguards arrangement. The bottom line, I repeat, is that these provisions should measure up to the yardsticks of 18 July and 2 March.

22. It has been asked whether our strategic options are not being restricted as a result of the July 18 commitment to continue our voluntary moratorium. Let me make it quite clear that this is not a new commitment, even in a bilateral understanding. In 1998, in the UN General Assembly, we had expressed a willingness not only to continue the moratorium but also to move towards its de jure formalisation. The Separation Plan has also been depicted by some analysts as eroding the vigour of our strategic deterrent. I can only state that those who are in a position to make an informed judgment on the needs of our credible minimum deterrent have concluded otherwise.

23. The July 18 Joint Statement has been followed by vigorous diplomatic engagement with our other major partners. That should set to rest any anxiety that the gains in Indo-US relations are at the expense of other ties. With the European Union, we had an extraordinarily successful summit last September in New Delhi that witnessed substantive progress on energy, trade, political, consular and cultural issues. India’s participation in the Galileo project and support for our membership of ITER were its high watermarks. With Russia, our
traditional exchanges have intensified further, including enhanced cooperation in defence, energy and trade sectors. The progress on GLONASS was a noteworthy development. With China, we have moved forward in the establishment of a strategic and cooperative partnership for peace and prosperity. Exchanges in defence have built mutual trust and confidence and Raksha Mantri’s recent visit was very successful. Our bilateral trade volume has grown rapidly and should cross $20 billion by 2008. With Japan, our economic and strategic engagements have intensified during the last year. Our growing partnership with Brazil and South Africa reflects the higher profile, of our interactions with Latin America and Africa. In South Asia itself, the beneficial effects of a confident and self-assured India have made themselves apparent, including in the dialogue with Pakistan. Our partnerships with South East Asia and West Asia have gained as well. As you are all aware, the King of Saudi Arabia paid a state visit earlier this year, after half a century.

24. July 18 is a milestone in the road to realize our aspirations. It is something of a departure from the beaten track, but one necessary for the times. Our mission is to realize its full potential, and by doing so, I am confident that we will create new opportunities to advance our national goals.

FF FFF

422. Meeting between US President Bush and Prime Minister Dr. Manmohan Singh at St. Petersburg.

St. Petersburg, July 17, 2006.

THE PRESIDENT: Thanks for coming over this morning. It’s always a pleasure to be in your company. He’s one of the really true gentlemen in the international arena. He’s got a wonderful heart. I know you’ve been through difficult times, and America mourns the loss of innocent life as a result of the terrorist attacks.

One of the issues that we’ve been discussing here at the G8 is the recent terrorist activities in the Middle East. Yesterday, in working with other members of the G8, we cobbled together a very important statement. I’m most pleased that the leaders came together to say, look, we condemn violence, we honor innocent life.
However, for the first time we’ve really begun to address with clarity the root causes of the conflict, the recent conflict in the Middle East, and that is terrorist activity — namely, Hezbollah, that’s housed and encouraged by Syria, financed by Iran, are making these moves to stop the progress of peace. We would hope that by addressing the conditions of this violence we could get to a situation where there was calm. We’re going to work hard as nations to address the root cause. Yesterday was an important statement. The reason I tell you that is that you’ll find nations willing to work together for the common good here.

I also look forward to discussing with you our trade matters, as well as the wonderful deal you and I negotiated. Our Congress is working on that important piece of legislation that will encourage and allow India and U.S. cooperation, and I’m optimistic that we will get that passed.

At any rate, welcome, and thank you, sir. I’d be glad for you to make some comments.

PRIME MINISTER SINGH: Mr. President, thank you very much on your words of sympathy and support in the wake of these terrible terrorist acts in Mumbai and (inaudible). I’ve just been there — 200 people, innocent men, women and children have perished, about 800 citizens injured — (inaudible) — in various hospitals. It was such a moving sight, people without limbs and always sad. And I’m grateful to you, you gave me help from Germany and I deeply appreciate your generosity. Your kindness, your sympathy and support mean a great deal to me, President. (Inaudible.)

Sir, your visit to our country in March, and in the company of the First Lady was a landmark. (Inaudible) are working together between our two countries. And I’m glad to report to you that we are making progress in all directions. India was the idea of getting the business community of our two countries engaged. You suggested we set up a CEOs forum. That forum is very active. It has produced a number of good ideas. We’ll follow it up by an investor’s summit towards the end of the year.

Sir, India is still very largely an agricultural country; 65 percent of all people live on land. And the initiative that you took, and (inaudible) put also your ideas and knowledge initiated a second green revolution in our country. We have now agreed on a road map. We have identified sectors like agricultural education, food processing, water management, (inaudible) as the key areas which will be the focus of this agriculture initiative. It means a great deal to us, to build a new trust to agricultural innovation, agricultural productivity. I thank your active support.
In science and technology also, Mr. President, we have now agreed to work together and invite national (inaudible) and science and technology coordinators (inaudible). They have no outline, a roadmap. And I am very happy that both our administrations are working very hard to give concrete meaning and substance to our cooperation.

And I thank you, Mr. President, for your efforts and Secretary Rice’s effort in getting the legislation with regard to nuclear cooperation moving through the Congress. We have (inaudible) really intensely what has been written into these bills. And I must confess to you that while we deeply appreciate your personal involvement, Secretary Rice’s (inaudible) — she appeared before the Congress — there are some concerns which (inaudible) — believe our parliament. And like you, we are a democracy; we have a parliament which is very jealous of what we do and what we don’t do. And we have -- these concerns are made, and I sincerely hope that we can find constructive solutions to all these problems. So this truly is landmark cooperation.

I recall it — I said to you that, Mr. President, that this is a (inaudible) consideration of India and the U.S. (Inaudible).

423. Reaction of Official Spokesperson to a question on passage of the bill authorizing the US Administration to engage in full civil nuclear energy cooperation between India and the US.

The passage of the bill authorizing the US Administration to engage in full civil nuclear energy cooperation between India and the US, by a large margin of bipartisan votes in the US House of Representatives, demonstrates the broad political consensus in the US in the promotion of Indo-US relations in all fields including in the field of civil nuclear energy cooperation. We must, nevertheless, await the finalized text of the legislation which will emerge after a Senate vote and the reconciliation of the two Bills, before we are able to comment on its contents. As has already been stated, there are concerns that we have conveyed to the United States to ensure that the final legislation must not deviate from the parameters of the Indo-US Joint Statement of July 18, 2005 and the Separation Plan.
424. **Briefing Points by Official Spokesperson on the visit of US Assistant Secretary of State Richard Boucher.**

**New Delhi, August 7, 2006.**

- Joint Secretary (Americas) and Assistant Secretary Richard Boucher held their regular consultations on 7th August 2006. Their discussions included a review of the follow up action to the 2 March 2006 and 18 July 2005 Joint Statements. They noted that considerable progress has been made on economic, trade, agriculture, energy, S&T and defence cooperation areas outlined in those statements. Views were also exchanged on regional issues of mutual concern.

- Assistant Secretary Boucher also had a meeting with Joint Secretary (Eurasia). He will be calling on Foreign Secretary later in the afternoon.

425. **Response of Official Spokesperson to questions about imposition of sanctions on two Indian companies by US Government.**

**New Delhi, August 7, 2006.**

We have seen the reports about imposition of sanctions on two Indian companies viz. Balaji Amines and Prachi Poly Products. The sanctions imposed by the US Government on the two Indian firms relate to transfer of some chemicals to Iran. Our preliminary assessment is that the transfer of such chemicals was not in violation of our regulations or our international obligations. Government of India’s commitment to prevent onward proliferation is second to none. We have instituted a rigorous system of export controls and our track record in this regard is well known. India is working with the international community including with the US as a partner against proliferation. In this context the imposition of sanctions by the US on our firms, which is our view have not acted in violation of our laws or regulations, is not justified.

At the invitation of U.S. Treasury Under Secretary Timothy D. Adams, Indian Ministry of Finance Department of Economic Affairs Secretary, Ashok Jha, led an official delegation to Washington to co-chair the sub-cabinet meeting of the India-U.S. Financial and Economic Forum, which is part of the broader U.S.-India Economic Dialogue. The delegations discussed a number of key issues including developments in the global economy, policy responses to high oil prices, U.S. and Indian leadership in the WTO Doha Development Round negotiations, strengthening India’s physical and financial infrastructure, and collective efforts to combat money laundering and the financing of terrorism.

Besides senior officials from the Ministry of Finance, Government of India and the U.S. Treasury Department, representatives from the Board of Governors of the Federal Reserve System, Office of the Comptroller of the Currency, U.S. Securities and Exchange Commission, National Association of Insurance Commissioners, Commodity Futures Trading Commission, Federal Deposit Insurance Corporation, Reserve Bank of India, and the Securities and Exchange Board of India, participated in the discussion. In the meeting, the discussions focused on:

Global Economic Issues
The delegations discussed a range of issues facing the global economy. They noted that global growth remains exceptionally robust, the highest in three decades, despite continued high oil prices. The Indian economy remains strong, driven by domestic demand. Growth in the U.S. remains solid, in part due to sustained productivity growth, and fiscal consolidation is ahead of schedule. The two sides noted risks to the global economy which include the impact of sustained high oil prices and a disorderly adjustment of unbalanced growth in many parts of the world. India and the United States reiterated that a successful conclusion of the WTO Doha Development Round negotiations remains essential to promote global trade and growth.

Financial Sector and Infrastructure Issues
The delegations discussed the role of sound financial institutions and efficient financial markets in mobilizing savings and allocating resources
efficiently to generate growth and help alleviate poverty. Both sides highlighted the important role that foreign direct investment can play in strengthening the productive base of the economy. The two sides discussed the role of financial sector development in stimulating resources for long-term financing.

U.S. officials discussed recent developments in the U.S. banking industry, as well as regulatory approaches to complex financial transactions and risk management. The U.S. side also emphasized the contribution of financial sector liberalization to growth and stressed the gains that could be achieved by greater foreign participation in the banking, insurance, and pension sectors, and in capital markets. The Indian side described the recent steps taken to liberalize the banking and insurance sectors and emphasized the importance of a calibrated, gradual approach to these issues, consistent with their overall policy objectives.

Indian officials affirmed their commitment to infrastructure development as a means of reducing poverty and expanding economic opportunities. They acknowledged the importance of encouraging private financing for infrastructure to complement public expenditure. Key components include an improved investment climate, financial sector development to enhance long-term financing, and improved project design.

The two sides acknowledged the importance of actions to detect and disrupt money laundering and financing of terrorism. They discussed implementation and enforcement of anti-money laundering laws within the financial sector. The delegations agreed to continue to work together to identify and freeze terrorist assets.
I am delighted to be in your midst this evening. We are in a period of good cheer in India on the eve of our annual festive season, when we will be celebrating festivals of many great faiths which have enriched our heritage over the centuries and millennia. The holy month of Ramzan has just begun today. We marked the beginning of the Jewish New Year yesterday. Amongst you I see so many faces of diverse India, and I feel as if I am at home.

When I look at you and meet other fellow Indians from different parts of the world, I often ask myself - what is it about us that we are able to adapt ourselves so easily to different societies, traditions and cultures? Why is it possible for Indians to make different places their home and to make themselves liked and admired? How is it that they make such meaningful contributions to the societies in which they live? In short, how is it so effortless for them to adapt seamlessly to the globalised world and yet retain their links over generations with the glorious civilizational heritage of India? While I do not always look at antiquity to seek answers to the riddles of contemporary times, I am convinced that many of the answers to the success of Indians at home and abroad lie in our history and culture.

It is indeed a matter of great pride for us that we represent a great and composite civilization that defines our “Indianness” and our worldview. Our thinking is shaped by a history in which practically all the communities of world have thrived. India has always been a mosaic of cultures and an open society. Great religions have been born in our nation, and many from outside have been absorbed and internalised. Not many people are aware that while the great religions of the East - Hinduism, Buddhism, Sikhism, Jainism and many others - grew from the soil of India, the faiths from West Asia were also embraced with equal respect and reverence. It was as early as the middle of the first century AD that Christianity came to India; that is about a thousand years before it took root in most of Europe. Jewish people lived in India with dignity and respect for centuries. Islam came first to India with Arab traders and enriched our civilization. Zoroastrians sought refuge and thrived in India for centuries. This rich heritage became an integral part of our identity. In contemporary India, it is reflected in our commitment to secularism, which is enshrined in our Constitution.
In a world of conflict and bigotry, India provides an alternative model of peaceful co-existence. In an age in which people talk of the end of history and a clash of civilizations, Gandhi’s message is that civilizations enrich each other by overlapping and interacting.

Another characteristic of the globalized world is the exchange of goods, services and people amongst the different parts of the world. It is a reflection of the logic of business and industry that they will move to wherever it is profitable and economical. This was also happening thousands of years ago. A spice route traveled north through Jammu & Kashmir in India to Central Asia to connect with the great Silk Route from China to Europe. Similarly, ships from the Malabar coast of India sailed to the Gulf and the Red Sea for further movement to the west. Ships from the eastern coast of India also traveled great distances to the Far East for trade and other exchanges. This overland and maritime trade connected our land with distant peoples and cultures. India has never been an insular land unused to trade and commerce with others. It is, therefore, not surprising that we see merit today in an increasingly inter-dependent and globalised world. The logic of our economic reforms was to strengthen ourselves to compete, and by competing, further strengthen our nation.

I am aware that you represent the fastest growing and third most populous Asian group in the United States. Indian-Americans are the best educated and amongst the wealthiest ethnic groups in this country. The largest number of foreign students in US universities is from India. Thousands of prominent Indian-American scientists, faculty members and research workers are contributing to the intellectual capital in American universities and other institutions. Indian-Americans have made their mark in areas of high technology and innovation, real estate development, journalism, legal practice, literature, music and art. They run a number of successful small businesses, head some large US corporations and control about 40% of hotels in this country. With over 40,000 doctors and more than 12,000 medical students and interns, Indian Americans contribute significantly to healthcare in the United States.

You have the great advantage of coming from an open and pluralist society and making another free society your home. And openness is the basis of human creativity. Democracies sometimes seem noisy and divisive, but they are ultimately the true guarantee of unity and equitable development. Free and fair elections in India over the last six decades and the steady strengthening of democratic institutions have ingrained a tradition
of democracy in such a large and diverse a country – a phenomenon which is unparalleled and unprecedented in world history. A society as diverse as India can only be governed as a democratic, federal and pluralist polity. Since, for most of you, your country of origin and your country of adoption are both democracies, I am sure that your participation, as good American citizens, in the political process of this country will serve your and this nation’s long-term interests. I have thus been heartened to learn of contribution of the Indian-American community to political life of the United States. I am sure that, with each passing year, your participation in the political processes at the local, state and national level, will continue to increase and be commensurate with your contributions to other aspects of life in the United States.

The Indian-American community has rightly earned for itself an extraordinary place in this country. We rejoice in your well-being and take great pride in your achievements. As you have flourished, so has the relationship between India and the United States. Today, we stand on the cusp of a great transformation in this relationship. Your role in this process is vital. Your creativity, knowledge and work ethic have helped to transform the image of India in American minds. In a relatively short span of time, you have traversed a vast distance. The rise of the influence of the Indian-American community has occurred in parallel with the strategic, economic and technological resurgence of India. India has experienced a noticeable growth of its GDP in the last few years, which reached 7.5% in fiscal 2004 and 8.4% in fiscal 2005. Our economy continues to remain buoyant and we hope to have sustained growth at higher levels. In the first four months of fiscal 2006, our exports have grown by nearly 34%. During the first quarter of 2006-07, foreign direct investment inflows into India have grown 47%. India’s industrial growth was 12.4% in July 2006; the fastest in the past decade. It will perhaps not be inaccurate to say that India is today the fastest growing democracy in the world.

India has, and will, continue to be a responsible member of the international community. We are one of the largest troop contributing countries to UN peacekeeping operations. Within our capabilities, we have always responded to the need for relief and supplies in case of natural disasters in any part of the globe. Even as a country affected by the tsunami of December 2004, we were the first to provide help to neighbours such as Sri Lanka, Maldives and Indonesia. When Hurricane Katrina caused death and devastation in the United States, we made a modest contribution in money and relief supplies flown aboard Indian Air Force aircraft as a gesture
of our sympathy and solidarity with the American people. When an earthquake struck the northern Indian state of Jammu and Kashmir and parts of Pakistan, we offered assistance to our neighbour.

India has also been a responsible member of the international community in other ways. Despite being the first Asian country to have built a nuclear reactor indigenously and then developing full nuclear fuel cycle activities, we have always used these sensitive technologies with great caution and care. There has not been even one case of outward nuclear proliferation from India to any country. This is the premise on which the international community today is prepared to cooperate with us in developing civil nuclear technology.

Our initiatives have not been limited to that of civil nuclear cooperation. Let us look at some developments in the last 18 months alone. During this period, India and the United States signed an Open Skies Agreement to increase the number of flights between our countries and enhance trade and tourism. Since then the number of flights have increased and non-stop flights between the two countries have commenced. We concluded the Next Steps in Strategic Partnership, or the NSSP process. This has made licensing procedures for export of sensitive goods and technologies from the United States to India easier and more predictable. We have established an Energy Dialogue that aims at boosting cooperation across the whole spectrum of energy sources. We have established a new Economic Dialogue between our two Governments, and launched a CEO's Forum representing top Indian and US companies. The New Framework for the India-US Defense Relationship that Defence Secretary Rumsfeld and I concluded in June last year laid the foundation for cooperation, including in defence industry. India and the United States have also signed a bilateral Science and Technology Agreement and established a Bi-National Science and Technology Commission with the objective of vastly enhancing cooperation in basic and applied sciences. We have decided to cooperate in the field of space. We have established a Knowledge Initiative in Agriculture aimed at generating a second Green Revolution in India. We have also taken various India-US initiatives which will have a positive global impact - in promotion of democracy, in natural disaster management, in meeting the challenges caused by pandemics like HIV/AIDS and avian flu and in other fields. Hence growing India-US cooperation will not only be of benefit to India and the USA but have a positive global impact.
I am confident that this trend of closer India-US partnership will strengthen in the coming years. India will continue its rise in the comity of nations, and so will the role of the Indian American community within the United States. The future of India and that of the Indian-American community within the United States thus appear to be intrinsically inter-twined. To respond to the widespread desire of this vibrant and dynamic community to have greater formal links with the land of its origin, our Government took the initiative of creating a separate Ministry of Overseas Indian Affairs and also put in place the overseas citizenship scheme.

I appreciate the fact that you have come from far and near to attend this reception. I extend my warm greetings and good wishes to all of you who are present this evening, as well as to all resident Indian citizens and Indian-Americans. We look forward to continuing to work together even more closely with you in forging a deeper partnership between India and the United States, based on the abiding values cherished by both our countries as well as our common concerns and intersecting interests.

I thank you for gracing this occasion with your presence and giving me a patient hearing.

428. Address by Defence Minister Pranab Mukherjee, on “India’s Strategic Perspective” at Harvard University. September 25, 2006.

Thank you very much for the kind introduction. I would like to thank Prof. Sugata Bose for the invitation to address this learned gathering at Harvard.

Ladies and Gentlemen, I am honoured to be amongst this distinguished gathering at America’s oldest and most prestigious university, and to share some thoughts with you on India’s strategic environment and perspectives. Harvard is a great centre of global intellectual discourse; it has given great personalities and great ideas; great citizens, great teachers and six Presidents to the United States of America. What better place, therefore, could we have to reflect on this important theme!

We live in a time of monumental changes in international affairs. Our strategic environment is in a constant flux. The era of cold war has
come to an end. The Soviet Union has disintegrated and the socialist world stands transformed. A new Russia, along with a series of new countries, has emerged in the former socialist space. India, China, and several other medium powers are rapidly growing in capabilities and global influence. Globalization is underway in every continent, knitting together industries and economies across nations and creating a radically different order. The rise of religious fundamentalism and terrorism is today one of the gravest security challenges to states, economies, peoples and democratic polities. It has been starkly etched in our memory by the recent Bombay blasts, the London, Madrid and Bali bombings, and, of course, the traumatic terrorist attack on the United States five years ago.

There have been huge gains from globalization, information revolution, and steady democratization through the latter half of the 20th century. At the same time there are also enormous pressures on states, both from within and without, because of the simultaneous pulls of these forces. The nature of threats and security discourse are, as a result, radically changing; nontraditional security issues are occupying increasingly greater space in policy formulation, even as the challenge of securing states and the democratic political order from armed fundamentalist and separatist actors confronts us as never before.

India’s strategic perspectives have been shaped by its long civilizational history, its geography, its culture and geopolitical realities. The country is both a continental and maritime nation with a territory of over 3 million sq kms, a land frontier of 15,000 kms, a coastline of 7,500 kms, and a population of 1.1 billion, the second largest in the world. Its location at the base of continental Asia and the top of the Indian Ocean gives it a vantage point in relation to both West, Central, continental and South-East Asia, and the littoral States of the Indian Ocean from East Africa to Indonesia. India’s projection into this vast and critically important waterway gives it a major stake in its security and stability.

Traditionally, India has been an open society. It has received and absorbed major influences from outside, like Islam and Christianity, and radiated its composite cultural influences outward. India’s civilization, along with the Arab, Persian and Sinic civilizations, influenced many parts of Asia. India has also been a well-spring of human intellectual and spiritual achievement, and the source of the great religious schools of Hinduism and Buddhism. As I have said earlier to another audience in this country, it is customary to talk of strategic perspectives in terms of ‘hard’ power;
however, our strategic perspectives need to be viewed also in terms of India’s ‘soft power’ – those of religion, spirituality, culture and commerce; and in recent times, the political thought and peaceful strategy of Mahatma Gandhi. The coincidence of the commemoration of the 9/11 terrorist attacks in the United States earlier this month with the 100th anniversary of the launching of Gandhi’s non-violent civil disobedience movement in South Africa on September 11, 1906, represented a juxtaposition of diametrically opposing ideologies.

Developments from the 17th century onwards fundamentally altered the traditional orientations and moorings of India’s relations with the outside world. European mercantilism evolved into the maritime domination of the Indian Ocean, changing the very nature of political, trade and cultural ties between India and its regional maritime partners to the east and the west. Further north, in mainland Asia, it introduced relationships of domination and rivalry between imperial powers, where earlier only local powers played out their dynastic destinies. The legacy left behind for independent India was in some ways negative and disruptive.

Several developments in the 20th century, with their roots in imperial history, affected India’s traditional relationships with its neighbourhood. Perhaps the most fateful was the partition of India. Viewed from this perspective, it can be argued that the first half of 20th century was a decided aberration in the evolution of India’s historical and traditional relationship with the outside world. The historical experience of the British East India Company, and imperialism in general, left India suspicious of foreign trade. Following India’s independence, this led to efforts to build a self-reliant and autarkic economy, wary of deeper engagement with the world economy. The model stood us in good stead for a while. It helped set up a robust technical and industrial base. Self-reliance gave us self-confidence. This provided the base for the accelerated growth and increasing globalization of the Indian economy since the early ‘90s when sweeping reforms were adopted by the then Congress Government.

While colonialism disrupted our traditional links, the cold war delayed their restoration. The fall of the Berlin Wall and the end of the cold war has provided an opportunity to recover our traditional, historical linkages that had become weak during the cold war years, and to rediscover our interest in a wider and increasingly integrated global community.

While the growing economic strength of India has attracted worldwide attention, this endeavour is still a work in process. India’s major priority
today is economic growth, which is inclusive and benefits all sections of society. For most of its history, India has been an open society and an open economy. This is the path it wishes to pursue in the future. India’s aspiration for continuing economic growth would depend on a secure and stable environment and its own ability to integrate with the global economy.

In the broad context of this nation-building endeavour, let me touch upon some of our principal security challenges.

The first is the challenge of terrorism. India has suffered the most gruesome and repeated acts of terror since the late 1970s – first in Punjab, then in Jammu & Kashmir, and in recent years in many other parts of our country. The Bombay blasts of 1993 were the original act of mass terrorism. India’s places of worship, symbols of its rapid economic growth, its prestigious centres of learning, popular shopping complexes and symbols of its vibrant democracy have all been systematically targeted. While in most parts of the world, terrorism is perpetrated by non state actors, in India it is sponsored and supported by state agencies from a hostile neighbourhood.

Second, since its independence, India has had to fight three wars on its western borders and one in the north. India continues to face a proxy war from across its western border. Its unresolved territorial and boundary issues with neighbours persist.

Third, India has been placed in an arc of proliferation activity running from east to west, which has had an adverse impact on our security situation. The possibility of linkages between proliferation of weapons of mass destruction and terrorism, which has emerged in recent years, is of great concern for us.

Fourth, the fragile political fabric of states in India’s neighbourhood is a source of continuing anxiety. Pakistan remains a nursery of global terrorism. Post 9/11, Pakistan has reportedly helped the United States to fight terrorism along its western border with Afghanistan. But it has done precious little to dismantle the infrastructure of terrorism on its eastern border with India. Many terrorists roam freely in Pakistan. India has repeatedly stated that, in order to proceed with the ongoing peace-process between the two countries, Pakistan must implement the solemn assurances it has given to stop all cross-border terrorism. This has not yet happened. In this context, we welcome the positive results of the recent summit between Prime Minister, Dr. Manmohan Singh, and President
Musharraf in Havana, in particular the decision to set up an institutional mechanism to tackle cross-border terrorism. If Pakistan claims to be a frontline state in the global war against terrorism, then it must do much more to dismantle the infrastructure of terrorism still intact on its soil.

On India’s northern border, Nepal has been ravaged by Maoist insurgency for many years. Mounting religious extremism in Bangladesh, coupled with illegal migrations, are a source of considerable concern for India. In Sri Lanka, the two decade old ethnic strife has grave political, economic and humanitarian ramifications for India. Thus, developments in these states may pose risks to India and undermine the stable and peaceful environment that India seeks for its own economic growth.

Fifth, India sits astride the Indian Ocean. The security of the entire region from East Africa to Southeast Asia is increasingly challenged by the rising incidence of violent conflict, growing fundamentalism and terrorism. It is also affected by trafficking in arms, drugs and human beings as well as piracy. 60,000 ships carry merchandise and energy from the Gulf to East Asia, through the Straits of Malacca, every year. Therefore, maritime security is a major preoccupation for India as it is for other littoral states in the Indian Ocean.

Sixth, with the Indian economy set on a higher growth trajectory, its demand for energy is, and will be, increasing rapidly. In this context, energy security and security of sea lanes of communication, on which India’s trade is dependent, assume significance.

In order to meet the challenges that India faces, it has been focusing on inclusive economic development, strengthening of its defence to deter aggression; ensuring stability and peace in its neighbourhood; developing friendly and mutually beneficial ties in its extended neighbourhood like West, Central and Southeast Asia; and establishing strategic partnerships with all the major actors in the world, particularly the United States, European Union, Russia, China and Japan. In order to deepen its engagement with Asia-Pacific and ASEAN, it is also pursuing its ‘Look East Policy’.

India seeks a stable and strong neighbourhood. Its vision of South Asia is a peaceful and prosperous region where its neighbours see it as an economic opportunity and a partner in progress.

India’s nuclear deterrence is a measure of self-defence in a hostile and nuclearised environment. Its nuclear doctrine emphasizes no first use,
non-use against non-weapon states, voluntary moratorium on testing and a credible minimum deterrence. India has been, and remains, a staunch advocate of nuclear disarmament and it has had an impeccable track record in the area of non-proliferation.

Beyond its immediate neighbourhood, India has been seeking to establish strong strategic partnerships with the major global players. The end of the cold war, and also its bipolar geopolitical architecture, has enabled India to pursue engagement with all great powers, specially with the United States.

China is India’s largest neighbour and developing stable and cooperative relations with it is a high priority for India’s foreign and security policy. With frequent high-level exchanges, including my recent visit to China, the process of building trust and understanding has gained momentum, and our cooperation has diversified across a wide range of areas. Our relations with China have reached a certain degree of maturity. We are both keen to build significant ties and identify newer areas of mutually beneficial cooperation. At the same time, we are striving to address our differences in a proactive and purposive manner, without allowing them to affect the comprehensive development of our relationship. As China grows in power and influence, it will shape our strategic environment in a variety of ways. India’s policymakers understand this reality and would evolve policy options to deal with the emerging situation. We look forward to intensifying the positive aspects in our relations where President Hu Jintao pays a visit to India later this year.

Our ties with Japan are also expanding rapidly. Japan plays a major role in our development programmes through its Overseas Development Agency. In recent years we have stepped up our defence and security ties, based on the premise that all countries and regions need to cooperate actively in order to tackle effectively the evolving global challenges. I have recently been to Japan, where I had the opportunity to discuss in detail a range of issues with my counterpart and some of his senior Cabinet colleagues.

India has an institutionalised summit level dialogue with ASEAN, with which it has land and maritime boundaries. India’s trade, security and energy ties with East Asia and the Pacific region are set to grow rapidly in the coming years. Southeast Asia and China are already two of our largest trading partners in this region, and South Korea and Japan among the leading investors in our country.
Building strong and cooperative relations with the United States is one of the fundamental goals of India’s current foreign and security policy. The growing warmth between the two countries is based on shared values and common concerns. The US remains the dominant global power and central to peace, prosperity and security of the world. India believes that the emerging ties with the US in trade, investments, technology, defence, energy, nonproliferation, and counter-terrorism would have a major impact not only in the bilateral domain but also in a global perspective. Our partnership will also help shape global norms and institutions that are universally accepted and democratic. Clearly, Indo-US relations are set to emerge as one of the fundamental inter-state ties of the 21st century.

In this context, the decision of President Bush and Prime Minister Dr. Manmohan Singh, to address the shared challenge of energy security by engaging in full civil nuclear energy cooperation, is a welcome departure from the era of technology denial regimes imposed on India. India is now seen as a partner and not as a target of global non-proliferation efforts, precisely because its impeccable record in this regard is now fully acknowledged.

Our traditionally close ties with Russia have withstood the test of time. We greatly value our strategic partnership with that country, based on shared interests, mutual trust and benefit. The strength and stability of our relations are manifested by long standing defence cooperation and common concerns on issues such as international terrorism.

The European Union has emerged as another major global partner with which India has a summit level dialogue, based on strong shared interests across a range of political, security and economic issues. We look forward to the steady strengthening of our close cooperation with our European partners, including France, Germany and the United Kingdom.

Ladies & gentlemen, India has been fighting terrorism for many years. This challenge is complex on account of cross-border linkages. However, India rejects any linkage between terrorism and religion. India’s secular Constitution, entitles all its citizens the freedom of religion. Personal laws on marriage and inheritance are based on traditional religious codes. Our Constitution draws a clear line between state and religion. The tradition of religious tolerance and moderation remains strong in Indian society, despite occasional aberrations. In the struggle to contain and eliminate terrorism, India has sought to strike a balance between security imperatives and political measures. The cost to our security forces has been high but the
political battle will be won. It is our belief that both in Jammu & Kashmir and in the North-East, stability, peace and reconciliation would be restored in the coming years.

Much will depend on the success of the ongoing peace process with Pakistan and its approach towards support to terrorism and irregular warfare both in India and Afghanistan. International pressure would have to remain on Pakistan to change, and to reform and democratize its polity. This would clearly be among the foremost tasks in international security in the coming years, and an area in which India hopes to work closely with other partners.

India has willingly contributed its naval capabilities to help safeguard the vital sea lines of communications that stretch from the Gulf of Hormuz to the strategic Malacca Straits. Towards this objective, we are actively cooperating with friendly navies in the region. India has backed a major security initiative to monitor shipping, mooted jointly by Indonesia, Singapore and Malaysia to enforce “compulsory pilotage” of the channel against pirates and maritime terror. India, as a major user-state, is willing to assist in the project and share its expertise in maritime security with nations of the region. With more than 50 per cent of India’s maritime trade passing through the channel, security of the Straits is important for us.

India has always sought a nuclear weapon free world and is determined to work with others to achieve the objective of universal and non-discriminatory nuclear disarmament. As this is a long term objective, India is willing to take interim steps to reduce the risks of nuclear weapons. At the current UNGA session, India will present a comprehensive paper on nuclear disarmament, calling for early multilateral negotiations on a universal and non-discriminatory treaty banning the development, production and use of nuclear weapons, on the model of the Chemical Weapons Convention.

India does not harbour any territorial ambitions. It does not wish to impose any ideology on others, except to advocate peaceful co-existence and tolerance. India’s strong military, its maritime capabilities, and its nuclear deterrent are for self-defence and its highest national priority is rapid economic development. India is an open society and an open economy, and a vibrant democracy that is rapidly integrating with the world. It has the second largest Muslim population in the world that has rejected distorted notions of jihad and begun to embrace modernity like all other sections of Indian society. All the different segments of India’s society remain wedded to the ideals of secularism. India aspires to play an increasingly larger role
in ensuring peace and prosperity in its neighbourhood, in a new and resurgent Asia that is likely to eventually emerge as the world’s economic and strategic hub.

Before concluding, I take this opportunity to express my sincere appreciation of the efforts being made by Harvard University to further promote studies on India and thereby contribute to closer understanding and stronger relations between India and the United States of America.

[Thank you for giving me a patient hearing].

429. Speech by Defence Minister Pranab Mukherjee at the inauguration of 3rd Indo-US Economic Summit.

New Delhi, September 13, 2006.

I am delighted to be here to address this august gathering of Indian and American Corporates, policy makers and thinkers. I congratulate the Indo-American Chamber of Commerce for this initiative that brings the businessmen of the two countries face to face and facilitates trade between the two countries. The Chamber is unique in having not just large enterprises but also small and medium businesses amongst its members. The small and medium businesses, after all, are the backbone of any economy. The summit provides an important forum for not just businessmen of all hues to talk to each other, but also to get their views and perspectives across to government. Many of you have literally travelled half-way across the globe to attend this summit. I urge you to make good every opportunity to catalyse joint ventures and partnerships. That we take this summit seriously is evident from the presence of so many of our premier economic thinkers, financial experts and policy makers amongst the audience. The theme for this year is “Accelerating Growth”. That, I think, amply reflects the current state of Indo-US economic relations. According to available statistics, US exports to India registered a growth of 23.3 % during January-May 2006. India’s exports to the United States in the same period registered a growth of 19 %. In just the first five months of this year, Indo-US bilateral trade amounted to approximately US $ 12 billion.

It is well set to overtake last year’s figure of $26.8 billion, which itself
was up from $21.6 billion in 2004. Our aim is to double bilateral trade to $60 billion within the next three years. It is an ambitious target. But not a difficult task, given the range of opportunities that abound in India, the new areas opening up for investment literally by the day, and reduced government restrictions on Foreign Direct Investment. As far as the conditions for doing business are concerned, a recent article from Wharton Business School concluded that India is a better place for business compared to China in the long run because of the solid underpinnings for economic growth, including “a democratic government, a strong education system, widespread knowledge of English and a deep pool of expatriates experienced in Western businesses.” To that, I would add a vibrant press which keeps the government on its toes. There could be minor hitches in the process of reforms, but as you know only too well, democracy is about checks and balances. Decisions can be taken only after debate and due consideration. Hasty decision making can have its own negative repercussions.

The good news is that mechanisms are in place to identify bottlenecks and removing them. Since the year 2000, when the Indo-US Economic Dialogue was established, a number of commissions and fora have come into existence with the goal of putting business relations onto a higher trajectory. Revitalising economic relations is a priority issue for both the countries as reflected in the Joint Statement signed between our Prime Minister and the US President in July 2005. The objective of setting up a Indo-US CEO Forum, as envisioned in the Joint Statement, was to bring private sector input to government-to-government deliberations. The Forum submitted its report in March of this year during the visit of President Bush. Another important initiative announced by our two governments last year was the establishment of a Trade Policy Forum. The Forum facilitates dialogue in the areas of tariff and non-tariff barriers on industrial products, agriculture, intellectual property rights protection, investment and services. In the year since its inception, three ministerial level meetings and one secretarial level meeting have been held. In the last one, held in Washington in June 2006, it was decided to create a senior-level private sector advisory group to allow for greater interaction between government and private sector trade experts, including from corporations, associations, think tanks and other organizations.

The Trade Policy Forum has proved to be a useful mechanism for removing irritants coming in the way of trade. No doubt, it will become even more effective, with the creation of the advisory group. If trade figures
are any indication, you are already reaping the fruits of these initiatives, with sales of American scientific equipment, coal, silver jewelry, fibre-optic cable, almonds, and power generation equipment sharing a growth of more than 30 percent in 2005. Another sector where there is ample scope for joint ventures is in defence research and production. The Joint statement of July 18, last year, provides for the United States and India to work towards concluding “defense transactions, not solely as ends in themselves, but as a means to strengthen our countries’ security, reinforce our strategic partnership, achieve greater interaction between our armed forces, and build greater understanding between our defense establishments.” And just before the July 18 agreement was reached, I had signed an important defence cooperation agreement with the US government on the above lines. The defence ministry has taken a number of initiatives to energise defence co-production, including opening up of defense production to the Indian private sector with the option of foreign direct investment up to 26 per cent in these companies. There has sometimes been criticism that our defence procurement procedures are time-consuming and opaque. I initiated a policy reforms process two years ago.

Defence Procurement Procedure – 2006 is now a comprehensive document with clearly stated norms and guidelines on ‘Buy’, ‘Buy and Make’ and ‘Make’ procedures. It also includes shipbuilding procedure and Fast Track Procedure for acquisitions. The Offset Policy which was introduced in 2005, is now firmly in position. The long pending request of the Indian industry for a level playing field has also been addressed and necessary orders providing a level playing field have been issued and are now a part of these two documents. With these measures, we have effectively opened the doors for the Indian industry to participate in defence research, development and production. The acquisition of defence equipment is a complex and intricate process. This is necessarily so as defence equipment is expensive involving commitment of substantial public funds. Defence acquisitions, owing to its special features and characteristics, involve a long and deliberate process.

This process is to ensure that the country gets best value for money. To achieve this objective, it is essential that proper procedures for acquisition are laid down and adhered to. These procedures provide the guidelines and norms that would govern the selection of an equipment and its subsequent acquisition. They provide the template against which all steps taken in the acquisition process can be examined for their correctness. Strict adherence to laid down procedures, therefore, ensures
the highest degree of probity and public accountability. It creates the conditions required for transparency, free competition and impartiality. Now all major decisions would be taken simultaneously in a collegiate manner by the Defence Acquisition Council. The generic requirements of the three Services would be placed on the website of the Ministry of Defence to enable vendors to register themselves on the internet. There would be increased transparency in the conduct of field trials. It will be mandatory to sign a pre-contract integrity pact in all contracts over Rs. 100 crores. In 2005, the government came out with a new offset policy which requires that 30 percent of the value of foreign defence contracts over Rs. 300 crores would need to be offset by purchases, investments and transfer of technology to India, to run concurrently with the main contract. That policy has been further amplified in the current set of procedures – a potential vendor now has many more options for fulfilling his offset obligations. He can either carry out direct purchase of goods or execute export orders for defence products, components and services provided by Indian defence industries. Alternatively, offset requirements could also be satisfied through direct foreign investment in Indian defence industries, and even by direct foreign investment in Indian organizations engaged in defence research and development. Roadmap for indirect offsets is also under our consideration.

A Defence Offset Facilitation Agency has been set up, as a single window agency, to facilitate the implementation of the policy. One of the briefs of this Agency will be to assist potential foreign vendors in interfacing with their counterparts in the Indian defence industry for the purpose of identifying potential offset products and projects. With these new and transparent policies in place, my hope is that you will find the defence sector an attractive arena to collaborate and invest in. It is true that the implementation of new policies brings up many problems, and the defence sector has problems that are unique to it, given its size and structure. You have my assurance that timely corrective measures will be taken to smoothen the roll out of the new policy framework. I will welcome suggestions from the industry in this process. Pre-existing barriers and mindsets that came in the way of economic co-operation are in the process of being removed on both sides.

The passage of the Bill on co-operation in the field of civilian nuclear energy by the US Congress would, I believe, benefit the business communities on both sides. Firstly, India is largely dependent on imported oil and gas to meet its energy needs. Our energy consumption levels are going to increase very significantly if we are to maintain a high rate of
economic growth of 8-10 per cent. Conversely, our growth levels could flag if we don’t have access to more than one source of energy. If that were to happen, that could have tremendous side-effects since India is poised to be one of the engines of the world economy in the years ahead. Secondly, there is a large body of restrictions on the US side related to the nuclear issue that forms an invisible barrier to trade and investment on the part of both Indian and American businesses. Particularly so in the areas of high-technology trade and co-operation, so vital to the advancement of the economies of our two countries in the 21st century. The benefits of co-operation, not just in trade, but on the other important issues of our times, are brought home to us day after day, and the governments of the two countries owe it to our two peoples to remove those barriers that come in the way of a better quality of life. Once the US Congress passes the Bill, in the form reflecting the understanding between the two governments, it is my belief and hope that Indo-US economic co-operation will finally come into its own. Current bilateral trade between our two countries is one tenth of the trade between the United States and China. There is no reason why levels of trade between our two countries shouldn’t rise to, and even surpass, those levels. It is my hope that the 3rd Indo-US economic summit will provide a useful forum bringing about awareness of the opportunities for trade between the two countries.

I wish the summit all success. Thank you.

New Delhi, October 5, 2006.

Please See Document No. 180.
431. Press Release of the Ministry of External Affairs on the telephone call from President George W. Bush to Prime Minister Dr. Manmohan Singh.

New Delhi, October 16, 2006.

The Prime Minister received a telephone call from President George W. Bush of the United States this evening. This was an opportunity for both leaders to exchange views on current matters. The issues discussed include the Doha Round of trade negotiations, the India-US Civil Nuclear Cooperation understanding, developments in the region including Pakistan and Afghanistan, and recent developments in North Korea. The conversation lasted about 10 minutes.

432. Telephonic Conversation between Prime Minister Dr. Manmohan Singh and US President George W. Bush.

New Delhi, November 16, 2006.

The Prime Minister had a telephone conversation with President George W. Bush of the United States this afternoon. This was an opportunity for both leaders to exchange views on current matters. They discussed the legislation relating to the India-US Civil Nuclear Cooperation understanding. The Prime Minister expressed appreciation for the President’s commitment to the passage of the legislation and hoped that the Bill in its final form will accommodate India’s stated concerns. The two

1. The next day the US Senate adopted a bill by 85 in favour to 12 against rejecting five killer amendments including one seeking to cap India's fissile material production. On the same day speaking at the Hindustan Times Leadership Summit Prime Minister while welcoming the passage of the bill by the U.S. Senate on the civilian nuclear deal, said there was still a long way to go for the pact to become “a living reality.” Aspects of the two bills passed by the U.S. House of Representatives and the Senate were “not identical,” and the process of reconciling them would “have to take on board our concerns.” “I welcome the decision of the U.S. Senate to approve the bill. Before that, the House of Representatives has done a similar thing,” he said. “But we still have a long way to go before nuclear cooperation between India and the U.S. becomes a living reality.” U.S. President George W. Bush assured him that he would work to ensure that the final version of the legislation was in conformity with the July 18, 2005 agreement and the
leaders expressed satisfaction at the state of bilateral relations between India and the US. The conversation lasted about five minutes.

March 2, 2006 separation plan, Dr. Singh said. On the same day when Prime Minister and President Bush spoke to each other on telephone, President Bush from Singapore said that the U.S.- India Nuclear Cooperation Bill, passed by the Senate, would “further strengthen” the “strategic partnership” between the “two great democracies.” Prior to his departure from Singapore for Hanoi to attend an Asia Pacific Summit, Mr. Bush said he would now “look forward to signing this bill into law soon.” Noting that he “appreciates the Senate’s leadership on this important legislation,” he expected the bill to serve as a “non-proliferation” measure in the present political ambience on the bilateral front. Mr. Bush said: “The United States and India enjoy a strategic partnership based upon common values. Today, the Senate has acted to further strengthen this relationship by passing legislation that will deliver energy, non-proliferation, and trade benefits to the citizens of two great democracies. As India’s economy continues to grow, this partnership will help India meet its energy needs without increasing air pollution and greenhouse gas emissions. It will also help reduce India’s dependence upon imported fossil fuels.” Mr. Bush drew a fine distinction between this bill and the U.S.-India Civil Nuclear Cooperation Agreement that will catalyse the legislation. The bilateral agreement “will bring India into the international nuclear non-proliferation mainstream and will increase the transparency of India’s entire civilian nuclear programme.” As a spin-off, the “historic agreement [also] creates new business opportunities for American companies and enhances our trade relationship” by “increasing India’s demand for civil nuclear technology, fuel, and support services.”

M. R. Srinivasan former Chairman of the Atomic Energy Commission and presently member of the Commission said on Nov. 17 that the Senate passing the bill on India-US civilian nuclear cooperation was “an important development”. He added “we have to wait for the joint House and Senate conference when they will have a reconciliation and common resolution. “Placid Rodriguez, former Director, Indira Gandhi Centre for Atomic Research, Kalapakam also called the Senate resolution a “most timely and welcome development”. “Let us see now what the joint resolution will contain”, he added.

New Delhi, November 17, 2006

1. We welcome the passage of the Bill on Indo-US civil nuclear cooperation in the US Senate by an overwhelming majority. This, undoubtedly, reflects the very broad bipartisan support which this initiative enjoys.¹

2. President Bush and Secretary of State Rice have worked personally to ensure the passage of the Bill and we express our sincere appreciation for their tireless efforts.

3. We now expect that the final version of the legislation, which would emerge after the Joint Conference of the House and Senate, should adhere as closely as possible to the understandings incorporated in the July 18, 2005 Indo-US Joint Statement and the March 2006 Separation Plan, so that full civil nuclear cooperation between India and the US becomes a reality and contributes to India’s energy security.

4. We understand that, as per present indications, the Joint Conference will convene after the passage of the Bill, and the final version will likely come up for a vote by both Houses when they reconvene after the Thanksgiving holidays, on December 4, 2006. We must await the final version before drawing any conclusions on the legislation.

---

¹ A few days earlier in the wake of elections to the Congress in which the Democrats won the majority, External Affairs Minister keeping his fingers crossed said in Kolkata (Nov. 12) that he was hopeful that the country’s nuclear deal with the U.S would be pushed through despite the changes in the composition in the US Congress. “There are political changes in every country but that does not affect international relations which do not depend on a single political party but on relations between the countries (concerned). “The relationship between India and the U.S has been a long one,” he said.
434. Joint Press briefing by Foreign Secretary Shivshankar Menon and U.S. Under Secretary of State for Political Affairs Nicholas Burns.

New Delhi, December 7, 2006.

OFFICIAL SPOKESPERSON (SHRI NAVTEJ SARNA): Good evening to you ladies and gentlemen, and welcome to this joint press interaction. We have here with us Foreign Secretary Mr. Shivshankar Menon and Under Secretary for Political Affairs of the United States Mr. Nicholas Burns. I will first request Foreign Secretary to say a few words followed by Mr. Burns. Then we will take a few questions.

FOREIGN SECRETARY (SHRI SHIVSHANKAR MENON): Good evening ladies and gentlemen. I am very happy to be here with Under Secretary of State Burns.

We have had a very productive day today. We have had a series of talks right through the day where we reviewed the development of our bilateral relations between India and the US. We also discussed regional issues. In the afternoon, he held discussions with PM's Special Envoy Shyam Saran on the civil nuclear agreement that we have between India and the US.

The atmosphere throughout was very positive, very constructive, very forward looking. During the bilateral review we naturally reviewed the state of implementation of the 18th July (2005) and 2nd March (2006) Joint Statements. The last year or so has seen an unprecedented engagement both in terms of depth, in terms of levels, in terms of the wide range of subjects which we have covered between the US and India. So, our job was really quite easy. We noted the progress in all the areas, in trade, in the economy, in energy, in agriculture, IPR issues, space, high-tech, defence, global issues, it really was quite a wide ranging discussion. We are working now on initiatives in each and every one of these fields. We also discussed expanding the horizon of cooperation and look forward to the next year and we hope to continue these discussions today and tomorrow while Under Secretary Burns is here with us here in India.

We also covered regional and international issues where we discussed questions relating to South Asia, to West Asia, and also decided to step up our cooperation in counter-terrorism, an area where we have a clear common interest. In the afternoon when Mr. Shyam Saran was there
he discussed the implementation of the nuclear understandings that we have arrived at between India and the US. Of course, we are awaiting the outcome of the Congressional deliberations. We do not have the text yet of the Bill but Mr. Burns is good enough to give us an idea, a sense of what is happening in Washington.

Overall, at the end of the day I would say that India-US relations are in a process of transformation. The nuclear cooperation is just one part of this overall transformation in the relationship which we are very satisfied and we are looking forward to continuing this. Our conversations today with Under Secretary Burns give us confidence that this will continue. I would now invite him to say a few words to you and then we will both take questions.

US UNDER SECRETARY OF STATE FOR POLITICAL AFFAIRS (MR. NICHOLAS BURNS): Foreign Secretary, thank you very much. It is a pleasure to be back in Delhi and in India, and it is a pleasure to be with you and to accept your invitation to participate in this strategic dialogue. Foreign Secretary and I are new partners and we have had an excellent day, a day of very friendly, very productive discussions on our bilateral relationship. We began to talk about the wider region and some global issues which we will continue to discuss this evening and again tomorrow.

But I would characterize this period as a period of, a time of great accomplishment in US-India relations, a time of some success and I think some optimism about the future of this relationship. It has been a year and half since Prime Minister Singh came to Washington for that historic meeting on July 18, 2005 with President Bush and the two leaders established an ambitious framework for this relationship. The Foreign Secretary and I are trying to help our two Governments fulfill that vision, and I think in large part we are doing it.

You know that we have just had the largest ever US trade delegation to India just in the last week. We have had our Agriculture Secretary here, to talk about an initiative very important to both our countries, but particularly to the Indian Prime Minister, to see if United States and India can combine again on a second Green Revolution as we did forty to fifty years ago on the first.

We have also had a delegation just recently led by our Under Secretary of Defence to see if we can chart better and greater military cooperation between our two Governments. All of this speaks to a
relationship that is, as the Foreign Secretary says, under significant and positive transformation from the American point of view. We are very pleased about all this cooperation.

We also tried to look ahead today to 2007 and 2007 is going to be a very active year in the US-India relationship. We want to see and to conclude of course all the implementing steps in the civil nuclear accord. We want to fulfill the mandate of Prime Minister Singh and President Bush from March 2, 2006. This extraordinary number of joint ventures from agriculture to education, to space cooperation and space launch, to trade, to the CEO forum, all of the different measures that are transforming this relationship into, for the United States, one of our most important global partnerships - strategic partnerships.

As the Foreign Secretary said, we need to look at areas where we can do more together. Certainly, counter-terrorism is an area where India and the United States face very similar threats where unfortunately and tragically Indian citizens have been killed in terrorist attacks, and the same is true for my country. We want to be a good friend and supporter of India in this round and we wanted to chart a new era of cooperation on counter-terrorism.

We also, of course, are partners for peace and for stability. I look forward to talking to the Foreign Secretary this evening and tomorrow about what we can do together to bring peace and help to bring peace to Sri Lanka, and stability to Bangladesh, and peace in Nepal. Certainly the United States will always encourage and always support steps by India and Pakistan to bring that relationship to one of closer cooperation. So, it has been a very good day.

I would like to say a word about the civil nuclear accord. This has occupied a lot of our time over the last year and a half. It is a pleasure to talk to the Foreign Secretary and a pleasure to see Shyam Saran again and to speak to him. As the Foreign Secretary said, our Congress has been meeting over the last two weeks to put the two Bills that have been passed by historically large margins in the House by over 380 votes in the Senate, 85 to 12, to put them together into one final Bill, what we call a Conference Bill, that we hope and expect will be voted upon in the next thirty six hours or so. That Bill will then be sent to President Bush, and I am sure that he will be very pleased to sign that Bill into law.

Since we have not seen the text of the Bill, the Congress has not yet
sent it to our Administration, I could not comment on the details because we have not seen them. But I would say this. Based on my own interaction with Members of Congress and their staff over the last two weeks, I anticipate a very successful and supportive Bill. I think the Bill that will emerge will support the agreements of July 18, 2005 and March 2006. It will be, in my judgment, well within the parameters of the agreement that we made between our two leaders in March 2006 and again in July 2005. It will be a Bill that will allow us to look towards 2007 and to complete all the necessary steps - the bilateral civil nuclear accord, the 123 agreement, of course, the provisions that India must undertake with the IAEA, etc., so that we can put into place we hope as quickly as possible in the coming year a full agreement and actually have the United States and our companies here assisting India to develop its civil nuclear sphere.

It will be a tremendous achievement for both countries, I would say historic. From an American point of view it is particularly significant because it is a very strong bipartisan agreement, by the President’s party, the Republican Party, and by the Democratic Party and its leaders in the Congress.

While we have not seen the final Bill, I am very optimistic. It is going to put it in a very good place and we look forward to seeing it and then discussing it with the Indian Government and having our Congress move ahead.

**QUESTION:** I have a question for Ambassador Burns. Ambassador Burns, even though you have not seen the final draft of the Bill, can you tell us something on the Iran that reference that may be binding upon India. Mr. Menon, Sir, do you think there is a very wide-ranging relationship between India and the US … The nuclear deal is an attempt to bring it off the ground? Would you say that it symbolizes a shift, it makes India and US a very special partnership and a very special friendship and, in a sense, similar to what India and the Soviet Union had before the Cold War?

**US UNDER SECRETARY FOR POLITICAL AFFAIRS:** You are right. Since I have not and no one else in our Administration has seen the final Bill, I simply cannot comment. I would not know.

**QUESTION:** Could you try?

**US UNDER SECRETARY FOR POLITICAL AFFAIRS:** No, I think that would be a great mistake to try to imagine what the Congress is going
to say in this issue because it is up to the Congress say that. But I will say this. We greatly respect the fact that India and the United States and all other countries around the world have to react to the challenges posed by Iran in the case of the nuclear programme. I would say that India and the United States have been in the mainstream of international opinion. When the IAEA Board of Governors met on February 4th of this year and voted to repudiate the Iranian nuclear programme, Brazil, Egypt, Sri Lanka, Ecuador, Japan, Australia, all the European countries, Russia and China, all of us sent the same message. And, so, I think India and the United States have been part of this global effort to say to Iranians, ‘We want to work with you.’ We the United States believe that Iran has a right to civil nuclear power. In fact President Bush said as early as a year ago that he will support President Putin’s initiative to supply civil nuclear power to Iran but Iran turned that down. I think all of us are just saying that we do not want to see a nuclear weapons power emerge in Iran. And so, India from my perspective is in the mainstream of that global opinion that unites Russia, China, Egypt, India, United States, lots of different countries. And I think India has to have a very responsible policy towards Iran. So, I do not expect any major surprises from the legislation that is going to emerge.

**FOREIGN SECRETARY:** Thanks for your question about the relationship, how to characterize it, how does it compare with other things. I think when I said that the nature of our relationship now is really unprecedented, with the sort of engagement we have. I think what I was trying to say is that please do not compare it with either what we have done before - because we have never done this before, India and the US - or with other relationships for one very simple reason. The world has changed, we have changed. None of us is what we were twenty years ago, thirty years ago. And we are now capable of doing things which we were not capable of doing then. And that is true of us all in the world. So, please, that is why I used the word unprecedented. But my hope is that we can carry on this process of transforming the relationship and I am very optimistic for the future of the relationship that as our capabilities grow, our common interests grow, and we learn to work with each other as we have shown over the last year and a half, on civil nuclear energy, as we go through this process, I think the prospects just keep opening up.

**QUESTION:** You have just said that the final legislation will be well within the parameters of the July 18 agreement. President Bush had assured that India will get uninterrupted fuel supply and that includes from strategic reserves. Will these commitments be kept?
US UNDER SECRETARY FOR POLITICAL AFFAIRS: Thank you.
Your question gives me the opportunity to thank the Congress of the United States. I think the Congress has acted in a very supportive way of the Administration. We thank Members of the Democratic and Republican parties for their efforts and we anticipate a very supportive Bill. The United States intends to meet all the commitments that we made to the Indian Government on July 18, 2005 and on March 2, 2006 and that includes the commitments that we made on fuel assurances because that was an important part of the agreement, particularly the March 2nd agreement. We believe this Bill will be within the parameters, as I said, of the two agreements. Therefore, we will welcome the Bill, I am sure the United States Government, and we will also go ahead and implement all the obligations that we incurred as we agreed to these Bills. And then we need to get on to, I think frankly to an easier stage. The most difficult part of this process, in my view, as the person who negotiated this with the United States, has been the last 18 months. We have some very tough issues to deal with. We were in uncharted waters because, of course, there had never been a deal quite like this. We felt strategically it was right to recognize everything that India had done to be a responsible steward of its nuclear technology, and it was right to welcome India again to the mainstream of the nonproliferation community, and it is right to break down the barriers of the last three decades that have kept India on the outside.

What I think the Congress of the United States will be doing, and this is a very decisive moment, is to pass legislation that will essentially agree to welcome India into the nonproliferation community, to allow the barriers to come down, to see a type of cooperation we have not been able to have since the 1970s. So, it is going to be a historic time. As we look towards 2007, I think the completion of the 123 agreement is really a codification of the major and difficult decisions we have already made. Of course, it is a long process towards the finish line, but it is not going to be, in my judgment, as difficult as the last 18 months. So, it is the time I think for us to be thankful for the work that we have done and to congratulate ourselves that we have come a long, long way. We think it is in the best interest of the United States and we also hope that it is in the best interest of India and that you see it that way as well.

QUESTION: I have a question to Mr. Menon. In Parliament today the External Affairs Minister has said that the Indo-US nuclear understanding is based on its own merits and it cannot be linked either to North Korea’s nuclear test or Iran’s nuclear policy. Given that Iran is very much a part of
the two Bills, including the Senate version, if this is India’s position what can we do to de-link ourselves from the legislation in the versions that we have already seen? My question to Mr. Burns is, India voted in a certain way in September last year and in February. Supposing we had abstained or voted against the established position of the United States, would we be considered irresponsible as far as staying away from the international mainstream of counter-proliferation efforts?

FOREIGN SECRETARY: You obviously know more than I do about this Bill. I have not seen it. So, I would rather not comment on something that is hypothetical. But our basic approach is quite clear. What is being done here and what we have both agreed to do here, on the basis on which we have spoken to NSG, for instance, is that we are doing a stand alone arrangement recognizing India’s unique position (and) the responsible role that we played in nuclear affairs, and our need for civil nuclear energy cooperation with the rest of the world. But it is a special arrangement that we have worked out and it is on that basis that we are moving forward. How it is linked to one provision or the other of the Bill, how those provisions work themselves out, all that for us is hypothetical until we see the Bill. So, I am not going to comment on that.

US UNDER SECRETARY FOR POLITICAL AFFAIRS: I am afraid that I am going to avoid answering a hypothetical question. It is not in my interest to answer a hypothetical question but I will say this. Everyone understands that India is a great country, and a sovereign country and nobody in our system, whether it is in the executive part of our Government or legislative, would ever want to infringe upon India’s right to make its own sovereign decisions. That is a fundamental tenet of international politics, and particularly, of this relationship of trust and respect that we have developed over the last several years. And so, in every respect you are going to see an American Administration and an American Congress I believe very respectful of India’s sovereignty and India’s independence.

I would also say this, it just bears repeating a point I made earlier, it is important that Iran is being sent one message on its nuclear weapons programme from China, Russia and the other countries of the Permanent Five members of the Security Council including my own, and countries like India. I think that degree of unanimity on that particular question is important to Iran. We seek a peaceful, diplomatic solution to the problem of Iran’s nuclear weapons. I would not read too much into what the Administration is saying, what others may say because I think we should accentuate the
positive that all of us have stood together with a message of peace and a message of diplomacy. That is a positive message which we hope the Iranians will react to.

**QUESTION:** Ambassador Burns, you have been very confident that the final legislation will be within the parameters of the July accord. But there has been a lot of opposition to the Bill here in India. No matter what the final legislation, there will be loud cries; there will be cries of sell out perhaps in some sections. Are you not scared that given the amount of time and effort that has been invested in this nuclear deal that if it is not well received in India, then it could impact the whole relationship?

**US UNDER SECRETARY FOR POLITICAL AFFAIRS:** I think the US-India relationship is very strong and I have great confidence that we are going to carry that forward in the future. I think it is interesting if you go back and look at some of the reactions in the United States as well as in India to both the July 18 announcement but particularly the March 2 agreement. No sooner had we left Hyderabad House that there was a chorus of voices in the United States and our nonproliferation community condemning the American Administration for what we have done. There were a lot of people, including in the Indian press, predicting in March of this year that we would not have the kind of success we have had in the American Congress. I think we broke new ground. We took a thirty-year policy of keeping India on the outside, of preventing India from participating in normal international commerce and trade, and nuclear technology and we changed it - our two Governments, particularly our two leaders. And sometimes change is difficult for people to accept. But you have seen in the United States, the Democrats, Republicans, the leadership of both Houses of the Congress come together to support this. I have been pleased to see a large measure of support in India’s as well for this. Now, of course, any initiative like this that is so historic, that changes policy in such a revolutionary way is going to encounter some criticism. We expect that in a democratic society though we are confident in the United States, we have done the right thing here and that it is going to make sure, it is going ensure that this relationship between India and the United States prospers in the future.

**QUESTION:** Ambassador Burns, my question was what is the kind of feedback that you from NSG countries, in particular China?

**US UNDER SECRETARY FOR POLITICAL AFFAIRS:** Well, you are right to suggest that at the end of this process, the Nuclear Suppliers
Group is going to have to agree by consensus, meaning everyone, to make the same type of changes in NSG practice that the United States Congress is just about to make today or tomorrow in the United States’ law. We spent the better part of the last year talking to our partners, including the Chinese Government and others, about this arrangement and we are, of course, enthusiastic supporters of the Nuclear Suppliers Group taking a positive initiative to support India. I think the great majority of countries in the NSG have already come out to support India. There are some who have not and there are some who have asked questions and who have been moderately critical. But I am confident that at the end of the day when this is presented to the Nuclear Suppliers Group it will pass by consensus and we will see the international community, in essence if you will, follow the lead of the United States, that our President has taken in suggesting that it is time that India be given its right and it is time that India be allowed to participate with all of our companies to develop its civil nuclear power sector. This is the right thing for the world as well as for our two countries.

QUESTION: My question is to Mr. Burns. There were a couple of concerns in the Indian strategic establishment over the Bill. I will just name two. One is the feared nuclear apartheid. The second is that of end use certification. What is your sense of these Indian concerns being met? My question to Mr. Menon is that the BJP went ballistic today accusing the Prime Minister of demeaning conduct in pursuing the nuclear deal with the US. The BJP also said they took exception to the Prime Minister entering into conversation with important American Senator.

US UNDER SECRETARY FOR POLITICAL AFFAIRS: Sir, I apologize, I did not quite get your second question to me..

QUESTION: End use certification and feared nuclear apartheid....

US UNDER SECRETARY FOR POLITICAL AFFAIRS: Well, let me just say, I am kind of surprised that anybody would use the term ‘nuclear apartheid’. India, it is true, has been kept out of the system for thirty-five years. India has not been given its rights. What President Bush and Prime Minister have done is essentially work for the liberation of India and to allow India’s scientific and technological community to be able to work on an equal basis with their brethren in the United States and in Europe, and in Russia and China. So, we look at this as the liberation Act of 2006 and 2007 for India’s civil nuclear power effort.

And the arguments we have made around the world is, how do you
keep the country that will soon be the largest country in the world by population, India, out when that country has been responsible, when it has not traded its nuclear technology on the world market or black market, when there are environmental and energy benefits to this that will accrue to the Indian people as well as to the whole world. We saw this as an issue of great strategic importance, of strategic liberation. As I said before, sometimes people when they react to change do so in a conventional way. This is undoubtedly the right step to take for the whole world and I think you are going to see a very large majority in support in our own country but also around the world.

FOREIGN SECRETARY: I am not sure what statement you are talking about but if your characterization of it is accurate about the Prime Minister’s behaviour being described as somehow ‘demeaning’, it seems to me that it shows the complete misunderstanding of a democratic way of working. Here is an issue between India and the US which we have been working on, now for 18 months, which is in our common interest. If somebody talks to you about it, you tell him what you think, I think that is perfectly normal to have conversations between us. That is what we did all day. We talked about the issues that we want to move forward and that is the normal democratic way of working. So, I cannot see how these things are demeaning. I do not see protocol or anything coming into it if we discuss these things among ourselves. This is what two friendly countries do, and leaders in these countries will do this. This is normal. But quite frankly, I have not seen exactly what you are talking about.

QUESTION: My question to Mr. Burns is what is the Administration’s view on the likely provisions of the Bill on spent fuel end use by India? To Mr. Menon, what is India’s position on fall back safeguards?

US UNDER SECRETARY FOR POLITICAL AFFAIRS: You know where the Foreign Secretary and I are, in a particular position. Neither of us has seen the text of the Bill, the common Bill, the conference Bill. It is emerging and so to answer detailed questions about the spent fuel end use is really impossible. It would not be very wise for me to try to guess as to what would be in there. But I will say this.

QUESTION: What is the Administration’s view?

US UNDER SECRETARY FOR POLITICAL AFFAIRS: You are asking me to comment on the Administration’s view on a piece of legislation that I have not seen. And perhaps tomorrow, I will be here in India tomorrow,
if I see one of you in the streets you can ask me that question and if I have seen the Bill I will give you the answer. But let me just say this. What this Bill is going to do is going to operationalise the intent that President Bush and Prime Minister Singh and is that is to open up the flow of capital and technology to help India develop its civil nuclear sphere so that a greater part of your energy production can come from that. It is clean energy, it is cheaper energy, and it is energy that is going to benefit your particularly agricultural population. That is what it is going to do. The rest is detail. So, that is why we are in favour of what we have been doing for the past 18 months.

FOREIGN SECRETARY: I think your question to me was, what is India’s position on fallback safeguards? Our position is that which was expressed by the Prime Minister in the Parliament on the 17th of August 2006. The rest is hypothetical.

435. **Press Release issued by the Prime Minister’s Office on the telephonic call received by Prime Minister from the U.S. President George W. Bush.**

**December 21, 2006.**

The Prime Minister, Dr. Manmohan Singh received a telephone call from President George Bush this evening. The two leaders expressed happiness at the strengthening of the bilateral relations highlighted in President Bush’s initiative to amend US laws to enable bilateral civil nuclear cooperation, which received strong bipartisan support in the United States Congress.

The Prime Minister said India still has some concerns, though many have already been addressed in the President’s signing statement. Both leaders expressed the hope that remaining concerns will be addressed in the next stage of negotiation.

The two leaders also discussed other subjects including regional matters. The Prime Minister conveyed season’s greetings to President Bush and Mrs. Bush.
436. **Statement by Official Spokesperson on the outcome of the Conference in the US Congress reconciling the Waiver Bills on civilian nuclear energy cooperation between India and the USA.**

**New Delhi, December 8, 2006.**

Government welcomes the outcome of the Conference in the US Congress that has reconciled the Waiver Bills earlier passed by the House of Representatives and the Senate respectively which would enable resumption of civilian nuclear energy cooperation between India and the USA.

The Bill awaits favourable votes by the House and the Senate. The US Administration has assured us that once passed, this legislation would enable it to fulfill all its commitments and obligations under the 18 July Joint Statement and the Separation Plan.

The enactment of the waiver has wider implications for India’s access to international cooperation in civilian nuclear energy and is, therefore, of historic significance.

We appreciate the personal effort and commitment demonstrated by President Bush and Secretary of State Condoleezza Rice in taking this initiative forward. We are also encouraged by the broad bipartisan support of the Congressional leadership for stronger Indo-US ties.

Government also notes that this draft legislation contains certain extraneous and prescriptive provisions. As Prime Minister stated in Parliament, no legislation enacted in a foreign country can take away from us the sovereign right to conduct foreign policy determined solely by our national interests.

The legislation that would be passed is an amendment to a law of the United States. Our obligations and commitments will be those that we undertake in the bilateral 123 Agreement. We expect that to adhere to the 18 July Joint Statement and the Separation Plan. We look forward to working with the US Administration for an early conclusion of a satisfactory Agreement. External Affairs Minister will be making a statement in the Parliament soon.

---

1. On December 9 President Bush made the following statement welcoming the US Congress passing the nuclear energy cooperation bill: “Congress has agreed upon bipartisan legislation that will strengthen the strategic relationship between America and India and deliver valuable benefits to both nations. I am pleased that our two countries will soon have increased opportunities to work together to meet our energy needs in a manner that does not increase air pollution and greenhouse gas emissions, promotes clean development, supports nonproliferation, and advances our trade interests. I appreciate Congress’ support for the U.S.-India civil nuclear cooperation initiative and would like to thank Chairman Hyde, Ranking Member Lantos, Chairman Lugar and Ranking Member Biden for their leadership on this extraordinary legislation. I look forward to signing this bill into law soon.”

INDIA’S FOREIGN RELATIONS - 2006

SECTION - VII AMERICAS

(ii) CENTRAL AND SOUTH AMERICA
THE BAHAMAS

437. Press Release of the Ministry of External Affairs on the visit of Minister of Foreign Affairs and Public Service of The Bahamas.

H.E. Mr. Frederick A. Mitchell, Minister of Foreign Affairs and the Public Service of The Bahamas led a comprehensive delegation on an official visit to India from January 22nd to 29th, 2006.

During the visit he called on Minister of State for External Affairs Rao Inderjit Singh on January 24th and discussed wide range of issues exploring cooperation in the fields of technical, economic, maritime, education, shipping, IT and culture. During the visit, a bilateral cooperation agreement was signed which will lead to better cooperation and cementing of friendly ties. He also met Minister of Shipping and MOS, Ministry of Communication and Information Technology and discussed ways to augment better cooperation and understanding in these fields.

An understanding between the Chamber of Commerce of India and the Bahamas was also signed to facilitate business. Keen to learn and benefit out of our expertise and success in the fields of IT, software, small-scale industries and health services, the visiting delegation visited NASSCOM, TCS, NSIC centers and met HSCC representatives. The visiting dignitary discussed cooperation in financial sector and met officials of SBI.
BRAZIL

The Government of the Republic of India and the Government of the Federative Republic of Brazil:

Noting the difficulties encountered by members of the family forming part of the household of a member of a diplomatic mission or consular post who wish to engage in a gainful occupation;

Realising that many members of such households, in particular spouse, may wish to work in the State where the member of a diplomatic mission or consular post is assigned to duty;

Desirous of facilitating the engagement of such family members in a gainful occupation in the receiving State:

Have agreed as follows:

1. Authorisation to engage in a gainful occupation

(a) The members of the family forming part of the household of a member of a diplomatic mission or consular post of the sending State shall be authorized, on a reciprocal basis, to engage in a gainful occupation in the receiving State in accordance with the provisions of the law of the receiving State.

(b) The receiving State shall retain the right to withhold authorization for employment in certain areas.

(c) Any authorization to engage in a gainful occupation in the receiving State shall, in principle, be valid only during the tenure of the member of a diplomatic mission or consular post in the receiving State.

2. Definitions

For the purposes of this Arrangement:
(a) “A member of a diplomatic mission or consular post” means any employee of the sending State who is not a national of or permanently resident in the receiving State and who is assigned to official duty in the receiving State in a diplomatic mission, consular post or mission to an international organization;

(b) “A member of the family” means the spouse of a member of a diplomatic mission or consular post, any minor children and any unmarried, dependent children up to the age of 25 years who form part of the household of a member of a diplomatic mission or consular post.

3. Procedures:

(a) A request for authorization to engage in a gainful occupation shall be sent on behalf of the member of the family by the diplomatic mission or consular post of the sending State to the Protocol Division of the Ministry of Foreign/External Affairs of the receiving State.

(b) The procedures followed shall be applied in a manner so as to enable the member of the family to engage in a gainful occupation as soon as possible and any requirements relating to work permits and similar formalities shall be favourably applied.

4. Civil and administrative privileges and immunities

In the case of members of the family who enjoy immunity from the civil and administrative jurisdiction of the receiving State in accordance with the Vienna Convention on Diplomatic Relations, 1961 or Vienna Convention on Consular Relations, 1963 or under any other applicable international instrument including the rules of customary international law, such immunity shall not apply in respect of any act or omission carried out in the course of the gainful occupation and falling within the civil or administrative jurisdiction of the receiving State.

5. Criminal immunity

In the case of members of the family who enjoy immunity from the criminal jurisdiction of the receiving State in accordance with the Vienna Convention on Diplomatic Relations, 1961 or under any other applicable international instrument:
(a) The provisions concerning immunity from the criminal jurisdiction of the receiving State shall continue to apply in respect of any act carried out in the course of the gainful occupation.

(b) However, in the case of serious offences, upon the request of the receiving State, the sending State shall give due consideration to waiving the immunity of the member of the family concerned from the criminal jurisdiction of the receiving State.

(c) The sending State shall also give due consideration to waiving the immunity of the member of the family from the execution of a sentence.

6. Fiscal, social security and exchange control regimes

In accordance with the Vienna Convention on Diplomatic Relations, 1961 or under any other applicable international instruments members of the family shall be subject to the fiscal, social security and exchange control regimes of the receiving State for matters connected with their gainful occupation in that State.

7. Settlement of disputes

Any differences or disputes regarding the interpretation or application of this Arrangement shall be settled through mutual consultations.

8. Entry into operation

1. Each Contracting Party shall notify the other of the compliance with the respective internal legal procedures for the entry into force of this Arrangement, which shall take effect 30 (thirty) days after the date on which the second notification is received. This Arrangement shall remain in force for an indefinite period.

2. The present Arrangement may be amended, through diplomatic channels, by mutual consent of the Contracting Parties. Amendments shall take effect according to the provisions of paragraph 1.

3. The present Arrangement may be terminated upon written notice from any of the Contracting Parties. The termination shall be effective 6 (six) months after the date of notification.

IN WITNESS WHEREOF the undersigned, being duly authorized by their respective Governments, have signed this Arrangement.

Done at Brasilia on the 2nd day of February 2006 in three original
each in the Hindi, Portuguese and English languages, all texts being equally authentic. In case of any divergence, the English text shall prevail.

For the Government of the
Republic of India

For the Government of the
Federative Republic of Brazil

439. Special Media Briefing by Foreign Secretary Shyam Saran on the visit of Prime Minister Dr. Manmohan Singh to Brazil and Cuba.

New Delhi, September 8, 2006.

Please see Document No. 049.

440. Statement of Prime Minister before his departure for his visit to Brazil and Cuba.

New Delhi, September 10, 2006.

I will be visiting Brasilia at the invitation of President Luiz Inacio Lula da Silva. The bilateral visit to Brazil on September 12 will be followed by the India-Brazil-South Africa (IBSA) Summit where President Mbeki of South Africa will also be participating.

I expect that my visit to Brazil will consolidate an extremely positive trend in our bilateral relations with that great country which we consider as one of our main partners in Latin America. I hope to discuss a wide range of issues including adding content to our political and economic interactions and cooperation in defence, agriculture and energy security. Brazil and India already enjoy an excellent tradition of cooperation in international fora.

IBSA has already emerged as a shining example of South-South Cooperation. The first IBSA Summit will provide a useful opportunity to review the progress that has been made over the last 3 years since IBSA
was first established. Our discussions are expected to focus on issues of global concern including energy security, international terrorism and the challenges of sustainable and equitable development. An IBSA Business Summit will add a new dimension to our interactions.

We have enjoyed close, friendly and historic relations with Cuba. I am looking forward to participating in the 14th NAM Summit Conference being held in Havana. As a founding member of this great Movement, India will play its part in helping NAM to revitalize itself so as to pursue the shared interests of its member states in a transformed world. Mutual support and solidarity among NAM members is of prime importance as we confront several common challenges such as making globalization more inclusive, the scourge of terrorism and addressing widespread hunger, poverty and disease. We will rededicate the Non-Aligned Movement to the universal causes of peace, disarmament and the progress and prosperity of all human kind.

During my stay in Havana, I look forward to fruitful interactions with a number of leaders from the developing world.

441. Joint Communique issued on the visit of Prime Minister Dr. Manmohan Singh to Brazil.

Brasilia, September 12, 2006.

1. At the invitation of H. E. Mr. Luiz Inacio Lula da Silva, President of the Federative Republic of Brazil, H. E. Manmohan Singh, Prime Minister of India, accompanied by a high level delegation, paid an official visit to Brazil from September 11 to 14, 2006.

2. During their bilateral meeting on 12 September, the two leaders recalled the milestone visit of President Lula to India in January 2004 as the Chief Guest at the Republic Day ceremony. Since then, bilateral relations have intensified and deepened. They acknowledged the significance and substantive importance of a bilateral visit to Brazil by an Indian Prime Minister after an interval of 38 years. Brazil and India recognize that their relationship has now reached the level of a strategic partnership.

3. President Lula and Prime Minister Singh reviewed the bilateral agenda and exchanged opinions on various issues of the international
agenda, as well as on the political and economic situation in their regions. They reaffirmed their commitment to work towards a qualitative upgrading of the broad-based bilateral relationship between the two large democracies that share a multicultural and pluralistic ethos and common developmental aspirations.

4. An important outcome of the meeting was the decision to initiate a bilateral strategic dialogue covering regional and global issues of mutual concern such as energy security and the international security situation, including the menace of terrorism. This will be conducted by the National Security Advisor on the Indian side and the corresponding authorities in the Brazilian Government.

5. The two leaders noted with satisfaction the growth of bilateral trade and investment between India and Brazil. They expressed satisfaction at the quantum leap registered by the two-way bilateral trade and resolved to create an enabling environment to deepen and diversify the growing commercial and economic interaction encompassing trade, investment and technology. To this end, exchange of business delegations, increased participation in each others trade events and promotion of mutual investment and setting up of Joint Ventures would be undertaken in a concerted manner. The two sides would also encourage establishment of business linkages in banking and other service sectors. They committed themselves to encourage the public and private sectors of their respective countries to increase and diversify the bilateral flows of goods and services.

6. They emphasized the significance of bilateral technological cooperation in all aspects of energy research and development, with a view to improve and diversify the energy supply and to develop more efficient, affordable and cost effective energy technologies. In this context, they encourage the development and use of alternative sources of energy particularly of bio-fuels to enhance sustainability and they reaffirmed that new forms of energy that are clean, safe and economically efficient should be fully explored. To this end, they decided to create a Joint Committee on Biofuels.

7. President Lula and Prime Minister Singh celebrated the signature of the Exchange Programme on Cooperation in the field of Education, during the Joint Committee Meeting, in January 2006 and reaffirmed that priority should be given to the cooperation in fields such as post-graduation, research, professional education and remote education.
courses. They noted with satisfaction the strengthening of the relations among universities of the two countries, that will be further improved by the first meeting of the Joint Working Group, to be held before the end of the year.

8. India and Brazil announced that they would shortly be opening Cultural Centres in Sao Paulo and in New Delhi. Further, as provided for under an MoU signed on the occasion, it has been agreed to organize Weeks of Indian Culture & Weeks of Brazilian Culture on a reciprocal basis in 2007. The two countries will also cooperate in promoting exchanges in the field of football and training of Indian players and coaches. People-to-people contacts as well as forging of institutional and academic linkages will also be fostered by the two sides in a systematic manner.

9. Both sides agreed to station Defence Attaches in each other capitals. President Lula announced his intention to promptly appoint the Brazilian Defense Attache. They also agreed to establish a Joint Defence Committee in pursuance of the Defence Agreement signed in December 2003, once the domestic requirements for the entry into force of this Agreement have been completed.

10. The National Institute of Metrology, Standardisation and Industrial Quality (INMETRO) and the National Physical Laboratory of India (NPLI) agreed on the content of a Memorandum of Understanding, concerning scientific and technological co-operation in the areas of Chemistry, Physics and Engineering Measurement Sciences. Both sides manifested the intention of signing the document, during the meeting of the International Bureau of Weights and Measures, to be held in Paris, during the current year.

11. President Lula and Prime Minister Singh reaffirmed that international terrorism constitutes one of the most serious threats to peace and security and emphasized the need for concerted and coordinated action by the international community, with the ultimate objective of eradicating terrorism in all its forms and manifestations. They reaffirmed their full support for the implementation of all the measures to combat terrorism outlined in relevant UN Security Council Resolutions and stressed that international cooperation to combat terrorism should be conducted in conformity with the principles of the United Nations Charter, international law and relevant international conventions.
12. President Lula and Prime Minister Singh underscored the priority that both governments attach to reforming the United Nations to make it more effective and attuned to present day realities. India and Brazil will continue to work closely together in the framework of G-4 in order to realize their aspirations to serve as permanent members on a reformed and expanded UN Security Council so as to make the world body more democratic, representative and reflective of the changed world order.

13. They also reaffirmed their commitment to fighting hunger and poverty, promoting democratic values and fostering economic development and emphasized the importance of implementing the Millennium Development Goals. They supported, in this regard, the promotion of innovative financing mechanisms aimed at complementing existing ODA flows on a stable and predictable basis. In particular, they expressed their satisfaction with the launching of the International Drug Purchase Facility (UNITAID), a mechanism based on innovative funding and other sources of long-term financing as a means of enhancing the access of poor people in developing countries to drugs against AIDS, malaria and tuberculosis at affordable prices.

14. President Lula and Prime Minister Singh stressed their intention to continue working with the G-20 towards the resumption of the negotiations of the Doha Round. They agreed that the substantial, political and technical work that has been carried out so far provides a solid platform for the continuation of WTO talks and expressed their confidence that WTO members will be prepared to reengage in the negotiations in the near future.

15. President Lula and Prime Minister Singh expressed the view that the IMF must be reformed to reflect the current realities of the global economy and this must include a reform of quotas with a higher allocation to the developing countries so as to ensure more effective participation by them in the decision making processes of the IMF. Any changes that are proposed must be based on these principles.

16. The talks were held in an atmosphere of warmth and trust with the objective of further strengthening the friendly relations and multifaceted cooperation between the two countries. The next meeting of the Joint Commission to be hosted by India in New Delhi would provide an opportunity to review the progress accomplished in strengthening bilateral interaction and explore possibility of utilizing
cooperation in areas such as disaster management, mutual legal assistance, water resources and rural development.

17. During the visit, the following bilateral acts were signed: a. Bilateral Agreement on Scientific and Technological Cooperation; b. Air Services Agreement; c. MoU on Cooperation in the field of Human settlements d. MoU on Plant Health Protection; e. MoU on Conduct of Weeks of Indian Culture in Brazilia & Weeks of Brazilian Culture in India. f. MoU between Bureau of Indian Standards & ABNT. g. MoU between Petrobras and ONGC-OVL h. MoU between Bharat Earth Movers and CCC

18. The Agreements and MoUs signed today reflect the mutual desire to impart a strong impetus to the growing bilateral ties with a view to realizing the full potential of the relationship between the two countries.

19. Prime Minister H.E. Dr. Manmohan Singh invited H.E. the President of the Federative Republic of Brazil to visit India.

442. Statement of Prime Minister Dr. Manmohan Singh at the Joint Press Conference with President Luiz Inacio Lula da Silva of Brazil.

Brasilia, September 13, 2006.

It is indeed a pleasure and privilege to visit this beautiful country. I would like to thank President Lula for the extremely gracious reception and hospitality. My visit to Brazil is after a 38 year-old hiatus since the last visit by Prime Minister Indira Gandhi. The significance of this bilateral visit is further enhanced by the holding of the first IBSA Summit which would be taking place tomorrow.

India and Brazil are large pluralistic democracies. Our economic growth is broad-based and multifaceted. This provides opportunities for expansion of our bilateral trade and economic relations. Our economic growth is also of global significance, as part of the so-called BRIC countries.
I convey to President Lula today that India will support all efforts to ensure a qualitative transformation of our bilateral relations and their elevation to that of a strategic partnership. I am very happy that President Lula has graciously accepted this suggestion. To further facilitate and coordinate cooperation in various areas, a strategic dialogue has been agreed to.

Our bilateral trade has grown in the last five years. From a mere 500 million dollars in 2002, trade between our two countries has increased fivefold to reach 2.5 billion. We are hopeful of further rapid expansion in our bilateral trade in the coming years. Implementation of the India-Mercosur PTA and the proposed deepening and expansion of our trade relations in the framework of IBSA will be important steps in that direction.

We are indeed gratified that there has been an upsurge in investment flows. Major Indian companies such as Tata Consultancy Services, Ranbaxy, Dr. Reddy’s among others, have taken advantage of opportunities in the Brazilian market. ONGC Videsh has earmarked approximately 400 million dollars for acquisition of a state in an offshore block in South-East Brazil.

It is my sincere conviction that there is considerable scope for the expansion of our cooperation in the agricultural sector, particularly food processing. We would like greater interaction between our agricultural universities and food processing sectors. We invite Brazil to partake in India’s success in IT, Bio-technology and Pharmaceuticals.

We have supported the Ethanol Initiative proposed by President Lula. Indian companies from both public and private sector have evinced interest in exploring production opportunities in Brazil to meet the anticipated growth in Ethanol used in India for both industrial as well as automobile use.

India and Brazil have a long tradition of cooperation in international fora including on global trade and economic issues. We have worked together in the WTO and are both united in our desire for a successful conclusion of the Doha Round of negotiations. We have been partners in the G-4 efforts to work towards expansion of the Permanent Membership of the UN Security Council. Brazil will have the distinction of hosting the first Summit of IBSA tomorrow.

I am very satisfied with my discussions with President Lula this morning. We have covered a whole gamut of relations covering bilateral relations as well as regional arrangements and cooperation in multilateral
fora. For me, this visit is a voyage of discovery, to explore in all sincerity the immense scope for expanding areas of cooperation between Brazil and India. In President Lula we have a brother and a friend. We admire the leadership that he has provided to the developing world as a whole. In him we have a world statesman and it has been a great honour and privilege for me personally to have worked very closely with President Lula in bringing our countries together in diverse fields. We have begun well. But we have a long journey ahead of us and we are confident of traveling that distance together. I have come to Brazil for the first time, but I am leaving behind a part of my heart. I wish him all success in the noble task of building a new Brazil which will be a source of mighty strength for all developing countries. We must endeavour and we shall be seeking to build a new international order which is both more equitable and more participatory developing countries. In that struggle, it is a great source of strength to us to have leaders of the eminence of President Lula. I thank you Mr. President for what you are.

I would like to thank President Lula again for his hospitality and I look forward to welcoming him in India.

F F F F F
CHILE

443. Press Release of the Embassy of India in Santiago on the visit of Minister of State Anand Sharma to Chile.

India and Chile discussed issues of bilateral, regional and international interest at two days of high-level meetings held in Santiago on March 27-28, 2006.

Minister of State for External Affairs, Shri Anand Sharma, visiting Chile for bilateral talks, led a delegation comprising of Secretary (West) in the Ministry of External Affairs Smt. Shashi Ubang Tripathi, India’s Ambassador to Chile Smt. Susmita G. Thomas, Joint Secretary (Latin America), Shri R. Viswanathan and Joint Secretary (Latin America-Commerce) Shri. Jayant Dasgupta.

Shri Anand Sharma met his Chilean counterpart Foreign Minister Alejandro Foxley. The Acting Vice Minister of Foreign Affairs, Mr. Carlos Portales led the talks from the Chilean side along with senior officers from the UN Division, Antarctica Division, Commerce Multilateral division and the Asia Pacific Division. The two sides discussed wide range of issues of mutual interest. These included issues of bilateral interest, the reform of the Security Council, interest in increasing bilateral trade, scientific cooperation, and negotiating a Free Trade Agreement. Chile expressed its continued support to the candidature of India as a permanent member of the UNSC. The talks were followed by a lunch hosted by the Minister of Mines and Energy Ms. Karen Poniachick, and attended by senior dignitaries like Senator Gazmuri, who visited India in February this year, and Mr. Francisco Folch, Editor of *El Mercurio*.

At a dinner hosted by the Ambassador of India to Chile in honour of the visiting Minister, he met leading industrialists, luminaries from the Chilean Press and Media, heads of the Chambers of Commerce and leaders from Indian community as well as Indian Ambassadors from the Latin American region, who were in Santiago for a review meeting with Shri Anand Sharma.

The Minister inaugurated the first gift under ITEC from India, a computer lab built at a cost of US$ 30,000, to the Republic of India School in Santiago. He also placed wreaths at the statues of Mahatma Gandhi,
Jawaharlal Nehru and Rabindra Nath Tagore in the Plaza de la India Santiago, inaugurated by late Prime Minister Smt. Indira Gandhi in 1995.

President Michelle Bachelet, the first woman elected President, who assumed charge of the Presidency on March 11, 2006, received Minister of State Shri Anand Sharma on March 28. During extremely warm, cordial and wide-ranging talks, lasting over 55 minutes, Shri Anand Sharma delivered a message from the Indian Prime Minister. He is the first Foreign Minister to call on the Chilean President in Santiago after her assumption of office.

Later that day, Shri Anand Sharma presided over the first-ever meeting of Indian Ambassadors in Latin America in Santiago underscoring the growing importance of Chile for India. Minister Sharma’s visit was widely covered by English and Spanish newspapers in Chile. In interviews with the leading Chilean newspaper *El Mercurio*, (established in 1827), and the Chilean National TV Channel, Minister Sharma emphasized that there is interest in both countries to strengthen relations and bridge the geographical divide between the two democracies, through closer cooperation based on mutual benefit and shared values. He added that India and Chile had agreed to undertake joint cooperation in the Antarctica and to negotiate the FTA in an early and time-bound manner.
CUBA

New Delhi, July 28, 2006.

Ms. Shashi U. Tripathi, Secretary(West) in Ministry of External Affairs led the Indian delegation at Foreign Office Consultations with Cuba held in Havana on 20-21 July, 2006.

The Indian delegation had meetings with Acting Foreign Minister of Cuba, Mr. Bruno Rodriguez Parrilla, Deputy Foreign Ministers Mr. Marcos Rodriguez Costa and Mr. Abelardo Moreno, responsible for bilateral and multilateral affairs, respectively, and senior officials. Besides an extensive exchange of views on issues related to the Non-Aligned Movement, preparatory to the 14th NAM Summit which will take place in Havana in September, 2006, the two sides reviewed bilateral cooperation and also discussed UN issues. The Indian side conveyed its thanks and appreciation to the Cuban side for a detailed briefing on preparations for the forthcoming NAM Summit.

The consultations were held in a highly friendly atmosphere, with both sides agreeing to further strengthen cooperation in bilateral and multilateral areas, and to work together closely within the Non-Alignment Movement, especially to strengthen South-South cooperation.

The Cuban Government expressed strong condemnation and condolences for the recent terrorist attacks in Mumbai. Both sides shared the view that terrorism, in all its forms and manifestations, must be condemned unequivocally by the international community.

The Cuban side warmly welcomed the forthcoming visit of the Prime Minister of India for the NAM Summit, which would provide an excellent opportunity for both sides to work together to revitalise the Non-Alignment Movement and also to further strengthen their traditionally warm and friendly relations.

During bilateral discussions, both sides welcomed the proposed inauguration of an IT laboratory in Havana, set up with Indian expertise, during the NAM Summit, and the growing cooperation in the energy sector.
The Cuban side appreciated India’s offer to increase ITEC slots. Possibilities of strengthening cooperation in other areas including agriculture, sports, culture and exchange of students were discussed. Both sides agreed to convene an early next meeting of the Joint Commission.

Cuba reiterated its strong support for India’s candidature for permanent membership of the UN Security Council and responded positively to the candidature of Mr. Shashi Tharoor for the post of UN Secretary General.

445. Statement of Prime Minister before his departure for his visit to Brazil and Cuba.

New Delhi, September 10, 2006.

Please see Document No. 050.

446. Statement by Member of the Indian Delegation to the UN A. Vijaya Raghavan on Agenda Item 18: Necessity of ending the Economic, Commercial and Financial Embargo imposed by the United States of America against Cuba at the 61st session of the UN General Assembly.

Please see Document No. 588.
DOMINICAN REPUBLIC

447. Joint Statement issued during the visit of the Secretary of State for External Relations of the Dominican Republic Carlos Morales Troncoso.

New Delhi, February 17, 2006.

The Republic of India and the Dominican Republic established diplomatic relations on May 4, 1999. On May 31st 2001, an MoU was signed in Santo Domingo between the two countries to undertake periodic consultations to review bilateral relations in the areas of political, economic, commercial, scientific, technical and cultural cooperation, as well as to exchange views on international issues of mutual interest.

Within the framework of the above-mentioned MOU, the first bilateral consultations were held from 5-7 September, 2004 during the visit of H.E.Rao Inderjit Singh, Minister of State for External Affairs to Dominican Republic and his meeting with the Secretary of State for External Relations, H.E. Carlos Morales Troncoso.

On this occasion, Minister Morales Troncoso is paying an official visit to India, from 16th to 23rd February 2006, to reciprocate the visit of MOS Singh and to strengthen bilateral relations.

Minister Morales Troncoso held bilateral talks with MOS of External Affairs of the Republic of India H.E. Mr. Anand Sharma. He thanked MOS for the invitation extended to him to visit India which gives him an opportunity to see and take note of the admirable development achieved by India in recent years, especially in the areas of advanced technologies including information technology, health and biotechnology, and cinematographic industry.

In an atmosphere of cordiality and understanding the two Ministers agreed to strengthen bilateral ties and cooperation. They exchanged views on areas of mutual interest in international affairs. Minister Morales Troncoso, on behalf of the Dominican Government, formally proposed to the Indian Government the signing of certain Agreements: Agreement on Technological Cooperation, Agreement on Exemption of visas for Diplomatic and Official passport holders, Agreement for Bilateral Promotion and Protection of Investment, Agreement for Double Taxation Avoidance and Agreement on Commercial and Economic Cooperation. He also informed
about the opening of the Dominican Embassy in New Delhi, which will issue tourist and business visas, without making a reference to the concerned Dominican authorities, to Indian nationals holding valid US Visa.

The Indian side welcomed the opening of the Embassy and agreed to facilitate it. The Indian side committed to consider positively the Agreements proposed by Dominican Republic.

The Indian side expressed its willingness to establish development partnership with Dominican Republic as part of its commitment to South-South Cooperation.

Foreign Minister Morales Troncoso, invited Indian businessmen to consider investment in DR, especially at the IT Park of Santo Domingo, taking into consideration the incentives and assistance offered to foreign investors.

He referred to the two visits to India in 2005 by the Secretary of State Eddy Martinez, Executive Director of the Centre for Promotion and Investment of the Dominican Republic (EI-RD) to promote Indian investment in Dominican Republic, exchange of business delegations and to seek Indian cooperation for undertaking training projects and capacity building of Dominican Citizens in technological areas. Mr. Martinez had signed several MoUs with Indian institutions.

The two sides agreed to cooperate with each other on issues of common interest in multilateral fora such as UN and WTO.

Foreign Minister Morales Troncoso thanked MOS Sharma for the warm hospitality offered to him and his accompanying delegation during their stay in India.

This joint statement is signed in two originals - in English and Spanish, all the texts being equally authentic.

Signed in New Delhi, on Seventeenth February of the year two thousand and six.

Anand Sharma Carlos Morales Troncoso
Minister of State for External Affairs Republic of India Secretary of State for External Relations of the Dominican Republic
PREAMBLE

The Government of the Republic of India and the Government of the Dominican Republic (hereinafter jointly referred to as the “Parties” and in singular as the “Party”):

DESIROUS to consolidate and expand the friendly ties and reciprocal understanding between the two countries;

CONVINCED of the necessity of a lasting and effective cooperation in order to contribute to the economic and social development of both countries;

CONSCIOUS of the desirability of promoting to the greatest possible extent the mutual knowledge of their respective intellectual and artistic achievements as well as their history and way of life by means of friendly cooperation between their respective countries; and

DESIROUS of strengthening and enhancing the quality of life of their peoples:

HAVE AGREED as follows:

ARTICLE 1
ESTABLISHMENT OF BILATERAL COOPERATION

The Parties shall establish a Joint Bilateral Commission (hereinafter referred to as “the Commission”), which shall create a general framework for bilateral cooperation.

ARTICLE 2
OBJECTIVES AND AREAS OF BILATERAL COOPERATION

(1) The Parties undertake to -

a) encourage and promote cooperation between them through mutual visits and through the development, elaboration and implementation of development plans, programmes and projects in the territories of both Parties;
b) encourage and promote cooperation between their two business communities; and

c) encourage the signing of Programmes of Cooperation between the Parties and between citizens, companies and public corporations in the territories of both Parties.

(2) Cooperation under this Agreement shall also include -

a) the elaboration of projects and technical assistance terms and conditions for the implementation of such projects;

b) the exchange of information, experts, specialists, consultants and trainees in the specified areas of cooperation;

c) the establishment of a partnership in areas such as arts and culture, education, health, tourism promotion, and national security technology;

d) cooperation in other fields agreed to by the Parties.

ARTICLE 3

COOPERATION BETWEEN AUTONOMOUS BODIES

(1) The Parties shall, within the fields of cooperation identified in Article 2, encourage the establishment of contact and cooperation between interested institutions, organizations, implementing agencies and persons in both countries.

(2) In the implementation of the provisions of this Agreement, due regard shall be given to the autonomy of relevant institutions and bodies and the status of implementing agencies. Their freedom to enter into and maintain mutual relations and agreements shall be recognized, subject to the domestic law of the respective countries.

ARTICLE 4

PROGRAMMES OF COOPERATION

(1) For the purpose of implementing this Agreement the Parties or implementing agencies of the Parties shall, as agreed upon from time to time, undertake Programmes of Cooperation which shall be valid for specific periods.

(2) The programmes contemplated in Article 4(1) shall pertain to the specific fields of cooperation identified in Article 2 and shall contain specific conditions for implementing cooperation in terms of this Agreement.
ARTICLE 5
ORGANISATION OF THE JOINT BILATERAL COMMISSION

(1) With a view to ensuring the implementation of this Agreement, to have an adequate follow-up mechanism for the cooperation activities provided for in this Agreement and to achieve the best conditions for its execution, a Commission is hereby established.

(2) The Commission shall meet once every three years in ordinary session, alternately in India and The Dominican Republic or in such other place as may be agreed. It may also meet in extraordinary Session, at the request of any of the Parties.

(3) The Commission shall be presided over by the Ministry of External Affairs on the Indian side and by the Ministry of External Relations on the Dominican Republic side and shall have the duties:
   a) promoting and coordinating the scientific and technical cooperation between the Parties;
   b) considering proposals aimed at the effective implementation of this Agreement;
   c) evaluating and establishing priority areas where it will be possible to execute “specific cooperation projects;
   d) studying and recommending the programmes and projects to be executed;
   e) revising, analysing and approving the programmes of cooperation; and
   f) working out proposals for removing obstacles that may arise during the execution of any project established under the Agreement or under separate Programmes of Cooperation.

(4) The Commission may create Committees of Experts and ad hoc Committees for detailed studies of particular questions. The conclusions reached by the Committees of Experts and ad hoc Committees shall be submitted for approval of the Commission.

(5) The recommendations of the Commission shall be written in the minutes of the meetings. The minutes of the discussions during the Joint Bilateral Commission shall be signed by the heads of delegation and shall be submitted to their respective Governments for approval.

(6) The date, venue and agenda of a session of the Joint Bilateral
Commission shall be agreed upon by the parties through the diplomatic channel and upon a proposal by the Government of the host country.

(7) The Joint Bilateral Commission, the Committee of Experts and ad hoc Committees shall determine their own internal rules and regulations.

ARTICLE 6
PROJECT FUNDING

Each Party shall be responsible for the transport and accommodation expenses of its delegation to the Joint Bilateral Commission, provided that the costs for the organization of work of the session and the costs of meals shall be borne by the host country.

ARTICLE 7
CULTURAL PROPERTY AND INTELLECTUAL PROPERTY RIGHTS

(1) The Parties shall cooperate in order to prohibit any illicit import, export and transfer of works of art and other cultural property of the respective States, and to promote in conjunction with the relevant authorities the return of cultural property transferred between the territories of the respective Parties.

(2) Any rules or regulations relating to the implementation of this Article shall be determined by the Commission.

(3) The projects jointly carried out between the Parties shall comply with the domestic law in force in both countries regarding intellectual property rights.

ARTICLE 8
APPLICABLE DOMESTIC LAW

Cooperation in terms of this Agreement shall be subject to the domestic law in force in the respective States.

ARTICLE 9
SETTLEMENT OF DISPUTES

Any dispute between the Parties as to the interpretation or implementation of this Agreement shall be resolved amicably through consultations or negotiations between the Parties.
ARTICLE 10
AMENDMENTS

This Agreement may be amended by mutual consent of the Parties through an Exchange of Notes between the Parties through the diplomatic channel. Such an amendment shall enter into force on the date of the Reply Note, accepting the proposed amendment.

ARTICLE 11
ENTRY INTO FORCE

(1) This Agreement shall enter into force on the date on which each Party has notified the other in writing through the diplomatic channel of its compliance with the constitutional requirements for the implementation thereof. The date of entry into force shall be the date of the last notification.

(2) The Agreement shall remain in force until terminated in terms of Article 12.

ARTICLE 12
TERMINATION

(1) Either Party may, by giving three months’ written notice to the other Party through the diplomatic channel, terminate this Agreement at any time.

(2) Termination of this Agreement shall not affect any Programmes of Cooperation undertaken prior to the termination of this Agreement, unless agreed to by the Parties.

IN WITNESS WHEREOF the following representatives, being duly authorized thereto by their respective Governments, have signed this Agreement in duplicate in the Hindi, Spanish and English languages, all versions being equally authentic.

DONE at New Delhi on this 17th day of February in the year 2006

FOR THE GOVERNMENT OF
THE REPUBLIC OF INDIA

(Anand Sharma)
Minister of State for External Affairs

FOR THE GOVERNMENT OF
THE DOMINICAN REPUBLIC

(Carlos Morales Troncoso)
Secretary of State for External Relations
ECUADOR

449. Joint Communique issued during the visit of Ecuadorian Minister for External Relations Francisco Carrión Mena.

New Delhi, July 18, 2006.

1. The Minister of Foreign Affairs of the Republic of Ecuador, Mr Francisco Carrión Mena, visited India on July 17-19, 2006, at the invitation of the Minister of State for External Affairs of India, Shri Anand Sharma.

2. Both Ministers highlighted the significance of this first-ever visit made by a Minister of Foreign Affairs of Ecuador to India, which will lay the foundation for a new beginning in the bilateral relations and cooperation. They agreed to have regular exchange of visits and dialogue including consideration of visits at the level of Presidents.

3. The Indian side expressed its appreciation for the opening of the Embassy of Ecuador in India and offered support and assistance for the effective functioning of the mission. The Indian side mentioned that it was, in principle, considering opening of a mission in Quito.

4. The two sides agreed to promote and diversify trade and encourage investment between the two countries in collaboration with the private sector and exchange business delegations. They agreed to explore possibility of Agreements to facilitate trade and reduce tariffs. The Foreign Minister of Ecuador will discuss these issues during his meeting with the Indian Minister of State for Commerce and Industry Shri Jairam Ramesh. The Ecuador side agreed to the request of India to consider simplifying and liberalising the procedures for issue of business visas for Indian visitors.

5. They attached importance to cooperation in the oil and gas sector and agreed to sign an MOU between the governments and another one between the oil and gas public sector companies. The cooperation would include exchange of experiences, training and technical collaboration. The Indian side expressed the interest of Indian companies in exploration and production of oil and gas in Ecuador. The Ecuadorian side welcomed and agreed to facilitate the entry of Indian companies. The Foreign Minister of Ecuador will have a meeting with the Indian Minister of Petroleum and Natural Gas, Shri Murli Deora to discuss the cooperation in the Hydrocarbons sector.
6. The two sides agreed to sign a Bilateral Agreement for the Protection and Promotion of Investments.

7. They were pleased with the signing of bilateral agreements in the area of Education and Culture, aimed at developing contacts and cooperation between educational institutions and enhancing the cultural knowledge of both countries. Ecuador thanked India for the ITEC cooperation and training scholarships including a special IT training for about 50 Ecuadorian nationals. The Indian side agreed to consider increase in the number of annual ITEC scholarships. The Indian side thanked the Foreign Minister of Ecuador for the donation of books to the Foreign Service Institute of India.

8. The Minister of Foreign Affairs of Ecuador expressed admiration for the advances made by India in the fields of science, biotechnology, manufacturing of generic medicine and vaccines. These areas together with rural development and information technology, are of specific interest to Ecuador. The two sides agreed to encourage setting up of Indian pharmaceutical plants in Ecuador.

9. They expressed satisfaction at the signing of a Cooperation Agreement between the Diplomatic Academies of both countries, which will allow young diplomats to share, from the very beginning of their careers, a joint vision of issues of mutual interest in regional and international arenas.

10. They agreed on the need for early signing of the Agreement on Exemption of Visa Requirement for Diplomatic and Official Passport holders.

11. The two sides reiterated the commitment of their countries to respect the principles of International Law and the important role of UN. The Ministers expressed their conviction on the need to foster the reform of the Security Council including expansion of its permanent membership. The Indian side thanked Ecuador for its support to the G-4 initiative and its own candidature for permanent membership of UNSC.

12. They acknowledged the importance of United Nations’ Human Rights Council and renewed their commitment, as founding members of this new body, to the principles of universality, impartiality, transparency, dialogue and cooperation in the promotion of human rights.
13. The two sides reiterated their commitment to South-South Cooperation and agreed to reinvigorate the agenda of the South.

14. The Minister of Foreign Affairs of Ecuador expressed Ecuador’s aspiration to join the G-20. The Indian side assured support to Ecuador in consultation with the other members of G-20 Group. Regarding the Doha round the Ministers reaffirmed the need to reach agreements that were consistent with the negotiating mandate for substantial and effective reductions in trade-distorting domestic support, elimination of all forms of export subsidies, and substantial improvements in market access particularly in products of export interest to developing countries. The Ministers re-affirmed also the need for operationally effective special and differential treatment for developing countries to be integral to all aspects of the outcome of the Doha Round.

15. The Ministers attached importance to the mechanism of political consultations already established between India and the Andean Community. They agreed to promote strengthening of this mechanism for more exchanges and cooperation.

16. The Minister of Ecuador congratulated India, a founding member of the Non-Aligned Movement and highlighted the significance of this group for the countries in the Southern Hemisphere.

17. The Ministers expressed satisfaction with the mechanism of Foreign Office Consultations and agreed that the next round will be hold in New Delhi, during the first semester of 2007.

18. Ecuador conveyed its solidarity and condolences to the Government and people of India on the loss of human lives in the recent bomb blasts in Mumbai and firmly condemned any act of terrorism.

19. The Minister of Foreign Affairs of Ecuador thanked the Minister of State for External Affairs for the hospitality and invited him to visit Ecuador.
450. Memorandum of Understanding on Mutual Cooperation between the Foreign Service Institute, Ministry of External Affairs, the Republic of India and the Diplomatic Academy, Ministry of Foreign Affairs, the Republic of Ecuador.

New Delhi, July 18, 2006.

The Foreign Service Institute of India and the Diplomatic Academy of Ecuador (hereinafter referred to as “the Parties”) in the spirit of cooperation that has traditionally existed between two countries and desiring to promote greater cooperation between the two institutions have agreed as follows:

ARTICLE 1

The Parties shall cooperate in mutually agreed areas of activity, which inter alia may include:

1. Exchange of information on structure and content of training programmes for diplomats;
2. Identification of experts in mutually agreed areas;
3. Exchange of information on the use of IT in diplomacy;
4. Joint research in mutually agreed areas;
5. Mutual assistance in designing IT-based course content for distance learning.

ARTICLE 2

The Parties shall exchange information and publications on training programmes, curricula of studies and other activities of common interest.

ARTICLE 3

The Parties shall promote the exchange of experts, scholars and diplomatic trainees.

ARTICLE 4

The Parties will encourage coordinated research on the subject of mutual interest.
ARTICLE 5

The Parties will decide the specifics and logistics of every project they undertake together.

ARTICLE 6

This Memorandum shall enter into force on the date of its signature and shall remain in force for a period of three years. Thereafter, it may automatically be renewed for similar three-year periods at a time, unless terminated by either party by giving a written notice of 90 days to the other party prior to the date of termination of the Memorandum.

In witness whereof, the undersigned being duly authorized thereto by their respective Governments, have signed this Memorandum and affixed their seals.

Done at New Delhi on this 18th day of July 2006 in two originals each in Hindi. English and Spanish languages, all three texts being equally authentic. In case of any divergence in interpretation, the English text shall prevail.

On behalf of Foreign Service Institute of India
(Anand Sharma) Minister of State
Ministry of External Affairs
Government of the Republic of India

On behalf of Diplomatic Academy of Ecuador
(Francisco Carrion Mena) Minister of Foreign Affairs
Ministry of Foreign Affairs
Government of the Republic of Ecuador

New Delhi, July 18, 2006.

The Government of the Republic of India and the Government of Republic of Ecuador:

Noting the difficulties encountered by members of the family forming part of the household of a member of a diplomatic mission or consular post who wish to engage in a gainful occupation;

Realizing that many members of such households, in particular spouses, may wish to work in the State where the member of a diplomatic mission or consular post is assigned to duty;

Desirous of facilitating the engagement of such family members in a gainful occupation in the receiving State;

Have agreed as follows:

1. Authorization to engage in a gainful occupation:

   The members of the family forming part of the household of a member of a diplomatic mission or consular post of the sending State shall be authorized, on a reciprocal basis, to engage in a gainful occupation.

   (a) In the receiving State in accordance with the provisions of the law of the receiving State.

   (b) The receiving State shall retain the right to withhold authorization for employment in certain areas.

   (c) Any authorization to engage in a gainful occupation in the receiving State shall, in principle, be valid only during the tenure of the member of a diplomatic mission or consular post in the receiving State.

2. Definitions:

   For the purposes of these Arrangements:

   (a) “A member of a diplomatic mission or consular post” means any employee of the sending State who is not a national of or permanently resident in the receiving State and who is assigned to official duty in
the receiving State in a diplomatic mission, consular post or mission to an international organization;

(b) “A member of the family” means the spouse of a member of a diplomatic mission or consular post, any minor children and any unmarried, dependent children up to the age of 25 years and any handicapped children with no limit of age who form part of the household of a member of a diplomatic mission or consular post.

3. **Procedures:**

(a) A request for authorization to engage in a gainful occupation shall be sent on behalf of the member of the family by the diplomatic mission or consular post of the sending State to the Protocol Division of the Ministry of Foreign/External Affairs of the receiving State.

(b) The procedures followed shall be applied in a manner so as to enable the member of the family to engage in a gainful occupation as soon as possible and any requirements relating to work permits and similar formalities shall be favorably applied.

4. **Civil and administrative privileges and immunities:**

   In the case of members of the family who enjoy immunity from the civil and administrative jurisdiction of the receiving State in accordance with the Vienna Convention on Diplomatic Relations, 1961 or Vienna Convention on Consular Relations, 1963 or under any other applicable international instrument including the rules of the customary international law, such immunity shall not apply in respect of any act or omission carried out in the course of the gainful occupation and falling within the civil or administrative jurisdiction of the receiving State.

5. **Criminal immunity:**

   In the case of members of the family who enjoy immunity from the criminal jurisdiction of the receiving State in accordance with the Vienna Convention on Diplomatic Relations, 1961 or under any other applicable international instrument:

   (a) The provisions concerning immunity from the criminal jurisdiction of the receiving State shall continue to apply in respect of any act carried out in the course of the gainful occupation.

   (b) However, in the case of serious offences, upon the request of the receiving State, the sending State shall give due consideration to
waiving the immunity of the member of the family concerned from the criminal jurisdiction of the receiving State.

(c) The sending State shall also give due consideration to waiving the immunity of the member of the family from the execution of a sentence.

6. Fiscal, social security and exchange control regimes:

In accordance with the Vienna Convention on Diplomatic Relations, 1961 or under any other applicable international instruments members of the family shall be subject to the fiscal, social security and exchange control regimes of the receiving State for matters connected with their gainful occupation in that State.

7. Settlement of disputes:

Any differences or disputes regarding the interpretation or application of these Arrangements shall be settled through mutual consultations.

8. Entry into operation:

These Arrangements shall enter into operation on signature and shall continue in operation until terminated by either Party by providing six months notice in writing.

IN WITNESS WHEREOF the undersigned, being duly authorized by their respective Governments, have signed these Arrangements.

Done at New Delhi on the 18th day of July, 2006 in two originals each in the Hindi, Spanish and English languages, all texts being equally authentic. In case of any divergence, the English text shall prevail.

(Mr. Anand Sharma)

Ministry of External Affairs  
Government of Republic of India.

(Dr. Francisco Carrion Mena)  
Minister of Foreign Affairs  
Ministry of Foreign Affairs  
Government of the Republic of Ecuador.
452. Press Conference by Minister of State Anand Sharma and Minister of External Relations of Ecuador, Francisco Carrion Mena.

New Delhi, July 18, 2006.

MR. ANAND SHARMA: Ladies and gentlemen, you have been witness to the signing of the four agreements. I may also mention here that this is the first ever visit of the Foreign Minister of Ecuador and we are very happy to welcome Dr. Francisco Carrion here. His visit is preceded by another significant decision of the Government of Ecuador that was to set up their Resident Mission in New Delhi. In the first few months the Ambassador has already made his own impact. We have been informed about the good work which he is doing.

Both India and Ecuador are very keen to expand the bilateral cooperation and deepen the engagement. We have had during our meeting today identified the priority sectors of cooperation which would include the energy sector, that is, oil and petroleum, also pharmaceuticals, IT. We have very good understanding between the two Governments when it comes to cooperation in the international fora, especially in the multilateral organizations including the United Nations. We have during the course of our discussions also talked about comprehensive UN reform, the democratisation of its structures and the expansion of the UN Security Council both in the permanent category and in the non-permanent category.

There are Indian companies both in the private sector and the public sector which have shown keen interest in Ecuador. Likewise, Ecuador Government, their State undertakings, State companies and also the private sector are taking interest in business cooperation, trade cooperation with India. In fact, the Minister is accompanied by leading representative of the industry of Ecuador who will be interacting with the Confederation of Indian Industry later.

From our side the petroleum sector, OVL has already been engaged in the exercise of looking at the possibility of both investing and (engaging in) oil exploration. We hope that in the energy sector, in the pharmaceutical sector and also in IT sector there is an enormous potential of bilateral cooperation between our two countries. We also hope that in other areas which are of shared interest and concern we will be working together.
Foreign Minister of Ecuador has in his opening remarks today offered his condolences over the serial bomb blasts in Mumbai, the loss of large number of innocent lives in India, which we do appreciate. During our discussions we have recognized the scourge of terrorism, the threat which it poses to the international community and to peace and also our shared resolve to work together in fighting the menace of terrorism worldwide. With these opening remarks I would like now to invite Dr. Francisco Carrion to make his observations.

DR. FRANCISCO CARRION MENA: Thank you very much, ladies and gentlemen. Well, I have almost nothing to add to what my colleague and friend Mr. Sharma has said because he has summarized exactly what we have been talking. Nevertheless, I want to stress that I and my delegation and my country acknowledge the hospitality and friendship of the people of India.

My country is a country that has many similarities with India although there is a difference of size and population. So, we are looking for new ways of strengthening our relations. We are looking for increasing our trade, our cooperation and we are sure that we can achieve it.

But first of all, I think that it is necessary to know each other more. That is why I am visiting India, to talk about my country, to identify the different issues in which we can increase our relations. Minister Sharma has already underlined the fields in which we can certainly do much more.

I want to repeat what the Minister has said about the solidarity and condolences of Ecuador over the bombings that took place in Mumbai because we think and we are decided that terrorism must be fought. We are working with multilateral bodies of the United Nations and (on) bilateral agreements against terrorism.

I told Minister Sharma that although Ecuador has not been struck by terrorism inside the country, we have had many Ecuadorians dead. They were killed in Madrid, they were killed in New York, because they were working or studying in those cities when the bombs exploded. So, we firmly condemn terrorism. We are with the people of India, with its institutions fighting terrorism.

We have many fields in which we can work together. We have already identified some of them. We talked about multilateral affairs, of course, in which we have many points in common. We have worked in the United Nations especially and we are very glad to see how our two countries, even though
we are far away geographically, are very near in our positions regarding peace, security and cooperation. Thank you very much.

**QUESTION:** Does Ecuador support India’s candidature for the permanent membership of the United Nations Security Council?

**DR. FRANCISCO CARRION MENA:** We see with great sympathy the candidature of India and we have supported that candidature.

**QUESTION:** This is your first visit to India, what impressions of India are you carrying back?

**DR. FRANCISCO CARRION MENA:** I am very impressed about India. I have been here for a short time, about twenty-four hours, but I have had the opportunity of talking with the Indian people. I have learned a lot about the economic growth of India, the importance of this market for us and, I am convinced now more than before coming here, the importance of cooperation between both countries. For that the first step is knowing each other better. That is why we signed a cultural agreement. We are identifying some fields in which we can work together, and there are many of them. We need the decision not only of the public sector or the Government but of the private sector of Ecuador and the private sector of India. I have a very good impression about what is going on in India in economic and political spheres. That is why we want to strengthen our relations. I am very very glad to meet you.

**QUESTION:** My question is to Mr. Anand Sharma. Sir, can you tell us about the situation in Lebanon especially in view of Indians over there and the steps that the government is taking for them and for the Indian troops stationed there under the UN Mission. Has there been any decision to withdraw them?

**SHRI ANAND SHARMA:** The situation there is grave enough to warrant concern. The Government of India has clearly expressed so. We have also issued an advisory to the Indian nationals in Lebanon, approximately twelve thousand of them, to keep their passports and travel documents ready. In the eventuality of the situation demanding their evacuation the Government of India will take all possible measures to move them away to safety and for their evacuation. There has been no decision as far as the troops are concerned because they are part of a multinational force.
**QUESTION:** Today is the first anniversary of the Indo-US nuclear deal, July 18. There are still one or two issues that need to be addressed. One is the issue of testing. Is this going to be sorted out? Secondly, there have been reports today that US and Germany have agreed to support Shashi Tharoor’s candidature. Is that being seen as a positive development?

**SHRI ANAND SHARMA:** With regard to the second part, I have no confirmation, I have no information. So, I am not in a position to comment at all. As far as the first part is concerned, the Joint Statement between President Bush and Prime Minister Dr. Manmohan Singh was signed last year on July 18. President Bush and Prime Minister have met in St. Petersburg at the G-8 and Outreach countries meeting. The Prime Minister had indicated that he would be taking up these issues, certain new clauses which were suggested, so that there can be a complete understanding reached within the framework of the July 18 statement and the mutual obligations which were explained therein. Prime Minister has also made clear India’s position that India will engage in civilian nuclear cooperation with the United States of America and other international partners strictly on the basis of reciprocal commitments which have been contained in the July 18 statement and the Prime Minister's statement to the Indian Parliament on the 11th of March. There are no additional obligations or conditions which India has accepted. So, we are hopeful that this would be resolved to the satisfaction of all concerned.

Thank you.
GUYANA

453. Press Release issued by the High Commission of India in George Town on 2nd Session of Foreign Office Consultations between India and Guyana.

Georgetown, July 18, 2006.

Mrs. Shashi U. Tripathi, Secretary, Ministry of External Affairs, Government of India led the Indian delegation to the Second Session of the Foreign Office Consultations between India and Guyana at the Ministry of Foreign Affairs in Georgetown on July 17, 2006. The Guyanese delegation was headed by Ambassador Elisabeth Harper, Director General of the Ministry of Foreign Affairs. The two leaders expressed great satisfaction at the development of friendly relations since the establishment of diplomatic ties between India and Guyana more than 40 years ago.

Ambassador Elisabeth Harper mentioned that Guyana had derived tremendous benefits from the deputation of Indian experts and training of Guyanese nationals under the Indian Technical and Economic Cooperation programme. She thanked the Government of India for providing financial support to build a modern Cricket Stadium in Guyana for the forthcoming Cricket World Cup 2007. She also commended India for its contribution towards peace, security and development, and conveyed Guyana’s sympathies on the recent terrorist bomb blasts in the trains of Mumbai.

Mrs. Shashi U. Tripathi hailed the deepening of bilateral ties against the background of the common colonial history of India and Guyana and pointed out that both the countries missed the industrial revolution because of colonialism but must not miss the knowledge revolution. She noted that the economic and commercial relations between India and Guyana have been on the rise since the two visits by President Bharrat Jagdeo to India in 2003 and 2004.

Mrs. Tripathi emphasized that both India and Guyana being developing countries, there was a need to look at new ways of synergising each other’s strengths particularly in the light of India’s rapid economic growth rate of 8% per annum over the last 2-3 years. She appreciated Guyana’s support to UN Reforms, including to India’s candidature for a permanent seat in the expanded Security Council.

The Second Session of the Foreign Office Consultations re-affirmed
the importance of the consultative mechanism between the Foreign Ministries of the two countries in reviewing the areas of cooperation and providing a forum for the exchange of views on international and multilateral issues of mutual interest and concern.

After extensive discussions on various agenda items the Indian side agreed to depute experts in the field of Flood Forecasting and Disaster Management, Law Enforcement related training and development of training courses for Foreign Service Officers. At the request of the Guyanese side the Indian side also agreed to consider proposals for the extension of the period of the deputation of future ITEC experts from two to three years.

The two sides agreed to take steps to extend the Cultural Exchange Programme by another three years. The last Cultural Exchange Programme was signed in August 2003 during the visit of President Bharrat Jagdeo to India.

The Guyanese side put forward the following proposals for concessional Lines of Credit:-

(i) Construction of sports facilities in the counties of Essequibo and Berbice

(ii) Creation of an ICT Park/Village and

(iii) Design and installation of a solar/electric traffic signaling system

The two sides exchanged views on issues of common interest in the international arena and had similar views on the UN Reforms. They also agreed to continue their collaboration in advancing efforts to combat terrorism.

The two sides agreed that the Third Session of India – Guyana Foreign Office Consultations would be convened at New Delhi at a mutually convenient date.

The leader of the Indian delegation also called on President Bharrat Jagdeo, Prime Minister Samuel Hinds, Minister of Foreign Affairs Rudy Insanally and Minister of Foreign Trade and International Cooperation Clement Rohee and discussed matters of mutual interest.
MEXICO

454. Memorandum of Understanding on Cooperation between the Indian Council of World Affairs, Republic of India and the Consejo Mexicano de Asuntos Internacionales (COMEXI), Mexico.

New Delhi, November 6, 2006.

The Indian Council of World Affairs [ICWA], New Delhi, and the Consejo Mexicano de Asuntos Internacionales (COMEXI), Mexico, hereinafter referred to as ‘The Parties’;

Intending to enhance mutual understanding and friendship between the peoples of the Republic of India and Mexico through the promotion of friendly institutional relations;

Have reached the following understanding:

Article 1 - General Guidelines

The Parties agree to develop exchanges and cooperation on the basis of mutual respect, equality and mutual benefit.

The Parties agree to establish a non-governmental group of eminent persons from both sides from the fields of diplomacy, culture, economy and trade, academics, sciences, social sciences, communications and the media to facilitate the India-Mexico Dialogue and cooperation between the civil societies of India and Mexico.

With a desire to make such dialogue and exchange fruitful, the Parties shall, through mutual understanding, decide upon the number of participants from each side, and shall each nominate their respective Co-Chairpersons.

The Dialogue will be hosted alternately in India and Mexico by the ICWA and the COMEXI respectively. The first dialogue will be hosted by COMEXI in Mexico City in 2007.

Article 2 - Contents of Cooperation

Cooperation under this Memorandum may include:

1. Promotion and support of those activities contributing to better understanding and relations between India and Mexico;
2. Promotion and support for the exchange of visits by eminent persons in the fields of diplomacy, culture, academics, economy and trade, education, sciences, social sciences, communication and the media;

3. Co-sponsoring of bilateral seminars, symposiums and panel discussions on issues of common interest;

4. Exchange of publications;

5. Other forms of cooperation as may be agreed upon by both parties through consultations.

**Article 3 - Sharing of Expenses**

On the basis of reciprocity, the sending Party shall cover international travel expenses while the receiving Party shall cover local transportation and hospitality expenses of the participants as well as local organizational costs.

**Article 4 - Others**

Other issues not covered in this Memorandum shall be decided through mutual consultation between the Parties.

**Article 5**

The Memorandum shall come into effect from the date of its signature. This Memorandum of Understanding may be amended by mutual agreement whenever necessary.

Signed in New Delhi on the 6th day of November of the year 2006 in three originals each in the Hindi, English and Spanish languages, all texts being equally authentic. In case of any divergence in interpretation, the English text shall prevail.

INDIA’S FOREIGN RELATIONS - 2006
SECTION - VIII
EUROPE
Blank
Hon'ble Minister for Power, Commissioner for Energy H.E. Mr. Andris Piebalgs, Excellencies, Distinguished participants and Guests.

I would like to extend a warm welcome to all of you to the first India-EU Business Conference on Energy. The presence of both European and Indian companies in such numbers, and particularly the decision of Commissioner Piebalgs to personally visit India for this Conference as well as for the Energy Panel tomorrow underlines the importance that both India and EU attach to cooperation in the Energy sector.

We are happy that both the Business Conference and the Energy Panel will benefit from the guidance of our Hon'ble Minister and of the Commissioner.

I wish to thank the European Commission and the Federation of Indian Chambers of Commerce and Industry, for having taken the lead in jointly organizing this business event, which I am confident will provide our entrepreneurs an interesting opportunity to interact with their counterparts from various member states.

As you are aware, in parallel with the annual political summits, we have also institutionalized a high level Business interaction with EU. However, today's event is unique as for the first time we have gathered together leaders in the field of Energy focusing exclusively on encouraging business to business interaction in specific Energy sectors - Thermal power generation, Renewable Energy, Energy Efficiency, Transport sector & Clean fuels.

The dialogue on Energy between EU and India is an outcome of the India EU Summit held at The Hague in 2004 which decided to elevate our relationship to the level of a Strategic Partnership. Cooperation between India and the EU in the energy sector is a very important part of the Strategic Partnership. At the Hague Summit, the Prime Minister pointed out that with the high rates of growth needed by India to achieve its developmental goals as well as China's high growth figures would have its consequences
in terms of increasing the demand for oil and gas and the price of oil. This would have consequences not just for India and the EU but for the whole world. It was necessary to look at changes in energy mix. The Summit created a high level Energy panel which in its very first meeting held last June decided that for the dialogue to be meaningful and result oriented it was essential that we bring together our business leaders from this strategic sector. So this is how this initiative was born. It shows a great deal of promise. We are happy with the progress being achieved.

Many of the participants of the Business conference, both from India and Europe, represent what could be termed Small and Medium enterprises. Nonetheless they represent the very best that we have to offer in this frontier area of technology.

While we are familiar with most of the major European Companies working in the Oil and Gas sector, today we also get to interact with companies representing a diverse energy mix. We understand that different countries in the EU have different strengths in the energy sector and today's Business Conference would provide useful opportunity to establish appropriate linkages.

I would like to believe that this is only our first step together in a new direction. I avail of this opportunity to suggest that in future annual business summits we create a specific segment devoted to energy so that our dialogue and interaction continues on a regular basis.

We are aware of the achievements of Europe in the areas of Hydrogen and renewable energies. Renewables are already supplying over 6% of Europe's energy needs. If one considers this along with the share of Nuclear Energy, this figure reaches an impressive 20%. Europe's target of generating 20% of its electricity and meeting 12% of its energy needs from renewable sources of energy by 2010, and even higher benchmarks for future, points to the seriousness with which it has addressed the twin issues of energy security and climate change.

Our energy requirement like yours is high, and is expected to grow much higher given our large population, and our projected economic growth rates. The rising prices of fossil fuels and our import dependence demands a diversification of energy mix, greater use of renewable energy and increased R&D for new technologies.

India constitutes about 15% of the world population but accounts for
only 3% of the world's total annual energy consumption. Per capita annual consumption of energy in India is very low at 0.32 TOE against the global average of 1.68 TOE, and US average of 8.55 TOE. Thus, even to reach the global average energy demand in India will need to go up 5 times. Our development and growth goals will not be met without safe, secure and stable energy supplies.

The time to think ahead and plan for alternate, secure, stable and clean sources of energy is now. It is with this objective that India has joined EU and other partners in the ITER project, and we look forward to working with European Companies in many more new Energy areas.

We need to work on several fronts simultaneously. We understand that merely securing existing energy sources is not an answer to the problem that we will face. There is an urgent need to reduce our dependence on the non-renewable sources of energy. We also need to improve energy efficiency all around, in all the fuel chains and the entire production and distribution chains.

With a strong industrial base and successful commercialization of technologies in wind, solar photovoltaics, solar thermal, small hydel, biogas and improved biomass stoves, India has acquired expertise in a wide array of technologies, and is poised to play a leading role in the global movement towards sustainable energy development. Though small in comparison to EU, India already has the third largest installed wind power generating capacity in the world.

All these sectors present promising opportunities for our foreign partners to invest - both in power generation and manufacture of products and systems for our domestic market as also for export to third countries. Other areas like hydrocarbons, hydropower and nuclear energy also provide areas of cooperation.

I am confident that today's interactions between experts and industry representatives you will lead to mutually fruitful partnerships.

I wish the Conference all success. Thank You.
The 2nd meeting of the India-EU Energy Panel took place today in New Delhi. The high level energy meeting was inaugurated by Minister for Power Mr. Sushil Kumar Shinde and the EU Commissioner for Energy, Mr. Andris Piebalgs, underlining the importance of Energy cooperation for the Strategic Partnership between India and the EU.

The Panel was co-chaired on the Indian side by Foreign Secretary Mr. Shyam Saran and on the EU side by Mr. Fernando de Esteban Alonso, Deputy Director General for Energy and Transport in the European Commission.

The India-EU Energy Panel was constituted following a decision of the 5th India-EU Summit at The Hague in November, 2004 which launched the strategic partnership between India and the EU and identified co-operation in the energy sector as a key area for co-operation.

The Joint Action Plan to implement the India-EU Strategic Partnership, which was adopted at the 6th India-EU Summit held in New Delhi in September 2005, attaches special importance to cooperation in the energy sector, in the areas of:

- Promoting energy efficiency and energy conservation
- Development of affordable clean energy technologies
- Identification of new technologies in the field of new, renewable, conventional and non-conventional energy sources
- Oil and gas, with a view to promoting security of supplies and stability in prices
- Nuclear energy
- Technology and expertise in exchange of energy between different grid systems and development of energy markets
- Development of hydrogen and fuel cells
- Methane recovery and use.
The inaugural meeting of the Energy Panel held in Brussels in June, 2005 set up three Working Groups covering:

- Coal and clean coal conversion technologies
- Energy efficiency and renewable energies
- Fusion Energy, including India’s participation in ITER.

India has since joined the ITER Thermonuclear Fusion Project in December 2005.

All three Working Groups have met and have had constructive discussions looking at how to take co-operation in these respective areas forward.

The first meeting of the India-EU Energy Panel had also agreed to organize an India-EU Energy Business Conference. This event took place on 6th April at New Delhi. It was co-organised by the Ministry of External Affairs, the European Commission and the Federation of Indian Chamber of Commerce (FICCI). This was the first ever India-EU Business Conference exclusively on energy. It brought together a large number of European and Indian companies engaged in developing new and renewable energy sources.

India and the EU have decided to mainstream this important sectoral dialogue in their annual business summits so that each side is apprised of emerging business opportunities in this new area of cooperation. It is expected that long-term business relations would be established between Indian and European companies, including with SMEs in this field.

At its second meeting, the Energy Panel reviewed the global energy scenario and exchanged views on their respective energy policies and the measures being undertaken to assure affordable and clean energy for assuring continued growth of their respective economies. Commissioner Piebalgs gave a presentation on the Green Paper on the European Energy Policy adopted last month at the European Council. Foreign Secretary gave a presentation on the Energy scenario in India.

The Panel also discussed various possible options and strategies for development of secure and sustainable energy supplies from a diverse mix of energy sources including fossil, renewable and nuclear energy. Senior officials from the concerned Departments and Ministries in the
Government of India, including External Affairs, Power, Petroleum & Natural Gas, Coal, Atomic Energy, Non-conventional Energy Sources and Environment exchanged views with their counterparts in the EU.

The Panel agreed in principle to set up a Working Group on Petroleum and Natural Gas to explore the areas of cooperation in this sector.

The Energy Panel also reviewed the reports of the three Working Groups. Based on the preparatory work of the Working Groups, both sides agreed to commission five specific techno economic studies covering areas of great significance. The studies would focus on:

- Coal Quality Management System in India
- Application of Eco-design requirements/methodology of energy using products in India
- Assessment of potential of using bio fuel in India
- Study and renovation and modernization of a thermal power plant
- Assessment of technologies for capture and geological storage of carbon dioxide.

The first four studies would be financed under the Action Plan Support Facility of the European Commission while the fifth study would be financed by GOI. The two sides will nominate focal agencies for these studies within a month. Their reports would be submitted to the Energy Panel.

The two sides underlined the importance of secure and clean energy sources which are both affordable and less harmful to the environment. India expressed a particular interest in transfer of technology, joint research projects, and sharing of best practices in areas of mutual interest particularly nuclear energy, hydrocarbons, clean coal conversion technologies, renewable energy and energy efficiency.

It was decided to hold the next meeting of the Panel in the first half of 2007 at Brussels.
Special Media Briefing by Foreign Secretary Shivshankar Menon on the visit of Prime Minister Dr. Manmohan Singh to the UK and Finland, 9-14 October, 2006.

New Delhi, October 7, 2006.

OFFICIAL SPOKESMAN (SHRI NAVTEJ SARNA): Good morning everybody and thank you for turning up on a Saturday morning. It is a particularly important occasion for us. This is the first time we have with us the new Foreign Secretary in this briefing hall to brief all of you. We would like to welcome him. I also welcome all of you to this briefing on the Prime Minister's visit beginning Monday to the United Kingdom and then on to Finland. In the end we will take questions. Please indicate your interest. I will keep a list. I request you to keep all your cell phones off and also to keep your questions to the visit.

FOREIGN SECRETARY (SHRI SHIV SHANKAR MENON): Ladies and gentlemen, I thought I will brief you on Prime Minister Dr. Manmohan Singh's official visit to the UK and to Finland for bilateral discussions and for the Seventh India-EU Summit from the 9th to the 14th.

PM will be in the UK from the 9th to the 11th and will be accompanied by the Commerce and Industry Minister Shri Kamal Nath and the Minister of State for External Affairs Shri Anand Sharma.

In the UK, during the visit Prime Minister will hold summit meeting with the UK Prime Minister Tony Blair. This is the third India-UK summit meeting since the Comprehensive Strategic Partnership between India and the UK was launched in September 2004. In addition, Dr. Gordon Brown, the Chancellor of the Exchequer and the UK Foreign Secretary Ms. Margaret Becket will be among those who would call on the Prime Minister while he is in London.

The focus of discussions during the visit will be on the further expansion of economic linkages, on R&D collaboration and academic exchanges and on cooperation in counter-terrorism and clean energy. These are among the focus areas for consultations and discussions during the visit. There will be other areas as well.

This will be the fifth meeting between the two leaders since 2004. Following Prime Minister's visit in 2004, Prime Minister participated in the Gleneagles summit in the UK in 2005. Prime Minister Blair visited India for
the Sixth India-EU Summit. We had the India-UK summit a day after that in Udaipur. PM also met the Prime Minister Blair in St. Petersburg earlier this year.

During Prime Minister's September 2004 visit, we had adopted a Joint Declaration which upgraded bilateral relations to Comprehensive Strategic Partnership which listed a whole series of areas for cooperation - civil nuclear activities; high technology trade; civilian space programmes; and further developing economic and other relations. We have seen substantial progress in the relationship over the last two years as a result. One of the important areas in this is collaboration in counter terrorism especially in view of recent global developments. For instance, both Delhi and London will be hosting major sporting events - the Commonwealth Games in 2010 and the Olympics in 2012. So, both countries could, for instance, share information on best practices between our concerned security authorities. While in the UK, Prime Minister along with the UK Prime Minister will address the India-UK Investment Summit on October 10th which is being organised by the Indo-British Business Partnership Network.

The event will also be addressed by Commerce and Industry Minister Shri Kamal Nath and by Mr. Alistair Darling, Secretary of State for Trade and Industry of the UK. About 100 CEOs are expected to attend the event. The UK is a very important partner for India due to our shared history; a large Indian community of about 1.2 million living in the UK; and the close political and economic linkages. Over 16000 Indian students study in the UK. As you know, there is a strong presence of Indian professional in the IT and other sectors in the UK as well. I just went over the series of high-level exchanges that we have had recently. We see that as continuing in the future. The UK is our fourth largest global trading partner and the largest in the EU with an annual two-way trade in goods of 5.6 billion pounds and services of 1.8 billion pounds.

The UK is also still the largest cumulative investor in India and the fifth largest in India since 1991. In recent years, Indian investments in the UK have grown rapidly and India has emerged as the third largest investor in the UK as well in terms of the number of projects with an estimated investment of over one billion dollars. Another significant indicator of the increasing Indian profile is that nearly 500 Indian companies have offices in the Greater London area. On the 11th of October, Prime Minister will travel to Cambridge University where he will be conferred an honourary degree. He will also be meeting members of the Indian community and representatives of the Indian
Overseas Congress while he is in London at a reception hosted by our High Commissioner. After London, Prime Minister will go to Finland, to Helsinki. He will be in Finland from 12th to 14th. On the 12th, he will hold bilateral discussions with the Finnish Prime Minister who, you will recall, had visited India in March 2006. For us Finland is a technologically advanced country with one of the highest per capita growth rates in Europe.

Indian companies have established several links with Finland in high technology areas. Tourism is also another area of promise in our relationship with Finland. Finn Air will be establishing direct flights from Finland to New Delhi from the 30th of October. Our bilateral trade in 2005 was 407 million Euros. We have now seen several Finnish investments in India, Several large Finnish technology companies in India, while Indian companies have also started investing in Finland in the last two years. For instance, Wipro has acquired a company in Finland and so has Sasken Communication Technologies. So, as I said, most of these are in the high-tech area. Prime Minister will take part in the Seventh India-EU Summit on October 13.

This will actually be the fourth summit level interaction that the EU under the Finnish Presidency is undertaking in the last two months because they have just done in September - China, Republic of Korea and ASEAN in which we also participated as a member. The EU will be represented under the Finnish Presidency by the Prime Minister of Finland Mr. Vanhanen, by the High Representative for Common Foreign Security Policy Dr. Javier Solana, and by President of the European Commission Mr. Jose Manuel Barosso, the European Commissioner of External Relations Mr. Benito Ferreiro-Waldner, and the European Commission of the Trade, Peter Mandelson. You would recall that the Sixth Summit in New Delhi in September 2005 had seen the adoption of an ambitious Joint Action Programme between India and the EU, the first that we have with any country, to implement the strategic partnership that had been launched at the Fifth Summit at the Hague in November 2004.

India is the sixth country with which the EU has such a strategic partnership, the others being the USA, Canada, Russia, China and Japan. The Joint Action Plan adopted last year provides for strengthening dialogue in consultation mechanisms, for deepening political dialogue and cooperation, for enhancing economic policy dialogue and cooperation, and for developing trade and investment. So, this summit will now review the implementation of the Joint Action Plan. There has been substantial progress in the implementation of the Joint Action Plan.
A high-level trade group was set up, for instance, by the sixth India-EU summit under the Joint Action Plan which was supposed to explore ways and means to deepen and widen the bilateral trade and investment relationship. The high-level trade group (HLTG) which was headed by the Commerce Secretary on our side and the Director General of the Trade on the EU side will finalise its report. Its report will be presented to the Seventh Summit. The officials had recommended that a broad-based bilateral trade and investment agreement be negotiated between India and the EU. It is now for the political leadership at the summit to decide on the contents of the recommendation and the rest of the report and on how to take this forward. For us, as you know, the EU is a very important partner both for the individual EU Member-States and the EU collectively. The EU is home to a very large Indian diaspora. Taken as a whole, the EU is India's single largest trading partner.

One-fifth of our total external trade is with the EU. Bilateral trade has grown steadily between 2001 and 2005 at over ten per cent on average each year to reach 40 billion Euros in 2005. The trend is continuing in 2006. In the first quarter it has increased by about 18 per cent. So, it is quite rapid. India is now the 11th largest exporter to the EU. We are also important investment partners in both directions, both the EU investment in India and the Indian investment in the EU. The total FDI inflows from the EU into India are about eight billion dollars. It is about 20 per cent of the total FDI flows since 1991. India has also begun to invest in the EU in recent years. In 2003, Indian FDI inflows into the EU were around 600 million Euros as compared to the EU investment inflows into India of about 658 million Euros. We have had Parliamentary exchanges and all the other normal exchanges that take place between States. The President of the European Parliament was in fact visiting India from the 30th September to the 6th of October. In the last year he has informed us that the European Parliament would be creating a separate delegation to just to look after relations with India. That is the shape of the three visits. I will be happy to answer any questions that you might have.

**QUESTION:** The President of the European Parliament said that as per the EU Parliament Resolution India should sign the NPT and only then there will be a possibility of cooperation between India and the EU in the field of civilian nuclear energy. What is the position that India is going to take so that the EU can be brought around to Indian position?

**FOREIGN SECRETARY:** You know our position and you do not
need me to repeat what we think on either proliferation, or non-proliferation, or on cooperation in civilian nuclear energy. As far as I know, the EU does not have a common position on the issue of civilian nuclear cooperation with India. There are individual state positions. As you have seen, in the last two years certain countries have been very supportive, some less so, some have conditions, and some might have reservations. We have been talking to all the individual member-states and explaining our position and the potential also of the nuclear energy cooperation. It is our understanding that the position in terms of the amount of support that there is among EU member-states for civilian nuclear cooperation with India is better than it was before.

**QUESTION:** Mr. Menon, in Prime Minister's interaction with the leadership of the UK and Finland, will India be sharing evidence of Pakistan's role in Mumbai blasts with these leaders? Do you have anything to say on the current status of the Galileo Project?

**FOREIGN SECRETARY:** Counter terrorism is an issue that we have been discussing with the EU, with Finland, with the UK in the past. As I said in the introductory remarks, it is a big part of our strategic cooperative relationship with the UK. We will certainly be discussing all these issues which include our recent experiences as a victim of terrorism in India. We will certainly raise this. We will also see what can be done actually to improve the situation and to improve our common effort against terrorism. The UK too has suffered from terrorism of the worst kind. We will naturally try and see what we can do to. But I do not want to prejudge these discussions. This is an ongoing dialogue. At the end of the visit we will certainly tell you where we have gone with this dialogue. On Galileo, the agreement was initialled last year, you would remember, during the summit. We hope to sign it at the end of this. I think it is almost ready for signatures.

**QUESTION:** There is a school of thought that India has been projecting the role of Pakistan in international terrorism and this agreement on the joint mechanism signed in Havana. There is a school of thought which believes that the Indian Government is suffering from Stockholm syndrome. Lots of people have been writing about it, I am not saying I believe it. When you go and speak about Pakistan and raise this issue, is it going to affect our position in any way?

**FOREIGN SECRETARY:** We have not changed our position on the issue of terrorism, on how we think it should dealt with. It is a scourge. We
see it as an ongoing dialogue, as I said. It is an issue we discussed before with these partners and we will discuss it this time. You cannot expect me to characterize the Government of India’s position in the manner that any private commentator does. Everybody is free to have his opinion about what it is. But the Government of India’s position as far as I can see has been absolutely clear right through. It is not determined by what anybody else does, it is determined by what we see on the ground, what we experience and how we think it should dealt with.

**QUESTION:** Will the civilian nuclear cooperation be a priority at the India-EU Summit?

**FOREIGN SECRETARY:** It will be one of the items that we will discuss. As I said to you, on the issue of civilian nuclear cooperation, as far as we know, there is no common position. We will certainly raise it with both the UK which has been very supportive in the past, and with Finland, and we will certainly discuss it.

**QUESTION:** One of the issues in which the EU has been very involved is the dialogue with Iran where Mr. Solana himself is the pointsperson. In some of the recent meetings he has had with Mr. Larijani, there is a suggestion that insisting on suspension of enrichment prior to the dialogue beginning is perhaps not the best way because Iranians are saying that once the dialogue begins they can consider suspension. There seems to be a difference of opinion between the EU and the United States. Do we have a position on this? Is it likely to come up for discussion?

**FOREIGN SECRETARY:** I am sure it will come up. In fact, if it does not come up, we will raise it because we would be very interested in hearing how far those discussions have proceeded and what Mr. Solana thinks of those discussions. At this moment, I do not want to comment. I do not want to get ahead of myself here. Once we know exactly what they think and how far they have got in those discussions, certainly we will share our position and our thinking. Maybe that is better done towards the end of the visit after we have had the discussions.

**QUESTION:** Most of the EU countries are members of the NSG. Would there be some amount of lobbying to get the NSG to move ahead on the entire civilian nuclear cooperation and India-specific waiver?

**FOREIGN SECRETARY:** We are in touch with individual NSG members countries. We have a Special Envoy who would do this. There is
an NSG meeting in early October in Vienna. We will be using the opportunity of having them all in one place to meet them and to talk to them. But I think the formal taking up of this issue of civilian nuclear cooperation with India will probably have to await developments in the US legislature process. But certainly we are going through that exercise, talking to each of them. That is why I am saying at the beginning that it is our impression that as a result of this effort over the last year and a half or so, today many more countries in the NSG, in the EU are sympathetic and are positive about the idea of civilian nuclear cooperation with India, many more than there were say two years ago.

**QUESTION:** Do we also plan to share the information that we have of the involvement of terror groups in Pakistan with the leaders whom the Prime Minister meets in the UK and Finland?

**FOREIGN SECRETARY:** I just told you we have been discussing counter terrorism, possible action, with these countries for some time. We would certainly bring them up to date with what we have experienced and what we think and what we expect. This would a part of the dialogue. Thank you very much.

---

**458. Statement of Prime Minister on his departure for UK and Finland for the India-EU Summit.**

New Delhi, October 9, 2006.

I will be paying an official visit to the United Kingdom at the invitation of Prime Minister Tony Blair. My visit to Helsinki is for the 7th India-EU Summit as well as to provide me an opportunity to meet Finland’s leaders.

The United Kingdom is one of our most important dialogue partners. During the last three years, there has been a substantial deepening of our relations in all key areas – trade and investment, science and technology, energy, education and research and cultural ties. Prime Minister Blair and I will address an Investment Summit. The UK is our largest trading partner in the European Union and an important source of foreign investment. Indian companies are amongst the major investors in the UK. Given the common threats we face, cooperation in the area of combating terrorism has become particularly significant.
I will visit Cambridge University to receive an Honorary Doctorate which will be conferred by the Chancellor of Cambridge University, the Duke of Edinburgh.

The India-EU Summit in Helsinki will provide an opportunity to review progress in implementation of the Joint Action Plan adopted by the last Summit in New Delhi. We will review specific steps to enhance trade and investment ties between India and the European Union, which is not only our largest trading partner but an important source of Foreign Direct Investment and high technology. In recognition of India’s growing stature a strategic partnership was formalized during The Hague Summit in 2004. Since then our dialogue has expanded to issues ranging from globalization, counter terrorism energy, environment and high tech areas such as ITER and the Galileo project. An India-EU Business Summit being held in Helsinki will provide an opportunity to reinforce the message of India as a secure and profitable trade and investment destination. Our discussions at the Summit will be reflected in a Joint Statement that will be issued on its conclusion.

During my stay in Helsinki, I will be calling on President Tarja Halonen as well as Prime Minister Vanhanen who had visited India in March this year. Finland is a world leader in high technology sectors including Telecommunications, IT and Biotechnology. I hope my visit to Finland will add further momentum to our bilateral relations.

459. Keynote address of Prime Minister Dr. Manmohan Singh at India-EU Business Summit.

Helsinki, October 12, 2006.

Hon’ble Mr. Matti Vanhanen, Prime Minister of Finland, Mr. Kamal Nath, our Minister for Commerce & Industry, Mr. Peter Mandelson, the EU Trade Commissioner, Mr. Christoffer Taxell, President of EK, Mr. Saroj Poddar, President, FICCI, Mr. R. Seshasayee, President, CII, Mr. Luca Cordero di Montezemolo, Vice President of UNICE, Excellencies and distinguished participants in the Seventh EU-India Business Summit,

I am deeply honoured to have this unique opportunity to share my thoughts with business leaders from India and the European Union. The practice of holding a business summit alongside the India-EU Summit underscores the importance of business and trade in emerging cooperation between India and the European Union.
Indeed, it is the winds of trade that brought our two civilizations in contact with each other in the modern world. But that was long ago, and in a different world. Today, our businesses meet as equals in a globally integrated environment. In addition, India and European Union have common core values - commitment to democracy, the rule of law and respect for fundamental human rights. There was a time, some years ago, when our newspapers mostly reported on European companies investing in India. Today we read reports about Indian companies and Indian business persons investing in Europe. I welcome this new phase in our business relations.

I understand that many of you have already met my cabinet colleague, Mr. Kamal Nath, Minister for Commerce & Industry, and other members of the Indian delegation. I believe they have brought you up-to-date with economic and social developments in India. I would like to inform you that nowhere else in human history we have an example of over a billion people seeking their social and economic transformation and their salvation in a framework of open society and an open economy and open polity. As such I believe the success of India’s experience with this model of development has great significance for evolution of human societies. I sincerely hope that in this saga of adventure and enterprise, India and Europe will be active partners.

As you may be aware India is now into the fourth year of 8.0% annual growth in our national income. This is unprecedented. In the first quarter of the current fiscal year the rate of growth has hit a new high of 8.9%. Our industrial sector is growing at 8.5% to 9% annually. Our savings and investment rates are close to 30% of our GDP. And what is more exciting is that age profile of our population years to come will witness a sharp increase in savings and investment rate and we can find productive jobs for our growing young labour force, that would begin new exciting chapter in long and tortuous history of India for a place under the sun in this harsh and competitive world.

In manufacturing, one of the drivers of growth this year is the automobile industry. Production of commercial vehicles has grown in the first quarter of this fiscal by 36.2%. Air traffic has grown by 32.2%. The number of telephone connections, including mobile phones, a product of particular interest here in Helsinki, has grown by a staggering 48.9%.

Our services sector has been an engine of robust growth in recent years and continues to be so. India is poised to become one of the leaders of the emerging knowledge industry.
Given a stable macro-economic situation, we should be able to record 8.5% growth in GDP during the current year with the industrial sector growing at approximately 10%. I am encouraged by our industrial production registering a 10 year high of 12.4% in July 2006, compared to July of the previous year.

I cite these statistics to draw your attention to the profound underlying changes taking place in India. The process of growth underway in India is now much more sustainable than ever before. More to the point, it is widening and deepening the market for goods and services and in the process creating new opportunities for progress in trade, capital and technology.

However, we are aware that to sustain the growth momentum, we need to do much more in the field of infrastructure and improve its all-round availability and quality. We have evolved several models for greater association of private developers and investors in building highways, ports, telecommunications and various sources of energy. Many established Indian and foreign companies find these to be potentially profitable avenues. I invite European firms to participate actively in the vast infrastructure boom in India that is now unfolding itself in India.

I am informed that a survey conducted by Eurostat in 2003, had revealed that European companies operating in India had a rate of return of 13%, compared to their global average of 6% on capital employed. Earlier this morning, the Prime Minister of Finland was telling me about the example of Finnish businessmen in India. He said the initial years were difficult but that period has gone. Since the reforms process started, there has been a sea change in the climate for investment and we are committed to improve it year after year.

Of course, I am aware of the various issues raised by EU investors and other European participants in the Indo-EU Business Summit held in New Delhi last year. I have learnt a great deal from the findings at this business summit and they will receive most serious attention of our Government back home.

The Government has tried to address several of these concerns, including the need to improve physical infrastructure. We have allowed 51% foreign equity in single brand retail outlets. I know this is not considered very satisfactory but it is good beginning. Several foreign chains have availed of this opportunity and others are seriously exploring this avenue
to enter the rapidly growing Indian retail market. As you know the wholesale trading and franchisee routes are already available to foreign investors in India.

We have taken concrete measures to strengthen the intellectual property regime in India. I do recognize that a strong credible system for enforcement of IPRs is the foundation of the success of business. In the modern technology driven world that we live, We are fully committed to make that happen. Last year, we amended the Indian Patents Act to allow for product patents for pharmaceuticals, bio tech products and pesticides. Earlier this year, we notified a set of Rules to make the new Law operational. The maximum permissible period for grant of a patent has been aligned with our international obligations. We have considerably modernized and strengthened our machinery for grant and enforcement of IPRs, though as you would all appreciate this is a continuing process.

Given our comparative advantage in manpower and now a fully compliant IPR regime, investments in knowledge based industries including R&D facilities can be very attractive. In fact, over a hundred of the Fortune 500 MNCs have already set up research bases in India, and many more investments are right now in the pipeline.

We continue to work towards smoothening our procedures and reducing the paper work involved in starting a business in India. We have enacted the Right to Information Act, a landmark legislation that enables a virtual full and time-bound right to access any information from a government functionary. This makes life for a government functionary difficult but I think that is worthwhile for the greater good of the country.

The EU remains by far India’s largest trade and investment partner. The EU’s enlargement can only increase its importance for us. There is increasing Indian presence in European business and such a development further strengthen our relationship. We are engaged with the European Union to evolve further formal mechanisms to promote trade and investments between the EU members and India. The recently received recommendations of the High Level Trade Group would form the basis of a future agreement on further economic cooperation.

All this suggests that we have much to look forward to. Yet, the fact remains that the present level of bilateral economic engagement is far below the vast latent potential that now undoubtedly exists. I invite you to show the spirit of adventure and enterprise of your forefathers and set out
to explore the opportunities in India once again. A new India is ready to welcome you with a sense of confidence and hope in the future. As I said, a billion people in India are now seeking the social and economic salvation in the framework of an open polity and an open society. I invite European enterprises to become an active partner in making a success of this phenomenon which I believe is of great historical importance for the humankind in 21st Century. Europe and India must be closer partners in progress and prosperity. Together we must learn to make the future.

460. Joint Press Conference by President of the European Council Prime Minister Matti Vanhanen, Prime Minister Dr. Manmohan Singh, President Barroso E.U. High Representative and Secretary-General of the Council Javier Solana.

Helsinki October 13, 2006.

PRESIDENT OF EUROPEAN COUNCIL (MR. MATTI VANHANEN):
Prime Minister Singh, President Barroso, High Representative Solana, ladies and gentlemen:It was a great honour to hold the Seventh EU-India Summit in Helsinki today. The Summit further consolidated the ties between the two strategic partners both in numerous fields of mutual interest and in many areas of common concern. Overall, the EU is very pleased with the excellent state of the relationship with India. The EU and India are the two largest democratic entities in the world. We share many key values like our commitment to democracy, human rights and fundamental freedoms, tolerance and diversity. We need to promote them jointly including in the multilateral context. We are increasingly facing common global challenges such as terrorism, security questions, energy issues and climate change. We need to intensify our cooperation on these in the future and the Joint Action Plan provides a solid framework to this end.

I am particularly pleased to announce that in the field of economic cooperation, we endorsed recommendations of the High Level Trade Group including the important decision of moving forward, negotiating on a broad-based trade and investment agreement. We also discussed our achievements in implementing the Joint Action Plan which was endorsed in the previous summit in Delhi a year ago.
During the past years, the two-way flows of trade and investment have grown rapidly. However, there is still great potential and opportunities. In the last summit in Delhi, we decided to establish a High Level Trade Group to explore ways of increasing our bilateral economic ties. In this summit we received a report containing their recommendations. The High Level Trade Group recommends to move towards a broad-based bilateral agreement to enhance trade and investment.

Both Prime Minister Singh and myself addressed the EU-India Business Summit yesterday. The key theme of this year’s summit was opening up new business opportunities. The Business Summit focused on sectors where we can see lots of potential for both European and Indian companies such as infrastructure, energy, ICT services and research and manufacturing.

As strategic partners, human rights are naturally a part of our joint agenda and we have bilateral mechanism in place for deeper dialogue. We discussed thoroughly the most topical United Nations issues. We reiterated our support for a strong, effective and efficient UN and reaffirmed our commitment to effective multilateralism and a rule-based international order.

We exchanged views on different international issues - North Korea and its nuclear tests, Iran’s nuclear programme, the current situation in Lebanon and in the Middle East, and recent developments in the South Asia region such as the conflict in Sri Lanka and the efforts towards restoring peace and democracy in Nepal. We also discussed developments in Darfur and Burma/Myanmar where the situation is very disturbing.

We recalled the Sixth ASEM Summit hosted by Finland here in Helsinki in September. One of the main outcomes was the decision to invite India to the cooperative process. This historical decision will significantly strengthen ASEM’s global weight and visibility, and contribute to a stronger and more comprehensive Asia-Europe partnership.

We also had a discussion on Russia. I think it was the first time in the history of EU-India Summit. Russia is one of the key priorities of the Finnish Presidency. Russia is a strategic partner for both EU and India. In the global context, Russia is a major player in the energy field which was one of the key areas of our discussion.

The EU warmly welcomed India’s support for the recent decision on granting EU an Observer’s status in South Asian Association for Regional
Cooperation. EU definitely looks forward to the SAARC Summit taking place in Delhi in April next year. We also discussed energy and climate change. We are committed to implementing the Kyoto Protocol mechanism and we agreed to strengthen the dialogue processes initiated under the Montreal Action Plan.

Competitiveness and economic growth are not contradictory objectives to environmentally sound actions. We believe that ambitious and sustainable environmental policies will actually strengthen our competitiveness. Clean technologies and energy efficiency are the future ways to take. Thank you.

INDIAN PRIME MINISTER (DR. MANMOHAN SINGH): Your Excellency Prime Minister Matti Vanhanen, Excellencies, ladies and gentlemen of the press: Prime Minister, it gives me great pleasure to thank you for your hospitality and for the warmth of your reception which has been experienced in such abundant measure by me, by my wife and the members of our delegation. I would also like to convey my deep appreciation to the leadership of the European Commission present here. We have enormously benefited by their wisdom, knowledge and experience.

The consolidation of strategic partnership with the European Union is a foreign policy priority for India. The European Union is not only India’s largest trading partner, it is also our largest source of foreign direct investment and of high technology collaboration.

This morning we reviewed the progress made in the implementation of the Joint Action Plan that was agreed upon by India and the European Union during the Summit in New Delhi in September last year. Both sides are united in their determination to further deepen our political and strategic dialogue and expand our economic and trade relations. There was strong recognition that India’s ongoing economic liberalization has opened up enormous opportunities for EU countries. There is also a commitment for dealing with issues that hamper bilateral trade and investment ties.

The India-EU Business Summit which was held yesterday was a highly useful forum to strengthen business-to-Government and business-to-business ties. Both Prime Minister Vanhanen and myself addressed the Business Summit yesterday. India and the European Union are already partners in the high technology ITER project. We look forward to early approval by the European Commission of India’s partnership as a full member in the Galileo project.
The highlight of our discussions was the endorsement by the Summit of the recommendations contained in the report of the High Level Trade Group. We have agreed to commence negotiations on a broad-based trade and investment agreement between India and the European Union covering over 90 per cent of tariff lines and trade volumes. This is indeed a very significant step that would build on the complementarities in the trade flows between the two sides whereby reduction in tariffs over a period of time will be a win-win situation for both.

We have had productive discussions on the issues of energy and environment. I have explained to the European Union our view that expansion of international cooperation through forward-looking approaches in the field of civilian nuclear energy is important for countries like India which have an impeccable nonproliferation credentials. This will enable them to meet their growing energy needs through nonpolluting energy alternatives.

India and the European Union are natural partners as we share common values of democracy, pluralism and the rule of law. We believe that our partnership is important to meet the challenges of global interdependence, particularly terrorism, proliferation, energy and environment.

We had an extremely useful discussion on instability in our common extended neighbourhoods which is a matter of concern to both India and the European Union. The recent bombings in Mumbai as well as the earlier bombings in London, Madrid and Srinagar remind us that terrorism remains the most serious threat to democratic, open and pluralistic countries. Strengthening international cooperation in this critical area is, therefore, of vital importance to all free and democratic societies.

We discussed the United Nations reform issue including expansion of the permanent membership of the Security Council. There was common agreement that a rule-based multilateral trading order is in the interest of both India and the European Union. We, therefore, are supportive of continuing efforts to bridge the gap in positions of various countries to enable resumption of the Doha Round of negotiations. I am fully satisfied with the Summit outcome. I would like to thank Prime Minister Vanhanen and other dignitaries of the European Union for their contribution. I thank you.

PRESIDENT BARROSO: Thank you. I am very pleased to conclude now this Seventh European Union-India Summit with very positive results.
We had the most cordial and fruitful discussion. We have, for the first time, reviewed implementation of our Joint Action Plan that was adopted last year in the Summit we had in Delhi. So, it was good to see one year afterwards that things are really moving and there is a new commitment and there are concrete results. This was indeed very important.

Prime Minister Vanhanen presented a comprehensive analysis of the subject, so let me underline only one or two points. But let me say in the first place that European Union-India relationship has strong foundation in shared values and mutual interests. We are, as was just said, natural partners.

The Summit endorsed the recommendations of the High Level Trade Group between European Union and India. The conclusions are that we have a good case for negotiations of a broad-based trade and investment agreement. Of course, those facts will have to conduct internal consultations on this matter. It is important bilaterally to start these negotiations but it is also important in a more general perspective because together we can set higher standards in terms of openness in this increasingly globalised world. Our relation is much more than economic, even if economy and trade and investment are so important.

We agreed to further intensify cooperation to address challenges of global concern from energy and climate change to sustainable development, nonproliferation, good governance, human rights, fight against terrorism. On most of these issues we share commitment to a rule-based international order and effective multilateralism. We have agreed to establish a Business Leaders Round Table, which you will see, to exchange views on ways to enhance European Union-Indian trade and business cooperation. We also established a regular high level macro economic dialogue to exchange views on economic and monetary challenges. We also have agreed to establish new cooperation on employment and social affairs. A very important field of cooperation is everything that has to do with science, technological cooperation, from ITER to Galileo.

We also have exchanged views on issues of international concern from North Korea to Iran, Middle East situation, our mutual concerns in South Asia of Afghanistan, Sri Lanka, Bangladesh on which there is I believe a great convergence in the analysis between European Union and India. I really believe it was a very productive summit that was now with some concrete results and that has shown not only the needs of consolidating the results achieved so far but to go ahead with more progress in the next years. Thank you.
EU HIGH REPRESENTATIVE (MR. JAVIER SOLANA): I would like to say a couple of things to add to what has been said very wisely. We define our relationship with India as a strategic partnership. Therefore, as a consequence of that, we have to talk about our bilateral relations. Not only about that, we have to take a look at the world with the same eyes and see what we can get by that looking at the world and the important issues which are now on the table on the agenda of any table like this where people of international responsibility meet. We have looked in great detail at the question of proliferation, terrorism, Middle-East, East Asia, all the questions that are important for both sides, for the European Union and for India. We have checked and checked in a very constructive manner that we have a very common approach to all these issues. That means that the strategic partnership is really working properly not only in the bilateral issues but in the manner we look at the world with more or less the same eyes. Mr. Prime Minister, thank you very much for your hospitality and thank you very much for your cooperation.

QUESTION (BLOOMBERG): Mr. Barroso, I want to ask you about the legislation that got passed by the Lower House of Parliament in France yesterday making it illegal to say that Turkey’s hopes to accede to the EU? Is it a backward step? Is it a signal to the Turks that France does not really want them in the EU?

PRESIDENT BARROSO: First of all let me tell you that this issue was not discussed during the Summit. Anyway I will answer the question. We, of course, have to respect all the decisions taken by the Parliament of France. But let me tell you very frankly that we do not think this decision at this moment is helpful in the context of the European Union’s relations with Turkey. The issue is a very sensitive one. Let me express of course my solidarity to all the suffering that the Armenian people have experienced over so many years. The question is one of how to address the situation. We believe this is something that has to be addressed in a truly conciliation spirit. It is a debate that is going on in Turkey. In Turkey that debate is developing - intellectuals, historians, the civil society is considering the issue. Frankly, we do not think it is helpful that another, lets say, Parliament outside takes a legislative action on a matter of historic interpretation and analysis. This is not the best way to contribute to something that we think is important. It is an analysis that the Turkish society itself is making of this very important and painful moment.

QUESTION (TIMES OF INDIA): …. (unclear) … slow progress. Does
not that also indicate that a certain strategic shift in EU-India relationship is still to happen?

**INDIAN PRIME MINISTER:** I do not think there is any delay in starting negotiations. The decision to appoint a High Level Trade Group was taken last year at the September Summit which was held in New Delhi. The Group has diligently produced a report. The Summit has endorsed the report. Therefore, the negotiations for a broad-based trade and investment agreement can now begin. So, there is no question of there having been a delay.

**PRIME MINISTER VAN HAVEN:** These questions are always complicated and sometimes also very technical. In the Summit we pushed those negotiations strongly forward.

**QUESTION (EUROPEAN MEDIA):** This is about the Nobel Prize that was given to the Bangladeshi economist Muhammad Yunus, the inventor of the so-called micro credit. Yesterday Mr. Singh in the press conference you stressed the importance of reducing poverty in India. Do you see micro credit as a way to reduce poverty in India? Also Prime Minister Vanhanen, would you comment on this?

**INDIAN PRIME MINISTER:** I am very happy that Prof. Yunus has won the well-deserved Nobel Peace Prize. He is an outstanding South Asian. I count him as one of my friends. The movement for micro credit that he has launched has important lessons for tackling the problem of poverty, particularly the problem of rural poverty. So, it comes to me as no surprise that the world at large has recognized the great contribution that Prof. Yunus has made to resolving problems of poverty in poor societies. I as a South Asian rejoice in this achievement of Prof. Yunus.

**PRIME MINISTER VANHANEN:** I also congratulate Muhammad Yunus and commend his bank for strongly supporting the people. I really congratulate him.

**QUESTION (THE TELEGRAPH):** My question is to Prime Minister Singh. Prime Minister, you talked of zero tolerance against terrorism. What does it mean in practical terms? What do you expect the EU to do and what are you doing? You say that it will send the right signal to unnamed countries who are directly engaged in terrorism or who allow their territories to be used for terrorism. Why is there also reluctance to name these countries? What are you doing? What do you expect EU to do? Which are these countries?
PRIME MINISTER SINGH: What we are doing back home I think is well-known to all of you. So, I do not have to dwell on that. The purpose of discussions at this EU Summit level was to learn from each others’ experience. We all agree that terror is a scourge which constitutes a threat to all civilized societies. Therefore, we have an obligation to cooperate with one another in every possible way to tackle this menace to civilized ways of living all over the world. EU and India have agreed that we will cooperate not only in ensuring that the process of having the UN Comprehensive Convention on Terrorism adopted - that is a common stand that we both have taken - but at the bilateral level we have also agreed to exchange information, exchange intelligence and other related matters between EU and India.

QUESTION (EUROPEAN MEDIA): …(unclear)…

PRESIDENT BARROSO: Of course, we join all those who have condemned this provocative act and we hope the international community will have a clear, determined response. In fact, it is all the credibility of the international community that is at stake when we are now seeing in which way we can show the condemnation of that act. That is, of course, not good news for peace in the region and in the world.

QUESTION (INDIAN MEDIA): I would like to know for our viewers back home what the trade and investment agreement does mean in simple terms relating to services, manufacturing, ICT. If the two Prime Ministers can give broad remarks on what this means to consumers of policy on two sides.

INDIAN PRIME MINISTER: By now there is a convincing amount of evidence that the liberalization of trade can be a win-win situation. There are great complementarities between production structures in Europe and production structures in India. Therefore, the liberalization of trade in goods and services can, therefore, lead to increased trade, increased employment, increased output, which can be mutually beneficial both for EU as well as for India.

PRESIDENT BARROSO: European Union and India, High Level Group recommended that we have a negotiation of a broad-based trade and investment agreement. Prime Minister Singh said just now that the European Union is the most important partner in trade and investment of India. We both were disappointed with the failure of the Doha Talks and we expect those talks to resume. We stay committed to a true multilateral
approach to trade. But, meantime, we should also do something together, India and the European Union. I believe it is in the interest of both sides and our consumers and our business communities - there are great opportunities as just now said by Prime Minister Singh – but also it is in the global interest because together when we have European Union is the biggest trade player in the world and such an important country like India, an emerging economic power, getting an agreement is useful not only for both sides but it sets the standards for further openness in this increasing global world.

QUESTION (AFP): ...(unclear)… you have set targets in terms of time table for designing of an agreement?

INDIAN PRIME MINISTER: This is what we have agreed. It will be a broad-based trade and investment agreement. So, all the relevant options will be explored when the negotiations start.

461. Opening Statement of Prime Minister Dr. Manmohan Singh at 7th India-EU Summit.

Helsinki, October 13, 2006.

Prime Minister Matti Vanhanen, European Commission President Jose Manuel Barroso, EU High Representative Javier Solana, Commissioner Peter Mandelson, Excellencies, Ladies & Gentlemen,

I would like to thank our host for the 7th India EU Summit, Prime Minister Vanhanen of Finland for his gracious hospitality. I would also like to acknowledge the presence here of the leadership of the European Union and thank them for their participation.

Let me introduce the members of the Indian delegation… Consolidation of strategic partnership and intensification of dialogue with the European Union has been a priority of our Government’s foreign policy.

We welcome forward movement in implementing the Joint Action Plan adopted by the last Summit in New Delhi in September last year.

We are deeply satisfied that the report of the High Level Trade Group has recommended for decision by this Summit, the launching of negotiations
for a broadbased Trade and Investment Agreement with the EU. We look forward to early conclusion of these negotiations within a period of 2 years as envisaged by the Report.

India and the EU are indispensable pillars of a new multi-polar world order. We have both the will and the capability to make meaningful contributions for meeting the challenges of managing global inter-dependence.

An international order based on well defined rules and effective institutions is in our vital interests. While there are some rules for managing growing economic inter-dependence, we still lack forward looking institutional arrangements to manage the global political order.

We believe that inclusive globalization will help in the equitable sharing of the fruits of economic and social development to address global problems of poverty, marginalization and inequality.

We must work against artificially dividing the world along religious or cultural lines as such divisions will spell the death knell of globalization.

Our shared values of democracy and respect for human rights, and our commitment to pluralism and liberty make us natural partners. We are also the world’s foremost example of multi-culturalism, which we believe is an inevitable consequence of globalization.

The successful model of Indian democracy, with high economic growth and inclusive governance gives India a special position as a unique partner for the EU in the region extending from Gibraltar to the Malacca Straits.

There are strong geo-political underpinnings for India and the EU to work together.

India’s global vision would remain imbalanced without the EU, more so, now, with the EU’s integrated foreign and defence policies.

Similarly, we believe that the EU’s engagement with Asia would be incomplete without India. This recognition has found expression in the recent decision to include India in ASEM which we welcome and appreciate.

India and the EU must work together in addressing key issues of globalization, terrorism, proliferation, energy and environment.
India is witnessing one of the most far reaching transformations of this century. Over a billion people are seeking salvation within the framework of an open economy and an open society committed to fully respecting fundamental human freedoms and the rule of law.

As a result of economic reforms initiated in the early 90s, India is experiencing an explosion of creativity and entrepreneurial spirit that has unleashed an economic boom.

The EU which is India’s largest trading partner and the second largest FDI source is already well poised to take advantage of these gigantic transformations.

India has registered a growth rate of 6-8 per cent per annum for the last 16 years. In the first quarter of this year, our growth rate was a robust 8.9 per cent.

We want EU to be a partner in our ambition to increase and sustain growth rates of 10 per cent per annum in the coming years.

We want EU to look at India as a safe, secure and profitable trade and investment destination. We want you to look at India as a hub for high technology R&D, manufacturing and for services. Not just for the vast Indian market but for adjoining areas with which India enjoys close ties – South East Asia, West Asia and Central Asia.

We want you to take advantage of the vast pool of quality scientific talent and a young skilled work force in the manufacturing and service sectors.

Restrictive visa regimes can stifle this potential. We should promote freer movement of people which is an inevitable requirement of globalization, while stemming the tide of illegal migration which we must all discourage.

We recognize the interest of the EU on measures that India will take to further liberalise FDI in areas such as Telecommunications and Retail; efforts to improve infrastructure; opening up our financial sector and relaxation of labour laws. These issues continue to receive the attention of our Government. We want the EU to look at the expanded opportunities offered by our Special Economic Zones.

Achieving energy security to provide for safe, secure, affordable and sustainable energy supplies is our common concern. We must also look to
alternatives to our dependence on fossil fuels through non-polluting sources such as nuclear energy.

We hope that the European Union will be in a position to support forward looking approaches to enhance international cooperation in the peaceful uses of nuclear energy. This will enable countries like India to expand the share of nuclear energy in their national energy baskets.

A meeting in Vienna with the NSG yesterday gave India the opportunity to reiterate its firm commitment to non-proliferation objectives while working with like-minded countries in expanding cooperation in the peaceful uses of nuclear energy. I would like to state that India strongly believes that a further erosion of the non-proliferation regime is not in India’s interests.

We would like to thank the European Union for its support for India joining the ITER Project as a full partner country.

I hope that the EU would be in a position to conclude early an agreement confirming India’s membership of the Galileo Global Satellite Project.

The recent bombings in Mumbai as well as the earlier bombings in London, Madrid and Srinagar remind us that terrorism remains the most serious threat to democratic, open and pluralistic countries. Strengthening international cooperation in this critical area is of vital importance to all free and democratic societies.

An international norm of zero tolerance against terrorism will send the right signal to those countries directly engaged in terrorism or which are allowing their territories to be used for terrorist purposes.

Thank you.

Helsinki, October 13, 2006.

1. The Sixth EU-India Summit, held in New Delhi on 7 September 2005, endorsed a comprehensive Joint Action Plan setting out a road map for the EU-India Strategic Partnership. It was agreed that a report on progress in implementation of the Joint Action Plan would be presented before each annual Summit.

2. Looking at each of the successive sections of the Joint Action Plan, both sides are pleased to report the following achievements: Strengthening dialogue and consultation mechanisms.

3. Since the sixth EU-India Summit, the two sides have taken significant strides forward in strengthening their dialogue, including through setting up a number of new consultation mechanisms.

4. The new EU-India consultation mechanisms that have been put into place include, among others, a Security Dialogue, a Dialogue on Migration issues and Visa Policy, sectoral Working Groups on Pharmaceuticals and Biotechnology, Agriculture and Marine Products, Food Processing, Technical Barriers to Trade and Sanitary and Phytosanitary Issues, and an informal Joint Action Plan Implementation Steering Committee. A High Level Trade Group was also constituted to study and explore ways and means to deepen and widen the bilateral trade and investment relationship.

Political dialogue and cooperation

5. The EU and India have developed institutional mechanisms to exchange ideas on regional issues. Building on this, the EU presented an application for observer status in South Asian Association for Regional Cooperation (SAARC), with a view to developing even closer contacts with this body. With India’s support, the EU’s application for Observer status in SAARC was considered and approved by the 27th SAARC Council of Ministers Meeting in Dhaka on 1-2 August 2006. The EU was invited to attend, as an observer, the 14th SAARC Summit, which will be held in New Delhi on 1-4 April 2007.

6. In the field of effective multilateralism, the EU and India cooperated closely in the past year on UN reform, including by encouraging the
establishment of the United Nations Human Rights Council, of which India and seven EU Member States are currently members, and of the United Nations Peace-Building Commission, which has India and eight EU Member States among the members of its organisational committee. Both sides have held various consultations in New York and Geneva to discuss topics of common interest. The EU and India will continue working together in multilateral fora to further common interests.

7. As agreed under the Joint Action Plan, human rights consultations were held on 1 December 2005 in New Delhi. An EU-India conference on “Global Agendas: Peacemaking in the 21st Century” was held in Delhi in February 2006. It is expected that the UN Peace-Building Commission may offer new avenues to cooperate in the field of peace-building.

8. The first meeting of the EU-India Senior Officials Security Dialogue, held in New Delhi on 22 May 2006, saw a useful exchange of views on global and regional security issues, disarmament and non-proliferation.

9. Contacts have been established between Indian officials and the Personal Representative of Mr Solana for non-proliferation. The two sides are considering possibilities for exchanging views on respective export control systems.

10. The sixth EU-India consultations on terrorism took place in Brussels in December 2005. It was useful in taking forward cooperation between the EU and India in the fight against terrorism and organised crime. The EU Counter-Terrorism Coordinator visited New Delhi in October 2006 to establish contact with his Indian counterpart. Their talks were the occasion to explore how to take forward EU-India counter-terrorism cooperation.

**Bringing together people and cultures**

11. The EU-India Civil Society Round Table has been a useful forum for involving civil society stakeholders in the Strategic Partnership. Its ninth meeting, in September 2005 in Hyderabad, addressed Pluralism and Diversity. The tenth meeting, in June 2006 in Vienna, focused on Energy, Social Development and Minorities. Enhanced civil society exchanges are also being developed in other areas.

13. Both sides welcome the intensification of EU-India parliamentary exchanges, as illustrated by the visit to India, in November 2005 and in April 2006, by members of the European Parliament delegation for relations with South Asia and their interactions with the Indian Members of Parliament. The President of the European Parliament, Mr Josep Borrell, also visited India from 30 September to 6 October 2006.

14. The number of scholarships awarded under the Erasmus Mundus India Window has more than doubled between the academic year 2005-2006 and the year 2006-2007. Both sides are undertaking promotional actions, to raise further awareness about this programme. Both sides have agreed to explore the modalities for the establishment of a network of ‘EU Studies Centres’ in a number of Indian universities. Several Chairs for Indian contemporary study centres are being established in European universities by the Indian Council of Cultural Relations. In order to further stimulate research on contemporary Indian issues in the EU, the European Commission has supported the establishment of an Academic Network of European Research related to India (ANERI).

15. Cultural initiatives have been organised, such as the EU Cultural Weeks in India (in September 2005), the 11th European Film Festival in India (in March-April 2006), as well as the India Festival in Brussels (from October 2006 to January 2007), organised by ‘Bozar’ in association with the Indian Council for Cultural Relations.

Economic policy dialogue and cooperation

16. The European Commission is currently drafting a Country Strategy Paper 2007-2013 for India, which outlines the priorities and provides the financial framework for the funding of cooperation activities in India. In this context, an Action Plan Support Facility is being established to kick-start activities in selected areas of priority.

17. Indian Finance Minister Chidambaram met with Commissioner Almunia in Brussels on 12 June 2006. At this meeting, it was agreed that the Indian authorities and the European Commission would
actively explore the modalities for the launch of a Macroeconomic Dialogue.

19. The first meeting of the Working Group on Pharmaceuticals and Biotechnology took place on 18 July 2006. It made a special reference to Ayurveda (Indian traditional system of medicine). Under this framework, an expert meeting on Ayurveda was held on 15 May 2006 in London, together with the European Agency for the Evaluation of Medicinal Products (EMEA). The Government of India hosted in April 2006 in New Delhi an “Asia Stakeholder Consultation on the EU’s Policy to Confront HIV/AIDS, Malaria and Tuberculosis” funded by the European Commission, which brought together officials, experts and civil society representatives from 16 Asian countries. Both sides exchanged experience, both at technical level and within the EU-India Security Dialogue, on tackling avian flu.

20. The fourth meeting of the EU-India Working Group on Information and Communication Technologies was held in Brussels in October 2005. European Commissioner for Information Society and the Media, Viviane Reding, visited India in November 2005 and proposed steps to further promote bilateral cooperation in Information and Communication Technology. Connectivity between the European (GEANT2) and Indian (ERNET) high speed research networks has been operational since August 2006 and will last for one year.

21. A visit to India of the European Commission Director General for Research and Development was followed by the establishment of a Science and Technology section in the European Commission Delegation in New Delhi. Within the framework of the EU-India Scientific and Cooperation Agreement, EU-India workshops have been held on Computational Materials Science, on Infectious Diseases as well as on cooperation in e-Safety. Since September 2005, Indian participation in the sixth EU Framework Programme for Research has more than doubled to over 50 projects. Efforts have been devoted to raising awareness on opportunities available for Indian participation in the seventh Framework Programme.

22. On 6 December 2005, India formally became a participant in the ITER project on fusion energy with the full backing of the EU. An EU-India Energy Business Conference was held on 6 April 2006 in
New Delhi with the participation of senior-level officials and industry representatives. The second meeting of the EU-India Energy Panel took place on 7 April 2006. The Energy Panel meeting was preceded by the first meetings, between January and March, of the three Working Groups on Fusion/ITER; Coal and Clean Coal Technologies and Renewable Energies and Energy Efficiency. Both sides agreed to establish a fourth Working Group on Petroleum and Natural Gas, as well as where appropriate also include key stakeholders from industry in the Working Group discussions. The Energy Panel also agreed to launch a set of studies in the energy domain.

23. An EU-India Workshop on the Kyoto Protocol’s Clean Development Mechanism (CDM) was held in November 2005 in New Delhi, which coincided with the first EU-India Environmental Forum, which focused on Waste Management. In February 2006 the EC-India Joint Working Group on Environment met in New Delhi.

24. Three rounds of discussions have been held during 2006 on Civil Aviation Cooperation including consultations on a Horizontal Civil Aviation Agreement. Both parties have agreed that, once formalised, a Horizontal Agreement will represent an important step forward in the development of the aviation relationship between the EU and India. Both sides also stressed the importance of agreeing on the priorities for a new technical cooperation programme in the Civil Aviation sector.

25. The first round of negotiations on a maritime transport agreement took place on 5-7 July 2006, in a constructive atmosphere, to discuss key issues related to a future EU-India agreement. The delegations agreed to hold a second meeting as soon as possible after the Summit in Helsinki and before the end of 2006.

26. The formal signing of the cooperation agreement on GNSS (Civil Global Navigation Satellite System) between the European Community and its Member States and the Republic of India should take place towards the end of 2006. Informal contacts on space policy have been made between respective authorities.

27. The European Commission and Indian Ministry of Labour and Employment agreed in February 2006 on a draft Memorandum of Understanding on Cooperation on Employment and Social Affairs.
28. A draft Work Programme for EU-India Customs Cooperation has been prepared.

**Developing trade and investment**

29. The High Level Trade Group was established at the sixth EU-India Summit. It has achieved significant progress in its work. The Group will present its report, including recommendations on how to take forward EU-India relations in the areas of trade and investment, to the seventh EU-India Summit.

30. Dialogue on WTO/DDA between EU and India has been particularly close and frequent at both technical and political levels during the negotiations.

31. An EU-India seminar on Geographical Indications was held on 23-24 November 2005 in New Delhi.

32. A seminar on Public Procurement was held in New Delhi on 12 May 2006 where both sides exchanged information on their respective legislation and practices.

33. The working group on Technical Barriers to Trade and Sanitary and Phytosanitary Issues has been set up and has held its first meeting, on 10-11 July 2006 in New Delhi.

34. An EU-India CEO Round Table has been established under the lead of the business confederations on both sides - the Confederation of European Business (CEB/UNICE) and Confederation of Indian Industry (CII) / Federation of Indian Chambers of Commerce and Industry (FICCI).
Joint Statement issued at the end of the India-EU Summit.

Helsinki, October 13, 2006.

1. The seventh EU-India Summit was held in Helsinki on 13 October 2006. The EU was represented by Mr. Matti Vanhanen, Prime Minister of Finland, in his capacity as President of the European Council, assisted by High Representative for Common Foreign and Security Policy Dr Javier Solana; and by the President of the European Commission, Mr. Jose Manuel Barroso, European Commissioner for External Relations Mrs. Benita Ferrero-Waldner and European Commissioner for Trade Mr. Peter Mandelson, Mr. Erkki Tuomioja, Finnish Foreign Minister, and Mrs. Paula Lehtomäki, Finnish Minister for Foreign Trade and Development. The Republic of India was represented by Prime Minister Dr Manmohan Singh, Mr. Kamal Nath, Minister for Commerce and Industry, Mr. Anand Sharma, Minister of State for External Affairs, and Mr M K Narayanan, National Security Adviser. The leaders sent the following message:

2. The EU and India, as the two largest democracies in the world and global actors in the multipolar world, reiterated their commitment to the Strategic Partnership launched at the fifth EU-India Summit in The Hague. This Partnership is firmly based on the shared values of democracy, pluralism, rule of law and respect for human rights. The two sides adopted a comprehensive and forward looking Joint Action Plan at the sixth EU-India Summit at New Delhi. Since then the EU and India have been working together closely to build on and take forward their Strategic Partnership at a bilateral and global level. The two leaders welcomed the progress achieved in the implementation of the Joint Action Plan and reaffirmed their commitment to take it forward.

3. The leaders welcomed the steady, significant intensification of the dialogue between the strategic partners. The level of engagement between India and individual EU Member States has also been qualitatively enhanced. Practical steps have been taken in setting up a number of new consultation mechanisms. The number of official visits has multiplied. Over and beyond this has been the marked expansion of formal as well as informal day-to-day contacts at working level between experts on subjects across the board. EU-India cooperation will be further enhanced through efforts to work
towards facilitating the movement of businesspersons, professionals and tourists, as well as researchers, scientists, students and academics between India and the EU Member States.

4. The EU and India stand committed to the rules-based multilateral trading system. The successful outcome of the Doha Development Agenda (DDA) multilateral trade negotiations remains their foremost trade policy priority, and they agreed to ensure that the deepening of bilateral trade relations supports the larger multilateral trading regime.

5. The rapidly growing flows of two-way trade and investment between the EU and India reflect the strengthening of bilateral ties. Leaders on both sides encouraged an expansion and deepening of trade and investment linkages. Recognising that stronger economic engagement is mutually advantageous and would buttress the Strategic Partnership, the leaders decided to advance their bilateral trade relations. The Summit welcomed the work done by the High Level Trade Group and endorsed the case made for a future broad-based bilateral trade and investment agreement. The Summit agreed that both sides move towards negotiations for such an agreement.

6. The close association of industry and business in EU-India cooperation as well as dialogue between businesses from both sides are crucial to achieving the common goal of enhancing trade and investment. The EU-India Business Summit, and the launch of the EUIndia CEO Round Table held in Helsinki yesterday, have provided for useful and constructive interactions among key Business leaders from both sides.

7. The EU and India are committed to promoting international peace and security and working together towards achieving economic progress, prosperity and sustainable development, as well as promoting good governance. Both the EU and India are committed to upholding human rights and fundamental freedoms. The two sides will continue, in a spirit of equality and mutual respect, the dialogue on human rights both in a multilateral and bilateral context.

8. The leaders welcomed the recently established EU-India Security Dialogue, held for the first time in May 2006, as a useful and important forum for an in-depth exchange of views on global and regional security issues, including disarmament and non-proliferation, as well as bilateral issues of common concern.
9. Emphasising the paramount need for effective multilateralism and their commitment to a rules-based international order, the leaders reaffirmed their commitment to intensify cooperation at the United Nations and in multilateral fora to address issues of global concern, including in the areas of development and environment. The Summit underlined the importance of a strong, effective and efficient United Nations Organisation and the leaders also recognised the need for a comprehensive UN reform. The Summit agreed to work jointly towards strengthening the role of the newly established UN Human Rights Council and the Peace Building Commission, and stressed the need to maintain momentum in the efforts to adapt the United Nations to the needs of today's world. In this same context the leaders stressed the need for more efficient environmental activities in the UN system. They also agreed to continue to explore the possibility of a more coherent institutional framework, building on existing institutions. The Summit leaders also expressed their conviction of the need to eliminate impunity for the gravest international crimes.

10. The EU and India reaffirmed their shared interest in working together as partners for disarmament and for countering the proliferation of WMD and their delivery systems. They regard the proliferation of weapons of mass destruction and their delivery systems, including the risk of their falling into the hands of terrorists and other non-state actors, as a major threat to international peace and security. In this context they emphasised the importance of full compliance by all States with their existing obligations through national implementation as well as UNSC (United Nations Security Council) Resolution 1540. They agreed that effective national export control measures for dual use goods, with due regard for cooperation for peaceful purposes, play a crucial role in preventing proliferation.

11. The leaders expressed deep concern at the reported nuclear test conducted by the Democratic People’s Republic of Korea (DPRK) in violation of its international commitments. They agreed that the test jeopardises regional peace and stability and highlights the importance of countering proliferation. Leaders urged the DPRK to return immediately and without preconditions to the Six-Party Talks.

12. The leaders emphasised the urgent need for the international community to promote a comprehensive peace plan for the Middle East / West Asia, with the objective of reaching a comprehensive, just
and durable peace and stability in the region. They reaffirmed their support for a negotiated settlement of the Israeli-Palestinian conflict based on existing agreements, including relevant UNSC Resolutions, the Roadmap, and the Arab League Resolution (Beirut 2002). The leaders discussed the situation in Lebanon and supported the full implementation of UNSC Resolution 1701. They also welcomed the reinforced UNIFIL for which EU Members contribute half the forces, along with countries like India, which have contributed towards UNIFIL since its inception more than two decades ago. They also stressed their determination to bring humanitarian assistance and recovery aid to the people of Lebanon in rebuilding of their nation.

13. In addition, the leaders discussed, inter alia, the situation in Sudan as well as Iran’s nuclear programme. They also discussed Burma/Myanmar and agreed that progress towards democracy and inclusive national reconciliation in Burma/Myanmar would contribute to peace and prosperity in that country.

14. The EU and India reaffirmed their long-term commitment to assist the Afghan Government in the stabilisation and rebuilding of Afghanistan. In this context, both sides welcomed the holding of the second Regional Economic Cooperation Conference (RECC) in New Delhi on 18-19 November 2006. They noted that although much has been achieved during the recent years, formidable challenges still lie ahead in the arena of security, governance, rule of law, economic and social development as well as human rights. They recalled the consistent need to assist the Afghan Government in establishing its control throughout the country and in curbing the ongoing insurgency. In this context the importance of counter-narcotics efforts was stressed.

15. The leaders welcomed the restoration of democracy in Nepal. This has paved the way for finding a peaceful political solution to the challenges facing that country. The Summit leaders welcomed the dialogue between all political groups for restoring political stability in an atmosphere free from violence. They also stressed the importance of consolidating the rule of law and respect for human rights in the context of multi-party democracy in Nepal.

16. Both sides are convinced that violence is not the answer to problems in Sri Lanka, and call on the parties to return to talks immediately.
The ongoing hostilities have resulted in great suffering including the loss of life, internal displacement of thousands, and a refugee exodus to India. The leaders expressed strong, continuing support for the efforts of Norway as the facilitator to bring peace to Sri Lanka.

17. The EU welcomed India’s support for the EU’s application for observer status in SAARC (South Asian Association for Regional Cooperation), which was considered and approved by the 27th Council of Ministers Meeting in Dhaka on 1-2 August 2006. The EU looked forward to attending as an observer the 14th SAARC Summit, which will be held in New Delhi on 1-4 April 2007.

18. The leaders warmly welcomed the decision on ASEM (Asia Europe Meeting) enlargement taken at the sixth ASEM Summit in Helsinki on 11 September 2006. The leaders looked forward to India’s future contribution to the ASEM process as it enters its second decade. They also noted that India’s participation will further increase the representativeness, dynamism and innovative character of the ASEM process, which is the main forum for dialogue and cooperation between Asia and Europe.

19. The EU and India stand united in facing the scourge of terrorism, which constitutes one of the most serious threats to international peace and security. The EU and India condemned terrorism in all its forms and manifestations, committed by whomever, wherever and for whatever purpose. The fight against terrorism can only succeed if it is sustained and comprehensive. The EU and India, therefore, attach great importance to counter-terrorism cooperation in the framework of the United Nations and share a commitment to universal ratification and full implementation of all international counter-terrorism conventions and related protocols. The EU and India continue to work actively towards a swift finalisation of a Comprehensive Convention on International Terrorism at the UN. They also welcomed the adoption of the first UN Counter-Terrorism Strategy by the General Assembly on 8 September 2006. The EU and India expressed their commitment actively to support implementation of the Strategy in all its dimensions. The leaders affirmed their commitment to combat terrorism with full respect of obligations under international law, in particular human rights law, refugee law and international humanitarian law. Both sides are committed to continuing their cooperation on counter-terrorism and
look forward to holding their next regular consultations in 2006. Strengthening cooperation to combat terrorism continues to be one of the priority areas for the EU-India Strategic Partnership.

20. Both the EU and India attach high priority to energy security as a key to stable and sustainable development. Energy is an important area of ongoing and future policy dialogue and practical cooperation between the EU and India. Significant progress continues to be made within the framework of the EU-India Energy Panel and its working groups. Both sides agreed that the first EU-India Energy Business Conference was an important step in bringing together various stakeholders in the process. They also expressed satisfaction over the establishment of a fourth new working group on Petroleum and Natural Gas. The EU and India will continue work to develop the necessary knowledge and expertise for the use of clean coal technology and sustainable clean energy resources.

21. The leaders reaffirmed that urgent action is required by all countries to address climate change in accordance with their common but differentiated responsibilities and respective capabilities. They welcomed progress in the implementation of the EU-India Initiative on Clean Development and Climate Change. They agreed further to strengthen their dialogue and exchange views on key issues, in particular those related to processes initiated under the Montreal Action Plan. They are committed jointly to facilitate the development, transfer, deployment and dissemination of sustainable and efficient energy systems, promoting renewable, low emission technologies and energy efficiency, and the implementation of the Kyoto Protocol mechanisms. They underlined the importance of encouraging and promoting sustainable patterns of consumption and production to lessen the causes and adverse impacts of climate change. They particularly emphasised the need to exploit, as appropriate, the synergies between the promotion of energy security, sustainable energy supply, innovation and reduction of greenhouse gas emissions in order to move to a low-carbon future.

22. The EU and India recognise the critical role of science and technology (S&T) in striving towards their respective knowledge-based economies and the mutual benefits of further strengthening joint research and S&T cooperation. The leaders look forward to the renewal of the EU-India S&T agreement in 2007. Both sides welcomed India’s full membership in the ITER project.
23. Given the healthy growth and potential in two-way trade, tourism, research and student exchanges, and business between the EU and India, the leaders recognised the importance of strengthening transportation links in order to further promote and facilitate exchanges. The leaders took note of the progress achieved in 2006 in the area of civil aviation cooperation and reiterated the significant prospects of further strengthening cooperation in the aviation sector. The leaders also welcomed the joint organisation of the first EU-India Aviation Summit that will take place in New Delhi on 23-24 November 2006, and the prospect of a finalisation of a 'Horizontal Agreement' between the EU and India, as well as an agreement on the priorities for a new technical cooperation programme.

24. The leaders welcomed the launch of the negotiations for a maritime transport agreement between the EU and India and expressed their full support to the continuation of the negotiation process with a view to concluding a mutually beneficial agreement.

25. The leaders also welcomed the finalisation of a Memorandum of Understanding on an EU-India Dialogue and Cooperation on Employment and Social Policy and looked forward to its signing at an early date.

26. The leaders reaffirmed their commitment to deepen bilateral economic cooperation and establish new policy dialogues in areas of mutual interest. They took note of the first meeting of the working group on Pharmaceuticals and Biotechnology, with particular reference to Ayurveda (Indian traditional system of medicine) and to regulatory issues concerning data protection and development of innovation. They looked forward to a visit to India this year by a team of experts from the European Commission to study the Ayurveda system.

27. Within the broad context of EU-India economic cooperation, the leaders support the establishment of a regular macro-economic dialogue, which would allow both parties to discuss economic developments and policy challenges in their respective economies as well as developments in the world economy at large. Both sides reiterated their commitment to the continuation of their financial services regulatory dialogue. Recognising the benefits of closer cooperation in fostering the protection and promotion of intellectual property rights, the leaders reaffirmed their commitment to develop
an active dialogue in this field, including cooperation on capacity building activities, human resource development and public awareness programmes.

28. Referring to the 2004 Joint EU-India Declaration on Cultural Relations, both sides stressed the importance of cultural diversity and of the early ratification and implementation of the UNESCO Convention on the Protection and Promotion of the Diversity of Cultural Expressions, as well as the growing importance of dialogue among cultures and civilisations in the new millennium.

29. Both sides welcomed the first EU-India Higher Education Fair to be held in November 2006 in New Delhi.

30. The leaders expressed their appreciation of the work of the EU-India Civil Society Round Table and acknowledged the valuable contribution of civil society to EU-India relations. They welcomed the launching of the EU-India Civil Society Internet Forum.
BULGARIA

464. Joint Statement on the official visit of Minister of State Anand Sharma to Bulgaria.

Sofia, June 17, 2006.

1. At the invitation of H.E. Mr. Ivailo Kalfin, Deputy Prime Minister and Minister of Foreign Affairs of the Republic of Bulgaria, H.E. Mr. Anand Sharma, Minister of State for External Affairs of the Republic of India paid an official visit to the Republic of Bulgaria on 15–17 June 2006.

2. During the visit the Minister of State for External Affairs had a separate meeting and held delegation-level talks with the Deputy Prime Minister and Minister of Foreign Affairs H.E. Mr. Ivailo Kalfin who also hosted a luncheon in honour of the visiting dignitary. Minister Anand Sharma called on H.E. Mr. Georgi Pirinski, President of the National Assembly of the Republic of Bulgaria, and H.E. Mr. Sergei Stanishev, Prime Minister of the Republic of Bulgaria. He met H.E. Mr. Rumen Ovcharov, Minister of Economy and Energy, and H.E. Ms. Snezhana Grozdilova, Chairperson of the Group of Friendship with India at the National Assembly, and members of the Group. The talks were held in an atmosphere of warmth, friendship and mutual understanding that traditionally characterise the relationship between Bulgaria and India.

3. Both sides expressed their willingness to further strengthen and expand bilateral relations in a wide range of areas, including political dialogue at all levels, trade, economic cooperation and investment promotion, scientific and technological cooperation, cultural and educational exchange. They shared the view that with Bulgaria joining the European Union soon, new opportunities arise for closer and more dynamic partnership between Bulgaria and India.

4. Stressing the significance of the state visit of H.E. Dr. Abdul Kalam, President of India, to Bulgaria in October 2003, as well as subsequent visits at ministerial and other levels, the two sides agreed to continue to maintain high-level bilateral contacts on a regular basis, including at the level of Head of State and Head of Government.

5. Both sides called for further intensification of parliamentary contacts, and acknowledged the contribution of the Group of Friendship with
India at the National Assembly of the Republic of Bulgaria towards promoting bilateral relations. The Indian side conveyed that a Parliamentary Friendship Group with Bulgaria would be constituted at the Parliament of India soon.

6. The two sides stressed their readiness to continue to maintain close contacts between the two foreign ministries at various levels, including within the framework of bilateral consultations and the links between the diplomatic training institutions. The Bulgarian side expressed its high appreciation of the assistance in the field of training rendered by the Government of India under the ITEC and other programmes.

7. The Indian and the Bulgarian side highly appreciated the results of the 4th Session of the Joint Committee for Scientific and Technological Cooperation and the 2nd Session of the ICT Forum both held recently in Sofia which gave a new impulse to the cooperation in these high priority areas. It was agreed to hold the 16th Session of the Joint Commission for Economic, Scientific and Technical Cooperation in Sofia and the 13th Session of the Joint Committee on Defence Cooperation in New Delhi at mutually convenient dates later this year.

8. The two sides agreed to continue to work for the implementation of the project for establishing a solar-based power station in Bulgaria with the expertise and assistance of India.

9. Both sides took note of the need for expanding cooperation in the field of culture and education, including promotion of Bulgarian studies in India and Indological studies in Bulgaria.

10. The two sides exchanged views on a broad range of regional and international issues of mutual interest and expressed satisfaction with the existing close proximity of views. They expressed their intention to further strengthen the cooperation between Bulgaria and India in the UN and at other international fora.

11. The Indian and the Bulgarian side emphasised the essential role of the UN for global peace and security, for promoting the economic and social advancement of all people and for meeting global threats and challenges. Recognising the serious threat that terrorism poses to international peace and security, they reaffirmed their strongest
condemnation of terrorism in all its forms and manifestations, as well as their keenness to further strengthen cooperation at the bilateral level and within the UN framework in the fight against international terrorism, organized crime and trafficking, and on disarmament and preventing proliferation of weapons of mass destruction and their means of delivery. They supported expeditious adoption and implementation of a UN Comprehensive Convention on International Terrorism. They agreed to continue their useful exchange of views in the context of the discussions at the UN on a global counter-terrorism strategy.

12. Both sides stressed their resolve to continue to work for the UN reforms aimed at enhancing the organization’s effectiveness to deal with the myriad challenges of today’s world. They welcomed the establishment of the Human Rights Council and the Peace Building Commission and pledged their support for the successful work of the new organs of the UN at the significant initial stage. As founding members of the UN Democracy Fund, Bulgaria and India reiterated their willingness to continue to work together to achieve the aims and objectives of the Fund. They also reiterated their willingness to continue cooperating within the Community of Democracies. In the context of plans for the long overdue reform and expansion of the UN Security Council, Bulgaria reiterated its support for India’s candidature for permanent membership. The Indian side conveyed its thanks for Bulgaria’s support.

13. The Minister of State for External Affairs of India visited “Indira Gandhi” School in Sofia and had a meeting with the governing body of “Friends of India” Club and with faculty and students of Indology Department of Sofia University “St. Kliment Ohridski”.

14. The Minister of State for External Affairs of the Republic of India H.E. Mr. Anand Sharma extended an invitation to H.E. Mr. Ivailo Kalfin, Deputy Prime Minister and Minister of Foreign Affairs of the Republic of Bulgaria, and also conveyed invitations to H.E. Mr. Georgi Pirinski, President of the National Assembly of the Republic of Bulgaria, and to H.E. Mr. Sergei Stanishev, Prime Minister of the Republic of Bulgaria, to visit India. The invitations were accepted with pleasure. The dates for the visits will be finalized through diplomatic channels.

15. The Minister of State for External Affairs of the Republic of India
H.E. Mr. Anand Sharma thanked the Deputy Prime Minister and Minister of Foreign Affairs of the Republic of Bulgaria H.E. Mr. Ivailo Kalfin for the warm hospitality extended to him and the accompanying delegation in Bulgaria.

16. **Signed** at Sofia on 17 June 2006 in duplicate in the English language, both texts being equally authentic.

HE. Mr. Anand Sharma
Minister of State for External Affairs of the Republic of India

HE. Mr. Ivailo Kalfin
Deputy Prime Minister and Minister of Foreign Affairs of the Republic of Bulgaria
CYPRUS

465. Briefing Points by Official Spokesperson on the meeting between Prime Minister Dr. Manmohan Singh and President of Cyprus Tassos Papadopoulos.

New Delhi, April 12, 2006.

The two sides reaffirmed the special relationship and commitment to reinvigorate the traditionally close bilateral relationship to a collectively new level in keeping with the shared perspectives on political and economic issues.

PM reiterated India's consistent support for the independence, sovereignty, unity and territorial integrity of Cyprus and welcomed the recent initiatives taken by Cyprus with the UNSG to resume the negotiations for a comprehensive, fair and mutually agreed settlement of the Cyprus Question in accordance with the relevant UN Resolutions.

Cyprus reaffirmed support to India's candidature for a Permanent Membership in an expanded UN Security Council.

As the member of the Nuclear Suppliers Group, Cyprus welcomed the India-US agreement on Civilian Nuclear Cooperation. Both sides agreed that such cooperation would welcome in addressing concerns relating to global energy security and environmental protection. In this connection, Cyprus conveyed its support to India's efforts for the promotion of full civilian nuclear energy cooperation.

Both sides agreed to set up a High Level Joint Committee to identify ways and means for a comprehensive upgradation of the bilateral relationship. Both sides recognized the new possibilities and needs of the growing economies of the two countries and agreed that the Joint Committee will make recommendations to the two Governments for ways to expand and diversify economic ties in areas of mutual interest.

Cyprus welcomed India's participation in the development of its hi-tech sector including Information Technology and knowledge based industries and invited India to set up companies in areas of core competence particularly in IT, pharmaceuticals and bio-technology.
To facilitate movement of Indian businessmen, professionals and scientists, the Cypriot President assured simplification of visa procedures and issuance of long term multi-entry visas within the overall policy of employment of third country nationals. The modalities for the same would be worked out by the two sides.

PM congratulated Cyprus on its accession to the European Union. The Cypriot President highlighted the opportunities for Indian companies, either on their own or in joint ventures with Cypriot companies for their wider operation across the EU.

A bilateral Agreement on combating terrorism, illicit drug trafficking and organized crimes was finalized during the visit.

The two sides also jointly issued postage stamps of each side in the two countries, under the existing bilateral agreement in the field of Posts and Electronic Communications.

The President also attended a business luncheon meeting jointly organized by Confederation of Indian Industry/Federation of Indian Chambers of Commerce and Industry/ASSOCHAM1.

1. Earlier on April 10 announcing the visit the Official Spokesperson told the media that “India-Cyprus relations have traditionally been excellent and time-tested. Over the years, India and Cyprus have worked effectively together in various international fora. All Presidents of Cyprus have visited India, the last being that of President Glafcos Clerides in 1997. From our side, our Prime Minister Shri A.B. Vajpayee visited Cyprus in October 2002.

Bilateral trade between India and Cyprus is far below the potential. In 2004, Indian exports to Cyprus were USD 37.4 million while Indian imports were USD 5.2 million. Cyprus’ membership of the European Union and its strategic location as a gateway to three continents open up potential new areas of bilateral economic cooperation. There are significant possibilities for Indian participation in high-technology areas including IT, bio-technology, pharmaceuticals and R&D projects. India’s areas of core competence could dovetail with Cyprus’ plans to develop its high-tech sector and knowledge-based industries as the third pillar of its economy. Other areas of cooperation include financial services, tourism, construction and fuel-efficient automobiles. India has consistently supported the independence, sovereignty, unity and territorial integrity of the Republic of Cyprus. India hopes that a just and lasting solution will be found to the Cyprus problem in accordance with the UNSC Resolutions and the aspirations of the people of Cyprus.”
466. Speech by President Dr. A. P. J. Abdul Kalam at a Banquet in honour of the President of Cyprus Tassos Papadopoulos.

New Delhi, April 12, 2006.

Your Excellency Mr. Tassos Papadopoulos, President of the Republic of Cyprus, Madam Fotini Papadopoulou, Excellencies, Ladies and Gentlemen,

On behalf of the Government and people of India, it gives me great pleasure to extend a very warm welcome to you, Mr. President, Madam Papadopoulou and to all members of the distinguished delegation accompanying you on your State visit to India. We are confident that your visit will usher in a new era of cooperation in areas of bilateral, regional and international relations and will further strengthen the tradition of understanding and cooperation that so happily exists between our two countries.

Excellency, the relations between India and Cyprus are long-standing and time-tested. Both our countries are ancient civilizations. Modern history has brought us closer together. The foundation stone of our post-Independence friendship was laid by the architects of modern India and Cyprus like Mahatma Gandhi, Jawaharlal Nehru and Archbishop Makarios. They all shared a common vision and enjoyed personal friendship and had respect for each other. In size and demography, India and Cyprus may present a few contrasts. But, the similarities of outlook across a wide spectrum of issues, shared values of democracy, human rights and commitment to fight terrorism, unite us in a common endeavour. With this background, our two countries have worked effectively together in various international fora and we would like to thank you for supporting India's candidature in the enlarged UN Security Council.

Excellency, it is indeed heartening to know that a bust of Mahatma Gandhi was installed near your Parliament House in 1972 and the avenue on which the Parliament is located was named after Pandit Jawaharlal Nehru during the visit of our Prime Minister Mrs. Indira Gandhi in 1983. Later, the road on which the Indian High Commission stands was named after Mrs. Indira Gandhi. We have taken this sentiment a step further today when the Indo-Cypriot joint commemorative stamp was released by Your Excellency and our Prime Minister as a special gesture indicating the long tradition of warm, close and friendly ties between our two countries.
Excellency, India has always supported the independence, sovereignty, territorial integrity and unity of the Republic of Cyprus. India respects the democratic choice exercised by the people of Cyprus in the April 2004 referendum. India hopes that a just and lasting solution will be found to the Cyprus problem in accordance with the UNSC resolutions and the aspirations of the people of Cyprus. In this context, India welcomes the Paris meeting between Your Excellency and the UN Secretary General on February 28, 2006 for the preparation of the ground for the resumption of the negotiating process under the UN auspices that will lead to a mutually agreed, functional and viable comprehensive settlement of the Cyprus question.

Excellency, Cyprus has witnessed momentous developments over the last two years. We would like to heartily congratulate you on becoming a full member State of the European Union from May, 2004. This is indeed a landmark development in the history of Cyprus.

The impressive developments in Cyprus economy have made it a true success story. As Cyprus has resolved to develop knowledge-based and hi-technology industry as the third pillar of its economy, cooperation with India holds out tremendous possibilities for collaboration in these areas which are considered to be India’s core competence. Indian enterprises would be happy to participate in the development of knowledge-based industries and in high-technology park projects in Cyprus.

The Indian economy has been growing at 7 to 8 percent over the last few years and our stock markets are doing well. Our foreign trade and foreign exchange reserves have grown since 1991. But in order to bring prosperity and growth to our one billion people, we need to grow at around 10 percent or so for the next few years. Although this is a high figure, we feel optimistic that we can achieve this. We are also seeking to ensure that the benefits of development reach our rural poor. Towards this end, we have embarked on giving importance to physical connectivity, electronic connectivity and knowledge connectivity which will lead to economic connectivity in our rural areas through an initiative called PURA—that is, Providing Urban amenities in Rural Areas. This is part of an integrated programme of rural development called the Bharat- Nirman Programme.

We are also involved in projects in oil prospecting and exploitation in different parts of the world and would be happy to share our expertise in the exploration of your hydrocarbon resources.
Before concluding, I would like to convey our sincere good wishes for your personal health, happiness and welfare and that of your family and of all the people of Cyprus.

May I now request the Distinguished Guests to join me in raising a toast to the:-

- personal good health and happiness of His Excellency President Papadopoulos and Madam Fotini Papadopoulou;

- well-being and prosperity of the friendly and peace-loving people of Cyprus; and

- everlasting friendship between India and Cyprus.

FFFF

467. **Joint Statement issued at the end of the visit of the Cypriot President Tassos Papadopoulos.**

**New Delhi, April 16, 2006.**

1. The President of the Republic of Cyprus, His Excellency Mr. Tassos Papadopoulos, paid a State Visit to India from April 11-16, 2006. The President’s delegation included the Minister of Foreign Affairs, Mr. George Iacovou, Minister of Commerce, Industry and Tourism Yiorgos Lillikas, and senior officials.

2. During the visit, President Papadopoulos held talks with President Dr. A.P.J. Abdul Kalam, Vice President, Shri Bhairon Singh Shekhawat, Prime Minister, Dr. Manmohan Singh. The President of Cyprus met Chairperson of UPA, Smt. Sonia Gandhi and former Prime Minister Shri Atal Behari Vajpayee. He also received Shri Anand Sharma, Minister of State for External Affairs.

3. The President of the Republic of Cyprus was accompanied by a high-level business delegation. In New Delhi, he addressed a luncheon meeting of representatives of apex Indian Chambers of Commerce & Industry – CII, FICCI and ASSOCHAM. The President delivered a lecture at the Indian Council of World Affairs on “Cyprus as a Bridge between India and the European Union”.

4. Leaders of the two countries reaffirmed the traditionally close and
time-tested friendship between India and Cyprus. Both sides reviewed with satisfaction the development of bilateral relations and agreed that the long tradition of political interaction, commercial and cultural exchanges provide a valuable base to take bilateral relations forward in all spheres and underlined their commitment to further strengthening and diversifying this relationship.

5. The Republic of Cyprus’ membership of the European Union and the framework of India-EU relations provided another area of meaningful interaction between the two countries.

6. India reiterated its consistent support for the independence, sovereignty, territorial integrity and unity of the Republic of Cyprus. India welcomed the joint press statement issued on 28 February 2006, following the meeting in Paris between the President of the Republic of Cyprus and the UN Secretary-General. India supports efforts for the preparation of the ground for the timely full resumption of the negotiating process under the UN auspices that will lead to a comprehensive, fair and mutually agreed settlement of the Cyprus question in accordance with the relevant UN Resolutions.

7. The two sides exchanged views on developments in their respective regions and international issues of common concern. The discussions revealed mutual understanding and a similarity or identity of outlook on the on-going international efforts for strengthening institutions and traditions of democracy in the world, for a rule-based system of international trade, and for a more determined global effort to meet the daunting environmental challenges.

8. The two sides share a deep concern on the need to counter international terrorism and welcome the strong condemnation of terrorism in all its forms and manifestations, as contained in the Outcome Document of the World Summit held in September 2005. They were of the view that all member-states of the UN should make concerted efforts for an early conclusion of the comprehensive convention on international terrorism.

9. The two leaders discussed the issue of UN reform. In this context, H.E. President Papadopoulos reiterating their position that as the world’s largest democracy with an active global role, India has all the credentials to be a permanent member of the UN Security Council, reaffirmed the Republic of Cyprus’ support to India’s
candidature for a permanent membership in an expanded Security Council.

10. Cyprus welcomed the India-US Agreement on Civilian Nuclear Cooperation. Both sides agreed that such cooperation would help in addressing concerns related to global energy security and environmental protection. Cyprus conveyed its support for India’s efforts for the promotion of full civilian nuclear energy cooperation for the benefit of her economic development and prosperity of its people.

11. The two sides took stock of progress in the implementation of existing agreements and emphasized the importance of optimal utilization of existing inter-governmental and other bilateral mechanisms. While expressing satisfaction that bilateral economic cooperation has shown growth over recent years, they agreed to pay particular attention to expand and diversify their trade and economic relations. Recognizing the new possibilities and needs of the growing economies of the two countries, the two sides decided to set up a Joint Committee which will prepare, within a year, recommendations to the two governments for ways to expand and enhance mutually beneficial cooperation in all areas of common interest.

12. As Cyprus plans to develop hi-tech sector as the third pillar of its economy, Information Technology, ITES, Biotechnology, including collaboration in R&D projects, have emerged as the areas for future cooperation between the two countries. In light of India’s well-established capabilities in this field, Cyprus welcomed participation by Indian companies in the development of knowledge-based industries and in the high-technology park project.

13. The two sides noted other potential areas for bilateral economic cooperation arising from Cyprus’ expertise in financial services and cooperation in knowledge-based industry relating to accountancy, legal and investment banking research.

14. Both sides consider the energy sector as a high priority area and India expressed its willingness to share its expertise with Cyprus in this regard. The two sides discussed the possibilities of forging long-term joint collaboration in promoting innovative energy renewable applications and rational use of energy and the deployment of energy thematic park in Cyprus.
15. Recognizing the tremendous scope for enhancing the two-way tourism, it was agreed that both countries would focus on bilateral tourism promotion initiatives, including considering the feasibility of direct air links between the two countries.

16. The two sides emphasized the need for a comprehensive expansion of mutually beneficial contacts between business communities of the two countries and noted with satisfaction the setting up of Cyprus-India Business Association as a step in this direction.

17. Aiming at further developing bilateral trade and mutually beneficial economic cooperation, the two sides discussed measures for simplification of visa procedures for business representatives, scientists, professionals and tourists. Within this context, issuance of long-term multiple entry business visas and facilitation for scientists and professionals who find employment in Cyprus, to be considered within the overall policy of employment of third-country nationals, was announced by the Cypriot side during the visit.

18. The two sides acknowledging the positive role that the traditional cultural affinity between the two countries and peoples has played in fostering bilateral ties, decided to organize special cultural events during 2006-07.

19. A bilateral agreement on combating terrorism, illicit drug trafficking and organized crime was finalized during the visit.

20. The two sides also jointly issued postage stamps of each side in the two countries, under the existing bilateral agreement in the field of Posts and Electronic Communications.

21. The two leaders agreed that regular exchanges of high-level visits will help to sustain the momentum of bilateral relations. In this context, President Papadopoulos extended invitations to President, Mr. A.P.J. Abdul Kalam and Prime Minister, Dr. Manmohan Singh, to pay an official visit to Cyprus at a mutually convenient time, which were warmly accepted.
CZECH REPUBLIC

468. Media Briefing Points by Official Spokesperson on the visit of Czech Prime Minister Jiri Paroubek.

New Delhi, January 16, 2006.

- H.E. Prime Minister Jiri Paroubek will visit India from January 17 to 19, 2006. His delegation will include Czech Deputy Minister of Foreign Affairs, Jaroslav Basta. A high-level 15-member Czech business delegation and a media delegation will also accompany the Czech Prime Minister on this visit.

- During his visit to New Delhi, the Czech Prime Minister would hold discussions with the Prime Minister, who will host a dinner in his honour. The visiting dignitary will call on our President. He will meet Smt Sonia Gandhi, Chairperson of UPA. He will also have discussions with Raksha Mantri, Commerce & Industry Minister (in Kolkata), and MOS (Heavy Industries & Public Enterprises). He will address a business luncheon meeting co-hosted by Assocham, CII and FICCI. He will also deliver a lecture at the Indian Council for World Affairs on The Global Implications of EU enlargement a Czech Perspective”.

- H.E. Prime Minister will be the guest of Honour at the CII Partnership Summit in Kolkata on January 19. He will also make a brief halt at Hyderabad to meet the Chief Minister of Andhra Pradesh.

- The visit of Prime Minister Paroubek to India, just over two months after the State Visit of H.E. President Klaus of Czech Republic, demonstrates the strength and vibrancy of India-Czech relations.

- India-Czech relations have been excellent ever since the creation of Czechoslovakia after the First World War in 1918. Trade and cultural exchanges with Bohemia (now a part of the Czech Republic) have an even earlier tradition, reaching back into medieval history. Our political relations have remained warm and our economic & defence cooperation has continued to strengthen since the emergence of the Czech Republic in 1993 [separating from the Slovak Republic].

- In recent years, our bilateral relations have been further strengthened by convergences in our worldviews. Czech Republic was one of the
early co-sponsors of the G-4 [India, Brazil, Germany, Japan] resolution at the UN for Security Council expansion and has again supported the re-tabling at the UN of the G-4 Resolution.

- Czech Republic became a member of NATO in 1999 and of the European Union in May 2004. It has a declared commitment to multilateralism in world affairs; promotes democracy and human rights worldwide [it is a part of the Global Democracy Initiative & has contributed to the UN Democracy Fund]; and has been an active advocate of UN reform.

- Our bilateral trade has been growing steeply in recent years. As per present estimates, bilateral trade turnover in 2005 was nearly US $ 500 million. The trade is roughly balanced. Investment flows in both directions are also picking up. Skoda Auto & Tatra Udyog are examples of recent successful Czech investments in India; an Infosys subsidiary, Progeon, has set up a BPO centre in Czech Republic.

- We expect the visit of Prime Minister Paroubek to strengthen these trends in the intensification of our bilateral political and economic relations with the Czech Republic. A joint press statement is expected to be issued at the end of the visit.

469. Joint Press Statement issued on the visit of Czech Prime Minister Jiri Paroubek.

New Delhi, January 19, 2006.

1. The Prime Minister of the Czech Republic, H.E. Mr Jiri Paroubek, paid a working visit to India from January 17 to 19, 2006.

2. H.E. Mr Paroubek held wide-ranging discussions with President A.P.J. Abdul Kalam, Prime Minister Dr. Manmohan Singh, Defence Minister Pranab Mukherji, Commerce & Industry Minister Kamal Nath and Minister of State for Heavy Industries & Public Enterprises, Santosh Mohan Dev. He also had a meeting with Smt. Sonia Gandhi, Chairperson of UPA. In Kolkata, he met the Chief Minister of West Bengal, and in Hyderabad he held discussions with the Chief Minister of Andhra Pradesh. The Prime Minister delivered a lecture at the
Indian Council of World Affairs on “Global Implications of European Union enlargement – a Czech perspective”.

3. The Prime Minister of the Czech Republic was accompanied by a high-level business delegation. In New Delhi, he addressed a luncheon meeting of representatives of apex Indian chambers of commerce and industry – Confederation of Indian Industry (CII), Federation of Indian Chambers of Commerce & Industry (FICCI) and Associated Chambers of Commerce (Assocham). In Kolkata, he was the Guest of Honour at the CII Partnership Summit, at which he addressed a Special Session on January 19.

4. In his meetings with the President, Prime Minister and other Indian government representatives, H.E. Mr Paroubek exchanged views on the excellent state of current bilateral relations. They agreed that the long tradition of political interaction, commercial and cultural exchanges, as well as defence cooperation, between the two countries provide a valuable base to strengthen the framework of cooperation in a manner responsive to current global realities.

5. The Czech Republic’s membership of the EU and the framework of India-EU relations provide another area of meaningful interaction between our two countries.

6. The two sides exchanged views on developments in their respective regions, and on the ongoing international efforts – in which both countries are deeply involved – against terrorism, for strengthening institutions and traditions of democracy in the world, for a rule-based system of international trade, and for a more determined global effort to meet the daunting environmental challenges of our time. The discussions revealed mutual understanding and a similarity or identity of outlook on all major international developments.

7. India and the Czech Republic share perspectives on the urgent need for strengthening the United Nations to more effectively address today’s challenges, and for comprehensive UN reform, including development, security and human rights. They shared the view that the Security Council must be reformed to reflect contemporary global realities. To this end, it needs to be expanded in both permanent and non-permanent categories, on the basis of equitable representation, with the inclusion of both developed and developing countries. In this context, H.E. Prime Minister Paroubek conveyed the Czech Republic’s view that, as the world’s largest democracy with an active global role, India has all the credentials for permanent membership in an expanded Security Council. The Czech Republic also reaffirmed its support for
the G-4 Framework Resolution on the reform of the UN Security Council, which has been re-tabled in the current Session of the UN General Assembly. India expressed its appreciation for the Czech Republic’s support for its candidature and for the re-tabled G-4 Framework Resolution. India conveyed that it would give the most favourable consideration to the Czech Republic's candidature for membership of the Security Council in 2008-09.

8. Both sides welcomed the strong condemnation of terrorism in all its forms and manifestations, as contained in the Outcome Document of the World Summit held in September, 2005. They were of the view that all member states of the UN should make concerted efforts to conclude a Comprehensive Convention on International Terrorism (CCIT) during the current Session of the UN General Assembly, as underlined in the Outcome Document of the World Summit.

9. The two sides expressed satisfaction over the progressive expansion and diversification of the India-Czech Republic bilateral economic relationship. They agreed that even though bilateral trade has shown dynamic growth over recent years, it has not done full justice to the existing potential. The two countries agreed to strive to achieve a bilateral trade turnover of USD 1 billion by 2010.

10. The two sides welcomed the resolution of the long-pending issue of the liquidation of the rupee balances from the pre-1990 Rupee trading arrangements and from outstanding Czechoslovak credits. The Government of India will take expeditious measures to complete the required budgetary procedures to transfer Rs 872.10 million to the Ceskoslovenska Obchodni Banka (CSOB) in full settlement of the outstanding balance.

11. The two sides considered ways to expand and deepen mutually beneficial cooperation in areas of common interest and agreed that joint venture and investment possibilities also existed in the sectors of machine tools, biotechnology, Information Technology, automotive components, and transport. Prime Minister Paroubek conveyed the interest of the Czech companies in energy projects in India, particularly drawing attention to the environment-friendly power technologies which Czech companies have developed in recent years. The understanding between the Czech government and the government of the state of Andhra Pradesh on the Nizampatnam integrated development project is an illustratioThe discussions between H.E. Prime Minister Paroubek and the Chief Minister of
Andhra Pradesh on the development of the Nizampatnam Port City Complex were of great importance.

12. In the context of efforts of both countries for greater energy security and to develop stable, sustainable and efficient energy sources, both sides agreed on the need to promote greater international cooperation in promoting strengthening nuclear energy as a safe, environment-friendly and sustainable source of energy, in accordance with the International Atomic Energy Agency (IAEA) Statute and other relevant agreements. While following with interest recent developments in the Indian civil nuclear initiatives with other countries, the Czech Republic stands ready to explore the possibilities of opening new trade avenues in the peaceful uses of nuclear energy, consistent with its international obligations. The Czech Republic and India agree to pursue further opportunities for the development of the purely peaceful uses of nuclear energy on the basis of the 1966 bilateral agreement in this regard.

13. The two countries expressed satisfaction at the current status of bilateral defence cooperation. They agreed that potential exists for further development of this cooperation, not only in equipment sales, but also in co-production, technology transfers, military to military exchanges and training.

14. They agreed that cooperation between the Czech Tatra company and the Indian BEML has been to mutual benefit, resulting in progressive indigenisation of the Tatra trucks assembled in India. They noted with satisfaction that the Tatra trucks remain an important component of the vehicle fleet of the Indian armed forces. A number of new contracts for supply of Tatra vehicles to the Indian Armed Forces are in advanced stages of negotiations and are expected to be concluded at an early date.

15. Recognising the tremendous scope for enhancing two-way tourism, it was agreed that both countries would focus on bilateral tourism-promotion initiatives, including the feasibility of direct air links between the two countries.

16. In the context of further development of mutual trade and economic relations, the two sides discussed possibilities of simplification of visa procedures for business representatives and tourists.

17. The potential of closer educational links was noted. To provide an institutional framework for facilitating exchanges of students and research scholars between educational institutions of the two
countries, India and the Czech Republic will hold discussions on a bilateral programme of exchanges in education.

18. The two sides also agreed to hold bilateral discussions for a framework agreement on cultural exchanges.

19. The two sides agreed that there is tremendous potential for a greater synergy between the scientific communities of the two countries, which can be exploited through closer cooperation between universities and exchanges of information and scholars between the research institutions. The two countries will explore the possibility of bilateral arrangements on cooperation in science and technology.

20. To follow up on these and other areas of promise for India – Czech cooperation, the two sides emphasized the importance of optimal utilization of existing inter-governmental and other bilateral mechanisms. For this, the following decisions were taken:

- To sustain the process of regular political consultations on major international issues and to better coordinate respective national positions in international organizations, the two countries will hold annual Foreign Office Consultations (FOC) at the level of Secretary to Government (India) / Deputy Minister (Czech Republic). The next session of the FOC will be held in New Delhi in the first half of 2006.

- The next meeting of the Joint Economic Committee, co-chaired by the Czech Deputy Minister of Trade & Industry and the Indian Commerce Secretary will be held in Prague in mid-2006. During this meeting, the two sides shall discuss new bilateral legal framework for economic cooperation.

- The Joint Business Council will be encouraged to draw up a programme of closer interaction between the business communities of the two countries.

- A Joint Defence Committee will be established to promote progress in various areas of bilateral defence cooperation. The Committee will be co-chaired by Director General (Acquisitions), Ministry of Defence from the Indian side and Deputy Minister, Ministry of Defence from the Czech side.

21. Regular exchanges of high-level visits will also help to sustain the momentum of bilateral relations.
DENMARK

470. Briefing Points by Official Spokesperson on media reports regarding the visit of Prime Minister of Denmark to India.

New Delhi, March 18, 2006.

- The two sides have found that the proposed timing for the visit was not optimal¹.

- The Indo-Danish relationship is strong and excellent and is moving into a new phase which is focused on political dialogue and economic cooperation instead of the decade old development cooperation, which has been phased out by the end of 2005. The visit of Danish Prime Minister will highlight this evolution.

- India and Denmark will continue their endeavours to establish a new cooperation framework in areas of mutual interest like ICT, biotechnology, maritime transport, double taxation and the establishment of a joint commission.

- India and Denmark look forward to the visit of the Danish PM to India at an early date.

¹ The clarification became necessary in view of the media speculation because of the controversy surrounding the publication of some cartoons in the Danish media said to be blasphemous and wave of protest against those cartoons among the Muslim Community around the world. Earlier on February 22 Prime Minister in his speech in Parliament called for “utmost restraint” in all quarters while protesting against the publication of a caricature of Prophet Mahammed in Danish newspaper. The Prime Minister said the Government shared deep concern over its publication. He also pointed out that New Delhi had conveyed its outrage to the Danish Government both in New Delhi and in Copenhagen. He said the newspaper should tender an apology and ensure that such acts were not repeated.
471. Statement of Prime Minister Dr. Manmohan Singh at Joint Press Conference with Finland Prime Minister.

Helsinki, October 12, 2006.

Your Excellency, Prime Minister Vanhanen, Members of the Press, I would like to thank His Excellency Prime Minister Vanhanen for his gracious hospitality. Relations between India and Finland turned a new leaf when the Prime Minister Vanhanen visited India in March this year. It has been a pleasure and a privilege to visit Helsinki on this bilateral visit which also coincides with the Finnish Presidency of the European Union. The 7th India-EU Summit will be held tomorrow. We are delighted that this meeting will take place under Finnish Presidency. During our discussions today, Prime Minister Vanhanen and I agreed that India and Finland have vast complementarities which must be fully exploited. Finland is one of the fastest growing economies among the OECD countries. It is a world leader in areas such as telecommunications, information technology and biotechnology.

We discussed the opportunities provided by India’s sustained economic growth rates of over 8% and its recognition as a safe, secure and profitable investment destination. India offers advantages of a pool of highly qualified scientific talent and a skilled workforce in the manufacturing and service sectors.

Prime Minister Vanhanen had inaugurated a Nokia plant in Chennai during his March visit. A number of other Finnish companies have also entered the Indian markets and we welcome their presence.

We are encouraged by the fact that in turn a number of Indian companies are investing in high-tech Finnish firms.

Looking at these developments, we believe that there is a huge potential for expansion of our trade and investment ties. We have agreed to work jointly to double our trade over the next two years.

We are glad that Finnair will be operating direct air services between Helsinki and New Delhi from October 30.

We also discussed the need to strengthen international initiatives in
combating terrorism. India has been a victim of terrorism. I appreciate the support and solidarity extended by Finland.

Meeting the challenges of globalisation requires the strengthening of multilateral institutions such as the UN and WTO. We value our dialogue with Finland which has a proven record of contribution to effective multilateral initiatives.

I would like to thank Prime Minister Vanhanen for the excellent quality of our discussions and for his deep personal commitment to developing close relations with India.

I will have the honour of calling on the President of Finland tomorrow. Thank you.
472. Joint Press Interaction by Prime Minister Dr. Manmohan Singh and French President Jacques Chirac.

New Delhi, February 20, 2006.

Statement of Prime Minister circulated at the Press Conference.

Your Excellency President Chirac, Ladies and gentlemen of the press,

It is a privilege to welcome President Chirac and his distinguished delegation to India.

Our relations with France, a global power and one of the anchors of our ties with the European Union, are special and privileged. President Chirac is a respected senior world statesman and a true friend of India. The vibrant strategic partnership that we enjoy today was initiated during President Chirac’s visit to India in 1998 and strengthened with his guidance and leadership.

Last year, I met President Chirac twice, in Paris and Gleneagles. We are indeed extremely happy that the positive momentum in our relations has been maintained and strengthened by President Chirac’s current visit to India.

Our discussions today have been very useful in taking forward our partnership. The range of Agreements signed today provide an indication of the extensive and substantive engagement between India and France. We have also issued a Joint Statement that clearly indicates the direction in which our strategic partnership will proceed.

The Declaration on Cooperation in the development of Nuclear Energy for Peaceful Purposes and the Agreement on Defence Cooperation are among the most important outcomes of the visit. We appreciate France’s support for the ongoing effort to enable full civilian nuclear energy cooperation between India and the international community. President Chirac was one of the first world leaders to support such an initiative and I thank him for his strong and consistent leadership on a matter of great importance for India’s energy security.

Cooperation in the space sector is another important aspect of our relations with France, which is progressing well. We also deeply appreciate
France’s support to India’s candidature for permanent membership of the UN Security Council.

The economic engagement between India and France is an important element of our Strategic Partnership. It is my hope that trade and investment will continue to grow. There are significant complementarities between our economies and we must make all efforts to exploit the existing untapped potential. French companies should take advantage of the immense opportunities offered by India’s rapid economic growth and science and technology potential. Last September in Paris, the President and I had expressed our resolve to double bilateral trade within 5 years. We identified infrastructure, IT, pharmaceuticals, environment, advanced and new technologies, food processing, automobiles and aeronautics as priority sectors for forging business partnerships.

We also discussed ways to further strengthen our bilateral relationship. France and India share common views on a range of regional and global issues. We reiterated our commitment to work together to address global challenges. We continue to cooperate in fighting terrorism, on non-proliferation of weapons of mass destruction, in promoting sustainable development, and in the effective management of globalization.

India supports President Chirac’s initiative for looking at innovative sources of financing to tackle diseases such as HIV/AIDS, TB and Malaria, which afflict millions the world over. We recognized that Indian pharmaceutical companies have emerged as global leaders in the fight against these diseases.

President Chirac’s visit is another milestone in the expansion of our civilizational ties that are based on mutual trust and shared values. Once again, Mr. President, a very warm welcome to you and the distinguished members of your delegation.

PRIME MINISTER MANMOHAN SINGH: President Chirac; distinguished members of the French delegation; ladies and gentlemen:

It is an honour for me and for my colleagues in the Government of India to welcome President Chirac in our country. India and France have a very close strategic relationship. In recent years this relationship has gone from strength to strength to a large extent because of the personal interest and involvement of President Jacques Chirac in fostering closer cooperation between our two countries.
Mr. President, in you we have a world statesman of rare wisdom, knowledge and experience and it is a proud privilege of our country to count as a very dear and special friend of our country.

Today marks another landmark in the development of our relationship. We have signed nine Agreements or Memoranda of Understanding. These include such vital areas as cooperation in the field of civilian nuclear energy, defence cooperation, cooperation in the field of space, cooperation in the field of education, science and technology, and culture. In all these respects the process that we have set in motion today will ensure in years to come a far more productive, a far more durable, a far more mutually beneficial relationship between our two countries.

We have discussed developments in the global political and economic scene. We have also had a very fruitful discussion on regional and bilateral issues. I am very glad to report that there is complete convergence of views on all these important matters between our two countries.

Mr. President, your landmark visit has opened up new pathways of cooperation between our two countries and I thank you from the core of my heart for having found time to visit us.

PRESIDENT CHIRAC: Prime Minister; ladies and gentlemen:

First of all allow me to thank the Prime Minister and the Indian authorities once again for the extraordinary warm welcome extended to us since our arrival here in India. We, that is to say myself and my delegation, have been especially touched by this hospitality and this generosity. In particular I refer to the hospitality I enjoyed yesterday on the part of the Prime Minister.

We are two countries, two nations, that have indeed much in common; countries that have in common longstanding old culture; countries that are deeply attached to our national independence; countries that share the same ideals of democracy and respect to human rights; and countries that recognise the importance of abiding by the rule of international law as enshrined in the United Nations Charter.

We also uphold other values in common such as the importance of secularism, a concern for the need to help the world’s poorest countries in their development effort. Let me make an aside here to underscore the importance I attach to India’s endorsement and support for initiative on
innovative financing, an innovative funding front. In fact the Prime Minister has told me that India is going to be sending a ministerial representation to the forthcoming Paris Conference on this topic. So, we are countries that indeed share a lot in common, values and beliefs.

    We, of course, have discussed during the course of our meeting, a number of topics with the Prime Minister. We examined, for instance, our respective points of view which I might add were extremely convergent, on the subject of India’s access to civilian nuclear technology. This access, we feel on the side of France, is indeed necessary in order to drive and fuel India’s economic development without at one and the same time leading to excessive pollution which would arrive from large-scale emission of greenhouse gases.

    We at the same time fully understand on the French side the concerns and the constraints faced by the Indian authorities and Indian Government, be they of an economic nature or they have to do with India’s national independence and security constraints and needs. Here there has been once again no divergence or difference of opinion between us.

    We, as you saw, have also agreed to sign, you are witness to this fact, a defence agreement which further consolidates our cooperation in the defence arena showing thus a strengthening of solidarity both in terms of defence and in terms of procurement of equipment - military procurement.

    We covered a range of economic and trade issues. I think it is very striking to note that there is a shared commitment on both sides - commitment that also has to be stepped up and increased on both sides - to increasing trade flows and economic ties between our two countries.

    I would also like to take this opportunity to thank the captains of industry, members of the French business community who have come along with me on this trip and who will be attending the economic forum which the Prime Minister and I are organising this afternoon, as you know. As a result of this commitment, as a result of these agreements and of this cooperation, we have set to ourselves the lofty goal of doubling, increasing two-fold, within the next five years the trade flows between our two countries.

    That is all. This whole scale strengthening of our ties be they of a political or economic nature, the ties that link India to France and France to India, I think are being borne out as evident by all these agreements and by the series of understandings that have characterised our thought.
I wish lastly, once again to avail myself of the opportunity of thanking the Prime Minister, the Indian authorities for their warm welcome, for the hospitality, and indeed for the Indian President for the magnificent ceremony that was laid out for us this morning.

**QUESTION** (FRENCH MEDIA): President, Sir, Mr. Mittal has been stepping up the number of interviews that he has been giving and statements that he has been making in which he had deplored what he called the hostile welcome that he has received or the hostile reactions that he has come up against in France. He says that he has been misinterpreted, misunderstood, and he has even referred to possible xenophobia in respect of this attitude. Would you, if you have the opportunity to meet him, wish to clear up any misunderstanding arising as a result of this?

**PRESIDENT CHIRAC:** I would really have difficulty in understanding this controversy. Just look at it as it stands right now. Clearly it involves two parties, two sides. On the one hand we have a British citizen, Indian born British national, who is taking an initiative vis-à-vis a Dutch company and a Luxembourg company. Therefore, as things stand right now, as we see things unfold, all we know is that a hostile bid has been made by the person in question which is of a purely financial nature. There has been no presentation of any kind of industrial plan, industrial development plan. There has been no prior consultation, which is in fact contrary to usual practice in such matters.

That being said, it is his right to be so and to act in this manner as it is equally the right of Europeans to care about their job, their future and the technologies involved, of what the future holds in store for them. We know, as I have already said, nothing more than what I have said that this is a financial offer, this is a hostile bid. We do not know anything about the content of what is intended. Therefore, we will wait and see. We are not prejuring anything. But this is the gist of what the Europeans have been saying to their shareholders, the European companies have been saying to their shareholders.

Now, we have nothing against in principle, absolutely nothing against, a non-European bidding on a European company or enterprise. Far from it. All I am saying is that we are waiting to see what the bid, what the offer, actually involves before we pass judgement on it or before we have anything to say on the subject. Therefore, I think that the concerns that have been expressed are entirely legitimate and I repeat what I said at the outset. I do
not understand what all the fuss is about. I do not understand what the controversy is about.

QUESTION (PARUL MALHOTRA, CNN-IBN): This is a question for both the Prime Minister and President Chirac, on the same issue. President Chirac, Sir, you have just clarified some of your position on that. Could you confirm if the bid is assessed as unhealthy for the company in question Arcelor, would your Government take any direct or indirect action to block that? Prime Minister, Sir, did you raise this issue in your talks with the President? Do you believe that racism or protectionism has had any role to play in this matter?

PRESIDENT CHIRAC: Madam, if that is what you have understood, I would say that you have misunderstood. I repeat what I said earlier on. We do not act nor have we any intention of acting, against a company or procedure. The situation as it stands right now is that quite simply a hostile bid has been made contrary to practice, with no prior explanation, no reasons given, on a large company, European company. As I said, we were given no reasons for this bid, we have no notion of what intention lies ahead for the company in question. There is no plan that has been presented. Presently we are standing by and waiting for such explanations to be given. As a result when they come, and if they come, we will act in accordance with a set number of principles and values and in particular the independence and respecting and upholding the independence of the private sector.

PRIME MINISTER MANMOHAN SINGH: Question was asked, ‘Did I raise this issue with the President?’ Yes, this matter did come up during our discussion. The President explained the positions in detail. It is my hope that a fair decision, taking into account the interests of all the stakeholders, will be taken in this matter.

QUESTION (FRENCH MEDIA): This is a two-fold question to the President and the Prime Minister. Mr. President, France has been very active in striving to achieve for India access to civilian nuclear technology, access to a status whereby it could access civilian nuclear technology. If the outcome to all of this is successful, and if indeed the international community goes along with it, what makes you believe that French companies would get, would win the contracts and the bids that would necessarily flow from such a decision. Could it not be American companies or other companies rather than France or French companies? Prime Minister, Sir, would you be prepared, were all of this to go through,
to place the installations and facilities in question, the programmes and the development of these programmes, under strict IAEA safeguards as indeed is mentioned in the agreement that has just been signed?

**PRESIDENT CHIRAC:** I said earlier on exactly what France’s position was on this matter. France is supportive of India. It is supportive of India as a function of two principles, the first being a moral issue, a moral principle. India must be allowed to achieve its necessary economic development without facing a stranglehold of economic constraints and energy constraints. The second is an environmental principle - principle of safeguarding the environment. In other words India, which is a responsible country, a responsible nation, should be able to produce the energy that it needs for its own development without, at one and the same time this having a negative fallout or impact on the world as a whole as a result of greenhouse gas emission.

We equally understand India’s position in this connection. We are supportive of India in this position. We know that India has a number of constraints, a number of objectives. Some of these objectives are also economic ones. But what France … or France’s support for India is a matter of principle. Of course, there will be, there is, somewhere along the line, the issue of Franco-Indian economic cooperation, on this particular front and I hope that there will be cooperation, enhanced cooperation between our two countries. But I repeat that has nothing to do with it because our support to India is principled support. It has nothing to do with economic cooperation, ties or development.

**PRIME MINISTER MANMOHAN SINGH:** We are very grateful to President Chirac and the Government of France for the principled position they have taken in promoting cooperation between India and the members of the Nuclear Suppliers Group relating to facilities, material covered by the nuclear field. As far as India is concerned, we are committed to honouring in letter and spirit the statement that I and President Bush jointly signed on 18th of July.

A question was asked about any international facilities that may become available to India through processes of enhanced international cooperation. I confirm that all facilities procured by India through international cooperation for civilian nuclear energy will, of course, be subject to safeguards. I am talking of any facility that may become available to India in the future through international cooperation, they will be of course subject to safeguards under the International Atomic Energy Agency.
QUESTION (RAJEEV SHARMA, THE TRIBUNE): My question is to President Chirac. France entered into strategic partnership with India in 1998. How has this strategic partnership evolved over the past eight years? Do you believe that the civilian nuclear energy cooperation agreement can act as perfect icing on the cake of this strategic partnership? What are the difficulties in its implementation?

PRESIDENT CHIRAC: France indeed, as you rightly said, entered in 1998 into a strategic cooperation agreement with India. This cooperation agreement was based on a number of principles which I listed earlier on and on a number of common interests. Since that day, since 1998, our relations have been constantly strengthening. They are longstanding, they are permanent and they are very close in a wide variety of different fields. At the international level you know that we have always been extremely supportive of India’s bid to a permanent seat on the United Nations Security Council and we will continue to be so. You know that we are supportive of India’s bid to be able to develop its own nuclear electricity-generating programme. We have strong political comfort on a number of important political issues. We share many views in common as far as world affairs are concerned. In fact on most issues on the world scene we have convergent views. Our economic ties as you have heard have also been constantly tightening over the past eight years and I hope that they will continue to do so in the years to come. So, this is the short answer to your question. Yes, I do believe that these relationships, this agreement has been seen to strengthen. These relations are becoming ever tighter, ever closer between India and France, something that the Prime Minister further confirmed to me today. We hope that this would continue in the future, which I cannot but applaud on my side.
President Jacques Chirac's visit to India today, closely following the visit of Prime Minister Manmohan Singh to France in September 2005 is a strong reflection of the commitment by both countries to take forward their Strategic Partnership by further strengthening bilateral cooperation in a wide range of fields including political, economic, defence, space, civil nuclear energy education and research.

Both sides have agreed to intensify the exchange of high level bilateral visits and consultations in the various areas of their interaction in order to further reinforce their comprehensive strategic partnership.

As India embarks on a period of rapid economic development, trade and investment relations with France are becoming more diverse. The two governments will make all efforts to increase the volume of investment and joint ventures in each other’s countries and realize the great potential for enhanced business partnerships in the priority sectors identified by them in the Joint Statement of 12 September 2005. They will also work towards the continued robust growth of bilateral trade so as to reach the target of doubling bilateral trade within 5 years. Small and medium enterprises have an important role to play in this regard and the two governments have decided to take specific actions to enhance cooperation between enterprises, with a particular focus on SMEs.

The two governments would initiate a dialogue on the possible areas of cooperation in the field of Intellectual Property Rights.

Both sides recalled the Joint Statement of 12 September 2005 in which they had agreed to work towards conclusion of a bilateral civilian nuclear cooperation agreement. They emphasised that the Joint Declaration on Cooperation on Civil Nuclear Energy, issued today, is an important step forward in the realisation of that objective and in taking forward the longstanding Indo-France cooperation in the civil nuclear energy sector. They agreed to continue to work together towards the fulfillment of that objective.

The two leaders expressed satisfaction at India joining as a full partner, the International Thermonuclear Experimental Reactor (ITER) nuclear fusion project.
France and India have also signed an Agreement on Defence cooperation. This is an important element of the Strategic Partnership between the two nations, building upon and expanding co-operation in the defence and military fields, defence industry, production, procurement, research and development of defence material, joint exercises, professional exchanges and training.

Indo-French cooperation in the Space sector has a long and successful history between two of the most advanced countries in this field. The recent successful launch of the INSAT 4A satellite by Ariane 5G from Kouru, French Guyana, is a testimony to the existing close cooperation. Work is also progressing well on the Megha Tropiques Joint Satellite Mission.

Both sides re-iterated the importance of the Strategic Partnership between India and the European Union and agreed to work together in further enhancing ties through the mechanism of the Joint India-EU Action Plan.

The President of France reiterated his country’s firm support for India’s candidature for permanent membership of the Security Council. India and France share common views on major international issues and call for the reform of the United Nations system to make it more representative and effective in meeting both traditional and non-traditional global challenges.

The Prime Minister of India welcomed the initiative of the President of France to broaden international consensus on innovative financing for development. India also welcomed France’s decision to implement an air ticket solidarity contribution to support developing countries in their combat against HIV/AIDS, tuberculosis and malaria, including by the establishment of an international drug purchase facility in which their pharmaceutical industries could participate. India would study the modalities of such a levy and also participate in the Leading Group on Development Solidarity Levies to be established at the forthcoming Paris conference.

India and France strongly condemn terrorism in all its forms and manifestations, constituting, as it does, one of the most serious threats to international peace and security. There is a growing need to co-ordinate and intensify bilateral, regional and global co-operation to combat terrorism in a sustained and comprehensive manner. Linkages with illicit trafficking in drugs, small arms and narcotics and weapons of mass destruction (WMD) have enhanced the destructive potential and lethal reach of terrorism. The Prime Minister of India and the President of France reaffirmed their
commitment to work together in fighting terrorism and to make concerted efforts towards early conclusion of the Comprehensive Convention on International Terrorism.

Both sides also reiterated their commitment to intensify co-operation in the fields of science and technology, educational, academic and cultural exchanges, tourism and other areas of mutual interest, where there is significant potential yet to be tapped. The Agreements and MOUs signed today reflect the wide range of bilateral interaction between India and France and will provide significant impetus to realizing the full potential of the comprehensive strategic partnership between the two countries.

---

1. The following are the details of the agreements signed:

   a. Agreement between the Government of India and the Government of French Republic on DEFENCE Cooperation
      
      Indian Signatory: Raksha Mantri Shri Pranab Mukherjee
      
      French Signatory: Defence Minister Mme Michèle Alliot-Marie

   b. STATEMENT OF INTENT on Cooperation between Ministry of Commerce & Industry, Government of India & Ministry of Economy, Finance & Industry of the French Republic on Cooperation between Enterprises
      
      Indian Signatory: Commerce & Industries Minister Shri Kamal Nath
      
      French Signatory: Minister Delegate Foreign Trade Christine Lagarde

   c. MoU on TOURISM Cooperation between Ministry of Tourism, India and Ministry of Tourism, France
      
      Indian Signatory: Minister of Tourism Smt. Ambika Soni
      
      French Signatory: Minister of Foreign Affairs Mr. Philippe Douste Blazy

   d. Declaration by India and France on the Development of NUCLEAR ENERGY for Peaceful Purposes
      
      Indian Signatory: Chairman Atomic Energy Commission Dr. Anil Kakodkar
      
      French Signatory: Minister of Foreign Affairs Mr. Philippe Douste Blazy

   e. MoU between BEE (Bureau of Energy Efficiency) and ADEME (Agence de l’ Environnement et de la Maîtrise de l’Energie)
      
      Indian Signatory: DG, BEE V.S. Verma
      
      French Signatory: CEO, ADEME Michel Pappalardo

   f. Agreement between Indian Council for Cultural Relations (ICCR) and Sciences Po, Paris
      
      Indian Signatory: DG ICCR Pavan K. Varma
      
      French Signatory: Dy. Dir. Sciences Po. M. Verillaud

   g. Agreement between ANTRIX Corporation and EADS ASTRIUM relating to W2M satellite
      
      Indian Signatory: Exec. Dir., ANTRIX K.R.Sridhara Murthi
      
      French Signatory: CEO EADS Astrium Mr. Antoine Bouvier

   h. MoU between Indian Institute of Management, Ahmedabad and ESSEC Business School Paris (École Supérieure des Sciences Économiques et Commerciales)
      
      Indian Signatory: Director, IIMA Prof. Bakul Dholakia
      
      French Signatory: Dean & President ESSEC Prof. Pierre Tapie

   i. Airbus purchase contract Indian Airlines – Airbus
      
      Indian Signatory: CMD Indian Airlines Dr. Vishwapati Trivedi
      
      French Signatory: Vice President (Marketing & Contract) Kiran Rao
474. Declaration by India and France on the Development of Nuclear Energy for Peaceful Purposes.

New Delhi, February 20, 2006.

India and France, recalling their deep ties of friendship and cooperation and the importance of the Strategic Dialogue established between them in January 1998, recognize that nuclear energy provides a safe, environmental friendly and sustainable source of energy. They underline the need to further develop international cooperation in promoting the use of nuclear energy for peaceful purposes. They believe that nuclear energy will provide an indispensable source of energy to future generations.

India and France consider that proliferation of nuclear, chemical and biological weapons, as well as their means of delivery, constitutes a threat to international peace and security. They share common concerns and objectives in the field of non-proliferation of weapons of mass destruction and their means of delivery including in view of possible linkages with terrorism.

India and France recall their past exchanges on civilian nuclear energy. They stress with satisfaction the development, since the creation of the Strategic Dialogue, of a fruitful bilateral dialogue on civil nuclear cooperation and on nuclear safety and, in accordance with their respective international obligations and commitments, the joint projects that are taking place as a result of this dialogue.

They recall that the joint statement issued by the President of the Republic of France and the Prime Minister of the Republic of India on 12 September 2005 stated that India and France would work towards the conclusion of a bilateral nuclear cooperation agreement. India and France affirm their willingness to further develop their cooperation in the use of nuclear energy exclusively for peaceful purposes under that agreement including in nuclear power generation, with a view to achieving sustainable development.

India and France recall the framework of the bilateral working group on Energy established in January 1998, of the France-India Joint Committee for Atomic Energy created by the 16 September 2002 MoU signed between AEC (Atomic Energy Commission), India, and CEA (Commissariat a l'Energie Atomique), France, and of the dialogue between their Nuclear Safety Authorities launched by the 29 July 1999 Arrangement, renewed
by the 24 October 2005 Arrangement between AERB (Atomic Energy Regulatory Board), India, and DGSNR (Direction Generale de la Surete Nucleaire et de la Radioprotection), France. They express their willingness to expand and strengthen their bilateral dialogue on peaceful uses of nuclear energy.

In accordance with the principles governing their respective nuclear policies, India and France confirm that they are engaging in discussions to conclude a bilateral cooperation agreement on the development of nuclear energy for peaceful purposes, subject to their respective international commitments and obligations. India and France look forward to adjustment of international civil nuclear cooperation framework with respect to India and confirm their intention to work to that end so that the agreement can be implemented fully.

In this respect, India and France share the same understanding of the following:

1) Cooperation under the future agreement may cover the following areas: basic and applied research not requiring the supply of uranium enriched to twenty (20) per cent or greater in the isotope U235; development and use of nuclear energy applications in the fields of agronomy, biology, earth sciences and medicine, and in industry; application of nuclear energy to power generation, including setting up of power projects; nuclear fuel management; nuclear waste management; nuclear safety, radioprotection and environmental protection; prevention of, and response to, emergency situations resulting from radioactive or nuclear accidents; public awareness and acceptance of the benefits of the use of nuclear energy exclusively for peaceful purposes; and in any other field as jointly agreed by the Parties to that agreement.

2) Cooperation under the future agreement may take the following forms: exchange and training of scientific and technical staff; exchange of scientific and technical information; participation by scientific and technical staff of one Party in research and development activities conducted by the other Party; joint conduct of research and engineering activities, including joint research and experimentation (that is to say for which the two Parties are providing equivalent resources); organization of scientific and technical conferences and symposiums; provision of material, nuclear material, equipment, technology, facilities and services; consultations and
cooperation in relevant international fora; and any other form of cooperation jointly agreed by the Parties to that agreement.

3) Agreements already signed between the concerned institutions of both countries such as DAE (Department of Atomic Energy) and CEA; BARC (Bhabha Atomic Research Centre) and IRSN (Institut de Radioprotection et de Surete Nucleaire); AERB and DGSNR in the field of atomic energy will become a part of this framework agreement and will continue to be implemented as at present.

4) India and France will ensure that cooperation pursuant to the future agreement shall be exclusively for peaceful purposes and covered where applicable by appropriate safeguards agreements with the IAEA. The cooperation agreement, and as appropriate, subsequent specific agreements, will also address issues relating to inter alia confidentiality of information, third party nuclear liability, intellectual property, measures relating to physical protection and retransfers to third States.

Done at New Delhi on this twentieth day of February 2006 in English and French languages.

Chariman, Atomic Energy Commission Minister of Foreign Affairs

475. Press Release issued by the Ministry of Commerce on the 14th session of the Indo-French Joint Committee.

New Delhi, May 31, 2006.

Welcoming recent trends in bilateral trade and investment, India and France have agreed to make concerted efforts to further expand bilateral trade and investment. Both sides have agreed to facilitate the movement of business persons, professionals, student, interns and tourists, as this would help in the expansion of business linkages between India and France. France has indicated that its future legislation on immigration present under examination by the French Parliament will open new avenues for foreign
qualified professionals and students to access the French market on a temporary basis. The French authorities are also ready to solve the problems faced by Indian companies on a case by case basis. This is indicated in the joint statement of the 14th Session of the French-Indian Joint Committee which was signed in Paris today by Shri Kamal Nath, Union Minister of Commerce & Industry, on behalf of the Government of India and Ms. Christine Lagarde, the French Minister of Foreign Trade on behalf of the Government of France. The one-day Joint Committee Meeting (JCM) was co-chaired by Shri Kamal Nath and Ms. Lagard.

Both sides recalled that the visit of the Indian Prime Minister Dr. Manmohan Singh to France, in September 2005 and the visit of President Jacques Chirac to India in February 2006 were strong illustrations of the common commitment to further strengthen bilateral economic and commercial ties. The two governments have also targeted to double bilateral trade within 5 years.

Two-way trade between India and France was around US $ 3 billion in 2004-05, indicating a growth of 26%.

Both sides reviewed market access issues faced by their exporters with the Indian side urging agreement between the French Agricultural Ministry and the Indian Export Inspection Council (EIC) in order to facilitate export of Indian agricultural food and fisheries products to France. India has also pressed for acceptance of the EIC certification, especially for products where specifications have not been harmonised within the European Union (EU).

The French side appraised India about its action plan to promote trade and investment by French small & medium enterprises (SMEs) in India and also indicated that French companies in the financial services and retail sector were eager to invest in India.

The Indian side also urged the support of France for the recognition of Indian whisky by the European Commission.
New Delhi, September 4, 2006.

The Defence Minister Shri Pranab Mukherjee has said that his 3-day visit to Paris will “deepen India’s relationship with France”. Taking to newpapers in Paris shortly after his arrival yesterday, Shri Mukherjee described France as a ‘strategic partner’ and said “all along Paris has taken an independent position” on the supply of armaments and weapons platform to India. He said our relationship with Paris is robust as far as defence cooperation is concerned.

Talking about cooperation with France in the civilian nuclear energy sector, Shri Mukherjee said ‘France has assured us of help in the development of nuclear energy for civilian use and we want to take this forward’. Referring to the Indo-US agreement on civilian nuclear energy which is currently pending with the US Congress, Shri Mukherjee said “if the United States removes the embargo and lifts the ban on India, other follow up action can take place.” He said that the process has begun with the US and we await its final clearance.

Asked about request for proposals on 126 Multi-role Combat aircraft, the Minister said it would be floated shortly and India’s response will be guided by the recently announced Defence Procurement Procedure for capital acquisition. He said said India’s relations with Iran is not dependent on Tehran’s relations with other countries. The Defence Minister will begin formal part of his visit today by holding one-to-one discussion with the French Defence Minister followed by delegation level talks.

The Minister who will go to Germany on the second leg of his tour tomorrow said India wanted to forge similar strategic tie-ups with Germany. The first ever Indo-German defence cooperation agreement to be signed during his stay in Berlin, is aimed at getting out of the buyer-seller relationship and upgrade it to deeper cooperation through co-production, joint production of weapons system and technology transfer. The Minister’s delegation comprises Chief of Integrated Defence Staff, Lt Gen H.S. Lidder, Air Officer Commanding in Chief, Eastern Air Command, Air Marshal F.H. Major, Director General of Acquisition in MoD, Shri S. Banerjee and Joint Secretary, Shri Gautam Chatterjee.
Germany

477. Media Briefing by Secretary (East), Ministry of External Affairs Rajiv Sikri and Secretary (West) Ministry of External Affairs Ms. Shashi U. Tripathi, on Prime Minister’s visit to Germany and Uzbekistan.

New Delhi, April 20, 2006.

Official Spokesperson: Good evening everybody. Welcome to this briefing on the forthcoming visit of the Prime Minister to Germany and Uzbekistan. We have with us Secretary (West) in the Ministry of External Affairs, Ms. Shashi U. Tripathi, who would brief you on the German leg so to speak. She is also accompanied by Mrs. Sujatha Singh, Joint Secretary in charge of West Europe and we will follow up on the Uzbekistan leg. May I first request Ms. Tripathi.

Secretary (West) (Ms. Shashi U. Tripathi): Good evening all of you. I believe most of you are going to be on this flight, is that right? Welcome aboard then.

The Prime Minister, as you know, is paying an official visit to Germany from the 23rd to the 25th of April. He will inaugurate the Hannover Trade Fair. He is the Chief Guest. As you know, India is the partner country. He would be inaugurating the Trade Fair along with Chancellor Merkel. It would also provide an opportunity for a political dialogue in the context of the periodic summits which had been set up in 2001 when former Chancellor Schroeder had visited India.

This visit by our Prime Minister assumes significance as this visit is going to be the first by a Head of Government from Asia to Germany since Mrs. Merkel took over as Chancellor. It also shows the commitment on the part of the two countries, the deep commitment and interest on the part of both countries and both sides to continue with the momentum of the interaction and the political consultations which have been going on to date.

As you know, Germany is an important partner of India. We have a strategic partnership with Germany; our relationship was upgraded to a strategic relationship in 2001. Germany is also our partner in G-4 grouping where we have been able to bring the question of UN reforms from the backburner to the forefront of global issues. Apart from that, trade and
investment and commercial relations, have proved to be a major strength in our relationship with Germany. Germany is synonymous with industry and efficiency, and India of course has a growing profile as a global player on the economic scene. Therefore, the time is just right for a synergy between these two economic giants, as it were, for interaction in a wide variety of things. That is why this trade fair and the political dialogue assumes significance.

As far as the Trade Fair is concerned, this is the second time that India has been invited to the Hannover Trade Fair. The first time was in 1984. So, 22 years later we find India once again being invited, this time with a much larger profile than it had in 1984. Our participation is going to be a major participation. I believe more than 300 Indian companies are going to participate in the trade fair. We participate every year, as you know, but this year the participation will be on a much larger scale. This will help to showcase our strengths in different fields of economic endeavour and will help to energise our interaction in commercial and economic spheres.

Once again on the trade and investment front the good news is that in October 2004 when former Chancellor Schroeder paid us a visit, at that time our overall trade turnover was 5 billion Euros. At that time a decision was taken that we should fix a target for doubling this figure by the year 2010. The good news is that this target is going to be reached much earlier than the deadline we had fixed. In fact, it will be reached by 2008 because already the trade turnover is showing a figure of 7.6 billion Euros.

Apart from inaugurating the Trade Fair, the PM will also inaugurate the India Pavilion with Chancellor Merkel and they will both go around the India Pavilion. On the sidelines of the Fair, a number of events will take place. One will be a World Energy Dialogue. India is participating in this. In fact, we are setting up an Indo-German Energy Forum which will be led on our side by Secretary Power, Ministry of Power,. The objective of this is to cooperate in the fields of energy security, energy efficiency, clean coal technology and renewable energy.

We are also planning to sign three MoUs at the end of the visit. One will be between the Indian Railways and the Deutsche Bahn which is the German Railways. The second is between the Indian Council for Medical Research (ICMR) and its counterpart organization which is called the Helmholtz Association. It is an association of their national research centers. The main objective is to carry out research in infectious diseases. The
third is between the Bureau of Indian Standards and the counterpart organization on the German side which goes by the acronym DIN or Deutsche Institute for Normung.

This, ladies and gentlemen, is the year of India in Germany frankly because in April India is the partner country in Hannover Trade Fair. Then, India is again the partner country in the Bonn Biennale which is going to be held in May at which there will be theatre, music and art representations from India. India is the Guest of Honour country at the Frankfurt Book Fair which is going to be held in October. Once again it will be the focus country most probably at the Travel Mart which is to be held in Dusseldorf. So, India is not just the flavour of the season, it is going to be in effect the flavour of the year and the Prime Minister is going to launch that flavour with a real bang. This is what we are looking at from this visit.

As far as the programme is concerned, PM apart from inaugurating the Trade Fair as I said and the Indian Pavilion will have meetings with the corporate world. In fact he will have meetings with representatives of German society across the board. He will be meeting representatives of the German corporate sector. He will be meeting academicians. He will be meeting the parliamentarians, members of the Indo-German Parliamentary Group. And he will be meeting with the Indian community. Then he will also inaugurate along with Chancellor Merkel the Indo-German Business Summit which is being coordinated by the CII which will be on the 24th.

So, this is as far as the programme goes. This is all I have to say for the moment. The detailed programme will be given to those of you who are coming on this trip. It will be given to you on the flight. Thank you very much.

OFFICIAL SPOKESPERSON: Any questions on this part of the visit?

QUESTION: The Germans have expressed some reservations about the Indo-US civil nuclear deal and if India can be given the kind of technologies it wants access to. In fact, I think there was this interview by the German Ambassador in which he talked about the whole Iran question and India’s stand on the Iran issue. So, will all this come up in PM’s talks with the Chancellor?

SECRETARY (WEST): You know the German Government or even their political parties have not issued any public statement…

QUESTION: The Foreign Ministry has said something…
SECRETARY (WEST): No, this was an informal statement and in fact they were encouraging remarks. Those remarks that were made were encouraging. In fact, even the interview in *The Hindu* of Ambassador Mützelburg, which you referred to, has encouraging remarks. He says Germany has certain concerns. We know they do. As between friends, we will certainly discuss those. Our position is very well known on these issues and we will once again clarify to them our position.

QUESTION: Some think that the G-4 initiative has lost steam. Do you think it can be revitalized and imparted momentum?

SECRETARY (WEST): We certainly hope so.

QUESTION: Is the Iran nuclear issue going to be discussed when the Prime Minister meets the Chancellor?

SECRETARY (WEST): As I said, between friends, especially friends whose relationship is of the order of a strategic relationship, then all these questions will necessarily be discussed.

OFFICIAL SPOKESPERSON: We are moving further East. We have Secretary (East) here to help us understand the visit to Uzbekistan. I will first request Mr. Sikri to address the press and then the questions.

SECRETARY (EAST) (SHRI RAJIV SIKRI): Well, East is East and West is West but the two do meet at a press conference.

Good afternoon ladies and gentlemen. As Navtej would have already mentioned to you, the Prime Minister after his visit to Germany will be going to Uzbekistan. Uzbekistan is an old friend of India and I need not emphasise the close historical, cultural, people-to-people links that we have traditionally enjoyed with Uzbekistan. Of course, through history we have had lot of interaction. Even in Soviet times there was lot of interaction with this Republic. Many Prime Ministers and Presidents visited Uzbekistan. I recall President Venkataraman, Prime Minister V.P. Singh, of course Shastriji was there and Panditji also in 50s and 60s.

I think it is worth noting that we had a Consulate in Uzbekistan as far back as April 1987. It was the first Consulate that was opened in Tashkent. It reflects how close we do feel to Uzbekistan, how real our interests are in Uzbekistan in particular and Central Asia in general. Then, in 1991 when the Soviet Union broke up and Uzbekistan became an independent country, we were one of the first to establish an Embassy there. It was set up in
early 1992. Prime Minister Narasimha Rao visited Uzbekistan in 1992. The President of Uzbekistan has paid many visits to India - in 1994, in 2000 and in 2005. However, from the Indian side this would be the second visit after Uzbekistan became an independent country. The Uzbeks are really looking forward to Prime Minister Dr. Manmohan Singh's forthcoming visit.

Uzbekistan is the largest country in Central Asia. It is a key country there. Its size, demography, location, resources, all combine to make it play a pivotal role in the region. We think that Prime Minister Dr. Manmohan Singh’s forthcoming visit will be a very important step in consolidating our friendship and cooperation and taking it forward. We have a reasonable trade and economic relationship. I find that in 2004 for example we had a trade turnover of about 150 million dollars. Apart from things like pharmaceuticals, tea, consumer goods, from India to Uzbekistan, Uzbekistan is selling us some raw materials, cotton, silk, wool, nonferrous metals. There is an aircraft production factory there, TAPC, which supplies IL-76s. So, this is an important area of cooperation and trade.

We have a joint inter-governmental commission which has been meeting regularly. It has met six times. The last session was just a month ago in New Delhi. We have cooperation in the science and technology field, an agreement going back to 1993 and there are regular work plans that take place. We have undertaken some projects there including most recently a few years ago one for the computerization of Uzbek post offices. In 2004 an MoU was signed on establishing an Indo-Uzbek IT Center in Tashkent which will incidentally be inaugurated by the Prime Minister during his visit to Tashkent. This is an Indo-Uzbek IT Center named after Pandit Jawaharlal Nehru.

ITEC is another important area where Uzbekistan is one of the largest beneficiaries with about 100 or so candidates coming every year. We have given lines of credits for various projects.

I should have a special word about our cultural relations because these are extremely important. Those of you who may have been to Tashkent or any other place in Uzbekistan would know from first hand experience how popular Indian culture, both popular and classical is. We have an Indian Cultural Center that has been functioning there since 1994. Indian films are very popular. We have cultural troupes there and exhibitions, film festivals. A couple of years ago we had a festival of Indian culture that
was organized in Tashkent. We also give scholarships under the cultural scholarships scheme, the cultural exchange programme and so forth.

Uzbekistan is a very rich country. It has got resources – cotton, gold, oil, gas, other minerals. It is our endeavour to see if we can have more cooperation with Uzbekistan in these sectors to mutual benefit. We expect that during the visit there would be some forward movement and there could be some agreements signed in the field of oil and gas, in the field of geology and mineral resources, agricultural research and education, some agreements for promoting development of entrepreneurs, perhaps some agreements that would leverage India’s strengths in IT and satellite connectivity to telemedicine and tele-education. I think on the margins there will also be some agreements between STC and their counterpart to look at something in the textiles field. In the field of oil and gas between GAIL and Ministry of Petroleum and Natural Gas; in the education sector some arrangements between the Delhi University and the Tashkent State Oriental University. So, a number of concrete things are being planned for the visit.

Turning away from the economic and cultural, I would like to briefly talk about our cooperation in countering terrorism. We have a Joint Working Group in this field. We had the second meeting last year in Delhi. We have common concerns about drug trafficking. We would like to cooperate more in countering fundamentalism.

On Afghanistan there is some shared interest because we are looking at transit to Central Asia via Iran and Afghanistan. You are aware of the Zaranj-Delaram Road which is being built in Afghanistan. This could ultimately provide an avenue, or route to Uzbekistan which is the most important market in Central Asia.

Uzbekistan is also well connected to India. We hope that the regular air connections between India and Uzbekistan will provide the basis on which we can increase tourist flows between India and Uzbekistan. I believe there is great scope there and we could be doing much more in this regard.

Prime Minister’s visit to Uzbekistan is a brief visit. He gets there on the evening of the 25th and has the whole day of the 26th before he flies back to India. His programme there would include the ceremonials, wreath laying and guard of honour and of course the talks with President Karimov. There will be an opportunity for a joint press interaction there, I believe. In addition he will be paying his respects at Shastriji’s monument. As I said, he would inaugurate the Nehru Indo-Uzbek Center for Information
Technology. He will be also meeting with the small Indian community and the Indologists who are in Uzbekistan. Immediately after that, after the banquet which President Karimov will be hosting for him he returns to Delhi. Thank you.

**QUESTION:** Could you throw some more light on the types of agreements likely to be signed in oil and gas sector?

**SECRETARY (EAST):** These are things that are being discussed between the Ministry of Petroleum and Natural Gas, GAIL. Uzbekistan is not the largest of producers of oil and gas. But it does have significant quantities of gas in particular. Lot of it may be unexplored. There are other countries like Russia and China which are trying to do some exploration work in this regard. If there could be mutual agreement and mutual benefit, then I think that our ONGC Videsh or GAIL would have some opportunities for exploration. There could be some interest that they may have an expertise that GAIL has on CNG and urban ...So, it is an overall kind of thing.

**QUESTION:** What about the lack of democracy, not just in Uzbekistan but in the rest of Central Asia? How does it affect the relationship?

**SECRETARY (EAST):** We have excellent relations with Uzbekistan and all the other countries. I do not think that what you are mentioning is any factor in this relationship.

**QUESTION:** How do we reconcile on the one hand advocacy of democracy and on the other relationship with a dictatorship?

**SECRETARY (EAST):** I think we deal with the world as it is. We deal with many countries, including our neighbours, which may not be democracies. We try and develop mutually beneficial relationships with all countries.

**QUESTION:** Is there any possibility of a gas pipeline being worked out between India and Uzbekistan?

**SECRETARY (EAST):** As you know, we are looking at various possibilities of gas pipelines from the West of India to India. There are discussions on the Iran-Pakistan-India pipeline. Recently India participated as an observer in the Turkmenistan-Afghanistan-Pakistan pipeline which could as well be extended to India. If any of these pipelines does materialize, it is not ruled (out) that Uzbek gas could be added to the supplies that may come through these pipelines.
QUESTION: What are the steps needed for developing tourism?

SECRETARY (EAST): I think a lot would depend on the kind of incentives and tour packages that the Uzbek side may wish to put together. I believe this is something that the tour operators on both sides need to work out. Naturally easy availability of visas and other things will be an important factor that would go towards determining the level of tourist traffic that there may be between India and Uzbekistan. There are lots of people who are traveling abroad from India and there is no reason why Central Asia should not be a popular destination if it is competitive with comparable destinations elsewhere. Thank you.

478. Press Interview of Prime Minister Dr. Manmohan Singh with the German daily *Die Handelsblatt*.

April 21, 2006.

Handelsblatt: Mr. Prime Minister, you were the architect of the far reaching reforms in India. The economy is growing fast since then. Can this development really continue?

Singh: The process of economic reforms has clearly accelerated the pace of growth. Since 1991 our economy has grown at an average rate of 6% and in recent years even at 7.5 to 8%. In the next five years, we want to increase the rate of growth to ten percent.

Is this realistic?

It is achievable. India’s savings rate has increased to 29% of GDP. Parallel to this, the investment rate has increased to 31%. This has made it possible for us to have 8% economic growth. The savings rate will increase further in the coming years. Our demographic profile, which increases the number of the employed, will make this happen. The investment rate will soon grow to 35 or 36%. Thus our society is headed towards a growth rate of 10%. And we need such growth to be able to create sufficient number of jobs and to generate resources for investing in infrastructure, health, education and protection of the environment.

The condition of India’s infrastructure is the greatest concern of investors. How quickly can one improve the situation?

We need huge investments if we are to remove the bottlenecks and
at the same time overcome the great challenges in sectors such as energy and water. Foreign companies can play an important role here. But a lot is happening already. We have established regulators in all important areas. Our highway system is growing, ports are being constructed and airports modernized. Now, the railway network is also being modernized. If we keep up this momentum, the country will soon look different.

The Indian state does not have a lot of resources. How are you improving the framework conditions for the participation of private sector in the area of infrastructure?

Infrastructure sectors are by definition oligopolistic. We therefore need a good regulatory framework, and we are creating this. We have established regulators in all important sectors, from roads to petroleum. In the telecom sector we have had for some years a regulator and a dispute settlement mechanism, and this sector has seen explosive growth. We are using this model now in the electricity sector as well.

But restrictions still hinder foreign investors. Allianz, Deutsche Bank or Metro AG for instance want to do more than what they are permitted to.

We will enable a greater role of foreign banks step by step. Insurance companies are now permitted to hold a share of 26%. We intend to increase this to 49%, but we require a consensus for this in our coalition, and this is presently not in sight. Over the long term I believe the liberalization of the banking and insurance systems will continue.

And the retail sector, in particular, the super markets?

We have begun a cautious opening for the retail traders who sell single brands. We will learn from this experience. Small traders have great influence on all parties in our country. There is something such as the fear of the unknown. But with time we should be able to enable greater presence of foreign firms in this sector as well.

Above all, the communist parties, which support your government, are blocking reforms in these areas. To what extent do these compulsions of realpolitik hinder you?

They limit our options in the short term; it takes a lot of time to convince our coalition partners. There are differences about the pace of liberalization, but even the communists do not question the general direction.

The Communists are becoming more pragmatic then?

They are more cautious than I would like, but they are learning fast.
West Bengal is being ruled by a very progressive communist government, which is doing everything in order to attract investors, especially from abroad. And they are successful in this.

**While the services sector is prospering, India is lacking labour intensive industries that create jobs for the unskilled.**

You are quite right.

**Can your country become a second “factory for the world” just like China?**

The conditions for this are improving. India’s manufacturing companies have become lean, efficient and globally competitive in many areas. If the World Trade System does not become more protectionist, our industry will continue to grow rapidly.

**But the risk of protectionism is increasing, because globalization is no longer disadvantageous for countries like India.**

The world trade system continues to damage emerging countries. Agricultural protectionism, especially in the EU and USA, deprives us of export opportunities. But we are realistic. We know that developing countries cannot shape the world trade system freely in accordance with their needs. We should therefore use all available opportunities. At the same time, the Doha Round should, as promised, become a real development round. This is the litmus test of whether old protectionism will raise its head. This will hinder our progress. But this will also adversely affect the rest of the world.

**Will India’s rise change the world as strongly as that of China?**

If India continues to grow at 8 to 10%, it will stimulate the world economy. And the more we export, the more we will import as well. Unlike other counties, we are no mercantilists. We do not want to horde unlimited currency reserves and we also have a large trade deficit. If Europe and USA help India in achieving its growth targets, they are doing themselves a favor as well.

**India and China have good relations at present. But is it not likely that the two Asian giants become rivals over the long term?**

At the moment the two countries complement each other. Our bilateral trade is booming. This was unimaginable five years ago. We do not view China as a rival, but as a friend. The world is big enough to accommodate the growth ambitions of both countries. There are still problems relating to the border, but we are making progress here as well. Cooperation between the two most populous and fastest growing
economies is important for peace in the region and the world. And this is also of decisive importance for Asia to become the political and economic epicenter of a new world order.

**Unlike the USA, Europe is overlooking this development.**

Two great countries like India and China, which grow so fast, have enormous potential to change the course of the world. This realization is growing in Europe as well.

**America is reacting more decisively. What are the long-term strategic consequences of the Pact with Washington, which recognizes India as de facto nuclear power and promises it access to civil nuclear technology?**

A global partnership is emerging between the two greatest democracies. I see this as a positive element, which will help in shaping our world.

**As against this, will not the strategic partnership between Germany and India be devalued, unless it is soon extended to the areas of defense and civil nuclear technology?**

Our relations are not limited to one issue. Our strategic partnership will however achieve its full significance only if it is broadened, and also addresses India’s requirements in the energy sector. I do hope that we will get Germany’s support for the Agreement with the USA in the civilian nuclear sector. Great Britain, France and Russia support it after all.

**How important is nuclear energy for India?**

It provides us greater possibilities to meet our growing energy requirements. This will help Europe as well. If our requirement for oil and gas were to increase greatly, it will exercise enormous pressure on the world market price and increase competition for diminishing reserves. I hope that we will be able to convince Germany to look at this issue for mutual benefit.

**India seems similarly more ambitious in the defense sector compared to the German side.**

We want to diversify the sources for our defence equipment. In the past India has cooperated with Germany in this field, but there are enormous possibilities for expanding this cooperation.

**What do you expect from your visit to Germany?**

I hope that it will sharpen awareness about India. The German
economy should take a better look at our country than it does now. Besides, I am looking forward to meeting Chancellor Merkel. We have the same background; like me she also started her career as a university lecturer.

Was the change difficult for you personally?

I found that it could be done. But have a look into history; one of the best economists, who has ever tried a hand at politics, was Schumpeter. He became finance minister in Austria. The results were catastrophic!

---

479. Statement by Prime Minister Dr. Manmohan Singh on his departure for his visits to Germany and Uzbekistan.

New Delhi, April 22, 2006.

I will be visiting Hannover and Berlin at the invitation of Chancellor Merkel of Germany. My visit is part of the annual summit meetings between our two countries as part of our strategic partnership. During my visit, I will also be calling on President Horst Kohler. My visit to Germany will provide an opportunity to further strengthen relations with one of the major European powers and a valuable partner on global issues. Germany is one of the world’s foremost trading nations. It is one of India’s most important business partners and among the major foreign investors in our country.

My visit to Germany coincides with India’s participation as a Partner Country in the prestigious Hannover Fair 2006, which is the world’s largest technology exhibition. India participated as a Partner Country the last time at the Hannover Fair 22 years ago. Over 300 Indian Companies including PSUs, large corporate houses as well as small and medium enterprises and all the main Chambers of Commerce and Industry will be participating in this event, which will show case the vast potential for partnership that India offers for trade, industry and technological collaboration through mutual benefit. I will also be inaugurating the Indian Pavilion.

On my way back, I will be paying a bilateral visit to Uzbekistan at the invitation of President Islam Karimov. Both countries share longstanding ties and deep rooted cultural and civilizational links. Uzbekistan is an important country in the Central Asian region which we consider part of our extended neighbourhood. We hope to build on our traditional ties in providing them with new meaning and substance including in the political,
economic, defence, energy, science and technology and cultural fields. On my way back, I will be paying a bilateral visit to Uzbekistan at the invitation of President Islam Karimov. Both countries share longstanding ties and deep rooted cultural and civilizational links. Uzbekistan is an important country in the Central Asian region which we consider part of our extended neighbourhood. We hope to build on our traditional ties in providing them with new meaning and substance including in the political, economic, defence, energy, science and technology and cultural fields.

480. Address by Prime Minister Dr. Manmohan Singh at the Inauguration of Hannover Trade Fair.

Hannover, April 23, 2006.

Your Excellency, Madame Chancellor, Your Excellency, Madame Minister for Research and Education Your Excellency, Minister President of Lower Saxony Mr. Chairman of the Hannover Fair Professor Edward Krubasik Ladies and Gentlemen,

It is a privilege to attend the inauguration of the Hannover Fair. India is proud to partner this event once again, after 21 years. Our industry is delighted to show you the new face of our ancient country in this major world fair. We thank the organizers and the people of Hannover for their gracious hospitality and friendship.

The Indian and German people have cherished a close and warm friendship. There has been a constant flow of ideas, knowledge and commerce between our peoples. Our participation at this Fair marks a qualitatively new phase in our bilateral economic relationship.

Madame Chancellor, Excellencies, ladies and gentlemen: India sees Germany as a leading scientific, technological and cultural power. We recall with gratitude the German role in the building of a new India. Your expertise helped us establish our first steel plants. German firms played-and still play-an important role in the technological modernization of India. Indeed, it is no exaggeration to say that in popular perception in India is that the “Made in Germany” logo is a synonym for the highest quality and cutting
edge technology. We see great mutuality of benefit for us in building upon this history of partnership. A future of great possibilities awaits us.

India is at the cusp of a historic transformation. Never before has the mechanism of an open market, in an enabling environment of a free parliamentary democracy, been used to raise so many millions of people from the age old scourges of poverty, ignorance and chronic disease. Today, we have a new vision for India as an active participant in the increasingly integrated global economy. We are committed to an open, liberal economy; one that is in tune with the new realities of the global economic order. We seek to enhance our presence in the international trading system. India has benefited from German support in the EU system. Just as we see Germany as a natural partner in Europe, we hope Germany will increasingly come to view India as its natural partner in Asia.

As tariff barriers fall and an even more welcoming investment climate develops, India is more open and more hospitable. Ours is one of the most liberal policy frameworks for foreign investment. We have opened up most sectors of our economy to foreign investment. I would subscribe to what Madame Chancellor said recently, when she spoke of the importance of “small steps”. In the past fifteen years, a series of steps has brought India a substantial distance. We are determined to go much further.

At present, we are paying particular attention to infrastructure. We have announced plans to step up investment in transport, connectivity, power and energy, both in the rural and the urban sectors. Our highway plan, currently nearing completion, is one of the world's largest. Our railway system, already one of the world's largest, is being modernized with new technology. Ports and airports are witnessing renewed activity as the private sector and public-private partnerships in investment and operation are encouraged. These programmes will create significant opportunities for construction and engineering firms. On a rough estimate, over the next decade, our economy can absorb over 150 billion dollars of investment in the infrastructure sector alone! I urge German companies to engage in building these new infrastructure facilities.

A resurgence of the manufacturing sector is underway in India. Over the past two years, this sector has achieved growth rates of 9-10 per cent. We aim to raise this to 12 % in the near future. India is expected to emerge as a major manufacturing base in coming years. At the same time, the restructuring of Indian industry has led it to become a strong force for growth. In fact, several Indian firms have established a presence in Germany. Our
firms are increasingly meeting global benchmarks of quality, cost and productivity.

India and Germany have great opportunities to work together. Some new areas of Indian strength, such as chemicals, pharmaceuticals, auto components and electronics, complement areas of German expertise. The possibility of new partnerships between the dynamic German SME sector and its Indian counterpart is another area of interest for us. The emerging knowledge sectors are a new area for cooperation between India and Germany. Our skills in design, R&D, and innovation benefit the IT, biotechnology, media and entertainment sectors, among others. In this context, we must build upon the tradition of cooperation in space, science and technology and nanotechnology between our two countries. It is now time to elevate this interaction to a new plane. It is time for German players to take advantage of the emerging knowledge regime.

Excellency, Ladies and Gentlemen To make our economic cooperation more robust, we need to address barriers to trade and investment. Some Indian companies have faced visa and work permit problems in Germany. Employment and taxation laws also pose problems, as do some environment and labor standards. While our companies have recast operating procedures, some requirements remain onerous.

Germany is one of the world’s foremost trading nations. The increased integration of India into the global trading system offers opportunities for both of us to work together bilaterally as well as in multilateral fora in a productive partnership to strengthen a rule-based, predictable international order. We look forward to working with Germany in the EU and at the WTO, among other things, to ensure the success of the Doha Round of trade negotiations.

Madame Chancellor, Ladies and Gentlemen, India and Germany have been traditional friends with a long history of mutually beneficial cooperation. With the emergence of a new and vibrant India there are new opportunities for Germany to revitalize its involvement with India. I wish the people of Germany happiness and prosperity. No less important, in the present context, I also wish you every success in hosting and playing in the forthcoming World Cup! Thank you.
481. Opening Statement by Prime Minister Dr. Manmohan Singh at Joint Press Interaction with German Chancellor.

Hannover, April 23, 2006.

Dr. Manmohan Singh: I would like to express my sincere appreciation to H.E. Chancellor Merkel and the German government for the warm welcome and hospitality extended to me and my delegation.

India and Germany enjoy excellent bilateral relations and are actively working to strengthen our Strategic Partnership. My visit here reflects our continued interest and commitment to work with Germany under Chancellor Merkel in order to further broaden and deepen our understanding on various bilateral and international issues.

As the Chancellor has mentioned, we had very useful discussion about our bilateral relations. We also exchanged views about regional issues and the current international situation. I do believe that these have helped us reach a better understanding of each other’s position on all these issues.

Germany is one of our biggest trading partners and has made large investments in India. Many of our Indian companies are also expanding their business presence in Germany. The rapid growth of the Indian economy offers significant opportunities to both sides to transform our economies.

The Hannover Trade Fair with India as the partner country and the Indo-German Business Summit, which will be held tomorrow will provide a further momentum to our economic cooperation, especially in the manufacturing and infrastructure sectors.

In the energy sector, we welcome the setting up of the high level Indo-German Energy Forum with participation of both governments, as well as public and private sectors. The Forum will enable the two countries to focus on practical cooperation in the fields of energy efficiency, clean coal technology and renewable energy.

India and Germany have long-standing cooperation in the field of science & technology. We have agreed to work actively toward setting up a jointly funded Indo-German Science Centre in Delhi.

India and Germany share a common perspective on terrorism. India has been a victim of terrorism for many years now. We appreciate
Germany’s understanding of our position and look forward to continued cooperation on counter-terrorism.

Our two countries also have a common vision of a cooperative, rule-based multipolar world order. During our discussions, we re-iterated our mutual determination to continue efforts within the framework of the G-4 for the reform and expansion of the UN Security Council without which the overall reform of the United Nations will remain incomplete.

I have invited Chancellor Merkel to visit India next year for continuing the tradition of annual summit meetings. I look forward to working with her to provide further impetus to our strategic partnership.

---

482. Joint Statement issued on the occasion of the visit of Prime Minister Dr. Manmohan Singh to Germany.

Hannover, April 23, 2006.

Federal Chancellor Angela Merkel and Prime Minister Manmohan Singh today reaffirmed the Strategic Partnership of Germany and India. Building upon the ‘Agenda for the Indo-German Partnership in the 21st Century’, which both countries adopted in the year 2000, Germany and India will deepen their strategic partnership based on shared democratic values and basic common interests.

The Indo-German Strategic Partnership has seen cooperation intensifying across the board, including on the G4 initiative relating to the reform of the United Nations Security Council. Both sides agree to continue cooperation bilaterally and in the framework of G4 for the strengthening of the multilateral system and a reform of the United Nations, including the reform of the UN Security Council.

Trade, investment, scientific and technological collaboration, including in the areas of infrastructure, energy and high technology areas such as space, form an important basis for the partnership. Both sides aim to further deepen their strategic and security dialogue and will work towards an agreement on bilateral defence co-operation.

Economic and trade relations between Germany and India have flourished in recent years. India’s participation as the Partner Country in
this year’s Hannover Messe reflects the growing interest in India as a global economic partner and offers an excellent opportunity to intensify bilateral economic ties. Infrastructure and Energy provide major areas of deepening engagement between the two countries. The Indo-German Joint Commission on Industrial and Economic Cooperation will continue to focus on specific areas of cooperation for mutual benefit. Both sides note with satisfaction that bilateral trade is growing rapidly and that the target of doubling the trade within five years, which was set at the previous Summit meeting in New Delhi in October 2004 is likely to be achieved much earlier. Both sides recognize the significant role of the small and medium enterprises in further promoting the trade, investment and technology links and agree to facilitate intensification of linkages of such enterprises. They also note with appreciation, the contribution of the Indo-German Chamber of Commerce, which is celebrating its 50th anniversary this year, to promote economic cooperation between the two countries. They welcome the opening of a German Trade Office in Bangalore, which will further promote German trade and investment in India. They also welcome the growing trend of Indian investments in Germany.

In this context both sides commend the work of the Indo-German Consultative Group and welcome their recommendations for a further strengthening of our overall relationship including our economic and trade ties.

Both sides acknowledge the valuable contributions of Indo-German development cooperation in wide-ranging areas including energy, environmental policy, sustainable economic development, health and vocational training.

The establishment of an Indo-German Energy Forum at Senior Officials level and including the private sector highlights the importance accorded by both countries to cooperate in this sector. The Energy Forum will address strategic energy concerns including energy security, efficient use of energy, promotion of renewable energy sources and environmentally friendly technologies, taking into account the environmental challenges of sustainable development.

The two sides also take note of the satisfactory progress being made with regard to cooperation between the EU and India in the energy sector and the fact that the India-EU Joint Action Plan finalized in September 2005 at the 6th EU-India Summit in New Delhi, provides for cooperation on achieving safe, secure, affordable and sustainable energy supplies. India’s
participation in the ITER initiative on fusion energy is an important part of the ongoing energy cooperation.

Germany and India have established a long and fruitful cooperation in Science and Technology. The Indo-German Science Circle has given new impetus to this cooperation and will further strengthen contacts between scientific and academic communities. Both sides expect that the newly established office of the Deutsche Forschungsgemeinschaft in New Delhi will further add to the close network of institutions between our two countries. Both sides will work towards setting up an Indo-German Science, Research and Technology Centre at an early date. The Indian Council for Medical Research and the Helmholtz Association of German research centers are signing an MoU on Research Cooperation in the field of biomedical sciences.

Germany will place special emphasis on cooperation in Science and Technology between Germany and India during its Presidency of the European Union. Both sides will work towards jointly organizing a Ministerial Conference on Science and Technology in the first half of 2007.

Both sides take note of the ongoing bilateral cooperation in the space sector including in the Chandrayaan project. India’s participation in the Global navigation Satellite System (GALILEO) will be an important contribution to such cooperation.

Both sides agree to continue close cooperation in the fight against terrorism, both through the regular bilateral consultations and cooperation in the multilateral context. In particular, they will continue cooperating in pursuing agreement in the UN on the Comprehensive Convention against International Terrorism. The two sides have also agreed to start negotiations on a Treaty on Mutual Legal Assistance in Criminal Matters aiming at early conclusion of such negotiations.

Both sides agree to actively promote our traditionally close cultural cooperation. India’s participation as the focus country in the Bonn Biennial Art Festival in May and as the Guest of Honour Country in this year’s Frankfurt Book fair are important events to further deepen our cultural ties. They welcome the decision of the Indian Council for Cultural Relations to set up five rotating Chairs on Contemporary Indian Studies in various German universities.
483. Media Briefing by Official Spokesperson on the call on Prime Minister Dr. Manmohan Singh by German Foreign Minister.

Hannover, April 24, 2006.

OFFICIAL SPOKESPERSON (MR. NAVTEJ SARNA): .....What I did want to tell you is that the first call this evening on the Prime Minister was by the Federal Minister of Foreign Affairs Frank-Walter Steinmeier.

They met for about 45 minutes. Essentially the Prime Minister gave an overview to the Foreign Minister of the direction of Indo-German relations, the potential of our economic and trade relations, the possibilities which have been underlined on several occasions in the last two days of greater German investment in India particularly in the infrastructure fields which are now familiar – airports, seaports, telecom, etc.

The Foreign Minister, of course, said that he was very happy about Prime Minister’s presence at Hannover and also the fact that India is the partner for this Hannover Trade Fair since he himself is ... it is almost a hometown. He spent ten years there himself. So, he had a very sympathetic and very positive attitude to the huge Indian trade presence as well as the Prime Minister’s presence in Hannover.

He said that Germany was also very keen to build closer relations to widen the already existing cooperation, not only in the economic field. He said that he had not yet visited India but was working towards a visit and he expects to visit India in the second half of August.

The Foreign Minister mentioned about the India-US Civilian Nuclear Energy Agreement. He said that there had been some confused reporting about some of his remarks in Washington and he wanted to clarify. He said that the disappointment or unhappiness in those remarks at that stage was because of the timing, because they felt that this would come in the way of their dealing with the Iran nuclear issue. But, on the substance, he said that they saw a great advantage in the deal as it will bring India closer to the IAEA.

He said that Germany sees this advantage and as Germany is in the Nuclear Suppliers Group (it) would ask constructive questions and was hoping to receive constructive answers. The Prime Minister then responded to this by briefing him on our impeccable nonproliferation record, the fact
that India has tighter export controls in position, that we have a no-first-use policy, and that we are a responsible nuclear power. He also explained the rationale for a credible minimum deterrent and the need to maintain a strategic programme.

Of course, the German side clarified that there was absolutely no confusion and that there was absolutely no scope for comparison between India and any other country on this account. And, I do not want to get into more specifics.

The Prime Minister also explained in this context the need for greater avenues of obtaining energy, which was one of the main constraints for development. He also placed the Indo-US Civilian Nuclear Energy Agreement in this context.

They also discussed several regional issues. The German side wanted a briefing on Nepal. So, the Prime Minister apprised them of India’s position with which you are very familiar now, and our concerns. Developments in our bilateral relations with China, Pakistan, Sri Lanka as well as our development efforts in Afghanistan were discussed. Cooperation between India and Germany in the multilateral fora was also discussed. The fact that both countries were part of G-4 and the commitment to G-4 continues, as well as the situation is now once more ripe for everybody to come together to keep the eye on the ball as far as UN reforms are concerned.

That was more or less it. Now there are further calls. There is a call going on by former Chancellor Schroeder. Then there is a meeting with some German Indologists. Thank you.
They also provide a new impetus to our bilateral commercial engagement. I look forward, Excellency, to working closely with you in taking Indo-German relations to a higher level of cooperation. I would like to thank the Hannover Fair authorities for their excellent arrangements and gracious hospitality. It is an honour for India to be here once again, after 21 years, as a Partner Country. India and Germany have longstanding and enduring cultural, social and economic relations. There is enormous respect for German enterprise and creativity in India.

Today, Germany is the 6th largest foreign investor in India and most major German companies are already in India, and doing well. Several have become market leaders in their areas of operation. Several Indian subsidiaries of prominent German companies have out-performed the German parent companies. This has created a good basis for cooperative engagement between our businesses. While the bigger German firms have been present in India for a long time and know India well, the German Mittelstand has also played an important role. We seek a closer engagement with this crucial sector. In this context, I would like to recognize the excellent work that the German-India Round Table has done in promoting this objective. It is because of all your good work that businesses in both our countries have a positive view of each other. I was heartened to see that a recent survey of German business leaders showed that more than 80 per cent of German companies are aware of the huge potential of the Indian market.

I believe 65 per cent of German manufacturing companies already have a presence in India and another 30 per cent plan to come there. This is a good augury for expanded cooperation between us in future. As I said yesterday at the inauguration of the Hannover Messe, the fundamentals of the Indian economy are strong and robust. We are confident of sustaining our high economic performance and growth rates of 8%. Indeed, we aim to raise this to the 8-10% bracket in the near future. Indian firms are becoming globally competitive and we are witnessing the rise of Indian multinationals. India has become a production base and an export hub for a range of products from agricultural goods to automobile components to high end and IT enabled services. Indian firms are now part of global production chains - importing, sub-assembling, adding value and re-exporting.

The Indian Pavilion at the Hannover Messe is, as we have just seen, a good representative sample of Indian skills today. Today, corporations from all over the world are establishing themselves in India. They seek to take advantage of the pool of high quality scientific talent and skilled work
force in the manufacturing and services sectors. There is immense scope for Indo-German Cooperation based on the triad of infrastructure development, manufacturing and high technology. Many German companies in India have successfully leveraged the advantage India offers to set up R & D facilities and business process outsourcing operations. Other corporations are also increasingly aware of the enormous opportunities that a market of over a billion consumers offers, in the long run. Consequently, it is no surprise that German companies are planning to expand their operations in India and make India their manufacturing hub for the region.

This is smart strategic planning. I welcome it! I offer my warm felicitations to the Indo-German Chamber of Commerce and Industry, which is celebrating its fiftieth anniversary, and the Indo-German Consultative Group. You have made a remarkable contribution in promoting the economic partnership between our two countries. I wish you success in all your future endeavours. I would like to wish this Business Summit all success.

Berlin, September 6, 2006

convincéd of the significance of international military cooperation as an important element of security,

conscious of the “Agenda for German-Indian Partnership in the 21st Century” of 18 May 2000 between the Governments of the Republic of India and the Federal Republic of Germany as a principle which guides future relations in a constantly changing international environment,

recalling the interest of both sides in the establishment of a strategic dialogue based on common interests and common democratic values and the confidence that has resulted in a long period of good relations,
conscious of the importance of industrial and technological cooperation between both countries and of a bilateral dialogue on export control issues, and
desiring to strengthen relations between the armed forces of the Republic of India and the Federal Republic of Germany by closer cooperation,

have agreed as follows:

Article 1
Purpose

The purpose of this Agreement is to establish a strategic dialogue for the benefit of the armed forces at the level of Defence Secretary/State Secretary of Defence and to form sub-groups focusing on “Strategic Defence Cooperation”, “Defence Technical Cooperation” and “Military to Military Cooperation”.

Article 2
Fields of Cooperation

Cooperation between the Parties shall involve a regular exchange of information and experience in the following areas:

1. a strategic dialogue at the Defence Secretary/State Secretary of Defence level conducted by delegations and concerning the strategic situation and current defence policy matters. This group called the India-Germany High Defence Committee (HDC) shall meet once a year, alternately, in India and Germany,

2. bilateral expert talks in a Strategic Defence Cooperation sub-group co-chaired by the Joint Secretary level official of the Indian Ministry of Defence and Deputy Chief of Staff, Politico-Military Affairs German Federal Ministry of Defence, which constitute an element of the strategic dialogue and deal with the following subject areas;
   a) security and defence policy,
   b) leadership concepts (“Innere Feuhrung”),
   c) disaster relief and humanitarian assistance,
   d) other mutually agreed areas;

3. bilateral expert talks in a Defence Technical Cooperation sub-group co-chaired by the concerned Joint Secretary in the Acquisition Wing
of the Indian Ministry of Defence and Armament Director of the German Federal Ministry of Defence which constitute an element of the strategic dialogue and deal with the following subject areas;

a) general defence technology cooperation,
b) general defence business cooperation,
c) exchange of information on armament procurement projects, including project related development,
d) exchange of information on defence technological research
e) technology in both countries;

4. bilateral expert talks in a Military to Military Cooperation sub-group co-chaired by a two star officer from Headquarters of Integrated Defence Staff (HQIDS) with members from the three Indian Services and a two star level officer from German Federal Ministry of Defence which constitute an element of the strategic dialogue and deal with the following subject areas;

a) standard and advanced training of military and civilian members of the armed forces,
b) organisational structures of the armed forces,
c) maintenance of armed forces in peacetime,
d) military medicine,
e) military geoinformation affairs,
f) environmental protection in the armed forces,
g) deployment of the armed forces within the United Nations (UN) framework,
h) disaster relief and humanitarian assistance,
i) other mutually agreed areas.

5. the three sub-groups shall meet once a year, alternately, in India and Germany and at least one month prior to the annual meeting of the India-Germany High Defence Committee (HDC).

6. The Co-chairs of the three sub-groups, on Strategic Defence Cooperation, Defence Technical Cooperation and Military to Military Cooperation will report to the HDC on their deliberations and bilateral work programme for approval.
Article 3
Implementing Procedures

(1) Bilateral cooperation shall be realized on the basis of previously agreed individual topics concerning the areas specified in Article 2. The Parties may alter the agreed individual topics at any time by mutual consent.

(2) Where necessary, implementing arrangements to this agreement may be established governing individual areas or other forms of cooperation.

Article 4
Security

The Parties shall guarantee the protection of information and intelligence gained in the course of bilateral contacts. The Parties shall undertake not to use such information and intelligence to the detriment of the other party’s interests. The information made available, as well as the knowledge attained thereof, may not be passed on to the government or its organizations or an individual or legal entity of a third country, without prior written consent of the Party making the information available.

Article 5
Costs

(1) Each Party shall bear the cost it incurs as a result of implementing the strategic dialogue.

(2) Necessary services performed for the other party within the scope of implementing the provisions of this agreement shall be refunded by the party that has received the services in accordance with the respective national budgetary provisions. Details shall be laid down in a separate protocol according to Article 3, para 2.

Article 6
National Laws and Regulations

All activities of the parties under this agreement shall be subject to their national laws and regulations.

Article 7
Settlement of Disputes

Disputes arising from the interpretation or application of provisions
of this Agreement shall be resolved bilaterally by consultation and negotiation between the Parties.

**Article 8**

*Entry into Force, Duration, Amendment and Termination*

(1) This Agreement shall come into effect on the date of signature thereof.

(2) This Agreement may be amended or supplemented in writing at any time as mutually agreed by the parties.

(3) This Agreement may be terminated in writing by either party by giving six months' notice.

*Done* at Berlin on 6th September 2006 in two originals, each in the Hindi, German and English languages, all texts being authentic. In case of divergence of interpretation the English text shall prevail.

For the Federal Ministry of Defence of the Federal Republic of Germany
GREECE

486. Press Release of the Embassy of India in Athens on the visit of Minister of State Anand Sharma to Greece.

Athens, August 29, 2006.

Minister of State for External Affairs, Mr. Anand Sharma, and his delegation had talks Monday with the Greek Minister of Tourism Mrs. Fanny Palli-Petralia, on measures to boost tourism cooperation and relations between both countries, including holding of tourism promotion business forums involving tourism operators of both countries, participation in Tourism infrastructure development in India, and promotion of new forms of tourism. The Greek Minister agreed to schedule an early visit to India for further discussions, and to open a Greek Tourism Promotion Office in Delhi.

Mr. Sharma had talks with the Greek Foreign Minister Mrs. Dora Bakoyannis, who has recently made a visit to the Middle East, and whose country is taking over the presidency of the UN Security Council in September. Both Ministers agreed that there was considerable scope for further strengthening bilateral relations, through further high level visits, and especially in fields such as shipping, tourism, trade, investment, science and technology, agriculture, and culture. They also exchanged views on current international issues, including the Middle East, South Asia, the need to counter terrorism and extremism, etc. On UN reform and enlargement of the UNSC, both sides agreed that reforms were essential to make the UN more effective. Mr. Sharma thanked the Greek Government for its support to India’s candidature for membership of the UNSC, and for co-sponsoring the G-4 draft resolution last year on this subject. The Ministers also discussed the election of the next UN Secretary General and agreed that it should be Asia’s turn to fill this post, for which India had presented a strong candidate, Mr. Shashi Tharoor. Mrs. Bakoyannis agreed to schedule a visit to India in early 2007.

Mr. Sharma noted that his visit is the first Ministerial level visit from India since changes in Government in both countries in 2004. Both countries have much in common, having ancient civilizations, and modern democracies, and common views on many issues. India has a strong relationship with the EU, of which Greece is a member since 1981, and is actively involved in the integration into the EU of countries of the Balkans and Eastern Europe.
HUNGARY

487. Media briefing by Official Spokesperson on the visit of the Foreign Minister of Hungary.

New Delhi, November 3, 2006.

The Foreign Minister of Hungary has also been proceeding during the day. Dr. Kinga Goncz had detailed discussions with the External Affairs Minister, Mr. Pranab Mukherjee. She also called on the Hon'ble Speaker. During the meeting with the Hon'ble Speaker, reference was made to the pending invitation to him to visit Hungary and the need for greater Parliamentary exchanges. During the meeting of the External Affairs Minister and the Foreign Minister of Hungary, a wide variety of issues were discussed. In particular, existing bilateral mechanisms of Joint Business Council and Joint Economic Committee were discussed with the purpose of raising the level of economic cooperation which, as I told you the other day, the trade is relatively low at USD 140 million only.

Science and technology cooperation was discussed, particularly cooperation between scientific academies, Ministries and institutions. The External Affairs Minister suggested the possibility of Hungary using European Union funding to finance scientific projects between the two countries. Energy cooperation and civilian nuclear energy, particularly in the role that Hungary can play in the NSG also came up for discussion. Hungary also confirmed support for permanent seat for India in an enlarged UN Security Council. Terrorism and efforts for cooperation to counter it were discussed with expressions of mutual support in this regard.
MONTENEGRO

New Delhi, August 10, 2006.

The Government of India has recognized the Government of the Republic of Montenegro. A communication to this effect was sent in a letter dated 2 August 2006 from Minister of State in the Ministry of External Affairs, Shri Anand Sharma addressed to Minister of Foreign Affairs of Montenegro H.E. Mr. Miodrag Vlahovic. Following this step, formal establishment of diplomatic relations is being initiated. The Indian Ambassador in Belgrade will be concurrently accredited to the Republic of Montenegro.
POLAND

489. Press Release issued by the Embassy of India on the visit of Minister of State Anand Sharma to Poland.

New Delhi, June 5, 2006.

Mr. Anand Sharma, Minister of State for External Affairs, visited Poland from June 12-15, 2006. During the visit, he had an extensive exchange of views with H.E. Ms. Anna Fotyga, Minister of Foreign Affairs of Poland. He also met with Defence Minister H.E. Mr. Radoslaw Sikorski, Secretary of State in PM’s Chancellery Mr. Zbigniew Derdziuk, Vice Marshal of the Sejm Mr. Marek Kotlinowski, Vice Marshal of the Senate Mr. Marek Ziolkowski, Undersecretary of State in Foreign Ministry Mr. Witold Wyszczykowski, and Undersecretary of State in President’s Chancellery Mr. Andrzej Krawczyk.

During these meetings, the two sides reviewed the entire gamut of bilateral relations and expressed satisfaction at the growth registered in all fields. Expressing satisfaction at more than doubling of bilateral trade during 2002-05 to reach a level of US$ 584.83 million, the two sides were of the view that there was a significant scope for further growth of bilateral trade and investments. Present Indian investments in sectors such as steel, information technology, electronics, pharmaceuticals, food processing, health services, etc should be consolidated and further expanded, in addition to the traditional fields of cooperation including defence. They said that the forthcoming visit of the Polish Economy Minister and the meeting of the revamped Joint Economic Committee in autumn this year would help the two countries make progress in these fields.

Minister Sharma thanked his Polish interlocutors for Poland’s support for India’s candidature for a permanent seat in the enlarged UN Security Council. The two sides decided to remain actively engaged on the issue of UN reforms as also other global issues such as the fight against the menace of international terrorism.

The two sides expressed happiness on the regular exchanges of high level visits. They expressed satisfaction with the successful visits of Indian Defence Minister and Commerce and Industry Minister to Poland. Minister Sharma welcomed the forthcoming visits of the Polish Defence Minister, Economy Minister and Prime Minister to India during the second
half of this year. He conveyed that these visits will not only help in promoting mutual understanding but will also give a boost to trade and investment between the two countries.

During his visit to Krakow on 14th June, Minister Sharma met with Governor of Malopolska region Mr. Witold Kochan and Rector of the Jagiellonian University Prof. Karol Musiol. He also interacted with students and teachers of Indian studies and other prominent personalities in Krakow. He stated that the presence of Indian major Tata Consultancy Services in the field of information technology in Krakow will not only create new jobs for the people but also project a new image of India as a global IT superpower. Success of this venture will encourage other Indian investors to develop cooperation with Poland. He said that India would continue to provide full assistance to further expansion of centres of Indian studies in the Polish universities. Towards this end, the Indian Council for Cultural Relations would deploy five more teachers in Polish universities, in addition to the existing deployments of Indian teachers in Warsaw University, Jagiellonian University and Polish Academy of Sciences. Details of cooperation with the Jagiellonian University were also discussed.

Minister Sharma sincerely thanked his Polish interlocutors for the courtesies and warm hospitality extended to him during the visit. He invited Foreign Minister Fotyga to visit India. The invitation was accepted and the date of the visit would be finalised through diplomatic channels.

490. Memorandum of Understanding on Cooperation between The Indian Council of World Affairs, Republic of India and The Polish Institute of International Affairs, Republic of Poland.

New Delhi, December 7, 2006.

The Indian Council of World Affairs (ICWA), New Delhi, and The Polish Institute of International Affairs (PISM), Warsaw hereinafter referred to as ‘The Parties’;

Intending to enhance mutual understanding and friendship between the peoples of the Republic of India and the Republic of Poland through the promotion of friendly institutional relations;
Have reached the following understanding:

**Article 1 – General Guideline**

The Parties agree to develop exchange and cooperation on the basis of mutual respect, equality and mutual benefit.

The Parties agree to promote India-Polish bilateral relations, particularly in the following areas: diplomacy, culture, economy and trade, academics, sciences, social sciences, communications and the media.

The India-Poland Meetings will be hosted alternately in India and Poland by the ICWA and the PISM respectively. The first Meeting will be hosted by PISM in Warsaw.

**Article 2 – Contents of Cooperation**

Cooperation under this Memorandum may include;

1. Promotion and support of those activities contributing to better understanding and relations between India and Poland;
2. Promotion and support for the exchange of visits by eminent persons in the fields of diplomacy, culture, academics, economy and trade, education, sciences, social sciences communication and the media;
3. Cosponsoring of bilateral seminars, symposiums and panel discussions on issues of common interest;
4. Exchange of publications;
5. Other forms of cooperation as may be agreed upon by both parties through consultations;

**Article 3 – Sharing of Expenses**

On the basis of reciprocity, the sending Party shall cover international travel expenses while the receiving Party shall cover local transportation and hospitality expenses of the participants as well as local organizational costs.

**Article 4 – Others**

Other issues not covered in this Memorandum shall be decided through mutual consultation between the Parties.
Article 5

The Memorandum shall come into effect the date of its signature. This Memorandum of Understanding may be amended by mutual agreement whenever necessary.

Signed in New Delhi on the 7th day of December in the year 2006 in three originals in the Hindi, English and Polish languages, all text being equally authentic. In case of any divergence in interpretation, the English text shall prevail.

491. Memorandum of Understanding on Cooperation between
The Indian Council of World Affairs, Republic of India
and the Instituto do Oriente, Republic of Portugal.

Lisbon, November 16, 2006.

Talmiz Ahmad, Director General of the Indian Council of World
Affairs located at Sapru House, New Delhi, Republic of India, and Narana
Sinai Coissoro, President of the Instituto do Oriente, Technical
University of Lisbon, Republic of Portugal On behalf of,

The Indian Council of World Affairs (ICWA), New Delhi, and The
Instituto do Oriente (IdO), Lisbon, hereinafter referred to as ‘The Parties’;

Intending to enhance mutual understanding and friendship between
the peoples of the Republic of India and the Republic of Portugal through
the promotion of friendly institutional relations;

Have reached the following understanding:

Article 1 – General Guideline

The Parties agree to develop exchanges and cooperation on the
basis of mutual respect, equality and mutual benefit.

The Parties agree to establish a non-governmental group of eminent
persons, from both sides from the fields of diplomacy, culture, economy
and trade, academics, sciences, social sciences, communications and the
media to facilitate an Annual India-Portugal Dialogue and cooperation
between the civil societies of India and Portugal.

With a desire to make such dialogue and exchange fruitful, the Parties
shall, through mutual understanding, decide upon the number of participants
from each side, and shall each nominate their respective Co-Chairpersons. The list of eminent members from both sides shall be communicated through
mutual exchange of letters.

The Annual Dialogue will be hosted alternately in India and Portugal
by the ICWA and the IdO respectively. The first dialogue will be hosted by
the ICWA in 2007.
Article 2 – Contents of Cooperation

Cooperation under this Memorandum may include:

1. Promotion and support of those activities contributing to better understanding and relations between India and Portugal;

2. Promotion and support for the exchange of visits by eminent persons in the fields of diplomacy, culture, academics, economy and trade, education, sciences, social sciences communication and the media;

3. Cosponsoring of bilateral seminars, symposiums and panel discussions on issues of common interest;

4. Exchange of publications;

5. Other forms of cooperation as may be agreed upon by both parties through consultations;

Article 3 – Sharing of Expenses

The expenses on each event to be organized shall be decided between the parties by mutual consent on the eve of each event.

Article 4 – Others

Other issues not covered in this Memorandum shall be decided through mutual consultation between the Parties.

Article 5

The Memorandum shall come into effect from the date of its signature. This Memorandum of Understanding may be amended by mutual agreement whenever necessary.

Signed in Lisbon on the 16th day of November of the year 2006.

492. Joint Statement on the State Visit to India of Romanian President Traian Basescu.

New Delhi, October 23, 2006.

1. At the invitation of Dr. A. P. J. Abdul Kalam, President of India, H.E. Mr. Traian Băsescu, President of Romania, paid a state visit to India from 22-24 October 2006.

2. During the visit the President of Romania had meetings with the President Dr. A.P.J. Abdul Kalam, Prime Minister Dr. Manmohan Singh. He also had a meeting with Smt. Sonia Gandhi, Chairperson of UPA.

3. The talks were held in an atmosphere of friendship, warmth and mutual understanding that traditionally characterize the relationship between Romania and India.

4. In his meetings with the President, Prime Minister and other Indian government representatives, H.E. Mr. Traian Băsescu exchanged views on the excellent state of the current bilateral relations. Both Sides emphasized that the bilateral ties have developed along the lines of excellence, especially in the past 16 years, during which the relationship has been steadily strengthening in all fields.

5. The visit of H.E. Mr. Traian Băsescu to India in October 2006 was recognized by both Sides as a continuation of the high level bilateral contacts sustained between the two countries, including the Official Visit of H.E. Mr. Bhairon Singh Shekhawat, Vice-President of India, to Romania in October 2005 as well as subsequent visits at ministerial and other levels. The two Sides agreed to continue to maintain high-level bilateral contacts on a regular basis.

6. In this regard, The President of Romania, H. E. Mr. Traian BASESCU extended invitations to the President of the Republic of India and the Prime Minister of the Republic of India to pay official visits to Romania. The invitations were accepted with pleasure. The dates of the visits would be decided through diplomatic channels.

7. Both Sides called for further intensification of parliamentary contacts, and acknowledged the contribution of the Groups of Friendship, of
the respective Parliaments of India and Romania, towards promoting bilateral relations, and towards employing the tools of the multilateral diplomacy in order to address issues of common concern in the international arena.

8. Both Sides stressed their readiness to continue to maintain close contacts between the two Foreign Ministries at various levels, including within the framework of bilateral consultations and the links between the diplomatic training institutions.

9. The two Sides also agreed that the long tradition of political interaction, commercial and cultural exchanges, fortified by recent surges in economic and investment ties between the two countries provide a valuable foundation for the strengthening of the cooperation framework in a manner responsive to current global realities.

10. Based on this assessment, Both Sides agreed to take active steps in order to elevate their bilateral relations to the status of extensive partnership, on the occasion of the next high-level bilateral meeting.

11. In this regard, Both Sides expressed their willingness to further strengthen and expand bilateral relations in a wide range of areas, including political dialogue at all levels, trade, economic and investment promotion, scientific and technological cooperation, cultural and educational exchanges.

12. India felicitated Romania on its impending membership of the European Union from 1 January 2007. Both Sides expressed the view that with Romania joining the European Union soon, new opportunities arise for closer and more dynamic relationship between Romania and India. Both Sides also welcomed their inclusion as partners in ASEM, which they acknowledged as an opportunity for extending the overall cooperation between the two countries.

13. The President of Romania was accompanied by a high-level business delegation. In New Delhi and Mumbai, he will address luncheon meetings of representatives of apex Indian chambers of commerce and industry – Federation of Indian Chambers of Commerce & Industry (FICCI), Confederation of Indian Industry (CII) and Associated Chambers of Commerce (Assocham).

14. In the context of efforts of both countries for greater energy security and to develop stable, sustainable and efficient energy sources, Both
Sides agreed to further enhance their cooperation in this field, in a manner consistent with their international obligations. In this regard, they also agreed on the need to promote greater international cooperation in promoting nuclear energy as a safe, environment-friendly and sustainable source of energy, through forward-looking approaches, in accordance with the International Atomic Energy Agency (IAEA) Statute and other relevant international agreements.

15. The two Sides declared energy, especially the oil and gas sector, and defence industry as the main strategic priorities of the bilateral relations, while designating the IT&C industry, the pharmaceutical industry and the SME’s as the main pillars of the economic cooperation between Romania and India. To that end, and recognizing the importance and the efficiency of the activity carried out by the Joint Working Group on Oil and Gas, the two Sides decided to inaugurate a new Joint Working Group on Energy Cooperation.

16. The two countries noted that potential exists for further development of bilateral defense cooperation, not only in equipment sales, but also in co-production, technology transfers, military to military exchanges and training.

17. The two Sides expressed satisfaction over the progressive expansion and diversification of the India-Romania bilateral economic relationship. They agreed that even though bilateral trade has shown dynamic growth over recent years, it has yet to deliver until it has done full justice to the existing potential. The two countries agreed to strive to achieve a bilateral trade turnover of USD 1 billion by 2010.

18. Both Sides reiterated their interest for intensifying cooperation bilaterally and in third markets, in various other fields, such as the space and aeronautical industry, civil engineering, machine building industry, agriculture and tourism.

19. Recognizing the tremendous scope for enhancing two-way tourism, it was agreed that the both countries would focus on bilateral tourism-promotion initiatives, including the feasibility of direct air links between the two countries.

20. In this regard the two Sides agreed to explore and identify mutually convenient solutions for facilitating the access of the representatives
of the business communities from both countries to each other’s market. The two sides agreed to work out arrangements for facilitating visa-free access for diplomatic and official passport holders of both countries.

21. The Romanian and the Indian Side emphasized the essential role of the UN for global peace and security, for promoting the economic and social advancement of all people and for meeting global threats and challenges.

22. Recognizing the serious threat that terrorism poses to international peace and security, both Sides reaffirmed their strongest condemnation of terrorism in all its forms and manifestations. They decided to further strengthen cooperation at the bilateral level and within the UN in the fight against international terrorism, organized crime and illegal trafficking, as well as on disarmament and preventing proliferation of weapons of mass destruction and their means of delivery.

23. Both Sides supported the expeditious adoption and implementation of a UN Comprehensive Convention on International Terrorism. They agreed to continue their useful exchange of views in the context of the discussions at the UN on the global counter-terrorism strategy.

24. Both Sides took note of the need for expanding cooperation in the field of culture and education, including promotion of Romanian studies in India and Indological studies in Romania. The Romanian Side expressed its high appreciation of the assistance in the field of training rendered by the Government of India under the ITEC and other programs.

25. The potential of closer educational links was noted. To provide an institutional framework for facilitating exchanges of students and research scholars between educational institutions of the two countries, India and Romania will hold discussions on a bilateral programme of exchanges in education, in the near future.

26. The two Sides agreed that there is tremendous potential for a greater synergy between the scientific communities of the two countries, which can be exploited through closer cooperation between the respective ministries as well as between universities for promoting exchanges of information and scholars between the research
institutions. The two countries will explore the possibility of bilateral arrangements on cooperation in science and technology.

27. The two Sides exchanged views on a broad range of regional and international issues of mutual interest and expressed satisfaction with the existing close proximity of views. They expressed their commitment to further strengthen the cooperation between Romania and India in the UN and at other international fora.

28. The two Sides exchanged views on developments in their respective regions, and on the ongoing international efforts – in which both countries are deeply involved – against terrorism, for strengthening institutions and traditions of democracy in the world, for a rule-based system of international trade, and for a more determined global effort to address the daunting environmental challenges of our time. The discussions revealed mutual understanding and a similarity or identity of outlook on all major international developments.

29. India and Romania share perspectives on the urgent need for strengthening the United Nations to more effectively address today’s challenges, and for comprehensive UN reform, including development, security and human rights. They welcomed the establishment of the Human Rights Council and the Peace Building Commission and pledged their support for the successful work of the new organs of the UN at the significant initial stage. As founding members of the UN Democracy Fund, Romania and India reiterated their willingness to continue to work together to achieve the aims and objectives of the Fund. They also reiterated their willingness to continue cooperating within the Community of Democracies.

30. Both Sides shared the view that the Security Council must be reformed to reflect contemporary global realities. To this end, they noted that the UN Security Council needs to be expanded on the basis of equitable representation, with the inclusion of both developed and developing countries.

31. The two Sides signed the following documents:
   i. Agreement on Economic Cooperation;
   ii. The Cultural Exchange Program for 2007-2009;
   iii Memorandum of Understanding on Cooperation between the
493. Speech by President Dr. A. P. J. Abdul Kalam at the Banquet in honour of the Romanian President Traian Basescu.

New Delhi, October 23, 2006.

Your Excellency,

Mr. Traian Basescu,
President of Romania,

Madam Maria Basescu,

Excellencies,

Distinguished Guests, Ladies and Gentlemen,

I am delighted to welcome you Mr. President and your delegation to India. Your visit, coming at the height of the festival season in India, is indeed a reaffirmation of the strong ties that bind our two countries.

I find that both our countries have age-old links. Neagoe Basarab’s work, “Advice to his son Theodosie”, is similar to Kautilya’s “Arthasastra”. Both works echo thoughts of wisdom and ethics. Recent ties between India and Romania stretch back to the 19th century. Romania’s national poet Mihai Eminescu was attracted to Indian languages and literature and translated a book on Sanskrit grammar into Romanian. Gurudev Rabindranath Tagore, our poet laureate, visited Romania in 1926 and received a Doctorate Honoris Causa from the University of Bucharest while Mircea Eliade from Romania spent four years studying philosophy and Sanskrit at Calcutta University. Such exchanges reflect the deep cultural and civilisational links that characterise our ties.

Bilateral diplomatic relations, whose 60th anniversary will be observed in the year 2008, have been marked by close political
understanding, frequent high-level exchange of visits, as well as significant cultural exchanges. The establishment of democracy in Romania since 1989 has brought our countries even closer together in terms of common aspirations and our relations have been marked by regular high-level visits. The Indian Vice-President had paid a State Visit to Romania in October 2005. Mr. President, you had very fruitful discussions with our Prime Minister in May 2005 on the occasion of Victory Day celebrations. Our Minister of State for External Affairs was a Special Guest Speaker at the Annual Reunion of Romanian Diplomacy last month. Your present visit, Your Excellency, will therefore provide fresh impetus to our bilateral relations.

Romania has been involved in major Indian projects in the past in sectors such as petroleum, power and metallurgy. However, what gives our relationship a special boost now is the substantial economic content, which has developed in our relations. Indian companies have invested in many Romanian sectors like steel, pharmaceuticals, plastics, property development, Information Technology and manufacturing. I understand that negotiations are also in progress in sectors like the hotel and tourism industry, textiles, and packaging etc. Bilateral trade has thus impressively increased from 68 million Dollars in 2000 to 426 million Dollars in 2005. We should aim at reaching 2 billion Dollars by the year 2010.

Just as this trend is encouraging, it is heartening to note that both our countries are seriously working at exploiting the considerable potential, which is still available for growth. For this purpose, both countries have identified Information Technology, pharmaceuticals, renewable energy, metallurgy and heavy industries as sectors having the maximum potential for cooperation. India has successfully invested in the field of oil exploration in other countries. With your country’s strength in the field of oil equipment, this area of oil and gas exploration could be an area of fruitful cooperation.

Energy is a key area where both countries could cooperate. We could cooperate in the areas of oil and gas, as well as low head hydroelectric plants, in which Romania has considerable capabilities. India has vast experience in setting-up of large-scale hydro-electric power stations. We are willing to collaborate with Romania on a turnkey basis for setting-up of hydroelectric power stations in Romania in a mutually agreed way. I understand that Romania has also progressed well in hydrogen related technologies. Scientific and technological exchanges as well as educational linkages between our two countries should therefore be initiated on an institute-to-institute and laboratory-to-laboratory basis to benefit from the
synergy of our combined competencies in these fields. India could offer cooperation in the field of agriculture and agro-food processing as well.

India and Romania have a flourishing Cultural Exchange Programme and I am happy to note the continued interest among Romanians for Indian art, music, dance, as well as in Yoga and Ayurveda. There has been a noteworthy revival of interest in Indology and Indian culture. During his visit to Romania last year, our Vice-President had announced a few cultural scholarships to be given to Romanians in addition to the existing scholarships under the ITEC programme.

I congratulate Romania on its impending membership of the European Union from 1st January 2007. This is a historic achievement for Romania and we wish all success to the people of Romania. As you are aware, we have a strategic partnership with the EU, which is currently our largest trading partner. We hope to further strengthen and expand this partnership.

Excellency, your visit to India will further strengthen our bilateral relations and lend greater dynamism to our multi-faceted ties. We welcome you as a dear friend representing a great and talented people and hope that you will find your stay in India to be pleasant and enjoyable.

Excellencies, Ladies and Gentlemen, may I request you to join me in raising a toast:

- to the health and happiness of His Excellency President Traian Basescu and Madam Maria Basescu;
- to the progress and prosperity of the friendly people of Romania; and
- to closer, more dynamic and vibrant cooperation between India and Romania.
494. Press Release of the Ministry of External Affairs on the telephonic conversation of Prime Minister Dr. Manmohan Singh with President Vladimir Putin of Russia.

New Delhi, March 5, 2006.

Prime Minister had a 20-minute conversation over the telephone with President Vladimir Putin of Russian Federation late in the evening of March 4. The conversation was initiated by the Indian side.

The two leaders discussed implementation of areas of cooperation identified during their last Summit meeting in Moscow in December 2005 in context of the forthcoming visit of H.E. Mr. Mikhail Fradkov, Prime Minister of the Russian Federation, in mid-march. President Putin also briefed Prime Minister Singh about the G-8 Summit being hosted by Russia in St. Petersburg in July 2006. Prime Minister conveyed his acceptance of President Putin’s invitation to participate in a broader dialogue with the G-8 at St. Petersburg.

The discussion between President Putin and Prime Minister Singh also covered India-Russia bilateral economic and commercial relations. Prime Minister Singh expressed satisfaction that the bilateral agreement on Russia’s accession to the World Trade Organization had been signed recently, in accordance with his commitment to President Putin during their last meeting. The two leaders also discussed ongoing cooperation in the field of civilian nuclear energy.

The leaders exchanged views in context of the forthcoming meeting of the Board of Governors of the IAEA on March 6. Prime Minister welcomed Russia’s efforts to address the issue related to Iran’s nuclear programme through dialogue and consultations.
495. Response of the Official Spokesperson to questions that US had expressed reservations to Russia’s intention to supply nuclear fuel for Tarapur.

New Delhi, March 15, 2006.

There is no violation of NSG guidelines and Russia has approached NSG under the safety exception clause. US is aware of the urgent need for fuel for Tarapur.

India had made a request to the US to supply fuel for Tarapur, but this was not possible under current US laws. The July 18 Joint Statement has stated that the US will seek to adjust its laws and seek a change in NSG guidelines to enable full civil nuclear cooperation with India, including, fuel supplies for the safeguarded reactors at Tarapur. The statement also commits the US, in the meantime, to encourage its partners to consider India’s request for such fuel supplies expeditiously. India has had to seek urgent and limited supplies of uranium fuel to enable Tarapur to continue its operations in safety.

The US Congress is currently debating a change in US laws which would enable full civilian nuclear energy cooperation with India. Once US laws have been amended, India looks forward to the US emerging as a major and reliable partner to India, not only in respect of assured fuel supplies, but for other aspects of civilian nuclear energy cooperation¹.

1. Answering questions from journalists about the fuel supply by Russia the Spokesman said:

“Question: There are some wire reports that Russia has agreed to supply nuclear fuel for Tarapur? What is your take on that?

Answer: Well, the report is correct to the extent that to India’s request, Russia has agreed to supply a limited amount of uranium fuel for the safeguarded units 1 and 2 of the Tarapur Atomic Power Station and this supply of fuel will enable the plant to continue to operate in safety and provide much needed electricity to the western power grid of the country.

Question: Have they taken the approval of NSG in this regard?

Answer: According to our information, they have notified the NSG of their intention to supply fuel to Tarapur under the safety exception clause of the NSG guidelines. The shortage of fuel for Tarapur would have affected its continued operations under reliable and safe conditions.
Question: Can Russia unilaterally do it, or this will have to be formally cleared by NSG?

Answer: Well, they have notified the NSG of their intention to supply the fuel under a particular clause which is the safety exception clause of the guidelines. The fact that they have notified them and identified the clause, I think answers your question.

Question: The last time such fuel came, in 2001, it was criticized by the US government... (inaudible)... this is a fallout of the... (inaudible)... it will allow more countries to have dealings outside the NPT?

Answer: Let me put it like this. You know India has made a request to the United States for supply of fuel for Tarapur, and this is not being possible under the current US laws. The July 18 statement has stated that the US will seek to adjust its laws and seek a change in NSG guidelines to enable full civil nuclear cooperation with India, including, fuel supplies to the safeguarded reactors at Tarapur. The statement also commits the United States, in the meantime to encourage its partners to consider supply of fuel expeditiously to India, and India has had to seek this urgent and limited supply of uranium fuel to enable the Tarapur reactors to function in safe and reliable conditions.

Meanwhile it was reported that India received the first part of the promised supply of 60 metric tones of Russian low enriched uranium fuel for the two units of Tarapur Atomic Power plant. The first consignment of 20 to 25 metric tones of uranium which has arrived from Russia at the Nuclear Fuel Complex of Department of Atomic Energy was to be delivered to Nuclear Power Corporation of India Ltd., at an appropriate time, the DAE officials said in Mumbai. The current fuel supply to the units I and II would last for eight months in one unit and for 18 months at the other. “With Russian supply of 60 metric tones of uranium, the plants will have fuel for the next five years and run smoothly,” the Executive Director, Corporate Planning, NPCIL told the Press Trust of India.

The Russian Prime Minister on a visit to New Delhi said on March 16 that Moscow’s decision to supply uranium fuel to Tarapur nuclear reactor “did not contradict international commitment… We are cooperating on this matter. We have served this issue within international framework and it does not contradict international commitment,” Prime Minister of Russia Mikhail Fradkov said. He said Russia had “informed the Nuclear Suppliers’ Group about supply of fuel to Tarapur Atomic Power Station…the sale of uranium is in the interest of both the countries (India and Russia).”
Briefing Points by Official Spokesperson on the visit of Prime Minister of the Russian Federation, Mr. Mikhail Fradkov.

New Delhi, March 17, 2006.

1. H.E. Mr Mikhail E. Fradkov, Chairman of the Government of the Russian Federation, paid an official visit to India from March 16 to 17, 2006.

2. During his stay in Delhi, H.E. Mr Fradkov called on the President of India, Dr. A.P.J. Abdul Kalam, held wide-ranging discussions with Prime Minister Dr. Manmohan Singh, Finance Minister Shri P. Chidambaram and Commerce & Industry Minister Shri Kamal Nath.

3. During the visit, the following seven documents on cooperation were signed:

   (i) Agreement between the Indian Space Research Organisation (ISRO) and the Federal Space Agency (ROSCOSMOS) for launching of Russian navigation satellites, GLONASS-M, by a variant of the Indian Geo-Synchronous Satellite Launch Vehicle (GSLV). This agreement would facilitate launching of GLONASS-M type of satellites of Russia using the Indian GSLV.

   (ii) Agreement between the Indian Space Research Organisation (ISRO) and the Federal Space Agency (ROSCOSMOS) on joint development of GLONASS navigation satellites, GLONASS-K.

   (iii) MOU on cooperation between Indian Oil Corporation and Joint Stock Company Stroytransgaz of the Russian Federation. This MOU is a declaration on intent for pursuing petro-infrastructure projects [design and construction of pipelines, gas & oil storage facilities etc.] worldwide jointly through a consortium.

   (iv) Agreement between Vneshtorg Bank of Russian Federation and EXIM Bank of India on opening of a new credit line.

   (v) Agreement on cooperation between the ICICI Bank and the Vneshekonomin Bank of the Russian Federation.
(vi) Agreement on cooperation between the Confederation of Indian Industries [CII] and the Russian Union of Industries & Enterprises [RUIE].

4. Prime Minister Mr. Fradkov was accompanied by Mrs. Elena Fradkova and high-level officials including the Head of the Russian Federal Space Agency, and a high-level business delegation. In New Delhi, he addressed a meeting of representatives of apex Indian chambers of commerce and industry – CII, FICCI and Assocham.

5. During his meetings with the President, Prime Minister and other Indian government representatives, H.E. Mr. Fradkov exchanged views on the excellent state of current bilateral relations. It was agreed that the strategic partnership between the two countries serves the long-term national interests of the two countries and would further consolidate their multifaceted cooperation. It was emphasized that the strong and forward-looking bilateral relations would promote peace, stability and security in the region and in the world. The Indian side has expressed its appreciation for the supply of fuel to Tarapur Power Station1.

6. It was felt that the long tradition of political interaction at high levels, frequent commercial, scientific and cultural exchanges, as well as defense cooperation, between the two countries provide a valuable base to further strengthen the strategic partnership in a manner responsive to current global realities. In this context, the signing of agreements during this visit in the fields of space, energy, banking

1. Russian understanding of Indian need for nuclear energy was reflected in an interview given by Director of the Foreign Ministry’s Security and Disarmament Department Anatoly Antonov to Russian daily Vremya Novostei. Recognizing India’s energy needs, he pleaded for making an exception for India in the Nuclear Non-Proliferation Treaty to give it access to civilian nuclear technology. “We cannot ignore India’s energy requirements. It is a rapidly developing country with a good non-proliferation record. We should probably make an exception in this case without adopting new norms that may erode the non-proliferation regime,” said Antonov.
and between the Chambers of Industry & Commerce of India and Russia was welcomed.

7. Trade and economic cooperation was the main focus of the visit. The progress made in the implementation of the agreements reached during the official visit of the Prime Minister to the Russian Federation in December 2005 was reviewed. It was agreed that the range and depth of bilateral cooperation would be further expanded, particularly in priority areas such as energy, trade and economy, high technologies, space, and civilian nuclear energy, infrastructure and other knowledge-based areas. The role of bilateral investment activity in mutually beneficial sectors was emphasized.

8. The completion of bilateral negotiations on Russia’s accession to the WTO was welcomed and it was hoped that this multilateral organization would be one more forum for close interaction between Indian and Russia. The two sides welcomed the setting up of a Joint Study Group to examine the feasibility of concluding Comprehensive Economic Cooperation Agreement between India and the Russian Federation.

9. The Russian side recognizes India’s growing energy requirements to support its economic development. The importance of frequent interaction between the business communities of the two countries was reiterated during this visit. The two sides share the view that banking and financial linkages between the two countries should be further promoted. Energy remains a key priority area in which India and Russia are making joint efforts for long-term and large-scale cooperation in civilian nuclear energy, oil and gas sector. In this regard, the 2 x 1000 MW capacity Kudankulam nuclear power plant, which is currently under construction with of participation by Russian companies, is an important project.
497. Joint Press Interaction by Prime Minister Dr. Manmohan Singh and Russian Prime Minister Mikhail Fradkov.

New Delhi, March 17, 2006.

Dr. Manmohan Singh:

Your Excellency, Prime Minister Fradkov Members of the Russian delegation Ladies and gentlemen of the press I warmly welcome you to New Delhi, a city with which the Prime Minister is so familiar.

Our discussions today focused on giving a new depth to our strategic partnership. As large modernizing economies, we have an interest in strengthening bilateral cooperation and in jointly making global interdependence beneficial. In this context, I am happy that we have concluded a bilateral agreement on Russia’s accession to WTO last month.

The formation of the India-Russia Trade and Investment Forum headed by our Commerce Minister and his Russian counterpart is a valuable step forward in revitalizing our trade and economic relations. We aim to expand bilateral trade to $ 10 billion in the next five years. A Joint Study Group has been formed to recommend ways to achieve this goal and to examine the feasibility of signing a Comprehensive Economic Cooperation Agreement. We will continue discussions to conclude an Agreement allowing investment of funds from the Rupee Debt Account in India.

While we explore ways, at the government level, to promote our economic ties, business communities must develop greater interaction and business-to-business contacts. Private sector partnerships must be the new cementing force in our relations. Greater facilitation of business travel will help in this regard.

Our two growing economies also offer considerable scope for cooperation in energy, information technology and biotechnology and high technology commerce. Along with trade, these sectors must supplement the excellent cooperation we enjoy in the political, strategic and defence spheres. I therefore welcome the various documents signed during this visit. Two of these are related to the implementation of cooperation in respect of the Global satellite navigation system [GLONASS]. Some of our banks are also entering into agreements to work together.

We have noted that energy security is one of the principal themes of the G-8 Summit to be chaired by Russia this year. I have accepted with
pleasure President Putin’s invitation to attend the G-8 Summit being hosted by Russia in St. Petersburg in July this year. In this context, we envision a substantial increase in the share of nuclear energy in India’s overall energy mix. We see the Kudankulam project as a flagship of our cooperation in this area. I am confident that both countries will utilize opportunities to expand our partnership in civil nuclear energy cooperation. In this context, I would also like to convey our warm appreciation to the Russian Government for responding positively to meet the requirements for nuclear fuel supplies to Tarapur I and II.

We look forward to working closely, bilaterally and multilaterally, with Russia. Ours is a strategic partnership based on trust, confidence and abiding convergence of national interests. Russia is a tried and tested friend. The steady development of our bilateral ties is a matter of great satisfaction to our Government and to me personally. In conclusion, I take this opportunity to convey through you Mr. Prime Minister our warm friendship to the friendly people of Russia. I now invite you Mr. Prime Minister to offer your comments, after which we can answer a couple of questions.

Mr. Mikhail Fradkov: Thank you, Mr. Prime Minister, for the high evaluation of the situation in our relations and the prospects of their development. I would also like to thank you for the kind words addressed to the people and Government of the Russian federation.

The visit is a success. The visit is very substantial on the subjects which we are discussing and the volume of our cooperation both bilaterally in areas which unite our two countries and multilaterally. I would like to point out the high intensity of contacts between our two countries at all levels and in particular the contacts at the highest level.

With particular interest we have discussed during our visit issues pertaining to trade and economic relations. We are trying to find answers and we are trying to adopt practical steps to make tangible improvements in our strategic partnership and to not leave gap between a very good political interaction and some lacunae and in trade and economic terms.

A month ago there was a visit to India by the Russian Minister of Economic Development and Trade who was accompanied by the representatives of the Russian business communities. Together with Indian colleagues and partners they laid down an Action Plan and they set up a special Russia-India Business Council. This Business Council is starting to function these days.
I brought with me to India business people and representatives of the business communities from the Russian Federation. Yesterday we had a meeting with the business communities of India. The meeting was very interesting, it was a good dialogue.

We have set a task to build up an efficient business-to-business interaction. My role and that of distinguished Prime Minister, as we see it, is to create prerequisites for this development. Hopefully, we can find answers to the issues which remain unresolved because the motivation between us is very serious. We are trying to look to the future and to bring our relations to the level required by the economic situation. Actually we work in a complementary manner and we can use resources available for the interest of both our people. To this end we are trying to overcome the kind of inertia which is characteristic of our trade and investment relations now. In this context we are discussing specific issues and we are striving to address them.

In conclusion I would like to say that we have promising prospects in the development of our trade and economic relations. I would also like to express my gratitude to the Prime Minister of India for his friendliness and hospitality which we saw during our visit to India.

Thank you.

Question (Russian Media): Good afternoon. I represent here the Russian State Television Company. My question is addressed to the Prime Minister of India. If possible, I would also like to know the opinion of the Prime Minister of the Russian Federation.

Recently we have heard a lot about the construction of the gas pipeline among Iran, Pakistan and India. I know that this project is practically agreed upon. But I would like to ask the Prime Minister of India at what stage is this project and how it will evolve? How do you see the role of Russia in this project?

Dr. Manmohan Singh: India is desperately short of hydrocarbon resources and, therefore, we are interested in entering into bilateral as well as trilateral arrangements which would help us to fill the yawning energy gap which is basic for our accelerated development. It is in that context that we have welcomed the proposal to have a pipeline which links together Iran, Pakistan and India. As far as Russia’s involvement, Russia has a great deal of experience in building pipelines. So, I do hope that ways and means can be found to involve Russia also in the construction of the pipeline.
Mr. Mikhail Fradkov: I would like to say that the cooperation between Russia and India in the gas sector is evolving. The Gazprom is here. Some affiliates of Gazprom are also working in the Indian market place such as Stroytransgaz. We are exploring the opportunities off the sea shelf of Bay of Bengal. We have ample experience in constructing pipelines. So, we need to utilize and to tap this potential. If there are suggestions we will consider it thoroughly.

Question (Mr. V. Mohan Narayan, Press Trust of India): The Prime Minister has spoken about greater facilitation for business travel. Indian businessmen are continuing to complain about difficulties in getting visas expeditiously. Are you considering any mechanism by which there can be fast-track issuance of business and tourist visas? The question is to Mr. Fradkov.

Mr. Mikhail Fradkov: We reaffirm our readiness to address this issue. But I believe that this issue should be addressed in a comprehensive manner so as to prevent illegal migration and any breaches in law and order. Therefore, I believe this agreement should be considered as a package, with the readmission agreement. I got several remarks from representatives of Indian enterprises. They told me that sometimes they encounter problems with visa issuance and they also face problems as far as passport controls are concerned because too many formalities apply to them. So, when I am back in Moscow I will give appropriate instructions so that we can establish due norms and procedures which won’t be violated, I mean these procedures will concern individuals.

Question (Russian Media): My first question is addressed to Prime Minister Fradkov. You told us that the level of political relations does not correspond to the level of the economic ties between the two countries. How do you view the avenues of addressing this problem; and, could you enumerate several big projects which are being carried out between Russia and India?

My second question is addressed to both Prime Ministers, and primarily to Prime Minister Singh. This question pertains to the issue of rupee debt which is a kind of an impediment on the way to development of our relations. Can we use this rupee debt in investment; and can you also name some concrete projects, some specific projects where they can be allocated?

Mr. Mikhail Fradkov: We cannot be satisfied with what is exported from Russia and from India. From Russia we export to India ferrous, nonferrous fertilizers and newsprint, whereas from India tea, coffee, tobacco, textiles and
some other traditional products. All this narrows the list of goods between our
countries and in a way impoverishes the development of economic relations.
Therefore, we are planning to do our utmost to increase the participation of
our businessmen in this project. One of the proposals that hopes to settle the
rupee debt is the following. Together with the investment which will increase
the level of economic cooperation, there is also a suggestion to enlarge the
list of goods which will also make it possible to increase our economic
cooperation. As soon as the agreement about exchanging letters is signed,
we can go on and start implementing a number of very interesting investment
projects. I mean here some joint ventures such as joint venture in the area of
aircraft service facility. Russia can also purchase a mobile operator in India.
We can contribute in the building of airports, roads and so on. It is quite evident
that our cooperation in space and nuclear energy opens up new opportunities.
For instance I can mention here the IT area where India has a great potential.
Technoparks is Indian forte. It has accrued a great experience here. And
Russia is very experienced and can contribute in free trade zones. We also
take due note of enterprises which were constructed with the help of the former
Soviet Union and which need to be modernized. I think we can cooperate and
we can work in this area as well.

Dr. Manmohan Singh: I think I do not have to elaborate on what
Prime Minister has said. I entirely endorse what he has said that there are
immense possibilities that we can give a big boost to our economic
cooperation. And I sincerely hope that the Joint Study Group which has
been set up will come up with imaginative solutions to realize the immense
potential of widening and deepening of the economic relations between
our two countries.

As regards the use of the rupee-rouble debt, we are exploring ways
and means to find practical solutions in which these funds can be used to
promote in Russian investments in India. There were large number of
sectors where this scope exists. I do not have to mention infrastructure,
the traditional sectors like - power, coal or steel. Prime Minister also
mentioned many new sectors, information technology, telecom,
nanotechnology. In all these areas there is immense scope for promoting
cooperation between Russian enterprise and Indian enterprise.

(The portion in italics is simultaneously translated from Russian at
the Press Conference.)

Question: What discussions did you have in Moscow?

Foreign Secretary: I would be having talks tomorrow with the Russian Sherpa for the St. Petersburg G-8 Summit. The Coordinators from the other Outreach countries invited to the Summit would also be participating in the discussions. The meeting would be in preparation for the Summit.

Question: What results does India expect to get from the Summit?

Foreign Secretary: The Russian Federation has identified three major themes for the St. Petersburg Summit viz energy security, education and the fight against infectious diseases. All three subjects are of great interest to India.

With regard to energy security, we expect a balanced outcome that would reflect the interests of both producers and consumers. There is a need to think of ways to enhance stability and predictability of the energy market. From the Indian perspective, diversification of the energy mix and moving away from dependence on fossil fuel is important. This will involve a greater share for hydro energy, nuclear energy and renewables. Cooperation between the G-8 and major developing countries could also be useful for the development of newer and cleaner sources of energy.

There is a need for a global effort to bring about complete literacy in developing countries, as also an upgradation of skills. There was also a need to find resources to achieve the goals of Education for All.

In health, the major challenges are HIV/AIDS, tuberculosis and malaria, besides new and emerging diseases such as avian flu. These challenges could be dealt effectively only through close cooperation among the major countries, including large developing countries. There is also a need to develop effective early warning systems for infectious diseases.

We also expect that St. Petersburg Summit would result in a strong statement against international terrorism that would reaffirm the commitment of countries to work together to eliminate this major threat to international peace and security.
**Question:** In what format would India participate in the St. Petersburg Summit?

**Foreign Secretary:** My understanding is that one morning session and a working lunch would be set aside for an informal exchange of views between the Leaders of the G-8 and the outreach countries.

**Question:** Does India intend to become a ‘regular’ member of this group of industrialized countries?

**Foreign Secretary:** At the moment India is a special invitee. It is difficult to speak of the future, but India would wait and see how things evolved.

**Question:** The US Vice-President says that Russia is moving away from democracy and using energy to pressurize other countries?

**Foreign Secretary:** India does not comment on bilateral relationships of other countries or their internal affairs. With Russia particularly, India has a long-standing relationship based on mutual respect. The basis of our relations with Russia is not its political system. However, we welcomed the establishment of democracy in Russia and the two countries have a shared respect for democratic values and institutions.

**Question:** There has been a lot of polemics between the Russian and the US Leaders?

**Foreign Secretary:** We have always advocated that there be constructive relationships between the major countries. Good relations between Russia and the United States are also good for the world as a whole. India’s relations with the Russian Federation stand on their own merit and are not influenced by Russia’s relations with any third country. This has always been the case and will continue to be so.

**Question:** What would the Indian Prime Minister discuss in his bilateral meeting with President Putin?

**Foreign Secretary:** It would really be for the two Leaders to decide. The relationship covers a broad range and is expanding further. The relations include cooperation in economic, commercial, defence and scientific fields. One could expect that the leaders would discuss ways to further strengthen bilateral cooperation. Relations between the two countries are also characterized by mutual trust and confidence. Both countries value the perspectives of the other, with regard to regional and international
developments. Prime Minister would welcome the opportunity to discuss recent developments with President Putin.

**Question:** Is there any one topic for the bilateral meeting?

**Foreign Secretary:** The Leaders would determine their own agenda. There is a great deal for them to discuss together.

**Question:** Would your Prime Minister meet the Leaders of the United States and China as well?

**Foreign Secretary:** We do not know if there would be time for bilateral meetings with all leaders. We have very good relations with both China and the United States. If there is occasion for the leaders to meet, they will discuss ways to strengthen the bilateral relationships and review regional and international developments.

India is an Observer in the Shanghai Cooperation Organisation. It would be natural to discuss with China the ways for taking forward this relationship. India, China and Russia also cooperate with each other in a trilateral framework. This, also, could be an important subject for discussion.

We have established a wide ranging relationship with the United States. This covers cooperation in the energy sector, including nuclear energy. India and the United States have established a Science Commission and a Joint Initiative on Agriculture. Bilaterally, a number of major developments have taken place. This could be the subject of discussions, besides emerging regional and international issues.

**Question:** There are reports that the ratification of the India – US Agreement on Nuclear Energy is stalled in the Congress. When can ratification be expected?

**Foreign Secretary:** No ratification is being contemplated. The Administration has put forward proposals for legislative changes. This is presently being debated in Congress. The expectation is it would be passed at an early date. This would allow civilian nuclear cooperation with India to be operationalized. We expect that this would be sooner rather than later. We are not aware of any reason for the legislation to be stalled. It would, however, be natural that there is debate in a democracy.

**Question:** If the legislation is passed, how would it affect cooperation between India and Russia in the nuclear field?
Foreign Secretary: After legislation is passed in the US Congress and NSG guidelines are amended, the nuclear energy market would be open to all partners, including Russia.

Question: What is India’s position on Iran’s nuclear programme?

Foreign Secretary: India has, throughout, said that Iran has the right to develop civilian nuclear energy consistent with the international commitments and obligations that it has undertaken. Certain questions have been raised about Iran’s nuclear programme. These questions should be clarified through Iran’s cooperation with the IAEA. We have also advocated that all issues should be settled through dialogue. Confrontation should be avoided. India would like to see maximum diplomatic effort being exerted for an amicable resolution. We welcome, in this context, the positive role being played by Russia.

(Note: This is an informal transcript of the interview)

New Delhi, October 24, 2006.

1. The fourth meeting of the India-Russia Joint Working Group on Combating International Terrorism was held in New Delhi on October 24, 2006. The Indian delegation was led by Mr K. C. Singh, Additional Secretary (International Organisations) and Counter-Terrorism Coordinator in the Ministry of External Affairs, Government of India. The Russian delegation was led by Mr Anatoly Safonov, Special Representative of the President of the Russian Federation for International Cooperation in the Fight against Terrorism and Transnational Crime. Both delegations included representatives of relative Ministries and agencies.

2. The negotiations were held in the atmosphere of trust, frankness and mutual understanding. The two sides shared concern on cross border terrorism and emphasized the importance of actions by all States to deny safe heaven to terrorists. They stressed the necessity
to take more efficient measures on preventing the propagation of terrorism, including in the Cyberspace. The importance of broader dialogue among cultures and civilisations to counter divisiveness, on which terrorists thrive, was underlined. In this context the two sides called for unconditional implementation of the UNSC Resolution 1624 on fighting incitement to terrorism.

3. The Russian and Indian delegations reiterated that cooperation in combating terrorism constitutes an important part of strategic partnership between the two countries. They unequivocally condemned terrorism in all its forms and manifestations and reiterated their commitment to further strengthen counter-terrorism cooperation.

4. The two sides expressed their concern regarding the increase in the spread of narcotics in the region and agreed that this directly threatens the security of both countries. They stressed the need to consolidate bilateral mechanisms for sharing information in curbing drug-trafficking. They shared concern over the financing of terrorism noting that its prevention is the key component in the counter-terrorism strategy and agreed to strengthen bilateral interaction in this field.

5. The two sides agreed to enhance cooperation in the international fora, especially in suppressing WMD terrorism. In this regard they noted that early entry into force of the International Convention on Suppression of Acts of Nuclear Terrorism (ICSANT) would facilitate this objective. They stressed the need to further improve the legal framework for the fight against terrorism. The two sides also urged the early finalization of the Comprehensive Convention on International Terrorism (CCIT) at the UN.

6. Issues of regional antiterrorist cooperation were reviewed. It was noted that India-Russia partnership within the SCO and ASEAN Regional Forum must be enhanced, including in eliminating new threats and challenges in Central, South and South-East Asia.

7. The sides also discussed the emerging threat to oil and gas installations from terrorists and agreed to exchange experiences to counter it, underscoring energy security as a vital component of national and international counter-terrorism strategies.

8. Both sides agreed to hold the next session of the India-Russia Joint Working Group on Counter-Terrorism in the second half of 2007.
EXTERNAL AFFAIRS MINISTER (SHRI PRANAB MUKHERJEE):
I am delighted, once again, to extend a very warm welcome to my good friend, Foreign Minister Lavrov. We are happy to see you in Delhi, Mr. Minister, especially so soon after our earlier meeting in New York in September this year. It is a personal privilege for me to count on you as a friend and a colleague to work with in the future.

The strategic partnership between India and Russia is based on trust, confidence and the abiding convergence of our national interests. The intensity of our bilateral interaction reflects the closeness of our cooperation at various levels. The Government of India is committed to further strengthening the strategic and time tested partnership with the Russian Federation. We believe that strong relations between India and Russia have been a factor in promoting peace, security and stability, and global efforts against terrorism and narco-trafficking.

Mr. Minister, we share your vision of a future in which India and Russia are closely linked to each other through economic, commercial and technological cooperation. Our talks today have been productive. We have covered important sectors of bilateral cooperation and reviewed key areas such as trade and economy, defence, energy, science and technology and space.

I am happy to note that we have covered some ground in our quest to give effect to our plans for strengthening bilateral trade and investment. We have concluded this year the bilateral protocol for the entry of the Russian Federation into the World Trade Organization. A Joint Study Group is working to identify measures required to enhance trade between our two countries. We look forward to the report of the Study Group. We would also like to upgrade private sector interaction through the mechanism of the Joint Trade and Investment Forum, which is expected to meet shortly.

Our excellent political relations need to be reflected in the development of bilateral trade and the enhancement of the economic aspects of our strategic partnership. Our two steadily growing economies offer considerable potential in a host of areas such as energy, information
technology, biotechnology and joint investments. In the key area of defence, we see mutual benefit in collaborating in joint design and development. While we explore, at the inter-governmental level, ways to promote our economic ties, the business communities also need to come closer through greater exchanges and business to business contacts. Towards this end, business travel would need to be encouraged and facilitated.

During its chairmanship of the G-8, Russia has identified energy security as an area of primary concern. We hope this global focus will also yield bilateral dividends. We view the Russian Federation as an important partner in our quest for sustainable sources of energy, and are prepared to work with Russia to enhance our current level of cooperation, particularly in the field of nuclear energy. We envision on a substantial increase in the share of nuclear energy in India’s overall energy mix to meet the demands of our economic growth. Cooperation in this field would, we feel, further strengthen the strategic nature of our relationship.

May I now invite you, Mr. Minister, to offer your comments, after which we have a few minutes to answer a question or two posed by our friends from the media.

RUSSIAN FOREIGN MINISTER (MR. SERGEI LAVROV): Thank you Mr. Minister for a cordial welcome and for quite substantive talks which were aimed at efficient preparation for the upcoming January visit of the President.

Russian leadership holds in high regard the strategic relationship with great India, our old friend and partner with whom we have a duty for development of cooperation for this relationship.

This partnership has been given a new impetus over the last twelve months, initially during the December visit of the Prime Minister of India to Moscow, and then in terms of the meetings on the margin of the July summit of G8 countries in St. Petersburg.

As a follow through of those ideas and agreements reached at the top level, the concerned agencies have been working on the important comprehensive set of documents which will cover the joint effort in trade and economy, interaction between countries, and also to cover specific projects of interaction in such areas as energy, new technology, and research in other areas to the benefit of both countries. Such things as (cooperation in) peaceful atom (uses of nuclear energy) and telecommunications will also be evolved.
I am sure that our plans and concepts will in fact be shored up greatly by the announcement of ‘Year of India in Russia’ and ‘Year of Russia in India’ to follow.

In addition to bilateral matters, we have also tackled regional and international matters.

In furtherance of the trilateral summit which was held in July in St. Petersburg between India, Russia and China, we have agreed to continue these meetings at the level of Foreign Ministers with the participation of Foreign Minister of China. We are very grateful to the Indian side for extending an invitation and to be the venue to host this upcoming trilateral Foreign Ministerial meeting.

We also find it useful to develop our contacts in the BRIC format that is to include Brazil as well.

As regards international matters, today we have discussed in detail the most acute and pertinent problems of today such as those pertaining to Iraq, Afghanistan, and Middle-East settlement as a whole. On all these issues we have found common ground with my colleague and friend. That boils down to the need to go in for a quest for settlement on the basis of a peaceful solution with the immediate involvement of all parties concerned and certainly with no attempts to be ...(Unclear)... to make it possible to sideline some of the players involved.

We are also satisfied with the need to go in for peaceful solution of such problems as related to the peaceful settlement on the Korean peninsula and therefore, we expressed satisfaction with the announced resumption of six-party talks on the Korean peninsula settlement as well as concerning the peaceful solution with regard to the problems of Korean nuclear problem.

Both Russia and India are interested in seeing to it that Central Asia retain its stability and does not become the field of interaction of extremists of all sorts and colours.

We agreed to jointly promote the furtherance of stability in Central Asia, among other things, through the mechanism of Shanghai Cooperation Organization.

So we hail the participation of India as an observer member of SCO in various practical projects which are carried out under the auspices of
that organization including such formats as the Business Council, as the Banking Community and as the newly emerging energy ...(Unclear)...

Today we have also agreed on the comprehensive and all-round agenda for inter-agency consultations on the basis of the Ministry of Foreign Affairs regarding the whole spectrum of bilateral issues and the international agenda to be tackled with our interaction in all the international fora, be it within the framework of India-specific and more globally at the level of United Nations putting an emphasis on the leading role of the United Nations Organization in dealing with all those international matters.

Thank you.(As interpreted by Russian Interpreter)

QUESTION (ITAR-TASS): This question is addressed to the Foreign Minister of India. With regard to the visit of the Minister of Foreign Affairs of Iran to your country, what was the subject of discussion there? Was the question of nuclear programme of Iran tackled during his talks? My second question is addressed to the Minister of Foreign Affairs of Russia Sergei Lavrov. This is concerning the draft resolution on Iran of the Security Council of the United Nations. What is the current status? Were the proposals to amend this draft resolution and Russian amendments taken into account? What is the essence of those amendments?

EXTERNAL AFFAIRS MINISTER: My response to the question is, I had discussions with the Iranian Foreign Minister in respect of the nuclear programme. Our position in this respect is already known. We do believe Iran has the right to pursue its nuclear programme for peaceful civilian use. But as a signatory to NPT it has certain obligations to carry conviction with international community and IAEA that it is being pursued for the peaceful purposes. We also shared our views with the visiting Russian Foreign Minister Mr. Lavrov and we shared that all possible means to resolve the issue in a peaceful manner through dialogue and negotiation should be attempted. Coercion and application of force is not the answer to resolve the issues.

RUSSIAN FOREIGN MINISTER: With regard to the question posed to me, from the very beginning, the sole understanding was attained to the effect that the Security Council of the United Nations should be dealing with the matters concerning the problems and questions still on the table on the part of IAEA, these are the Iranian nuclear programme, and to get the clarification of this matter first. That is to say, the role of the Security Council is precisely to help but not to replace the IAEA in the process. In a similar manner, from the very beginning we agreed that with the good
offices of the Security Council we would be in the business of helping attaining that goal rather than punishing Iran. So, in very strict conformity with those agreements reached, we have been trying from the beginning to help with the IAEA apparatus to bring the matter to negotiating table rather than to block the roads and pathways for the possibility of pursuing those talks.

**QUESTION (TIMES NOW):** Question for the Indian Foreign Minister. The Indo-US nuclear deal cleared the Senate today. In reference to that I wanted to ask, keeping in mind India’s energy requirements over the next decade, how will it help? Secondly, what concerns do you still have regarding the Bill and the reconciliation? Also, how are we going to react as far as the 1-2-3 agreement is concerned.

**EXTERNAL AFFAIRS MINISTER:** In fact we have welcomed the Bill passed by the Senate and we also appreciate the special efforts made by President Bush and Secretary of State Condoleezza Rice on behalf of the Administration to ensure that the Bill receives the support. The massive support the Bill received clearly indicates a strong bipartisan support in favour of this agreement. But the legislative process is not yet complete. The reconciliation process, which will start in the reconciliation conference sometimes in early December, will give the final shape to the Bill after which it will be voted. We shall have to ensure that the final text of the Bill is in conformity with the parameters laid down in the July (2005) statement of the Prime Minister and President Bush, and also the Separation Plan which was placed in the Parliament in March, 2006.

---

501. **Press Release of the Ministry of External Affairs on the 12th Meeting of the Indo-Russian Inter-Governmental Commission on Trade, Economic, Scientific, Technological and Cultural Cooperation.**

**New Delhi, December 8, 2006.**

The Twelfth Meeting of the Indo-Russian Inter-Governmental Commission [IRIGC] on Trade, Economic, Scientific, Technological and Cultural Cooperation was held in New Delhi on 8th December, 2006. Hon’ble Minister of External Affairs is Co-Chairman of the Joint Commission and led the Indian delegation at the talks. The Russian delegation was led by H.E. Mr. Alexander Zhukov, Deputy Chairman of the Government of the Russian
Federation. Discussions were held in a warm and friendly atmosphere traditionally associated with relations between India and Russia.

Mr. Zhukov had a detailed exchange of views with the Hon’ble Minister of External Affairs in a restricted format and separate delegation level talks were held. He called on the Hon’ble President of the Republic of India and interacted with representatives of industry and business at a lunch organized by the Federation of Indian Chambers of Commerce and Industry.

There are five Working Groups under the auspices of the Joint Commission: (a) on Trade and Economic Cooperation; (b) on Mines and Metallurgy; (c) on Technologies; (d) on Energy; and (e) on Culture and Tourism. These groups have met earlier and have finalized detailed areas of cooperation. A protocol relating to the deliberations during the visit of Mr. Zhukov and the understanding reached at the five Joint Working Groups was signed highlighting the areas which need to be attended to further intensify the process of economic and commercial cooperation between the two countries.

It may be recalled that there has been extensive interaction at the highest levels since the last meeting of the Joint Commission in October, 2005 in Moscow. Prime Minister Dr. Manmohan Singh visited Russia in December, 2005 for bilateral summit meetings and participated in the meetings among G8 and outreach countries in Saint Petersburg in July 2006. Prime Minister Mikhail Fradkov visited India in March, 2006.

India and Russia have set up a Joint Study Group (JSG) to provide a road map to raise bilateral trade and study the feasibility of a Comprehensive Economic Cooperation Agreement [CECA] between the two countries and the JSG has had two meetings so far. An Indo-Russian Forum on Trade and Investment has also been set up. This Forum is expected to meet in February, 2007 in New Delhi with wide participation of business representatives.

H.E. Mr. Zukhov is accompanied by Mrs. Zuhkova and would be visiting Khajuraho and Mumbai on 9-10 December 2006. In Mumbai he is expected to interact with prominent representatives of business and industry.

New Delhi, July 3, 2006.

Prime Minister of India Dr. Manmohan Singh and President of the Government of Spain Jose Luis Rodriguez Zapatero today re-affirmed their commitment to further enhancing and strengthening relations between the two countries.

The two sides agreed to institutionalize the process of political dialogue at various levels, commensurate with the expanding bilateral relationship. They will also intensify consultations and cooperation in international organizations and other multilateral fora, with a view to jointly addressing global challenges.

Economic and trade relations between India and Spain have flourished in recent years. The two Governments agreed to work actively together to realize the full potential of economic linkages between the rapidly growing Indian and Spanish economies. They agreed to make all efforts to expand bilateral trade and the volume of two-way investments and joint ventures in each other’s countries. The two sides would also work towards forging business partnerships in the following priority sectors: energy, tourism, food processing, automobiles, environment, information technology and infrastructure.

They agreed to work towards closer cooperation in the defense sector, including the possibility of joint research and development.

The two sides expressed satisfaction at the increasing cultural exchanges between the two countries. Both sides look forward to the inauguration of the Casa de la India building in the City of Valladolid in Spain in November 2006 and to the next civil society dialogue under the aegis of Casa Asia and Indian Council of World Affairs, scheduled to be held in India in October 2006.

The two sides agreed to further promote cultural and academic exchanges between the two countries and expressed their willingness to support and facilitate the increase in the number of Spanish lecturers in Indian Universities in the following years and took note with satisfaction of the announced opening of a Cervantes Institute in New Delhi in 2007.
The two sides recognize the importance of establishing direct air links in strengthening tourism, economic, political and people-to-people relations between India and Spain. In this context, both Heads of Government agreed that their respective Civil Aviation Authorities will renegotiate the existing bilateral Air Services Agreement within three months.

The two sides will also work towards facilitating the movement of businesspersons, professionals and tourists, as well as students and academics between the two countries. Both sides took note with satisfaction of the proposed opening in 2007 of a Consulate General in Mumbai (which will include a Trade Office), as well as a Tourism Office.

The two sides agreed to strengthen cooperation in science and technology through building a close network of linkages between the institutions of the two countries.

Recalling the Outcome Document adopted by the 2005 World Summit, both Heads of Government reaffirmed the vital importance of an effective multilateral system, in accordance with international law, to better address the multifaceted and interconnected global challenges and threats and to achieve progress in the areas of peace and security, development and human rights. They expressed their firm support for the work of the United Nations as a fundamental framework for multilateralism and agreed on the urgent need for a comprehensive reform of the United Nations to enable it to address today’s challenges more effectively. The two leaders reiterated their commitment to continue their active and constructive role in the ongoing process of UN reform.

The two leaders reiterated their strong condemnation of terrorism, in all its forms and manifestations, constituting as it does a criminal and unjustifiable act and one of the most serious threats to international peace and security. They recalled the Joint Declaration made by the two countries in 1993 on cooperation in combating terrorism, drug trafficking and organized crime. Both Heads of Government recognized the need to extend support and solidarity to the victims of terrorism, as well as to the development of appropriate international mechanisms to this end, and agreed to further strengthen cooperation at bilateral and multilateral levels. They called upon the member states of the UN to make further concerted efforts to conclude the comprehensive Convention on International Terrorism, as well as the adoption of a global strategy against terrorism at
an early date. They also agreed to continue to constructively contribute to the discussions at the UN aimed at adopting and implementing a global strategy against terrorism. These measures will further strengthen the moral, political and legal authority of the UN and international community, as well as the operational tools to fight this scourge in all its aspects.

India and Spain expressed their firm support for the Alliance of Civilizations initiative. Both Governments await with interest the Action Plan that the High Level Group will be submitting to the Secretary General before the end of the year and declare themselves willing to explore, once its contents are known, possible ways of collaborating to jointly support the implementation of the ensuing recommendations.

They further reaffirmed the importance of the Strategic Partnership between India and the European Union and agreed to work together in further enhancing ties through the implementation of the comprehensive Joint Action Plan.

A number of agreements and MoUs were signed during the visit. These include:

- MoU on Institutionalisation of Political Dialogue
- Mutual Legal Assistance Treaty on Criminal Matters
- MoU between Technology Development Board (TDB) and Centre for Development of Industrial Technology (CDTI)

The two sides are also actively pursuing cooperation in a number of other areas such as Science and Technology, Information Technology, Film Production, Tourism and Environmental Issues, where agreements and MOUs are under finalisation.

The Agreements and MOUs signed today reflect the growing bilateral interaction between India and Spain and will provide significant impetus to realizing the full potential of the relationship between the two countries.
503. Agreement between the Republic of India and the Kingdom of Spain on Mutual Legal Assistance in Criminal Matters.

New Delhi, July 3, 2006.

The Republic of India and the Kingdom of Spain (hereinafter referred to as Contracting Parties);

Guided by the traditional friendly relations between the two countries;

Recognising the need to facilitate the widest measures of mutual assistance in criminal matters;

Desiring to improve the effectiveness of both countries in the investigation, prosecution and suppression of crime, including crime related to terrorism and tracing, restraint, forfeiture or confiscation of the proceeds and instruments of crime, through cooperation and mutual legal assistance in criminal matters;

Have agreed as follows:

ARTICLE 1
Scope of application

1. Under this Agreement, the Contracting Parties shall grant each other the widest measure of mutual legal assistance in criminal matters.

2. For the purpose of this Agreement mutual legal assistance shall be granted irrespective of whether the assistance is sought or to be provided initially by a judicial authority or any other authority, if ultimately such a request or grant is issued by a judicial authority.

3. This Agreement shall be without prejudice to other obligations between the Parties pursuant to other treaties or arrangements or otherwise, and shall not prevent the Parties or their law enforcement agencies from providing assistance to each other pursuant to other treaties or arrangements.

4. This Agreement shall also apply to any requests for mutual legal assistance relating to acts or omissions committed before its entry into force.
ARTICLE 2
Definitions and Scope of the Assistance

1. Criminal matters mean, legal proceedings relating to investigations, inquiries or trials of the offences created by the law, including the fiscal crimes.

2. Assistance shall include:
   i. measures to locate, restrain, forfeit or confiscate the proceeds and instruments of crime;
   ii. taking of evidence and obtaining of statements of persons;
   iii. providing of information, documents and other records, including criminal and judicial records;
   iv. location of persons and objects, including their identification;
   v. search of persons and places and seizure of assets and documents;
   vi. delivery of property, including lending of exhibits;
   vii. making detained persons and others available to give evidence or assist investigations;
   viii. service of documents, including documents seeking the attendance of persons; and
   ix. any other assistance consistent with the objects of this agreement.

3. For the purpose of this agreement:
   a. “proceeds of crime” means any property that is derived or realized directly or indirectly by any persons from an offence or offences or the value of any such property;
   b. “property” includes money and all kinds of movable or immovable, tangible or intangible property, and includes any interest in such property;
   c. “confiscation” means any measure resulting in the deprivation of property;
   d. “instruments of crime” means any property which is, or is intended to be, used in connection with the commission of an offence; and
   e. “the restraint of property” means any measure for the prevention of dealing in or transfer or disposal of property.
ARTICLE 3
Central Authorities

1. Requests for assistance under this Agreement shall be made through the Central Authorities of the Contracting Parties.

2. In the Republic of India the Central Authority is the Ministry of Home Affairs. In the Kingdom of Spain, the Central Authority shall be the Ministry of Justice.

ARTICLE 4
Form and Contents of Requests

1. Requests for assistance under this Agreement shall be made in writing. The requests may be made in advance by fax, e-mail or other equivalent mode, due to be confirmed by original document signed by the Requesting State within following thirty days of their formulation.

2. Requests for assistance shall include a statement of:
   a. the name of the competent authority conducting the investigation or proceedings to which the request relates;
   b. the matters, including the relevant facts and laws, to which the investigation or proceedings relates;
   c. the purpose for which the request is made and the nature of the assistance sought;
   d. details of any particular procedure or requirement that the Requesting Party wishes to be followed;
   e. any time limit within which compliance with the request is desired;
   f. the identity, nationality and location of the person or persons who are the subject of the investigation or proceedings;
   g. in the case of requests for the taking of evidence or search and seizure, a statement indicating the basis for belief that evidence may be found in the jurisdiction of the Requested Party;
   h. in the case of requests to take evidence from a person, the text of the questionnaire and the description of the method by which it should be done;
i. in the case of lending of exhibits, the person or class of persons who will have custody of the exhibit, the place to which the exhibit is to be removed, any tests to be conducted and the date by which the exhibit will be returned;

j. in the case of making detained persons available, the person or the authority who will have custody during the transfer, the place to which the detained person is to be transferred and the date of the person’s return;

k. the need, if any, for confidentiality and the reasons therefor;

l. in the case of requests for restraint or forfeiture of proceeds or instruments of crime, where possible:
   i) a detailed description of the proceeds or instruments including their location;
   ii) a statement describing the basis for belief that the monies or property are the proceeds or instruments of crime; and
   iii) a statement describing the evidence that would be available for a proceeding in the Requested Party.

3. The Requested Party shall not refuse to execute the request solely because it does not include all of the information described under this article if it can otherwise be executed according to the law of the Requested Party.

4. If the Requested Party considers that additional information is needed to enable the request to be dealt with, that Party may request such additional information.

ARTICLE 5
Execution of Request

1. Requests for assistance shall be executed in accordance with the law of the Requested Party and may be executed in accordance with any requirements or manner specified in the request if not incompatible with the law of the Requested Party.

2. The Requested Party shall, upon request, inform the Requesting Party of any circumstances which are likely to cause a significant delay in execution of the request.
3. The Requested Party shall promptly inform the Requesting Party of a decision of the Requested Party not to comply in whole or in part with a request for assistance, or to postpone execution and shall give reasons for that decision.

ARTICLE 6
Refusal of assistance

1. The Requested Party may refuse the assistance if:
   (a) the execution of the request would impair its sovereignty, security, public order or other essential interests;
   (b) the execution of the request would be contrary to the domestic law of the Requested Party;
   (c) if the request seeking restraint forfeiture or confiscation of proceeds or instruments of activity which, had it occurred within the jurisdiction of the Requested Party, would not have been an activity in respect of which a confiscation order could have been made; and
   (d) the request relates to an offence in respect of which the accused person had been finally acquitted. However, the Requested Party shall provide information as may be required to establish that the accused has been finally acquitted.

2. Before refusing to grant a request for assistance, the Requested Party shall consider whether assistance may be granted subject to such conditions as it deems necessary. If the Requesting Party accepts assistance subject to conditions, it shall comply with them.

ARTICLE 7
Transmission of Documents and Objects

1. When the request for assistance concerns the transmission of records and documents, the Requested Party may transmit certified true copies thereof, unless the Requesting Party expressly requests the originals.

2. The original records or documents and the objects transmitted to the Requesting Party shall be returned to the Requested Party as soon as possible, upon the latter's request.

3. Insofar as not prohibited by the law of the Requested Party, documents, objects and records shall be transmitted in a form or
accompanied by such certification as may be requested by the Requesting Party in order to make them admissible according to the law of the Requesting Party.

**ARTICLE 8**
**Taking evidence in the Requested Party**

1. A person, including a person in custody, requested to testify and produce documents, records or other articles in the Requested Party may be compelled by subpoena or order to appear and testify; and produce such documents, records and other articles, in accordance with the law of the Requested Party.

2. Subject to the law of the Requested Party, commissioners, other officials of the Requesting Party and persons concerned in the proceedings in the Requesting Party shall be permitted to be present when evidence is taken in the Requested Party and to participate in the taking of such evidence.

3. Subject to the law of the Requested Party, the right to participate in the taking of evidence includes the right of counsel present to pose questions. The persons present at the execution of a request may be permitted to make a verbatim transcript of the proceedings. The use of technical means to make such a verbatim transcript may be permitted.

**ARTICLE 9**
**Availability of Persons to Give Evidence or Assist in Investigation in the Requesting Party**

1. The Requesting Party may request that a person be made available to testify or to assist in an investigation.

2. The Requested Party shall invite the person to assist in the investigation or to appear as a witness in the proceedings and seek that person’s concurrence thereto. That person shall be informed of any expenses and allowances payable.

**ARTICLE 10**
**Making Detained Persons Available to give Evidence or Assist in Investigations**

1. A person in custody in the Requested Party shall, at the request of the Requesting Party, be temporarily transferred to the Requesting
Party to assist in investigations or proceedings, provided that the person consents to that transfer and there are no overriding grounds against transferring the person.

2. Where the person transferred is required to be kept in custody under the law of the Requested Party, the Requesting Party shall hold that person in custody and shall return the person in custody at the conclusion of the execution of the request.

3. Where the sentence imposed expires, or where the Requested Party advises the Requesting Party that the transferred person is no longer required to be held in custody, that person shall be set at liberty and be treated as person present in the Requesting Party pursuant to a request seeking that person’s attendance.

**ARTICLE 11**

**Safe conduct and Immunity**

1. A person present in the Requesting Party in response to a request seeking that person’s attendance shall not be prosecuted, detained or subjected to any other restriction of personal liberty in the territory of that Party for any acts or omissions which preceded that person’s departure from the Requested Party, nor shall that person be obliged to give evidence in any proceeding other than the proceedings to which the request relates.

2. A person, who is present in the Requesting Party by consent as a result of a request for the person’s attendance to answer before a judicial authority any acts, omissions or convictions shall not be prosecuted or detained or subjected to any other restriction of personal liberty for acts and omissions or convictions which preceded that person’s departure from the Requested Party, not specified in the request.

3. Paragraphs 1 and 2 of this Article shall cease to apply if a person, being free to leave the Requesting Party, has not left it with in a period of 30 days after being officially notified that that person’s attendance is no longer required or, having left that territory, has voluntarily returned.

4. Any person who fails to appear in the Requesting Party may not be subjected to any sanction or compulsory measure in the Requested Party.
ARTICLE 12
Proceeds and Instruments of Crime

1. The Requested Party shall, upon request endeavours to ascertain whether any proceeds or instruments of a crime are located within its jurisdiction and shall notify the Requesting Party of the results of its inquiries.

2. A request may be made for the assistance in securing the forfeiture or confiscation of proceeds or instruments of crime. Such assistance shall be given in accordance with the law of the Requested Party by whatever means are appropriate. This may include giving effect to an order made by a judicial authority or other competent authority whose actions may be appealed against to a judicial authority in the Requesting Party or submitting the request to one of the said authorities for the purpose of seeking a forfeiture or confiscation order in the Requested Party.

3. A request may be made for assistance in the restraint of property for the purpose of ensuring that it is available to satisfy an order for the recovery of proceeds or instruments.

4. The State Party which has under its custody the proceeds or instruments of crime shall make them available in conformity of the established norms in its internal legislation, unless otherwise agreed in a particular case.

5. Where action has been taken in the Requested Party pursuant to a request for assistance under paragraphs 1 or 2 of this Article, and there is a representation in either of the Contracting Parties as the case may be by a third Party affected by the order, the relevant Party shall inform the other Party as soon as possible and shall also inform it promptly of the outcome of that representation.

ARTICLE 13
Confidentiality and Limitation of Use of the Information

1. The Requested Party may require, after consultation with the Requesting Party, that information or evidence furnished or the source of such information or evidence be kept confidential or be disclosed or used only subject to such terms and conditions as it may specify.
2. The Requested Party shall, to the extent requested, keep confidential a request, its contents, supporting documents and any action taken pursuant to the request except to the extent necessary to execute it.

3. The Requesting Party shall not disclose or use information or evidence furnished for purposes other than those stated in the request without the prior consent of the Requested Party.

ARTICLE 14
Authentication

Evidence or documents transmitted pursuant to this agreement shall not require any form of authentication, save as is specified in Article 7.

ARTICLE 15
Language

Requests and supporting documents shall be accompanied by a translation into the official language of the Requested Party or English.

ARTICLE 16
Expenses

1. The Requested Party shall meet the cost of executing the request for assistance, except that the Requesting Party shall bear:

   (a) the expenses associated with conveying any person to or from the territory of the Requested Party at the request of the Requesting Party, and any allowance or expenses payable to that person while in the Requesting Party pursuant to a request under Article 9 or 10 of this Agreement; and

   (b) the expenses and fees of experts.

2. If it becomes apparent that the execution of the request requires expenses of an extraordinary nature, the Contracting Parties shall consult to determine the terms and conditions under which the requested assistance can be provided.

ARTICLE 17
Entry into Force

This Agreement shall come into force on the last date of the month following in which the last communication through diplomatic channel between the parties is made conveying completion of all the internal legal requisites for its entry into force.
ARTICLE 18
Termination

Either of the Contracting Parties may terminate this agreement by giving six months notice thereof through diplomatic channels. Upon the expiry, of such notice, the agreement shall cease to have any force or effect.

IN WITNESS WHEREOF, the undersigned, being duly authorized thereto by their respective Governments, have signed this agreement.

DONE at New Delhi this the 3rd day of July 2006 (Two Thousand and Six) in two originals each, in Hindi, Spanish and English, all texts being equally authentic. However, in case of difference, the English text shall prevail.

504. Briefing Points by Official Spokesperson on India-UK Foreign Office Consultations.

New Delhi, April 3, 2006.

- India and the UK held Foreign Office Consultations in New Delhi on April 3, 2006. This is an annual exercise. The previous round was held in London in March 2005. The Indian delegation was led by the Foreign Secretary. The UK delegation was led by his counterpart in the Foreign & Commonwealth Office, Sir Michael Jay, Permanent Under Secretary.

- The Foreign Office Consultations covered the whole range of bilateral political, economic and consular issues. The discussion focused on ways to take the strategic partnership between India and the UK forward with focus on reinforcing our partnership on combating terrorism, expansion of economic ties and intensifying cooperation in the areas of science and technology, education and culture.

- The two sides also had a useful and extensive exchange of views on regional issues including the EU, West Asia, Asia-Pacific, and the South Asia region.

- They also discussed the forthcoming G-8 Summit at St. Petersburg and multilateral issues of mutual interest including energy security and environmental issues, which are on the agenda. UN reform, including UNSC reform was also discussed, as was civil nuclear energy cooperation.

- Both sides agreed that India-UK relations have acquired a rich, substantive and qualitatively mature character. The tradition of high-level exchanges would continue with several such visits being planned from both sides over the course of the year.
505. Address of Prime Minister Dr. Manmohan Singh at the UK-India Investment Summit.

“Prime Minister Tony Blair, Mr. Alistiar Darling, Mr. Kamal Nath, Excellencies, Ladies and Gentlemen, I am very grateful to Prime Minister, his colleagues and to each one of you for the time that you have spared this afternoon. I know the leaders of Indian and British business do meet often, both here in London and in New Delhi. But I am happy that we have this opportunity today to interact with you. As I have often said, the relations between nations are a sum of the relations between our peoples and our businesses. What augurs well for the growth of our relationship is that the political leadership in both the countries is convinced that we must forward and we must move forward with dedication and speed.

I recall the initiative that both our Governments took way back in 1992, when the Indo-British Partnership Initiative was launched, to revive trade and investment relations between our two countries. I believe the IBPI was a useful initiative and there has been a quantum increase in trade and investment flows between Britain and India in the past decade.

However, the time has come for a great leap forward. I know that both Prime Minister Blair and I would like to see that happen and I am glad that the first signs are highly encouraging.

Earlier this afternoon, many CEOs of the two countries had met Mr. Blair and me and given several suggestions to further increase trade, investment and other economic engagement. We have assured them that their inputs would be given due consideration in the evolving policy framework. But as the Prime Minister said politics is the art of the possible, so that constraint is something which cannot be wished away.

But I assure you that we have removed most barriers to foreign direct investment in India in the manufacturing sector. I would like to see higher FDI inflows, particularly in infrastructure from Britain.

Our Government would like to see a further liberalization of trade in services, including financial and legal services. I am aware that there is great interest in Britain in our financial sector.

I do believe we need to promote a widely held pension fund system. We need a much larger insurance sector with a higher capital base and
more diverse products. It is these which will generate the necessary long-term funds for investing in a debt market and make available resources for the investment needs of our country particularly in the vital infrastructure sector.

I am confident that we will in the near future be able to forge a meaningful political consensus and take reforms of the financial sector forward.

I wish to assure investors here in the United Kingdom that India adheres to all international codes and regulations pertaining to safety and protection of investment and intellectual property. We also have in place a well-designed system of standards for data protection. Investment in India is both safe and profitable and we are always to learn from our friends about what more can be done in this regard. We have signed an MoU with Britain to strengthen our cooperation in Intellectual Property Rights. India offers tremendous new opportunities in manufacturing, particularly in automobile and auto-components, pharmaceuticals & bio-technology and food processing. We welcome small and medium enterprises from Britain to look more favourably on the prospects of profitable investments in our country.

I am aware that there is a lot of dynamism among small and medium enterprises in Britain. They can be engines of growth in India too based on innovation and adaptation.

Many global corporations have made India their research base. Inward investment in R&D is rapidly increasing in India. The educational and research institutions of United Kingdom have been significant suppliers of technology to Indian firms and institutions. The recently launched UK-India Education and Research Initiative which owes great deal to the forward push given by the Prime Minister himself, has the potential to vastly increase collaboration between the educational institutions of the two countries and to facilitate exchange of students. This would give a fillip once the issues of Visas and Work Permits for students are further streamlined.

For me a visit to Britain is always a sentimental journey, and a journey into my youth. I am very grateful to Prime Minister Tony Blair for his warm hospitality and strong support to further promotion of our multi-faceted relationship. I sincerely hope we can all work together to write a new chapter in Indo-British relations. I thank you.”
506. Statement of Prime Minister Dr. Manmohan Singh at the Joint Press Conference with the British Prime Minister Tony Blair.

Prime Minister Blair, Ladies and Gentlemen of the Press, It is gratifying for me that Prime Minister Blair and I have kept our commitment to hold a bilateral meeting each year.

I deeply appreciate Prime Minister Tony Blair’s personal commitment and involvement to strengthening our Strategic Partnership.

As the world’s largest and the oldest democracies we obviously share deeply held values and a commitment to democratic institutions and the rule of law.

Our cooperation in combating terrorism has become particularly significant. We agreed that there is need for a coherent global effort with shared perspectives and commitments to combat terrorism wherever and whenever such attacks take place. Sadly both the Mumbai and London attacks are reminders of the common terrorist threats we face.

Prime Minister Blair and I will later address an Investment Summit of our business leaders. There is clearly tremendous opportunity for further expansion of economic linkages even though they are strong and they are moving in the right direction.

We are particularly glad that the United Kingdom views the rapid growth of India as an opportunity that can be used for mutual benefit. In fact, United Kingdom Business and Industry should look more closely at opportunities unfolding with the quiet but substantive manufacturing revolution taking place in India.

While the United Kingdom is India’s 4th largest trading partner and the 5th largest source of foreign investment into India, India has emerged to become the 3rd largest investor in the United Kingdom in terms of number of projects.

In fact, foreign direct investment flows from India to the United Kingdom have exceeded those from the United Kingdom into India since 2004.
India and United Kingdom have revitalized cooperation in scientific research and sought ways to link science and innovation with enterprise. We feel the time is right to expand collaboration in knowledge-based industry and to stimulate greater investments into India by both large corporations and Small and Medium Enterprises.

As a knowledge economy, India places great store on respecting Intellectual Property Rights issues and data security and protection.

We also hope to see a stepping up of cooperation in new fields like education, and health care. Increased cultural exchanges and facilitating the movement of peoples between our countries need to be encouraged.

Prime Minister Blair and I conducted a useful review of issues of global importance and concern particularly the future of Doha Round of Trade negotiations. We also shared perspectives on developments in our regions as well as on issues relating to energy security and climate change in which the Prime Minister himself taken a lead in drawing global attention to these crucial issues.

India deeply values friendship and cooperation with the United Kingdom. I am confident that the momentum in our relations will only gather momentum in the coming years and I thank the Prime Minister for his personal interest, strong endorsement to strengthen our bilateral relations. Thank you.

Towards Inclusive Globalisation

I am deeply conscious of the honour that you have bestowed upon me by inviting me to deliver this lecture and by conferring on me the degree of Doctor of Law. I crave your indulgence as I begin on a personal note. I am one of the fortunate few to have been embraced by Britain’s two oldest universities. Before I went to the other place by the Isis, I saw the river Cam when I came up to study for my Economics tripos at St John’s. In the beginning was St. John’s. The colour light blue is one of my favourites and
is often seen on my head. My memories of my days in Cambridge are deep. I was taught by teachers like Nicholas Kaldor, Joan Robinson, Maurice Dobb and Professor R.C.O. Mathews. I have vivid recollections of the economist Pierro Srafa working studiously at the Marshall Library. It was here that I became a contemporary of Amartya Sen, Jagdish Bhagwati, Mahbub-ul Haq and Rehman Sobhan – all renowned economists from South Asia who became lifelong friends. My teachers and my peers in Cambridge taught me to be open to argument and to be fearless and lucid in the expression of one’s opinions. These virtues, and a relentless desire to pursue intellectual truth were inculcated in me at Cambridge. In many important ways, the University of Cambridge made me.

I am certainly not the only Indian who is thus indebted to this great University. Jawaharlal Nehru was at Trinity as was his grandson, Rajiv Gandhi. Both became Prime Ministers of India. I am thus the third Prime Minister of India to have come out of Cambridge. Sarojini Naidu, known as the ‘Nightingale of India’, played an extremely significant role in India’s freedom movement and she studied at Girton. Looking beyond the arena of political leadership, there were many eminent Indians, who studied in Cambridge, and then made significant contributions to the world of science and to public life in India. In this context, I think of Jagadish Chandra Bose, who was at Christ’s in the 1880s and was a pioneer in the study of radio waves and the life of plants. I think of Srinivasan Ramanujan, the master of the theory of numbers who was brought to Trinity by G.H.Hardy. I remember P.C. Mahalanobis who was at King’s and then founded the Indian Statistical Institute in Calcutta. Homi J. Bhabha, who played a crucial role in the development of India’s nuclear programme and established the Tata Institute of Fundamental Research in Mumbai was at Gonville and Caius. M.S. Swaminathan, the man who envisioned the Green Revolution in India, was at St. Catharine’s. I mention here only the very eminent but there are many others in the social sciences, in education and the bureaucracy in India who, like me, claim this university as their alma mater. The links between India and Cambridge are long and enduring.

Globalisation

When I came up to Cambridge in the mid 1950s, the Cold War had frozen the world into two blocs. India had won Independence a few years before and under the leadership of Jawaharlal Nehru was trying to establish its own place in a divided world. For Indians it was an era of hope, and there was great optimism about the prospect of development.
Today the world appears radically altered. The Cold War is history. A new age of freedom has harnessed to it new technologies that have transformed production and communication. The dismantling of state control has unshackled economic forces. More countries are now integrated into a global economic system in which trade and capital flow across borders with unprecedented energy. The age of freedom is also the age of economic growth. Prometheus has truly been unbound.

A very significant feature of the global economy is the integration of the emerging economies in world markets. In fact, the weight of global economic activity is gradually shifting to these emerging economies. They now account for more than two-fifths of world exports compared to a fifth twenty-five years ago.

In many parts of the developing world, especially India and China, per capita incomes are doubling or are expected to double over every decade. This will lift millions of people out of poverty. This pace of change is unprecedented, far exceeding what was witnessed during the Industrial Revolution in Europe. Freer trade and financial flows in the world as a whole are helping to contain inflation, keep interest rates low, and sustain higher levels of investment.

In my own country, the economic reforms we initiated in the early 1990s have made our economy more competitive. Indian business is responding to new market opportunities. India’s growth is underpinned by a vibrant and growing entrepreneurial class. Indian youth is keen to get into technical and scientific institutions – helping India gain salience as a knowledge based economy. Our country, I believe, is now on a growth path of 7 to 9 per cent per annum, while maintaining reasonable price stability. The proportion of people living below the poverty line is declining.

**Globalisation: Some Concerns**

These achievements of the era of globalization should not blind us to the new anxieties that globalization has brought in its wake. The reach of globalization is yet to touch many parts of the world. Moreover, the evidence suggests that the process has not removed personal and regional income disparities. In many developing countries, growth is by-passing the rural areas. Also, in the face of stagnation in their real pay, the working classes in industrialized countries are becoming fearful of the opening of markets. The gap between the rich and the poor is widening. This, coupled with the inability of the public sector to provide adequate and quality services
in health and education, and cater to the needs of the poor, is causing resentment and alienation. This is nurturing divisive forces and putting pressure on the practice of democracy.

These are real and palpable concerns and they cannot be ignored. Ladies and gentlemen, I suggest to you that we address these vital concerns by making globalisation an inclusive process. We need to work for inclusive globalisation. This calls for a new global vision.

**Make Globalisation Inclusive**

That vision must ensure that the gains from globalization are more widely shared. It is a matter of deep concern that the Doha Development Round of trade negotiations has reached an impasse. If trade is to be an instrument of combating poverty and spreading manufacturing capacities more evenly in the world, it is then vital that barriers to the export of agricultural goods from developing countries be eliminated.

Nearly 2/3rd of the population of developing countries live in rural areas. In the developed countries this falls to less than ten per cent. My appeal is that developed countries should not allow short-term national interests to prevail at the cost of promoting freer trade and combating poverty. The prosperity of so many cannot be sacrificed for protecting the interests of so few. The price of myopia is heavy on the exchequers of the developed world. The issue also has profound moral dimensions.

To convince people in poor countries about the benefits of globalization we must take a more enlightened view in liberalizing trade in services and labour intensive manufactures, in which developing countries are competitive. I see trade not only as a means to prosperity, but also as peace building. Collectively we need to devise an enlightened approach to negotiations over the reduction of harmful gas emissions, intellectual property rights in the production of life saving drugs, transfer of technologies that help to combat poverty and such issues.

Prosperity, ladies and gentlemen, is not divisible. Neither is global peace possible without the eradication of poverty. As Jawaharlal Nehru said in his address to the Canadian Parliament in 1949:

“There can be no security or real peace if vast numbers of people in various parts of the world live in poverty and misery. Nor can there be a balanced economy for the world as a whole if the underdeveloped parts continue to upset that balance and drag down even the more prosperous nations.”
Terrorism and Fundamentalism – From a “Clash of Civilisations” to a “Confluence of Civilisations”

The best efforts to eradicate poverty will be defeated if our societies and nations are threatened by the spectre of terrorism and extremism.

Open societies like India and Britain are more vulnerable to this threat. The very openness of our societies makes us more vulnerable. Yet we must fight terrorism without losing the openness or the rule of law that guarantees the freedom of the individual.

I believe that terrorism can be defeated only by combating fundamentalism and promoting respect for diversity. Britain, the land of John Stuart Mill and Bertrand Russell, the cradle of common law, liberty and democracy, has a unique role to play in fighting fundamentalism. India too has its own pluralistic traditions and openness to other cultures. The legacy of Mahatma Gandhi and Jawaharlal Nehru ordains that we remain committed to combating fundamentalism. We do not believe in a “clash of civilizations”. What we believe in is enrichment of the human condition through cultural inclusiveness and a “confluence of civilizations”.

Global governance

As democracies we must also stand together in making governance across the world more democratic. As a democracy we aspire to a world in which global institutions are more democratic and more representative of all the peoples of the world. The governance processes of global institutions of today – be they Bretton Woods institutions or the UN Security Council - reflect the realities of the world as it was more than half a century ago.

A more inclusive global process that carries the population of the world with it calls for a reform of these institutions, in which the developing world will have a greater voice. Not to do otherwise is to risk alienation and to render ineffectual the global system. I look to Britain, the Commonwealth and other great nations of the world to join forces in bringing about such a reordered global system.

Ladies and Gentlemen, you may well wonder why I have expressed these thoughts at this forum. Before the First World War, a young man from Allahabad came up to Trinity via Harrow. After the Second War, a simple young Indian came to St John’s from an obscure university in Punjab. Cambridge University embraced both. This inclusive character of my alma mater emboldened me to speak to this august gathering about inclusive
globalisation. I thank you very sincerely for your patience and for your indulgence. Thank you.

508. Joint Press Briefing by External Affairs Minister Pranab Mukherjee and Foreign Secretary of the United Kingdom Ms. Margaret Beckett.

New Delhi, November 2, 2006.

EXTERNAL AFFAIRS MINISTER: Good morning, Ladies & Gentlemen. First of all, I would like to welcome the Foreign Secretary of the United Kingdom to India. We are happy that one of her first major destinations abroad is our country, which underlines the importance both our countries attach to each other.

Ms. Beckett is a long-standing friend of India and is the Honorary President of the Labour Friends of India in the UK Parliament. It is due to the contribution and efforts of leaders like Ms. Beckett that this relationship has strengthened at such a fast pace. I am sure that it will continue to gather momentum under her stewardship.

Over the years, India and the UK have developed a historically strong relationship which has allowed us to work together on a number of important areas of mutual interest. The Indo-British bilateral relationship is now perhaps at its best ever. It is a comprehensive strategic partnership which seeks to intensify our co-operation over the entire gamut of our interactions. Our relationship is underpinned by the presence of a large, successful, integrated and dynamic Indian community in the UK.

As you are aware, Prime Minister Manmohan Singh just concluded the third bilateral Summit with Prime Minister Tony Blair in London. There was a remarkable convergence of views on the prospects of the bilateral relationship and on critical issues like counter proliferation and counter terrorism.

I had the privilege of discussing these issues with our honoured guest. We discussed the full range of international, regional and bilateral issues, as well as the follow up to the recent bilateral summit with the UK and the EU.
We have strong cooperation on international issues, with both of us uniting on the need to face terrorism with resolve and without equivocation. Both our countries have been the victims of terrorism. We greatly appreciate the UK’s commitment to fight terrorism wherever it appears and the banning of terrorist groups operating against India. We discussed strengthening cooperation in counter-terrorism and have agreed to a meeting of our experts in the area of protecting critical national infrastructure such as mass transit systems and other assets.

We exchanged views on developments in South Asia. We share the objective of stabilising Afghanistan and ensuring that terrorism is defeated in our region, and we shared our perspectives in this regard.

Our economic relationship has been transformed dramatically, with half a million people from India visiting the UK annually and more than 400,000 British nationals visiting India. The UK has become a bridgehead for Indian companies’ expansion abroad, especially in the I.T. sector, where as you know, India places great emphasis on intellectual property rights and data security and protection.

Both trade and investment have witnessed significant increases and India has emerged as the third largest investor in the UK. We would also encourage UK business to look more closely at investment and trade opportunities with India. We think there is great potential here.

Our educational links are also increasing with India having endowed Chairs in the UK and over 16,000 Indian students in UK educational institutions. Our human capital is the greatest resource that we have and this is helping lay the foundation for a strong synergy between our two knowledge-based economies.

Cooperation in scientific research and modalities to commercialise it are being explored. Our countries are also cooperating in developing solutions for sustainable development and clean energy.

The relationship is flourishing, multi-dimensional and strong. It is based on shared values and interests and indicates the depth and maturity of a partnership between our two countries - one the largest democracy and the other the oldest.

I have no doubt that our interactions today will contribute significantly to taking forward our comprehensive strategic partnership.
BRITISH FOREIGN SECRETARY (MS. MARGARET BECKETT):
Thank you very much indeed Minister Mukherjee. It is a great pleasure to be able to visit India again and to be one of the early visitors to you in your new capacity to which I strongly welcome you. Apart from anything else, it is always nice to meet a Foreign Minister who is newer in that post than one who is ...(inaudible)... It was as you say very recently that I was able to take part in the annual summit between our two Prime Ministers and I can certainly assure you that this was seen as a very, very successful visit and very much a testament to the strength and value of the relationship between India and the UK.

I am happy to say that, of course, I have visited India on a number of previous occasions and I think in almost all of my previous Ministerial roles, including the first occasion as the Minister for Trade and Industry and have many fond memories of all of those visits.

I think that our meeting this morning has been excellent, very constructive and hope that it will set the scene for the rest of my visit on this occasion. We have had, as you say, very constructive discussions on the bilateral relationship between India and the UK, on the important global challenges and opportunities that face all of us and on the regional and security issues, including counter-terrorism. I share your view that the bilateral relationship between our countries and between our Governments has probably never been better, and that also it is a modern and forward-looking relationship which is indeed, as you say, underpinned by the growing business links between our two countries. I believe that until recently the UK is the third largest investor into India and India is the third largest investor into the UK. Although I understand according to figures for the first six months of this year, India is the second largest investor into the UK. So, those links are indeed strengthening and the people-to-people links which see over a million people in effect traveling between our two countries every year is again testament to the strength of our relationship. But we have both agreed that we have to do more to thicken those excellent links. India and the UK are both important players on the world stage - our own country through its membership of the UN Security Council, the G8, the EU, the Commonwealth, and we see India as very much an important and a powerful country with a strong emerging economy. The UK has, as I hope you would know, been at the forefront, of course, for India to have a permanent seat in the UN Security Council. We were very keen to take steps for inviting India to take part in the G8 meeting at Gleneagles last year.
We see our two countries as natural partners as we look even beyond the bilateral relationship and to the global issues that face all of us. And today, as I said, Minister Mukherjee and I agreed how we can take forward the activities which will flow from cooperation on counter terrorism that our two Prime Ministers announced at the recent meeting in London.

We also touched on the challenges and opportunities of climate change. We have seen the Stern report - this is the summary, the full report is larger than this – published earlier this week. In that context again there is much for us to work on together. And, of course, we also both recognize the importance of success in the Doha trade talks.

What is clear about all of these issues is both how well our countries are working together but also how necessary it is that we work together. You were good enough to talk, Sir, about our shared values and interests and the maturity of our relationship. And I think, yes, it is a mature relationship because it has endured for many years but it is not its maturity which is the most important thing, it is indeed those shared values and interests and the way in which we work together. I look forward to a longer and fruitful partnership between us as Foreign Ministers as well as between our countries.

QUESTION (BBC): Mrs. Beckett, two questions if I can. One is on counter-terrorism. Could you tell us what in practice the cooperation means? On the climate change, what do you say to India to convince it to take up what the Stern report says that action is needed?

BRITISH FOREIGN SECRETARY: First of all, on the issue of counter-terrorism there are the obvious things on shared concern, shared flow of information and so on. But also very concretely we have people working, for example, with the relevant authorities in India to help prepare as we have all been trying to do for greater protection in attacks on mass transit infrastructure. So, there are some very concrete ways here, in which we are sharing our very unfortunate and tragic joint experience and trying to learn from each other’s experience.

With regard to the issue of climate change, we take very strongly the view which indeed Sir Nicholas Stern expresses in his report that this is a common interest, but it is, of course, wrong to use the language of, the jargon if you like, in climate change today which is ‘differentiated’. It is the developed countries, unfortunately, who have created - although no one realised we were doing so at that time- some of these problems because
of the unsustainability of our approach in the past for growth and development. Therefore, it is for us to move first and to take the lion’s share, if you like, of the action that has to be taken if these problems are to be resolved. But, unfortunately, there are problems which will face all of us. What Sir Nicholas Stern identifies in his report is that these are problems the world community is able to address if we work together (as a world community); that the earlier we take action the less it will cost; and if we do not take action the cost in every country in the world will be much greater than anything that it could cost us to take some action now or in the future. The cost of not tackling climate change is substantially higher (and) far outweighs the cost of some of the steps that we need to take if we are to tackle this problem.

**QUESTION (IANS):** Madam, India’s FDI in Britain has exceeded that of Britain in India. Our Prime Minister has been talking about foreign investment in infrastructure sector. Is Britain looking at stepping up investment in infrastructure sector in India?

**BRITISH FOREIGN SECRETARY:** There is, as Minister Mukherjee said already, a very strong economic partnership and flows of investment that we are talking about. India is a very major partner for development and I believe a recipient of the largest flow of development investment that the British Government makes. But, of course, most of mutual flows of investments that we are discussing are indeed coming from the private sector. We certainly encourage British companies to look to the opportunities that there are in India for development to our mutual advantage and see such opportunities in a range of infrastructure. For example, one thing which we are extremely interested in the United Kingdom because that is to everyone’s advantage is the possibility of investment in development into clean coal technology which goes back to the question I was asked a moment ago. It is a technology which we believe could be very beneficial in helping to tackle climate change, one of the aspects of developments of this kind.

We and the EU are working with the Chinese Government already on developing a clean coal demonstration plant. We would be very interested in discussions as to whether or not something very similar can be developed here in India because we see, as I say, tremendous opportunities. One of the features of the Stern report is that he also draws attention to the fact that there are great opportunities for industrial development and for creation of employment. (These are) some of the
steps that we need to take as a world community to tackle climate change and that is one of them.

**QUESTION (BBC AUSTRALIA):** This question is for the Foreign Secretary. I interviewed you last time when you were here as Environment Minister a couple of years ago. I see now that you talked about the fact that the international community should come out within two years probably (with) some kind of treaty which could look at climate change. How much political capital is Britain ready to spend on this considering that your allies in the world particularly the United States and Australia have not yet ratified the Kyoto Protocol?

**BRITISH FOREIGN SECRETARY:** We have already spent a lot of political capital on it and intend to spend more. You may recall that when a year ago Britain was in the Presidency of the G8 and also of the European Union, we made tackling climate change one of our top two priorities. One of the major steps that we took was to make this very much a priority at the Gleneagles Summit to which, of course, India came and we were very delighted to welcome the Indian Prime Minister and take part in the discussions that took place along side the Gleneagles meeting and to welcome both the statement that was made by those other five countries of which India is one and also the establishment of the Gleneagles Dialogue which I do not think anyone was confident that we would be able to establish at the beginning of the year.

The purpose of that dialogue, to which India is again a contributor, is to have the opportunity of space for more informal discussion about how we deal with these issues. Of course, negotiations, whenever they take place in whatever form, are a matter for proper discussion through the United Nations body. But what we were keen to do is to create a forum in which people can explore the different ideas which are being considered about how we tackle this issue in the future without feeling that they are in a negotiating set of circumstances and they are not being bound by what they say, and people can explore the ideas that are in the public domain. But we have already advanced substantially the role in discussion of these issues with the United States. President Bush did agree to the setting up of the Gleneagles Dialogue, the United States took part in it. Also in Montreal last year the United States agreed to be a participant in talks about how move on beyond the first Kyoto commitment period, which again is not something that I think anyone was confident of, certainly at the beginning of the last year. Even when we went to Montreal nobody was quite confident
that the United States will be able to prepare to move forward as they have
done. Equally, the saying applies to the Government of Australia. Of course,
where there is a difference is that the Government of Australia have
committed themselves to continue to meet their Kyoto targets even though
they are not signatories to the Kyoto Protocol. So, there is a somewhat
different approach there and, of course, both countries are part of the Asia
Pacific Partnership.

QUESTION (CNN-IBN): This question is for the Indian Foreign
Minister and the British Foreign Secretary. Sir, do you believe that there
are double standards on India’s war against terror as far as the western
countries are concerned? India’s big concern is Pakistan-sponsored
terrorism. Did you put across that to your British counterpart? Madam,
your intelligence agencies have a pretty robust relationship with the ISI. In
that situation, is your Government in a position to lean on Islamabad?

EXTERNAL AFFAIRS MINISTER: My response to the question is,
terrorist activities are not confined to any territorial limit. This is a menace,
perhaps the biggest menace, to world peace in the post-Cold War era.
Therefore, all countries will have to work collectively to fight this menace
and to eradicate it. Of course, we discussed the problems in all its
dimensions but it is not any country-specific.

BRITISH FOREIGN SECRETARY: I strongly share that view. As
you probably know, our own Prime Minister expressed the view quite
recently that terrorism is a threat to all countries wherever it arises and that
all of us must do what we can to work together and to tackle and to try to
solve those problems because the terrorists are interested only in violence
in a whole number of parts of the world and are operating counter to the
interests of everyone except themselves. So, it is very important that as a
world community, we all do everything we can to help to counter their
activities.
VATICAN

509. Response of Official Spokesperson to questions on media reports regarding a statement\(^1\) attributed to H. H Pope Benedict XVI.

New Delhi, May 19, 2006.

It is acknowledged universally that India is a secular and democratic country in which adherents of all religious faiths enjoy equal rights. The Constitution of India states that “all persons are equally entitled to freedom of conscience and the right freely to profess, practice and propagate religion.

---

\(^1\) As the Indian Ambassador-designate Amitab Tripathi presented his papers of credence to the Pope the latter was reported to have said that there “were disturbing signs of religious intolerance which have troubled some regions of the nation, including the reprehensible attempt to legislate clearly discriminatory restrictions on the fundamental right of religious freedom.” He further said the attempt to restrict religious freedom “must be firmly rejected as not only unconstitutional but also as contrary to the highest ideals of India’s founding fathers, who believed in a notion of peaceful coexistence and mutual tolerance between different religions and ethnic groups.” The Indian Parliament was too seized of the matter. In answer to a question in the Rajya Sabha on May 22 the Minister of State Anand Sharma said that the Charge d’affairs of the Vatican in New Delhi was summoned to the Ministry of External Affairs and it was conveyed to him in “no uncertain terms that the Government of India disapproved of the Pope’s statement” and was displeased by it. He added that it was pointed out to the Charge d’affairs that the Pope was not properly briefed on the secularism and religious tolerance prevailing in India which few countries could boast of. He assured the House that the Government’s response was “firm, appropriate and timely.”
INDIA’S FOREIGN RELATIONS - 2006
SECTION - IX
(i) INDIA AND THE UN
510. Press Release of the Ministry of External Affairs on re-tabling of G-4 draft resolution on Security Council reforms by Brazil, Germany and India.

New Delhi, January 6, 2006.

The G-4 draft resolution of 6 July, 2005 (L.64) which generated very wide support in the general membership in the 59th Session of the General Assembly, was re-tabled by Brazil, Germany and India\(^1\) on 5 January 2006. It is widely recognised that no other model for the reform and expansion of the UN Security Council has met with a similarly high level of endorsement. A comprehensive reform of the UN Security Council will bring it in line with contemporary realities and strengthen the United Nations as a whole. The objective of re-tabling the G-4 resolution is to instil positive dynamics into the process of Security Council reform, which had been emphasised in the Outcome Document of the World Summit held in September, 2005.

Brazil, Germany and India will continue the cooperative framework of the G-4 with Japan. All Member States genuinely interested in reform are welcome to discuss the draft resolution. Discussions will be undertaken with an open mind with a view to further broadening the basis of support. The aim of the re-tabling the G-4 draft resolution is not to call for a vote in the immediate future, but to further explore the potential of joining hands

---

\(^1\) Interestingly while Japanese representative was present at the time of tabling of the Resolution, Tokyo did not join the other constituents of the G-4 in tabling it. The draft had to be re-tabled because the General Assembly had begun a new session. The Japanese Chief Cabinet Secretary Shinzo Abe told journalists in Tokyo on January 6 that his country now was evolving, in association with the USA a draft resolution on Security Council expansion. He said Japan had therefore not joined the other members of the G-4 when they “resubmitted” the group’s collective draft at the UN. He said he understood the strategy of the other three to “resubmit” the old draft to keep the issue in focus and gain primacy for it over a possible counter-draft from the African union. That the Government of India considered the expansion of the SC as central to the reform process of the UN was stated unambiguously in the Lok Sabha on the 6th December. In reply to a question on the subject the Government said: “The reform and expansion of the UN Security Council is considered by the Government as central to the process of United Nations reform, which has been ongoing for some years. This reform of the UN Security Council should encompass its expansion, both in permanent and non-permanent categories, as well as the improvement of its working methods. The Government continues to actively pursue this issue, including through coordination and engagement with Brazil, Germany and Japan, otherwise known as the G-4 group. India is next participating in a debate in the plenary of United Nations General Assembly on December 11, 2006 on the issue of UN Security Council reform. The object is to keep the focus at the United Nations on this vital issue, while developing a model of UNSC reform that has wide support and acceptance. So far the progress in this direction has been satisfactory.” (In this Connection please see Documents No. 549, 553 and 605.)
with all member states supporting structural reform of the Security Council. In this context, the efforts of the African Union are encouraging. The project of the S-5 Group of Countries is also to be noted. Both these initiatives share to a large degree the reform aims of the G-4 draft resolution.

It is also encouraging that the President of the General Assembly has recently noted the need for modernising the Security Council and stressed the continuing willingness of the wider UN membership to pursue this goal.

It is hoped that the tabling of G-4 draft resolution will impart new impetus to Security Council reform, without which the overall reform of the United Nations will be incomplete, as has been stated on several occasions, including by the UN Secretary General.

511. Address by Minister of State Anand Sharma at the inauguration of the Second Asia Pacific Model UN Conference.

New Delhi, February 10, 2006.

Shri I. K. Gujral, Former Prime Minister of India, Shri Subodh Kant Sahay, Minister of Food Processing & Industries, Shri Ram Niwas Mirdha, Chairman, Indian Federation of United Nations Associations, Mr Kim Hak-Su, Executive Secretary of ESCAP, Mr Gregory Kovirzhenko, Chairman, World Federation of United Nations Associations, Ms. Shalini Dewan, Director, UN Information Centre, Members of IFUNA, Distinguished Delegates and Invitees,

It gives me great pleasure to attend the Inaugural Session of the Second Asia Pacific Model UN Conference in New Delhi. This large participation of national UN associations is an eloquent testimony to our collective faith in the ability of the UN system to address the challenges and meet the objectives of our global community. As a founding member of the UN and a firm believer in its Purposes and Principles, India has contributed significantly to the furtherance and implementation of the UN’s noble ideals, which run parallel to our civilizational ethos.

At the outset of a new millennium, we envisage not only new and varied challenges but also opportunities for the global community. Political, economic, social, environmental and demographic challenges are impinging
on intra-state as indeed inter-state affairs. The complexity and the intensity of these issues dawns on us the realization for greater interdependence of peoples and nations requiring collective actions. Thus the need and relevance of the UN today is greater, not lesser, even though many question the effectiveness of multilateralism today for influencing policies.

Mr. Chairman, I am happy to note that the theme of this Conference are the Millennium Development Goals, which were adopted at the Millennium Summit of our Heads of State and Government in a collective pledge to ensure a better future for mankind. There is optimism and hope that enhanced economic and technological growth will enable a frontal attack on global poverty, ignorance and disease and that benefits would percolate to the common man. However, six years after the Millennium Declaration, we are still far from registering significant progress and need to redouble our efforts to achieve the goals and targets that we had set for ourselves in the coming decade.

Mr. Chairman, The 2005 World Summit recognised the need for continued efforts in a global compact for the realisation of the Millennium Development Goals. In particular, the World Summit stressed the development dimensions of the Doha round of trade negotiations as well as raising investment and savings rates through meeting the ODA target and using innovative sources of financing. We need to strengthen the momentum generated by the Summit towards promoting international cooperation for development and positioning the discourse on development at the center of the global economic agenda.

Mr. Chairman, The developing countries constitute the vast majority of the UN membership. It is important for them that the UN helps them resolve their development problems as they deem appropriate, including by addressing the systemic issues that are at the root of numerous problems they face. Presently, much of the discussions at the UN are primarily confined to addressing governance issues at the national level. The main economic issues of concern to developing countries such as financial flows, the multilateral trading system, external indebtedness, etc. are no longer debated and agreed upon within the United Nations, as used to be the case earlier. This needs to be urgently rectified.

Mr. Chairman, The World Summit underscored the importance of bringing back global economic issues on the agenda of the United Nations to assess and promote a long-term policy framework and provide political direction on international economic issues. The UN must play an important
role in promoting coherence among financial, monetary and trade policies, transfer of resources and of technologies, etc. The importance of “enhancing the voice and participation” of developing countries in the decision making processes in global trade, financial and monetary institutions can hardly be overstated. The ECOSOC needs to be strengthened and be made more effective in order to identify and make policy recommendations that ensure that policies are supportive of development and that multilateral institutions do not work at cross purposes.

Mr. Chairman, The follow-up of the World Summit must ensure that the fundamental objective of rapid economic growth of the developing countries, enabling them to reach the MDG targets, reduce poverty and increase employment, is kept in view. Monitoring the progress made in the implementation of MDG-8 by developed countries has to be an integral part of the monitoring of MDGs as a whole. At present, the UN is largely engaged in discussing internal economic and social issues while placing much emphasis on provision of technical assistance. We would welcome, through the UN system, the mobilisation of greater resources for development and the emergence of a coalition that would take initiatives in areas of interest to developing countries.

Mr. Chairman, India is home to every sixth person in the world. We are acutely aware of our responsibility to meet the Millennium Development Goals (MDGs), as our contribution to attaining global benchmarks. We have made considerable progress in poverty reduction and are making determined efforts to achieve the targets we have set for ourselves in the social sectors. The National Common Minimum Programme of our Government has laid particular emphasis on health, education, shelter, infrastructure and employment, especially in the rural areas. We have launched “Bharat Nirman”, a programme of unprecedented magnitude, for developing infrastructure in rural India. We aim to provide connectivity for all of India’s six hundred thousand villages through roads, electricity and telecommunication. The Tenth Five Year development Plan, which is currently under implementation, provides for sustained access of potable water for all villages in India. The next Plan will complete the target of providing shelter for all. We have equally ambitious programmes for universal elementary education and improvement of health in rural areas. To ensure a minimum level of employment for everyone in rural areas, we have prepared the National Rural Employment Guarantee Act, which we hope will transform rural India.

Mr. Chairman, Our experience in India and elsewhere has shown that
democracy and development are complementary and mutually reinforcing. The principles of democracy and the rule of law are equally relevant for ensuring economic progress and human development, which contribute to the consolidation of peace. Our abiding commitment to democracy is amply reflected in our support to the UN Democracy Fund, which was set up at the last UNGA. We hope the UN Democracy Fund will help nations to build and strengthen democratic institutions and practices to realize the fruits of globalization for the betterment of their people.

We believe that the management of global interdependence also requires strong international institutions and a rule-based multilateral system. Nations’ faith in the UN system will be strengthened when it reflects their aspirations and acts to address their concerns. This brings to centre-stage the reform of the UN and the need to tackle the democracy deficit in its structure and decision making process.

Mr. Chairman, As we mark the 60th Anniversary of the UN, there is a unique opportunity for its comprehensive reform and to strengthen multilateralism with the UN at its centre. It is important that the United Nations is reflective of contemporary global realities and is equipped to respond effectively to the needs, requirements and concerns of the developing countries, which constitute the vast majority of its membership. In this context, the reform and expansion of the Security Council and inclusion of developing countries as permanent members in an expanded Council can no longer be postponed.

Mr. Chairman, Several threats and challenges face us today. Some are self evident, such as terrorism, conflict and the threat of a link between terrorism and proliferation of weapons of mass destruction. Poverty, hunger, disease and deprivation, are still pervasive in large parts of the world. We need to carefully consider systemic ways and means to address each of these, while being mindful that failure to address the challenges of underdevelopment effectively could exacerbate all other threats. In the age of globalisation, we must ensure that its benefits permeate the globe and that the most vulnerable and those in the greatest need do not face any adverse consequences. More-so we also need to bridge the digital divide as also the gap between the rich and poor countries which is growing though the net reverse flow of wealth from the South to the North despite pledges from developed states of greater aid to developing countries.

Mr. Chairman, Six years ago, the adoption of the Millennium Declaration affirmed our united readiness to confront and overcome the
challenges of the 21st Century. We have achieved some progress, but much remains to be done. It is time for us to renew our commitment to MDGs and collectively translate them into reality with a greater sense of urgency. We owe this to future generations.

Mr. Chairman, Today’s world is an interdependent one in which no nation can prosper in isolation. An international environment supportive to our collective needs and security is an imperative. We must, therefore, strive for a reinvigorated UN for the common benefit of all of us.

I wish all the participants a fulfilling and enriching experience in India and the Conference much success. Thank you.
place an emergency response fund, in view of the major challenges that lie ahead. Its success, however, will be assessed by how far it meets expectations, not of those assembled here, but of the thousands who annually fall victim to natural disasters and humanitarian emergencies. CERF holds out the hope of ready availability of resources for rapid initial response in times of need. The adequacy of that response will depend upon early building up of the corpus of the Fund and its regular replenishment.

We also expect the Fund to address the tragedy of what has been termed as ‘neglected emergencies’. For too long, emergency aid commitment has been subject to the so-called ‘CNN effect’. Dire emergencies, especially in parts of Africa, slip off the radar screen of the donor community either for geo-political reasons or because they are no longer media worthy.

We expect the Fund to be operated in a transparent and accountable manner. Indeed, the long term viability of the CERF would depend on two aspects of its functioning. The foremost would be the improvement in the response of the UN agencies to sudden onset disasters by cutting down the time required for raising resources and thereby saving lives in the immediate aftermath of such disasters. The second would be the fairness and transparency in allocation of resources from the CERF. Regular and stringent audits, not merely of the records in OCHA, but also within the agencies that receive resources from the CERF, would be a pre-requisite in establishing confidence in the CERF as an effective, transparent and accountable instrument, worthy of receiving resources. An annual review by the General Assembly would ensure that the CERF meets the high expectations of Member States and the international community.

Much as we support the setting up of the CERF, the longer-term solution lies in the capacity of countries to mitigate the effects and manage their own responses to natural disasters. Development cannot be sustainable unless disaster mitigation is built into the development process at all levels. The international community also has to maintain its focus beyond emergency relief and to support the medium and long-term rehabilitation, reconstruction and risk-reduction efforts of the Governments of the affected countries.

Two of the biggest natural disasters have affected India within a year – the Indian Ocean tsunami of December 2004 and the devastating earthquake that struck the northern Indian sub-continent in October 2005.
As a response to the multi-hazard vulnerability of our country, we have in recent years significantly strengthened our disaster management capacity. A National Disaster Management Authority has been set up in India under the chairmanship of the Prime Minister. We are also establishing a SAARC Regional Disaster Management Centre. We would be happy to share our skills and expertise with other members of the international community.

Our focus on development of a disaster response capacity also enabled us to cope with recent disasters relying on our own resources. It was also clear to us that while our situation was serious, there were other affected countries where the need for immediate relief was even greater. We extended assistance to Sri Lanka, the Maldives and Indonesia, in the immediate aftermath of the Tsunami. In fact, India airlifted relief and medicines for Sri Lanka and the Maldives the same evening and the very next day our hospital ship was in place in Sri Lanka and Indonesia. We did our utmost to provide material and other help to neighbouring Pakistan for relief and rehabilitation of victims of the earthquake. At the International Conference in Geneva organized by the UN Emergency Relief Coordinator, we also pledged US $25 million for assistance to Pakistan. India has also offered bilateral assistance to many other countries affected by natural disasters in the Asia-Pacific, African and Central American regions.

Excellencies, By supporting local and national recovery processes at an early stage, it is possible to close the gap between relief and development and to transform disasters into opportunities for sustained development. India is convinced of the need for continuing international engagement in the post-disaster period, for restoring livelihoods, building resilience and reducing vulnerability. We hope that the international community will focus on meeting this need even as we address emergency relief issues. International cooperation in disaster and humanitarian relief is the praxis of that ancient Indian idea - “the world is one family”. That is what breathes life into international solidarity and gives meaning to the idea of multilateralism in the lives of ordinary people.

Disasters can and do afflict both the developing and the developed countries. The developing countries unfortunately lack the capacities and resources to cope with the immediate aftermath of disasters and need assistance from the international community to save lives affected by sudden onset disasters. India has always supported efforts aimed at addressing the difficulties faced by the developing countries. We see the CERF as an instrument conceived to address a vital need of the developing world and
will support in fulfilling the noble objective for which it was conceived.

Excellencies, I am happy to announce the Government of India’s contribution of US$ 2 million to the CERF. Thank you.

513. Press Release of the Ministry of External Affairs on Minister of State Anand Sharma announcing India’s US$2 million contribution to new Central Emergency Response Fund (CERF) at UN.

New Delhi, March 10, 2006.

Mr. Anand Sharma, Minister of State for External Affairs, announced Government of India’s contribution of US $2 million to the new Central Emergency Response Fund (CERF) at a High-Level Meeting held at the United Nations in New York on 9 March 2006 to formally launch the Fund.

The Minister of State highlighted the efforts made by India in recent years to significantly strengthen the country’s disaster management capacity and informed the gathering about the setting up of a National Disaster Management Authority in India under the Chairmanship of the Prime Minister, and the upcoming SAARC Regional Disaster Management Centre. He added that India would be happy to share its skills and expertise with the members of the international community. He recalled the assistance extended by India to other neighbouring countries in the immediate aftermath of the Tsunami and to Pakistan for relief and rehabilitation of victims of the earthquake. He highlighted the need for a longer-term solution to disasters through the development of the capacity of countries to mitigate the effects of and manage their response to natural disasters. He highlighted the importance of medium and long-term rehabilitation, reconstruction and risk reduction efforts of the Governments of the affected countries and underlined the need for continuing international engagement in the post-disaster period for restoring livelihoods, building resilience and reducing vulnerability.

CERF was approved by the General Assembly in December 2005. It has been set up to provide a more predictable and timely response to
humanitarian emergencies. The Fund would help save lives in sudden onset disasters by cutting down the time required for raising resources in the immediate aftermath of disasters and would address the needs of those ‘neglected emergencies’ that do not have the benefit of high media attention.

The Fund was launched by the UN Secretary-General, Mr. Kofi Annan. The President of the UN General Assembly, who was present on the occasion, welcomed the launch of the Fund. The other keynote speakers at the High-Level Meeting were Dr. R.H. Keith Mitchell, Prime Minister of Grenada, on behalf of CARICOM; Mr. Hilary Benn, Secretary of State for International Development, United Kingdom; and Mr. Jean-Louis Schiltz, Minister for Development Cooperation and Humanitarian Affairs, Luxembourg. 37 Member States spoke during the High-Level Meeting in support of CERF. An NGO representative and a representative from the first private sector contributor to the Fund also spoke. Of the US $500 million target for the CERF, pledges for over US $254 million were made by the end of the Meeting, which is in addition to the existing US $50 million loan component that is already available to the CERF.

New Delhi, May 4, 2006.

1. The recently set up United Nations Democracy Fund (UNDEF) has announced its online call for the first round of UNDEF grants and has initiated the process of inviting project proposals. For project guidelines and details of the online application process, the websites http://www.un.org/democracyfund or http://www.undemocracyfund.org/submit.html may be visited. The last date for making project applications is 15 May 2006.

2. The funding priorities for projects would include strengthening democratic dialogue and support for constitutional processes; civil society empowerment; civic education; voter registration and strengthening of political parties; citizen’s access to information; human rights and fundamental freedoms; and accountability, transparency and integrity. Eligible beneficiaries would include government agencies; independent and constitutional bodies; civil
society organizations and non-government organizations; global and regional inter-government bodies, organizations and associations; and the UN, including its relevant departments, specialized agencies, funds and programmes working in this field.

3. As the world’s largest democracy, India has a large number of institutions, civil society organizations, NGOs and other bodies with considerable expertise in various areas related to the UN Democracy Fund, especially institution building, capacity building, awareness creation and leadership development.

4. Given India’s deep rooted commitment to the principles and values of democracy, the Government of India hopes that institutions, civil society organizations and other agencies with relevant capabilities will send meaningful project proposals in large numbers for consideration by the UNDEF.

5. It may be recalled that India was one of the first countries to support the creation of the UN Democracy Fund. The Hon’ble Prime Minister of India had participated in a ceremony to launch the Fund held in New York on 14 September, 2005 during the World Summit 2005. Out of a total amount of nearly $49 million pledged to the UNDEF, India has made a contribution of $10 million and is represented on the Fund’s Advisory Board by its Permanent Representative to the United Nations in New York.

New Delhi, May 12, 2006.

In elections held on 10 May 2006 in the 54-member Economic and Social Council (ECOSOC), India’s candidate Shri Chandrashekhar Dasgupta was elected to the Committee on Economic, Social and Cultural Rights for the term 2007-2010.

The Committee on Economic, Social and Cultural Rights deals with
the International Covenant on Economic, Social and Cultural Rights to which India is a Party. The Members nominated to the Committee are experts with recognized competence in the field of Human Rights, who serve in their personal capacity.

Shri Chandrashekhar Dasgupta, who was a member of the Indian Foreign Service for 38 years before retiring in 2000, was India’s Ambassador to China, Belgium and Luxembourg, the European Union and India’s High Commissioner to Singapore and Tanzania. Shri Dasgupta is currently a Distinguished Fellow at The Energy and Resources Institute (TERI) where he works on climate change and sustainable development issues. He is the author of War and Diplomacy in Kashmir, 1947-48.

516. Media Briefing by Official Spokesperson on the announcement of the candidature of Shashi Tharoor for UN Secretary General.

New Delhi, June 15, 2006.

Official Spokesperson: Good Evening. I have a number of issues from my side to talk about. First, an announcement...

India strongly supports the principle of regional rotation under which the next Secretary General of the United Nations should be from Asia. The Asian Group within the UN had approached other Groups, seeking their support for this principle, and the African Group has already confirmed its support. We hope that other regional groups would also articulate support for the rotational principle.

India also believes that a prospective UN Secretary General should have impeccable credentials, be acceptable to the broadest possible membership of the UN and have a strong commitment to the reform of the UN and the interests of the developing countries.

It is in this framework that India has decided to announce the candidature of Mr. Shashi Tharoor, Under Secretary General for Communications and Public Information at the United Nations. Mr. Tharoor, an Indian national, is a distinguished son of Asia, who has served the UN in diverse capacities since 1978. During his long innings at the UN, Mr.
Tharoor has held a number of key positions in various areas including peacekeeping, UNHCR and UN’s communications strategy, with particular responsibility for ensuring the coherence and effectiveness of the United Nations’ external message. Mr. Tharoor has been closely involved in the process of the reform of the United Nations.

Mr. Tharoor is a well-known writer. He is the author of eight books, as well as numerous articles, op-eds and literary reviews in a wide range of publications. He is also the recipient of several journalism and literary awards, including a Commonwealth Writers’ Prize.

In January 1998, Mr. Tharoor, was named by the World Economic Forum in Davos, Switzerland, as a “Global Leader of Tomorrow”. Mr. Tharoor is an elected Fellow of the New York Institute of the Humanities and a member of the Advisory Board of the Indo-American Arts Council.

Born in London in 1956. Mr. Tharoor was educated in India and the United States, completing a PhD in 1978 at the Fletcher School of Law and Diplomacy at Tufts University, where he also earned two Master’s Degrees. He was awarded the honorary degree of Doctor of Letters in International Affairs by the University of Puget Sound, United States.

Mr. Shashi Tharoor’s internationally acclaimed stature and experience make him eminently suitable to become the next Secretary General of the United Nations.

India has informed, through diplomatic channels, other member states of the United Nations of its nomination of Mr. Shashi Tharoor’s candidature and requested their support.

**Question:** So does that mean that India is no longer interested in a seat in the UN Security Council?

**Official Spokesperson:** They are separate issues and it is incorrect to perceive India’s support for one as dilution of our commitment to the other. India is a founder member of the United Nations and we have consistently and significantly contributed to all aspects of its functioning. India is strongly committed to comprehensive reforms of the United Nations and believes that the reform and expansion of the Security Council in both permanent and non-permanent categories is central to the process of UN reforms. As far as that is concerned there is widespread and growing appreciation of India’s impeccable credentials to become a permanent member of the Security Council. There has been a steady accretion of
support in our favor since the candidature was announced in 1994. India remains committed, I may mention, to the G-4 Initiative and continues a policy of engagement of G-4 and other member states to achieve the objective of UN reform. India’s nomination of Mr. Shashi Tharoor for the post of UN Secretary General is based on a commitment to rotational principle under which the next Secretary General should be from Asia and Mr. Tharoor’s internationally acclaimed stature, achievements and experience.

**Question:** Has there been any discussion with any member of the P-5 in advance of this?

**Official Spokesperson:** We have taken up this issue of seeking support for the candidature of Mr. Tharoor through diplomatic channels with all member countries of the United Nations.

**Question:** Any feedback from China?

**Official Spokesperson:** I do not have feedback from individual countries. Certainly, our Missions are actively seeking support of the member countries of the UN.

**Question:** There are a number of candidates from Asia.

**Official Spokesperson:** Yes there are.

**Question:** Will it not create problems because ASEAN also has its own candidate?

**Official Spokesperson:** All these considerations - pros and cons - have obviously been taken into consideration by the government in deciding to support Mr. Tharoor’s candidature.

**Question:** What is in it for India?

**Official Spokesperson:** I think it is a matter of pride for a son of India, a son of Asia to be the UN Secretary General.

**Question:** When are the elections supposed to be held?

**Official Spokesperson:** If I am not wrong, this matter usually comes up before the General Assembly in October and carries on but the process involves the Security Council also making a list of the candidates by, I think, mid July.
Question: Is it going to be one name or they have more names?

Official Spokesperson: Traditionally, the Security Council recommends one name.

Question: Isn't he perceived to be too close to Mr. Kofi Annan...US support...

Official Spokesperson: These are perceptions you may have or somebody else may have. As far as we are concerned, we have based our support for his candidature on his impeccable credentials, on his very considerable achievements and on his tremendous experience within the United Nations.

Question: Has any Indian ever been nominated?

Official Spokesperson: No Indian has held that office.

Question: Nominated...

Official Spokesperson: I do not think so.

New Delhi, June 23, 2006.

1. India has decided to make an initial commitment of US $ 2 million to the Peacebuilding Fund proposed to be set up under the newly established Peacebuilding Commission (PBC) at the United Nations.

2. India had welcomed the proposal contained in the 2005 World Summit Document to establish a Peacebuilding Commission at the UN, as an inter-governmental advisory body to help countries in the process of post-conflict peacebuilding, recovery, reconstruction and development.

3. As a part of its composite engagement with other member states on issues related to the reform of the United Nations, India has been constructively involved in discussions to set up and operationalise
the PBC. While the PBC was established in December, 2005, the process of forming its Organisational Committee was completed in May, 2006. The UN Secretary General has scheduled the first meeting of the Organisational Committee at the UN in New York today.

4. India has been selected as a member of the Organisational Committee of the PBC under the category of the top five providers of military personnel and civilian police to the UN peacekeeping operations.

5. India is among the longest serving and largest troop contributors to UN’s peacekeeping activities. More than 85,000 Indian troops, military observers and civilian police officers have participated in 42 out of the 60 peacekeeping missions established since the inception of the UN. 116 Indian soldiers have made the supreme sacrifice while serving in UN peacekeeping operations, and have been awarded the Dag Hammarksjold Medals.

6. Besides continuing its active contribution to the UN peacekeeping operations, India also attaches high importance to the issues related to peacebuilding, on which the Peacebuilding Commission will be rendering advice and assistance at the request of prospective recipient countries. India looks forward to making positive contribution to PBC’s functioning, especially in areas of capacity building.

518. Press Release of the Permanent Mission of India at Geneva on the visit of Minister of State E. Ahamed.

Shri E. Ahamed, Minister of State for External Affairs, addressed the 60th Session of the Governing Council of the United Nations Compensation Commission (UNCC), being held in Geneva from 27-29 June 2006.

UNCC was established in 1991 to process claims and compensation for losses arising out of Iraq’s invasion of Kuwait. UNCC functions as a subsidiary organ of the United Nations Security Council (UNSC). The
Governing Council of the UNCC is the main body that determines the policies of UNCC within the framework of relevant UNSC Resolutions.

In his address to the Governing Council, Shri E. Ahamed called for the acceptance of claims owing to lack of information or access to relevant documentation. He urged the Governing Council to extend the deadline of 30 September 2006 for filing of claimants and the deadline of end June 2006 for verification of erroneous payments made by the UNCC. Shri E. Ahamed also emphasized that the genuine and poor claimants should not be denied justice and invited a fact finding mission of the UNCC to visit India at the earliest. It may be recalled that of the approximately 200,000 persons affected over 147,000 claims were made on behalf of Indian nationals and over US$ one billion has been disbursed as compensation awards.

Shri E. Ahamed also had occasion to discuss these issues with the concerned officials of the UNCC, including the Executive Secretary, Mr. Rolf Goran Knutsson. He expressed his appreciation for the cooperation being extended by the UNCC to Government of India in its endeavour to help the Indian claimants.

---

519. **Press Release of the Ministry of External Affairs on the visit of India’s Candidate for the Post of UN Secretary General Shashi Tharoor to the African Union Summit in Banjul, The Gambia.**

**Banjul (The Gambia), July 4, 2006.**

Mr. Shashi Tharoor, Under Secretary General at the United Nations and India’s candidate for the post of the UN Secretary General visited Banjul (The Gambia) from June 29 – July 1, 2006 to interact with African leaders during the African Union (AU) Summit in Banjul, and seek their support for his candidature.

Mr. Tharoor addressed an Informal Session of the AU Executive Council at the level of Foreign Ministers on 30 June, in both French and English. He presented his candidature at this august gathering in the framework of India’s traditionally close relations with African countries and his impeccable credentials. Spelling out his vision for the United Nations, he emphasized that both continuity and change were important. He recalled
Mahatma Gandhi’s exhortation that those who want change should become a part of it. Mr. Tharoor’s address was received with overwhelming acclamation. Mr. Tharoor was a special invitee at the State Banquet hosted by the President of The Gambia.

Mr. Tharoor met with Heads of State/Government, Foreign Ministers and other dignitaries from a large number of African countries. African leaders responded to Mr. Tharoor’s candidature in highly supportive terms, underlining the warmth and friendship characterizing the relations between India and African countries. They appreciated that Mr. Tharoor had chosen the AU Summit to launch his campaign after his candidature was officially announced by Government of India.

Government of India’s delegation to the AU Summit, led by Mrs. Shashi U. Tripathi, Secretary (West) coordinated the programme of Mr. Shashi Tharoor’s visit and requested support for his candidature during their meetings with African leaders.

---

520. Press Release of the Ministry of Defence on Defence Minister’s meetings in New York.

New Delhi, September 21, 2006.

The Defence Minister Shri Pranab Mukherjee arrived in New York on the evening of September 19, as the leader of India’s delegation at the General Debate of the 61st General Assembly. Shortly after his arrival, Shri Mukherjee attended a reception hosted by the US President Mr. George Bush, where he had the opportunity to interact with his host and other world leaders.

Yesterday, Shri Mukherjee began his engagements by meeting with Mr. Jaap de Hoop Scheffer, Secretary General of the North Atlantic Treaty Organization (NATO). During the meeting, the two dignitaries discussed current issues and political perspectives, in particular, covering areas relating to the field of regional security.

This meeting was followed by a meeting between the Defence Minister and President Stjepan Mesic of Croatia. The two leaders discussed the potential role of Croatia as a gateway into Europe, apart from other topical regional issues.
In the afternoon, Shri Mukherjee participated in a meeting of Brazil, Russia, China and India. The meeting was convened by the Russian Foreign Minister Mr. Lavrov, and was also attended by the Chinese Foreign Minister Mr. Li Zhaoxing and the Brazilian Foreign Minister Mr. Celso Amorim. The meeting provided an opportunity for discussions on issues including the ongoing logjam in the negotiations at the World Trade Organization and issues relating to energy conservation and energy from renewable sources. There was also a brief discussion on the situation in West Asia. The leaders agreed that such meetings in an open-ended format would form a useful method for coordinating positions in future and would continue wherever convenient.

Thereafter, the Minister met Mr. KP Sharma Oli, the Deputy Prime Minister and Foreign Minister of Nepal, and Ms Dora Bakoyannis, Foreign Minister of Greece. The Nepalese Deputy PM and the Defence Minister exchanged views on the regional situation, including on the ongoing dialogue between the Government of Nepal and the leaders of the Maoist movement. The Defence Minister reiterated full support of New Delhi to Kathmandu in taking forward the peace process.

In the meeting with Foreign Minister Ms. Bakoyannis of Greece, discussions centred on bilateral issues, the need for effective action against terrorism, matters of concern in the United Nations, and on the scope for cooperation in the search for renewable sources of energy.

In the evening, Shri Mukherjee attended a reception hosted by President Kufuor of Ghana in honour of the outgoing Secretary General, Mr. Kofi Annan, and a reception by the President of the 61st General Assembly, Sheikha Haya Rashed Al-Khalifa, who is only the third lady to hold this post, the first being Vijayalakshmi Pandit of India.
521. Key Note Address by Commerce Minister Kamal Nath at the UNCTAD High Level Policy Dialogue.

- The recent decades have witnessed a sharp acceleration in the growth of the global economy. Underpinned by worldwide productivity growth, the processes of globalisation and liberalisation are inexorably leading the world towards greater economic openness, inter-dependence and integration. These trends have manifested themselves through higher levels of international trade, cross border capital flows and increasing integration of financial markets.

- The entry of billions of workers into the world economy has also had an important effect on global growth and poverty reduction in developing countries, even though the impediments to mobility of professional service suppliers across borders have not been seriously addressed. Nevertheless, wealth has been created across the world.

- A remarkable feature of the current economic expansion has been the participation and performance of developing countries. Many developing countries have consistently outperformed the developed countries in output growth. Within the developing world also, the growth has been fairly broad-based, with Africa growing at around 5% in the last three years. UNCTAD’s Trade and Policy Report 2006 finds that Sub-Saharan Africa is expected to grow at 6.6% in 2006, the highest growth rate of a sub-region after East Asia. Significantly, the improved output growth of developing countries in recent years is matched by their performance in international trade. This does not, however, mean that our job is done, and developing countries, large and small, are firmly on a path of sustained growth and development fuelled by trade.

- UNCTAD has been playing a vital role to address the development dimension of the international trading system given its mandate as the focal point within the United Nations for the integrated treatment of trade and development and the inter-related issues in the areas of finance, technology, investment and sustainable development as defined in the Sao Paulo Consensus. I recall my meeting with Dr. Supachai Panitchpakdi, Secretary General, UNCTAD, during his visit to New Delhi in November 2005. At the outset, I would like to reiterate
India’s willingness to work to strengthen UNCTAD. The High Level Policy Dialogue presents a useful and timely opportunity to share my views.

- The timing of the present discourse is significant. We are on the cusp of the multi-lateral trading systems development oriented evolution and reform, and against the background of some paradigm shifts taking place in international trade and development. It is also an occasion for the international community to affirm, that despite our involvement in over 300 RTAs, PTAs, regional and inter-regional, North-North, North-South and South-South, we attach importance to the WTO as a central pillar governing the regulation of trade relations globally. Equally, and in the context of the UN reform efforts, we support the focal point role of UNCTAD in the UN system for the integrated treatment of trade and development through its independent research and beyond conventional wisdom analysis, beneficiary-driven technical cooperation and knowledge based consensus building functions.

- In recent years we have witnessed certain paradigm shifts in international trade and development. There has been an intensification of the “new geography of international trade” wherein countries of the South are moving from the periphery towards the centre. My own country is contributing to this dynamism with a services success story to tell, and ambitions of becoming a global manufacturing hub and one of the world’s most attractive investment destinations. South-South trade liberalisation and economic integration has gathered pace in an unprecedented way both regionally and inter-regionally. Demography trends are creating a growing “Human Resource and Youth Reservoir” in developing countries (like India) along with a preponderance of aging populations in developed countries. Comparative advantages in trade are increasingly weighted in favour of knowledge intensive and innovation driven products and services.

- Since the time that UNCTAD was founded, the world has evolved. Much, however, still needs to be done to create an international enabling environment conducive to the accelerated and sustained growth of developing countries consistent with their special circumstances and their national priorities. UNCTAD can, and should, continue to play its important role in this relentless pursuit of
development. It should continue to examine the interface between the international trading system and national development strategies with a view to assuring that the processes of globalization and liberalization bring benefits to all.

- Development is a shared responsibility, a collective endeavour. The search for solutions to the challenges of development cannot but be a shared objective among all countries to ensure enhanced welfare for all. The geo-political and economic relations, as they have thus far evolved, have had a positive impact on the development and poverty reduction of many developing countries. They have contributed a note of optimism regarding the achievement of the United Nations Millennium Development Goals. However, the statistics hide a number of worrying features which the world can only ignore at its peril. Some of the danger signals are already evident – continuing protectionism in developed countries, and turbulence in energy markets are only a few examples of such dangers.

- One of the most important factors contributing to global imbalances is the inability of many developing countries to take advantage of the economic expansion. The structural factors which contribute to such market failures have to be urgently addressed if the current phase of growth is to be sustained. In a globalised world where economic decisions are increasingly taken by markets, market failure leading to exclusion of countries and regions remains a major challenge. To address it, apart from strengthening a rule based and fair multilateral trading system which is in the shared interest of all, each country must also have policy space and ability to choose what is most appropriate for its circumstances and its people.

- In order to address the prevalent imbalances and asymmetries in the global economic system, it is also necessary to re-visit the institutional architecture involved in the governance of globalisation. This architecture includes the UN System, the Bretton Woods Institutions and the WTO. The structure and objectives of these institutions have to reflect the deep-seated changes that have taken place since they were established. Setting aside my views on the systemic changes required in the UN and the Bretton Woods Institutions for a relevant forum, let me confine myself today to international trade and development.
The suspension of the Doha Round Negotiations in July has brought into focus not only the substantive issues which are the subject of discord, but also the institutionalised asymmetries which continue to pervade the WTO after its emergence from the GATT. While its professed objective is greater openness in all aspects of trade, in practice this objective is observed in a highly selective manner that reflects the predilections and concerns of developed countries. Let me give just a few examples of this selective openness:

- National borders should matter less and less for merchandise trade and capital flows. But we are told – don’t talk about technology flows and labour flows.

- Subsidies are bad for industrial sectors, but on agricultural subsidies, the only thing we hear is that we’ll get back to you. Tariffs should be transparent and ad valorem in the industrial sector. In agriculture, now, that’s something else!

- The private interests of IPR holders are sacred; issues of public interest regarding intellectual property are of a second order.

- I could go on about this. But the basic point is that unless we deliver on the agreed development dimension under the Doha Round, the underpinnings of the WTO will continue to address mainly the mercantilist interests of the developed countries.

- It is important for the WTO to resolve the issue of inequitable integration through both political and institutional measures. At the political level, we must recognise the current asymmetries, and agree to do away with them in the present Round of negotiations. This would involve in agriculture, for instance, a clear understanding, both on the removal of distortions caused by developed countries’ measures as well as an understanding on S&D measures required by developing countries to manage their concerns regarding subsistence, small and low-income farmers, food security and livelihoods in their agricultural sectors. Similarly, in manufactures, the concerns of small-scale and labour intensive production as well as of infant industries must be addressed through effective flexibilities. In services, developing countries have acquired skills in the delivery of a number of services, for example through cross border trade (Mode 1) and movement of natural persons (Mode 4) that are critical to their trading partners. For globalization to entail win-win scenarios,
the comparative advantage of developing countries should not be stifled by protectionism in their developed partners.

- As far as institutional measures are concerned, there is a need for greater emphasis on capacity building and technical assistance to enable smaller developing countries to participate meaningfully in the negotiations. Supply side constraints in such countries have to be tackled through an effective Aid for Trade Programme that ensures additionality of resources, predictability and need-based programmes that improve the capacity of the recipient countries to take advantage of increased opportunities. In order for Aid for Trade to be effective, it needs to be channelled multilaterally and integrated into country development strategies. In terms of decision making, this implies greater emphasis on transparency and openness. Considerations of efficiency alone cannot be allowed to prevail over the need for inclusive decision making procedures to ensure equity and sustainability of the decisions.

- As someone who has been deeply involved with the current Round of negotiations in the WTO, I cannot assert with any degree of confidence that these changes are being made in the WTO. Judging from the progress so far, talk of a Development Round remains largely rhetorical. Issues of serious concern to developing countries like cotton, ushering in fair and undistorted agricultural world trade, Duty Free Quota Free Treatment for LDC’s, Implementation Issues, etc. remain unresolved. The fundamental principle of S&D treatment for developing countries to address their concerns of policy space in the major areas of negotiations remains deadlocked. There is as yet, no recognition by some developed countries that the basic premise of a Development Round is primacy for the development needs of developing countries, and not market access for developed countries. Under these circumstances, much needs to be done to maintain the confidence and optimism of the developing countries in this Development Round.

- Trade exchanges among the developing countries constitute a promising area of current and future trade growth. According to the Trade and Development Report, 2005, the share of South-South exports in total developing country exports increased from 27% in 1985 to 43% in 2003 i.e. from US$ 97 b to US$ 921 b. Exploring the full potential of South-South trade remains a desirable objective.
GSTP is an important vehicle for promoting South-South cooperation. We are actively participating in the ongoing third round of negotiations of the GSTP that was launched at Sao Paulo in 2004, and would like to see its early successful conclusion.

Moreover, India is forging links through regional trade, free trade and comprehensive economic cooperation agreements. We have recently concluded a successful Summit of the IBSA (India-Brazil-South Africa) trilateral partnership. We have been sharing our experience in information technology, biotechnology, pharmaceuticals, medical sciences, and remote sensing with our friends from the developing world, including the developing countries of Africa and Asia. Indian entrepreneurs are taking a serious look at trade cooperation and closer investment in our larger neighbourhood. We believe that these South-South initiatives serve to complement the multilateral trading system. This does not diminish our firm belief in the benefits that can potentially accrue from a fair and strengthened multilateral trading system.

UNCTADs mandate must remain the enhancement of development opportunities for developing countries. It must continue to make a real contribution to assist developing countries confront today's complex trade and development challenges.

As a knowledge-based body, UNCTAD needs to remain ahead of the curve in generation of ideas and in addressing issues related to integrated treatment of trade and development. It has the wherewithal to serve as a brains trust for development-friendly and innovative analyses and policy options.

UNCTAD should continue to examine, from the development perspective, the inherent asymmetries and inequalities in the international market place and its structural limitations. UNCTAD can play a role in supply-side productive and trade capacity building, in working on issues related to trade diversification, strengthening of technological capacity, and addressing the development dimension of intellectual property rights.

Development, we reiterate, is a shared responsibility, a collective endeavour. Shared responsibility should beget a shared programme for development and a collective response. To this end, there is a need for an effective, results-oriented partnership between the
developing and the developed countries. Let us not confront each other; let us together confront the problems, the challenges of development that we face today; and, it is in this context, that UNCTAD must act as an effective bridge between developed and developing countries on the entire range of issues relating to globalization, trade and development.

- Finally, I assure the UNCTAD community of my commitment to work with them to achieve our common goals and objectives, and to wish this High Level Policy Dialogue all success. Thank you.

524. Statement by Representative of India at the Presentation of the High Commissioner’s Strategic Management Plan for the Biennium 2006-07 by the High Commissioner for Human Rights.

Madam High Commissioner, I would like to join others in complimenting you in bringing out the first Strategic Management Plan for the biennium 2006-07. This document outlines the OHCHR’s strategic priorities, targets and the activities planned to achieve them. The Plan is expected to deliver tangible results in promotion and protection of human rights and empowerment of all people.

India supports the underlying spirit of the Strategic Management Plan. We have in the past, supported the High Commissioner's efforts in promotion
and protection of human rights, inter alia, through financial contributions to the Voluntary Fund for Technical Cooperation. We would continue to support OHCHR’s future endeavours in this regard.

Thank you.

525. Press Release of the Ministry of External Affairs on India’s election to the first UN Human Rights Council.

New Delhi, May 10, 2006.

India scored a major success yesterday at the United Nations when it was elected to the first United Nations Human Rights Council securing the highest number of votes among the contested seats by polling 173 votes out of 190 votes.

This was a recognition of India’s diplomatic standing in the comity of nations today and its commitment to promotion and protection of human rights. It is also a reflection of the success that India has had with its diplomatic demarches made in New York and through the Indian Missions abroad to the members of the United Nations.

As a democratic and pluralistic country, committed to the rule of law, Indian presence on the new Human Rights Council would bring a unique perspective to the new body during its formative phase. India has been a committed supporter of the UN human rights system and the promotion and protection of human rights is ingrained in its domestic and foreign policies.

In one of the largest elections at the United Nations, 47 members of the Human Rights Council were elected by secret ballot. These elections were held in pursuance of a resolution of the United Nations General Assembly, which was adopted on 15 March 2006 to establish the Human Rights Council (HRC) to replace the Commission on Human Rights (CHR).

Under the current distribution of seats, the Asian Group has 13 seats, African Group has 13, Latin American and Carribean Group has 8, Western and other Countries Group has 7, and Eastern European has 6 seats. The African Group was the only one to produce a clean slate, with the number of candidates and seats being equal. For the rest of the regional groups, especially in the case of Asia and East Europe, the number of candidates
considerably exceeded the number of available seats, making it a fiercely contested election. After India, other top vote getters among the contested seats were Brazil (165), Indonesia (165), Bangladesh (160), Japan (158), Argentina (158), Malaysia (158), Germany (154) and Mexico (154).

Following the HRC elections, a draw of lots was held to decide the term of the newly elected members. India has been drawn for a one-year term. The first year of the Human Rights Council is important since the work methods and procedures would be decided and the review of the special provisions and mechanisms from the CHR would be carried out. The countries would be eligible for re-election to a full second term of three years.

India attaches great importance to the newly constituted Human Rights Council and will work to make the Council a strong, effective and efficient body capable of promoting and protecting human rights and fundamental freedoms for all.

526. Statement by Minister of State Anand Sharma at the High Level Segment of UN Human Rights Council.

Mr. President, President of the General Assembly, Secretary General of the United Nations, High Commissioner for Human Rights, Excellencies, Ladies and Gentlemen,

On behalf of the Government of India, I would like to congratulate you, Mr. President, on your election as the President of this historic first session of the Human Rights Council. We are confident that under your able guidance, this Council shall have a smooth and effective beginning. May I assure you of our full support in this endeavour.

I feel privileged to be present here today to witness this landmark moment, the birth of a new organization, the Human Rights Council. A few months back, the Member States of the United Nations demonstrated again their unwavering commitment to strengthen the UN human rights machinery when they resolved to create the Human Rights Council as a subsidiary of the UN General Assembly. They recognised the need to reform the international human rights machinery to secure effective enjoyment by all of all human rights, including the right to development.
This is a milestone in the long journey that we have collectively undertaken since the adoption of the Universal Declaration of Human Rights in 1948. The Twentieth Century witnessed many upheavals and instances of denial of human rights. It also witnessed gradual development of an international human rights machinery to respond to these challenges. While there have been some successes, we are still a long way from realising the goal of “inherent dignity of man”, as promised in that Declaration, for many around the world. By establishing the Human Rights Council, the international community has reaffirmed its resolve and commitment to constantly adjust and improve its framework for addressing human rights challenges.

Mr. President, People around the world have high expectations from the new Council. They hope that the new body will make a real difference on the ground and give voice to the concerns and aspirations of the underprivileged. Much has been said in the recent past about the achievements and shortcomings of the former Commission on Human Rights. While there is a clear recognition of the Commission’s tremendous contribution in the areas of standard setting and development of human rights norms, it is also commonly recognised that the Commission’s credibility and effectiveness suffered because of politicisation. We now have a new body and it is up to us to make this body a success, by introducing a new work culture of cooperation and mutual understanding and to avoid repeating the mistakes of the past.

In its first year the new Human Rights Council is to establish a Universal Periodic Review mechanism, which should ensure equal treatment of all Member States and also prevent selectivity and double standards. While improving and rationalising mandates, mechanisms, functions and responsibilities of the former CHR, the HRC should adopt an even-handed approach in dealing with civil and political rights on the one hand and economic, social and cultural rights, including the Right to Development, on the other. It also needs to work towards transforming into reality the commitment to the Right to Development contained in the Resolution establishing the HRC.

Another major challenge that the international community is confronted with today is that emanating from terrorism. Terrorism is one of the greatest scourges of our times. The international community should recognize that terrorism is a direct violation of human rights, in particular the most basic rights, the right to life and liberty.

Mr. President, India has a long tradition of promoting and protecting
human rights. It was privileged to be in the forefront of the struggle against apartheid since even before independence.

Our commitment to human rights flows from our firm belief that in a truly pluralistic society, growth and welfare of citizens can be ensured only through a culture of promotion and protection of human rights. This was the vision of our nation’s founding fathers who, while very carefully framing our Constitution, guaranteed fundamental civil and political rights and also made provisions for the progressive realization of economic, social and cultural rights.

Our democratic polity with an independent and impartial judiciary, free and independent press, a vibrant civil society and powerful and independent National Human Rights Commission provide the basis for nurturing a culture of respect for and promotion and protection of human rights in India. These institutions guarantee full and free enjoyment of human rights by all our citizens.

India has also taken an important initiative for the empowerment of women by reserving one-third of all seats for women in urban and local self-government, thus bringing over one million women at the grassroots level into political decision making. Meanwhile, the right to work is being significantly realised with the launch of the National Rural Employment Guarantee Programme earlier this year.

Having said that, Mr. President, India’s commitment to the promotion and protection of human rights is not limited only to our domestic concerns. It is also integral to our foreign policy. We attach great importance to the work of the United Nations human rights machinery. We have actively participated in deliberations on human rights in international fora for promotion and protection of human rights and fundamental freedoms for all. India played a leading role in the historical struggle for decolonization and abolition of apartheid. We were among the very few select countries who were members of the former Commission of Human Rights throughout over 60 years of its existence.

Mr. President, The Human Rights Council should emerge as a forum for voluntary participation and sharing of national experiences and best practices in the protection and promotion of human rights. As national governments shoulder the primary responsibility for the protection of human rights, the Council should devise means to provide, upon their request, technical and financial assistance to enable them to more effectively address human rights concerns. Only in this way can we create an environment of
trust and confidence which will encourage those who are in real need, to come forward and seek assistance to build up their capacities to harness their resources for promotion and protection of human rights in their respective countries.

Mr. President, We may recall Mahatma Gandhi’s conviction that means are always as important as ends. This is particularly relevant in today’s context. We all agree on the larger objectives to be pursued through the UN human rights system. However, it is equally important to ensure that the means for attaining those objectives do not create confrontation and divisiveness.

As we look ahead to the future and craft a vision for a peaceful and humanitarian world order, I can do no better than recall what our Prime Minister Dr. Manmohan Singh said in a recent speech and I quote: “Our nation was built on the foundations of a deep and abiding commitment to the values of liberal, social democracy. Pluralism, secularism, multi-culturalism and the principles of equity, social justice and the rule of law are core values of our civilisation and the bedrock of our Republic. If there is an “idea of India” by which India should be defined, it is the idea of an inclusive, open, multi-cultural, multi-ethnic, multi-lingual society. I believe that this is a dominant trend of political evolution of all societies in the 21st century. Therefore, we have an obligation to history and mankind to show that pluralism works”

At the heart of this vision lies the individual, and our commitment to human rights is a manifestation of our commitment to guarantee every human being a life of dignity and freedom. Thank you.

527. Statement by Member of the Indian Delegation to the UN Shatrughan Sinha on Agenda Item 68: Human Rights Council Report at the 61st session of the UN General Assembly.

Please See Document No. 593.
INDIA’S FOREIGN RELATIONS - 2006
SECTION - IX
(ii) DISARMAMENT
Blank
528. Statement by Permanent Representative to the Conference on Disarmament Ambassador Jayant Prasad on Nuclear Disarmament.

Mr. President, My delegation would like to congratulate you on your assumption of the presidency of the Conference on Disarmament and commend your many initiatives in seeking consensus on its programme of work. I wish you success in this mission and assure you of the fullest cooperation of my delegation.

We appreciate also your initiative to extend the established convention of the presidency troika to include all the incoming presidents for the 2006 CD session. Your idea to involve them in decision-making and to invite them to the presidential consultations will ensure continuity and consistency in presidential initiatives all through the year. The five incoming presidents also deserve credit for working closely with you in creatively exploring options for commencing substantive work in the Conference.

We are satisfied that the Conference adopted its traditional agenda, by consensus, at its very first meeting. This only reflects the belief of Member States that the existing agenda of the Conference is relevant, inclusive and flexible enough for dealing with issues that they regard as important for their national security, as also international peace and security.

Having adopted the agenda, now the primary task before the Conference is to reach agreement on a programme of work. India is willing to consider any initiative that could facilitate consensus on it. 42 successive presidencies, since 1999, have grappled with this challenge. We support your initiative to invite Member States to engage in a debate on the issues on the agenda of the Conference in the hope that our deliberations today, and in the coming days, will enable us to find the common ground to reach agreement.

The goal of nuclear disarmament has been on the international agenda ever since the first nuclear weapons were built and used. The international community has accorded the highest priority to this objective, as embodied in the 1978 Final Document of the First Special Session of the General Assembly devoted to disarmament. The goal of a nuclear-weapon free world remains as important today as it was then. Prime Minister Dr. Manmohan Singh, addressing the Indian Parliament in July last year,
stressed that nuclear disarmament remains a core concern of India's foreign policy. India is committed to a nuclear-weapon free world, to be realised in a systemic and progressive manner, through global, verifiable and non-discriminatory nuclear disarmament.

As an interim measure, until the achievement of the objective of universal nuclear disarmament, India continues to support the demand of non-nuclear weapon States for multilateral and legally binding security assurances. They have regarded the existing security assurances as conditional and not legally binding. There has been, however, little progress in realizing this demand.

India has always expressed its readiness to participate in the negotiations in the Conference on a multilateral, non-discriminatory and internationally and effectively verifiable fissile material cut-off treaty. This is the essence of the Shannon mandate, which embodied the spirit of 1993 General Assembly resolution on FMCT, co-sponsored by India and many other Member States. While conscious of the developments in this regard over the past year and a half, we continue to believe that this essence should remain the basis for any future work.

The peaceful applications of space technology have very much contributed to India's socio-economic development. India has created a growing infrastructure, including deployment of several satellites in space for communications and remote-sensing and for the utilisation of space technology and assets in space for such diverse sectors as agriculture, health, education, natural resource management and disaster management. India is, therefore, committed to the peaceful pursuit of space technology and to preserving outer space, a common heritage of the mankind, exclusively for peaceful uses. We share the concerns about the dangers of deployment of weapons in the outer space and believe that this will not be in our collective interest. We regard the Conference as the appropriate forum to deal with this issue.

The agenda of the Conference is comprehensive and enjoys the support of all the member States. Likewise, for any programme of work of the Conference to enjoy the support of all member States, it will have to take into account their concerns and priorities. India has also, for instance, sought to accommodate the growing convergence on the A-5 proposal, even though its mandate had departed from CD/1570, which proposed a negotiating mandate on nuclear disarmament. Though not fully satisfied with the A-5 proposal, India decided to support it in the hope that it could
become a basis for CD’s programme of work. India continues to support the proposal as it reflects, to a large extent, the priorities of most constituents of the Conference. In this context, India continues to fully subscribe to the statement made by G-21 last year.

The UN Secretary General has acknowledged, in his message to the Conference, that it is the lack of political will which has not allowed the Conference to reach consensus on a programme of work. As we have seen, procedural fixes and cosmetic changes in the existing proposals have failed to end the impasse. The underlying reasons behind the Conference’s deadlock have also impacted on other multilateral processes and forums, such as in the outcome document of the 2005 World Summit. This symptomises not just a procedural failure; it reflects the deep divergences in the security concerns, priorities and goals of Member States. It is, therefore, not surprising that we have not been successful in reaching consensus on CD’s programme of work.

We do not share the view that the current impasse signifies the failure of the Conference. As the sole multilateral disarmament negotiating body, the Conference has continuing relevance in today’s world. There is no alternative forum that brings together militarily significant States and that can engage in negotiations on issues that directly impact on international security. If there is a divergence of views on security concerns, the same absence of convergence among key States will also impede progress in any alternative process or mechanism.

Mr. President, India believes that we need to remain engaged in deliberations, since these are an essential prerequisite for success of any negotiating process. Your pragmatic proposal to undertake an exploration of agenda issues may be an instrument of distillation, leading to the enlargement of the common ground. As Mahatma Gandhi said, and I quote: “no principle exists without its application.” We must persevere in our efforts, but these should expressly be made for the purpose of establishing a programme of work. We are supporting the presidential initiative in the hope that discussions in the plenary meetings may lead to the commencement of substantive work in the Conference.
529. Statement by Permanent Representative to the Conference on Disarmament Jayant Prasad on nuclear disarmament.

Mr. President, My delegation is most happy to see you in the Chair. We would like to congratulate you, the four incoming Presidents, as also Ambassador Rapacki, for organising discussions on key issues on the agenda of the Conference. You shall have our full and earnest cooperation.

In my statement today I shall attempt to provide India’s assessment of the present situation in the field of nuclear disarmament and the way ahead to accomplish the goal of a nuclear-weapon free world. This is perhaps the most critical and difficult issue on the global disarmament agenda.

Efforts to address nuclear disarmament began as soon as nuclear weapons were first tested and used. Ever since, the international community has accorded the highest priority to the goal of the total elimination of nuclear weapons. The very first resolution of the UN General Assembly, Resolution 1(I) of 1946, adopted unanimously, sought the elimination of atomic weapons and all other major weapons adaptable to mass destruction from national armaments, and the use of atomic energy only for peaceful purposes.

The Final Document of the First Special Session of the General Assembly devoted to Disarmament in 1978 constitutes the basic terms of reference of the Conference on Disarmament. The agenda of the Conference, which we are in the process of addressing, derives from it. The Special Session accorded the highest priority to the goal of nuclear disarmament. It outlined concrete steps to achieve that objective. It affirmed that the ultimate goal was the complete elimination of nuclear weapons.

Some five years ago, the unanimously adopted UN Millennium Declaration reiterated the commitment of the Member States of the United Nations to strive for the elimination of weapons of mass destruction, in particular nuclear weapons, and to keep all options open for achieving this aim.

The objective factors for the increasing militarisation of international relations, a feature of the Cold War years, no longer exist. Yet, we are very
far from realising the goal of total elimination of nuclear weapons. India welcomes steps taken so far by the Russian Federation and the United States to reduce their nuclear weapons stockpiles, as also their means of delivery. India also welcomes the Russian Federation’s willingness to consider further reducing its stockpiles of nuclear weapons to levels lower than those specified in the Moscow Treaty. We hope the process of bilateral reductions will be further continued.

India shares the belief that the very existence of nuclear weapons, and of their possible use or threat of their use, poses a threat to humanity. India has remained committed to the goal of a nuclear-weapon-free world, to be achieved through global, verifiable and non-discriminatory nuclear disarmament. My delegation believes that there is no reason why nuclear weapons too, like biological weapons and chemical weapons, cannot be eliminated. The Conference successfully negotiated conventions to prohibit biological and chemical weapons and it has now to find practical ways of addressing the issue of nuclear disarmament in a comprehensive and non-discriminatory manner.

While India will continue to maintain a credible minimum nuclear deterrent, there is no dilution of India’s commitment to nuclear disarmament, which remains a core concern of India’s foreign policy. India continues to believe that the security of India and that of the entire world would be enhanced in a world free of nuclear weapons. Our position is based on the fact that India is not seeking a nuclear arms race with any other nuclear power. India’s nuclear doctrine is well defined and based on a posture of no-first use and non-use of nuclear weapons against non-nuclear-weapon States. Our doctrine also reaffirms India’s readiness to join multilateral negotiations for the reduction and elimination of nuclear weapons. India has continued to observe a moratorium on nuclear explosive tests. We are ready to participate in negotiations, in this Conference, on a non-discriminatory, multilateral and internationally and effectively verifiable treaty banning the production of fissile material for nuclear weapons or other nuclear explosive devices.

India attaches the highest priority to establishment of an Ad-Hoc Committee on Nuclear Disarmament. The Group of 21 proposed this almost a decade ago. It sought to commence negotiations on a phased programme of nuclear disarmament, for the eventual elimination of nuclear weapons within a specified framework of time. India, together with 27 other members of the Group, also put forward a proposal, in August 1996, for a programme
of action for the elimination of nuclear weapons, as contained in document CD 1419.

India’s preferred position has, thus, always been for negotiations on nuclear disarmament, as contained in documents CD 1570 and CD 1571. Nevertheless, India decided to support the Amorim proposal and the proposal of the Five Ambassadors, hoping that they could become a basis for consensus on a programme of work for the Conference. We recognize that given the current impasse, it may be unrealistic to expect consensus on a negotiating mandate for the Ad Hoc Committee on nuclear disarmament, but anything less than what is contained in the proposal of Five Ambassadors would not be acceptable to us.

India’s resolution in the General Assembly on a “Convention on the Prohibition of the use of Nuclear Weapons”, first presented in 1982, requests the Conference on Disarmament to commence negotiations for an international convention prohibiting the use or threat of use of nuclear weapons under any circumstances. The resolution reflects India’s belief that a multilateral, universal and binding agreement prohibiting the use or threat of use of nuclear weapons would contribute to the mitigation of the nuclear threat as an important interim measure. It would also help create the climate for negotiations leading to the elimination of nuclear weapons, thereby strengthening international peace and security.

Pending the total elimination of nuclear weapons, India accords high priority to the need for steps to be taken to reduce the risk of unintentional or accidental use of nuclear weapons. The Final Document of SSOD-I had recommended that, to ensure that mankind’s survival was not endangered, all States, in particular nuclear weapons States, should consider various proposals designed to secure the avoidance of the use of nuclear weapons and the prevention of nuclear war. The residual threats of accidental and unauthorized use of nuclear weapons can be addressed by moving towards a progressive de-alert of nuclear forces.

India’s resolution on “Reducing Nuclear Danger”, first presented in 1998, manifests our conviction that the hair-trigger posture of nuclear forces carries the unacceptable risk of unintentional or accidental use of nuclear weapon. This would have catastrophic consequences. The danger posed by the increased risk of nuclear weapons or its components falling into the hands of non-State actors or, in some cases, rogue actors within State structures, has further aggravated existing dangers. While unilateral, bilateral or plurilateral nuclear confidence building measures are useful,
our aim should be to reach international understanding or agreements for reducing nuclear danger, as also the risk of accidental nuclear war.

Any solution to end the impasse in the Conference on its programme of work must be responsive to the concerns of Member States of the Conference, big or small, developed or developing, nuclear-weapon States or non-nuclear-weapon States, within or outside alliances and privileged security relationships. It must address the security of all, for no State can imperil its security or allow other States to impose their will on it. The way out of the current impasse is for States to agree to deal with all core issues on the agenda of the Conference, as in the Five Ambassador’s proposal.

The lack of consensus on disarmament and non-proliferation paragraphs of 2005 World Summit Outcome underscores the fact that, currently, there are sharp differences among States over the goals, priorities and approaches in the field of disarmament. These differences cannot be set aside or ignored. Such differences can only be overcome by rising above the practice followed in the past century that sought to perpetuate the asymmetric advantage of a handful of countries at the expense of collective global security. Otherwise, our inability to deal with these fundamental questions would continue to frustrate us in various disarmament forums, whether it is the First Committee, the Conference on Disarmament or the Disarmament Commission.

A basic problem afflicting the disarmament institutions and processes is the lack of trust among States. This erosion of trust further begets the lack of willingness for mutual accommodation, making progress on nuclear disarmament even more difficult. We believe that this lack of trust also belied hopes for any consensus on disarmament and non-proliferation issues at the 2005 World Summit. The international security environment will be a key determinant in enabling realisation of progressive and systemic elimination of nuclear weapons. For any breakthrough, all States will need to sincerely engage in exchanges on their approaches to nuclear disarmament and understand and accommodate each other’s security concerns and threat perceptions. Trust can only be restored through a reaffirmation of the unequivocal commitment of all nuclear weapon States to the goal of the complete elimination of nuclear weapons.

A revalidation of this commitment, with further steps towards its progressive concretion, may be the right way to proceed. The goal of complete elimination of nuclear weapons, in a systemic and progressive
manner, will also be facilitated by reducing the salience of nuclear weapons in the security doctrines of nuclear-weapon States. Alignment of nuclear doctrines to a posture of no-first-use and non-use against non-nuclear-weapon States by all nuclear-weapon States will be an important step in achieving this objective. India is ready to enshrine its commitment to no-first-use and non-use of nuclear weapons against non-nuclear-weapon States in a legally binding agreement. We are also ready to multilateralise our no-first-use commitment so as to reduce the salience of nuclear weapons in the strategic realm. These measures should be within our grasp given the non-adversarial relations among major powers.

Mere tinkering with modalities or revisiting the divisive debates, especially those of the past year, is not going to help. What might is a renewed effort to create a system of global security based on the fundamental changes in the international political, economic and security environment, which could contribute to achieving the goal of total elimination of nuclear weapons. As mentioned before, for any measure of nuclear disarmament to be successful, it must be global and non-discriminatory and should enhance the security of all States. The continuing impasse in the Conference is out of tune with the aspirations of the international community, the growing democratic temper of the world, and the absolute imperative of development in an age of globalisation. That is why, Mr. President, we must persevere in our efforts in the Conference.

529-A.Statement by Permanent Representative to the Conference on Disarmament Jayant Prasad at the UN’s Disarmament Commission.

Please see Document No. 547.
530. Statement by Permanent Representative to the Conference on Disarmament Ambassador Jayant Prasad on the FMCT.

Mr. President,

1. My delegation congratulates you warmly on your assumption of the Presidency of the Conference and compliments you for efforts to organize structured and interactive deliberations on the issue of prohibition of the production of fissile material for nuclear-weapons or other nuclear explosive devices. You have our full cooperation in these efforts. We welcome Ambassador Tim Caughley in his new incarnation as the Deputy Secretary General of the Conference.

2. We would also like to take this opportunity to compliment your predecessor, Ambassador Park In-Kook, now Deputy Minister for Policy Planning and International Organizations of the Republic of Korea, for his leadership in organizing useful and productive discussions on the question of nuclear disarmament on which he made available a useful compilation of views. This, together with the verbatim records of our meetings, will provide a good source for reference. Our deliberations were useful in identifying a number of issues related to the goal of achieving a world free of nuclear weapons. Several delegations, including ours, believe there is a need to establish an ad-hoc committee of the Conference on nuclear disarmament.

3. We welcome the present discussion on FMCT. This is part of our larger effort to explore and expand the common ground for reaching consensus on the programme of work of the Conference.

4. India was one of the original proponents of an FMCT. The General Assembly, in its resolution 48/75L, co-sponsored by India, had expressed its unanimous conviction that a non-discriminatory, multilateral and internationally and effectively verifiable treaty banning the production of fissile material for nuclear weapons or other nuclear explosive devices would be a significant contribution to nuclear non-proliferation in all its aspects and had recommended the negotiation of such a treaty in the most appropriate international forum.

5. The Conference had tasked Ambassador Shannon of Canada, at
the beginning of its 1994 Session, with seeking the views of members on the most appropriate arrangement to negotiate such a treaty. Further progress was made when the Conference adopted, by consensus, his Report of 24th March 1995. He reported that delegations had agreed that the mandate for the Ad-hoc Committee to negotiate an FMCT should be based on Resolution 48/75L of the UN General Assembly. The mandate, contained in the Shannon Report, called upon the Conference to establish an Ad-Hoc Committee on a “ban on the production of fissile material for nuclear weapons or other nuclear explosive devices” and to direct the Ad-Hoc Committee to negotiate, for this purpose, a non-discriminatory, multilateral and internationally and effectively verifiable treaty.

6. The Shannon mandate clearly delineated the parameters for negotiating an FMCT. It also reflected the consensus within the international community over the basic goal of the Treaty, as embodied in the 1993 General Assembly resolution, and defined the character of the treaty that was to emerge from negotiations: it must be non-discriminatory, multilateral and internationally and effectively verifiable. The issue of verifiability of the treaty, as indeed any issues, could be raised during the negotiations. Since the principle of consensus would determine any outcome of these negotiations, delegations that have varying perspectives on different issues should be able to join negotiations on the basis of the existing mandate, as agreed in 1995, and again in 1998.

7. India continues to believe that any treaty banning the production of fissile material must be non-discriminatory: it must stipulate the same obligations and responsibilities for all States. While the nature, extent and mechanisms for verification shall no doubt be determined during the negotiations, we believe that an FMCT should incorporate a verification mechanism in order to provide the assurance that all States party to it are complying with their obligations under the Treaty. Full compliance by all States with their obligations under international instruments to which they are party is critical to the achievement of the goals envisaged in these instruments. When a State consents to adhere to an instrument, it wants to be assured that other States parties to that instrument are also complying with their obligations. Verification, which serves the dual purpose of detection and deterrence, provides that assurance. Absence of a verification mechanism may engender lack of confidence in compliance with
the treaty, encourage wilful non-compliance, and lead to allegations and counter-allegations of non-compliance.

8. As regards the scope of the Treaty, we should be guided by the General Assembly resolution of 1993, which expressed the conviction that FMCT would be a significant contribution to nuclear non-proliferation in all its aspects. An FMCT must be a treaty for banning the future production of fissile material for nuclear weapons or other nuclear explosive devices.

9. We do very much hope that our deliberations on the subject during this week, and later on the remaining agenda issues, will contribute to reaching an understanding on CD’s programme of work.

The next day on May 18 Indian Representative again took the floor and made the following observation:

“I would like to recall my statement yesterday, when I had outlined India’s basic approach on the issue of prohibition of the production of fissile material for nuclear weapons or other explosive devises.

In the discussions over the past three days, several proposals have been put forward in the Conference to advance our work on FMCT. The United States has presented its initiative earlier today. We hope that further discussion on these ideas and suggestions will help us collectively to move towards a consensus.”
531. Statement by Permanent Representative to the Conference on Disarmament Ambassador Jayant Prasad on Prevention of an Arms Race in Outer Space.

Mr. President,

1. My delegation would like to congratulate you warmly on your assumption of the Presidency of the Conference on Disarmament. We commend your efforts in organising structured discussions on the prevention of an arms race in outer space (PAROS) and look forward to actively participating in them. You have our full and earnest cooperation in support of your endeavours. We would also like to take this opportunity to express our appreciation to Ambassador Costea of Romania for the productive discussions on a Fissile Material Cut-Off Treaty held last month.

2. Speaking to a university audience through a multi-media teleconference just last week, on 31st May 2006, the President of India, Dr. A.P.J. Abdul Kalam, a well-known space scientist, evoked the vision of creating “wealth and prosperity in the Global Knowledge Village.” Three years earlier, addressing the ‘Space Summit’ of the Indian Science Congress he had cautioned: “we must recognise the necessity for world’s space community to avoid terrestrial geo-political conflict to be drawn into outer space, thus threatening the space assets belonging to all mankind”.

3. The importance of the peaceful applications of space technologies for all countries was strongly underlined in the Conference organized by the United Nations Institute for Disarmament Research (UNIDIR) on 30–31 March 2006 on ‘Building the Architecture for Sustainable Space Security.’ A representative of Indian Space Research Organization (ISRO) made a presentation at that Conference on how India has been harnessing space-based assets for its social and economic development.

4. India has placed satellites in outer space for establishing global connectivity, eradicating illiteracy, providing health security, improving navigation and meteorological services, optimising management of natural resources and the environment, and coping with natural disasters. A more recent application has been the setting up, across
India, of Village Resource Centres as a single-window delivery mechanism for a variety of space-enabled services, including tele-education, tele-medicine and interactive advisories on land and water management.

5. There has, thus, been a dramatic acceleration, in recent years, in the peaceful uses of outer space and in international cooperation for this purpose. So also has there been an increased potential, in particular for the developing countries, to leapfrog and become full participants in the technology-based global economy of the twenty-first century. India, for instance, has in the past year signed agreements with the Russian Federation and the European Union for cooperation in their GLONASS and Galileo programmes, respectively, and ISRO’s Chandrayaan mission to moon in 2008 will carry lunar surface mapping instruments from Bulgaria, the European Space Agency and NASA. A connectivity mission between India and the countries of the African Union is also being pursued to provide both communication links and a range of space-enabled development oriented services.

6. Given our increasing efforts to use outer space for developmental purposes and the all-pervasive application of space technology for almost every aspect of modern life, my delegation would like to emphasize the importance of the security of assets based in outer space and the enormously harmful consequences of any threat to them. We, therefore, strongly support the quest to upgrade the present international legal framework for regulating space activities, set at the relative infancy of the development of space technology, and to strengthen the existing space law for the peaceful use and exploration of outer space. The placement of weapons in outer space may herald a new arms race and disrupt the peaceful uses of outer space. The respect for the safety and security of space assets and capabilities of all countries is a prerequisite for ensuring the continued flow of space-enabled services to all countries, including to developing countries. We hope that our work in the Conference will contribute to this goal.

7. Soon after the launch of the Sputnik in 1957, and notwithstanding the competition of the Cold War, the international community embraced the idea of the use of outer space exclusively for peaceful and scientific pursuits. This became the accepted global norm the
very first time the United Nations General Assembly considered the ‘Questions of the Peaceful Use of Outer Space’ in 1958 and encapsulated it in its resolution 1348(XIII). Conscious that space exploration had opened new possibilities for the improvement of life of humankind, it also created the Ad-hoc Committee on the Peaceful Uses of Outer Space (COPUOS) to harness outer space activities for cooperative mutual gain.

8. COPUOS has since developed five outer space-related treaties, including the Outer Space Treaty, which constitutes the cornerstone of the international legal framework for the peaceful application of outer space. Its four core principles are that the exploration and use of outer space shall be carried out ‘for the benefit and interest of all countries;’ that outer space will be ‘the province of all mankind;’ that outer space shall be ‘free for exploration and use by all countries;’ and that parties of the Treaty ‘undertake not to place in orbit around the earth any object carrying nuclear weapons or any other weapons of mass destruction.’ The Final Document of the First Special Session of the UN General Assembly devoted to Disarmament (SSOD-I) had stipulated that, in accordance with the spirit of the Outer Space Treaty, further measures should be taken and international negotiations held “in order to prevent an arms race in outer space.” We look upon our current activity in the Conference as a step towards attaining that objective.

9. The issue of the prevention of an arms race in outer space has been on the agenda of this Conference since 1982 and an Ad-hoc Committee on PAROS functioned for a decade since 1985. The Committee was engaged in examining, as a first step at that stage, through substantive and general consideration, issues relevant to the prevention of an arms race in outer space. The issue remains as relevant today, if not more, as it was then.

10. India supports the establishment of an Ad-hoc Committee of the Conference to deal with the issue of PAROS as outlined in the A-5 proposal. We believe that it provides a good basis for commencing our work on PAROS, which India stands ready to join.

11. We welcome the initiative of China and that of your delegation in presenting working papers and non-papers dealing with various aspects of the issue before us. They are most useful in enabling a better understanding of the different dimensions of outer space
security. We compliment those delegations that have invited their experts to join in our deliberations. Their contribution would enrich our debate and enable us to fully appreciate the technical and legal aspects of the challenge we face today.

Mr. President,

12. My delegation’s approach to a programme of work of the Conference has been consistent: any solution to end the current impasse must be responsive to the security concerns of all the constituents of the Conference. We do, therefore, very much hope that our deliberations on PAROS during this week and structured discussions on the other remaining issues on the agenda of the Conference will pave the way for reaching a consensus allowing the Conference to begin its substantive work, which is its principal vocation and raison d’être.

Mr. President, We are most happy to join other delegations in congratulating you on your assumption of the Presidency of the 3rd CCW Review Conference. We are confident that the Conference will have a successful outcome under your leadership, of which we have had ample evidence in various disarmament forums. We would also like to felicitate other members of the Bureau on their election. India has shouldered responsibilities entrusted to it to nurture the CCW processes, including its Presidency in 2002-2003, when Protocol V on Explosive Remnants of War was negotiated and concluded, and later, the coordination of the Working Group on ERW. In this context, I am grateful to the Non-aligned Group and all the States Parties for nominating and endorsing me as chair of the Drafting Committee of this Conference.

The CCW Convention embodies the principle that the right of the parties to an armed conflict to choose the methods or means of warfare is not unlimited. It prohibits the employment, in armed conflicts, of weapons, projectiles and materials and methods of warfare of a nature that cause superfluous injury or unnecessary suffering. The Convention and its Annexed Protocols, while stipulating measures to mitigate humanitarian concerns arising from the use of specific weapons and weapon systems, also take into account their military necessity and strike a balance between the two. The Convention has evolved and demonstrated its relevance through the successive adoption of five Protocols addressing humanitarian concerns arising from the use of specific weapons and munitions. The entry into force of the amendment to Article I of the Convention has extended the scope of application of the Convention both to external and internal conflicts.
India is wholly committed to the CCW Convention and the humanitarian principles that it embodies. We have ratified all five Protocols annexed to it, as also the amendment to Article I of the Convention. We have taken the necessary steps to fully implement our obligations under Amended Protocol II. We are equally committed to taking all requisite measures to implement other protocols, including Protocol V on ERW.

Today, the CCW Convention has 100 adherents. It is of utmost importance that the States that are not party to it are encouraged to join the Convention and the Protocols annexed to it. India supports the adoption of the proposed Plan of Action to promote universality of the CCW.

Since participation by States Parties in CCW-related meetings demonstrates their commitment to the Convention, those States Parties that are unable to do so due to financial constraints should be provided requisite assistance. The Review Conference will have before it a draft decision on the establishment of sponsorship programme, which we support.

India believes that States Parties are primarily responsible for the full and effective implementation of their obligations under the Convention and the Protocols to which they are bound. We are satisfied that there have been no instances of non-compliance so far. The importance of a mechanism to ensure compliance is self-evident and we have been actively engaged in the consultations on evolving such a mechanism. In view of likely procedural and legal obstacles related to amending the Convention to do so, we support your proposal for a decision by the Conference on the future compliance mechanism. We would like to thank the successive Chairmen of meetings of States Parties, as also Ambassador Markotic of Croatia in his present capacity as a Friend of the Chair for the efforts made in this direction. We hope the Review Conference will reach consensus on the proposed draft decision. It is our understanding of paragraph 1 of Part II of the draft decision on compliance that the High Contracting Parties are required to take all appropriate steps to meet their obligations under the Convention and its Protocols, including legislative and other measures, only wherever necessary.

The entry into force of Protocol V on ERW, within a few days, will be a landmark development in fulfilling the basic objectives of the CCW Convention. India is among the 25 States that have notified the UN Secretary General of their consent to be bound by Protocol V. We look forward to the special plenary meeting to mark the occasion of its entry into force. We are happy that the Conference will issue a Declaration to mark this occasion, which emphasizes the determination of States Parties to address the
humanitarian, developmental and environmental impact of ERW and to reinforce international cooperation and assistance on the issues related to the implementation of Protocol V.

This Protocol stipulates post-conflict remedial measures, including clearance, removal or destruction of ERW. Significantly, it recognizes the right of the High Contracting Parties to seek and receive assistance and requires them to provide assistance in dealing with the problems posed by existing ERW. Article 9 of the Protocol encourages the High Contracting Parties to take generic preventive measures aimed at minimizing the occurrence of ERW, including those referred to in Part 3 of the Technical Annex. We are confident that, when fully and effectively implemented, Protocol V would go a long way towards mitigating the humanitarian concerns associated with ERW. We call upon all States that have already acceded to Protocol V to fully implement it and encourage all other States to join it.

Since the adoption of Protocol V in November 2003, the Working Group on ERW continued its work in two areas related to ERW: consideration of the implementation of existing principles of IHL and possible preventive technical measures aimed at improving the design of certain specific types of munitions, including sub-munitions, with a view to minimizing the humanitarian risks of these munitions becoming ERW.

Discussions in the Group, and the responses of States Parties to the questionnaire on the national implementation of existing IHL principles presented by a group of like-minded States, amply demonstrated that Parties to CCW take their IHL obligations seriously. We appreciate, in this regard, the analytical report of Prof. Tim McCormack, which has identified shortcomings and outlined various steps to promote further implementation of international humanitarian law in the context of explosive remnants of war. We believe States Parties will benefit from this process and will be encouraged to take further measures, as necessary, to meet their IHL obligations.

The CCW process is primarily concerned with the application of existing IHL principles for regulating the use of specific types of weapons, weapon systems and munitions in order to mitigate the humanitarian risks associated with their use. While we should continue to encourage the States Parties to fully meet their IHL obligations within the CCW framework, the proposals for elaborating and developing existing IHL principles and promoting their implementation would be best addressed through the mechanisms available under the Geneva Conventions and its Additional Protocols.
The meetings of military and technical experts on preventive technical measures have carried out useful work on establishing criteria for identifying specific munitions, including sub-munitions, which pose a greater humanitarian risk. They have also considered measures, including improvements in design, to enhance the reliability of these munitions.

They should be given further opportunity to conclude their work. Since Part 3 of the Technical Annex to Protocol V outlines generic preventive measures pertaining to entire life cycle of munitions, the mandate of the experts should remain focused on identifying preventive technical measures related to the design of munitions.

The Working Group on Mines other than Anti-Personnel Mines has made significant progress in evolving outline of a future protocol to regulate the use of MOTAPM without, however, finding common ground on the key issues of detectability and active life span. We hope States Parties will demonstrate flexibility in order to reach consensus on the remaining issues enabling us to adopt a legally binding protocol on MOTAPM that would maintain the balance between humanitarian concerns and the military utility of these weapons. Having carefully considered the three options outlined in the Coordinator’s Paper, we do not consider it appropriate to allow States to adhere to only a part of, and not all of the obligations contained in a future instrument. This may not be conducive to fully addressing the humanitarian concerns arising from the use of MOTAPM. Our preference, therefore, is for a legally binding instrument with uniformly applicable obligations.

We look forward to a comprehensive review of the scope and operation of the Convention and the Protocols annexed to it. We now have the opportunity to consider the various proposals on the table of the Conference. My delegation will adopt a constructive and flexible approach in so doing.

I would like, finally, to record our appreciation for the active participation of the International Committee of the Red Cross and non-governmental organizations within the CCW process. This has enriched our work and contributed very much to our understanding of the issues. We appreciate their most useful and constructive role and hope to see them involved with the same energy and enthusiasm in our future activities.

I thank you, Mr. President.
INDIA’S FOREIGN RELATIONS - 2006
SECTION - X
INDIA AT THE UN
533. Statement by Permanent Representative to the Conference on Disarmament Jayant Prasad at the Preparatory Committee for the Conference to Review Progress made in the Implementation of the UN Programme of Action to Prevent, Combat and Eradicate Illicit Trade in Small Arms and Light Weapons in all its Aspects.

Mr. Chairman,

My delegation is most content to see you in the chair of the Preparatory Committee for the 2006 Conference to review progress made in the implementation of the UN Programme of Action to Prevent, Combat and Eradicate the Illicit Trade in Small Arms and Light Weapons in all its Aspects. You have our fullest support in your efforts to make a success of this meeting.

Your initiative in undertaking prior consultations with Member States has helped in gaining greater clarity on the key questions that we require to address. Our deliberations, both here and at the Review Conference, should catalyze fresh thoughts on how to implement the Programme of Action more effectively. In this connection, we would like to express our appreciation for the important contribution that some organizations and institutions have made towards enhancing our understanding of the core issues before us, especially the UNDP and UNIDIR, as well as civil society organizations like the Geneva Forum, Small Arms Survey and IANSA. We have come better prepared to the review process, thanks to their efforts.

In this process, our singular focus will be to assess the progress made in the implementation of the Programme of Action. The Review Conference presents the international community with its first opportunity to strengthen it. It can do so by appraising its implementation and deriving lessons on more effective ways to address the serious challenges posed by the illicit trade in and easy availability of small arms and light weapons through practical actions and mechanisms.

The 2001 Conference was a landmark event. It succeeded in according centrality to the issue of illicit small arms and light weapons on the international security agenda. The Programme of Action, adopted unanimously, marked a significant step forward in committing States to developing and strengthening agreed norms and measures to reinforce
their efforts in addressing the proliferation of illicit trade in small arms and light weapons. It reflects the sense of a shared commitment to a clearly enunciated goal. The need now is to implement it fully in a truly collaborative framework. This in turn requires greater cooperative efforts by all stakeholders, beginning with governments, and including civil society, non-governmental organizations, voluntary agencies and regional and UN-related inter-governmental bodies. India is ready to continue its engagement in these efforts.

As we begin to prepare ourselves to assess national, regional and global implementation of the Programme of Action, it is well worth reminding ourselves of the devastating impact of the proliferation of illicit trade in small arms and light weapons. It continues to gravely endanger the security of States and communities.

Use of small arms and light weapons by non-State actors continues to threaten global peace, disrupt social harmony, destabilize political systems and hamper development. The ready availability of illicit weapons fosters organized crime, drug trafficking, and illegal exploitation of natural resources and promotes violence, insurgency, and terrorism. India believes that efforts to combat and eradicate illicit trade in small arms and light weapons will contribute to the global efforts to combat terrorism and other organized crime.

India’s full and effective implementation of the Programme of Action encompasses legal and administrative mechanisms for effective control and regulation of such weapons. They cover all aspects of their lawful possession, manufacture, sale, transport, stockpile management, transfer and export and import of arms and ammunitions. India follows a strict policy regarding exports that includes the requirement for end user certificates on a government to government basis and a ban on exports to countries under UN arms embargo.

**Mr. Chairman,**

In sharp contrast to mainstream disarmament efforts, the international community has made welcome, even if modest progress in addressing illicit trade in small arms and light weapons. We succeeded last year in reaching consensus on an international instrument to enable States to mark all small arms and light weapons, and to identify and trace illicit ones in a timely and reliable manner. Even though our preference was for a legally binding instrument, we joined the consensus, as did all
Member States, since the instrument enjoins new commitments on States on marking and cooperating with other States in tracing. This significant achievement reflects our common commitment to achieve the objectives enshrined in the Programme of Action. What is required now is an early and full implementation of the instrument. India had the privilege of chairing the Group of Governmental Experts on small arms, which provided the foundation for subsequent negotiations.

As regards illicit brokering, the General Assembly Resolutions 59/86 and 60/81 contain the parameters of further action. The Group of Governmental Experts, mandated by the resolutions, will consider further steps to enhance international cooperation on illicit brokering, which the Secretary General has been requested to appoint no later than 2007.

The Firearms Protocol of 2001 complements the Programme of Action. Despite a slow ratification process, the Protocol entered into force in July last year. We consider this significant since the Protocol is the first global, legally-binding measure addressing international small arms supply.

Mr. Chairman,

As for sequencing of issues to be taken up at the Review Conference, this should follow the structure of the Programme of Action. The 2001 document does not preclude the consideration of a wide range of issues, including those on which convergence was not achieved at that time. Since its adoption, the international community has become even more sensitized to the threat posed by terrorism. It should now be ready to express its firm commitment to prohibiting the supply of weapons to non-State actors. We would like the Review Conference to strengthen the Programme of Action by including measures that could deny terrorists access to small arms and light weapons, such as a commitment by States that the trade in these weapons would be channeled only through government authorized agents and by bringing in greater transparency in its trade.

On the future organization of work, we require some rationalization, perhaps through greater synchronicity of reporting and the scheduling of future Biennial Meetings and Review Conferences. Together with the Netherlands and South Africa, our delegation had presented a paper on this subject at the 2nd Biennial Meeting of Member States last July. We could consider this matter in the course of the thematic debate.
By far the most important task of the Review Conference is to oversee the implementation of the Programme of Action and draw lessons from it on how to do better. This would include not only actions that Member States could take nationally but also assistance efforts that could be taken by them for other States. The Biennial Meeting of States in July 2005 had provided testimony from a number of practitioners involved in small arms-related ground-level activity. In the process, they had also outlined some of the challenges that had come their way. The Review Conference should be an occasion to see what we could do to make available assistance through bilateral, regional and international cooperation. Also, the thematic debate on various aspects of the illicit trade could be useful in better understanding their relevance to the core concerns addressed by the Programme of Action.

The small arms process and, through that, multilateral diplomacy can take justifiable credit for, first, identifying the issues, and then, embracing a realistic and achievable framework to resolve them in the form of the Programme of Action. We need to carefully nurture the collective, coherent, cooperative and committed approach that has emerged as the hallmark of the Programme of Action and the small arms process. There is considerable goodwill among UN Member States on these and the convergence amongst them, which has a humanitarian impulse, should not be wasted. Every effort should, therefore, be made to maintain our discussions on a practical and functional track so that these are not distracted by consideration of issues which are being discussed in other more appropriate forums.

We are convinced that a forward looking, flexible and converging approach will take the Programme of Action further in realizing its objective of eradicating the menace of illicit trafficking in small arms and light weapons. With that end in view, let us turn the review process into an opportunity to consolidate our achievements of the last five years and set actionable goals for the next phase of the small arms process.
Mr. Chairman,

I would like to once again commend Ambassador Kumalo and you for the excellent draft before us. As requested by you, I will restrict myself solely to commenting on the text in the draft document [Rev.2 version] of 19 December 2005 that is not in bold type or within brackets.

As regards the preambular paragraphs, there are some minor changes that I would have liked to suggest. However, at this advanced stage of our consideration of this draft there is not much point in unnecessarily quibbling over words. Accordingly, my delegation would be willing to accept the preambular part as it is. After all, it is only exhortatory in nature.

Turning to Operative Para 1, our position has been that there is no need for a reference to a review of the status of the Human Rights Council by the General Assembly within five years. We would thus have certainly preferred if the second sentence of OP1 be deleted.

Nevertheless, if it is to be retained, we believe that we must be open-minded about the proposed assessment that will take place in five years. It should be carried out without pre-judging its outcome. In the circumstances, we accept that your draft, Rev.2, covers the middle ground and is thus fairly well balanced. Accordingly, we will support OP1 being retained as it is and would suggest to you not to change its text.

We have no comments to offer on Operative Paragraphs 2, 3 and 4. As regards Operative Para 5 (b), we would prefer retention of the reference to global thematic review, even though several delegations have objected to it. Nevertheless, we would not insist on our position.

As regards Operative Para 5 (e), we support the concept of universal periodic review and would like to enhance the cooperative nature of the universal periodic review mechanism. We would also support the amendment proposed by USA that such an assessment be “based on objective and reliable information”.

We would also like to join delegations like Argentina and Singapore in supporting the deletion of the last sentence of Operative Para 5(e). It would be for the Human Rights Council to take the appropriate decisions on how to proceed after a review has been conducted. Accordingly, it is for that body to work out subsequent modalities. Let us not circumscribe the choice before the Council to the presentation of a Chairman’s summary. As regards Operative Para 5(f), we would agree with the African Group, CARRICOM and others who have sought its deletion. Our reasons are, however, somewhat different. We are of the view that Operative Para 2 covers promotion of human rights, while Operative Para 3 addresses prevention of human rights violation. Thus, the idea contained in Operative Para 5(f) is already incorporated in Operative Para 3. Moreover, the wording of Operative Para 5(f) is unclear.

After all, why are we being asked to contribute “towards” prevention of human rights prevention, rather than to contribute “to” their prevention? Perhaps the reason is because prevention of human rights violations are a responsibility that essentially devolves on Governments and is to be carried out by them within national jurisdiction. There is little, if anything, that can be done multilaterally and thus not much merit in retaining a text that is unclear. Therefore, we would favour OP 5(f) being dropped.

Turning to the proposal by USA to include a reference in OP 5(f) relating to responding to emergencies. We have no problem with the suggestion and perhaps a separate sub paragraph might address it, if there is a majority view in its favour.

As regards Operative Para 5(k), the term “United Nations system” at its end is rather ambiguous. Operative Para 1 makes it clear that the Human Rights Council will be a subsidiary organ of the UNGA. Therefore, the link between the Human Rights Council and the UNGA has to be umbilical, like between a mother and her child. All other linkages, including with the UN Security Council, should not follow an automatic route, but be via the UNGA. Accordingly, we would like to propose that the words “to the UNGA, and through the UNGA to the rest of” be inserted before the words “the United Nations system” at the end of OP5(k). Mr. Chairman, the electoral system of the new Human Rights Council must better ensure that states that are elected to it are there to protect and promote human rights, rather than be there in order to shield themselves from criticism or scrutiny. Therefore, we accept that the text we are drafting should somehow take into account the human rights record of states while electing them. But this
should not be done via incorporating wording as contained in Operative Para 8 and Operative Para 9. After all, as regards OP 8, being guided by the highest standards of human rights is something that should be relevant for all UNGA members, rather than merely being restricted to members that are being elected to the Human Rights Council.

As regards Operative Para 9, if Human Rights Council membership will be for three years, as is presently envisaged in OP 10, then during the three year term every country would presumably be looked at through the prism of the universal periodic review mechanism. If so, it would be irrelevant whether a country is a member or is not a member of the Human Rights Council. If a country’s turn for periodic review comes after three years, then we need to revisit the entire proposal as we will be looking at violations in a somewhat historical context rather than a contemporary one. For these reasons, we believe that both OP 8 and OP 9 are not necessary. Nevertheless, we can live with both of them if it helps us reach a consensus or makes the entire text more palatable for some delegation or delegations.

Turning to Operative Para 11, I would like to raise a point not made by any other delegation, but which I believe is of relevance. This pertains to the phrases “not fewer” and “no less than” contained in the second and third lines of OP 11. It would be useful to have some degree of certainty about the duration and timings of meetings of the proposed Council. This would be best achieved by a cap on the maximum number of meetings and their duration. Doing so would provide clarity and certainty, including from the budgetary angle. We have no problem as regards the meeting lasting for six weeks, eight weeks or ten weeks.

However, we would certainly like to know in advance precisely how long each session will last and how many times we will meet annually, rather than stating that we would meet not fewer than four times per year. This would also help us know how many times delegates from our capitals would have to visit Geneva and would allow us to plan travel and make appropriate budgetary allocations. We would suggest for your consideration that the phrases “not fewer” and “no less than” contained in OP 11 be deleted.

As regards the convening of special meetings of the Human Rights Council, our preference is that these takes place at the request of a member of the Council with the support of half its membership. Nevertheless, we are willing to accept that it take place with the support of one third of the Council membership.
However, we would prefer that the words “or its Chair with the agreement of the Bureau, or the Secretary-General” at the end of Operative Para 11 be dropped. The Human Rights Council is intended to be an intergovernmental body and decisions to convene it in a special session should correctly be taken by and amongst Governments that are its members.

As regards Operative Para 12, we would tend to agree with Norway that till such time as the Human Rights Council agrees on new procedures, the present procedures should apply and be carried forward. This pertains to participation in the Council by Non-Governmental Organisations and others.

Thank you Mr. Chairman.

535. Statement by Permanent Representative at the UN Ambassador Nirupam Sen on Review of Mandates at the Informal Plenary Meeting on Secretariat and Management Reform.

We thank the Co-Chairs for organizing these informal consultations. This gives us a timely opportunity to convey our views and to address some concerns regarding the listing of mandates that the SG is presently preparing. The template of the document that will be submitted to the General Assembly and which was circulated by you also provides a useful point of reference to focus our discussion.

We strongly support the statement made by South Africa which forcefully and with clarity summarizes the position.

We are encouraged by the guiding principal, particularly relevant for the mandate review, which the Co-Chairs laid down at the first informal plenary meeting on Secretariat and Management Reform on December 6, 2005.

The Co-Chairs had then stated that this is not a cost-cutting exercise, but rather a review that takes into account the political and intergovernmental nature of the United Nations, its purpose and proceedings and that above all, the United Nations is not a commercial operation.
One delegation has stated that the UN has to compete with other bodies in carrying out its work. The United Nations as the only universal inter-governmental body has a unique legitimacy that has been proven time and time again.

Therefore, we do not believe that the UN has to compete with any other body. Rather, all other international bodies and organizations have to work in cooperation with the UN and under its leadership. This matter is also operationally important. For instance, the Bretton Woods Institutions have strayed far from their original mandate (when they were set up) to encourage Keynesian demand management policies to promote full employment. This is still the Charter mandate of ECOSOC. Moreover, globalization and liberalization have frequently, in some developing countries (notably in sub-Saharan Africa) increased unemployment and income disparities. It is therefore extremely important for UN to set the international agenda and provide leadership. Hence we cannot accept the argument that the UN should leave such matters to other organizations that allegedly can do better.

In accordance with the World Summit Outcome embodied in Resolution 60/1, the timeline that has been set by the collective membership is that the GA and the other organs should complete and take the necessary decisions arising from the mandate review during 2006. This is a complex exercise involving all the principal organs of the UN and extending to every area of its work. It would require detailed consideration and discussion among Member States if it is to really achieve its stated objective, which is to “to strengthen and update the programme of work of the United Nations so that it responds to the contemporary requirements of Member States”.

We welcome the fact that the Secretariat has proceeded with a sense of urgency in this complex task. However, a mere listing of mandates is not enough. The information has to be presented in a form that the membership is able to analyze and absorb. The Secretariat had stated at our meeting on December 14 last year that the information would be organized in such a way as to facilitate the review of mandates by Member States. In our view, it is essential that the information and observations of the Secretary General be presented in a manner that makes it possible to sort the information in terms of the following criteria:

- The organ that is to undertake the review of each mandate.
- Categorization in terms of the broad purposes of the Organisation.
Rather than in terms of thematic clusters as has been suggested by the Secretariat, this could be in terms of the agreed priorities of the Organisation such as development, human rights, peace and security etc.

Whether it is a general mandate or relates to a region or a particular Member State or States.

Whether it is older than five years and reaffirmed subsequently, or it has not been reaffirmed or if it is a new mandate.

In order to be usable, such a presentation has to also be made available in an electronic format that permits sorting on the basis of each of the above criteria to facilitate analysis and informed consideration. This would be especially useful for smaller delegations. An illustration of this would be that if the General Assembly wishes to review the number of reports it is requesting from the Secretariat on the issue of social development, it should be possible, by searching electronically, to extract the number of reports on social development that have been requested by the GA, ECOSOC and ECOSOC’s subsidiary machinery.

In addition to the information corresponding to each mandate that has been indicated in the template that the Co-Chairs have kindly circulated, the template should also include information on:

- The intergovernmental body that originated the mandate (it could be a principal organ or a subsidiary body, since many mandates owe their origin to subsidiary bodies)
- The intergovernmental body that is responsible for overseeing the mandate
- Whether the mandate is currently being implemented and if not the reasons for non-implementation.
- Linkage to other mandates, if applicable.

The Secretariat should bring out clearly in explanatory notes to each mandate exactly what each mandate seeks to accomplish and how it is being implemented. If there has been any shortfall in implementation, the reasons for such shortfall whether they be lack of adequate resources for implementation, whether a mandate has been overtaken by a subsequent mandate, or any other reason should be clearly indicated.
We do not see the logic of the argument that there are only five weeks till the deadline and hence the information to be provided may not be comprehensive or detailed as possible. This is a deadline that seems to have been set by the Secretariat. The General Assembly has never called for any such deadline. As stated earlier, the Outcome Document states that this review be conducted in 2006. We were looking forward to the report in end-February. However, if the report is to be incomplete or inaccurate as a consequence of the rush to complete the job, we would rather wait until the Secretariat can assure us of a good report.

Here, I would like to make a brief comment on how the rush to complete against a deadline creates problems as seen in the case of the Peace Building Commission. We will be condemned to repeat history if we do not learn lessons from that. In the discussions on the Organizational Committee of the Peace Building Commission, we have seen the problems created by the Resolutions. In Hegel’s phrase, in the case of the Peace Building Commission it was a tragedy, in the case of the mandate review it may be a farce: we should avoid such an outcome.

On programmatic shifts, such an exercise would only be possible after Member States have determined which mandates can be discontinued and hence what resources can be released. This is a subsequent process which will follow this exercise. In any case, that is for Member States to determine and not for the Secretariat to undertake. In both conceptual and practical terms, we cannot put the cart before the horse.

Administrative mandates should not be subject to this exercise as that would complicate the process relating to the review of policies, rules and regulations that is the subject of another report which will be considered by the ACABQ and the Fifth Committee.

On the issue of indicating in the template the budgetary implications of each mandate, this is neither practicable nor desirable. It is not practicable for the reason that the budget of the United Nations is allocated among programmes and sub-programmes, each of which are tasked with implementing dozens or even scores of mandates. There is no way of disaggregating resources allocated to a sub-programme among the many mandates that it seeks to implement. The Secretariat cannot be expected to indulge in such a fruitless exercise.

Nor is this exercise desirable. Mandates have to be considered on their intrinsic merit and based on the value that Member States attach to
their continuance, not on the basis of costs associated with them. It is only once the review has been undertaken that the Secretariat can be tasked with identifying the resources that could be freed from the discontinuance of identified mandates.

One delegation has stated that if the budgetary implications of each mandate cannot be indicated, the number of work days involved could be used. It may be satisfactory but is certainly ironic that we are shifting from the monetary to the Marxist concept of labour time.

However, from a practical point of view, we do not see how this would be feasible.

Some have advocated that by indicating resource allocations against each mandate, Member States would be able to determine whether they receive value for money. The question is of course, value for whom. We should not lose sight of the fact that the Organisation exists for the good of its collective membership. It goes without saying that the Organisation’s programme of work has to be based on what the vast majority of its membership considers to be of value.

This brings me to my final point which is that above all, the process of mandate review has to be a democratic one whereby the continuation or otherwise of mandates is determined by the majority of the membership of the Organisation. This would ensure that such a review is based on the value that the larger membership of this Organisation attaches to its work rather than on any monetary cost that some Member States may like to weigh. Since a few cannot determine what is of value to the many, consequently the results of the review have to be determined through the normal democratic process where every Member State has an equal say.

I thank you, Mr. Co-Chair.
Mr. Chairman, like other delegations, we look forward to the informal consultations of the UNGA plenary to be held on February 6, when more detailed comments would be offered. Nevertheless, like others, let me also make some preliminary comments on the revised text that you have just given us.

First of all, I would like to thank you for following an open, inclusive and transparent process involving everyone. I would also like to compliment you on the balanced, fair and reasonable proposal that you have placed before us. We may all be wedded to our positions, but a time comes to move ahead. I think that time for negotiations and give and take is upon us now.

Mr. Chairman, we have noted how you have introduced in the preambular portion the principle of equal rights and self-determination of peoples, which was referred to by many delegations during our last meeting. It has been done by placing in Preambular Paragraph 1 wording relating to “respect for principle of equal rights and self-determination of peoples” that has been taken from Article 1 paragraph 2 of the UN Charter. It is the most non-controversial wording that could be found on the subject and we can certainly accept it and would like to encourage others to do the same.

There had been concern voiced earlier over language that appeared to by-pass national governments by providing benefits of international cooperation directly to rights holders. This has now been taken into account in Preambular Paragraph 9, which has been modified to indicate that the promotion and protection of human rights should be ‘... aimed at strengthening the capacity of Member States to comply with their human rights obligations’ for the benefit of rights holders.

Mr. Chairman, as regards OP 5(e) about undertaking a universal periodic review, every delegation that spoke on the previous occasion had supported the inclusion of “based on objective and reliable information” in line 1. We are grateful to you for now reflecting those words in our text. The sentence at the end, stating that ‘Conclusions of the review shall be
presented in a Chair’s summary’, has also been dropped as several delegations, including mine, had felt that we should not circumscribe the manner in which we could present any conclusions that may be reached. Thank you for dropping it too.

In OP 5(f), the language on the new Human Rights Council “contributing towards the prevention of human rights violations” has been re-shaped by including the words ‘through dialogue and cooperation’ in the first line. While it would have been preferable that the sub-para be deleted entirely, this modification at least partly meets a concern voiced by many delegations. It is also noted that new language has also been proposed at the end of the sub-para, namely, that the Human Rights Council ‘respond promptly to deteriorating human rights situations’. In that phrase the usage of the term “deteriorating” is unclear and you may like to consider modifying it suitably, by circumscribing it somewhat.

As regards the text of OP 5(i), it has been shortened by deleting ‘… to Member States and the United Nations system’ towards its end. We welcome this, but would have also liked there to be an explicit reference to recommendations being made to the UNGA and only through it to others. That would have been appropriate and is an amendment that we had formally supported. However, if overall agreement demands that we not insist on our position, then we will not do so. After all, we have all accepted in OP1 that the Human Rights Council will be a subsidiary organ of the UN General Assembly, so who else would it report to if not to its superior body, the UNGA?

In OP 6, it has now been proposed that the HRC undertake a complete review of all mandates, mechanisms, functions and responsibilities of the CHR within one year after holding its first meeting. This is an unexceptionable and reasonable proposal.

The size of the proposed HRC has been proposed at 45 members. This falls exactly between the two earlier options of 38 or 53 members. While we would have certainly preferred an HRC with 53 members, we can live with your variant too. What could be fairer than proposing the middle road if a choice had to be made?

As regards electing new members, sensibly, both options have been retained, that is, by simple-majority or two-thirds of members present and voting. Again, what could be more fair-minded on the part of the Co-Chairs, than not to take sides? Our preference in this case has all along been for
a simple majority, but we would be willing to go with two-thirds if that helps build consensus. In any case leaving both options in brackets appears to be the most reasonable way of presenting the choices before us at this stage.

We commend you for incorporating in Operative Paragraph 7 wording that provides that the composition of the HRC be based on equitable geographical distribution. That is how it should be. It represents the only fair way to proceed. We agree that States should somehow take into account the human rights record of other States while electing them to the new body. In Operative Paragraph 8, a few indicative parameters have been suggested for consideration by Member States when electing HRC members. This too constitutes wording that is a vast improvement on the unacceptable choices that we had earlier. While we may have some minor modifications to suggest, we can also live with OP8 it as presently worded if there is no other choice.

We would still like to see greater certainty in the text of OP 10. As we had suggested earlier, it would be nice to know exactly how many normal meetings of the HRC we are talking about. Accordingly, we would have preferred to cap the number of normal meetings and their total duration by deleting the words “no fewer than” and “no less than” in the text. It would be difficult to explain to our budgetary authorities why we allowed such a lack of clarity to remain or how come others were satisfied with it. We would request you to revisit this issue once more. But if that is not possible, we would live with it, reluctantly. As regards OP 10, we would have also far preferred that special sessions be convened only at the request of a Member supported by half of the HRC members. The present wording sets the bar lower and requires the support of only 1/3rd of the membership. In our view, this is not the better or preferred option. After all, much time and money would be unnecessarily wasted if 1/3rd of the members convened a meeting only to find that half the members did not approve of the idea behind it! Nevertheless, if it is the position of the majority to go with 1/3rds, and not merely that of one-third of us, we would go along with it.

We are satisfied that the provision in OP 10, enabling convening of special sessions by the “Chair with the agreement of the Bureau or the Secretary-General”, has been dropped. We welcome this as it reflects the reality that the HRC is an inter-governmental body and only its members should be able to convene its special sessions.
In conclusion, I would like to again congratulate you, Mr. Chairman, for a fair-minded and serious effort to progress our work.

Thank you, Mr. Chairman.

537. Statement by Deputy Permanent Representative at the UN Ambassador Ajai Malhotra on Human Rights Council, at the Informal Plenary meeting of the UN General Assembly.

Mr. Chairman,

I did not initially plan to take the floor as I had already shared, last Friday, my preliminary comments on the draft text that you had circulated to us. Having revisited the text over the last few days, I am happy to confirm once again that my delegation finds it to be a balanced, fair-minded and reasonable proposal, for which I would once again like to commend the Co-Chairs.

I am intervening, Mr. Chairman, because a point raised by a couple of delegations during the discussions yesterday needs a response. This relates to the proposal in Operative Paragraph 7 as regards how the membership of the new Human Rights Council, based on equitable geographic distribution, would actually be distributed.

Mr. Chairman, I would like to emphasise that what the Asian Group is asking for, unanimously, is equitable geographic distribution. We are certainly not seeking favourable or preferential treatment. All we are requesting is that, at least henceforth, the new Human Rights Council not be biased against our group in its composition.

Mr. Chairman, Asia is currently denied an equitable presence on the Human Rights Commission. For decades others have benefited from what has been a clearly unfair, unjust and discriminatory situation. However, if we had wanted a “fair” distribution, we would have reminded everyone that nearly 60-65% of the world’s population comes from our region. Accordingly, whether we look at human rights as an individual right or a
collective right, or both, we would have no choice but to ask for at least 27 seats on the 45 seat HRC that you have proposed. If we had wanted a “just” distribution of seats we would have had to, in addition, build in a further corrective for the unjust way in which we have been treated for over five and a half decades, and ask for even more than 27 seats. However, all we are asking for, Mr. Chairman, is to be treated “equitably”. I am highlighting this, Mr. Chairman, because in our discussions yesterday you had noted that the European Union wanted to change the proposed distribution of seats, pointed out that a Latin American country too had changes to suggest on the lines of the PBC, and had even ventured that perhaps the African Group may also have a problem with your proposed distribution of seats.

Mr. Chairman, we are already having enough problems with the PBC allocation, so the less said about the PBC pattern idea, the better. Furthermore, turning to the European Union, the EU statement of February 6 mentions, and I quote, “On the question of size and distribution of seats in OP 7, the proposed package is not acceptable and must be discussed further”. However, I suspect, Mr. Chairman, that what is not acceptable to the EU is only the proposed size of the HRC and that as regards its distribution they actually have no real problem. I listened carefully to statements made yesterday by individual EU member countries, such as France, Sweden and others. None of them referred to distribution of seats as an issue, even in passing. I think we need to delve deeper into the mysterious EU position. If we do so we may find that the proposed distribution is actually not a matter of serious concern to them.

Mr. Chairman, we are not asking for any favours. All we are asking for is that each and every electoral group be treated equitably. Some here may be wondering as to what magic the Asian Group has used to suddenly be in a position to ask for so many seats. So, I think it may be useful to share how the Asian Group has grown in recent years. Thus, in 1991 we were happy to welcome Republic of Korea, Democratic People’s Republic of Korea, Federated States of Micronesia and Marshall Islands, to the Asian Group. In 1992, we welcomed Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan, and Uzbekistan. In 1994, Palau. In 1999, Kiribati, Nauru, and Tonga. In 2000, Tuvalu. In 2002, we welcomed our most recent member, Timor Leste. In fact, Mr. Chairman, six of the seven new UN members in the last decade have joined the Asian Group. The only one that got away was Switzerland and given the close cooperation between us and the Ambassador of Switzerland on human rights issues here, perhaps it too could have been welcomed into our group!
Mr. Chairman, the Ambassador of Singapore has very helpfully worked out and provided us with a sliding scale of how seats are to be assigned between the various regional groups, depending upon the size of the Human Rights Council that we finally agree upon. On looking at it my only suggestion, if you agree to make a change Mr. Chairman, is to increase the size of the proposed new Human Rights Council from 45 to 46, assigning the additional seat to the African Group. That would also ensure that your proposal would have, at the very minimum, the support of well over half the UNGA membership.

Mr. Chairman, the task before us is to see that the new Human Rights Council does not start off on an inequitable and discriminatory footing insofar as assignment of seats to any group is concerned. So, Mr. Chairman, if there is any other proposal that is brought before you pretending to reflect an equitable geographic distribution, and I have not heard of any, I would offer only a single point for your consideration. I would request you to test and judge such a proposal against but one template. Ask, Mr. Chairman, what is its basis? What principle does it operate on? If it is based on horse-trading, or is otherwise inherently discriminatory, my request to you, Mr. Chairman, is to politely but firmly reject it.

Thank you, Mr. Chairman.

538. Statement by Permanent Representative at the UN Ambassador Nirupam Sen on Management and Secretariat Reforms at the Informal Consultations of the Plenary.

Mr. Co-Chair,

We appreciate this opportunity to exchange views on the subject of management reform. We would like to thank the Deputy Secretary General for her elaboration of the outline paper on management reform that she presented on 30th January. South Africa, on behalf of the G-77 has made comprehensive statements on process and substance, both today and at our last meeting which we support in their entirety.
Mr. Co-Chair,

We have carefully examined the outline paper and the Deputy Secretary-General’s presentation at our last meeting and would like to comment on them by grouping the issues into the following four categories. In the first category of issues are those that are already under consideration in the General Assembly, through its Fifth Committee and detailed proposals are awaited from the Secretariat. These are, in any case, to be presented for consideration and decision during 2006, in accordance with the respective General Assembly resolutions. Such questions include mobility of staff, simplification of contractual arrangements, harmonization of rules and benefits for staff across the UN family, and consolidation of peacekeeping accounts. Clearly, the Secretariat cannot now present summary proposals for what has been termed as ‘strategic’ decisions without presenting the detailed proposals that the General Assembly has already requested.

The second category of issues are those that are being put forward as new Secretariat proposals for management reform which should actually have been implemented by now. Take the case of the adoption of International Public Sector Accounting Standards. The Board of Auditors had called for their adoption five years ago and the Secretariat has been examining their possible adoption since then.

Another case in point is that of strengthening the evaluation function. The General Assembly, in its Resolution 58/269 of 23rd December, 2003, recognizing the importance of this function, had called for programme managers to indicate resource requirements for evaluation and self-evaluation in the budget. We wonder why this was not done in the 2006-7 budget that we just approved and instead it is now being presented as a new management reform proposal from the Secretariat.

The third category of issues are those that had been put forward by some delegations either in the initial stage of discussions of the draft Outcome Document or in the Fifth Committee’s consideration of the proposed programme budget for 2006-7. Those proposals are now being resurrected and presented as new proposals of the Secretariat. The Secretariat is of-course well aware that those proposals did not find place either in the Outcome Document or in the 2006-7 Budget Resolution because they were not acceptable to the General Assembly. When repackaging and resubmitting proposals that were introduced by some Member States, the Secretariat would do well to note that the word ‘flexibility’
does not appear either in the Outcome Document on management reform or in the budget resolution – and not without reason. Here, I would like to reinforce the point made by the Permanent Representative of Jamaica. The Budget Resolution calls for “limited discretion....in budgetary implementation within defined parameters to be agreed by the General Assembly along with clear accountability mechanisms to the Assembly for its use”. The Secretariat proposals should be formulated bearing this in mind.

In the fourth category are proposals that seek to arrogate to the Secretariat that which is the prerogative of Member States in the General Assembly. One example is what the outline of the reform report refers to as “measures to improve the budget adoption process”. The Budget adoption process is a function of Member States who have not given the Secretariat any mandate to undertake an assessment of that process. We hope that the Secretariat will keep this in mind. Another example is the discretion to be sought for transfer of resources from one program to another that the Deputy Secretary General spoke about. Presently, the Secretariat already has the discretion to do so among sub-programs. However, transfer of resources between programs directly affects the relative priorities of the Organisation. Priority-setting is a Member State function.

The Secretariat should not seek to encroach on the prerogatives of Member States who should continue to allocate and re-allocate resources among the various programs in accordance with the relative priority that they attach to each program.

It is worthwhile dwelling a little on the issue of ‘flexibility’. The DSG stated that presently the SG has very little flexibility – limited to the deployment of only 50 posts.

The question that needs to be asked is what the Secretariat did with this flexibility that was granted by the General Assembly as far back as 2003. It was only when this provision was coming up for review by the GA that some departments, and especially the regional commissions were asked to surrender posts towards the end of 2005. In most if not all cases, such posts were unfortunately taken from offices and departments dealing with development.

Coincidentally or not, five of the biggest departments and offices which are headed by nationals from the five permanent members of the Security Council did not surrender a single post in the one and a half years
of the operation of this flexibility. Creation of the post of Chief Operating Officer or redefining the role of the Deputy-Secretary-General would not change this situation at all.

Authority must flow directly from the Secretary-General. In short, we have to recognize the problem before we find a solution. And the solution is that Member States should refrain from undercutting the authority of the Secretary-General in defence of their nationals who are heads of departments and offices in the UN; greater oversight by the GA; and more importantly, the primacy of the General Assembly in the selection process of the Secretary-General is critical and would greatly help.

Article 97 of the Charter states unambiguously that the Secretary-General “shall be the chief administrative officer of the Organisation”. Any implicit change of that status, or the formal creation of a Chief Operating Officer post or function to carry out that role, if warranted, should require an amendment of the Charter and hence will have to be carefully examined. The post of Deputy Secretary-General was created as part of the reforms proposed by the new SG in 1997 to assist him in carrying out his responsibilities. We can therefore not rush to any decision on this issue without very careful consideration of the much larger issues involved. In short, the solution should address the problem and not bypass it.

Let us take another example of the type of discretion that is being sought. The DSG has stated that reclassification of posts should not require permission of Member States. In our view posts need to be reclassified both upward and downward based strictly on requirements for the level of that post. Unfortunately, the only reclassification that the Secretariat consistently seeks is upward reclassification leading to grade creep. A post is upgraded over time for the purpose of promoting the incumbent but is not reclassified downward when the individual leaves that post. The General Assembly has, over the years been calling for identification of posts for downward reclassification without success. Surely, the General Assembly cannot now grant unfettered discretion only to permit continued upward reclassification of posts.

What the Secretariat should embark on is better career planning and development of promotion policies which are essential elements of any human resources management system.

Incidentally, it is a peculiar coincidence that the attempted arrogation of the functions of the General Assembly by the Secretariat comes at a
time when we are witnessing a similar arrogation by the Security Council. Later this month, the Security Council will hold a meeting on the management of the Department of Peacekeeping Operations specifically related to procurement. Presumably, this is with regard to the OIOS audit that was undertaken recently.

Procurement and audit, as with other aspects of management, is the prerogative of the General Assembly. As we are all aware, the audit in question is one that was mandated by the General Assembly in Resolution 59/296. In point of fact, the proposal for such a comprehensive management audit of DPKO was introduced jointly by a few developing country delegations including my own and was subsequently adopted by the General Assembly. Rather than briefing Member States in the General Assembly on the outcome of this audit, we have on the one hand the Under Secretary-General for Management briefing the Press and on the other, we have the Security Council organizing a meeting on the subject. We are all-of-course, well aware of the consequences of the Security Council involving itself in management – the Volcker Committee report and its searing criticism of the role played by the Security Council are all too fresh. The General Assembly will have to address this assault on its functions and prerogatives or else give up discussing its revitalization.

On audits and investigations mandated by the General Assembly as also of selectivity in matters of accountability and disciplinary action, some delegations had spoken on the previous occasion. Permit me a couple of sentences on this subject. We all know that an audit report has to be followed up with investigations in order to determine culpability for any wrong-doing and this must surely be pursued vigorously and concluded expeditiously. But what is distressing is to see that in the rush to the press, even the basic principles of natural justice are denied to those accused and they are tried and convicted through the press without being given even an opportunity to see the charges against them let alone being given an opportunity to defend themselves. The Chair of the G-77 has written to the Secretary-General on this issue and we hope that appropriate action will be taken.

Lewis Carroll had summarized the problem long ago: “I’m judge and I’m jury/Said cunning old Fury/I’ll try the whole case and condemn you to death.” It is about time we changed this.

The issue of equitable geographical representation is understandably a concern for developing countries that have a marginal presence in the
Secretariat. While we await what has been termed as the ‘proactive’ approach to recruitment, any new system that compromises on transparency and which does not address the need to ensure a representative composition of the Secretariat will have no possibility of gaining acceptance. Another principle that the General Assembly has laid down, which is that no Member State shall have a monopoly of any post in the Secretariat also has to be scrupulously followed. Since we are discussing the urgent need for management reform, a case in point is that of the post of Under Secretary-General for the Department of Management - a post which has for years been occupied by incumbents from a single Member State. The General Assembly has to ensure that its resolution 46/232 whereby it decided, that as a general rule no national of a Member State should succeed a national of that State in that post and that there should be no monopoly on senior posts by nationals of any State or group of States, is scrupulously followed.

Mr. Co-Chair,

Some delegations have stated that the review of rules and regulations should be conducted at the political level. The DSG also stated that the proposals would be presented for “strategic” decisions, whatever that means, and the detailed technical decisions could be taken subsequently.

Flowing from this is the implication that decisions will be taken in this informal working group based on summary proposals and only the details would be left to the ACABQ and the Fifth Committee to work out subsequently. The Chair of the G-77 has already made it clear that the Secretariat will have to provide detailed, specific and well-thought-out proposals with technically sound arguments and not mere broad and “strategic” expressions of intent on all matters related to this review. It is only through the detailed technical evaluation of the proposals by the ACABQ and the Fifth Committee that the GA can reach any decision on the merits of the proposals that will be presented. We hope that the Secretariat will keep this in mind and present their report accordingly.

I thank you.
1906

Mr. Chairman,

On behalf of the delegation of India, I wish to convey to you our warmest felicitations on your election. I would like to assure you of my delegation’s full cooperation in the deliberations and the work of this Commission. Our congratulations also go to other members of the Bureau.

We thank the Secretary-General for his comprehensive report and the Under-Secretary-General for his statement to the Commission.

We associate ourselves with the statement made by the distinguished Permanent Representative of South Africa in his capacity as Chairman of the Group of 77.

Mr. Chairman,

Ten years after the launch of the United Nations Decade for Eradication of Poverty, the international community is still devising effective mechanisms to eradicate poverty. The progress on meeting the Millennium Development Goal (MDG) target of halving extreme poverty and hunger by 2015, as brought out in the Report of the Secretary-General, presents a stark and grim reminder that so much still remains to be done. Sub-Saharan Africa has suffered a setback since the 1990s and needs our cooperation and support in meeting the MDG goals. The only silver lining is that East Asia and the Pacific and South Asia are on track to achieve the target of halving extreme poverty at the national level by 2015. This is the basis for South- South Cooperation; also goals cannot be achieved in reasonable time without the application of science and technology and significant flow of resources. India’s 500 million dollars highly concessional credit lines to West Africa; more than 200 million dollars to NEPAD; grants of essential medicines; debt cancellation for the HIPC countries; scheme for duty free access to our market for LDC exports; substantial programmes of technical cooperation and capacity building; and the dedicated satellite and fibre optic connectivity mission for Africa are some of the ways in which we seek to assist.
The keynote speaker, my good friend the Hon'ble Ms Clare Short, has, with eloquence, succinctly summed up all the important moments in the great international enterprise of eradicating world poverty. Therefore, we shall confine ourselves to three issues: the factors (mainly economic) that seem responsible for continued poverty; an attempted answer to a famous question asked in the first decade of the last century, “What is to be done?” specially by the United Nations; and the lessons of the Indian experience and whether it is replicable.

Poverty and internal conflicts are often not simply the legacy of the colonial past or the result of current poor governance but are epiphenomena of liberalisation and the policies of international economic institutions. The imperative of liberalisation and attracting foreign capital is inevitably accompanied by risks; low tax-GDP ratios reinforced by IMF style structural adjustment reduces investment in the social infrastructure (especially health and education). Such policies in some regions have additionally had a negative impact on rural infrastructure and food security. The problems of sub-Saharan Africa amply demonstrate the systemic impact of such policies. The IMF and the World Bank have strayed from one of their original purposes – Keynesian demand management to maintain high levels of employment. The Bretton Woods institutions have the power but no longer have the mandate. ECOSOC has the mandate but not the power. There thus exists a justifiable role for the United Nations to provide direction in the reform of international financial and trade systems to enable them to constructively and effectively support national efforts in eradication of poverty. The report of the World Commission on the Social Dimension of Globalisation called “A Fair Globalization” clearly concluded that “Developing countries should have increased representation in the decision making bodies of the Bretton Woods Institutions while the working methods in the World Trade Organisation should provide for their full and effective participation in its negotiations” and, above all, that “the UN multilateral system constitutes the core of global governance and is uniquely equipped to spearhead the process of reform.” It is no accident that the Outcome Document of the World Summit of September 2005 emphasised increasing the “voice and participation” of developing countries in Bretton Woods Institutions. The World Bank has itself recognized that poverty is not just a question of income but also of insecurity and voicelessness. Fourteen out of the eighteen countries where poverty has increased in the last decade are in Africa, mainly sub-Saharan Africa.
While private sector investment is important, in this region the physical and social infrastructure is sometimes too weak to attract any. Therefore, sequencing is important and a commitment to 0.7% target for ODA by developed countries as also innovative sources of financing are crucial. So also in the case of debt cancellation by the developed world conditionalities on encouraging privatization would only recreate the conditions that led to debt in the first place. In the post-Hong Kong negotiations in WTO, it would be important for developing countries (and we hope that the G-10 would remain active – Argentina, Brazil, Egypt, India, Indonesia, Namibia, Philippines, South Africa, Tunisia and Venezuela) to maintain flexibilities and policy space particularly when negotiating on NAMA tariffs, in order to avoid the danger of deindustrialization for some developing countries. As India’s Commerce Minister said, “It is no use having zero duty levels on aeroplanes while maintaining a 30% duty on leather handbags”; he pointed out that our farmers “can deal with trade flows but not with the avalanche of subsidy flows from the developed countries.”

The United Nations played a creative and a critical leadership role in shaping the international economic agenda in the 1970s. It has to do so again. It has shown the way in the Resolution on Trade which was adopted by an overwhelming majority and clearly brought out the relationship between TRIPS and the Convention on Biodiversity and also called for duty free and quota free access for exports of LDCs. This could not be fully achieved at Hong Kong and the struggle has to go on. Many of the concerns that we have outlined above need to be taken into account in our continuing deliberations on the strengthening of ECOSOC and on Development, specially leadership on systemic issues. Equally, there are implications for Human Rights and the forthcoming discussions on mandates. The Right to Development becomes the key for developing countries’ citizens to enjoy other rights: to be shut out from the Pasture is also to be shut out from the Presence (to use the Biblical metaphor). Similarly, simply because the agenda item is more than five years old one cannot get rid of it: the agenda item can be transcended only when poverty is transcended.

In India, the poverty ratio has declined from 45% in 1983 to 26% in 2000. Time would not permit me to describe all the major anti poverty programmes but I may mention the “Sarva Shiksha Abhiyan” (Universal Education), the Public Distribution System which makes food available to every household at an affordable price; the Integrated Child Development Scheme; the Mid-day Meal Scheme for school children; the various Food
for Works programmes; the Swarnajayanti Gram Swarozgar Yojana for self employment of the rural poor; the Indira Awaas Yojana for the construction of houses for the poor, free of cost; the Prime Minister’s Urban Poverty Eradication Programme for employment generation, shelter upgradation, social development and community empowerment. The National Rural Employment Guarantee programme, as envisaged in the Common Minimum Programme, launched in 2006 makes the right to work a fundamental right. It provides 100 days assured employment annually to every rural household.

Such rural regeneration measures coupled with innovative rural health missions and expansion of the Universal Elementary Education Scheme would help address poverty in a holistic manner. As part of our social integration policies, the “Right to Information Act” passed by the Indian Parliament would lend voice to the citizens for accessing Government policies. New programmes to eradicate poverty and for income generation launched in India in recent years are expected to assist India in meeting its commitment to reduce the poverty level by a further 5 percentage points by 2007 and by an additional 15 percentage points by 2012.

Liberalisation and de-bureaucratisation of the economy has also been accompanied by State led efforts to rapidly upgrade the physical infrastructure through investments of the order of more than dollars forty billion on roads; dollars 15 billion on ports and dollars 10 billion on airports. India has been fortunate. As the Prime Minister said recently,

Indian enterprise has “emerged successfully from a battle between unequals. The secret of enterprise and creativity lies in being able to score on uneven playing fields”.

The lessons of the Indian experience are in general replicable though sequencing is necessary. Liberalization of the economy has to follow a certain level of development of economic and scientific capacity. The Kuznets Curve is a myth: inequality and high growth do not automatically eventually lead to greater equality and social justice; therefore direct anti poverty programmes are necessary.

Adam Smith’s invisible hand is totally invisible because it does not exist: the State’s role is as important as the market’s. Nevertheless, unleashing entrepreneurial energies is crucial. Education is an absolute must and, on this basis, a strong incentive for the rapid development of science and, technology and its application to most socio-economic areas.
Finally, it is important to keep government on track through continuous popular pressure and diverse popular movements. This point was made long ago by the Nigerian novelist Chinua Achebe: “Our rulers” must “reestablish vital inner links with the poor and dispossessed of this country, with the bruised heart that throbs painfully at the core of the nation’s being”. One of the most unfortunate results of globalization is the kinship of developing countries’ elites with those in developed countries rather than with the poor of their own countries; absolutely reversing this is critical: hence the importance of democratic governance.

Mr. Chairman,

We welcome the suggestions of the UN Secretary-General that the Commission on Social Development, and through it the ECOSOC, should continue to address poverty eradication through an integrated and holistic approach, by evolving specific development strategies to halve extreme poverty by 2015, fostering social integration and making employment a central objective of national and international macroeconomic policies.

540. Remarks by Permanent Representative at the UN
Ambassador Nirupam Sen at informal Consultations of
the Ad Hoc Working Group on the Revitalization of the
work of the UN General Assembly.

Madam Co-Chair,

We appreciate this opportunity to exchange views on the revitalisation of the General Assembly. We join our colleagues in congratulating both of you on your appointment. Comparisons are invidious but yours is perhaps the most important task. If the General Assembly cannot be revitalised the rest of the reform process may prove unavailing, certainly skewed and sub-optimal.

We entirely support the statement made by Malaysia, on behalf of the Non-Aligned Movement. Therefore, we shall confine our observations to dimensions that need to be highlighted or additional points that need to be made.
The Outcome Document clearly reaffirmed the central position of the General Assembly as the chief deliberative, policymaking and representative organ of the United Nations, and the role of the Assembly in the process of standard-setting and the codification of international law. It also called for full and speedy implementation of the measures adopted to strengthen the General Assembly’s role and authority.

Paragraph 4 of General Assembly resolution 59/313, pursuant to which these consultations have been scheduled, decided to identify ways to further enhance the role, authority, effectiveness, and efficiency of the General Assembly, inter alia, by building on relevant Assembly resolutions and reviewing the agenda and working methods of the Assembly. While welcoming discussions on the three key elements that you have identified in your letter as being part of this task, we believe that the mandate provided by the General Assembly on this issue is much broader, firstly, because 59/313 decided to build on relevant Assembly resolutions, which includes resolutions 58/126, 58/316 and 59/313 and, secondly, the two tasks that have been identified in para 4 of resolution 59/313 are only indicative – para 4 speaks of these measures in the context of the popular UN phrase, “inter alia”. We, therefore, consider the key elements identified in your letter as a good starting point for our discussions.

The primary question that we should address is whether the General Assembly can be revitalized through a mere rationalization of its agenda or meetings. Perhaps, we need to remind ourselves that the task before us is to strengthen and revitalize the General Assembly and not to carry out its administrative reorganization. We are convinced that the General Assembly can be revitalized only through action, through taking decisions according to the approved rules of procedure; through asserting control over long term questions of peace and security, including disarmament and arms control (Articles 11 and 14 of the Charter); by elaborating international law and human rights, including oversight of all human rights machinery (Article 13.1); by controlling Secretariat restructuring, including finance, personnel and management; by setting the international economic agenda; and by establishing the principles of oversight and accountability through actually selecting the heads of the UN and its bodies. Such strengthening and revitalization cannot be accomplished through a mere rationalization of agenda and meetings or by transferring items from one weak body to another.

Not only is there need for full respect for the functions and powers of
the principal organs, in particular the General Assembly but also to maintain balance among them within their respective functions and powers in accordance with the Charter. The UN Security Council acts on behalf of the Member States while carrying out its primary responsibility for the maintenance of international peace and security under Article 24 of the Charter. Accountability to the General Assembly is implicit in the performance of the Council’s primary responsibility. Along with respecting and upholding the Charter, it is imperative that the Security Council avoid the temptation to shift the agenda of the Assembly to the Council. The Security Council seems to be following Oscar Wilde’s example of “resisting everything except temptation.” The encroachment by the Security Council on issues which clearly fall within the functions and powers of the Assembly and its subsidiary bodies is contrary to the decision that we have all taken together, including the members of the Security Council, to strengthen and revitalize the General Assembly.

The General Assembly should not depend on the Security Council for its own revitalization - it must defend what it is mandated by the Charter to do. Thus, the Security Council, by its decision to focus this month on the issues concerning peacekeeping operations, management/procurement and sexual exploitation and abuse in peacekeeping operations has clearly encroached upon areas that are still under the Assembly’s active consideration and which under the Charter fall within the competence of the Assembly. Consultations may help but I am not sure that consultations would be enough.

Consultations seldom prevent land encroachment. It is unlikely, that, by themselves they can check mandate-encroachers any more than they check land encroachers. The General Assembly will have to address this assault on its functions and prerogatives or else give up discussing its revitalization. The Non-Aligned Movement has already done much in its letters of 3 February and 14 February addressed to the General Assembly President. As we deliberate on further measures that we need to take for the revitalization of the General Assembly, members of the Assembly need to consider ways to defend the Assembly’s mandate, including through their approach to participation in discussions of the Security Council that encroach on the mandate of the Assembly.

Resolution 59/313 focused not just on the role and authority of the Assembly and its revitalization but also on the strengthening of the role and leadership of the President of the General Assembly. The position of the President and his leadership would be strengthened not just by
organizing debates or by augmenting of the resources available to him but also by the proactive role that the President can play vis-à-vis the President of the Security Council whenever the Council encroaches upon the mandate of the General Assembly that has elected him.

The General Assembly’s role cannot simply be one of constructive relationship to ensure a better coordination. It should go beyond coordination and coherence to setting the agenda. The Assembly must focus on the global economic architecture and change it and ensure the centrality of the UN in economic matters. It is in the interest of the developing countries to increase their weight and voice and thereby exercise a beneficent influence on Bretton Woods Institutions.

Member States would soon engage in the process of selecting a Secretary-General for the U.N. At the moment, the Security Council presents a name of the candidate to the General Assembly for its consideration. Thus, the GA has a de jure role in the selection procedure while de facto selection is made by the Security Council. If the General Assembly is to be revitalized, its involvement in the selection of the Secretary-General should be both de facto and de jure. Instead of a selection process which is shrouded in secrecy, we need a leader aware of and responsive to the aspirations of the wider membership, with the legitimacy of a wider base and a less arbitrary selection process where the General Assembly would both have primacy and a de-facto and not just a de-jure role in making the choice. It was after all the General Assembly that in 1950 made the decision to extend the tenure of the first Secretary-General Trygve Lie by three years when the Security Council informed the General Assembly about its inability to agree on a recommendation on the appointment of a Secretary-General. To take another example, in 1946, the resolution that the General Assembly adopted on the appointment of the Secretary-General and the respective roles and responsibilities of the Security Council and the General Assembly in that context, was based on the recommendations of the Fifth Committee. It is more than sixty years ago that resolution 11(1) was adopted and perhaps it is now time to revisit the issue to impart greater transparency and inclusiveness in the selection process.

There is a tendency outside the United Nations, but not only outside it, to denigrate the General Assembly and deny it, its vital role. This is strange considering its pre-eminent role since the time of the founding of the Organisation. The General Assembly has provided the structural competence in establishment of specialized programmes on issues that
are of primary concern to the large majority of this principal organ. These include a wide range of activities including human rights, children, refugees, food aid, trade, aid, population control, disaster relief, environmental protection etc. In this context, it is necessary to consider whether the exercise of mandate review in all organs should be conducted by the General Assembly in order to have a complete picture of overlapping mandates and the changes in mandates that have, for example in the case of the Security Council, resulted from setting up of the Peacebuilding Commission and the changes in human-rights related mandates that will result when a Human Rights Council is set up. An important activity such as a mandate review should therefore not be done piecemeal but in a comprehensive way by the only universal representative organ of the United Nations which is the General Assembly.

It will also be necessary for the General Assembly to keep in mind that the mammoth exercise of mandate review is not bound by an artificial timeline or held hostage to any spending cap. This would not only be impractical but may produce outcomes that we may eventually find difficult to unravel. For example, the adoption of the mandate under Security Council Resolution 1646 has created enormous difficulties in the setting up of the Organisational Committee of the Peacebuilding Commission.

In conclusion, I would like to state that the General Assembly

has to either set the agenda or be dominated by somebody else's; either act or remain in the realm of words for years to come; either find concrete and effective mechanisms for actually addressing the concerns of the vast majority of this Organisation or continue to be a spectator to the progressive encroachment on its role and authority.

I thank you Madam Co-Chair.
541. Statement by Permanent Representative at the UN Ambassador Nirupam Sen at the General Debate of the Special Commission on Peace-keeping Operations at the UN General Assembly.

New York, February 27, 2006.

Mr Chairman,

We congratulate you and other members of the Bureau on your re-election. We thank Under Secretary General Guehenno for the traditional statement this morning that highlights the priorities in peacekeeping for the coming year.

We associate ourselves with the statement delivered this morning by the distinguished representative of Morocco, on behalf of the Non Aligned Movement and, therefore, we shall confine our observations to dimensions that need to be highlighted or additional points that need to be made.

The report of the Secretary-General (Doc A/60/640) addresses some important issues that have arisen consequent to the current surge in peacekeeping. We note the increase of the total number of uniformed personnel in the field currently to approximately 70,100 and civilian personnel to 15,000. The challenges that face us in peacekeeping today are not only because new missions have been set up or old ones expanded but also because of the manner in which they were set up; what they are asked to do and, not the least, the tools they are provided with.

Article 24 of the Charter, which defines the functions and powers of the Security Council in the maintenance of international peace and security, begins by stating that these are conferred on it “in order to ensure prompt and effective action by the United Nations”. But when the Council is not prompt or is ineffective, it ceases to discharge its primary responsibility. The degraded operational effectiveness of UNMEE is one such example.

Mr. Chairman, peacekeeping was visualised as a tool jointly invented and honed by the Council and the General Assembly, not an attribute of power given to the Council by the Charter. Therefore, the Special Committee on Peacekeeping Operations must seriously discuss whether the Security Council should continue to have a monopoly in the setting up and running of peacekeeping operations. The United Nations Emergency Force during the 1956 Suez Crisis was established by the GA. Some UNSC members
had opposed the legality of the Uniting for Peace Resolution and the establishment of this Force.

These and the expenses incurred on UNEF and ONUC were referred by the GA to the International Court of Justice which declared that the responsibility conferred by Article 24 (1) is "primary" and not "exclusive". The ICJ added that the "exclusivity" is solely reserved for coercive action under Chapter VII and the GA was competent "to organise peacekeeping operations, at the request or with the consent of the States concerned" under Article 11 (2).

There is also a much more practical reason for the General Assembly to take matters in hand. The Security Council determines the nature and size of peacekeeping mandates and also extends the duration of such missions from year to year. The General Assembly determines the financing and management of such missions. Permanent Members of the Security Council are required to pay more for such missions by virtue of their "special responsibility" for maintaining peace and security. But we have a situation where Permanent Members of the Security Council do not pay their assessments to particular peacekeeping missions for years on end thereby creating problems in their financing and management. Surely such 'special responsibility' also entails responsibility for financing of the mandates that they determine. Since Security Council members have been unwilling to finance some of the very mandates that they approve, it is perhaps necessary for the General Assembly, by virtue of its responsibility to manage those missions, to take up those mandates and to examine them closely. Otherwise, it will not be possible to continue some of those peacekeeping mandates.

Again, the Secretary-General will be presenting proposals for consolidation of peacekeeping accounts to the Fifth Committee. This presents an opportunity for Member States to address the issue of selective financing of peacekeeping missions that is sometimes resorted to. Member States should be entitled to cash surpluses from missions only if they do not have dues to other missions. Such consolidation will also help the Secretary-General to better manage the finances of peacekeeping missions. It will address the chronic cash deficits faced by some missions and ensure predictable troop cost and contingent owned equipment reimbursements to Member States.

We welcome the Secretary-General listing the important issue of enhancement of safety and security of uniformed and civilian personnel, as one of the five objectives of his agenda in this year's report. The safety
and security of UN peacekeepers is an area of critical concern for troop contributors who place the lives of their soldiers at risk, in pursuance of the UN ideal. The 122 deaths of peacekeepers in 2005, including that of an Indian peacekeeper Naib Subedar Ram Kripal Singh, while doing his duty with the UN Mission in the Democratic Republic of Congo, is a reminder of the worsening situation regarding the safety and security of peacekeepers in the field. It is, therefore, important that we address this challenge. The UN needs to place emphasis on enhancing its capacity for information gathering and assessment and sharing it with field units along with concrete recommendations for preventive action. The progress made through the establishment of Joint Operation Centres and Joint Mission Analysis Centre (JOC/JMAC) has yet to filter down to the Missions. We would once again underline the importance of sharing of information with troop contributing countries and field commanders. The information should not be lost in the jungle of the ‘cohesive integrated Headquarters’.

India has been a leading proponent of energising the mechanism of triangular consultations between Troop Contributing Countries, the Security Council and the United Nations Secretariat. In this context, we do note the holding of Private Meetings under Resolution 1353 format and increase in the frequency of briefings for TCCs. However, they still continue to be held on the eve of renewal of Mission mandates, giving little scope for serious or meaningful discussions. We would re-emphasise that TCCs need to be involved early and fully in all aspects and stages of mission planning. Their views must find their way into mission mandates. It must be borne in mind that those who have the final say in the Security Council resolutions rarely participate in their implementation; it is not their troops who have to translate the Council’s words into action, or bear the brunt of criticism if things go wrong, because the mandate is unrealistic or the means authorised inadequate.

It took 47 years to begin to recognise the spirit of Article 44 when the “first meeting of TCCs” took place in May 1993 and it was only in May 1994 that the UNSC recognised the “need for enhanced consultations” with TCCs. If the situation continues to be unsatisfactory, countries may have no recourse but to operationalize the unused Article 43 to redress the breach of Article 44. In any case, Article 43 was designed as a limitation on the use of force under Article 42.

We welcome the Secretary-General’s efforts to further deepen the relationship between the United Nations and African Union. The World Summit in September 2005 had supported the development and
implementation of a ten year plan of capacity building with the African Union. India supports these efforts. We share close and historic ties with our African brothers and sisters and are ourselves involved in bilateral capacity building efforts in many of their countries. Notwithstanding this important capacity building exercise, the UN cannot absolve itself of “its responsibility under the Charter for the maintenance of international peace and security”, as the report of the Special Committee (A/59/19) states. The real challenge for the UN is to strengthen peacekeeping without regionalising it.

We note the emphasis of the Secretary-General on reforming the United Nations Stand-by System (UNSAS) as a central element in increasing the UN’s capability to rapidly deploy military and police personnel. The 2005 World Summit, recognising the importance of adequate reserve capacity, noted the need for enhanced rapidly deployable capacities for peace operations facing serious challenges. The Secretary General has offered three options. We have already outlined our views on regional arrangements. As for “inter mission cooperation arrangements”, limited logistical support could be considered in certain specific circumstances but we have reservations over blanket sharing of assets and personnel of one mission in a region with those of another. This is contrary to UN practices and provisions. We look forward to a constructive exchange on these options during the Committee session.

As regards the sensitive and delicate issue of conduct and discipline, we are convinced that sexual exploitation and abuse are totally unacceptable forms of behaviour. We fully support the establishment and implementation of a policy of zero tolerance and note the work done by DPKO in the past year on raising the awareness of those with managerial and command responsibilities; establishing standards of conduct, training and investigation. Careful preparatory training in terms of a multi-cultural, pluralistic and tolerant outlook is as important as subsequent swift punitive action, once culpability is established.

In the context of focussing on issues of sexual exploitation and abuse in peacekeeping operations by the General Assembly, we support the NAM Chairman in resisting the effort by the Security Council to encroach on an issue that clearly falls within the functions and powers of the General Assembly and its Subsidiary bodies. We would urge the C-34 to continue taking the lead on issues relating to sexual exploitation and abuse. Incidentally, the Secretary General must continue his efforts to “increase procurement opportunities for developing countries and countries with
economies in transition”, as envisaged in Fifth Committee Reports and Resolutions.

Mr Chairman, the establishment of an Integrated Training Service (ITS) is a welcome step. In this regard, the Department of Peacekeeping Operations must utilise and benefit from the considerable field expertise of the Troop Contributing Countries.

The role of Civilian Police in peacekeeping has grown substantially. We have noted that the UN Secretary-General has proposed the creation of a Standing Police Capacity, an initiative that was proposed at the World Summit in September 2005. We appreciate the efforts being made by the Police Adviser and DPKO to get it operational. In this context, we look forward to engaging in constructing discussions during this session to carry this concept forward. We would like to emphasise that due attention should be paid to coordination between the police and military components of the UN Peacekeeping Missions in the field.

Mr. Chairman, India stands committed to assist the United Nations in the maintenance of international peace and security. We have a proud history of UN peacekeeping dating back to its inception in the 1950s. We have contributed nearly 80,000 troops, and participated in more than 40 missions. India has also provided and continues to provide eminent Force Commanders for UN Missions. We salute the 110 personnel of the Indian Army, as well as peacekeepers from other countries, who have made the supreme sacrifice by laying down their lives for the cause of world peace, while serving in UN Missions. This is the “friendship bound with the bandage of the arm that drips, knit with the webbing of the rifle-thong”.

Mr Chairman, in response to the Secretary-General’s call for increased representation of female personnel in field missions, we are contributing lady military and police officers to a number of UN Missions. We have recently pledged to send a full Female Formed Police Unit to UN Mission in Liberia (UNIMIL). This also reflects India’s commitment to assist the UN in reaching out to the most vulnerable sections, i.e. women and children, in conflict and post-conflict societies.

In conclusion, Mr. Chairman, I would like to assure you and other Bureau members of my delegation’s full cooperation and support in the work that lies ahead.

Thank you.
Mr. President,

Jawaharlal Nehru, in a famous and moving speech, said that “a moment comes, which comes but rarely in history, when we step out from the old to the new” and we have witnessed such a decisive moment this morning. The United Nations has shown, in spite of all its critics and the crescendo of criticism to which it has been exposed, particularly in the recent past, that it can deliver, that it can create something with a high threshold, something that is radical, something that is new and can achieve this broad agreement among such a vast membership. Here I must say that you, Mr. President, deserve our special congratulations for the sensitivity with which you have held firmly to the centre where broad agreement inhabits and the sensitivity with which you have been able to take on board the views of diverse members and to harmonise these in this text in order to achieve a broad agreement.

As far as India is concerned, for us it is certainly a special day because we are committed, and indeed have been since even before independence to the enlargement of human freedoms throughout the world. This Council meets the demands of the civil society of the world, again to use a phrase from the same speech of Jawaharlal Nehru, “not wholly or in full measure but very substantially”. This is indeed a creditable achievement and a very important achievement for the United Nations itself. We also wish to congratulate the co-Chairs, Ambassador Arias and Ambassador Kumalo, for the work they did, for their tireless efforts. We think that the strength that has been evident in these negotiations has been the strength of cooperation and dialogue and the future strength of this Council will also depend on the same principles of cooperation and dialogue. It is really in this spirit that my delegation has also worked in order to promote a broad agreement and we therefore also have a sense of institutional satisfaction as a delegation.

We are also confident that because of the principle that I just enunciated there is no real contradiction. I have listened carefully to the
statements of most of the delegations and I really do not see any contradictions between what is in the text and what most delegations would like to achieve and like to see happen. For instance, you yourself, Mr. President, have said in your statement here that we must evolve better ways of promoting tolerance, respect for and freedom of religion and belief. This is something that is a part of the work of any Human Rights Council, as it is certainly a part of innumerable human rights instruments that we have. In this connection, I would like to recall also the American Convention on Human Rights (to which almost all the countries of the Americas are signatories) which is also referred to as the Pact of San José, Costa Rica of November 22, 1969, which, in Part 1, Chapter 1, Article 1, emphasises opposition to “discrimination for reasons of race, colour, sex, language or religion”. So we do not really think that there is a contradiction between what this Council will do and should do and established understanding of human rights as embodied in various instruments, including in this region where we are sitting at present. We all know also that this is very much a part of the African Union Charter on Human Rights, the Banjul Charter. This is part of the thinking of the developing countries also. I may mention a great philosopher of modern Ghana, Kwame Anthony Appiah whose great work called “Cosmopolitanism” clearly says that there are universals. We may not think that these universals include let us say liberalism or relativism, any special beliefs, but there are universal moral obligations which include respect, as he says, for particularities. So this is very much a part of our thinking and very much a part of the cooperation and dialogue in which this Council was born and which will give strength and life to this Council as it works in the future.

Similarly, we stand very firmly by the text on the General Assembly having the power to point out systematic and gross violations of human rights. We are happy that we do not have Security Council-determined conditionalities. Quite apart from the reasons which I have mentioned in detail elsewhere on earlier occasions and would not like to repeat at this stage, in the context of the current debate, any Security Council-determined conditionalities may, in fact, tempt it into further encroachment on what essentially is something for the General Assembly to ultimately take a view on and, therefore, such encroachment would continue to be resisted, as with a wall of steel and, hopefully, would eventually be rolled back and swept away, as by a river in spate. So here also I do not see any contradiction and, in fact, we think that the text captures what needs to be done.
The same is true of the Right to Development reflected both in the preambular and in the operative paragraphs of this Resolution. There is quite clearly a commitment to the Right to Development and, we think this is as it should be. Here also, again, we do not see any contradiction between the emphasis on this Right and that which the text has and here the text really belongs to a long tradition. It goes back to the General Assembly Resolution of December 4, 1986 on the Right to Development which clearly said that this is “an inalienable human right” in which “all human rights and fundamental freedoms can be fully realized”. It was also the UN Committee on Economic, Social and Cultural Rights which, in 1990, sponsored in Geneva, as we all know, a Global Consultation on the Realization of the Right to Development as a Human Right. Mr. President you said in your statement that on development we must now do all we can to ensure that the commitments of 2005 are implemented in 2006 and if we are achieve the Millennium Development Goals by 2015, there is no time to lose. I would recall in this context the 7th session of the Working Group on the Right to Development which was held in Geneva from January 9 to 14, 2006. It adopted a set of criteria for evaluation, periodically, of the global partnership for development in MDG 8 from the perspective of the Right to Development. Also it said that the policies of the Bretton Woods Institutions have to be corrected in terms of deficiencies from the perspective of the Right to Development. Here also there is broad agreement which straddles across divides and again I see no fundamental contradiction. The Right to Development in Article 22 of the African Charter is a legally binding provision. This year in Geneva both Canada and Japan joined the consensus in this Working Group on the Right to Development so that, as we move forward, we should have the cooperation of a broad majority of States in fulfilling the promise of the Millennium Declaration to “make the right to development a reality for all”. With this, I would conclude by expressing my congratulations to all Member States who have made the Human Rights Council possible.

I thank you.
Madam Co-Chair,

We thank you for convening the third meeting of the working group and the two informal notes on the implementation of resolutions 58/126, 58/316 and 59/313. After all, these resolutions and their implementation provide the basis for our deliberations here. Let me first comment on the information provided in the two informal notes.

This information at times is incomplete and, in some cases there is inadequate explanation of why a particular measure remains unimplemented or partially implemented. To give an example, OP4 of resolution 58/126 called on the General Assembly President to apprise the General Assembly of his decision on the assessment of the debate on the annual report of the Security Council as to the need for further consideration of the Council's report and on any matters that need to be brought to the attention of the Security Council. The “Status of Implementation” provides the following information: “To date, consideration of the report of the Security Council has been held in the plenary.” This is neither sufficient nor gives any idea whether there was any assessment undertaken or whether a need was felt for further consideration of the Security Council report, including in respect of convening informal consultations.

On the question of “rationalisation of the agenda” the information provided in the second note indicates that several Main Committees have undertaken measures to bi-ennialise and triennialise agenda items. A more useful analysis for our work would be the number and proportion of items that have actually been biennialised or triennialised? The question is not whether resolutions can be biennialized or triennialized. The question is whether it this is really an effective mechanism for the revitalisation of the General Assembly.

A similar assessment of the measures provided in resolution 58/126 needs to be undertaken - for example, whether the mechanism of meetings of the Bureaux-elect immediately after their election and meetings
between incoming and outgoing Bureaux was found to be useful in improving the functioning of the Main Committees. This type of assessment can be provided by the Bureaux of the Main Committees to the General Assembly President as it would give us an insight into the utility of such mechanisms in improving the functioning of the Main Committees.

One fact is, however, very clear - the resolutions adopted by the General Assembly on the rationalisation of its agenda and working methods have had little or no impact on improving either its effectiveness or its efficiency. In fact, rationalisation of the agenda and improvement of its working methods will only be meaningful if it, in turn, leads to implementation of General Assembly decisions. Or conversely, if General Assembly decisions are implemented in full measure, this could obviate the need for considering an agenda item in a subsequent year.

As I had said during a previous discussion, administrative reorganization measures envisaged under these resolutions are insufficient for revitalization of the General Assembly. The short point is that, if these measures were sufficient we would not be discussing the revitalization of GA today. This has more than amply been demonstrated by the increasing encroachment on and consequent undermining of the role and authority of the General Assembly by the Security Council. While the relevant Committees of the General Assembly will continue to examine these issues, the General Assembly plenary sooner rather than later will, have to consider issues that fall within its prerogative. These are, after all, integrally linked to the UN reform process as well as the shape that these reforms take, specially whether this will be a General Assembly determined process. We achieved this substantially in the case of the Human Rights Council established yesterday but could not do so satisfactorily in the case of the Organizational Committee of the Peace-building Commission. In formal terms, the Secretariat’s background note correctly claims that much has been achieved. In real terms, not only has the decline in the authority and role of the General Assembly not been reversed; it has not even been halted. If anything, not only does this decline continue apace; in the recent past it seems to have gathered momentum.

This was to be expected. Five additional posts, transitional office accommodation, election of the full bureaux three months in advance, reorganisation of the agenda, services for ad hoc groups, rationalising the agendas of the main committees, their adopting early programmes of work, issuing GA Rules of Procedure online and the like can at best clear the
wreckage and streamline things; it cannot empower the General Assembly. These measures do not automatically lead to empowerment but empowerment would inevitably have led to the automatic adoption of these measures.

Working methods by themselves do not empower. The Security Council is gathering ever more powers though its working methods are opaque and its Rules of Procedure not only not online but formally provisional and actually seldom observed.

The background note says that the use of optical scanners is still being examined. Even if the examination were to be completed, the measure would streamline but not empower.

Stalin understood this point well when he said that “what is important is not who does the voting but who does the counting”.

What we require is not something technical and therefore marginal but something political and therefore central – in short not a technical improvement but political empowerment. I would like to suggest six measures that this Working Group may wish to consider:-

1. The meeting between the Presidents of the General Assembly, the ECOSOC and the Security Council are meant to promote the harmonious functioning of these organs. But harmony cannot be achieved by one chord in a one sided manner. What if the Security Council does not heed sound advice, as has happened recently (in the case of the PBC and procurement debates). In such cases, it is not enough to let the ritual meetings go on and achieve little: it is important for the General Assembly to take matters in hand and hold a debate on the issues where encroachment has taken place and take practical concrete measures to assert its oversight role and authority.

2. Similarly, the Chart on Implementation annexed to the background note shows that since the adoption of Resolution 58/126 of December 2003, no special subject oriented reports have been submitted to the General Assembly. The General Assembly may wish to seek specific reports for its consideration on specified subjects. This would be of special importance in the coming months. Following the submission of the last Annual Report, many delegations had stated that it represented a marked retreat from better working methods
since it was purely factual and devoid of analytic content. In future, the General Assembly could consider rejecting such reports and asking for fresh reports.

3. The background note mentions the role of the GA in discussing issues pertaining to the maintenance of international peace and security. It is worth remembering that the United Nations Emergency Force during the 1956 Suez Crisis was established by the GA and this as well as the expenses incurred were upheld by the International Court of Justice which had clearly stated that the responsibility conferred by Article 24(i) on the Security Council is “primary” and not “exclusive”. The Security Council determines the nature and size of peacekeeping mandates and also extends the duration of such missions from year to year.

The General Assembly determines the financing and management of such missions. Permanent Members of the Security Council are required to pay more for such missions by virtue of their “special responsibility” for maintaining peace and security. But we have a situation where Permanent Members of the Security Council do not pay their assessments to particular peacekeeping missions for years on end thereby creating problems in their financing and management. Surely such ‘special responsibility’ also entails responsibility for financing of the mandates that they determine.

Since Security Council members have been unwilling to finance some of the very mandates that they approve, it is perhaps necessary for the General Assembly, by virtue of its responsibility to manage those missions, to take up those mandates and to examine them closely. Otherwise, it will not be possible to continue some of those peacekeeping mandates.

4. We are soon going to consider the mandate review in all organs of the UN. Perhaps we need to consider whether this exercise should be conducted by the General Assembly in order to have a complete picture of overlapping mandates and the changes in mandates that have, for example in the case of the Security Council, resulted from setting up of the Peace-building Commission and the changes in human-rights related mandates that result from the setting up of the Human Rights Council. An important activity such as a mandate review should therefore not be done piecemeal but in a
comprehensive way by the only universal representative organ of the United Nations which is the General Assembly.

5. We are discussing elsewhere the strengthening of ECOSOC. Sometimes, we hear talk of duplication between the work of ECOSOC and the Second Committee. It is important to bear in mind that the ECOSOC is supposed to consider the details of issues and the General Assembly provide policy guidance. There is a clear complementarity leading to synergy. The General Assembly should also give some attention to this matter in order to preserve this because this is so essential for fulfilling the development mandate of the United Nations. A mechanical approach to duplication could lead to further emasculation rather than empowerment.

It is amply clear that it is not a question of going beyond what is contained in these resolutions for guidance but of implementing these in letter and spirit. Take Preambular paragraph 10 of resolution 59/313 which reaffirms that the plenary meetings of the General Assembly should constitute a forum for high-level policy statements, as well as for the consideration, inter alia, of agenda items of special political importance and/or urgency.

6. A crucial issue of special importance for all of us will be the selection of the new Secretary-General. There has been a growing realisation both among Member States and among civil society on the need for a Secretary-General who comes to office backed by the legitimacy of a wider support base and a less arbitrary and more inclusive selection process than the current arrangements. The practice since 1971 – of the General Assembly accepting the Security Council’s recommendation and appointing the Secretary-General by acclamation - has to be seen against the legal requirement under Article 97 of the UN Charter, which recognizes that “The Secretary-General shall be appointed by the General Assembly upon the recommendation of the Security Council”. In any case, as far as the Security Council is concerned, the days of acclamation seem to be over; there is less and less left to acclaim.

The General Assembly has to reassert its appointing role and its primacy in this matter.

The provision in Resolution 11(1) that it is desirable that the Security Council recommend one candidate was in the context of a different world
order that existed at that time in which it was desirable that the two cold-
war adversaries agree on a common candidate before putting forward his
name. (This was meant to straddle the East-West divide). The situation
today is entirely different. The time has now come for a greater de facto
and not just abstract de jure General Assembly involvement in the selection
of the Secretary-General.

This working group should, therefore, consider revisiting Resolution
11(1) of 1946 as a key priority in its work. It should consider formulating
guidelines and criteria for the selection of the Secretary-General – a process
which will inject new dynamism and impart greater legitimacy to the selection
process. The basis of work can be the General Assembly Resolution 51/
241 of 22nd August 1997, one of the most important for the revitalisation
of the General Assembly through action on a specific issue of special
political importance and some urgency. Paras 56, 57 and 60 of this
Resolution are worth recalling: “56- the process of selection of the Secretary
General shall be made more transparent”; “57- The General Assembly
shall make full use of the power of appointment enshrined in the Charter in
the process of the appointment of the Secretary General and the agenda
item entitled “The Appointment of the Secretary General of the United
Nations”: “60 – Without prejudice to the prerogatives of the Security Council,
the President of the General Assembly may consult with Member States to
identify potential candidates endorsed by Member States and, upon
informing all Member States of the results, may forward those results to
the Security Council”. The GA needs to build on the spirit of these provisions.
As for transparency, since 1981 there has been an increase in arbitrariness
and secrecy through first the straw polls and then coloured ballots, which
incidentally concretized the distinction between permanent and non-
permanent members in the shape of two pence coloured and penny plain
– red were permanent members and white non-permanent members.

Our point of departure is the actual situation. On the one hand, there
is a sense of alienation and disempowerment among the broad majority of
Member States, made worse by the Security Council’s continual
encroachment on the prerogatives of the General Assembly. On the other,
is the clear lesson of the Volker Report on the Oil-for-Food Programme
that the Secretary General’s lack of authority was not because of any
management problem but because the Security Council (specially its
permanent members) did not let him have any. Both these point to the
necessity of a Secretary General who would be independent of such
pressures and this can only be if he is elected by the General Assembly
not just de jure but de facto. This would also establish through action the primacy and authority of the General Assembly.

I thank you, Madam Co-Chair.

544. Statement by Acting Permanent Representative at the UN Ambassador Ajai Malhotra on Role and Authority of the General Assembly: Substance of Debates and Resolutions, Relevance of General Assembly work at the Thematic meeting No. 2 of the Ad Hoc Working Group of the Revitalization of the Work of the UN General Assembly.

New York, April 6, 2006.

Madam Chair,

At the outset, I would like to associate myself with the comments made by Algeria on behalf of the Non-Aligned Movement.

We have previously addressed the need for and measures that can be taken to enhance the role and authority of the General Assembly. Thus, there may, per force, be some duplication in the issues raised today with those that we have raised previously.

Madam Chair,

The representative of the Non-Aligned Movement has already objected to the choice of the word “relevance” vis-à-vis the UN General Assembly in the title of the themes that we are discussing today.

Accordingly, I will not focus further on that point, except to state that the relevance of the UN General Assembly is beyond doubt. What we are considering is how to enhance its role and authority.

In response to the first question that you have placed before us today, it would be useful to revisit OPs 2 and 3 of GA resolution 59/313 on a “strengthened and revitalized Assembly”. It would be seen that thematic debates are one of six elements outlined in Operative Para 2 of resolution 59/313. There can be little doubt that further strengthening of the GA’s role
and authority will take place as a result of holding thematic debates. Operative Paras 2(b) to 2(f) of resolution 59/313, inter alia, speak of consideration of special reports of the Security Council through substantive and interactive debates in the UN General Assembly, of consideration of special subject-oriented reports submitted by the Security Council to the General Assembly on issues of current international concern, of the Security Council updating the UNGA on improvements in its reporting to the General Assembly. Unfortunately, no such reports have ever been submitted by the Security Council. As a result there has been nothing to consider. Securing the implementation of these provisions via thematic debates could certainly be a useful measure for strengthening of the GA.

Turning to the issue of selection of the themes for major thematic debates, it would be seen that Operative Para 3(a) of resolution 59/313 indicates that the President of the UNGA can propose interactive debates on current issues on the agenda of the Assembly, in consultation with Member States. Views of the Member States in deciding the themes for such periodic thematic discussions would be important in ensuring that the issues taken up are indeed of current global relevance. It would also be useful to avoid duplicating discussions held recently in other UN fora, for example, in ECOSOC or its functional Commissions. Revisiting many of the GA resolutions, starting from 57/270B, would show that the aspect of funding of developmental/humanitarian assistance, or the means of implementation is an important issue for the General Assembly to address. An overall assessment of the fulfillment of MDG-8 is another such issue.

I agree with the Ambassador of Jamaica that the UN General Assembly is the primary policy making organ of the UN and must be treated as such. ECOSOC could do much of the monitoring of implementation since it is the central mechanism for system-wide coordination and promotion of the integrated and coordinated implementation of and follow up to major UN conferences in the economic, social and related fields.

Turning to the next issue, Madam Chair, the need for GA resolutions to be concise, focused and action-oriented has been recognized in GA resolution 58/126. These are impeccable suggestions; obviously, no one wants resolutions that are long-winded or unfocussed. However, in the attempt to adopt a more concise text, the substantive elements of the resolution have to be kept in mind. Shortening the text of resolutions may not be practicable beyond a point and it is in any case not an end in itself.
As regards the issue of greater participation by and interaction with NGOs and others, this has to be seen in the context that UN decision-making is necessarily an inter-Governmental process. We cannot overlook or bypass this inter-Governmental character of the UN. The General Assembly has agreed on rules of procedure that must be strictly and diligently observed. The revitalization of the General Assembly cannot take place by compromising its rules of procedure.

As regards making the work of the General Assembly more visible to the public, the example set by the present UNGA President of leading from the front is worth emulating. Above all, the General Assembly makes its presence felt through its actions and the quality of its decisions. In recent months the General Assembly has established CERF, the Human Rights Council and the Peace building Commission.

These far-reaching steps have provided automatic visibility to the work of the UNGA. The GA can ultimately become more visible only if it takes important decisions or contributes to important decisions that matter.

In this context, I cannot avoid mentioning the issue proposed for our next discussion, namely, the role of the UNGA in election of the UN Secretary-General. It is by asserting its authority on issues assigned to it under the Charter and preventing encroachment by other organs of the UN on its authority and mandated responsibilities that the UNGA would be able to strengthen its public visibility. After all it is not only who you are that determines whether your actions are newsworthy, it is also what you do, i.e., the actions themselves that are important in determining whether the spotlight will be turned in your direction.

Thank you, Madam Chair.
545. Statement by Acting Permanent Representative at the UN Ajai Malhotra at the informal meeting of the Plenary with members of the High-Level Panel on United Nations System-Wide Coherence in the UN General Assembly.

New York, April 6, 2006.

Mr. President,

At the outset I would like to thank you for organising this informal meeting for an exchange of views with the High-level Panel on UN System-wide Coherence. I would also like to thank the distinguished Panel for briefing us about their deliberations so far. We associate ourselves with the statement made by South Africa on behalf of the Group of 77.

Mr. President, poverty eradication and securing sustainable development are the first and overriding priorities of developing countries. Accordingly, we believe that the process of UN reform should be driven by a vision of a strengthened role for the UN on development issues.

We are told that reform is needed in view of high administrative and overhead costs, resulting in high cost of delivery of development assistance. What is needed is to address the fundamental issue of the gap between mandates and financial resources available for their fulfilment. We must recognise that the delivery role of the UN will perforce be peripheral, given the modest funds available to the UN and the huge requirements of developing countries. Yet, there is an important catalytic role to be played by the UN. We have to help the UN make its buck go further. With this in mind we would propose that South-South Cooperation play an important facilitatory role in the UN context. The impact and effectiveness of development assistance could be enhanced by the use of local expertise including use of relevant technologies. We have to think global, but use local. Thus, projects in a recipient country may be tackled through “in-sourcing”, both from within a recipient developing country and amongst developing countries. Such an approach would lead to considerable savings that could be ploughed in to meet other development demands.

Mr. President, there have been references in our discussions to national or country ownership of the process. However, national or country ownership is not in doubt. What we are talking about is national or country “leadership” of the process. This resumes that inputs from UN and others should be in line with and support national plans, programmes and priorities.

Mr. President, several views have been expressed regarding the
need for a more coherent governance structure. It has been argued that multitude of bodies, procedures, etc., weakens the efficiency and impact of development activities. It may be a good idea to examine proposals for development/environment institutions being run as “tightly managed entities”. After all, who can contest the merits of “tight” management. However, proposals for drastic reengineering of development and environment bodies by collapsing them inwards into “large unified entities” is not a good idea. In this context, we are happy to note that Mr. Greenhill has today spoken about the High Level Panel having “no pre-cooked solutions” in mind. There is still a case for specialised and separate entities to serve specific mandates, which may otherwise not receive the emphasis or financial resources they deserve. Moreover, taking the example of environment bodies, many of them are young and have probably benefited from their geographic dispersal and relatively “independent” existence linked to the concerned Convention, e.g. Climate Change Secretariat at Berlin, Biodiversity at Montreal, Trans-Boundary Movement of Hazardous Wastes at Basel, etc.. Mr. President, you mentioned that you would soon be visiting Kenya. I have no doubt that while there you would note the advantages of geographical dispersal of agencies, including via the location of UNEP and UN-Habitat in Nairobi.

Turning to UN coordination in the field, a unified country-level approach for UN offices is perhaps not a bad idea. We are open-minded about it, especially if it leads to more efficient and effective delivery of development assistance. Mr. President, we are not convinced of the need to identify new horizontal policy themes for promoting coherence. There is no need to separately list environment and natural resources, as we learn has been done in the Concept Paper provided to the High-level Panel, as these are entirely covered within the “sustainable development” concept.

In our view, there may be some need for greater coherence as regards the process to be followed itself. Reference here is to the work of the High-level Panel, mandate reviews, strengthening of ECOSOC especially its oversight and system wide coordination functions and informal consultations on environment. All these considerations and processes would reach a boil or an outcome as per different time horizons and we hope that serious attention is given so that we do not reach contradictory or confusing results.

Lastly, Mr. President, we look forward to a transparent and inclusive process.

Thank you, Mr. President.
546. Statement by Acting Permanent Representative at the UN Ambassador AJai Malhotra on Mandate Review at the Informal Consultations of the Plenary.

New York, April 7, 2006.

Mr. Chairman,

At the outset, my delegation aligns itself with the statement by South Africa as the Chair of G-77.

The review of mandates is one of the more important areas that we need to address in the context of management reform. In fact, the reevaluation of old UN mandates to determine whether they still serve a useful purpose or justify modification or removal, is an on-going exercise in many ways. This review process provides us with a good opportunity to address some of the waste and redundancy that permeates the UN system. This exercise would eventually have to extend to reviewing mandates of other UN actors, and not merely be restricted to the principal organs. We are ready to join other Member States in an exercise that aims at eliminating obsolete UN mandates, changing those that have become wasteful or ineffective, and reassigning resources so released to other objectives.

Mr. Chairman,

Let me also express my appreciation to the UN Secretariat for responding promptly and effectively to our request to develop an electronic inventory of mandates. When we had sought such a database, we had in mind that it would be of particular use to smaller delegations with limited manpower as also to capitals. We now recognize that the on-line database will not only meet those objectives but has several long-term uses.

We have examined the Secretary-General’s report on mandate review that was released on March 30 and would like to commend the Secretary-General for the dispassionate and professional manner in which the data has been presented. We find it particularly attractive that the facts provided have not been overlaid with subjective judgement. This unbiased presentation provides us with the raw material to conduct the review. We do hope that these facts and the electronic data will now not be twisted with a view to achieving narrow political objectives. Instead, we expect that we could now start in good faith an inter-governmental process of review whose aim will not be cost cutting nor the achievement of targets.
against artificial timeframes, but a consideration of the mandates to see what we can all agree upon that needs to be retained or dispensed with. This is a Member State exercise and it is for Member States to arrive at their own determination regarding the value or otherwise of individual mandates.

The report of the Secretary-General (A/60/733) helps demystify the mandate review exercise. The definition of a mandate as “a request or direction, for action” is in concordance with the definition of outputs under Rule 105.4 of the PPBME Regulations and Rules. This has been recognized in para 36 of the report, which arrives at the same conclusion that my delegation and the G-77 arrived at in September 2005, namely, that existing regulations and rules provide for an ongoing mandate review. Regulation 5.6 states, and I quote, “within the proposed programme budget, the Secretary-General shall submit to the GA, with justification, a list of outputs….which….can be discontinued and which….have not been included in the proposed programme budget.” As recently as December 2005, while approving the current biennial programme budget, the General Assembly discontinued over 2,700 such mandates. Nearly a thousand were discontinued in the previous biennium. Figure 2 on page 12 of the report of the SG would have been even more useful if it had also indicated such outputs or activities that have been discontinued in past years and not just those mandates that have not been renewed in the last five years.

This is not to suggest that there are no further activities that could be considered for discontinuance, but to point out that there are mechanisms that permit such ongoing review and which have been and continue to be used.

The Committee on Programme and Coordination reviews such proposals for discontinuance of activities proposed by the Secretary-General. The CPC report is presented to both the ECOSOC and the UNGA for review. It is only in the Security Council that there is no regular review of its mandates; it would be timely to institute such mechanisms there.

Mr. Chairman,

While existing procedures do provide a means to address the issue of mandate review, it is in the area of duplication and overlapping mandates of principal organs that the inventory of mandates will be useful in order to sharpen the focus of each. Under the present effort, each principal organ is required to examine its own mandates. However, it is necessary for one
body to also examine overlap of activities amongst all principal organs. The only body that can perform such a function is the General Assembly. This also appears to be borne out by the content of the report of the Secretary-General. The mandate review has to be mutually reinforcing with other processes underway. The Secretary-General has concluded that the exercise of the revitalization of the GA will provide a strong base on which Member States can conduct the mandate review. We would like to take that view a step further and state that decisions and action by the General Assembly on the mandate review relating to all organs will, in turn, also revitalize the GA.

We agree with the Secretary-General that it may be necessary to initiate a process to consider more fully which intergovernmental organ should be the primary forum for the consideration of certain items and to find ways to improve coordination between the principal organs on those issues that are of concern to all organs. Again, this is an exercise for the General Assembly to undertake as the only universal representative organ of the UN.

Mr. Chairman,

Turning to the recommendations of the Secretary-General, the report has suggested that the Secretariat provide information about proposed mandates in a draft resolution in the same way that it provides budget implications during consideration of a draft resolution. This needs to be considered carefully. Statements of budget implications have of late had the undesirable effect of mandates not being approved in principal organs and main committees unless the resolution states that they are “within existing resources”. Firstly, it is the Fifth Committee of the 4 General Assembly that determines whether a mandate should or should not be financed from within existing resources. Secondly, the gap between resources available and mandates approved has grown over the last few years as a consequence of other bodies adopting mandates “within existing resources”. To add another statement on proposed mandates may lead to friction between Member States and also unnecessarily put the Secretariat in conflict with Member States, since determination of the value of a new mandate is a purely subjective interpretation which should be left to Member States. In any event, unlike in the past, Member States would now have the electronic inventory of all mandates to consult in order to determine whether a proposed new mandate is required or not. Then again, the Secretary-General has stated that a report is often sought as a compromise when there is no agreement on the course of action to be pursued. This is
unfortunate but true and is used in situations where decisions have to be taken by consensus. Perhaps this is a small price to pay for maintaining that consensus.

The Secretary-General has also clearly identified the problem of the gap between mandates and resources committed by Member States. There is wide agreement in this room that mandate review is not a cost-cutting exercise. Hence, it logically follows that in the context of this review we should commit to fully fund those mandates on whose continuance we agree upon. If the objective of this exercise is to strengthen and update the work of the Organization, an objective we all share and have agreed to in the Outcome Document, then we would also have to commit to fund the mandates of this Organisation.

My delegation has consistently called for strengthening of monitoring and evaluation functions relating to mandates. We are glad that the Secretary-General has recognized the importance of these functions. Member States should commit to provide resources for monitoring and evaluation up to 2% to 3% of the regular budget which has been identified by the Secretary-General as the standard for such organizations, as against the 0.35% that exists at present.

Finally, this exercise has provided Member States a valuable tool in the shape of a birds-eye view of all UN mandates. Fifty years ago, Dag Hammarskjold initiated the first and only previous UN mandate review, but web-based applications with all their possibilities did not exist in those days. Now Member States will have control over the mandates that they have approved, be able to hold the Secretariat accountable for their execution, and exercise governance more effectively by conducting more thorough monitoring and evaluation.

Thank you, Mr. Chairman.
547. Statement by Permanent Representative to the Conference on Disarmament Jayant Prasad at the UN’s Disarmament Commission.

Mr. Chairman,

On behalf of my delegation, I congratulate you on your election as the Chairman of the Disarmament Commission and assure you of our full cooperation in your efforts to guide the Commission’s work. We should like to express our appreciation for Ambassador Sylvester Rowe of Sierra Leone, the outgoing Chairman, for his contribution to forging a consensus on the agenda of the Commission. I would also like to congratulate the new Under Secretary General for Disarmament Affairs, Ambassador Nobuaki Tanaka, and compliment him on his thoughtful statement to the Commission yesterday. There is a deep connection between the deficient functioning of the United Nation’s disarmament machinery and the decline in the multilateral ethic in international relations. The reconvening of the substantive UNDC session after a gap of two years to consider two important issues on the disarmament agenda is, in a sense, a reaffirmation of multilateralism. It symptomises that the multilateral approach, even if contested, continues to be regarded by the international community as critical for the development of norms and standards governing international relations.

The Disarmament Commission plays a unique role in the multilateral disarmament mechanism created by the First Special Session of the General Assembly devoted to Disarmament. As a subsidiary organ of the General Assembly, with the same universal membership, it has the mandate to consider and make recommendations on issues relevant to disarmament to the General Assembly, and through it, to the negotiating body, the Conference on Disarmament. The Commission provides a platform where all States can engage in an interactive and thoroughgoing dialogue over these issues.

The task of the Commission, thus, is to prepare the ground for disarmament negotiations, by elaborating a general approach to such negotiations. The Commission has previously been able to formulate principles, guidelines and recommendations on several disarmament issues, including those on verification and confidence building measures. Since the Commission reaches its conclusions by consensus, its
recommendations provide a useful and universally acceptable framework for all States in their endeavour to achieve their final objective: general and complete disarmament under effective international control.

The Commission’s first agenda item enjoins it to make recommendations for achieving the objectives of nuclear disarmament and non-proliferation of nuclear weapons. India remains fully committed to the goal of a nuclear-weapon-free world, to be realized by the complete elimination of nuclear weapons through global, verifiable and non-discriminatory nuclear disarmament. The Final Document of SSODI had accorded the highest priority to the goal of nuclear disarmament. It affirmed that its ultimate objective was the complete elimination of nuclear weapons and outlined concrete steps to achieve that objective. The Millennium Declaration in 2000 reiterated the commitment of the member States of the United Nations to strive for the elimination of the weapons of mass destruction, in particular, nuclear weapons.

For India, nuclear disarmament and nuclear non-proliferation are not mutually exclusive. Instead, they intersect and reinforce each other. The very first resolution of the UN General Assembly, Resolution 1 (I) of 1946, adopted unanimously, sought the elimination of atomic weapons from national armaments and, as indeed, all other major weapons amenable to mass destruction. The present discussion is how to go about this task and also, in the process, deal with contemporary proliferation threats, emanating both from States and non-State actors. Disarmament and non-proliferation, therefore, are not polar opposites but two ends of a single continuum.

Under the Presidency of the Republic of Korea during the first part of its 2006 session, the Conference on Disarmament engaged in a focused debate on the issue of nuclear disarmament. It became evident that all States, both those who possess nuclear weapons as also the non-nuclear-weapon States, remain firmly committed to the goal of nuclear disarmament. A number of issues were identified by member States of CD during the debate for achieving this goal. It is, therefore, opportune that the Commission is going to consider in some detail the ways and means for achieving the objective of nuclear disarmament and nuclear non-proliferation, in order to arrive at a set of recommendations on the subject. The Commission can carry forward discussions on nuclear disarmament and chart a possible path that provides direction for the future work of the Conference. The task of the CD, as the sole multilateral disarmament negotiating forum, is to produce legally
binding agreements and conventions. Although it is currently engaged in structured discussions on the issues on its agenda, it cannot substitute the functions of UNDC, the deliberative organ of the UN disarmament mechanism, which must consider issues relevant to disarmament and make recommendations to the Conference. My delegation shall present India’s perspectives on the steps for achieving the twin objectives of nuclear disarmament and the non-proliferation of nuclear weapons in the course of discussions in the Working Group devoted to this issue.

A basic problem afflicting the disarmament institutions and processes is the lack of trust among States. This erosion of trust further begets the lack of willingness for mutual accommodation, making further progress on nuclear disarmament even more difficult. The absence of consensus on disarmament and non-proliferation paragraphs of the 2005 World Summit Outcome underscored the fact that, currently, there are sharp differences among States over the goals, priorities and approaches in the field of disarmament and nonproliferation. These differences cannot be set aside or ignored.

For any breakthrough, all States need to sincerely engage in a dialogue on their approaches to nuclear disarmament and nuclear nonproliferation and understand and accommodate each other’s security concerns and threat perceptions. One way to restore this trust would be to secure a reaffirmation of the unequivocal commitment of all nuclear weapon States to the goal of complete elimination of nuclear weapons. The Commission provides all States an opportunity to reaffirm their commitment to nuclear disarmament and nuclear non-proliferation and to outline their positions and priorities, as well as understand the positions and priorities of others.

We are hopeful that renewed consideration of the agenda item “practical confidence building measures in the field of conventional weapons,” will be productive this time. In revisiting this issue, addressed during the last three substantive sessions of the Commission, we should strive for a consensus that had eluded the Commission earlier. My delegation considers it useful to build on the deliberations held already in the Commission during its last cycle of work. India fully supports the adoption of confidence building measures, whether bilateral, regional or global, on the basis of arrangements freely arrived at among States of a region. India has initiated, both unilaterally and bilaterally, a number of confidence-building measures in its neighbourhood to build trust and confidence and to ensure greater transparency. We are committed to adopting further measures to prevent misunderstanding and promote a stable environment
of peace and security with the countries in our neighbourhood. In considering this matter in Working Group II, we shall outline our approach on the issue of confidence-building measures in fuller detail.

The United Nations has contributed to the development of an impressive corpus of norms and standards governing international relations, including in the field of arms control and disarmament. The Commission has also played a unique role in this and has many achievements to its credit. However, no system or institution is perfect and there is always room for improvement. Our experience in the First Committee demonstrates that there is scope for better utilization of the resources available. My delegation, therefore, welcomes that besides considering the two agenda items, the Commission will also discuss measures for improving the effectiveness of the methods of its work.

We look forward to working with other delegations for a purposive and productive session.

I thank you, Mr. Chairman.

548. Statement by Permanent Representative at the UN
Ambassador Nirupam Sen at the Thematic meeting on the Role of the General Assembly in the Selection of the Secretary-General — Ad hoc Working Group on the Revitalisation of the General Assembly.

New York, April 19, 2006.

Mr. Co-Chair,

We thank both of you for convening these discussions. It is still the season of Easter and we can look forward to the resurrection of the General Assembly. Obstacles that appear big and formidable when an institution is on its knees, disappear when it rises to its feet. In an earlier discussion, there was a reference to the absence of media attention (to the General Assembly). The media is attentive when the General Assembly discusses something important: even before we have begun our discussions today, there is an article in today’s Financial Times. This is another indication of how the GA can revitalize itself.
It is important for us to identify the problems and address these. Our point of departure is the actual situation. On the one hand, there is a sense of alienation and disempowerment among the broad majority of Member States, made worse by the Security Council's continual encroachment on the prerogatives of the General Assembly. On the other, is the clear lesson of the Volcker Report on the Oil-for-Food Programme that the Secretary General's lack of authority was not because of any management problem but because the Security Council (specially its permanent members) did not let him have any (incidentally, this has implications for his managerial authority, important in the context of management reform). Both these point to the necessity of a Secretary General who would be independent of such pressures and this can only be if he is elected by the General Assembly not just de jure but de facto. This would also establish through action the primacy and authority of the General Assembly.

Only then would he truly address the interests of the downtrodden and uphold the sanctity of the Charter. As Albert Einstein said: “Problems cannot be solved by the level of thinking that created them”. That is why a new approach is necessary. That is why the views of Security Council as communicated by you are totally inadequate in terms of addressing these problems.

Quite clearly, there is Security Council pressure on the Secretary-General and on the General Assembly. The Secretary-General often has to be a Secretary vis-à-vis the Security Council and a General vis-à-vis the General Assembly. This has to be reversed. It is, therefore, necessary to ensure that a future Secretary-General would always be a General vis-à-vis the Security Council and a Secretary vis-à-vis the General Assembly. General Assembly Resolution 11/1 of 1st February, 1946 belongs to the past. Let the dead bury the dead. At that time, it was necessary to straddle the East West divide (as the distinguished Permanent Representative of Mongolia also argued) and the mode of selection facilitated this. Today, it is necessary to straddle the North South divide and the current mode of selection certainly does not facilitate this. What we are de facto doing is forgetting the objective instead of changing the selection process.

There is an obvious need for amending and improving upon the selection procedure of the Secretary-General to bring it in line with current realities, which will allow the organization to better respond to the challenges that it faces. In contrast to the necessity of a new Secretary-General responsive to the aspirations of the broader UN membership, in particular
developing countries, and one who comes to office backed by the legitimacy of a wider support base, the current arrangements are cloaked in secrecy and devoid of formal procedures, which is a great disservice to the principles of transparency and democracy. Who the candidates are is often as much of a mystery as how they are considered, a subject of intrigue and much speculation by the media. This process works to keep many qualified candidates - from getting due consideration. This needs to change.

The distinguished Permanent Representative of Canada said that the UN Security Council proposes and the General Assembly disposes, echoing the proverb that Man proposes and God disposes; this is only on the surface: in reality, the General Assembly proposes and the Security Council, godlike, disposes. We need to shift the focus from the Permanent Members of the Security Council to the Permanent Members of the General Assembly, from the P 5 to the P 191.

Incidentally, where the P 5 played a role we have the PBC and where the P 191 played a role we have the HRC. The difference is palpable and does not need to be laboured. Such a process (inclusive, transparent and General Assembly-driven) would make Article 100 a reality. Abstract de jure approval can be done by a rubber stamp. A real de facto selection can only be done by a truly empowered body. The UN Security Council may claim to be on the side of the angels. We can agree so long as we understand the angels to be fallen angels.

In the process of UN reforms, the difficulties in management reforms or mandate review or budget, should be placed in the context of the General Assembly whose concrete actions, such as that on the establishment of the Human Rights Council, demonstrate its movement towards a revitalized status and the importance of transparency. The time is, therefore, ripe for a greater de facto and not just abstract de jure General Assembly involvement in the selection of the Secretary-General.

The selection process is far too important to be left entirely to the Security Council. The Secretary-General’s election should not be limited to merely “consulting closely with other Security Council members to reach agreement on a candidate” followed by approval by acclamation by the UNGA. At the same time, it should not be allowed to become a divisive issue between the two bodies. The need for the General Assembly to address this issue arises from the fundamental purposes of Charter – to address peace and security as well as development. A predominant Security Council role during the selection process neither provides legitimacy of
the wider membership nor the crucial ownership in addressing development issues. Without addressing the development problems besetting the vast majority of UN membership, security in its full sense cannot be achieved either. It is thus imperative to address both development and peace and security in a balanced and self-sustaining manner. The practice of the General Assembly accepting the Security Council’s recommendation and appointing the Secretary-General by acclamation - has to be seen against the legal requirement under Article 97 of the UN Charter, which recognizes that “The Secretary-General shall be appointed by the General Assembly upon the recommendation of the Security Council”. After all, the General Assembly adopted resolution 51/241 on 22 August 1997, one of the most important for the revitalisation of the General Assembly through action on a specific issue of special political importance and some urgency. Paras 56, 57 and 60 of this Resolution are worth recalling: “56- the process of selection of the Secretary General shall be made more transparent”; “57- The General Assembly shall make full use of the power of appointment enshrined in the Charter in the process of the appointment of the Secretary General and the agenda item entitled “The Appointment of the Secretary General of the United Nations”: “60 – Without prejudice to the prerogatives of the Security Council, the President of the General Assembly may consult with Member States to identify potential candidates endorsed by Member States and, upon informing all Member States of the results, may forward those results to the Security Council”.

No progress has been registered in the role of the General Assembly in the selection process since the adoption of resolution 51/241 almost a decade ago, because, so far, no concrete step was taken, especially the amendment of Resolution 11(1) This working group should, therefore, consider amending resolution 11(1) of 1946 for consideration by the General Assembly to improve the selection process of the next Secretary-General. This is the key to immediate action; the other aspects are secondary.

The amendments to resolution should propose that “it would be desirable for the Security Council to proffer a panel of at least three candidates for the consideration of the General Assembly.” It is not for the General Assembly to send any names to the Security Council; it is for the Security Council to send a panel of names to the General Assembly which is the deciding authority, as clearly mandated by the UN Charter. The role of the General Assembly President is clearly defined in paragraph 60 of resolution 51/241. He could conduct consultations with regional groups on the panel of names to allow for a consensus to emerge around one
candidate or at least a clear majority to emerge around a candidate. There could also be opportunities for the candidates themselves to meet members.

With great respect to my distinguished colleague from Canada who has done much to highlight this issue, I must respectfully but very firmly and fundamentally disagree with him. If we follow his prescription, we would not revitalize the General Assembly or achieve our objective of a quick change in making the selection process inclusive and transparent leading to an optimal choice of candidate: we would dissipate our energies on long-term matters that cannot be brought to a conclusion quickly such as the term of office, the setting up of a search committee and the like. We would thereby lose the interest and momentum available in the year of reform. Let me emphasize that we have no problem at all with these ideas; our central problem is with not amending 11(1) which clearly shows the net effect and direction of the Canadian proposal. It is important to concentrate on the selection procedure and limited criteria through amending 11(1) which can be brought to a conclusion quickly. The Canadian proposal in its totality will give us an impression of revitalization without real revitalization, a substitute for the real thing, engage us in much ado about nothing now, in debate on what cannot be implemented now. In short, while the Canadian proposal is undoubtedly fruitful for the future, it is a blind alley for the present. My distinguished friend said that the process has not begun. It has not because 11(1) was not amended.

It would be appropriate that a new Secretary General be sensitive and responsive to the development imperatives of the developing world. The existing practice of regional rotation could be incorporated among these principles, which would contribute in some measure to reducing the arbitrariness of the selection process. Resolution 51/241 of 22nd August, 1997 in para 59 clearly refers to “due regard to regional rotation and gender equality”. In so far as the timing is concerned, the General Assembly could rapidly adopt these measures during its 60th session and well in time for the selection of the new Secretary-General towards the end of the year.

What is proposed is concrete but extremely modest. The contradictions of the SG’s role are Charter-based but have been made worse by the P 5. How can the SG be an honest broker if he is sometimes broken into being the P-5’s official executioner? While his independence may be strengthened through a single term it can only be consolidated through direct and actual election by the General Assembly. Only then would he have the moral courage to resist pressures. Only then would we
have an individual who combines an inner sense of justice with sensitivity to social injustice; individual creativity with sensitivity to the developmental aspirations of the vast majority of countries; individual diplomatic and intellectual skill with respect for cultural diversity; an ability to communicate with a greater ability to listen; originality with the common touch and a sense of the common purpose.

I thank you, Sir.

New York, April 20, 2006

Mr. Chairman,

We are pleased to see you chair this meeting and would like to assure you of our full support and cooperation in carrying out your responsibilities. Kindly accept our congratulations on the convening of this first meeting of the Open-Ended Working Group on the Question of Equitable Representation on and Increase in the Membership of the Security Council and Other Matters related to the Security Council.

This first meeting is to focus on organisational matters and will enable a general exchange of views on the work of the Open-Ended Working Group. The Working Group has played an important role in the past in bringing about some reforms in the UN Security Council.

Yet much more remain to be done. In statements at the 60th UN General Assembly and earlier, India has repeatedly highlighted the imperative to comprehensively reform the UN Security Council, both in terms of its membership and its working methods. In particular, we have pointed out that while membership of the UN has increased nearly four-fold since its inception sixty years ago, the size and composition of the Security Council, particularly of its permanent membership, has remained more or less intact. A comprehensive reform of the UN Security Council is
overdue and is essential in order to bring it in line with contemporary realities and strengthen the UN as a whole. It is also a matter of concern that developing countries are grossly under-represented in the Security Council, even though most decisions taken by the Council directly affect them. Any expansion and restructuring of the Security Council must include developing countries, both as permanent members and in the non-permanent category. Inclusion of permanent members from Africa, Asia, Latin America and the Caribbean, would optimise the Security Council decision making that is so essential to address the concerns of the developing countries and help secure the adoption of new, fair and transparent working methods.

The United Nations Charter has delineated clear lines of responsibility between the General Assembly and the Security Council. Articles 11, 12, 15, 24 and 25 are particularly relevant in this regard. Additionally, various General Assembly resolutions have clarified this relationship, including Resolution 377 (V) of 3 November 1950 (Uniting for Peace) and Resolution 58/126 of 19 December 2003. In discharging its responsibilities, it is important that the Security Council respond to the mandate embodied in the Charter and to the discussions in the General Assembly. Faithful observance of these norms is critical for securing and reinforcing a healthy constitutional relationship between the General Assembly and the Security Council.

Mr. Chairman, in many other ways too the working of the Security Council leaves much to be desired. Thus, for example, we have observed that the consultations with and briefing of nonmembers by the Security Council has tended to be arbitrary and adhoc. Certainly, some Council Presidents do attach importance to this process. However, many others have been indifferent. In several instances, despite scheduling of briefings for the general membership, these either did not take place or were perfunctorily carried out. In fact, briefings given to the media are often far more comprehensive than those given to non-members of the Security Council!

Mr. Chairman, in order to address this unsatisfactory state of affairs, the G-4 countries had introduced on 6 July 2005 a practical and comprehensive resolution that addressed the issue of Security Council reforms in its entirety. That draft resolution received very wide support amongst UNGA members. It has been re-tabled by Brazil, Germany and India on 5 January 2006 as document L.46. No other model for reform and expansion of the UN Security Council has met with a similarly high level of
endorsement.

Our aim behind re-tableing the G-4 draft was to further explore the potential of joining hands with all Member States supporting Security Council reform. In that context, we welcome a discussion of the L.46 draft resolution by all Member States genuinely interested in such reform. We will join in such discussions with an open mind with a view to further broadening its support base. We hope to now see positive dynamics instilled into the process of Security Council reform.

We have also been encouraged by the efforts of other Member States in the same direction. In fact, both the initiatives undertaken by others in tabling draft resolutions on this issue share to a large extent some of the central reform aims of the G-4 draft resolution. Thus, we have been enthused by the tabling of the draft resolution by the African Union last December. Its contents we support.

We have also noted with interest the tabling last month by the S-5 of the draft resolution on Working Methods of the Security Council.

While well intentioned, the S-5 proposal is neither practical nor comprehensive. It is exhortatory in nature and its operative paragraphs invite the Security Council to consider measures and report to the General Assembly. Unfortunately, if past precedent is any guide, the P-5 are unlikely to respond positively to such an invitation. Still, despite its evident deficiencies, we are willing to consider the S-5 draft in the hope that the exercise of doing so may simultaneously stimulate and open the way to comprehensive Security Council reform.

In conclusion, Mr. Chairman, we look forward to a constructive exchange of views in the Open Ended Working Group. Without comprehensive Security Council reform, the overall reform of the UN will only be piecemeal, unsatisfactory, and incomplete.

Thank you, Mr. Chairman.
550. Statement by Acting Permanent Representative at the UN Ambassador Ajai Malhotra in the General Assembly debate on the UN Committee on Information.

Mr. Chairman,

At the outset let me express my deep satisfaction upon having you preside once again over the deliberations of the Committee on Information. You can be assured of my delegation’s full support as you guide our work. I would also like to join others in conveying our appreciation to Under-Secretary-General Shashi Tharoor for his comprehensive and skilful presentation of the ‘balance sheet’ of the performance of the Department of Public Information [DPI] over the past year. His leadership has contributed to a transformed DPI, with a new focus, direction and purpose. I would also like to associate my delegation with the statement made by the distinguished representative of South Africa, as the G-77 Chairman.

The United Nations has recently been receiving a concentrated dose of media attention as a result of the 2005 World Summit and its follow up. Despite its image being affected by scandal-driven media coverage, the UN remains a pivotal global institution. The UN presently stands at the threshold of a new era, with a variety of opportunities and threats on its horizon. The DPI has a pivotal role to play at this sensitive stage, since it is the conduit for the flow of information between the UN and the peoples of the world. We welcome the DPI’s new strategic approach that combines realignment of resources and achieving greater effectiveness in its communications work through targeted delivery, enhanced use of information and communication technology, and the building of new partnerships with civil society organizations. This is particularly so, since the DPI will per force have to meet its goals with limited resources while functioning in an often unhelpful environment.

Looking ahead, the DPI must further intensify its efforts to meet the concerns and special needs of the developing countries in the field of information and communications technology. The ‘digital divide’ remains vast; huge segments of populations in developing countries continue to be deprived of the benefits of the information and IT revolution. Traditional means of communication, including radio and print, retain tremendous relevance for disseminating the UN message in developing countries. In this context, we welcome the recent initiatives undertaken by United Nations Radio through integration of new technologies, which has broadened the
scope of its broadcasts and expanded its outreach. DPI must continue to expand its partnerships with local and national broadcasters, especially in the developing world.

Core economic development and social issues remain the overriding priorities of developing countries. We welcome DPI's focus over the past year on priority issues such as HIV/AIDS, Human Rights, New Partnership for Africa's Development, the Millennium Development Goals, Palestine, etc. We support DPI in its efforts to do even more to highlight such issues and the work of the UN in addressing them.

We also favour a strong relationship between DPI and the Department of Peacekeeping Operations [DPKO]. We welcome the two major guidance projects for the public information components of peacekeeping missions that have been recently completed. We would also encourage DPI and DPKO to devise and implement a comprehensive communication strategy that highlights success stories of peacekeeping and the role of peacekeepers in their areas of operation. An example would be to bring out the humanitarian activities being undertaken by a peacekeeping mission such as the UN Mission in Ethiopia and Eritrea [UNMEE]. Using resources voluntarily provided by Troop Contributing Countries such as Jordan, Kenya and India, UNMEE has been successfully implementing a focussed 'Winning of Hearts' programme by which it has sought to apply a healing touch via undertaking soil conservation and water harvesting activities, supply of drinking water and medicines to the locals, holding of nearly 500 free medical camps and 300 free veterinary camps, organising free vocational training in auto repair, carpentry, and basic handling of computers for the local population, improvement of tracks, clearance of war debris, construction of sports fields, restoration of schools and hospitals, promotion of mines awareness, distribution of school bags and books, etc. Such initiatives could be beneficially highlighted by the DPI, both locally and internationally. This is one of those stories that the world needs to hear more about via the DPI's outreach initiative!

The United Nations Information Centres [UNICs] are crucial in enhancing the public image of the UN and in disseminating its message, especially in developing countries. If the DPI is the UN's bullhorn, then it is the UNIC mechanism that gives its voice a local resonance. Adequate budgetary resources must be reassigned to secure effective functioning of UNICs in developing countries. We have noted that rationalisation of the network of UNICs will continue and would encourage DPI to consult closely with host countries; other countries served by these Information Centres, as well as the concerned region, in its efforts at further improvisation and
innovation. Development of websites in local languages must also remain a primary DPI concern as it seeks to provide up-to-date information in the field.

We commend the DPI on its redesigning the UN website and welcome the new Press Release Webpage and daily Media Alert put out by it. The UN website’s continued development is essential for user satisfaction. We support DPI’s plans to modernize the website architecture so as to provide even faster access to features that users actually seek out. It is good that the past three years have witnessed a sharp rise in subscribers to the UN News Centre’s e-mail service and in readership of the print and online editions of the UN Chronicle. The possibility of subscribing to the UN News Centre’s e-mail service from the UN home page itself, may be worth considering.

Intermediaries like the media, NGOs, and educational institutions, help amplify and spread the UN’s message to target audiences. DPI outreach services, in particular its educational outreach, contribute to promoting awareness of the role and work of the UN on priority issues. We welcome the Global Teaching and Learning project and accompanying Cyber School Bus website, by which DPI has promoted innovative approaches to learning about the UN. We also favour DPI efforts to strengthen its focal point role for interaction with civil society and commend its efforts to improve the quality of information available to NGOs.

DPI will have to constantly appraise and adjust its activities in a timely manner to fast changing international challenges. Accordingly, assessing and reassessing the effectiveness of its actions must underpin its efforts and a systematic “culture of evaluation” guide its work. Training of staff to constantly review the impact of their work is a natural follow-up to this emphasis on evaluation. It is good that DPI is constantly exploring new ideas in this regard.

The DPI’s challenge is not simply to make the UN’s voice heard loud and clear, but to simultaneously deliver a message that is easily understood, appreciated and assimilated. In doing so, it will need to constantly improvise, modernise and re-invent, seeking to tell the UN story in an effective and efficient manner. I would like to convey our support to the DPI team in tackling the formidable tasks before it.

Thank you, Mr. Chairman.
551. Statement by Joint Secretary (Disarmament and International Security Affairs) in the Ministry of External Affairs Hamid Ali Rao at the UN Conference to review progress made in the Implementation of the Programme of Action to Prevent, Combat and Eradicate the Illicit Trade in Small Arms and Light Weapons in all its aspects.

Mr. President,

Allow me to congratulate you on your assumption of the post of the President of the Conference and assure you of our full cooperation. We would like to commend your thorough preparatory work and hope that under your able guidance the Conference will have a positive outcome.

Mr. President,

2. The international community has long recognized that the illicit trade in small arms and light weapons (SALW) poses a grave danger to the security of States. In the hands of terrorists, insurgents and criminals, such weapons have disrupted political and social stability, derailed pluralistic and democratic political processes and hampered economic growth and development. They have fueled international terrorism and provided sustenance to organized crime, including trafficking in drugs. In many States, easy availability of small arms to rival factions and insurgent groups has protracted civil wars resulting in enormous loss of lives and livelihood.

3. India has been a victim of transnational terrorism and other organized crimes, sustained by illicit trade in small arms. Continuing seizures of a large number of small arms from various terrorist groups indicate that the channels for their supply continue to remain active. We have taken measures to arrest such illicit flows and ensured that the weapons confiscated by security forces do not find their way back into the illicit trade channels or fall into the hands of unscrupulous or criminal elements. We see the international efforts to prevent, combat and eradicate the illicit trade in small arms as an integral part of the global fight against terrorism. We believe that success in eliminating the illicit trade in small arms would effectively contribute to the elimination of the scourge of terrorism.

4. The first UN Conference on Small Arms in 2001 was a reflection of the importance attached to this issue by the international community.
The Programme of Action, adopted by consensus, manifests the international community’s recognition of the dangers posed by the illicit trade in small arms to the international peace and security. It embodies the resolve of States to undertake various measures at the national, regional and global levels to prevent, combat and eradicate the illicit trade in small arms. Even though the Programme of Action is not a perfect document that meets all our expectations, it represents the political consensus among the member States to prevent, combat and eradicate the illicit trade in small arms.

5. India, therefore, accords high priority to full implementation of the Programme of Action as a means to combat transnational terrorism and other organized crime. Though there has been some progress in the implementation of the Programme of Action, much remains to be done. States have undertaken various measures and initiatives at the national, as well as regional and global levels. On the basis of the recommendations made by the Group of Governmental Experts, which India had the honour to chair, the Open-Ended Working Group negotiated an international instrument to enable States to identify and trace in a timely and reliable manner illicit small arms and light weapons. This was a significant achievement, given the current impasse in various other disarmament fora.

6. Even though India, like many other States, would have preferred a legally binding Instrument and would have liked it to cover ammunitions within its scope, we believe that it would make a vital contribution to preventing, combating and eradicating the illicit trade in small arms. India has already begun its implementation and the concerned establishments have taken steps to conform the markings on weapons produced by them to the requirements of the Instrument.

Mr. President,

7. The Review Conference provides the member States a valuable opportunity to reaffirm their commitment to the Programme of Action. It is important that we preserve the consensus, arrived at in 2001 and carefully nurtured since. Given the different situations and capacities of States and regions any exercise to further elaborate the provisions of the Programme may not be conducive to preserving this consensus. The Programme is flexible to allow any State or region to adopt measures beyond its existing provisions. These efforts could be encouraged and would, in time, allow states to learn and implement further measures based on each others’ experience. In our deliberations, our focus should remain on a
comprehensive assessment of the implementation issues so as to identify gaps and the further steps that States need to be take to fulfill their commitments.

8. We believe that effective national measures for exercising full control over the export, import, transit and re-transfer of small arms are a sine qua non for preventing, combating and eradicating their illicit trade. The Programme of Action obliges States to assess applications for export authorizations according to strict national regulations and procedures that cover all small arms and light weapons and are consistent with the existing responsibilities of State under relevant international law, taking into account in particular the risk of diversion of these weapons in the illegal trade. It requires States to put in place and implement adequate laws, regulations and administrative procedures to ensure the effective control over the export and transit of small arms, including the use of authenticated end-user certificates and effective legal and enforcement measures. These obligations need no elaboration but effective implementation. These measures, together with adequate marking on all small arms and tracing of illicit small arms, in a timely and reliable manner, coupled with effective control over illicit brokering, provide the basic framework for preventing, combating and eradicating the illicit trade in small arms.

9. We are satisfied that the broad-based consultations held by the Department of Disarmament Affairs has led to a consensus among the member States on setting up a Group of Governmental Experts to consider further steps to enhance international cooperation in preventing, combating and eradicating illicit brokering in small arms. We look forward to participate in the work of the Group and hope that it would enable full deliberations on various aspects of the problem of illicit brokering and reach consensus on a set of recommendations.

10. While the primary responsibility for its implementation falls on States, the Programme of Action recognizes the need for close international cooperation to prevent, combat and eradicate the illicit trade in small arms. The member States have committed to cooperate and to ensure coordination, complementarity and synergy in their efforts to deal with the illicit trade in small arms at the global, regional, sub-regional and national levels. The Non-Aligned Movement has presented a proposal on further measures to ensure adequate international assistance, enabling the States requiring assistance to take measures to implement their obligations under
the Programme. We would like the Review Conference to focus its deliberations on international assistance and cooperation.

11. India has long recognized that close international cooperation is required to prevent, combat and eradicate the illicit trade in small arms. We believe that the efforts to effectively implement the Programme of Action are an integral part of the international efforts to combat terrorism. India has taken bilateral and regional initiatives to put in place arrangements for enhanced cooperation in fighting terrorism and organized crime, as a corollary to the efforts to prevent, combat and eradicate the illicit trade in small arms.

12. Regional initiatives have played an instrumental role in implementation of the Programme of Action. India has been involved in various regional initiatives. We would like to compliment the other States that have been proactively involved in leading such initiatives and place on record our appreciation for the role that the inter-governmental organizations and various NGOs have played in promoting implementation of the Programme of Action.

**Mr. President,**

13. As we focus our deliberations on reaching consensus on a final outcome of this Review Conference, we need to bear in mind that the process of reaching consensus on the Programme of Action was protracted and required compromises by all member States. We would do well to remember that and temper our ambitions, taking into account the concerns and priorities of all member States. Any hasty effort to elaborate or augment various existing obligations under the Programme may erode this consensus and disturb the delicate balance. We should continue to focus on the key issue of the illicit trade in small arms, which is also the main concern of the Programme of Action, and desist from expanding it to cover the ‘licit trade’ among States.

14. As regards our expectations from this Conference, we would like it to reaffirm the obligations stipulated in Programme of Action and to renew the commitment of States to implement them. The Conference should stress that the primary responsibility for preventing, combating and eradicating the illicit trade in small arms falls on States. It should indicate the way ahead on strengthening international cooperation and assistance for enabling States to implement the Programme. It should encourage the inter-governmental organizations and NGOs to continue to contribute to
the efforts of States in implementing the Programme. It also needs to reach an agreement on the future meetings of States to assess the implementation of the Programme. We hope that our non-paper, submitted together with South Africa and the Netherlands, will contribute to deliberations on this issue.

15. A vast majority of States have emphasized the need to deny terrorists and groups or individuals engaged in organized criminal activities access to small arms. The Review Conference, we believe, should address the issue of supply of small arms to terrorists and other non-state actors. International community has accepted in the past the principle of non-transfer to non-State actors. Under the Amended Protocol II to the CCW Convention, High Contracting Parties have undertaken “not to transfer any mine to any recipient other than a State or a State agency authorized to receive such transfers”. Further, paragraph 6 (e) of the international Instrument on marking and tracing of SALW provides that, for the purposes of that instrument, small arms and light weapons are illicit if “they are transferred without a license or authorization by a competent authority”. We believe that all States should, as part of their efforts to combat global terrorism, take all necessary measures to deny terrorists access to small arms. We look forward to working with the member States to reach a common understanding on this issue.

Thank you Mr. President.

552. Statement of Counsellor at the Permanent Mission at the UN Dr. Neeru Chadha at Informal Consultations of the Plenary on Counter Terrorism Strategy.

Mr. Chairman,

We would like to thank the two co-chairs for preparing this text. It is a good effort to address many structural and drafting suggestions made by several delegations during the last informal consultations.

The new text is presented in a more coherent fashion and is considerably compressed.
Mr. Chairman, during the last informal consultations, we had emphasized that one aim of this exercise has to be to strengthen the international community’s capacity to challenge and defeat terrorism. We had agreed that the text could focus on practical measures of cooperation among states for better and more effective implementation of international obligations under various instruments, especially for preventing acts of terrorism. We had stressed that we would favour a focused and result oriented strategy that to the extent possible steers clear from controversial elements and is based on elements of convergence. This was to avoid divisive debates which informed the sessions of the Ad Hoc Committee during negotiations of the draft comprehensive convention on international terrorism.

We supported the present process while continuing to believe that the comprehensive convention would have provided the legal framework upon which a counter-terrorism strategy could have been based. What is regrettable is that agreement on a comprehensive convention was within easy reach. Unfortunately, we failed to exercise the political will to close the gap that would endow the international community with the legal basis upon which the global struggle against terrorism could be conducted. Notwithstanding the setback of not meeting the timeline set by the World Summit Outcome Document for concluding a comprehensive convention, we continue to believe agreement on the draft convention is attainable.

In our current deliberations, Mr. Chairman, we have to understand that a legal document, which the comprehensive convention on counter-terrorism would have represented, cannot be substituted by a political document. Nor can an international conference facilitate understanding of definition of terrorism in the absence of a convention that sought to provide one. We must, therefore, perforce leave out any controversial elements, which while desirable in a legal context, would be unattainable in a political document.

This brings me to the last point I wish to make. While some delegations have pointed to the absence of one or the other substantive element that in their view should be part of a UN strategy on counter-terrorism, there is the other side of the coin.

Accommodating the views of 192 Member States on an issue that afflicts all regions and most countries of the world cannot be an easy task at the best of times. We agree with many opinions voiced in this forum in
different ways that the revised draft proposal is bland and largely bereft of substantive content. At the same time, we understand the compulsions that led to the drafting of such a document, that is, the compulsions of compromise. If this draft were to additionally seek to compensate for the absence of a legal document, the result would be either no agreement or the acceptance of a minimum common denominator. And the latter is what the current revised draft on counter-terrorism strategy represents. A compromise between conflicting ideas, most of which would have to be resolved within a legal context.

Mr. Chairman,

My delegation would have liked to see the United Nations convey a far stronger message on counter-terrorism. We would have preferred a strategy which sends a strong signal to errorists that their actions would not be tolerated irrespective of the motivations behind them. A strategy that unites the international community in its global fight against terrorism through practical measures that facilitate cooperation by way of extradition, prosecution and information flows. A strategy that signals the will of the international community to no longer tolerate the actions of the sponsors of terrorism or of those who willfully fail to prevent terrorists from utilising their territories for moral or material shelter. A strategy that provides comfort and support to the victims of terrorism.

In other words, Mr. Co-Chairs, most of us here desire a political document that meets the expectations of the vast majority of people who look to the United Nations for solutions to the global threats of our times. Regrettably, we cannot achieve what is desirable. But we must stop expending further time and resources by dragging on the process through legal proposals that cannot be acceptable to the broad membership under the political framework in which we are currently engaged.

Thank you, Mr. Chairman.
Mr. President,

It is a happy coincidence that you are chairing this meeting as you were on the day I spoke during the last such debate. As you had wanted the debate has been rich and constructive. I do not intend to repeat what has already been stated or even the old arguments which would only exhaust the listeners without exhausting the subject. Nor do I intend to fight old battles all over again. I shall therefore address the issue of Security Council reform from the perspective of the current conjuncture, especially the lessons of the general reform process, the problems of the Security Council in this context and, flowing from this, the way ahead.

The Security Council has not been able to address effectively the problems of peace and security, especially the Middle East problems. These are arguably worse than ever before. It has to perform its Charter role and not spend time on roles that the Charter does not mandate, such as bringing issues on its agenda that have nothing to do with peace and security. As the Bible says, and this is consonant with the Charter, instead of looking at the mote in their neighbour’s eye, they should look at the beam in their own. In the United Nations, the North South divide is sharper, the division between the P-5 and the rest greater and the imbalance between the General Assembly and the Security Council more profound. This coincides with the assessment of Parliamentarians outside. The Report of the High level Parliamentary Delegation that visited New York on June 26 and 27, circulated by the Inter Parliamentary Union on July 10 states that, “In the eyes of the world and within the United Nations itself, the Security Council has come to assume more power vis-à-vis the General Assembly than is warranted under the Charter” and concludes, “As long as the Security Council is not changed, it will be hard for the UN to truly change”. It is no coincidence that the revitalization of the General Assembly and the reform of the Security Council are both being frustrated.
Some members of the Security Council are the last followers of Francis Fukuyama and are carrying his flag even after he has abandoned it. He has disavowed the “End of History” in his subsequent book. For some of the P-5, history ended in 1945. They oppose any dispersal of quotas in IMF; more than one candidate being recommended by the Security Council to the General Assembly for the post of Secretary General; addition of six new permanent members. At the same time, they insisted on permanent membership for the P-5 in the Peacebuilding Commission and desired it greatly in the Human Rights Council. For them, history stopped in 1945. All subsequent changes: the vast expansion in membership, the anti-colonial and anti-apartheid triumphs, freedom, equality, have not happened and should not be taken into account. Multilateralism means nothing; plurilateralism is the order of the day. The majority may not like it; so much the worse for the majority.

One of my friends in the debate yesterday talked of the importance of ownership. We entirely agree. But we cannot confuse the substance with the mere machinery or method. Ownership is concerned with the substance of power to decide our own destinies, in short the limitation on power, especially arbitrary power and its dispersal. It has nothing whatever to do with unanimity or consensus, which is a matter of mere machinery or method. We imposed last December the Spending Cap by consensus. Did we have a sense of ownership of the Spending Cap? Most regarded it as an unfortunate turnip ghost from an aborted Halloween party, a scarecrow that fortunately failed to scare and had to be given a decent burial. The General Assembly resolution on setting up the Peace-building Commission was also adopted by consensus. Did we have a sense of ownership which ensured equitable geographical representation and rapid operationalisation of the Peace-building Commission?

We know the history of Peace-building Commission. Taking refuge in technical legality the Security Council, in terms of the spirit of the matter, illegally went against the will of the General Assembly in inserting the definite article “the” in the notorious Resolution 1646 on the P-5 being permanent members of the Commission. I am reminded of Byron’s lines “How strange the mind that very fiery particle/Should allow itself to be snuffed out by an article”. They instituted dualism by making the Commission subsidiary to the Security Council and by ensuring that, only with their approval, would any country on their agenda approach the Commission for assistance. All this clearly undermines from the beginning the Commission’s capacity for optimal advice and its functioning.
Another member state from the same group said yesterday that because there are five permanent members and resulting problems, it does not justify there being any more permanent members. Firstly, a limitation on power and its dispersal which would give members a real sense of ownership would come from new permanent members elected and held accountable to the General Assembly through review of their performance. Secondly is the question of equity. I recall vividly that the same member, deploring what happened at the birth of the Peace-building Commission based himself on these same arguments: “Permanent members will be permanently represented. Those who put their sons and daughters in harm’s way as peacekeepers deserve equal treatment”. I hope they would apply the same logic to the reform of the UN Security Council.

The conclusion is clear and I cannot do better than let the Secretary General draw it by quoting from his press conference in Geneva on June 22: “I believe very strongly in the need for Security Council reform and I have said time and time again that no reform of the UN will be complete without Security Council reform…. They should pursue Security Council reform because it is part of the reasons why we have tensions in the Organisation today. Because quite a lot of members feel that our governance structure is anachronistic and we cannot continue to have a situation where the power base is perceived to be controlled by a limited number of five Member States........ Even when you talk of management reform, it becomes a question of power struggle. I mean, people see it in terms of power – which bloc is gaining, which is going to lose. And of course, this perception of a power struggle was not helped by the attitude of the Permanent Five, because when we set up the Peacebuilding Commission, they insisted that they should be reserved five seats, and they got them. And of course, when we started talking about the Human Rights Council, a similar demand was made, the membership reacted and they pulled back”. A member state yesterday said that UN Security Council reform should not be a power game; the Secretary General in his just quoted statement has demonstrated that keeping it unreformed is a power game. Our experience of the general reform process thus confirms that several dimensions of reform have been distorted or vitiated and the reform process has demonstrably suffered from an absence of UN Security Council reform.

In an organism there should be proper circulation of the blood. If enough blood does not flow through an organ, it eventually atrophies. This may be happening to the General Assembly. Hence, the attempt to revitalize it. This is the whole meaning of balance. So far, regrettably, this attempt
has not been very successful. Therefore, the only way to restore balance, to prevent and roll back encroachment is the expansion of both the permanent and nonpermanent categories and the improvement of the working methods of the Security Council. As we have seen in the case of procurement, some aspects of peacekeeping and thematic debates, the nonpermanent members are not able to roll back encroachment. The continuity and institutional memory inherent in permanent membership would give new permanent members the strength to resist such usurpatory proposals. Their election and a stringent review clause would ensure that they remain accountable to the General Assembly and check any encroachment on its prerogatives. Therefore an interim solution is not at all admissible because it would not give the necessary permanence and strength to do so. Decision making would then improve. We agree with the speaker before last that the Council should be effective and efficient. A larger permanent membership would prevent decisions under bilateral pressure or other means of coercion. The Council then would not encroach. This is real efficiency and not the political Darwinism that some call efficiency. The original governance and flexibility proposals in Management Reform that were rejected by the Fifth Committee in May would have fashioned the General Assembly in the image of the Security Council – dominance and decision making by a charmed circle. This would have been the greatest encroachment of all, not just on the GA’s domain but on its very essence.

The dominance of the Security Council would have been extended from the Secretariat to the General Assembly by reducing the latter to irrelevance. The Security Council wants to give the General Assembly only one choice which may be summed up in the words of the American humorist Woody Allen – “You are at a fork in the road: one road leads to despair and helplessness, the other to total extinction: I hope you will have the wisdom to make the right choice”. The best and most basic working method is that which can confine the Security Council to its Charter role – no encroachment and no legislative power. This cannot be achieved through traditional reform of working methods alone but only in conjunction with the expansion of the permanent and non permanent membership.

The S-5 have just circulated on July 14, a significant date, an explanatory note on their resolution. I am reminded again of Byron “They are explaining metaphysics to the nation/I wish they would explain their explanation”. The note and some speakers say that only a few members are affected by enlargement and all by working methods. The problem is
that there would be no enduring new working methods without enlargement and in this sense everybody is affected by enlargement, quite apart from the fact that without enlargement of permanent membership, there would be no solution to the problems of Security Council encroachment and law making, not to speak of its coercive diplomacy. Also, without new permanent members committed to new working methods, these would not endure as we have seen in the case of the quality of Security Council Annual Reports. Yesterday, a member state rightly referred to Resolution 267(III) of 14 April 1949. The member state correctly said that the working methods produced by the Security Council are totally inadequate but overlooked the much more important point that without new permanent members committed to these methods, these working methods would not be there and would not endure. Let us look at this Resolution. It was passed by the General Assembly on the Report of the Special Political Committee on Working Methods: it speaks of conferring functions on the Security Council in a manner that would “to the greatest extent feasible exclude the application of the Rule of Unanimity of permanent members” (i.e. limitations on the use of veto); that the General Assembly could “make a recommendation on a dispute or situation in respect of which the Security Council is exercising its functions”; “to grant access to the records of private meetings of the Security Council to representatives of other members of UN”; to ensure that TCCs “participate in the decisions (decisions and not debates) of the Security Council concerning the employment of contingents of their armed forces”. This is far more radical than anything in the S-5 Resolution. But has any of this been implemented since 1949? The G-4 text on Articles 31 and 32 and Security Council Resolution 1353 goes as far or even further than the S-5 text. But clearly there are many commonalities and therefore considerable scope for consultations to facilitate a common understanding.

The distinguished Permanent Representative of Singapore, yesterday succinctly and superbly demonstrated that semi permanent seats are fatal for the Federation of Small States which he chairs. More than eighty countries, almost half the membership, have never served on the Security Council; a small state cannot hope to serve more often than once in forty years. The G-4 Resolution would increase their chances by removing some major countries from the competition and also, more importantly, ensure the participation of states, including small states in the day to day work of the Security Council. Both our resolution and the
S-5 resolution therefore speak of participation by non members of the Security Council in its subsidiary bodies. But only new permanent members committed to this can ensure that this happens. Hence enlargement of permanent and non permanent membership and reform of working methods have to go together. To separate these two is to divide and dilute the substance.

My time has come to a close but before I conclude let me say that perhaps the Security Council’s greatest encroachment is in the sphere of law making. Though in the Tadic case the ICTY justified its setting up in terms of Article 29 on the creation of subsidiary bodies, its judgement is untenable because the Charter has not given the Security Council any judicial functions and therefore it cannot, under Article 29, give a subsidiary body functions it does not possess. My Latin is not as good as that of my British colleague sitting directly below but the tribunal ignored the basic legal principle nemo dat quod non habet (you can’t give what you don’t have). To have real ownership, to prevent encroachment, to limit arbitrary power, to break the charmed circle, to restore balance in decision making, to end law making and norm setting, there is no alternative to expanding the permanent membership of the Security Council, besides expanding the non-permanent membership and improving the working methods.

Many speakers have called for consultations and dialogue. There are many areas of commonality and we welcome this. This should be done in steps. First there should be a dialogue between the supporters of the three proposals that are on the table (those of the AU, the G-4 and the S-5) and which are mutually compatible. We therefore call for an intensive process of consultations between them to arrive at a common understanding. Thereafter the process can extend to other member states.

I thank you.
554. Statement by Permanent Representative at the UN
Ambassador Nirupam Sen on the Situation in the Middle
East at the Security Council.

Mr. President,

We thank you for scheduling this meeting. Since this is the first time that I am taking the floor during your Presidency, allow me to congratulate you on your skilful and capable handling of it. I wish to also take this opportunity to felicitate the Ambassador of Denmark for her Presidency of the Council in the previous month.

Mr. President,

India is seriously concerned about the escalating tension in West Asia as a result of developments, in the Gaza Strip and on the Israel-Lebanese border, which have the potential to inflame the region further and widen the conflict.

India condemned the abduction of two Israeli soldiers on 12 July 2006 and has called for their immediate release. We have equally strongly condemned the excessive and disproportionate military retaliation by Israel which has targeted civilian infrastructure, including Beirut airport and resulted in the killing and suffering of innocent civilians, including women and children. The responsibility to protect women and children in armed conflict has to be real and not theoretical.

At least one Indian national has been killed and several injured in the bombings that are taking place in Lebanon. There can be no justification for the targeting of civilians and civilian infrastructure, which merits condemnation and is contrary to international law.

We call upon all parties concerned to eschew violence, de-escalate the situation, and return to the path of negotiations. It is our firm conviction that lasting peace and security in the region, which is in the interest of not only the countries of the region but of the whole world, can be achieved only through peaceful dialogue and not through the use of force.

In his briefing to the Security Council yesterday, the Secretary-General called for a ceasefire to prevent further loss of life, provide humanitarian access and give diplomacy a chance to work. In addition, the Secretary-General elaborated the elements of a plan, suggested by
the UN Mission to the region, which he said must form the political basis of any lasting ceasefire. We believe that the international community can no longer remain silent in the face of the severe escalation in the conflict, in which civilian populations have been affected, a humanitarian crisis is looming and a spill-over of the conflict beyond the region is a distinct possibility. The Secretary-General’s plan offers a firm basis for discussions in the Security Council on how the issue has to be addressed. An immediate and comprehensive ceasefire would be predicated on the return of the captured Israeli soldiers, extension of the authority of the Government of Lebanon over all of its territory and immediate measures to provide relief and rehabilitation to the people of Lebanon and therefore a withdrawal of Israeli forces. Thereby the Security Council would fulfil its Charter responsibility.

As a major troop contributor to both the United Nations Interim Force in Lebanon (UNIFIL) and the United Nations Disengagement Observer Force (UNDOF), India is concerned about the conditions under which UN peacekeepers in the conflict zone are required to perform their duties. The Secretary-General, in his update yesterday on UNIFIL, stated that UNIFIL had no freedom of movement, which precluded it from even providing humanitarian escorts for displaced people, was experiencing difficulties in receiving essential supplies and was exposed to considerable risk from the ongoing exchange of fire. These are a cause for serious concern. Unilateral restrictions on UNIFIL have to be removed, and the UN’s mandate and the sanctity of its personnel have to be respected.

Mr. President,

There is equal concern about the situation in the Gaza Strip. On June 12, India condemned the killing of innocent civilians, including women and children, by the Israeli Defence Forces in an unprovoked attack on June 9. India also condemned the incident at the Kerem Shalom crossing near Gaza on June 25, which provoked the threat of massive retaliatory measures by Israel.

India is seriously concerned at the hardships and sufferings of the Palestinian people as a result of the evolving situation in Gaza and the West Bank. A situation that, I may add, has been exacerbated by Israel’s destruction of Palestinian infrastructure, including roads, bridges and power plants. The Office for the Coordination of Humanitarian Affairs has assessed that nearly half the population in the Gaza Strip is currently without electricity, and that this situation could persist for up to nine months. This reduced
capacity is affecting the provision of water, with daily access for families being cut by up to 50% in some parts of the Gaza Strip. India condemns the wholly unjustified arrest and continuing incarceration of Ministers of the Palestinian National Authority and members of the Palestinian Legislative Council. There can be no justification whatsoever for taking such action against the duly elected representatives of the Palestinian people. We call upon Israel to release them immediately and unconditionally.

The international community needs to call for an immediate halt to hostilities on all sides, counsel utmost restraint, especially in the excessive use of force, and urge a return to dialogue. We also reiterate our call for all parties to renounce violence and resolve their differences through peaceful means. Israel must halt its offensive, withdraw its forces from their positions inside Gaza and release all political figures and other Palestinians. At the same time, the Palestinian leadership should make every effort to facilitate the release of the Israeli soldier and prevent any escalation of the conflict through rocket attacks against Israel and other extremist actions by militants.

In response to a request from the Palestinian authorities, and in keeping with India’s traditional and consistent policy of extending sympathy and support to the people of Palestine, the Government of India has decided to give immediate humanitarian assistance worth Rupees 100 million to the Palestinian people in order to alleviate the difficult situation in which the Palestinian people find themselves. This is in addition to the approximately Rupees 700 million of assistance pledged last year during the visit of President Abbas to India. The assistance will be primarily in the form of life-saving drugs and medical supplies requested by the Palestinian authorities.

We support the Secretary-General’s call for an immediate cessation of indiscriminate and disproportionate violence in the Israeli-Palestinian conflict, and a reopening of the closed crossing points. It is unfortunate that President Abbas was held incommunicado in Gaza for the last three weeks and not allowed to meet anyone. The international community needs to support a peace track for Gaza and President’s Abbas’ call for a proper dialogue with the Government of Israel.

It is our firm belief that a negotiated outcome of the long-standing conflict is the only way to ensure long-term peace, security and stability of the region, leading to the establishment of a viable, united and sovereign State of Palestine living in peaceful coexistence and harmony with the State of Israel.
Mr. President,

It is vital that the international community act to put an immediate end to the hostilities and to ensure that the conflict does not widen to engulf the entire region. We support the role of the regional powers in finding a solution to the crisis as solutions imposed through unilateral measures may not prove enduring. A comprehensive solution to the situation in West Asia, based on the relevant Security Council resolutions, offers the best way forward. Our commitment to the Palestinian cause was articulated by Mahatma Gandhi, Jawaharlal Nehru, Indira Gandhi and other leaders. What Jawaharlal Nehru, one of the greatest founders of the Non Aligned Movement, wrote in a letter of 11 July 1947 to Albert Einstein remains relevant:

“I do not myself see how this problem can be resolved by violence and conflict on one side or the other. Even if such violence and conflict achieve certain ends for the moment, they must necessarily be temporary. I do earnestly hope that some kind of agreement might be arrived at between the Arabs and the Jews. I do not think even an outside power can impose its will for long or enforce some new arrangements against the will of the parties concerned”.

555. Statement by Permanent Representative at the UN Ambassador Nirupam Sen in the Security Council open debate on “Peace Consolidation in West Africa.

New York, August 9, 2006.

Your Excellency Foreign Minister Akufo-Addo,

It gives me great pleasure to participate in this open debate on the theme of “Peace Consolidation in West Africa”. This initiative of the Ghanaian Presidency of the Security Council is timely and meaningful and we welcome it. It was to be expected from a nation that has consistently made noteworthy contributions to peace not only in its own region, but internationally as well. For me personally and for my country, it is an added pleasure to address the Hon. Foreign Minister of Ghana in the Chair today, given our traditionally close bilateral relations, and our experience of the
wisdom and insight that the Hon. Akufo-Addo has always brought to any international forum he has graced with his presence. I have also been specially directed by our Minister of State for External Affairs, Mr. Anand Sharma who has asked me to convey to you his warmest good wishes.

The history of conflict in West Africa has shown that stability can be imposed for a while by force of arms and the determined involvement of the world. But history also tells us that such stability is often short-lived. Peace achieved through force of arms is often, to quote the Secretary General, a situation that is “stable but fragile”.

Indeed, recent World Bank studies underline that “countries that have suffered conflict in the recent past are also likely to see conflict return: the risk that the country will fall back into conflict within the first five years of the end of a conflict is nearly fifty percent”. This worrisome statistic is made worse by the fact that armed conflict inevitably increases military expenditure in the countries involved. This not only crowds out other public spending but, on a worldwide basis, exceeds spending on international development assistance.

Furthermore, given the current international economic order, the advantages obtained through employment-generation in parts of Africa have been squandered through negative resource flows, low commodity prices, lack of access to international markets, and the debt trap. In other words, global conditions make it likely that the vicious circle of conflict — peace — conflict becomes self-sustaining. Thus, creating peace has rarely ensured that peace remains.

The overarching question before the world today is to find ways to consolidate peace. In other words, how can regional organizations and the UN prevent States emerging out from old conflicts from lapsing into new conflict situations. We agree that in this context, we must promote sustained, equitable and employment-driven economic growth, as this is an inextricable part of the process of building durable peace. The effort to achieve these goals needs to be managed institutionally and driven internationally; it is this that gives relevance to the newly established Peacebuilding Commission.

We believe Sir, that conflict prevention efforts must include ‘operational’ prevention: a response to immediate and pressing crises such as preventive diplomacy, and ‘structural’ prevention, implying long-term structural preventive measures to prevent crises from arising or to prevent
them from recurring. The latter often involves a long-term commitment to help vulnerable and poor countries develop human and institutional resources through increased development assistance. While peace-building focuses on preventing the conditions that foster conflict, development focuses on the structural conditions that prevent growth and equity, and thereby provide ground for conflict. Peacekeeping and peace-building must be part of the same continuum if peacekeeping is to succeed. Interestingly, studies show that military interventions in conflict ridden areas are actually more expensive than the adoption of preventive approaches. Estimates show that the international community spent around US $200 billion on seven major interventions in the 1990s while a successful preventive approach is estimated to have hosted almost US $130 billion less.

Fundamental to a successful and long term preventive approach are sound macroeconomic policies promoting sustained employment-driven growth. Expenditure on social sector programmes of poverty eradication, education — in particular of women — immunization and basic health, and on basic infrastructure, creates conditions for sustained economic growth.

In this context, I am tempted to note that developing societies such as ours do not live on bread alone, but equally on solidarity. India and others have written off the debt of the seven Highly Indebted Poor Countries. India will continue its economic and scientific initiatives, such as TEAM 9, which involves a concessional credit of US $500 million along with technology transfers to countries in the West African region; further cooperation with NEPAD, as well as the satellite and fibre optic connectivity mission announced by our President for the entire African continent.

Another essential pillar of the process of economic transformation involves development of effective mechanisms to resolve social tensions arising from the legacy of conflict, including through rehabilitation, reconciliation and reconstruction. It also includes the development of credible institutions of governance, stable political structures including political parties and credible strategies to effectively mobilize human and material resources. Hence, the need for the Peace-building Commission not only to work with the Security Council but above all to take into consideration inputs from other UN bodies and work under the overall guidance of the UN General Assembly. Effective coordination and consultation with regional groups and organizations must be encouraged as part of this effort.

Another key element for peace consolidation is the development of an overall country strategy framework to deal with post-conflict recovery
and reconstruction. What is crucial here is ‘national ownership’. As many other speakers before we have pointed out, it is the only pragmatic answer to a practical problem. In order to ensure peacekeeping blends into peacebuilding, it may occasionally be necessary to operate without clear-cut national authority. But in spite of this, it is essential that embryonic national ownership is respected through clear guidelines on ascertaining and respecting the views of civil society and community representatives.

This brings me Sir to good governance. Strong local, regional and national institutions are fundamental for societal transformation. Without legitimate laws, justice cannot be effective; without minimum standards of social equality, one cannot guarantee principles of justice and fairness. Thus, it is essential that good governance prescribed for recipient countries should equally be practiced by the international institutions doing the prescribing. The two speakers before we spoke we have pointed out recent success stones: Sierra Leone and Guinea Bissau. But it is important to note that recent experiences. For instance, when Sierra Leone relapsed into civil war, it had spent 83% of the intervening period between 1994-1998 under an IMF programme. It is therefore essential that international financial institutional, especially the Bretton Woods institutions, undergo reform to reflect the voice of developing countries.

Lastly, it is essential that the process of peace consolidation is implemented at various levels. At one level, the Peace-building Commission will implement its mandate of proposing integrated strategies for post-conflict peace-building and recovery, ensuring predictable financing and developing best practices for cooperation between relevant actors and stakeholders. At another level, effective regional initiatives are essential. In this context, we fully support the efforts of the Economic Community of Western African States (ECOWAS) and the African Union in cooperating to address questions of peace and security in West Africa. Finally, there is the national level, at which it is equally essential that international institutions and partners find ways to support the efforts of countries emerging from conflict through highly concessional aid, debt waivers, assistance with disarmament, demobilization and reintegration of former combatants, employment generation strategies and extension of appropriate technologies. It is only through integrated action at all these levels that the consolidation of peace can be made effective and durable.

Thank you.
Venerable Monks, Your Excellency Special Representative of the Deputy Prime Minister of the Kingdom of Thailand and Distinguished Guests.

India is delighted to be a part of today’s Dedication Ceremony of the Vesak Day Buddhist Memorial Stupa to the United Nations. The sacred stupa being permanently installed here is not only an artefact of religious significance, but also a sacred item of peace and goodwill. It is satisfying that the legacy of the Lord Buddha endures and continues to inspire present generations, as it will, no doubt, those to come, to follow the path of righteousness, benevolence and humanism. In a sense, we are today marking an important milestone in the process initiated in the 3rd century B.C. by one of the greatest rulers of India, Emperor Asoka, to spread the Lord Buddha’s message of non-violence, peace and compassion across the world.

Lord Buddha’s mission in life was also to alleviate human suffering, poverty and ignorance. More than two thousand five hundred years after Lord Buddha’s Parinirvana, we find the lasting impact of his teachings on the political, social and other priorities of our times. In today’s world the path to salvation is not necessarily found through renunciation; it can also be found in action, provided our actions are guided by the best interests of all. The sacred stupa will serve as a constant reminder to all of us to continue to focus our efforts and actions at the international level on the promotion of love, peace and equality and the eradication of ignorance, poverty and human suffering throughout the world.

We are deeply honoured to be a part of this important event and thank all those who made it possible.

Thank you.
557. Statement by Deputy Permanent Representative at the UN Ambassador Ajai Malhotra at the adoption of the United Nations Global Counter-terrorism Strategy.

Mr. President, at the outset I would like to place on record our sincere appreciation to the two Co-Chairs, the distinguished Permanent Representatives of Singapore and Spain, who have taken into account the concerns of various delegations and provided several successive drafts since May this year, in order to produce a final draft text that we can all live with.

2. Mr. President, we understand the compulsions that have resulted in the present text. Nevertheless, my delegation would have liked to see the United Nations convey a far stronger message directed at countering terrorism. We would have liked the Strategy to send a strong and clear signal to terrorists that their actions will not be tolerated irrespective of the motivations underlying them. Today itself terrorists have killed over 35 persons in Malegaon, India. This senseless slaughter of innocents reinforces the point that we cannot and must not yield any space to terrorism, but must resolutely confront it very where and at all levels.

3. Mr. President, we must also firmly reject the notion that there is any cause that can justify terrorism. No consideration can ever justify the targeted killing of innocent men, women or children. In this regard we would have liked to see the retention of Operative Para 11 of the July 31 draft text, which reiterated what was affirmed in the 1994 Declaration and various UNGA resolutions on measures to eliminate international terrorism. That operative paragraph unequivocally asserted that criminal acts of terrorism intended or calculated to provoke a state of terror in the general public, a group of persons or particular persons for political purposes are, in any circumstances, unjustifiable, whatever the considerations of a political, philosophical, ideological, racial, ethnic, religious or other nature that may be invoked to justify them. This widely accepted and well known principle should have been reflected in the Strategy.

4. Mr. President, the condemnation in this Strategy of terrorism in all its forms and manifestations signals the will of the international community that it would no longer tolerate the actions of the sponsors of terrorism or of those who wilfully fail to prevent terrorists from utilising their territories.
5. Mr. President, we continue to believe that a strong response to terrorism requires broad-based international cooperation, reducing the space for terrorists, and increasing the capability of States to address terrorist threats. It requires sustained and specific cooperation by a variety of national, regional and global agencies. We hope that the Strategy would provide the impetus to unite the international community in its fight against terrorism via practical measures that facilitate cooperation by way of extradition, prosecution, information flows, and capacity building.

6. We have gone along with the present process, Mr. President, while remaining convinced that the Comprehensive Convention against International Terrorism that we have been negotiating would have provided the requisite legal framework upon which a counter-terrorism strategy could have been based. The timeline set by the World Summit Outcome Document 2005 envisaged the adoption of the Comprehensive Convention in the 60th UNGA session. We continue to believe that agreement on it is attainable. We must now work together for the early finalization and adoption of the CCIT.

Thank you, Mr. President.

558. Statement by Minister of State E. Ahamed at the High Level Dialogue on International Migration and Development at the UN General Assembly.

Madam President,

International Migration is a subject of much global interest at present. It involves people and has differing impact on sending, receiving and transit countries, including on their economies and societies. I am therefore glad that international migration is being discussed at the United Nations. I would like to thank the Secretary-General for the detailed report as well as the events organized as part of the preparatory process for this High Level Dialogue.

Madam President,

India is a major country of origin, destination and transit of migrants,
with a long history of attracting and sending people to other lands. It is
estimated that around 20 million people of Indian origin live in other countries
while another 20 million migrants, including a large number of irregular
migrants are in India today. Overseas Indians, through sheer dint of effort,
very often in trying circumstances, have significantly contributed to the
countries of their destination while, at the same time, playing a positive
role in building a bridge with India. Recognizing this, every year we celebrate
their achievement with a “Pravasi Bharatiya Divas” or “Day of the Indian
Migrant” and have taken several innovative investment and policy initiatives
including the “Overseas Citizenship of India”.

Madam President,

In the context of globalization there is need to recognize the
inevitability of international migration. This presents challenges and
opportunities, including the increased demand for specialists in developed
countries to strengthen their international competitiveness. In fact, the World
Bank’s Global Economic Prospects 2006 notes that a rise in migration
from developing countries raises incomes of natives in high-income
countries. The developed countries would therefore benefit by a greater
openness than hitherto in allowing movement of natural persons across
national frontiers and through greater political will and determination for a
successful conclusion of the GATS MODE 4 negotiations.

High income countries must address the legitimate needs of migrants,
including receiving back their pension benefits and social security
contributions, especially in cases of migration of shorter durations. The
lack of appropriate or matching structures in the country of origin should
not be made an excuse for the denial of a migrant’s legitimate pension
benefits. Efforts, especially in the case of short duration migrants, also
need to be made to reduce the cost of remittances.

Madam President,

Coming from Kerala, which is one of the largest places of origin of
many of our workers overseas, I can personally testify to the importance of
remittances, which are often the most important source of livelihood for
the families of the migrant workers, and support not just one but many
persons.

Madam President,

There is no restriction in India on migrating overseas. We favour a
regular, non-discriminatory and orderly process, whether for permanent or
shorter-term migration. In this context, artificial barriers to migration by high-income countries should not be created and that receiving as well as sending countries act to reinforce the positives from migration and work together in a cooperative atmosphere while being sensitive to each other’s concerns.

We also believe that countries of origin benefit from the return of migrants with skills or capital that they would not have acquired at home. The existence of reliable domestic institutions encourages the involvement by migrants in the development of their countries of origin. ‘Brain drain’ as a result of migration of skilled and highly trained people can also be translated into an overall gain.

Madam President,

As we speak about international migration today, we also need to note the problematic facet of irregular migration, which is a cause of concern for our collective well-being. Moreover, there are serious security implications, including the use of irregular migrants as an instrument for cross-border terrorism and for creating social tension in the host country. This needs to be tackled with a firm resolve. Its no longer the concern only of domestic law enforcement, but is a matter of global priority requiring coordinated and concerted action. A similar firm resolve is required to tackle the scourge of people smuggling and trafficking, especially of women and children.

Madam President,

Cooperative international efforts should result in comprehensive, mutually beneficial solutions that are based on the best practices dealing with international migration. We recognize that international migration solutions and approaches relevant for a particular country or region may not be appropriate for others. Our efforts should focus on promoting teamwork amongst nations, to maximize the benefits of international migration while reducing its negative effects. We also believe that regular interaction among countries, including at the UN, could result in a win-win situation for all.

Thank you, Madam President.

Madam President,

I would like to congratulate you on your election as the President of the General Assembly and on the successful organization of this important High-level meeting to review the progress made in the implementation of the Brussels Programme of Action for the Least Developed Countries. It is a privilege to participate in this meeting.

Madam President, At the outset, I would like to note that the LDCs themselves have been making major efforts for their economic development, including achievement of the goals set out in the Brussels Programme of Action. The Cotonou Strategy is a testimony of their commitment and determination.

Recent studies have highlighted that many LDCs have achieved relatively high rates of economic growth, though the sustainability of the accelerated growth has a significant element of being contingent on commodity prices. The key to achieving sustained economic growth in LDCs is developing productive capacities. For this, the development partners need to move vigorously in supporting the efforts of LDCs. International organisations can also play an important role by providing replicable models and information, which would help LDCs in building national capacity for domestic resource mobilisation.

The issue of debt is a critical one for many LDCs. We welcome the Multilateral Debt Relief initiative and look forward to the G-8’s political intentions being fully converted into unqualified commitment. India, on its part, has demonstrated its commitment to help LDCs, which are in a particularly difficult position, in reducing their external debt burden by writing off the debt owed by seven Highly Indebted Poor Countries [HIPC] who had reached their ‘decision points’.

Debt relief through HIPC initiative or MDRI alone is not sufficient unless accompanied with efforts to improve debt management capacity
and a proactive approach to assist achieve higher growth, enhanced exports performance and revenue mobilization through better market access and enhanced trade related opportunities. The launching of the third round of negotiations for the Global System of Trade Preferences holds promise in terms of immensely benefiting both LDCs and other developing countries. India is also in the process of finalising a package for preferential market access for LDC products.

Madam President,

ODA disbursements to LDCs are more than a third short of the agreed target. There is an urgent need for new and additional commitments to fulfil the commitment by the developed countries to meet the 0.15-0.20 percent target for ODA to LDCs. This needs to be without prescribing development modes, policies of actions, either directly or through condition attached to their support, as has been noted by the Secretary-General.

Moreover, wherever appropriate, aid should help promote greater foreign and domestic private investments consistent with national priorities for sustainable development. However, a ‘one size fits all’ approach for all LDCs is not practical and is unlikely to succeed and while private sector investment is important, the physical and social infrastructure in many LDCs is too weak to attract investment, and therefore requires sequencing.

Madam President,

The issue of good governance has been much in focus in the context of development in developing countries as a whole and LDCS in particular. We believe that good governance at the international level is as essential as at the national level and efforts at domestic resource mobilisation need a supportive international environment that is stable, predictable, and characterised by non-discriminatory trading, monetary and financial systems.

LDCs and other developing economies also need to be assisted in capacity-building, particularly in setting up the requisite institutional framework to help prioritise the sources and destination and to attract, evaluate and facilitate, foreign investment inflows.

Madam President,

India has been a strong votary of South-South cooperation. The Indian Technical and Economic Cooperation (ITEC) has, since 1964, provided technical assistance of over US$ 2.5 billion and more than 5000
representatives of developing countries receive training in over 250 institutions in India every year. We have constantly tried to increase mutually beneficial economic cooperation with all LDCs in general, and with those in our extended neighbourhood, in particular.

We are partnering Afghanistan in a significant manner for infrastructure and capacity building projects and a school children feeding program. With Myanmar, we are cooperating in infrastructure upgrading projects while our endeavours with Maldives include speciality healthcare and assistance for rehabilitation projects after the tsunami disaster.

We have special relationships with Nepal and Bhutan and a deep interest in their development. In the context of recent developments in Nepal, we have offered a significant immediate package of assistance. India is the largest development cooperation partner of Bhutan. Over the past decades we have built a mutuality of interests and shared economic prosperity with Bhutan.

Madam President,

Africa has always been a high priority for India and we are strengthening our cooperation through NEPAD and through other efforts such as TEAM-9 for Western Africa. Our commitment in terms of lines of credit and other concessional financial assistance add up to almost US$ 1 billion. We are also working on a Pan-African Network which would be a major satellite and fibre optic connectivity mission that would cover the entire continent of Africa, enabling a network linking learning centres, universities, hospitals in every country in Africa with counterpart institutions in India that have a proven expertise in these fields.

Madam President,

In our endeavour to attain the Millennium Development Goals globally by 2015, it is imperative that Brussels goals for LDCs are attained by 2010. It is important that the international community comes together to ensure that this happens.

I thank you.
Madam Chairperson,

At the outset I would like to felicitate South Africa on the outstanding leadership provided to the Group of 77 since the beginning of this year and for promoting the Group's interests in all UN fora.

I would also like to welcome Pakistan on its election as the Chairman of the Group of 77 for the year 2007. We are confident that Pakistan would effectively pursue the interests of the Group of 77 while protecting the long-standing positions of the Group on issues of vital interest to developing countries.

Madam Chairperson,

The Group continues to face the same underlying systemic challenges that originally brought developing countries together, although the conditions have changed. On the one hand, globalisation has reinforced interdependence among countries. On the other hand, making the process of globalisation fair and equitable continues to remain a major challenge. The current impasse across all areas of negotiations under the Doha round threatens to jeopardize the development prospects of developing countries and is a matter of serious concern for developing countries. If globalisation is inevitable, multilateralism has to be its life sustaining mechanism. Solidarity among developing countries would be crucial in addressing the challenges associated with globalisation.

Progress in international trade and finance has to be measured against the yardsticks of poverty eradication and sustainable development. For many developing countries, the 1990s, the decade in which globalisation came into full force, were a decade of frustration and disappointment. With few exceptions, several economies of the sub-Saharan Africa refused to respond to the structural adjustment policies of the international financial institutions. We believe that developing countries must have the policy space to determine their development plans and priorities based on their individual situations. However, more intense cooperation at the international level, coupled with increased flow...
of resources, enhanced market access and debt relief, is an absolute imperative. The fulcrum of international economic endeavour is MDG 8 – global partnership for development. In this context we welcome the call for developed countries to achieve the target of 0.7% of GNP as ODA by no later than 2015. We also welcome the agreement reached in the context of development follow-up to the 2005 World Summit to monitor the progress made towards the realisation of this target. We support the extension of further debt relief to highly indebted poor countries [HIPCcs] and low-income countries facing problems of financing Millennium Development Goals [MDGs].

The suspension of Doha round of trade negotiations has been disappointing considering the hopes that were raised after the Hong Kong Ministerial. Demands for reduction of de minimis payments by all countries is unacceptable to developing countries with subsistence farming and resource poor farmers. It is also important for developing countries to maintain flexibilities and policy space particularly in the context of NAMA, in order to avoid the danger of deindustrialisation for some developing countries. The overarching principle of special and differential treatment remains a categorical imperative. It is important that resumption of negotiations carry forward the progress made, that precise, effective and operational special and differential treatment for developing countries must be an integral to all aspects of the outcome of the negotiations and the outcome should deliver on the developmental imperatives embodied in the Doha Work Programme.

Madam Chairperson,

The role of science and technology for development cannot be overemphasized. The revolution in information and communication technologies offers us the tool to face the challenges of globalisation. It is ironic that the shrinking of the world as a result of technology and communications should be accompanied by evolution of controls that restrict movement for the peoples of the developing world. Intellectual property rights regimes are also often used as tools to restrict control and deny technologies rather than facilitate their transfer to developing countries. It is imperative that development dimensions are integrated into such regimes as quickly as possible. The international community also needs to find pragmatic ways to promote research and development in developing countries. We welcome the hosting of the meeting of Ministers of Science and Technology of the Members States of the Group of 77 earlier this month in Brazil to address these challenges.
Madam Chairperson,

The UN has an overriding role in the area of development. The 2005 World Summit and the agreements reached for the follow-up on “development” provide us with an opportunity to restore the primacy of the UN in dealing with the development agenda. Enhancing voice and participation of developing countries in international economic decision-making and norm-setting remains a matter of concern. A comprehensive reform of international financial architecture is needed. The development agenda of the UN needs to be an inclusive one, going beyond the Millennium Development Goals and encompassing the outcomes of major UN conferences and summits. The need to address the concerns of the Least Developed Countries, the Landlocked Developing Countries and the Small Island Developing States, can hardly be overemphasized. India has also supported concrete and implementable recommendations in support of the priorities of NEPAD with a substantial outcome for the special needs of Africa.

We support the Economic and Social Council playing its due role in promoting awareness and giving policy guidelines in the area of development cooperation. The central question is one of political will in allowing ECOSOC to discharge its responsibility. An early conclusion of ongoing consultations in the General Assembly on this question, incorporating the G-77 proposals, would be a step in the right direction.

Madam Chairperson,

India is willing to share its expertise, including in frontier areas of science and technology, and is indeed doing so already with several partner countries. We are unwavering in our support for greater South-South cooperation and the need to continue to enhance our cooperation with our partners in developing countries. The Group of 77 has been a valuable asset for developing countries. We shall remain engaged in exploring cooperative solutions both among ourselves and with the wider international community.

I reiterate India’s full support and involvement in this effort.

Thank You, Madam Chairperson.
561. Statement by Defence Minister and Head of the Indian Delegation to the UN General Assembly Debate Pranab Mukherjee at the General Debate in the 61st UN General Assembly.

New York, September 27, 2006.

Your Excellency, Madame President,
Excellencies,
Ladies and Gentlemen,

At the outset, let me join previous speakers in welcoming your election as the President of the 61st UN General Assembly. On India's behalf, I would like to assure you of our constructive support and our wholehearted commitment to work with you to achieve both the larger goals of the UN Charter and the more topical goals of the reform of this Organization that were set out in last year's World Summit Outcome Document.

Madame President,

The topic before us at this General Debate is “Implementing the Global Partnership for Development”. It is difficult to contest its relevance or topicality. Today, whether we look at issues such as international trade, international financial mechanisms, methods to improve economic and social well-being, or even the various threats to peace and security that challenge our collective existence, one common theme that emerges is the lack of an effective and equitable global partnership. This is an imperative even for achieving the Millennium Development Goals.

Madame President,

The important Annual Report of the Secretary General has highlighted several successes in moving ahead with UN reforms. During the last UNGA, a Central Emergency Response Fund, the Peacebuilding Commission and the Human Rights Council were established and a Global Counter Terrorism Strategy agreed upon. We have also gradually moved forward on management and budgetary reforms. While these are certainly important and critical, if we are honest, we have to acknowledge that significant unfulfilled tasks and challenges lie ahead, particularly in unaddressed issues, including reform of the architecture of our multilateral bodies that oversee security, trade, financial flows and development.
Without this reform, the discontents of globalization would only deepen. Without it, there cannot be substantially enhanced and assured resource and technology flows to developing countries, necessary for real economic transformation and to achieve the Millennium Development Goals.

Madame President,

It is sometimes argued that private sector investment is today replacing the traditional reliance on aid and developmental assistance. While we appreciate the important role of private sector investment, it cannot replace public investment in developing countries whose absorptive capacities are often limited and where physical and social infrastructure is weak. ODA remains an important means to augment public investment in areas such as human capital development and rural infrastructure, which rarely attract private sector investment. This process of increasing the available pool of resources for investment in the social and economic infrastructure of developing countries can be promoted at one level, by developed countries, through expeditiously reaching the target of setting aside 0.7% of GDP for ODA. At another level, there is also a need to develop innovative sources of financing. We must evolve a broader understanding of ways to encourage least developed countries out of the debt trap by extension of debt-cancellation programmes, without insisting on conditionalities, such as encouraging privatization which, applied indiscriminately, may recreate the original difficulties that necessitated a recourse to debt in the first place.

The impasse in international trade negotiations is disappointing to say the least, considering the hopes raised after the Hong Kong Ministerial and at the G-8 Summit in St. Petersburg this July. Early resumption is desirable but adherence to the existing mandate is imperative – the mandate of the Doha Declaration, the July Framework and the Hong Kong Ministerial Declaration.

When agriculture was brought into the ambit of negotiations at the creation of the WTO, the developing countries were given a clear understanding that trade distorting agricultural subsidies would be phased out in a time bound manner.

Minimizing the vulnerabilities of the poor farmers must be our collective priority. Demanding market access from developing countries, which displace low-income and subsistence farmers to satisfy commercial interests, cannot be supported. Proportionately lower overall tariff reduction
commitments and operable and effective development instruments of Special Products and Special Safeguard Mechanism are the essential components of securing food security, livelihood security and rural development needs of developing countries. The overarching principle of special and differential treatment, therefore, remains a categorical imperative, and is the underlying basis of the position of developing countries.

In our view, there exists an overwhelming logic for giving the United Nations a role in providing direction to the comprehensive reform of the international financial and trading systems. These reforms must be aimed at building an international architecture that reflects the realities of the 21st century and is able to create an environment that effectively supports national efforts to eradicate poverty. The Millennium Development Goals have given hope to the poor and the underprivileged of the world and these goals are to be achieved by 2015. In this context, the World Bank must remain steadfast in its mission for ‘a world free of poverty’ and its strategy must remain embedded in the historical development-centric approach. The Outcome Document of last year’s World Summit had emphasized that ‘enhancing the voice and participation of developing countries in the Bretton Woods Institutions remains a continuous concern’. The bridging of this ‘voice’ deficit requires fundamental reforms in the quota structure, which are long overdue and absolutely necessary to enhance the credibility and legitimacy of the IMF. The quota reform has to begin with the revision of the formula, so as to reflect the relative economic strengths of countries in the 21st century. The UN should encourage that immediate steps are taken to initiate the second stage of IMF quota reform, involving a basic revision of the quota formula and subsequent increase of quotas for all under-represented countries. And all this must be done in a time-bound manner.

Madame President,

Change is the law of life. Acute dissatisfaction in many statements is the result of preventing institutions from changing. What is true in the economic field is equally true of the architecture of our international security system—as reflected in this unique Organization that is supposed to reflect the collective will of our world—which remains mired in the past. Recent tragic events in Lebanon, and the stasis in the peace process in the Middle East, have highlighted the growing failure of the institution designated by the Charter with primary responsibility for issues relating peace and security. There is wide acceptance that the Security Council can no longer be
regarded as being reflective of the changed international environment that has emerged since the time of its creation. The Security Council has not only to be more representative but also to be more effective if it is to be able to satisfactorily perform the role mandated to it by the Charter. At the same time, it has needlessly diverted its attention to issues and areas that go beyond its mandate. For instance, the inclusion of items on its Agenda that have nothing to do with peace and security represents an encroachment on the roles mandated to other UN bodies. In order to ensure that the international community exercises real ownership of the process of securing our world, it is essential that comprehensive reform of the Security Council is undertaken and that its membership is expanded in both permanent and non-permanent categories. It is no accident that the Secretary General’s report refers to the enhancement of the legitimacy and the urgent need for reform to ensure relevance and credibility.

The revitalization of the General Assembly is intertwined with the reform of the Security Council, and it is no coincidence that its reform too has long been frustrated. A strengthened and more effective United Nations presumes a revitalized General Assembly that exercises its role and authority in the areas of responsibility assigned to it by the Charter. These include its effectively addressing topics such as international law and human rights, financial, budgetary and administrative matters, as well as the global economic architecture and important issues related to development.

**Madame President,**

I now turn to one of the most crucial issues of our times: the problem of terrorism. While this phenomenon has become increasingly global, our collective response to it has remained rather inadequate. The multiple ways in which terrorism challenges the core principles of humanity and the mandate of the United Nations are underlined by the outrages perpetrated in India over the last few months. Barely two months ago, in a single black day, more than 200 lives were lost and more than 1000 were injured by dastardly bombings in Mumbai and elsewhere in India. These and other such incidents of outrage were clearly designed to spread maximum terror among ordinarily people. And ours is not the only country to be singled out by vicious and senseless acts of murder. A strong response to terrorism requires broad-based international cooperation denying the space available to terrorists, and increasing the capability of States to address terrorist threats. It requires sustained and specific cooperation by a variety of national, regional and global agencies.
Madame President,

We have joined in the adoption of the United Nations Global Counter-Terrorism Strategy earlier this month, even though we would have ideally liked the United Nations to convey a far stronger message to counter terrorism. We must collectively and unanimously reject the notion that any cause can justify terrorism. No cause can ever justify the targeted killing of innocent men, women and children. The international community must signal that it will no longer tolerate the actions of the sponsors and abettors of terrorism or of those who wilfully fail to prevent terrorists from utilising their territories. We hope that the Strategy would provide the impetus to unite the international community in its fight against terrorism via practical measures that facilitate cooperation by way of extradition, prosecution, information exchange, and capacity building.

While we have gone along with the Global Counter Terrorism Strategy, the Comprehensive Convention against International Terrorism, which remains a work in progress, would have provided the requisite legal framework upon which a counter-terrorism strategy could have been based. It cannot be beyond our collective ingenuity to reach an agreement on this Comprehensive Convention, even though we have missed the target of doing so in the 60th UN General Assembly. We must work together to finalize and adopt the Comprehensive Convention, at least during this session of the General Assembly.

Madame President,

The existence of nuclear weapons continues to threaten international peace and security. In our view, the best non-proliferation measure is universal disarmament and the international community needs to take immediate steps to eliminate the threat of use of nuclear weapons. We have to revive momentum for achieving what late Prime Minister Rajiv Gandhi called “a nuclear weapons free and non-violent world”, to be achieved through negotiations in a time bound manner. India will be presenting a working paper at this session of the UNGA on the issue of nuclear disarmament on which we look forward to working with UN Member States.

In recent years, new dangers have emerged due to the link of proliferation of WMD related materials and technologies to non-state actors and terrorist groups. The international community needs to work together to meet these challenges. India’s record in this regard is impeccable and we have instituted effective measures to ensure that technologies developed by us are not leaked in any way.
Madame President,

It is true that the developing countries bear the heaviest burden from pandemics, epidemics and chronic disease. The scourge of HIV/AIDS, Malaria, Avian Influenza and Tuberculosis seriously threaten the future of many developing countries by robbing them of their most productive segment of society - the youth - thereby affecting the future of these countries. An enhanced global collaborative effort is called for to confront the proliferation of challenges affecting the lives of the majority of our citizens.

We also need to address the central issue of the special needs of the developing countries, especially in Africa and the vulnerable small states. On our part, we shall continue to expand our programme of South-South cooperation also through New Partnership for African Development (NEPAD), through TEAM 9 – our special program for West African countries – and by means of the connectivity mission in Africa as well as assistance, capacity-building and technology transfer aimed at reducing the vulnerabilities of small states.

Madame President,

Prime Minister Jawaharlal Nehru, who embodied our commitment to the UN ideals, said “in a world of incessant and feverish activity, men have little time to think, much less to consider ideals and objectives. Yet, how are we to act, even in the present, unless we know which way we are going and what our objectives are?” Confronted as we are by the globalization of threats and by the limitations of our international systems to address such challenges, the need for a comprehensive reform of the UN has never been more imperative. We need to enfranchise the UN to meet the challenges of our time by reinforcing its role and authority as the core of real multilateralism.

We look forward to working closely with other Member States, under your leadership, to press ahead with essential reforms at the UN and implement an effective global partnership for development that encompasses everyone and enables every individual to live a life of dignity in a clean, safe and healthy environment.

Thank you, Madame President.
Madam Chairperson,

My delegation congratulates you and other members of the Bureau on your election. I would like to assure you of my delegation’s cooperation in the work of the Second Committee. We associate ourselves with the statement made by the Permanent Representative of South Africa as Chairman of the Group of 77. We would like to express our appreciation for the statement made at the beginning of this debate by the Under-Secretary-General for Economic and Social Affairs, Mr. Jose Antonio Ocampo, and for sharing with us his insight on the world economic situation and prospects.

Madam Chairperson,

The World Economic Situation and Prospects 2006 report brings out that global economic growth slowed noticeably in 2005 from the strong expansion in 2004. It is expected to grow at a moderate pace of about 3% during 2006, and widening global imbalances and high oil prices constitute downside risks. The pattern of net transfer of resources from developed to developing countries has lasted for about ten years, rising steadily from US $ 8 billion in 1997 to US $ 483 billion in 2005. Even though net transfers to sub-Saharan Africa are still positive, the magnitude of these transfers is on the decline, reaching US $ 2 billion in 2005, down from US $ 7.5 billion in 1997. International income inequality that continued to rise strongly from an already high-level and the world economic social survey 2006 has concluded that failure to redress the tendency towards growing global inequality could have wide-ranging consequences for human development.

The mobilisation of additional financial resources to assist developing countries in achieving the Millennium Development Goals continues to remain a major challenge and the current impasse in the Doha round of trade negotiations is a cause of concern. Even though the aggregate ODA reached a record high of US 106 billion in 2005, only a small fraction of this nominal increase actually represented a flow of additional finance to the countries that need them most. The MDGs cannot be achieved without implementing the 0.7% ODA target in a time bound
manner, innovative financing, deeper debt relief and enhanced market access. We support efforts extended to low-income countries, including those in Africa, where debt burdens pose serious constraints to the attainment of MDGs. As the proposals for innovative sources of financing reach maturity, establishment of robust and efficient mechanisms to track ODA flows would become vital, more so in the context of recent debt relief initiative. What is needed is to strengthen the existing mechanisms, and to consider establishing new mechanisms to monitor review and follow up of the implementation of all the commitments, as stipulated in the development follow-up resolution adopted by the General Assembly this July.

Madam Chairperson,

Trade can stimulate growth. In this context, realization of the development imperatives of the Doha development agenda, the July Framework, and the Hong Kong Ministerial Declaration is imperative. Proportionately lower overall tariff reduction commitments and operable and effective development instruments of Special Products and Special Safeguard Mechanism are the essential components of securing food security, livelihood security and the rural development needs of developing countries. In the absence of elimination of trade distorting domestic support and export subsidies in the agricultural sector by the developed countries and non-agricultural market access, import liberalization by developing countries will only lead to domestic demand constraint and industrial recession. The overarching principle of special and differential treatment, therefore, remains a categorical imperative. A systematic effort and demonstration of considerable political will are essential, if the negotiations are to be saved.

The growth successes and collapses have tended to cluster around specific time periods; it is unlikely that domestic factors alone can explain a pattern common to many countries at the same time. Poverty and conflicts are not simply a legacy of the colonial past, but epiphenomena of the policies of the international financial institutions. It is no coincidence that several countries have rejected the prescriptions meted out by the Bretton Woods institutions [BWIs]. Governance at the international level is as important as governance at the domestic level. The BWIs must remain steadfast in their mission for a world free of poverty and their policies must remain development oriented. Addressing the democratic deficit in the governance structures of the BWIs remains a necessity. The 2005 World Summit reaffirmed the fundamental role of the United Nations in promoting
international cooperation for development and system-wide coordination of policies of the UN system. The UN should encourage the BWIs to take further and immediate steps to initiate the second stage of IMF quota reform, involving a basic revision of the quota formula and subsequently increasing the quota for all under-represented countries.

Madam Chairperson,

We welcome the proposal for intensifying global development partnership for helping Africa. India has an extensive bilateral programme of economic and technological cooperation with Africa including lines of credit that also encompass the vital areas of infrastructure, education and public health. We support greater efforts through the UN system for assisting the efforts of countries in Africa as well as for addressing the special needs of Least Developed Countries, Landlocked Developing Countries and the Small Island Developing Countries.

Madam Chairperson,

Environmental protection remains a major challenge for developing countries. Concrete efforts are needed to provide new and additional resources as well as to ensure transfer of environmentally sound technologies on concessional and preferential terms to developing countries, within the common and differentiated responsibilities paradigm.

Madam Chairperson,

The Secretary-General has emphasized, in his annual report on the work of the Organisation, that 2006 must be the year of implementation. We agree with him.

We hope that the deliberation of the Second Committee will help us in identifying areas of cooperative action and moving forward the implementation of the development agenda.

Thank you, Madam Chairperson.
563. Statement by Permanent Representative at the UN
Ambassador Nirupam Sen on Agenda Item 102: Report
of the Secretary-General on the Work of the Organisation
at the 61st session of the UN General Assembly.

New York, October 2, 2006.

Madam President,

We congratulate you on your election and on the efficient manner in
which you have been conducting the work of the 61st session. We assure
you of our constructive cooperation. We thank the Secretary-General for
the comprehensive overview of the Organization’s main achievements and
challenges during the past 12 months.

As the report highlights, the Secretary-General has overseen many
achievements of this Organization during the past ten years. The Millennium
Summit, which led to the adoption of the Millennium Declaration and the
Millennium Development Goals, was followed up last year with the five-
year review and the adoption of the 2005 World Summit Outcome
Document. The MDGs itself embody a quantifiable vision of certain
important economic and social rights and, in this sense, they carry forward
the right to development. The global partnership for development, as set
out in the Millennium Declaration and reaffirmed by the 2005 World Summit,
is primarily a commitment to make the Right to Development a reality for
all and we should reach broad agreement in fulfilling the promise.

The report reminds us of the imperative of implementing the global
partnership for development; the need for enhanced focus on
peacebuilding; increased attention to the special needs of Africa, health
issues, including HIV/AIDS, malaria and tuberculosis; and to the need for
strengthening the United Nations and making it a robust and vibrant
Organization, responsive to the needs of the time, and by implication to
the needs of developing countries which constitute the vast majority of the
Organisation. I may state categorically that unless there is a sharp increase
in welfare and a sharp decrease in vulnerability across the African continent
and across the Small Island Developing States, we cannot pride ourselves
on any measure of success. It is worth remembering that what was achieved
at the 2005 World Summit was to the extent of the solidarity of the
developing countries. This remains important in the implementation of the
commitments made in the World Summit Outcome; agreement reached in
the context of Development Follow-up is indicative.
Madam President,

For developing countries, the centrepiece is development. Poverty and conflicts are not only the legacy of the colonial past, but also epiphenomena of the structural policies of the IFIs. The present international system takes from the poor – net transfers from developing countries continued to rise for the twelfth consecutive year reaching over US $ 450 billion. Without addressing the development problems faced by the vast majority of UN membership, security in its full sense cannot be achieved. The report of the Secretary-General notes that, since the Millennium Summit in 2000, the progress has been uneven and the ongoing levels of human deprivations remain staggering.

Implementing the global partnership for development [MDG 8] is a categorical imperative. The MDGs cannot be achieved without implementing the 0.7% ODA target in a time-bound manner and innovative financing; deeper debt relief, enhanced market access and improved global economic governance. Even though aggregate ODA reached a record high of US $ 106 billion in 2005, only a small fraction of this nominal increase actually represented additional finance to support real investments in countries that need them most. We welcome the agreement reached to monitor the fulfilment of commitments made to provide development assistance. India is supportive of all initiatives in support of the low-income countries, including those in Africa, where debt burdens pose serious constraints to the attainment of MDGs. It is also important that debt stock cancellation is complemented by sharp increases in ODA.

Addressing systemic issues is an urgent practical necessity. As reaffirmed by the 2005 World Summit and subsequently agreed in the context of “development follow-up” this July, there is an overwhelming logic for the United Nations to give direction to the comprehensive reform of the international financial, monetary and trading systems. The democratic deficit in the international financial architecture can only be addressed through a fundamental reform of the quota structure, an absolute necessity for the credibility and legitimacy of international financial institutions. The UN should encourage further, effective and time bound steps for the second stage of IMF quota reform without delay, involving a basic revision of the formula, subsequent increase of quotas for all under represented countries and amendment of the Articles of the IMF.

The suspension of the Doha Round of trade negotiations is a cause of concern. Realization of the development imperatives of the Doha
Development Agenda, the July framework and the Hong Kong Ministerial Declaration is crucial for developing countries.

The overarching principle of special and differential treatment remains a categorical imperative. Many developing countries’ problems are not because of inadequate liberalisation or corruption but because developed countries set the agenda and went back on their promises thereby ensuring that the history of trade negotiations would be a history of broken promises. In the Uruguay Round, in return for the developing countries’ reducing their tariffs and accepting new regimes like TRIPS, the developed countries’ promised to phase out textile quotas and remove agricultural subsidies. The former took a decade and the latter still remain. This amounts to barring the Punta Del Este Declaration. The Doha Development Round has delivered neither fair trade nor development. Demonstration of political will by the developed countries will be required if negotiations are to be saved. A clear political direction to the WTO that was not possible in the 2005 World Summit in spite of broad political support remains necessary.

The primacy of development on the global agenda can only be achieved if the UN takes a lead in setting the international economic agenda. The problem is the reform of the UN system, the reinstatement of the UN-driven and development oriented approach. What is needed is the UN overseeing the international economic agenda and promoting the reform of international economic institutions through a revitalized General Assembly, strengthened Economic and Social Council and a reformed Security Council. Only if we remain engaged actively can we correct the imbalance; ensure that no country is too weak to influence the UN; that the economic agenda is truly development-oriented; and that laws are made by the General Assembly. Professor Stiglitz, in his latest book “Making Globalisation Work” has suggested that the UN – the ECOSOC would be the appropriate body – should carry out regular independent evaluations of the performance of international economic institutions because those by the World Bank and the IMF cannot be “fully independent” and later adds that the ECOSOC should “play an important role in defining the global economic agenda”.

The 2005 World Summit emphasised the need to strengthen the Economic and Social Council in order to enable it to play a critical role in promoting international cooperation for development as well as enhancing policy coherence and coordination among agencies. An early conclusion of negotiations on this issue is needed, as is a demonstration of political
will to enable the ECOSOC to fulfil its mandate, as envisaged in the Charter, and to contribute to peace building and peace consolidation efforts in countries emerging from conflict in accordance with the agreements reached at the time of establishment of the Peacebuilding Commission. Similarly, in the context of strengthening of the role and authority of the General Assembly, early consultations on the establishment of the ad hoc working group is called for. In fact the early setting up of the ad hoc working group on GA revitalisation is essential. The General Assembly is best placed to ensure that the candidate proposed for the post of the Secretary-General is sensitive to the needs of the developing countries.

The Bretton Woods Institutions, like the UN Security Council, carry the stigmata of 1945 – the world was still colonised and these clubs of the rich play by rules totally inadequate for the 21st century. In the IMF, the rich countries, in fact a single rich country has virtually a veto, as we saw in Singapore recently. The most powerful countries appoints the Head of the World Bank, and, with Western Europe, shares the top two posts of the IMF. Is it any different with vetoes and appointments by the Security Council? The revitalisation of the General Assembly has not really taken place because the 2006 Resolution remains as much a dead letter as the 1997 Resolution and encroachment by the Security Council continues. Unless the developing countries managed to change things lock, stock and barrel, unless they eschew temporary and immediate but certainly evanescent gains and recover the energy of our founders, this organisation may pass out of their hands and we would end up in a limbo, a corner, on the margins, without any rights. And the continual adaptation to continually lower expectations would transform this august Assembly into irrelevant spectators.

Madam President,

The recent tragic events in Lebanon and the stasis in the peace process in the Middle East have highlighted the growing failure of the Security Council designated by the Charter with primary responsibility for issues relating to peace and security. They reminded me of Emperor Nero who was fiddling while Rome was burning (incidentally this is not a reference to the Uniting for Consensus). The main problems that beset peacekeeping are not a lack of resources or even personnel, but an un-representative Security Council, which lacks the political will to act and when it does, does so in a manner that is entirely inadequate. The Council also needs to shore up its participation in peacekeeping operations; the Secretary-General’s
Report states that an overwhelming number of troops in UN peacekeeping operations are contributed by developing countries. This is a distressing reflection on Security Council willingness to share the burden of maintaining international peace and security. It is no accident that the Secretary-General's report refers to the enhancement of the legitimacy and the urgent need for reform to ensure relevance and credibility. We agree with the Secretary-General that 'the Council should be more representative of today's geopolitical realities and more efficient and transparent in its working methods'. There is widespread acknowledgement that no reform of the United Nations would be complete without the reform of the Security Council. The Security Council must not only be more representative but also more effective, if it is able to satisfactorily perform the role mandated to it by the Charter.

The recent plenary debate on the UN Security Council reform held in July this year gave a clear signal that the momentum for reform remains intact and maintaining the status quo was unacceptable. Developing countries remain grossly under-represented in the Council even though most decisions taken by the Security Council directly affect them. Thus, developing countries continue to face the same underlying systemic challenges that brought them together in the 1960's; today in many respects, the environment is more harsh. The voice of developing countries and their further empowerment in the international arena is vital for leveling the so-called 'playing fields'.

It is, therefore, imperative that any expansion and restructuring of the Security Council must include developing countries, both as permanent members and in the non-permanent category. We are committed to undertake intensive consultations with other developing countries in the spirit of solidarity, and to embark on a South-initiative for the reform of the Organisation in a manner that is reflective of the aspirations of the developing countries and that ensures that the reformed structures are responsive to their needs; in areas ranging from development to peace and security – strengthening of ECOSOC, revitalization of the General Assembly and reform of the Security Council. It is worth recalling that the spending cap was imposed by consensus. But the damaging proposals on governance and flexibility were first halted by the solidarity and resolute action of developing countries. The lesson is obvious: an organic initiative from below is necessary. This can only be a South initiative for the comprehensive reform of all the key institutions so vital for the South – General Assembly, ECOSOC and Security Council. What some of the P-5
Madam President,

The Secretary-General’s report speaks of the increased recourse to the United Nations for peacekeeping and for prevention of armed conflict. This highlights the need for the Organization to develop capabilities in the sphere of peace-building, not merely in the cause of peacekeeping, underlined most starkly in the vicious circle of violence that continues to plague the Middle East; and that conflict resolution needs to go well beyond its current limited role of keeping belligerents apart. The Peace-building Commission is, in this sense, a welcome effort. Our pledge of US $ 2 million to this body reflects our perception that there is a grave need for a shift of focus from merely peacekeeping to peace-building/peace consolidation. The PBC must establish its credibility. As a member of the Organizing Committee, we are committed to contribute in this direction.

The surge in peacekeeping reported by the Secretary-General has brought new challenges and more demands, though the earlier problems persist. The issues of effective planning, congruity among mandates, resources allocated and objectives to be achieved, safety and security of peacekeepers are some of the other areas of particular concern. These questions should be the subject of a constant dialogue and interaction among the troop-contributing countries, the Security Council and the UN Secretariat, if peacekeeping is to be effective.

India remains steadfast in its commitment to promoting world peace and security. Our contribution to UN peacekeeping is part of this broader commitment. We have been one of the most consistent contributors of troops to the UN, and shall continue to uphold this tradition. We shall continue to work with the Secretariat and Member States in order to make peacekeeping the effective instrument that we all wish it to be.

Madam President,

Nothing can justify terrorism. The adoption of the United Nations Global Counter-Terrorism Strategy is a step in the right direction to the extent that the Strategy would signal the will of the international community that it would no longer tolerate the actions of the sponsors of terrorism or of those who willfully fail to prevent terrorists from utilizing their territories for moral or material shelter. As for the concept of State terrorism, we
mean by State terrorism, State sponsorship and patronizing of terrorists in order to disrupt the peace in other countries. Notwithstanding the setback of not meeting the timeline set by the 2005 World Summit for concluding a comprehensive convention, we believe that agreement on the draft convention is attainable. We must now work together for the early finalization and adoption of the CCIT. The problems in Article 18 (the new Article 20) can perhaps be overcome through formulations on not affecting the legal status of any entity under International Humanitarian Law.

**Madam President,**

The 2005 World Summit, while recognizing that peace and security, development and human rights are interlinked and mutually reinforcing, underscored the centrality of development. The Seventh session of the Working Group on the Right to Development, which was held in Geneva in January 2006, adopted a set of criteria for evaluation of the fulfillment of commitments towards global partnership for development [MDG 8] from the perspective of the right to development. It also said that the policies of BWIs have to be corrected in terms of deficiencies from the perspective of the Right to Development. Thus, there is broad agreement that straddles across divides; there is no fundamental contradiction. The efforts to mainstream all human rights, including the Right to Development, by strengthening linkages between the normative and operational work of the UN system need to proceed in a measured manner taking into account the specific needs and requirements of the Member States concerned.

We welcome the establishment of the Human Rights Council whose focus should be the promotion of human rights through international cooperation and genuine dialogue among Member States, including capacity-building and mutual assistance. We believe that the Office of the United Nations High Commissioner for Human Rights (OHCHR) should extend technical assistance and enhancing capacity building in the area of human rights to Member States at their request. It is in this spirit that India supported the strengthening of the Office of the High Commissioner, including an increase in its resources from the regular budget of the United Nations.

We agree with the need for further steps aimed at enhancing the speed and effectiveness of the UN’s response to humanitarian emergencies. India would continue to play a constructive role in this regard bearing in mind the lessons learnt from experiences in the field. India has been constructively engaged in the setting up of the Central Emergency Response Fund. India’s contribution of US $2 million to CERF at its launch
in March 2006 is a reflection of our solidarity with other developing countries in the aftermath of disasters. We would remain actively engaged with the process of improving the working of the CERF.

**Madam President,**

Our Organization needs to reform to keep up with the complex challenges of today. We welcome the reforms that have been implemented in the United Nations Secretariat since 1997 and look forward to constructive discussions in the 61st session on important issues such as governance and oversight. The declared objectives of these reform proposals cannot be repudiated. Nevertheless, the process often becomes as important as the goal itself. We would, therefore, stress the importance of discussions on these issues to be undertaken in an open, inclusive and transparent manner and are ready to engage on these issues with an open mind.

On the issue of governance, we reiterate the importance of the existing structure of administrative and budgetary decision-making in the United Nations based on primacy of the General Assembly and its Fifth Committee. Improvement is an incessant process and we could discuss ways to make administrative and budgetary decision-making in the Organization more efficient and effective. Altering the unique all-inclusive character of the Fifth Committee, which is being proposed by some, has already been rejected by Member States and remains unacceptable. We strongly support strengthening the oversight role of the GA, maintaining the inter-overnmental nature of the UN, and respecting the sovereign equality of all Member States to participate in the decision-making processes of the UN.

We need to strengthen oversight in the UN system by making the oversight bodies independent. We seek greater accountability from the Secretariat to Member States. We believe that the United Nations should have a fair, transparent, and rule-based selection process based on equitable geographical representation and with due regard for gender balance. We call for an administration of justice in the United Nations, based on due process of law that is fair, consistent, non-discriminatory and speedy. We look forward to comprehensive procurement reforms in the Organization.

**Madam President,**

There is a broad realization of the need to work urgently towards a nuclear weapon free world. Yet, the goal of nuclear disarmament remains
elusive. We believe that the best non-proliferation measure is universal disarmament and the international community needs to take immediate steps to eliminate the threat of use of nuclear weapons. India will be presenting a working paper at this session of the UNGA on the issue of nuclear disarmament on which we look forward to working with UN Member States.

We shall provide more detailed comments during discussions of the respective agenda items in the General Assembly and its main Committees.

Thank you, Madam President.

F F F F F

564. Speech by Member of the Indian Delegation to the UN K. P. K. Kumaran on the subject of “Granting of Independence to Colonial Countries and Peoples” in the 4th Committee of the 61st session of the UN General Assembly.

Mr. Chairman,

It gives me great pleasure to congratulate you on your election as Chairman of the Fourth Committee, as well as the other members of the Bureau. I assure you of my delegation’s full cooperation and support during this 61st session of the UN General Assembly.

Mr. Chairman,

Despite progressing into a new century, we continue to grapple with the vestiges of colonialism, a bygone system that runs contrary to the fundamental principles of this Organisation. Colonialism is anachronistic and outmoded; it contravenes the fundamental tenets of democracy, freedom, dignity and human rights. While remarkable progress has been made in removing over 80 countries, 16 areas still remain on the list of Non-Self Governing Territories. This serves as a reminder that the process of decolonisation is incomplete and more needs to be done. We are now in the sixth year of the Second International Decade for the Eradication of Colonialism [2001- 2010] and unless we intensify our work to implement the various resolutions and recommendations to eradicate colonialism, the
Special Committee of 24 may well need a further decade to complete its work.

Our approach to the task ahead must therefore blend urgency and activism on the one hand, and sensitivity and circumspection on the other. We must, first and foremost, take into account the needs of the people of these Territories and their special circumstances. An appropriate format and timing for the completion of decolonisation in each territory needs to be focused upon. Ascertaining the political aspirations of the people in each of these Territories, and taking into account the stages of development of each Territory, are critical inputs for making decisions that enable them to develop indigenous political and socio-economic institutions and structures of their choice. The importance of eschewing a “one size fits all” approach cannot be overstated; the focus should instead be on a case-by-case approach, with a view to making real progress in each Territory.

Dissemination of relevant information regarding options that may be available to the people in the Territories is crucial. All too often, they may be unaware of their legitimate political options; for real constitutional and political advancement to occur, the peoples of a Territory require sustained access to unbiased information on the licit options of political equality before them, namely, independence, free association with an independent state or integration with an independent state, as clearly defined under Resolution 1541 [XV] of the General Assembly.

Two other important tools that could serve to bridge this information deficit in the process of decolonisation, are the visits of UN Missions to Non Self-Governing Territories and the conduct of Regional Seminars by the Special Committee of 24 on Decolonisation. The instrumentality of visiting Missions helps in the collection of adequate and first-hand information on conditions in the Territories and for ascertaining the wishes and aspirations of the peoples concerning their future status. Such missions are important in the context of furthering modalities and action plans for decolonisation and observing acts of self-determination. We hope that the administering Powers would extend their full cooperation to the Special Committee in facilitating such visiting missions. Similarly, we favour the holding of regional seminars by the Special Committee, in an effort to mobilize world opinion to support and assist the peoples of the Territories in speedily ending colonialism. The idea of combining visiting Missions to certain Territories with seminars in order to optimize available resources is a worthy one, which should be pursued.
The role of the administering Powers is an important factor. A spirit of cooperation and flexibility has largely imbued their actions in recent years. Therefore, we call upon them to further build upon this positive spirit by, in particular, assisting the Special Committee of 24 in devising specifically tailored action plans for the decolonisation of certain Territories in their quest for self-determination. The holding of a referendum in Tokelau on the political status option in February 2006 is one such example. A United Nations team led by Ambassador Robert G Aisi was present on the occasion at the joint invitation of the New Zealand and Tokelau Governments. We hope that such instances of partnership will serve as a guide to other administering Powers which continue to resist the international dialogue established by the United Nations on the political and constitutional development of the territories under their administration. We agree that an interactive dialogue on the objective reality in the Territories would be to the benefit of all concerned, in particular, the people of these territories.

We should like to express our appreciation for the work of the Special Committee. We agree with the Chairman’s contention that the focus should now be on implementation. We support moves to concentrate efforts to produce a plan of implementation for the wider United Nations system in order to organize actions already called for, into concrete activities, in furtherance of complete decolonization by 2010. We are convinced that only through such a pro-active approach, which we must carry forth into 2007, will we be able to fulfill the mandate for decolonisation by the end of this decade. We would like to assure the Chairman of the Committee of 24 of our full support and involvement in his efforts to move the agenda ahead and successfully complete the mandate of the Special Committee.

Mr. Chairman,

As a founding member of the UN and the Special Committee of 24 on Decolonisation, we share solidarity with other erstwhile-colonized peoples and nations. We consider it an honour to re-dedicate ourselves to the cherished ideals of freedom, democracy, human rights, dignity and peaceful co-existence, while reaffirming our commitment to achieving the goal of complete decolonisation.

Thank you, Mr. Chairman.
Madam Chairperson,

Please accept my delegation’s warm felicitations on your assumption of the Chair of the First Committee of the General Assembly. We are most happy to see in this position an illustrious representative of Norway, a country that has distinguished itself in the advocacy of peace and disarmament. You have our full cooperation and support.

2. The United Nations can play a central role in making the international community’s yearning for general and complete disarmament a reality. The First Committee, tasked to deal with disarmament and related international security questions, is the instrument for achieving this as it provides a universal forum for Member States to assess the current global security environment, identify threats to international peace and security and recommend concrete measures to combat them.

3. The threats we face today are global in their character and, therefore, need global solutions. No State possesses the capability to confront them by itself. The imperative of cooperation has never been more evident. However, collective security, which inspired the founders of the United Nations, remains only an idea, with security of States being largely predicated on national capabilities. This imperils and weakens the international security system.

4. It is thus the lack of a shared perspective that has stalled the Conference on Disarmament and prevented consensus on the disarmament and non-proliferation segment of the 2005 World Summit Outcome. The Conference on Disarmament has failed to reach agreement on its programme of work. Procedural fixes and debates have failed in bridging these differences. India remains committed, as always, to support initiatives that foster a consensus based on priorities and concerns of all states to break the deadlock in the Conference.

5. An important component of international security is energy security. As the global economy expands, spurred by high growth rates in emerging economies, the global demand for energy will dramatically increase. Given
the imperatives of sustainable development and the risks from climate change, nuclear energy offers us an environment-friendly source for meeting the global demand. We believe there is an immense opportunity for international cooperation combining with indigenous national efforts to ensure diversified energy mix for sustainable development.

6. Another looming danger is the proliferation of weapons of mass destruction (WMD) and global terrorism. The growing possibility of terrorists gaining access to weapons of mass destruction has added a new and dangerous dimension to the threat of WMDs. The existence of networks of proliferators, aided and abetted by elements within state structures, has further aggravated this threat. It is, therefore, of paramount importance that: (i) States renew their commitment to fulfil their responsibility to fully abide by their non-proliferation and disarmament obligations, assumed voluntarily under various legal instruments; (ii) States take seriously requisite measures to deny non-State actors, including terrorists, access to weapons of mass destruction as well as related equipment, materials and technologies.

7. India’s own impeccable record on non-proliferation of weapons of mass destruction has been recognized and appreciated by the international community. Enactment of a comprehensive legislation by us on prevention of unlawful activities regarding WMDs by our Parliament in June 2005 strengthened the existing legal framework for this purpose. We have also updated our export control regulations and lists to reflect the best international practices on export controls. We shall continue to ensure that India will never be a source of proliferation.

8. It is, however, necessary that we do not lose sight of the goal of nuclear disarmament, which should remain the international community’s highest priority. Progress towards nuclear disarmament has unfortunately stalled and the global disarmament machinery remains paralysed leading to disquiet among the international community. Non-proliferation and disarmament ought to be mutually reinforcing. This is a challenge for the UN General Assembly to take up.

9. The very first resolution adopted by the General Assembly, resolution 1(1) of 1946, sought the elimination, from national armaments, of atomic weapons and all other weapons of mass destruction. We can commemorate the glorious vision on its 60th anniversary by renewing our commitment to general and complete disarmament, in particular nuclear disarmament. Member States embraced this objective unanimously in 1978, at the first special session of the General Assembly devoted to disarmament.
In our view, another special session may provide the much-needed impetus to the consensus achieved in 1978 and help to evolve forward-looking approaches, taking into account the concerns and priorities of all Member States.

**Madam Chairperson,**

10. The principles of restraint and responsibility are the sheet anchor of India’s nuclear doctrine. While maintaining a credible minimum deterrent, there has been no dilution of India’s commitment to nuclear disarmament, which remains a core objective of India’s foreign policy. This is so because India believes that its security, as indeed of the entire world, would be enhanced in a nuclear-weapon free world. India’s nuclear doctrine espousing no-first use per se and the non-use of nuclear weapons against non-nuclear weapon States, is itself a minimalist doctrine reflecting our civilisational abhorrence of violence and destruction.

11. India has thus continued to observe a voluntary moratorium on nuclear explosive tests. India is ready to join negotiations on a non-discriminatory, multilateral and internationally and effectively verifiable treaty banning the production of fissile material for nuclear weapons or other nuclear explosive devices. On this basis, India had joined the consensus in the 1993 General Assembly Resolution on this subject.

12. It may be recalled that our late Prime Minister Rajiv Gandhi had presented at the 1988 session of the General Assembly an Action Plan for nuclear disarmament within a specific timeframe. To reaffirm India’s abiding commitment to the goal of global, verifiable and non-discriminatory nuclear disarmament and to outline concrete steps, towards a nuclear-weapon free world, we hereby present a Working Paper, distributed with my statement, which seeks to:

- Reaffirm the unequivocal commitment of all nuclear weapon States to the complete elimination of nuclear weapons;
- Reduce the salience of nuclear weapons in security doctrines;
- Reduce nuclear danger, including the risks of accidental nuclear war, by de-alerting of nuclear-weapons to prevent unintentional and accidental use of nuclear weapons;
- Negotiate a global agreement among nuclear weapon States on ‘no-first-use’ of nuclear-weapons;
- Negotiate a universal and legally-binding agreement on non-use of nuclear weapons against non-nuclear weapon States;
Negotiate a Convention on the complete prohibition of the use or threat of use of nuclear weapons;

Negotiate a Nuclear Weapons Convention prohibiting the development, production, stockpiling and use of nuclear weapons and on their time-bound destruction, leading to the global, non-discriminatory and verifiable elimination of nuclear weapons.

13. The steps mentioned in the paper are not exhaustive nor do they exclude other measures for achieving the same goal. They are also not listed priority-wise nor have any implementation-specific sequencing. We hope that our Paper will spur dialogue among States on both the need and the means to nuclear disarmament.

14. Abiding by your appeal to keep statements short, we propose to utilize the thematic debate to outline our approaches on the issues related to biological weapons, small arms and light weapons and other conventional weapons. For now, we wish only to underline the importance that we attach to the success of the BTWC and CCW review conferences later this year.

15. Meanwhile, I hope the deliberations in the First Committee will meet our expectations and enhance international peace and security.

I thank you, Madam Chairperson.

Working Paper on Nuclear Disarmament Presented to the First Committee of the UN General Assembly at its session on October 6, 2006 by Member of the Indian Delegation to the UN Balasaheb Vikhe Patil.

The international community has long recognised that nuclear weapons pose the greatest danger to humankind and therefore, it is essential for it to take urgent steps towards realisation of the goal of their complete elimination. The UN General Assembly, in its very first resolution, Resolution 1(I) of 1946, adopted unanimously, sought the elimination, from national armaments, of atomic weapons and all other major weapons adaptable to mass destruction and to use of atomic energy only for peaceful purposes, a goal that has been reaffirmed by the General Assembly on several occasions thereafter.

2. The Final Document of the First Special Session of the General Assembly devoted to Disarmament (SSOD-I), the only document on nuclear
disarmament adopted by consensus by all member States, affirmed and
c accorded the highest priority to the goal of nuclear disarmament and outlined
 concrete steps to achieve that objective. It pointed out that the achievement
 of nuclear disarmament would require urgent negotiation of agreements, at
 appropriate stages, and with adequate measures of verification satisfactory
 to the States concerned, for (i) the cessation of the qualitative improvement
 and development of nuclear weapon systems; (ii) the cessation of production
 of all types of nuclear weapons and their means of delivery and of the
 production of fissionable material for weapon purposes; and (iii) a
 comprehensive, phased programme with agreed timeframes, whenever
 possible, for progressive and balanced reduction of stockpiles of nuclear
 weapons and their means of delivery, leading to their ultimate and complete
 elimination at the earliest possible time. It emphasized that in the task of
 achieving the goals of nuclear disarmament, all nuclear weapon States, in
 particular those among them that possess the most important nuclear
 arsenals, bear a special responsibility. It also emphasized that the process
 of nuclear disarmament should be carried out in such a way and requires
 measures to ensure that the security of all States is guaranteed at
 progressively lower levels of nuclear armaments. The principles and
 objectives, which were agreed by all, remain of continuing relevance and
 need to be reaffirmed by the international community.

3. The International Court of Justice (ICJ) concluded in 1996 that:
“there exists an obligation to pursue in good faith and bring to a conclusion
 negotiations leading to nuclear disarmament in all its aspects under strict
 and effective international control.” The UN Millennium Declaration reiterated
 the commitment of the Member States of the United Nations to strive for the
 elimination of weapons of mass destruction, in particular nuclear weapons,
 and to keep all options open for achieving this aim. Various proposals for
 nuclear disarmament have since been considered, including in a number of
 studies ranging from the Canberra Commission to the more recent WMD
 Commission. The Pugwash Movement and the NGO Community have also
 made valuable contributions to the nuclear disarmament discourse.

4. The Non-aligned Movement, described as the largest peace
 movement in history, has always accorded the highest priority to nuclear
 disarmament. The NAM Summit has recently reaffirmed the Movement’s
 principled positions on nuclear disarmament and emphasized the necessity
 to start negotiations on a phased programme for the complete elimination
 of nuclear weapons with a specified framework of time, including a Nuclear
 Weapons Convention.
5. The international community is far from achieving the objective of the total elimination of nuclear weapons, though there has been some progress in this regard. In particular the Russian Federation and the United States have taken steps to reduce their nuclear weapons stockpiles, and India welcomes such efforts. Notwithstanding these reductions the global threat posed by nuclear weapons has not subsided. In recent years another dimension has been added by the possibility that terrorists and other non-State actors may acquire and use weapons of mass destruction, including nuclear weapons and so-called “dirty-bombs”.

6. Despite the end of the cold war, the international security situation is still characterised by lack of trust and political will amongst states to make progress towards the complete elimination of nuclear weapons. The non-nuclear-weapon States have serious concerns about the commitment of nuclear-weapon States to nuclear disarmament. The absence of any reference whatsoever to disarmament and non-proliferation in the 2005 World Summit Outcome underscored this fact. The Final Document of SSOD-I enshrined the essential principle of mutually reinforcing linkage between disarmament and non-proliferation. States that have voluntarily undertaken disarmament and non-proliferation obligations under respective treaties must implement them fully and faithfully.

7. Nuclear disarmament and nuclear non-proliferation are mutually reinforcing processes. Effective, credible and comprehensive system of export controls, which at the same time do not hinder legitimate applications of science and technology for peaceful and developmental purposes, could be building blocks of a move towards universally acceptable non-discriminatory norms and effective international non-proliferation arrangements. Non-proliferation policies must also be forward looking, so as the allow for the expansion of international cooperation in the peaceful uses of nuclear energy for countries desirous of increasing the share of nuclear energy as a non-polluting energy source, in a manner that is safe, secure and proliferation resistant.

8. International efforts in nuclear disarmament would yield tangible results when they are backed by an international consensus. The Conference on Disarmament is the sole multilateral negotiating body on disarmament. The Disarmament Commission is the universal deliberative forum. The UN Charter endows the General Assembly with a responsibility on disarmament matters. The General Assembly must explore the convening of the Fourth Special Session on Disarmament, subject to
consensus on its objectives and agenda. These remain the best fora to enable the emergence of a consensus and to make effective contribution to the goal of nuclear disarmament and the complete elimination of nuclear weapons worldwide.

9. India has played an active role in the international community’s endeavours towards nuclear disarmament. India was the first to call for a ban on nuclear testing in 1954 and a non-discriminatory treaty on non-proliferation of nuclear weapons, as distinct from non-dissemination, in 1965. India’s proposition on non-proliferation was predicated on the principle that the progressive steps towards elimination of weapons of mass destruction must be based on a balance of obligations between those who possess such weapons and those who do not. In 1978, India proposed negotiation for an international convention that would prohibit the use or threat of use of nuclear weapons. In 1982, India called for a ‘nuclear freeze’- a prohibition on production of fissile materials for weapons, on production of nuclear weapons and related delivery systems.

10. In 1988, India presented the Rajiv Gandhi Action Plan to the General Assembly that provided a holistic framework seeking negotiations for a time-bound commitment for the complete elimination of nuclear weapons to usher in a world free of nuclear weapons and rooted in non-violence. This Action Plan was by far the most comprehensive initiative on nuclear disarmament, covering issues ranging from nuclear testing, fissile material for nuclear weapons to a time bound elimination of stockpiles. India, together with 27 other members of the Group of 21, in August 1996, presented to the Conference on Disarmament a Programme of Action, as contained in document CD/1419, for the elimination of nuclear weapons, with a specified time frame. This was further endorsed by the Group of 21 in documents CD/1570 and CD/1571.

11. So long as the States that possess nuclear weapons continue to believe that nuclear weapons constitute a critical element of their security strategy, the goal of the complete elimination of nuclear weapons will remain elusive and distant. Therefore, reducing the salience of nuclear weapons in strategic and security doctrines and policies is essential for realizing the goal of complete elimination of nuclear weapons. Alignment of nuclear doctrines to a posture of ‘no-first-use’ and non-use against non-nuclear-weapon States by all nuclear weapon States will be an important step towards achieving this objective.
12. The non-nuclear weapon States have persistently sought legally-binding assurances from the nuclear-weapon States against the use or threat of use of nuclear-weapons against them. They have regarded the security assurances provided so far by the nuclear-weapon States as inadequate, conditional and non-binding. Legally-binding assurances on use or threat of use of nuclear weapons against non-nuclear weapon States would further reduce the nuclear danger and mitigate the sense of insecurity among non-nuclear weapon States and, thereby, strengthen the non-proliferation regime. India firmly supports a policy of ‘no-first use’ and non-use of nuclear weapons against non-nuclear weapon States. India is ready to join multilateral negotiations to enshrine its commitment to no-first-use and non-use of nuclear weapons against non-nuclear weapon States in legally binding agreements. An agreement among the States possessing nuclear weapons on a global ‘no-first-use’ posture will engender strategic stability and reduce the danger of the accidental or unintended use of nuclear weapons.

13. The international community succeeded in negotiating Conventions on total elimination of biological and chemical weapons mainly because their use had already been prohibited through the 1925 Geneva Protocol and States were prepared to relinquish these weapons as they did not foresee the likelihood of their use or their contribution to ensuring security. There is no reason why nuclear weapons cannot be eliminated in the same manner. A prohibition on the use or threat of use of nuclear weapons would be essential for eventual elimination of nuclear weapons.

14. The General Assembly resolution on a “Convention on the Prohibition of the use of Nuclear Weapons”, first presented by India in 1982, requests the Conference on Disarmament to commence negotiations on an international convention prohibiting the use or threat of use of nuclear weapons under any circumstances. The resolution reflects India’s belief that a multilateral, universal and binding agreement prohibiting the use or threat of use of nuclear weapons would help generate necessary political will among States possessing nuclear weapons to engage in negotiations leading to the total elimination of nuclear weapons; it would also contribute to mitigation of the nuclear threat in the interim, pending the complete elimination of nuclear weapons.

15. The General Assembly resolution on “Reducing Nuclear Danger” manifests India’s conviction that the hair-trigger posture of nuclear forces carries the risk of unintentional, unauthorized or accidental use of nuclear weapons leading to a nuclear war with catastrophic consequences. The very real danger posed by the increased risk of systems and components
falling into the hands of non-State actors or rogue actors within State structures, has further aggravated the existing dangers. Unilateral, bilateral and regional confidence-building measures, could supplement international agreements in reducing nuclear danger as also the risk of accidental nuclear war.

16. Progress towards the goal of nuclear disarmament will require a climate of mutual confidence in the international community to conclude universal non-discriminatory and verifiable prohibitions on nuclear weapons leading to their complete elimination. No effort must be spared in consensus building to this end.

17. We would urge the international community to intensify dialogue, so as to build a consensus that strengthens the ability of the international community to initiate concrete steps towards achieving the goal of nuclear disarmament based on the following elements:

- Reaffirmation of the unequivocal commitment of all nuclear weapon States to the goal of complete elimination of nuclear weapons;
- Reduction of the salience of nuclear weapons in the security doctrines;
- Taking into account the global reach and menace of nuclear weapons, adoption of measures by nuclear-weapon States to reduce nuclear danger, including the risks of accidental nuclear war, de-alerting of nuclear-weapons to prevent unintentional and accidental use of nuclear weapons;
- Negotiation of a global agreement among nuclear weapon States on ‘no-first-use’ of nuclear-weapons;
- Negotiation of a universal and legally-binding agreement on non-use of nuclear weapons against non-nuclear weapon States;
- Negotiation of a Convention on the complete prohibition of the use or threat of use of nuclear weapons;
- Negotiation of a Nuclear Weapons Convention prohibiting the development, production, stockpiling and use of nuclear weapons and on their destruction, leading to the global, non-discriminatory and verifiable elimination of nuclear weapons with a specified timeframe.
Statement by Member of the Indian Delegation to the UN K. P. K. Kumaran on Agenda Item 122: Scale of Assessments for the Apportionment of the Expenses of the UN in the 5th Committee of the 61st session of the UN General Assembly.

New York, October 9, 2006.

Mr. Chairman,

At the outset kindly accept the congratulations of my delegation on your election as the Chairman of the Fifth Committee. We also extend our felicitations to the other members of the Bureau on their election. We are confident that under your stewardship, the Fifth Committee would undertake constructive deliberations during this session. I assure you of my delegation’s fullest cooperation during the discussions that lie ahead.

I would also like to express our appreciation to the Chairman of the Committee on Contributions, Mr. Bernardo Greiver, for introducing the report of the Committee, and to the Chief of the Contributions Services, Mr. Mark Gilpin, for his introduction of the report of the Secretary-General on multi-year payment plans.

My delegation aligns itself with the statement made by the Distinguished Permanent Representative of South Africa on behalf of the Group of 77.

Mr. Chairman,

We support the conclusions of the Committee on Contributions on the applications before it for exemption from the application of the provisions of Article 19. We endorse the recommendation to permit the concerned member states to vote in the General Assembly until the end of the 61st UNGA session.

We have taken note of the Committee’s observations on the positive contribution of the multi-year payment plans in encouraging and assisting member states to reduce their unpaid assessed contributions. We acclaim those Member States that are making efforts to meet their obligations under their respective voluntary plans. In particular, we commend Iraq for completing its payments under its multi-year payment plan which has enabled it to free itself from the provisions of Article 19. We also welcome the submission of Liberia’s multi-year payment plan. We fully appreciate
the position of those member states in arrears that are not, at this point in time, in a position to submit their multi-year payment plans. It is our solemn duty to stand by these members state in their time of need. In that spirit, we also support Tajikistan’s request for writing off its arrears for peacekeeping that accumulated before 2000 in view of the difficulties faced by the friendly people of Tajikistan during that period.

However, there is no justification whatsoever for developed countries to be in arrears.

Mr. Chairman,

My delegation reiterates our common understanding that the financing of our organization is based on the fundamental and inviolable principle of “capacity to pay” of member states. We are conscious that statistics can be utilized by the clever to justify any argument. However, that is not what the United Nations is all about. We strongly believe that the member states must be assessed for their contributions according to their means, so that membership of the United Nations does not become a source of penury and hardship. At the same time, it is also important for the Organization to maintain its financial solvency in order to enable it to perform its mandated tasks. We are, therefore, convinced that the primary source of distortion in the “capacity to pay” principle resides in the 22% ceiling that was imposed on the assessment of one member state to encourage the payment of arrears and thereby improve the financial situation of the United Nations. Six years down the road, time has come for us to assess the impact of that ceiling in achieving its declared goal and to take appropriate measures in the light of that assessment.

The financial well-being of the United Nations is in the interest of all its member states. Accordingly, we call upon all member states to pay their assessed contributions in full, on time, and without conditions; to do so constitutes not only a legal obligation but also a moral one.

Mr. Chairman,

With regard to the methodology of the scale of assessments for the period 2007-2009, we endorse the Committee’s recommendation that the scale of assessments for the period 2007-2009 should be based on the most current, comprehensive and comparable data available for Gross National Income(GNI). However, we should be vigilant, that in pursuit of latest data, the criticality of comprehensiveness and comparability of data should not be compromised. We also agree with the Committee’s
recommendation that conversion rates should be based on Market Exchange Rates for the assessments for the period 2007-2009, except where that would cause excessive fluctuations and distortions in the GNI of some member states.

On other elements of the scale of assessment, we would like to reiterate that from the point of view of simplicity, technical soundness and smoothing of short-term fluctuations, we prefer a six-year base period. This is particularly so since the present scale, based on an average of the machine scales of six years’ and three years’ data was merely a compromise, is lacking in technical merit and did not altogether smooth out short term fluctuations in GNI data. We are also wary about the proposal for annual recalculation as it would, in all probability, be less stable besides being unpredictable and adding to needless administrative costs.

On debt-burden adjustment, we are in favour of the current debt stock approach as it is the true indicator of indebtedness of an economy. In our understanding, a debt is a debt which is a liability and has to be repaid either in the short term or long term. In the same light, we should also examine the appropriateness or otherwise of the current application of the debt burden adjustment to higher income countries.

My delegation believes that the amount of low per-capita income adjustment is an integral part of the scale of assessment process since its inception and it should continue to be distributed only among Member States above the threshold and not among all Member States. My delegation opposes any large scale increases in the rates of assessments of developing countries. Similarly, we are cognizant of the fact that the floor level of assessment was lowered from .01 percent to .001 percent.

Nevertheless, we would be open to examining if this still imposes an excessive burden on some of the smaller Member States. This is especially true for least developed countries and small island developing states.

On the crucial issue of ceiling, we would urge the Committee on Contribution deliberate further to analyze its impact on the scale of assessments of other member states.

Finally, we urge the Secretariat to cooperate with those Member States that have difficulties in collating and submitting national income statistics on time. As a result, in one case, Angola, the assessment has risen by an astronomical percentage. We have to examine how to mitigate
these unreasonable increases, so that member states are not assessed unjustly.

Mr. Chairman,

My delegation looks forward to discussing the above issues in greater detail during informal consultations of this Committee with a view to providing guidance to the Committee on Contributions on the important work before it at its next session.

Thank you Mr. Chairman.
These were the first international criminal tribunals established since the Nuremberg and Tokyo tribunals of World War II, and because of the manner of their creation, they have faced a great number of political and legal challenges in establishing their legitimacy. In questioning the competence of the Security Council to establish these tribunals, many legal scholars, after an extensive analysis of the *traveaux préparatoires*, came to the conclusion that it was not the intention of the drafters of the Charter to endow the Council with such competence. However some scholars rely on other concepts to justify the attribution of legislative functions to the Council, namely, the concepts of “implied powers” and “subsequent practice”.

The concept of implied powers is derived from the idea that organizations or their organs must have the power and competence, which is necessary or essential for the execution of their functions. In the Reparation for Injuries case, the ICJ stated that “under international law, the Organisation must be deemed to have those powers which though not expressly provided under the Charter, are conferred upon it by necessary implication as being essential to performance of its duties”.

This doctrine and Article 29 of the charter under which the Security Council can establish subsidiary organs necessary for its functions, is often used in the context of justifying setting up of ICTY. This doctrine has been also confirmed by the ICTY in the Tadic case. However, this ignores the basic legal *principle nemo dat quad non habet*, which means you cannot give what you don’t have. The Security Council has not been assigned any judicial functions under the Charter, therefore under Article 29, or under the concept of implied powers, it cannot set up a subsidiary body entrusting to it the functions which the Council itself does not possess. In so doing the Council did not take a legitimate peace-enforcement measure under any article or articles of Chapter VII, notably under article 41. It took, simply, a law-making (not to mention law-determining and law-enforcing) measure which fell outside its functions under Chapter VII or any other provision of the Charter or general international law.

**Madame President,**

International humanitarian law requires that trials for violations must be scrupulously fair and consistent with contemporary international standards. Therefore the tribunals, in bringing to justice those who bear the greatest responsibility for serious violations of international law, must ensure that they provide for the highest standards of fair trial.
The purpose of prosecution is to accomplish at least two goals. The first is to punish the guilty. The second is to promote a range of socially desirable results, including deterrence of future offenses and fostering an overall respect for the rule of law. In instances where the cases grow out of profound national traumas, such as civil war or a period of repression, the reassurance of the citizens, promotion of national/ethnic/political reconciliation, and fostering of national catharsis are also seen to be critical goals. Although international prosecutions can perhaps achieve the first goal—punishing the guilty—they are often not equipped to deliver on the others. There is a view that when such “international” prosecutions are undertaken by foreign judicial systems or Tribunals, with little or no connection to the perpetrators, victims, or offenses, they are invariably decoupled from the political, social and economic context of the affected country.

Further, given the challenges associated with investigating and prosecuting international crimes, the international tribunals cannot prosecute all perpetrators. Therefore, strengthening of national judicial systems to prosecute these crimes is extremely essential. Creating effective and lasting legal and judicial institutions that uphold the rule of law is essential for the maintenance of peace. Therefore, the international community must continue to strengthen the national justice system by building local capacity of judicial personnel. This includes the further training and mentoring of the local judiciary, as well as a timetable to gradually introduce local judges and prosecutors into sensitive cases. According to the reports of the tribunals, the ICTY has developed a cooperative relationship with neighboring States and regional institutions, and the ICTR, through its outreach program, has worked on capacity-building by training of Rwandan Jurists, advocates and human rights practitioners through seminars and workshops aimed at strengthening knowledge of international humanitarian law and criminal law. These are commendable efforts. In this regard the establishment of War Crimes Chamber of the State Court of Bosnia and transfer of cases by the Yugoslav Tribunal to this Chamber is a further step in the right direction, though the ICTY should have been set up by the General Assembly.

We hope that both the Tribunals are able to complete their work within the time frames stipulated by the relevant Security Council Resolutions.

Thank you, Madam President.
568. Statement by Member of the Indian Delegation to the UN Ravni Shankar Prasad on Agenda Item 100: Measures to Eliminate International Terrorism at the 6th Committee of the 61st session of the UN General Assembly.

Thank You, Mr. Chairman,

The Agenda item on Measures to Eliminate International Terrorism is of great significance to my country as terrorism remains one of the major threats to international peace and security. It undermines the very foundation of freedom and democracy, enjoyment of human rights and continued existence of open and democratic societies. The annual report submitted by the Secretary General on the implementation of Para 10 of the “Declaration on Measures to Eliminate International Terrorism” presents measures taken at the national and international levels for the prevention and suppression of international terrorism as well as information on incidents caused by international terrorism. We thank the Secretary General for this useful report. We would also like to thank Ambassador Rohan Perera for his report on the meeting of the Ad Hoc Committee established by General Assembly Resolution 51/210.

Mr. Chairman,

We are convinced that terrorism in all its forms and manifestations, irrespective of its motivations is a criminal and unjustifiable act. It cannot be condoned or accepted as legitimate in any situation. Justifications on diplomatic political, religious, philosophical or any other grounds remain untenable. The 1994 Declaration is most categorical in this respect and provides that no considerations of political, philosophical, ideological, racial, ethnic, religious or any other nature could justify criminal acts intended or calculated to promote a state of terror in the general public. This principle is also reiterated in several conventions against terrorism.

In recent months my country has again been subject to horrific terrorist attacks. In July, simultaneous bombings in 7 trains in Mumbai and elsewhere in India claimed more than 200 lives and injured more than 1000. Thereafter a bomb attack near a place of worship killed 35 people. These bombings were clearly designed to spread terror among common people, harm economy and trigger communal clashes. It is a measure of good sense and resilience of ordinary people that the attempt failed. This
senseless killing of innocent civilians in my country and elsewhere reinforces the continuing importance of strong international resolve and a coordinated global approach to confront the threat posed by terrorism.

Mr. Chairman,

In April this year, the Secretary General in his report titled “Uniting against Terrorism: Recommendations for a Global Counter Terrorism Strategy”, provided the Assembly with recommendations for a collective global effort to fight terrorism, especially in developing State capacity to defeat terrorism and defend human rights. On the basis of this report the General Assembly, vide its resolution 60/288, adopted the United Nations Global Counter Terrorism Strategy which was launched at a high level segment at the beginning of the 61st Session. The strategy, in the form of a resolution and a plan of action, includes practical measures of implementation at the local, national and international level – ranging from strengthening the capacity of individual States to preventing and combating terrorism, to ensuring that human rights and the rule of law are always respected in the fight against terrorism. The strategy makes clear that it is important to consistently, unequivocally and strongly condemn terrorism in all forms and manifestations, committed by whomever, wherever and for whatever purposes.

We trust that the condemnation of terrorism in all its forms and manifestations in the Strategy would signal the will of the international community that it would no longer tolerate the actions of the sponsors of terrorism or of those who wilfully fail to prevent terrorists from utilising their territories for moral or material shelter. We hope that the strategy would provide the impetus that unites the international community in its global fight against terrorism through practical measures that facilitate cooperation by way of extradition, prosecution, information flows and capacity building.

Mr. Chairman,

As regards the Comprehensive Convention against International Terrorism, notwithstanding the setback of not meeting the timeline set by the World Summit Outcome Document for concluding the convention, we continue to believe that agreement on the draft convention is attainable. The call for early conclusion of CCIT was reiterated by practically all the dignitaries in the general debate this session. A meeting is necessary to work for early conclusion of the CCIT. We must now work together for its finalization and adoption. We sincerely hope that, in a spirit of mutual
accommodation and flexibility, Member States would respond constructively and help in the early conclusion of the Comprehensive Convention so that our mandate of completing the legal framework of conventions aimed at combating international terrorism can be brought to a successful close. We may determine whether appropriate reference to international humanitarian law could meet the pending concerns.

On the question of convening a high level conference under the auspices of United Nations, we reiterate our view that the conference should be convened only after the conclusion of the draft comprehensive convention against international terrorism.

Mr. Chairman,

We attach great value to the comprehensive legal framework that the UN General Assembly has successfully established in the field of counter-terrorism. The 13 UN Conventions and Protocols remain fundamental tools in the fight against terrorism. In this regard we also note the “Report of the Secretary General on strengthening international cooperation and technical assistance in promoting the implementation of the universal conventions and protocols related to terrorism within the framework of the activities of the United Nations Office on Drugs and Crime”. We appreciate the growing activities of UNODC in counter terrorism efforts, especially its technical assistance activities at the national, sub regional and regional levels, within the framework of its global project on strengthening the legal regime against terrorism. We are pleased to note that its work has contributed significantly to increasing the number of countries that have ratified all twelve universal legal instruments relating to terrorism. We understand that the focus of the technical assistance activities of UNODC is shifting from the phase of ratification support to the phase of legislative implementation and support for national counter terrorism capacity building for criminal justice systems. We therefore, support increased resource allocations for UNODC counter terrorism activities from the United Nations regular budget and voluntary contributions.

Thank You, Mr. Chairman
569. Statement by Member of the Indian Delegation to the UN K. P. K. Kumaran on Agenda Item 30: International Cooperation in the Peaceful Uses of Outer Space at the 4th Committee of the 61st session of the UN General Assembly.

New York, October 12, 2006.

Mr. Chairman

My delegation is pleased by the progress achieved by the Committee on the Peaceful Uses of Outer Space (COPUOS) at its 49th Session. The effective utilization of space systems for national development is crucial for all developing countries to make rapid and substantial progress. Conceiving specific application programmes to address the societal problems at the grass roots level is of utmost importance. Towards this goal, COPUOS has been providing the right platform for encouraging countries to take up space application programmes for the benefit of mankind. We are also pleased to note that COPUOS, under the mandate of the General Assembly, is contributing significantly to maintaining Space peaceful as well as international, thus serving the interests of all the countries. We would like to congratulate Dr. Brachet of France for successfully guiding the deliberations of the 49th session of COPUOS.

Mr. Chairman,

2. We would also like to congratulate USA on the successful return to flight mission of the Space Shuttle and also on the silver jubilee of the Space Shuttle. The successful launch of its New Horizon spacecraft to Pluto is another important space effort. We also congratulate the Peoples Republic of China on its second successful Manned Mission flight during October 2005.

Mr. Chairman,

3. Developing countries today face a number of challenges in terms of improving their Agriculture, Water Resources Management, eradicating illiteracy, providing better education to their people, improving Public Health Services and providing timely disaster management support. To meet these challenges we need to strengthen the capabilities of Member States, especially developing countries, to use the results of space research for economic, social and cultural development.
4. The UN Programme on Space Applications has played an important role in implementing the recommendations of the UNISPACE-III, particularly in improving the capacity building of developing countries to apply space technology to support sustainable development efforts.

Mr. Chairman,

5. Maximizing the benefits of existing Space capabilities for disaster management support has been one of the important agenda items of the COPUOS. We would like to convey our appreciation of the achievement made during the 49th session of COPUOS in recommending establishment of a “United Nations Platform for Space based Information for Disaster Management and Emergency Response”, named SPIDER. We are happy that the entity is proposed to be implemented as a Programme of the Office of Outer Space Affairs, UN-Vienna, and will function as an open network and the activities would be planned and carried out in a coordinated manner through the consolidation of a network of regional support offices.

6. India strongly supports the establishment of an Entity for Space Systems Based Disaster Management Support named as SPIDER. The Indian Delegation is of the view that the use of Space based systems to address disaster management issues, so as to benefit the affected population in a timely manner, would require proper integration of the Space and Ground based segments.

Mr. Chairman,

7. In India, the space programme evolved to provide for the socio economic development of the country. This led to specific user driven application programmes through the use of remote sensing, meteorological and communications satellite systems. Let me briefly present to this committee, the significant achievements made by India in the Space field.

8. An important milestone during the year has been the launch of India’s most advanced communication satellite INSAT-4A, intended mainly for meeting the demand for Direct-to-Home television broadcasting requirements. It carries 12 high power Ku-band and 12 C-band transponders. Recently, the satellite has been commissioned and has been put into regular service.

9. Space Application programmes have witnessed the advent of several newer initiatives. Over the year, a number of Tele-Education, Tele-Medicine and Village Resource Centre networks got commissioned and
improved the outreach of important socio-economic initiatives in India. In the area of Tele-education, more than 8000 EDUSAT classrooms have been created and over 200,000 students have benefited from using the Tele-education network. The system has been used for imparting training to teachers and nurses as well. Similarly, we have successfully expanded ISRO’s Tele-Medicine network over the past year. It now consists of 176 hospitals of which 142 hospitals in remote and rural areas levels have been connected to 34 Super Specialty hospitals in the major cities.

Mr. Chairman,

10. India attaches high importance to the use of Space based systems for water and forest resources management. Presently, remote sensing data has been effectively put to use for a number of water based applications, which includes Irrigation Water Management, Snow & Glacier studies, Surface water bodies mapping/monitoring, Ground water prospecting and recharging. Similarly, remote sensing data is being used extensively to generate forest cover maps for monitoring forest cover changes and planning conservation measures.

11. Adding another dimension to the effective use of Space-enabled services for societal benefit has been the initiative of ISRO in creating Village Resource Centres (VRCs). VRCs are envisaged as single window delivery mechanism for a variety of space based products and services, such as Tele-education, Tele-medicine, information on natural resources for planning and development at local level, interactive advisories on agriculture, fisheries, land and water resources management, livestock management, etc. It is planned to set up at least 100 VRCs across the country by the end 2006.

12. In addition, other major Space Application programmes such as Crop Acreage and Production Estimate, forecasting of Potential Fishery Zones, and creating national inventory on wastelands were continued during the year.

Mr. Chairman,

13. ISRO takes special interest in providing expertise and services for helping developing countries in the application of Space technology. The Center for Space Science and Technology Education for Asia and Pacific Region, affiliated to UN and operating from India, is an initiative in this direction. The Center has carried out 22 Postgraduate programmes of nine months duration, besides organizing a number of short-term courses/
workshops. So far 643 scholars from 46 countries have benefited from the educational activities of the center.

Mr. Chairman,

14. A connectivity mission has been launched between India and the countries of the African Union to provide for Tele-education, Tele-medicine, e-governance, e-commerce, infotainment, resource mapping and meteorological services. The network consists of five regional universities, 53 learning centres, five regional super specialty hospitals, and 53 remote hospitals in all the countries of Africa. The network will be linked to six universities and five super specialty hospitals in India. As part of this Pan-African network, a pilot project has already been implemented in Ethiopia. It is planned to subsequently link Ghana and Seychelles.

Mr. Chairman,

15. India has been an active member of COPUOS since its establishment. It has participated in many global co-operative programmes such as remote sensing, space based disaster management, Tele-medicine and Tele-education.

As a member of the International Charter “Space and Major disasters” it has contributed significantly to disaster response and provided timely assistance during earthquakes, floods, forest fires, etc.

16. The effective utilization of space application programmes is very important for the overall prosperity and development of a nation. With increased dependence on and use of space-based systems, it should be everyone’s responsibility to maintain the outer space exclusively for peaceful purposes. Recently there has been a trend towards making high resolution imageries of sensitive areas of all countries available on the internet freely and in an unrestricted manner. Keeping in mind the present security threats that every nation is facing, including from terrorists and their organizations, it is of utmost importance to quickly evolve policy guidelines to regulate the availability of such sensitive data in the public domain.

Mr. Chairman,

17. The integrated and application driven space programme pursued by ISRO has benefited and enhanced the quality of life in India. We are satisfied that the UN Programme on Space Applications, while addressing matters related to capacity building for gainful utilization of Space Application
Programmes in developing countries, will also play an enhanced role in keeping outer space peaceful as well as international, and thus serve the interests of present and future generations.

Thank you, Mr. Chairman.

New York, October 12, 2006.

Madam President,

We thank the Secretary-General for his fourth consolidated report on the progress in implementation and international support of the New Partnership for Africa’s Development [NEPAD], and other reports prepared for this joint debate.

We associate ourselves with the statement made by the distinguished Representative of South Africa on behalf of the G-77.

Madam President,

India has consistently identified with the aspirations of the peoples of Africa and has maintained long-standing political relations with that the countries of that continent. It was in South Africa that Mahatma Gandhi forged the political weapon of “Satyagraha” or “non-violent struggle of passive resistance”. His exposure to injustice in Africa transformed an urbane lawyer into an icon for peaceful and non-violent struggle that evolved into India’s struggle for independence. South African President Thabo Mbeki described Mahatma Gandhi as “the beloved son of South Africa” at the centenary celebrations on the launching of “Satyagraha” recently held in
South Africa. India’s first Prime Minister, Jawaharlal Nehru, speaking at the Afro-Asian Conference at Bandung in 1955, described Asia and Africa as “sister continents”. Like the countries of Africa, India suffered the burdens of colonial domination, economic exploitation and racial discrimination. Even though our own deprivation was considerable, we realize that Africa’s tribulations were even greater. India has, therefore, always been a strong and consistent voice in support of Africa, at the UN and elsewhere.

Madam President,

It is our firm conviction that success in achieving the objectives of NEPAD depends on an African-led and Africa-developed agenda. With the rich human and natural resources available to Africa, and the commitment of Africa’s leaders to achieving the objectives of NEPAD, success can be achieved if NEPAD receives the dedicated support of the international community in realizing the African dream.

The report of the Secretary-General (A/61/212) provides details of the progress made in the various priority areas of NEPAD and analyses the response of the international community in support of NEPAD. The report states that while the past year has witnessed a promising start to delivery on commitments, progress has been more marked on debt relief than on ODA and trade. It is heartening that the trend of significant increases in ODA to Africa continued in 2004 and 2005. However, much of the increase in 2005 was on account of huge debt write-offs. The report states that a massive collective increase in ODA is required in 2006 and thereafter to meet the 2010 commitments, but that the level of increase is not nearly fast enough to deliver on the pledges made at the Gleneagles G-8 Summit in 2005. The report adds that the observed increase continues to take the form of emergency aid, debt relief and technical assistance.

The Secretary-General’s report acknowledges that the substantial progress over the last twelve months in debt relief makes this an area in which the G-8 countries have kept their commitments. We would emphasize here that the multilateral debt relief initiative of donor countries include a commitment to provide additional resources to the International Financial Institutions to ensure that debt forgiveness does not erode their financial capacity.

Reports on Africa have emphasized that aid should be released in predictable tranches over a long-term period and should be focussed on enabling African economies to produce a broad range of goods and to
create more jobs. For the success of the international community's current focus on the special needs of Africa, and to avoid the damage done to African countries through the austerity measures brought in by the IMF dictated structural adjustment programmes of the past, it is necessary that African countries be allowed to implement their national development policies with national ownership and given policy space instead of imposition of intrusive policy conditionalities.

Madam President,

While ODA and debt relief can ease the financial burdens, especially in highly indebted countries in Africa, sustained economic growth would require longer-term measures including in the area of trade. The report of the Secretary-General recommends that initiatives such as “aid for trade” must complement and not substitute efforts to improve market access for African exports and to strengthen Africa’s participation in world trade.

In this context, the suspension of the Doha Round of trade negotiations is a cause of concern. An early resumption of the trade talks along with adherence to the existing mandate, i.e., the mandate of the Doha Declaration, the July Framework and the Hong Kong Ministerial Declaration is an absolute imperative.

The report of the Secretary-General recalls that at the Hong Kong Ministerial Trade Talks, agreement was reached to eliminate export subsidies by developed countries on cotton in 2006 and to end all forms of agricultural export subsidies by the end of 2013 with a substantial portion to be lifted by 2010. The report also points out that export subsidies represent only a small share in the support given to agriculture in OECD countries. Much of the support is in the form of trade-distorting domestic price support and agricultural tariffs. Failure to resume the Doha Round of Trade Talks has negative implications for the large number of poor and marginal farmers, on their food security, livelihood security and rural development in developing countries, especially those with subsistence farming.

Madam President,

The report of the Secretary-General highlights India’s cooperation with NEPAD as a part of South-South Cooperation. It also highlights the projects being undertaken by India in infrastructure, IT and other areas through the Techno Economic Approach for Africa-India Movement, or
TEAM-9. In addition, India is engaged in several other bilateral initiatives in a number of African countries as well as a pan-Africa e-connectivity mission. India has shared its expertise in sectors such as infrastructure, pharmaceutical, healthcare, and IT, among others, with the aim of building capacity and technology transfer for the benefit of African countries. The Indian Technical and Economic Cooperation (ITEC) scheme, which provides training programmes to over 150 countries including most African countries, has been running since 1954, providing scholarships to African students interested in studying in India and sending Indian experts to Africa for provision of training. India’s cooperation programme with Africa currently amounts to about US$ 1 billion. India’s efforts, or those of other partner countries from the developing world, are a part of South-South Cooperation. Contrary to the suggestion of the Advisory Panel, these should not be clubbed with the efforts of the developed countries, either in calculations of volume of aid moving to Africa or for monitoring of such aid.

Madam President,

The Secretary-General’s report on the causes of conflict and promotion of durable peace and sustainable development in Africa (A/61/213) describes the recent conflict prevention, peacemaking, peacekeeping and peace-building activities in Africa. India has been one of the oldest, largest and most consistent contributors of UN peacekeeping organizations, having participated in almost every major operation since the inception of peacekeeping in 1950s. Indian personnel are currently serving in UN missions in Ethiopia, Eritrea, Burundi, Congo, Cote d’Ivoire, Sierra Leone and Sudan. Given Africa’s focus on gender issues, India would soon despatch the first-ever Female Formed Police Unit (FFPU) to Liberia. We expect the all-women unit to be in Liberia by the end of the year.

India has consistently pointed to the need for an integral link between peacekeeping and peace-building, which is a prerequisite investment in the future to protect the hard won gains of the efforts to establish peace. India therefore energetically participated in the deliberations last year for the establishment of the Peace-building Commission and welcomed its establishment by announcing a contribution of US $2 million. We have emphasized national ownership of the peace-building process and been closely associated with the holding of the first two country specific meetings of the PBC. We will remain engaged with efforts to define the role and method of work of the PBC.
Madam President,

Turning to the agenda item on rolling back of malaria in developing countries, particularly in Africa, we believe that there is need for wider recognition that malaria is largely a killer of children and poor people. It continues to threaten at least 3 billion people in 107 countries and territories.

Each year more than 500 million people suffer from acute malaria, resulting in more than one million deaths. About 3000 children and infants die from malaria every day. Malaria also has a significant impact on long-term economic growth and development, leading to loss of gross domestic product, consuming enormous portions of household incomes and government health spending. India is familiar with tackling the mosquito menace and fully supports efforts that focus on the prevention and elimination of malaria in developing countries, including those in Africa.

Thank you, Madam President.

571. Statement by Member of the Indian Delegation to the UN Tariq Anwar on Agenda Item 80: The Rule of Law at National and International level at the 6th Committee of the UN General Assembly.

New York, October 17, 2006.

Thank You Mr. Chairman,

First I would like to thank the delegations of Liechtenstein and Mexico for proposing this important subject for inclusion in the agenda of the Sixth Committee.

The rule of law is often advanced nowadays, as a solution to abusive governmental power, economic stagnation and corruption. It is considered fundamental in promoting democracy and human rights, free and fair markets and fighting international crimes and terrorism. It is also seen as an essential component of promoting peace in post-conflict societies. The rule of law may therefore have a different meaning and a different content depending on the objective it is seeking to achieve.

At the national level, in the context of democratic societies, the rule
of law is perceived as strict adherence to a set of specific rules that are enforced by an independent judiciary. In addition, those norms should not only be procedurally fair but also conform to a set of higher norms predicated either by international treaties or principles of natural justice.

There is sufficient reason to seriously examine the concept of the rule of law as it functions at the national level and to explore ways of understanding the rather new internationalised context within which it operates today. In this regard it is essential to point out that supranational institutions which are set up to promote rule of law should themselves also be in accord with systems of democratic accountability presupposed by the rule of law. This applies inter-alia to the United Nations and international financial and trading institutions. This also means that, in accordance with the UN Charter, development of international law is a function of the General Assembly and not the Security Council.

Mr. Chairman,

As regards the application of this concept to implementation of international obligations undertaken in international conventions, the existence of appropriate national legislation embodying international obligations is a prerequisite for accrual of optimal benefits to a country from the use of a particular international regulatory regime. It helps to strengthen the linkages between municipal law and international law, as well as promotes international law.

The setting up of a rule of law assistance unit having a broad mandate would be useful in this context. The dissemination of regular information about actions taken by the General Assembly and other international organizations would be helpful in identifying and evaluating new trends in international law, such as the appearance of guidelines, recommendations and other “non-enforceable” texts. This so-called “soft law” often plays a significant role in the development of contemporary international law and in strategic efforts to amend it.

The provision of information on treaty actions and other relevant developments would help, for example, in areas like the law of the sea. There are many UN agencies, international and regional organizations that have a mandate either wholly or partly relating to the law of the sea. This dispersal of authority leads to overlap and poses a challenge to cooperation and coordination. All these bodies have important legislation: hard law in the form of treaties, protocols as well as numerous soft law instruments in
the form of memoranda of understanding, codes, guidelines, plans of action, and non-binding resolutions. These hard and soft law instruments cover a broad range of issues related to the law of the sea: safety of navigation; international fisheries; carriage of dangerous goods; protection of the marine environment; prevention and punishment of crimes at sea, etc. The advantages of having focused information in this field from one source are self evident.

Mr. Chairman,

As regards the ‘technical assistance’ aspect of the proposed rule of law assistance unit, the coordination functions of the unit would be crucial. It would have to operate in a manner so that its functions do not replicate the functions already being performed by various specialized agencies and organizations of the UN.

In this regard it may be recalled that practically all international organizations have technical assistance programmes whereby these organizations, in their respective fields, undertake law reform assessments to assist governments, legislative organs and other authorities in developing countries in inter-alia drafting of national legislation to implement specific conventions and organize training activities to facilitate the implementation and interpretation of the concerned legislation by judiciaries and legal practitioners. UNCITRAL, UNCTAD, UNEP and UNODC to name a few, all have well developed technical assistance programmes.

However, for several organs and bodies like ICJ, and other Courts, International Law Commission etc., there is presently no institutional examination and dissemination of information about their activities and impact on development of international law. The proposed unit can help fill that gap.

Thank You, Mr. Chairman
572. Statement by Member of the Indian Delegation to the UN Anil Basu on the Thematic Debate on Conventional Weapons, Small Arms and Light Weapons and CCW at the First Committee of the 61st session of the UN General Assembly.

New York, October 17, 2006.

Madam Chairperson,

If the entire spectrum of weaponry that is the focus of disarmament and arms control measures was to be placed within a pyramid, it would have a three-tiered structure. Nuclear weapons, our foremost priority, will constitute the top of the pyramid, followed by chemical and biological weapons at the middle layer. But the broadest part of the pyramid will be made up by conventional weapons and small arms and light weapons.

While it is vital to address the apex of the pyramid, its base constitutes a larger, more contingent concern, affecting directly a large mass of people afflicted by conventional conflict.

Unregulated and illicit trade in conventional weapons and small arms and light weapons are continuing to have devastating consequences. The direct costs include death, injury and trauma and the cost of caring for the wounded and disabled, not to speak of the destruction of the civilian infrastructure. The indirect costs include displacement, destitution and prolonged underdevelopment. The proliferation of illicit trade in small arms and light weapons gravely endangers the security of States, disrupts their social harmony and hampers growth and development. The ready availability of illicit weapons fosters organised crime, drug trafficking and illegal exploitation of natural resources. It promotes sectarian violence, insurgency and terrorism.

India is, therefore, strongly committed to the full and effective implementation of the UN Programme of Action on Preventing, Combating and Eradicating Illicit Trade in Small Arms and Light Weapons. It is a good augury that we now have an international instrument containing vital commitment by UN Member States to mark all small arms and light weapons according to universal standards and cooperate with each other in tracing illicit ones. We now hope for similar cooperative action in other related areas concerning small arms, including on brokering and the prohibition of transfer of weapons to non-State actors, including terrorists.
We believe future biennial meetings of States would provide a welcome opportunity to take stock of national implementation of the UNPOA. The General Assembly could, thereafter, consider further practical steps required to strengthen and promote its implementation.

India’s approach to disarmament and international security is guided by a strong commitment to international humanitarian law, of which the Convention on Certain Conventional Weapons is one of the principal instruments. India is among those 20 States Parties that adhere to the entire CCW package – the Convention, Amended Article I, and all five Protocols, including AP II. We support the draft Plan of Action, to be adopted at the forthcoming Review Conference, stipulating seven action points for promoting the universality of the Convention. India also favours strengthening the Convention through a compliance mechanism. Besides, we support the creation of a sponsorship programme to facilitate enhanced participation from mine and ERW-affected States Parties in CCW-related meetings. This may also broaden awareness about the Convention and help in promoting its universalization.

The CCW Review Conference next month will be a significant event. We are happy that Protocol V on Explosive Remnants of War will enter into force on 12 November, coinciding with the Review Conference. The Protocol provides for post-conflict remedial measures of a generic nature in order to minimize the risks and effects of ERW. It includes generic preventive measures aimed at minimizing the occurrence of ERW. It is intended to eradicate the threat that unexploded ordnance and abandoned explosive ordnance pose to the civilian population. India is among those 23 countries that have already ratified the Protocol. India also steered the work of the Working Group on ERW for two years.

Our policy on land mines use is regulated by an abiding concern for protection of civilian life from the threats posed by irresponsible use of mines other than anti-personnel mines, including improvised explosive devices. During the last four years of work carried out by the Group of Government Experts. India has contributed constructively to the process of finding common grounds on the whole range of issues. These include the technically complex issues of detectability and active life of MOTAPM. We have a forward-looking approach. We believe that, even on the contentious issues, a balanced approach could accommodate national security imperatives, humanitarian requirements, financial costs and technological constraints. We also believe that a future instrument on
MOTAPM will supplement the existing instruments on anti-personnel mines in addressing humanitarian challenges in a more comprehensive manner.

India is conscious of the humanitarian risks resulting from the indiscriminate use and transfer of anti-personnel mines. We, therefore, support the humanitarian objectives of the Anti-Personnel Mine Ban Convention. At the same time, we recognize the limitations of this Convention in not addressing national security concerns of States with long land borders, where minefields at frontiers will continue to form an important component of defence in times of conflict. While our security requirements necessitate the use of anti-personnel mines, these are used in accordance with internationally acknowledged security norms and safety parameters. We are in favour of strengthened cooperation in mine clearance, including unrestricted transfer of mine clearance technology, equipment and training; risk education; rehabilitation; victim assistance and socio-economic betterment of mine-affected communities.

In the field of conventional disarmament, we believe that an enhanced level of transparency will contribute greatly to confidence building and security amongst States. It could also help in the detection of arms transferred illegally. India has supported the UN Register of Conventional Arms as an important confidence building measure and has submitted annual reports on the export and import of conventional arms. We note that the Register has evolved through the triennial reviews carried out by the Group of Governmental Experts. We are happy that at the latest review in July 2006, the Group recommended that States that wished to do so could also report their transfer of small arms and light weapons to the Register on the basis of an optional standardized form. It also recommended a lower reporting threshold for warships and submarines. These are welcome steps.

We shall continue to work towards steady progress in the areas of conventional disarmament, small arms and light weapons and the CCW process. In particular, we hope to have a positive and forward-looking outcome of the CCW Review Conference in Geneva in the coming month.

I thank you, Madam Chairperson.
The Indian delegation welcomes this opportunity to comment on the topic of “Questions relating to Information”. Through his statement yesterday, Under-Secretary-General Shashi Tharoor has set the tone for a lively debate, and I would like to congratulate him for the dynamic leadership that he has provided to what is now a restructured and revitalized Department of Public Information (DPI). I would also like to associate my delegation with the statement made by the distinguished representative of South Africa, as the G-77 Chairman.

Mr. Chairman,

The UN stands at the threshold of a new era, with a variety of opportunities and threats on its horizon. The DPI has a pivotal role to play at this sensitive stage, since it is the conduit for the flow of information between the UN, member states, media, civil society and the public at large. We welcome the DPI’s four strategic objectives: targeted delivery of public information, enhanced use of the new information and communication technologies, increased partnerships with civil society and integrating a culture of evaluation. The DPI will be measured by its success in meeting its goals within limited resources.

Mr. Chairman,

DPI must intensify its efforts to meet the concerns and special needs of the developing countries in the field of information and communications technology. The ‘digital divide’ remains vast; huge segments of populations in developing countries continue to be deprived of the benefits of the information and IT revolution. Traditional means of communication, including radio and print, retain tremendous relevance for disseminating the UN message in developing countries. In this context, we encourage the use of combination of traditional means such as print and radio, and new information and communications technologies, such as internet and web-casting by DPI. We have noted Department’s efforts to strengthen and
expand its partnership with international broadcasters, especially in the developing world. In this context, we welcome United Nations Radio Website programming including Hindi, Bengali, Urdu.

The role of United Nations Information Centres [UNICs] in disseminating information about the aims, objectives and activities of the United Nations, especially in developing countries, is critical. Adequate budgetary resources must be reassigned to secure effective functioning of UNICs. We have noted in the latest report of the Secretary-General that DPI is taking measures to integrate the network of UNICs into its overall communications strategies and work plan. We would encourage DPI to consult closely with host countries, other countries served by these Information Centres, as well as the concerned region, in its efforts at further improvisation and innovation. The geographical, linguistic and technological characteristics of the various regions need to be taken into account. Development of websites in local languages must also remain a primary DPI concern as it seeks to provide up-to-date information in the field.

We welcome DPI’s effort to develop and refine its global communications strategy in support of United Nations peacekeeping operations. It is encouraging to note that DPI and DPKO brought together Chiefs of Information from 18 UN Peacekeeping and Political Missions along with a large number of Headquarters personnel in April this year for a dialogue on the way public information is conducted in the field and how it is supported at Headquarters. The two Departments, particularly need to work together and highlight success stories of peacekeeping and the role of peacekeepers in their areas of operation. The local challenges facing the peacekeeping operations in number of its missions like UNIFIL, UNMEE, UNMIS, etc. must not be under-estimated. By appropriate projection, the DPI could go a long way towards creating goodwill and a better image for the United Nations and its peacekeepers. We support involving DPI right from the initial stages of PKO’s through interdepartmental consultations and coordination, particularly with DPKO.

Mr. Chairman,

Some of the other important issues contained in the report of the Secretary-General pertain to the UN Website; outreach activities; academic initiatives and culture of evaluation. We would like to congratulate the DPI for the impressive strides made in development of the UN Website, an important resource-base for the UN family as well as for the wider public. In particular, we compliment recent improvements in its website that ensure
accessibility for persons with disabilities. We also note with interest the UN Chronicle’s efforts to develop co-publishing partnerships and collaborative educational activities as well as the publication of the 58th Volume of Annual Yearbook of the United Nations, an authoritative reference book on United Nations.

We laud the efforts by DPI to reach out to specialized target audiences such as Non-Governmental Organisations, research institutions, libraries and academic communities. We welcome the Global Teaching and Learning project and accompanying CyberSchoolBus website, which has recorded hundred per cent increase from last year. We continue to favour DPI efforts to strengthen its focal point role for interaction with civil society.

We have noted with interest the continuing promotion and refinement of a culture of evaluation and performance and DPI becoming the first UN Department to institute an Annual Programme Impact Review, as a self-evaluation tool. Training of staff to constantly review the impact of their work is a natural follow-up to this emphasis on evaluation. It is good that DPI is constantly exploring new ideas in this regard.

In closing, Mr Chairman, we fully agree with the Secretary-General that DPI’s success will always be measured by how convincingly it tells the United Nations story and how well it connects with its constituents: member states, media, civil society and the public. I would like to assure our support to the DPI team in tackling the formidable task before it.

Thank you, Mr. Chairman.
Madam Chairperson,

We would like to thank the Secretary-General and the UNCTAD for the detailed reports submitted under the agenda item on “International trade and development”. We associate ourselves with the statement made by the distinguished representative of South Africa on behalf of the Group of 77.

Madam Chairperson,

The negotiations launched at Doha, and its elaboration through the July framework and the Hong Kong Ministerial Declaration, are intended to secure a pro-development outcome for developing countries and at the same time to render the international trading system more open, based expressly on fair and equitable rules and disciplines. It is no accident, but by agreed intent, that we have called it the “Doha Development Agenda” and not a market access round.

The imbalances in the international trading system remain entrenched. The Uruguay Round has not unshackled the chains that tie down the family farms, the small and marginal producers of industrial goods and the professionals and services providers in developing countries. The international trading system is full of inequities - no real reductions in agricultural subsidies by the developed countries have resulted, while “real” market access in products of export interest to developing countries remains impeded by tariff peaks, escalations, specific duties, and non-tariff barriers; discouraging industrialisation in the developing countries. Besides, it is estimated that non-tariff barriers cost the developing countries over US $100 billion, almost twice the current level of Official Development Assistance. The WTO is not about free trade alone. The Secretary-General has rightly observed that ‘the suspension of Doha Round has caused significant uncertainty on the negotiations and may have major implications for the international trading system’, and by implications on the prospects for economic growth and development of the developing countries. The
Secretary-General has also reminded us of the need for an appropriate balance between national policy space and international disciplines and commitments. For defending livelihoods, sovereignty of the state is important and disciplines that erode the autonomy of policy space need to be reformed.

The impasse in WTO trade negotiations is disappointing. The report of the Secretary-General has stressed the need for early resumption of the suspended talk so that the compact in the Doha Ministerial Declaration to place needs and interests of developing countries at the heart of Doha Round can be carried to a positive, development-oriented outcome. Early resumption is desirable but adherence to the existing mandate – that of the Doha Ministerial Declaration, the July Framework Agreement and the Hong Kong Ministerial Declaration - is imperative.

**Madam Chairperson,**

Agriculture is not only about trade; it has vital development ramifications. The developing countries represent over 90% of world farmers; the developed countries have more than 50% of the World’s agricultural trade but only 2% of the farmers - the reason is their huge agricultural subsidies that enable the State at the expense of the resource-poor and subsistence farmers of developing countries. Food security and rural livelihood are of immense economic relevance and have a socio-political dimension in many developing countries. When agriculture was brought into the multilateral trade negotiations, then developing countries had been given a clear understanding that trade distorting agriculture subsidies would be phased out in a definite timeframe. The anticipated gains from agricultural reform by developed countries have till now eluded the developing countries. Moreover, the current impasse, which is also characterized by demands for reduction of de minimis payments and linking the issue to market access under NAMA, amounts to “canceling the spirit of Punta del Este”. Minimizing the vulnerabilities of the poor farmers must be our collective priority.

Demanding market access from developing countries, which displace low-income and subsistence farmers to satisfy commercial interests, cannot be supported. Proportionately lower overall tariff reduction commitments and operable and effective development instruments of Special Products and Special Safeguard Mechanism are the essential components of securing food security, livelihood security and rural development needs of developing countries. The overarching principle of special and differential
treatment, therefore, remains a categorical imperative, and is the underlying basis of the position of developing countries.

In the context of non-agricultural sector, some striking statistics have been provided in the report of the Secretary-General. It has quoted UNCTAD estimates, which suggest that global welfare gains from non-agriculture market access liberalization could be of the order of US $20 billion to US $60 billion annually and that developing countries could potentially enjoy about two thirds of these gains. The report is, however, cautious and has stressed the importance of flexibilities for developing countries to enable them to protect industries they consider important. The liberalisation of trade in non-agricultural products could lead to shifts in output and employment in key sectors in developing countries, resulting in job and revenue loss for many of them. It is, therefore, particularly important for developing countries to protect sensitive tariff lines in the small scale and employment intensive sectors of the economy and to preserve the autonomous liberalization programme. Hence, the inviolability of the mandate of flexibilities for developing countries contained in paragraph 8 of the July Framework Agreement.

The report of the Secretary-General has highlighted that welfare gains from liberalizing the temporary movement of natural persons are in the range of US$ 150 billion to US $250 billion. Effective and commercially meaningful access in Mode 4 for developing countries’ services suppliers is the area where the largest gain is expected and would contribute to the achievement of MDGs. It could be a win-win situation; restricting the movement of professionals across the world is unnatural and, ultimately, to the detriment of developed countries themselves.

Greater emphasis needs to be placed on key development issues. One such important development issue relates to the TRIPS Agreement. Developing countries are a recognized repository of the traditional knowledge of their indigenous communities that has been used for ages, inter alia, to provide a cost-effective cure for a number of ailments. In the recent past, attempts have been made to misappropriate this knowledge for commercial gain, denying in the process the value that justly should be reaped by these communities. Developing countries have therefore sought amendments in the TRIPS Agreement to prevent piracy of biological material and misappropriation of traditional knowledge. Disciplines on disclosure of the source and country of origin of the biological resources and traditional knowledge along with securing prior informal consent and equitable benefit
sharing should be agreed to. Respect for the intellectual property rights of individuals should be complemented by respect of intellectual property rights of communities.

On the issue of preference erosion, India believes that the main responsibility lies with the developed economies through implementation of their commitment to lower preferential rates to zero and, more importantly, through enhancing the utilization of GSP schemes by rationalizing the rules of origin. Notwithstanding the constraints of being a developing country, India would soon be finalising a bilateral package of preferential market access for LDCs into the Indian market. We welcome the ‘Aid for Trade’ initiative as a means of enhancing the capacity of developing countries to realise the gains of trade. While helping countries to build supply side capacities and trade related infrastructure particularly, in least developed countries, we need to remind ourselves that ‘Aid for Trade’ cannot be a substitute for the expected development benefits from a successful conclusion of the Doha Round. We also agree with the Secretary-General that such aid must be additional to current development assistance and be secure, predictable and non-debt creating.

**Madam Chairperson,**

We are meeting at a time when the actions of the global development community are being closely scrutinised against the promises that we have collectively made and repeated often. The scale of the development challenge facing us is daunting and the United Nations needs, more than ever before, to focus on where it can actually make a difference. The United Nations has a central role in the promotion of development. A clear political direction to break the current impasse is necessary. Developed countries must be encouraged to remove the barriers that they have erected, which result in lost development opportunities for many developing countries. India is actively and constructively participating in negotiations on the Doha Work Programme in the expectation that they will fully address the concerns of developing countries.

Thank you, Madam Chairperson,
575. Statement by Member of the Indian Delegation to the UN Anil Basu on Agenda Item 55: Globalisation and Interdependence: [A] Globalisation and Interdependence; and [B] International Migration and Development at the Second Committee of the 61st session of the UN General Assembly.

Madam Chairperson,

We thank the Secretary-General for the reports on the agenda item: “globalisation and interdependence” under consideration today. We associate ourselves with the statement made by the distinguished delegate of South Africa on behalf of the Group of 77.

Madam Chairperson,

The spirit of globalisation is rapidly reshaping the world today. It has accelerated the flow and exchange of trade, capital, technology, information and people and has created unprecedented opportunities for the progress and prosperity of all countries, transcending the narrow confines of national boundaries. But globalisation has also brought new challenges and many developing countries are facing difficulties in responding to these challenges. The 1990s was the decade in which globalisation came into full swing. It was also the decade of frustration for many developing countries. It is no coincidence that the Millennium Declaration recognises that the benefits of globalisation are very unevenly shared, while its costs are unevenly distributed.

In an increasingly globalising world, the regimes governing international trade, money, finance and technologies are critical determinants of development.

Not only do they establish the rules of the game for the flow of goods, services, technologies and people, they influence the actual flows in these areas. The deepening of global imbalances continues to pose a major risk to global growth and stability. Caught between the intellectual property rights and trade regimes, as well as the conditionalities imposed by the World Bank and IMF, the developing countries increasingly find erosion of much needed policy autonomy and flexibilities to evolve their own policies and strategies to achieve sustained economic growth and development,
critical for poverty eradication and the achievement of the Millennium Development Goals. It is incumbent upon the international community as a whole to consider the issue of an appropriate balance between national policy space and international disciplines and commitments when deciding collectively on future disciplines and commitments as well as on the implementation and interpretation of the existing ones.

The current impasse in the Doha round of trade negotiations is a cause of concern. There is no doubt that development-oriented outcome of trade negotiations, with effective and operable special and differential treatment for developing countries, is imperative to enable the developing countries reap the benefits of globalisation. It is equally important to address systemic issues and in this regard to undertake a comprehensive reform of the international financial architecture in a time-bound manner. Unequal bargaining power leads to regimes that are unfair. The international community must find ways to contracting the circles of exclusion.

Fair globalisation requires political will that can be manifested externally by the United Nations. There has, regrettably, been an erosion in the role of the United Nations over the years in shaping the regimes governing international trade, money, finance and technologies and providing political guidance to shape the international economic agenda. Its watchdog function in pursuing the development agenda has been whittled down. It is imperative that the ongoing efforts to reform the United Nations address the question of restoring the centrality of development on the agenda of the United Nations and utilizing fully its comparative advantage of democratic and universal characteristics. We must evolve equitable and rules-based regime to manage global trade, investment flows, technology transfer and movement of services.

Madam Chairperson,

The determinants of development are rapidly shifting along several paths; from agriculture to manufacturing; from manufacturing to services; from capital resources to knowledge resources. In conditions where access to critical resources are severely restricted by international rules and regimes, the challenge before the developing world is to fully tap the enormous productive potential of the non-material knowledge resources. India recognizes the importance of science and technology as a critical determinant of development and seeking to remain on the fast track to knowledge-led growth, through strengthening the roots and sinews of its capacity and capability building to meet the challenges of the 21st century;
not merely to become a knowledge producing society but a knowledge sharing and knowledge consuming society. We thank the Secretary-General for focussing, in his report, on the role of science and technology in the context of globalisation and interdependence.

Madam Chairperson,

The role of science and technology for development cannot be overemphasized. Intellectual property rights regimes are often used as tools to restrict, control and deny technologies, rather than facilitate their transfer to developing countries. It is imperative that development dimensions are integrated into such regimes as quickly as possible. The international community also needs to find pragmatic ways to promote research and development in developing countries.

Madam Chairperson,

The revolution in information and communication technologies offers us the tool to face the challenges of globalisation. It is ironic that the shrinking of the world as a result of technology and communications should be accompanied by evolution of controls that restrict movement for the peoples of the developing world. In the context of globalisation, there is need to recognise the inevitability of international migration. This presents challenges and opportunities. The increased demand for specialists in developed countries can be matched by their availability in developing countries. There, however, needs to be greater receptivity among developed countries to the request made to them for enhanced market access in Mode 4. This can be a win-win situation. The World Bank’s Global Economic Prospects 2006 notes that a rise in migration from developing countries raises incomes of natives in high-income countries. India believes that efforts at the United Nations should focus on promoting teamwork amongst nations to maximise the benefits of international migration while reducing its negative effects. We look forward to participate constructively in discussions on international migration and development.

Thank you, Madam Chairperson.
576. Statement by Member of the Indian Delegation to the UN Anil Basu on Agenda Item 33: Comprehensive Review of the whole question of Peacekeeping Operations in all their aspects at the Fourth Committee of the 61st session of UN General Assembly.

Mr. Chairman,

We welcome the opportunity to participate in discussions under Agenda Item 33: Comprehensive Review of the Whole Question of Peacekeeping Operations in all their aspects. We associate ourselves with the statement made by the distinguished representative of Morocco, on behalf of the Non Aligned Movement.

Mr. Chairman,

We note the recent increase in the number of UN peacekeeping personnel to approximately 93,000 men and women in 18 peacekeeping operations. There is a likelihood that the numbers are going to rise even further, with increased commitments in Lebanon, Sudan and Timor Leste. While this shows the indispensability of peacekeeping operations the world over, it is also a sad commentary on the present international situation.

The Under-Secretary-General has in his comments rightly commended the DPKO’s ability to raise and deploy large peacekeeping components at short notice. At the same time, it has also been seen that the UN tends to create new parallel instruments without in-depth planning. Therefore, the problems that face us in peacekeeping today are not only because new missions have been set up or old ones expanded but also because of the manner in which they were set up, what they are asked to do and, not least, the tools they are provided with.

Foremost among the challenges continue to be the necessity to improve the safety and security of uniformed and civilian personnel - an area of great interest and concern to India. The rush to deploy troops under difficult UN mandates, without adequate resources, places the life of peacekeepers at increased risk. In this context, we welcome the Under-Secretary-General’s recognition of strategic priorities, especially the focus on reform, resources, training, modernization and accountability.

The progress made through the establishment of Joint Operation Centres and Joint Mission Analysis Centres (JOC/JMAC), needs to filter
down to the Missions. We would again underline the importance of sharing of information with troop contributing countries and field commanders. The bureaucracy at Headquarters must actively and continuously engage field missions and positively respond to resolving their problems rather than creating more problems for them. Therefore, while we note the emphasis on creation of a civilian cadre for DPKO, we hope this would not end up being merely another expansion of job opportunities. We would also like to emphasize the importance of ensuring equitable geographical representation and transparency in recruitment while undertaking such expansion. We also welcome the Under-Secretary-General’s underlining of the need for improving communication technologies and IT capacities so as to enhance the safety and security of personnel in the field.

**Mr. Chairman,**

India supports the energising of the mechanism of triangular consultations between Troop Contributing Countries, the Security Council and the UN Secretariat. In this context, we note the holding of Private Meetings under Resolution 1353 format and the increase in the frequency of briefings for TCCs.

However, such meetings still continue to be held on the very eve of the renewal of Mission mandates, leaving little time or scope for meaningful discussions. We would like to re-emphasise that TCCs need to be involved early and fully in all aspects and stages of mission planning. This would contribute to further enhancing the design, execution and effectiveness of peacekeeping operations.

We welcome the UN’s efforts to further deepen its relationship with the African Union. India supports these efforts. We share close and historic ties with our African brothers and sisters and are ourselves involved in bilateral capacity building efforts in most African countries. Nevertheless, the role of regional arrangements should be in accordance with Chapter VIII of the UN Charter and the real challenge for the UN is how to strengthen peacekeeping without regionalizing it. The UN cannot absolve itself of its responsibility under the Charter for the maintenance of international peace and security.

**Mr. Chairman,**

We agree that peacekeeping elements should be incorporated into new multi-disciplinary peacekeeping operations from the outset to ensure a seamless transition. We would, however, caution against the tendency to confuse peacekeeping with peace-building. Peacekeeping is short-term,
designed to perform a series of specific tasks, particularly establishment of a basic degree of security and order. Post-conflict peace-building, on the other hand, is a longer term exercise, best left to the Agencies, Funds and Commissions of the UN system and must be locally-owned. Post-conflict peace-building cannot be achieved through peacekeepers, who do not have the training, resources, or capabilities to undertake post-conflict reconciliation, reconstruction and development. In this regard, we support establishment of institutional cooperation and coordination between DPKO and the Peace-building Commission, including the Peace-building Support Office.

As regards the sensitive issue of conduct and discipline, we must emphasise that sexual exploitation and abuse are totally unacceptable forms of behaviour. We fully support the implementation of a policy of zero tolerance and note the work done by DPKO on raising the awareness of those with managerial and command responsibilities; establishing standards of conduct, training and investigation. Careful preparatory training in terms of a multi-cultural, pluralistic and tolerant outlook is as important as subsequent swift punitive action. We also welcome the progress underway with regard to the establishment of Standing Police Capacity and we recognize the role played by the Police Advisor in taking it forward and look forward to its becoming functional. We would emphasize that the recruitment to this capacity should be done in a transparent manner giving due weightage to professionalism, geographical balance and contribution of TCCs.

Mr. Chairman,

India has contributed over 80,000 troops to UN peacekeeping, participated in almost in every UN mission, particularly in Africa, and made the supreme sacrifice on 112 occasions. We are proud that the first Female Formed Police Unit in the UN would be contributed by India to the Mission in Liberia (UNIMIL). This reflects our commitment to assist the UN in reaching out to the most vulnerable sections, i.e. women and children, in conflict and post-conflict societies.

In conclusion, Mr. Chairman, I would like to restate India’s unwavering commitment to the purposes and principles of the UN and our desire to make peacekeeping into an even more effective tool in the maintenance of international peace and security. Thank you, Mr. Chairman.
Madam Chairperson,

We thank the Secretary-General for the reports under agenda item 53 on Sustainable Development. We associate ourselves with the statement made by the distinguished representative of South Africa on behalf of the Group of 77.

Madam Chairperson,

India has actively participated in shaping international agreements to tackle major global environmental issues. In 1972, at the United Nations International Conference on Human Environment in Stockholm, Prime Minister Indira Gandhi emphasised that environmental concerns cannot be viewed in isolation from developmental imperatives. Twenty years later, the Rio Conference affirmed the importance of sustainable development. Agenda 21, adopted by that Conference, provides a blueprint of how to make development economically and socially sustainable. The Rio Conference and the Johannesburg Summit established a global partnership committed to protecting the environment while addressing development needs. India contributed to that global partnership and is committed to it.

The Government of India’s National Environmental Policy 2006 recognises that human beings are at the centre of sustainable development. It emphasises that the right to development must equitably meet the developmental and environmental needs of present and future generations. Its dominant theme is that while we must conserve environmental resources to secure livelihoods, the most effective way of doing this is to ensure that people benefit more from conservation than from resource degradation. The Policy is intended to mainstream environmental concerns in all development activities. India is privileged to host the eighteenth meeting of the Parties to the Montreal Protocol and substances that deplete the ozone layer.

Madam Chairperson,

The Secretary-General’s report notes that many Governments have taken the lead in implementing sustainable development. This
implementation takes place within countries. Thus, each country is responsible for its own sustainable development. However, if developing countries are to attain the goals and targets of Agenda 21 and JPOI, the international community must make the means of implementation available and create an international environment supportive of development.

As a result of globalisation, external factors contribute to the success or failure of developing countries to a greater extent than before. Developing countries are caught between intellectual property rights and trade regimes, as well as the conditionalities imposed by the World Bank and IMF, all of which erode their autonomy and flexibility. However, these countries need that autonomy and flexibility to evolve policies and strategies for economic growth and sustainable development, which is so critical to eradicating poverty and achieving Millennium Development Goals. The current impasse in the Doha round of trade negotiations is a cause for concern. When agriculture was brought into multilateral trade negotiations, developing countries had clearly been given to understand that trade distorting agriculture subsidies would be phased out in a definite timeframe. However, gains expected from agricultural reform by developed countries continue to elude developing countries. JPOI recognises that agriculture is inextricably linked to poverty eradication, especially in developing countries. Minimizing the vulnerability of poor farmers must be our collective priority. Reducing agricultural tariffs and subsidies is not enough: there must be exceptions to allow developing countries more space to pursue their pro-development strategies and policies aimed at protecting their poor. Special and differential treatment for developing countries, to enable them to meet food security, livelihood security and rural development needs, remains a categorical imperative.

It is no coincidence that JPOI recognises good governance at the international level as fundamental to achieving sustainable development, and that it emphasises the need to address international finance, trade, technology and investment patterns that impact the development prospects of developing countries. We would suggest that the report of the Secretary-General include a detailed analysis of actions taken at the international level for consideration at future sessions.

Madam Chairperson,

The themes of the current implementation cycle of the multi-year work programme of the Commission on Sustainable Development, namely, energy, climate change and industrial development including air pollution,
are particularly relevant. Energy is critical to development. In developing
countries, a rapid increase in energy use per capita is imperative to realizing
national development goals and Millennium Development Goals. Developing
countries must have the policy space to address their energy
needs in light of their individual circumstances. All significant energy sources
– whether conventional or advanced fossil fuels based, or renewables, or
civilian nuclear power – must remain in policy reckoning to address energy
needs for sustainable development. In particular, there needs to be a fresh
assessment of nuclear energy, as a clean and safe source of energy.

Many developing countries, including India, still rely on traditional
sources of energy for a significant part of their energy needs. However,
traditional technologies are inefficient, insufficiently versatile and have major
health, gender, and environmental impacts. Modern renewable energy and
energy-efficient technologies remain expensive, except in niche
applications. There has been insufficient R&D in this area. Institutions in
industrialised and developing countries can share technologies resulting
from collaborative R&D. We believe that this is an important and promising
but unutilized area in partnerships for sustainable development.

Madam Chairperson,

At the Johannesburg Summit, we collectively agreed to significantly
reduce the current loss of biological diversity by 2010. India recognises
the importance of the conservation, protection and sustainable use of
genetic resources. It is particularly significant for developing countries that
there be an international regime to protect and safeguard the equitable
sharing of benefits arising from the use of genetic resources and traditional
knowledge. The report of the Secretary-General has rightly recommended
that all efforts be made to conclude the negotiation process for an
international regime, within the framework of the Convention on Biological
Diversity, by 2010.

The international community has not lived up to its commitments for
technology transfer since Rio. Critical technologies are beyond the reach
of developing countries because of prohibitive costs under the existing
IPRs regime.

IPRs regimes must represent the tradeoffs between innovator
incentives and wider human societal imperatives. We need to revisit the
IPRs regime to ensure that technologies necessary for pursuing the global
imperative of sustainable development are placed in the limited public
domain and made accessible to developing countries. The international community should also explore the possibility of establishing a Clean Technology Acquisition Fund to enable developing countries to access critical technologies. This would encourage the use of clean technologies, and significantly impact the realisation of sustainable development goals.

Madam Chairperson,

The Mauritius Strategy implementation review demonstrates that Small Island Developing States, or SIDS, need long-term attention in the areas of capacity building and resource transfer, to enable them to address the challenges of managing their compelling development priorities. In the spirit of South-South solidarity, India has directed its engagement with SIDS to focus on natural disaster preparedness and mitigation, resilience and capacity building and climate change. India's contribution is intended to supplement the efforts required from the international community. It is essential that the donor community fulfill their commitments.

Thank you, Madam Chairperson.

578. Statement by Permanent Representative at the UN
Ambassador Nirupam Sen on Agenda Item 70: Report of the International Court of Justice at the 61st session of the UN General Assembly.

New York, October 26, 2006.

Madam President,

At the outset, I would like to thank the President of the International Court of Justice, Judge Rosalyn Higgins, for her detailed and comprehensive presentation of the report of the Court as contained in document A/61/4.

The International Court of Justice, the principal judicial organ of the United Nations, is an important forum for the peaceful settlement of international disputes. In April, the Court celebrated the sixtieth anniversary of its inaugural sitting. We congratulate the court for its distinctive contribution to the maintenance of international peace and security in all the years of its existence.
Madam President,

The UN was established to save succeeding generations from the scourge of war. The founding fathers of the UN sought to achieve this objective by the twin approach of prohibiting the use of force under Article 2(4) of the Charter and by promoting the peaceful settlement of international disputes under Article 33 of the Charter. As a central element in the promotion of international peaceful settlement, departing from the model of the League of Nations, the UN Charter established, through Article 92, the International Court of Justice as its principal judicial organ. Further, in the case of disputes under consideration of the UN Security Council, Article 36(3) directs the Security Council to recommend to the parties to refer all legal disputes to the International Court of Justice. Finally Article 92 of the Charter makes the Statute of the ICJ an integral part of the Charter.

The above provisions clearly indicate the respect and the central role assigned to the ICJ within the UN Charter system. This is a status which is unique to the ICJ and not enjoyed by any other tribunal established since 1945.

Madam President,

The recent period has witnessed the creation of a number of specialized regional and international courts. The political process connected with the establishment of special international judicial bodies has been, on occasion, perceived as diminishing the role of the ICJ in the field of peaceful settlement of international disputes. Moreover, legitimate questions have been raised about the legal basis underlying the establishment by the Security Council of the ad hoc international criminal tribunals established for former Yugoslavia and Rwanda. The Security Council does not have this power under the Charter and while, it can set up subsidiary bodies, it cannot give them powers that it does not have itself: the established legal principle of nemo dat quod non habet. The lack of challenge from the general UN membership does not mean acceptance of such exercise in the future, still less any general endorsement of a power that the Charter does not give.

However, despite all these developments, the International Court of Justice still remains the only judicial body with legitimacy derived directly from the Charter, enjoying general jurisdiction and available to all States of the international community on all aspects of international law. All other international judicial institutions, established as they are with competence over specified fields, are confined to their limited areas of jurisdiction, and lack general jurisdiction of a universal nature.
Madam President,

Over the last fifty years, the Court has dealt with a variety of legal issues. Its judgments have covered disputes concerning sovereignty over islands, navigational rights of States, nationality, asylum, expropriation, law of the sea, land and maritime boundaries, enunciation of the principle of good faith, equity and legitimacy of the use of force. The issues presently before it are equally wide ranging, and its judgments have played an important role in the progressive development and codification of international law. Despite the caution it exhibited and the sensibility it showed to the political realities and sentiments of States, the Court has asserted its judicial functions and consistently rejected arguments to deny it jurisdiction on the ground that grave political considerations were involved in a case in which it otherwise found proper jurisdiction for itself.

Thereby the Court clearly emphasized the role of international law in regulating inter-state relations which are necessarily political.

In the same vein the Court - or for that matter any other competent judicial body - should not regard itself as precluded from questioning the validity of a Security Council resolution, insofar as it affects the legal rights of States. The issue was raised very pointedly by Judge Shahabudin and others in the Lockerbie case.

Many legal scholars rightly emphasize that the Court should not concede to the Security Council a place above the Charter; it should rather adopt a textual approach to Article 39, the wording of which contains all the necessary elements for a delimitation of the competences of the Security Council under chapter VII. The Court should not hesitate to affirm the rule of law in the international legal order. In the Lockerbie and Namibia cases the Court showed that it has the power of judicial review but, unfortunately, this is limited to a very few contentious proceedings and a very few advisory opinions that are sought.

The power of judicial review is a crucial element in a democratic system of checks and balances. The most practical, and perhaps the only, way of introducing these into the functioning of the Security Council is through an expansion of the permanent and non-permanent membership of the Council and a transformation of its working methods.

Madam President,

The phenomenal docket explosion of the Court stands testimony to the Court’s high standing and authority not only in the UN system, but in the international community itself. It also reflects the increased relevance
of and respect for due process of law that States exhibit, and is an affirmation of faith in the Court. From being in a situation where, in the early 1970s, it was called the court without a case, it is now faced with the problems of plenty. In fact, it now finds itself in a position of being unable, within its existing resources, to respond effectively and in time to the demands made on it as a result of its increasing workload.

As emphasized in its Report, the Court is taking various measures to rationalize the work of its Registry, making greater use of information technology, improving its working methods and securing greater collaboration from the Parties to reduce the time taken for individual cases. The Report says that the Court’s docket increasingly includes fact-intensive cases, which raise new procedural issues for it. The Court’s request, therefore, for individualized legal assistance for all its members is reasonable and must be implemented urgently to enable it to efficiently carry out its designated functions as the principal judicial organ of the United Nations.

Thank You, Madam President.

579. Statement of Member of the Indian Delegation to the UN Vijaya R. Alapadan on Agenda Item 29: Effects of Atomic Radiation at the Fourth Committee of the 61st Session of the UN General Assembly.

Mr Chairman,

India reiterates its recognition of the importance, significance and scientific value of the work of UNSCEAR (United Nations Scientific Committee on the Effects of Atomic Radiation) and congratulates the Committee on the 50th anniversary of its first session.

The mandate of UNSCEAR is to undertake broad reviews of the various natural and man-made sources of ionizing radiation and their effects on the health of humans and the environment. The Committee’s work has immense implications for the health and well-being of thousands of occupational radiation workers, patients undergoing radiation treatment or radio diagnosis and even people living in the high natural background radiation areas of the world, like Kerala and Tamil Nadu in India. The
UNSCER assessments are equally consequential to the environment and non-human biota.

We note with appreciation that the UNSCER report this year has five scientific annexes, based on the Committee’s assessments of:

A) Epidemiological studies of radiation and cancer.
B) Epidemiological evaluation of cardiovascular disease and other non-cancer diseases following radiation exposure.
C) Non-targeted and delayed effects of exposure to ionizing radiation.
D) Effects of ionizing radiation on the immune system, and
E) Sources to effects assessment of radon in home and work places.

Mr Chairman,

Cancer remains the main concern among radiation induced health effects. However, there is increased awareness that this multi-factorial disease can be influenced by several other factors such as life-style, diet, smoking, etc. As far as effect on cancer incidence following radiation exposure is concerned, the risk estimations, based primarily on Japanese Atomic Bomb survivors, are greatly affected by the sample size and statistical power of different studies. Other contentious issues are dosimetric inconsistencies, extrapolation from the moderate dose, high dose rate exposures to low doses, extrapolation of risk to end of life and transfer of risk across populations. Most estimates in the low dose region are found wanting in these attributes and may lead to a substantial overestimation of risk.

Mr. Chairman,

It is generally believed that an important source of information on the influence of low dose radiation on cancer incidence would come from the data on the population living in high level natural radiation areas as in Kerala and Tamil Nadu. The Committee may use such data for its assessment of risk of cancer at low doses of radiation.

Other multifactorial diseases or defects also need to be paid attention to. Congenital malformations belong to this category. These may be a part of the non-targeted effects of radiation. There are some very interesting data from the studies done in India and China on the incidence of congenital malformation which show no significant difference in the population living in the high level natural radiation areas and their corresponding normal level natural background controls.
Mr. Chairman,

The Linear No Threshold (LNT) concept of radiation dose response has been the cornerstone of all international regulation related to the radiation exposure limits set forth for nuclear power plants and other nuclear installations. The stringent requirements of the present regulatory regime impose huge and unreasonable costs the countries harnessing nuclear power for generation of electricity. However, there are numerous studies on low dose radiation effects, including those on immunological aspects, longevity and cancer incidence, which would question the scientific acceptability of the generalized LNT hypothesis.

With the changing global scenario emphasizing the inevitability of nuclear energy as a viable economical and environment friendly option, such data need to be carefully analyzed. A scientific debate was triggered last year following the reports of the French and US National Academy of Sciences. The scientific conflict of opinion can be resolved by more vigorous and rigorous studies.

Mr. Chairman,

Some uninformed individuals/agencies have tended to use the UNSCEAR estimates of risk coefficients and collective doses to the population to predict the number of deaths following accidental radiation exposure. Such an approach is scientifically incorrect and will result in overestimation and spread panic among the people of the affected nations, as happened following the recent report of the Chernobyl forum. It will encourage radio-phobia. It is in this context that the attributability of specific health effects to radiation needs to be debated at length.

Medical radiation exposures constitute a major component of man-made radiation exposures. There is a need to collect authentic information on various radio-diagnostic and therapeutic procedures followed in different countries – at least in the member states of UNSCEAR and exposures resulting from them. We hope that the Committee will succeed in cataloguing this information and present it as a scientific annexure to its next year’s report to the UNGA.

The Committee has, for the first time, come out with an analysis of the risk of non-cancer diseases, especially cardiovascular diseases following relatively high dose of radiation exposure. Likewise, the Committee has also, after a considerable gap, analyzed the effect of radiation on the immune system. We are pleased that the Indian delegation was able to contribute significantly to the development of this annexure.
Another important feature of this year’s report is the assessment of the effects of exposure to radon in home and work places. The pooling of residential case control studies in Europe and North America now provide a direct method of estimating risk of long term exposure to residential radon.

It is important to emphasize that the Committee’s work is highly scientific and the technical details are handled very carefully. The Committee’s scientific analyses guide the regulatory agencies such as ICRP. It is, therefore, necessary that the United Nations Environment Program (UNEP) accords utmost importance and priority to UNSCEAR’S work.

Mr Chairman,

UNSCEAR has suffered from lack of adequate resources for the last several years. Consequently, it is not in a position to hire competent and reputed consultants to prepare its documents and undertake methodical analysis of the extent of radiation exposure. This year, its budget was not even enough to pay

for the travel of all the representatives. India strongly supports a substantially increased budget for the 2008-2009 bienniums pursuant to the resolutions 60/98, 59/114, 58/88 and 57/115 of the UNGA.

Thank you, Mr. Chairman.

580. Statement by Member of the Indian Delegation to the UN Mufti Mohammed Sayeed on Agenda Item 81: Report of the International Atomic Energy Agency at the 61st session of the UN General Assembly.

Madam President,

The delegation of India thanks the Director General of the International Atomic Energy Agency [IAEA], Dr. Mohamed El Baradei, for presenting to the General Assembly the Report of IAEA. The contribution of the Agency has been recognized through the award of the Nobel Peace Prize to Dr. El Baradei and the IAEA in 2005. India believes that this tribute was both timely and well deserved.
The IAEA is a unique organisation in the UN system founded on a strong science base. As a founder member of the Agency, India has consistently played an active role in the work of the IAEA for promotion of peaceful uses of nuclear energy.

Madam President,

The demand for nuclear power is growing in step with growing global energy needs. The exigencies of economic development, the finite nature of fossil fuels and concerns linked both to their prices as well as their impact on global climate change add to the attractiveness of nuclear power. The immense energy potential of nuclear fuels, readily available and deployable technologies and the safety and productivity record of nuclear power over the past 20 years are likely to help maintain an upward trend in the demand for nuclear energy. Indeed nuclear power is now an inevitable and indispensable part of the solution to the world’s growing needs for energy.

India believes that the Agency should continue to pay special attention to the promotion and development of nuclear energy, especially in areas of the world where developmental needs and aspirations remain pressing and unfulfilled. As the Report of the IAEA notes, 2005 was a year of rising expectations of nuclear energy, which kept pace with the steady growth in the global electricity market. Nuclear power accounted for 16% of the world electricity production with a net increase in capacity of 2300 MW(e) in 2005. The report also notes that of the 26 Nuclear Power Plants under construction, 15 are located in Asia. In India, with the TAPS-4 achieving criticality on March 6, 2005 and TAPS-3 on May 21, 2006, there are 16 operating power plants, with 7 under construction. Further, Government of India has recently approved pre-project activities on additional eight reactor units. With the completion of all these units, the total nuclear power generation capacity in India would reach around 14,000 MWe. The emerging possibility for expanding civil nuclear cooperation between India and the international community would supplement our domestic efforts to meet the developmental aspirations of our people through additional energy inputs.

India considers a closed nuclear fuel cycle of crucial importance for its well established three stage nuclear power programme with its long term objective of tapping India’s vast thorium resources. In the front end of the cycle, our programme is providing inputs to the indigenous Pressurized Heavy Water Reactor (PHWR) phase. In the back end of the fuel cycle, reprocessing of PHWR spent fuel has enabled India to successfully operate
a Fast Breeder Test Reactor for two decades and launch a commercial Fast Breeder Programme. The technology of reprocessing irradiated Thorium fuel has been developed and U-233 recovered so far utilised to fuel a small reactor. A comprehensive capability in the area of nuclear waste management has been achieved.

India’s participation in the International Thermo-nuclear Experimental Reactor (ITER) project is recognition of its advanced capabilities and its record of responsibility in the area of nuclear energy. India has been an active participant in the activities of the Agency under the International Project on Innovative Nuclear Reactors and Fuel Cycles (INPRO), and has applied the INPRO methodology for analyzing nuclear systems for hydrogen generation and in the study of closed fuel cycle using fast reactors. India supports the Agency’s work towards the development of small and medium sized reactors for development of technology for additional applications and for expanding nuclear power. Indian experts have also contributed to the work of the International Desalination Advisory Group (INDAG). We have offered to share our experience and identify future areas of work in nuclear desalination. We are also bringing our national commitment and professional expertise to the IAEA activities in the areas of plasma physics and fusion research.

The aging of the work force in many areas of nuclear applications is a matter of serious concern for a number of States. India supports the efforts of the Agency to preserve and maintain nuclear knowledge through all databases and, in particular the International Nuclear Information System (INIS) database that provides free access to students at 283 universities and has over 1 million authorized users. We take note of the support provided by the Agency to 75 students from 33 countries to attend the first summer institute of the World Nuclear University. Given the long-term benefits, we encourage the Agency to continue its support to potential students from developing countries. India has been supportive of the technical cooperation activities undertaken under IAEA aegis. This year India has pledged US $3,24,800 for the Technical Cooperation Fund for 2007. We have reinforced our financial contribution by providing technical experts, hosting meetings, symposia, workshops and offering training facilities.

Madam President,

India maintains that the promotional role of the Agency is of direct, visible and measurable benefit to its Member States. We commend the activities of the Agency in promoting the applications of nuclear technology
in areas of food and agriculture, human health, water resources management, protection of the environment and industry. India notes with appreciation the setting up of the IAEA Nobel Cancer & Nutrition Fund. At the 50th Session of the General Conference of the IAEA the Prime Minister of India announced India’s offer of a recently developed cobalt 60 Tele Therapy Machine (Bhabhatron) as our contribution to the Programme of Action for Cancer Therapy (PACT) of the IAEA.

Madam President,

The international community has recognized the need to protect and secure radiological materials because of the increasing global concern that terrorists could gain access to use them. India, therefore, supports the efforts of the Agency towards ensuring safety and promoting a global security culture and attaches a high priority to this issue. India has ratified the Convention of Nuclear Safety and actively participated in the amendment to the Convention on the Physical Protection of Nuclear Materials. India has also participated in the Regional Radiological Security Initiative and has been conducting courses under the aegis of IAEA in India on a regular basis. India successfully conducted, for the third consecutive year, the regional course on ‘Physical Protection of Nuclear Installations’.

Madam President,

If we are to be successful in realizing the benefits of atomic energy, we need to act in concert and we need to adhere to our respective international commitments. The IAEA and the Director General deserve our complements for ensuring that the Agency continues to be the global community’s platform for addressing these issues in a spirit of harmony and consensus in accordance with the Statute of the Agency. In accordance with its commitment and its record as a responsible state with advanced nuclear technology India is prepared to supplement international efforts for promotion of peaceful uses of nuclear energy.

The issue of assured supply of nuclear fuel in a manner that does not cause proliferation concerns has been attracting attention in recent times. Different countries and groups of countries have proposed various schemes in this regard. A Special Event “New Framework for utilization of Nuclear Energy in the 21st Century:

Assurances of supply and Non-Proliferation” was organized along side the recently concluded 50th IAEA General Conference, when these
proposals and related issues were discussed. India made a presentation in the event on “The Twin Challenges of Abundant Nuclear Energy supply and Proliferation Risk Reduction – A View”. Indian capability in the nuclear fuel cycle activities is well recognized.

India believes that closed fuel cycle is essential if nuclear power is to make sustained contributions at a large enough scale necessary to meet global energy needs. India also believes that reprocessing and recycling of nuclear fuel is essential not only for this purpose but also for the reduction of long term radio toxicity and security implication of disposal of spent fuel as such. Further, Thorium offers an excellent matrix for efficient burning of surplus plutonium with a much greater degree of proliferation resistance and very low minor actinide burden.

With its well-established high level of R&D capabilities and sizeable pool of highly qualified and trained manpower, India is prepared and offers to supplement international efforts for sustainable growth of nuclear energy worldwide, while address proliferation concerns.

Madam President,

The prospects of rapid depletion of global fossil fuel and the burden imposed by rising fuel prices, combined with concerns about global climate change, have brought out the vital importance of nuclear energy. India believes that it is possible and feasible to enhance the share of nuclear energy as a clean energy source of the future while taking care of the imperatives of nuclear safety, security and non-proliferation. India stands willing to support the efforts of the international community and the IAEA towards further development of nuclear energy to meet the growing energy needs of the world.

Thank you, Madam President.
Statement by Member of the Indian Delegation to the UN A. K. S. Vijayan on Agenda Item 78: Report of the International Law Commission Chapter VI: Shared Natural Resources and Chapter VII: Responsibility of International Organisations at the 6th Committee of the 61st session of the UN General Assembly.

Mr. Chairman,

On the topic of “Shared Natural Resources”, we welcome the completion, on first reading, of the set of 19 draft articles and commentaries on the law of transboundary aquifers. We commend the Special Rapporteur, Ambassador Yamada, for the progress achieved by the International Law Commission. We also appreciate the contribution of the Working Group on Shared Natural Resources under the Chairmanship of Mr. Enrique Candioti.

The work of the Commission in this field is important, as this is an area in which international practice is still evolving. Despite the abundant treaties and other legal documents that have been concluded in this area, which provided useful inputs to the work of the ILC, it may be noted that considerable growth in the international practice and scientific knowledge concerning transboundary aquifers has only taken place in recent years, we therefore welcome the caution exhibited by the Commission in taking the view that it was still premature to reach a conclusion on the question of the final form the Draft Articles should take.

My delegation reiterates its support for the inclusion in Draft Article 3, of an express affirmation of the principle of the State’s sovereignty over the portion of a transboundary aquifer or aquifer system located within its territory. This is consistent with the principle of sovereignty of States over natural resources within their territories.

The principle of “equitable and reasonable utilization”, set out in Article 4, needs to be considered together with Draft Article 5 on “factors relevant to equitable and reasonable utilization”. The phrase “accrual of benefits” contained in Article 4 (a) requires clarification, since the title of the Article as well as Article 5 refer to “utilization”.

In Draft Article 11, India supports the inclusion of the “precautionary” approach. However, this principle needs to be more clearly specified and
the clause “In view of uncertainty …..” should be deleted, as this is not suitable for inclusion in a legal text.

Draft article 16 deals with the obligations of States in responding to actual emergency situations that are related to transboundary aquifers. However, the commentary recognizes the lack of adequate knowledge regarding the type and extent of emergencies that could occur, or the response action that could be undertaken by the concerned States.

India supports the general obligation to cooperate, as contained in the Draft Articles. However, there appear to be some overlapping areas, as this obligation is referred to in different Articles. Thus, Article 4 requires the aquifer States to “establish individually or jointly an overall utilization plan”, Article 7 stipulates that they “should establish joint mechanisms of cooperation”, Article 13 requires that “A joint management mechanism shall be established, wherever appropriate”, while Article 17 provides for bilateral or regional agreements or arrangements. The functions of these various mechanisms provided for and their inter-relationship needs to be more clearly established.

These are the preliminary observations of my delegation on the Draft Articles. As desired by the Commission, we would also be submitting further comments separately.

Mr. Chairman,

We would also like to convey our appreciation to the Special Rapporteur Professor Gaja on his fourth Report on the Responsibility of International Organizations as well as for presenting the set of draft 13 articles including commentaries adopted by the ILC this year. Articles 17 to 24 on circumstances precluding wrongfulness follow the general pattern of the relevant articles on State Responsibility as, according to the Rapporteur, the principles contained in the Chapter on ‘circumstances precluding wrongfulness’ are equally applicable to international organisations with minor adjustments to fit the nature of the organisation. We had earlier sounded a note of caution in this regard. First, the attributes of a State and an international organization are not the same. Second, given the diversity of international organizations and differences in their objectives and functions, it would be difficult to assess which of the circumstances precluding wrongfulness listed in Chapter V of Part One of the articles on the responsibility of States could be applicable to international organizations, especially given the absence of definitive practice in this area.
Article 18 on self defence is a good example in this regard. This article provides that wrongfulness of an act of an international organisation is precluded if the act constitutes a lawful measure of self defence. Since international organisations are not members of the United Nations, the reference to the Charter of the UN is replaced by “principles of international law embodied in the Charter of the United Nations. However, this comparison overlooks the essential difference between a state and an international organisation, namely a circumstance such as self-defence is by its very nature only applicable to the actions of a State, it could be questioned whether the international obligations usually attributable to international organizations may be such that could reasonably lead to a breach of a peremptory norm of general international law under article 26 of the articles on State responsibility.

In the same vein, we are not sure whether the concept of necessity should be extended to international organisations. States are entitled to invoke necessity to safeguard their essential interests, but under what circumstances the same right should extend to international organizations is difficult to envisage due to lack of specific practice in the area. The application of this concept to Peace Missions also raises some difficulties as those Missions have to follow very clear rules of engagement. Therefore, we would prefer deletion of this article so that this concept may not be invoked as a pretext for non-compliance with international obligations or for infringement of the rights of any third State.

These are our preliminary comments on Draft Articles 18 and 22. We would submit comments on other articles later.

Thank You, Mr. Chairman
582. Statement by Member of the Indian Delegation to the UN Iqbal Ahmed Saragdgi on Agenda Item 31: United Nations Relief and Works Agency for Palestine Refugees in the Near East at the 4th Committee of the 61st session of the UN General Assembly.

New York, November 1, 2006.

Mr. Chairman,

At the outset, I should like to express my delegation's appreciation to Ms Karen AbuZayd, Commissioner General of the United Nations Relief and Works Agency (UNRWA) for Palestinian Refugees in the Near East for presenting an insightful and comprehensive report on the work by the Agency. My delegation would also like to take this opportunity to commend the work of the staff members of the Agency in the service of the Palestinian refugees in Jordan, Lebanon, Syria, the West Bank and the Gaza Strip.

Mr. Chairman,

India is deeply concerned at the on-going conflict in the Middle East. The support for the Palestinian cause has been a central feature of India’s foreign policy since even before it achieved independence in 1947. We believe that there can be no military solution to the Palestinian issue. The violence that has beset the region since September 2000 has claimed several thousand Palestinian and Israeli lives, besides the physical and psychological scars affecting civilians and combatants. India has joined the international community in voicing its concern over the endless cycle of violence and counter-violence that has characterised the current phase of this conflict. India has maintained consistently that violence was a serious impediment to the peace process, and that the solution did not lie in more violence but in pursuing the path of political dialogue.

The economy of the Palestinian Authority has suffered immeasurably as a result of the on-going conflict. Some of the grim details are contained in Paragraph 14 of document A/61/13. Palestine has been particularly hard hit.

According to the World Bank report, about 43% of the Palestinian population still fall below the poverty line, with perhaps 15% living in deep poverty and unable to meet subsistence needs. The widespread increase
in poverty and unemployment, coupled with the decreasing revenues of the Palestinian Authority, has brought the economy to the verge of collapse.

We note the concern of the Chairperson of the Advisory Commission of UNRWA that “the separation wall/fence, closures, curfews and other restrictions imposed by the Israeli authorities in both the West Bank and the Gaza Strip, will lead to further hardship for the affected Palestinian population.” As we have stated in the past, the walls/encroachment on Palestinian land and interests creates great hardships for the people affected by its construction and exacerbates the already grim situation. Besides, the continued construction of the wall on Palestinian land threatens to prejudge the eventual outcome of the final status negotiations between the parties.

Mr. Chairman,

The services provided by UNRWA are of a critical importance in the context of the continuing spiral of violence in the Middle East. Since its inception over half-a-century ago, the Agency has played a key role in addressing the multifaceted needs of the Palestinian refugees, and it is today a symbol of the international community’s commitment to the well being of the Palestinian refugees until a just and durable settlement of the refugee problem is achieved.

As the largest UN programme in the Middle East, the Agency is a key instrument in providing education, health, relief and social services and other vital programmes to the most vulnerable segments of the Palestinian population, not only in the West Bank and the Gaza Strip, but also in Jordan, Lebanon and Syria.

India has called for an urgent easing of the restrictions placed on the Palestinian areas and an immediate amelioration of the on-going humanitarian crisis there. We have, in the past, manifested our support to the Palestinian people through regular assistance and supply of medicines to the Palestinian Authority. In May 2006, in response to a request from the Palestinian authorities, India announced humanitarian assistance worth Rs.100 million, primarily in the form of medicines and medical supplies, to the Palestinian people in order to alleviate the difficult situation in which the Palestinian people find themselves.

We have also been a regular, albeit modest, contributor to the UNRWA budget.
An area of continuing concern is the restriction in freedom of movement of UNRWA staff members. Regrettably, the environment in which the Agency carries out its operations continues to hamper its ability to deliver services. Of equal concern is that these restrictions have had a serious impact on the ability of UNRWA to move staff and provide humanitarian assistance to those in urgent need. Closures and blockades need to be lifted and unhindered access allowed to humanitarian supplies. We support the plea of the UNRWA Chairperson regarding removal of restrictions on the movement of agency staff and goods, as specified in his letter dated 28 September 2006. We salute the staff members of UNRWA for their efforts to assist Palestinian refugees under difficult and often dangerous circumstances.

Mr. Chairman,

UNRWA is the primary source of humanitarian relief assistance to Palestinian refugees. We believe that the Agency’s activities constitute an important component in the struggle for the realisation of peace in the Middle East. Its continued operations in the region are crucial to address the mounting humanitarian crisis among the Palestinians. Under the circumstances, it is imperative that the international community remains firmly committed in carrying out its shared responsibility to provide the vital support required by UNRWA to continue to effectively fulfil its mandate.

Mr. Chairman,

At this juncture, it is critical for the international community, in particular the Middle East Quartet to work closely with the parties with a view to encouraging them to fulfil their commitments and obligations. It must also be ensured that vested interests are not allowed to derail the process. India is confident that a just and comprehensive solution to the conflict is attainable and we call upon all sides to work together to achieve the vision of two States living side by side in secure and recognised borders, based on Security Council resolutions 242, 338, 1397 and 1515.

Thank you, Mr. Chairman.
583. Statement by Member of the Indian Delegation to the UN Shatrughan Sinha on Agenda Item 58: Operational Activities for Development: Operational Activities for Development of the UN System at the 2nd Committee of the 61st session of the UN General Assembly.

New York, November 2, 2006.

Madam Chairperson,

We thank the Secretary-General for the report on ‘Comprehensive statistical data on operational activities for development for 2004’ and the ‘Activities of the United Nations Development Fund for Women’. We associate ourselves with the statement made by the distinguished representative of South Africa on behalf of the Group of 77.

Madam Chairperson,

The report on ‘Comprehensive statistical data on operational activities for development for 2004’ provides a good picture of the distinction between contributions made for humanitarian assistance and for long-term development cooperation. In the context of funding for development cooperation, the Report reveals that while yearly contributions have risen steadily over the last five years, the proportion of core resources has not witnessed a favourable trend. The Report recalls the ‘2004 contributions report’ of UNICEF, which states that, while it highly valued ‘other resource’ contributions, UNICEF’s comparative advantage would be compromised if the imbalance between regular resources and other resources continued.

We note that while there was some kind of balance between core and other contributions from 2000 to 2003, the share of core resources fell substantially in 2004, when these were only 70 per cent of other resources. For the first time over that period even the nominal dollar amount of core resources fell, while the nominal dollar amount of other resources registered its biggest annual increase. The Report recalls that in 2004 only 40 per cent of contributions to UNICEF went to ‘core resources’. It adds that this is the lowest core percentage that UNICEF has ever received.

Madam Chairperson,

Core resources are the foundation of country programmes of cooperation and are necessary for UNICEF, as also other organizations, to perform core functions at the optimal level and to contribute towards
achievement of the Millennium Development Goals. Core resources enable UN funds and programmes to respond quickly to emerging crises and distribute resources based on need and long-term objectives. While recognizing the value of the increase in non-core resources, the General Assembly has repeatedly highlighted the need to enhance the core or regular contributions to the United Nations development system. General Assembly resolution 59/250 (paragraph 20), acknowledges that ‘other resources’ “are not a substitute for core resources”.

The primary requirement for enhancing the capacity of the UN system to achieve development results is, indeed, the availability of adequate, sustainable, timely and predictable funding. The issue of financing for development cooperation, in particular the need for adequate core funding, would therefore, be an important issue that India would stress upon during next year’s discussion of the Triennial Comprehensive Policy Review (TCPR).

**Madam Chairperson,**

India believes that the UN system’s operational activities for development should be valued and assessed on the basis of the contribution they make to the efforts of developing countries to pursue their national development plans and priorities. India emphasises that the UN system’s operational activities should respond to the development needs of developing countries in a flexible manner, while recognizing that these activities are carried out for the benefit of the developing countries and at their request.

The General Assembly has recognized that the fundamental characteristic of the operational activities of the UN development system should be, inter alia, their universal voluntary and grant nature, their neutrality and multilateralism. The strength of the UN operational system lies in its legitimacy at the country level as a neutral, objective and trusted partner for both the recipient and donor countries. India backs the strengthening of these unique characteristics of the UN system’s operational activities for development so that they can better support the long-term development efforts of developing countries.

**Madam Chairperson,**

The Report presents and analyses data on humanitarian contributions and expenditures for the first time. We agree with the Report that countries in need require both humanitarian and development assistance, and that in many cases humanitarian assistance is an essential component in the process of transition from relief to development. The international community needs to maintain its interest and funding for the
relief and reconstruction phases of humanitarian emergencies, long after the eyes of the media have moved on to other stories and new emergencies. General Assembly resolution 59/250 on TCPR recognizes the importance of funding for long-term development as part of a smooth transition process. The resolution recommends that planning for the transition to development and supportive measures in this regard should be taken from the beginning of the relief phase.

The Report notes that humanitarian assistance expenditures have represented, by far, the largest sector in the area of technical cooperation. This is despite the fact that available figures seriously understate the level of humanitarian assistance, especially as they have excluded UNHCR. We agree with the Report that there is need to make the data more representative and transparent.

Madam Chairperson,

The report on the ‘Activities of UNIFEM’ provides an overview of its programmes and activities. Despite being small, UNIFEM has been able to make a contribution in several areas in a large number of countries. We agree that while UNIFEM can contribute to the achievement of the reported results, the outcomes are dependent on the contributions of the national partners in government and non-government organizations.

The Report cites a number of projects in India where UNIFEM had some collaboration. An important project that is achieving concrete results is the partnership between UNIFEM and the Indian Railways to incorporate gender-responsive policies and practices related to HIV/AIDS. The Report labels its collaboration with the third largest employer in the world, as a project that is a ‘recognized model of public-sector intervention’ and adds that UNIFEM, along with UNFPA and representatives of Chinese Railways have visited the programme to look into possible replication.

We have noted the improvement in UNIFEM’s funding situation. We congratulate UNIFEM on attaining a record total income of US$ 57.6 million in 2005 and for exceeding its multi-year funding framework target of US$ 43.4 million. However, core contributions stood at US$ 22 million, as against the target of US$ 25.4 million. We would like to once again emphasize the importance of enhanced core funding to help UNIFEM continue the pursuit of its mandated activities.

Thank you, Madam Chairperson.
Mr. Chairman,

I thank the Chairman of the International Law Commission for his detailed introduction of the Report of the ILC on the present cluster of topics.

On the topic “Effects of armed conflicts on treaties”, we commend the Special Rapporteur, Prof. Ian Brownlie, for his second report.

While the topic is generally part of the law of treaties and not that on the use of force, the topic is also closely related to other domains of international law, therefore, it is not possible to maintain a strict separation between the law of treaties and other branches of international law which may also be relevant to the topic.

The scope of the topic should be limited to treaties concluded between States and not include treaties concluded by international organizations. The definition of “armed conflict” in Draft Article 2 should be considered independently of its effects on treaties. In particular, the present definition would appear to make the existence of an armed conflict contingent on its likely effect on the operation on treaties between the parties to the conflict.

The scope of an “armed conflict” should be limited to conflicts between States and not deal with internal conflicts, as treaties are entered into by States, and internal conflicts do not directly affect treaty relations. Where internal conflicts give rise to circumstances which indirectly affect the operation of a treaty, the effects could be dealt with within the framework of the 1969 Vienna Convention on the Law of Treaties.

While the intention of the parties is relevant for interpretation of a treaty, such intention is to be determined from the text of the treaty, including
its context, and it is highly unlikely that at the time of its conclusion, the parties would have contemplated and provided for the likelihood of a situation of armed conflict arising between them.

All relevant circumstances, including the object and purpose of the treaty, the nature of the conflict or the situation that arises there-from and the nature of the treaty obligation itself, and subsequent actions of the parties in relation to the treaty, should be taken into account for determining whether the treaty or some of its provisions could continue in force, in the context of armed conflicts, as well as the legality of the actions of each of the parties to the conflict.

Mr. Chairman,

Draft Article 7 provides a listing of treaties which, on the basis of necessary implication from their object and purpose, are considered as continuing in operation during an armed conflict. A listing of such treaties would raise the presumption that treaties not covered by those categories would automatically lapse. It may, accordingly, be preferable to identify some general criteria for determining the type of treaties that would continue to apply during an armed conflict. In particular, treaties which expressly apply in case of or during an armed conflict, and therefore, can in no circumstances be terminated by an armed conflict, should be identified and considered separately from other treaties. It would also be useful to identify categories of treaties which could be considered as suspended or terminated during an armed conflict. In particular, these would include treaties which operate through the cooperation and interaction between the States parties, whether at the governmental level, or through individuals and companies.

Mr. Chairman,

Turning now to the topic “the Obligation to extradite or prosecute”, I thank the Special Rapporteur, Mr. Galicki, for his preliminary report on the subject, concerning the substance of the topic, highlighting the most important points for further consideration and including a preliminary plan of action for the future work on the topic. We look forward to receiving further reports from the Special Rapporteur formulating draft rules on the concept, structure and operation of the obligation to extradite or prosecute.

India is a State party to the international conventions against drug trafficking, as well as the United Nations Conventions against terrorism,
and is signatory to the Conventions on transnational organized crime and on corruption, all of which provide for the obligation to extradite or prosecute. While none of these conventions specifically permit reservations to this obligation, the absence of a bilateral extradition treaty may have such an effect in case the law of a State party does not allow extradition without an extradition treaty.

Under Indian law, extradition may take place on the basis of a bilateral treaty or arrangement, or on the basis of a multilateral convention which provides for extradition, and also on an ad-hoc case by case basis. All our extradition treaties provide for the obligation to extradite or prosecute. Extradition may be granted for all offences which are punishable with imprisonment for a minimum of one year. However, since extradition can be granted only when a prima facie case has been established, the obligation to prosecute would arise only if extradition is refused after it is established that all requirements for extradition have been met.

Mr. Chairman,

On the topic “Fragmentation of international law: difficulties arising from the diversification and expansion of international law”, we commend the Study Group and its Chairman, Mr. Martti Koskenniemmi, on the conclusion of the consideration of the topic.

The ILC, in its Report, refers to the dramatic increase in the scope of international law, which from a tool for the regulation of formal diplomacy, has expanded to deal with the most varied kinds of international activity, from trade to environmental protection, from human rights to scientific and technological cooperation.

According to the ILC, this expansion has taken place in an uncoordinated fashion, within specific regional or functional groups of States, and has led to the fragmentation of international law, as the focus has been on solving specific problems through the emergence of specialized and autonomous rules or rule-complexes, legal institutions and spheres of legal practice.

The Commission also recognizes that while fragmentation does create the danger of conflicting and incompatible rules, principles, rule-systems and institutional practices, it also has a positive effect, as it accounts for the development and expansion and is a sign of the vitality of international law.
The “42 conclusions” identified by the ILC, based on application of the provisions of the Vienna Convention on the Law of Treaties, the hierarchy between norms of international law and the principle of harmonization, set out some of the principles that should be taken into account when dealing with actual or potential conflicts between legal rules and principles, and should prove very useful to practitioners and legal advisers as guidelines in dealing with the practical consequences of the widening scope and expansion of international law.

Thank you, Mr. Chairman.

585. Statement by Member of the Indian Delegation to the UN Mufti Mohammed Sayeed on Agenda Item 49: Sport for Peace and Development at 61st session of the UN General Assembly.

Madam President,

We thank the Secretary-General for his report on “Sport for Development and Peace: The way forward”. We note that the report reviews the achievements of the International Year of Sport and Physical Education 2005, including the broad range of activities, and initiatives carried out worldwide by Member States, the UN system and other stakeholders for continuing the momentum generated by the International Year.

Madam President,

Activities relating to Sports and Physical education are necessary components of human resource development. They have a positive impact on the overall personality of youth through the promotion of good health, comradeship and a spirit of friendly competition. Apart from providing beneficial recreation, Sports also improve productivity and foster social harmony and discipline.

India believes in the key role of sports in national life. Given the importance of sports and games, the Government of India has taken several initiatives to improve the standard of sports in the country. In the modern
world, the complexion of sports has undergone a transformation due to the use of modern equipment and introduction of modern infrastructure and highly sophisticated equipment. The high degree of competitiveness in international sports has led to nurturing of talent from a tender age, and to greater emphasis on hard and physical training along scientific lines.

Madam President,

Despite resource constraints, India has been making efforts for broad-basing sports and provision of modern sports infrastructure. The Government has focussed its attention on the need for upgrading the skills of the coaching fraternity and provision of adequate sports-science backup. The Government has encouraged the National Sports Federations to function more efficiently and is also encouraging the active involvement of business and industry in the promotion of sports. The Government of India formulated a New National Sports Policy in 2001, keeping in mind these objectives.

India has a long tradition of sports and physical fitness. In keeping with this tradition, the Government of India has instituted several sports awards to encourage achievements by sportspersons. The Government is also encouraging international cooperation in the field of sports and physical education and has been providing financial assistance to recognised National Sports Federations.

The Sports Authority of India was established by the Government in 1984 to achieve the twin objectives of broad-basing of sport and nurturing talent in children of different age groups by providing them with the necessary infrastructure, equipment, coaching and other facilities. The Sports Authority is implementing a number of Sports Promotion Schemes. Under one of its schemes it established a Sports Medicine Centre, which is operational full-time. The Sports Authority also maintains a Dope Control Centre.

Government of India has been promoting sports through several schemes that provide incentives for encouragement of sports activities. The Sports Fund for Pension to Meritorious Sportspersons was launched in 1994 and is providing pension to about 375 sportspersons. A scheme for Promotion of Sports and Games in Schools was introduced in 1986 to raise the standard of sports at the school level and to encourage participation in inter-school competitions. To broad-base games and sports in rural areas, the Government launched the Rural Sports Programme in
1970-71. Under this scheme, tournaments are also organized for indigenous sports popular in different parts of the country. The Sports Scholarship Scheme was launched in 1970-71 to assist talented boys and girls to receive a nutritious diet, sports equipment support and to pursue sports as a career option. A National Welfare Fund for Sportspersons was set up in 1982 to assist retired outstanding sportspersons. Under this scheme, pension and grants are provided to eminent sportspersons as well as their families. A National Sports Development Fund has been instituted to mobilise resources for Government and non-governmental sources, including the private and corporate sector.

Madam President,

We have taken note of the various activities organised by the UN system to help build on the momentum of the International Year. We encourage the UN system to undertake activities for Sport for Development and Peace and to develop indicators and benchmarks for evaluating and monitoring these activities. We agree with the Secretary-General that it is the national governments that are responsible for the achievement of the Millennium Development Goals. We have taken note of the Secretary-General's suggestion to Member States for maximizing the positive impact of sports and realizing the full potential of this powerful tool. India recognizes the positive value of sport as an instrument that can bring people together in a neutral and apolitical setting. In our neighbourhood, the game of cricket has sometimes served as an instrument of diplomacy, adding a new phrase to our lexicon, namely "cricket diplomacy".

Madam President,

India believes that sports activity is integral to the all round development of the human personality. We have, therefore, remained engaged with the efforts of the Special Adviser to the Secretary-General on Sport for Development and Peace, including his efforts to organise the United Nations Global Youth Leadership Summit. We are convinced that the engagement of Youth will help energise the efforts of countries to achieve the Millennium Development Goals. We support efforts by the UN system to generate awareness among the Youth through such initiatives.

Thank you, Madam President.
586. Statement by Member of the Indian Delegation to the UN Shatrughan Sinha on Agenda Item 65: Elimination of Racism and Racial Discrimination and Agenda Item:66 Right of Peoples to Self-Determination at the 3rd Committee of the 61st session of the UN General Assembly.

Mr. Chairman,

We thank the Secretary-General for his report under the Agenda Item 65 ‘Elimination of Racism and Racial Discrimination’. We also thank Mr. Doudou Diene, Special Rapporteur on Contemporary forms of Racism, Racial Discrimination and related Intolerance, and Mrs. Amada Benavides, Chairperson of the Working Group on the Use of Mercenaries as a means of impeding the exercise of the right of peoples to self-determination, for their introductory statements. My delegation associates itself with the statement made under the Agenda Item 65 by the distinguished representative of South Africa, as the Chairman of the Group of 77.

The report of the Secretary-General concludes that despite taking important steps both at international and national levels to combat racism, racial discrimination, xenophobia and related intolerance, much more remains to be done. The Special Rapporteur’s findings of an alarming retreat in the struggle against racism, racial discrimination and xenophobia is a matter of concern. In this connection, my delegation feels that implementation of the commitments made in the Durban Declaration and Programme of Action with a strong resolve is of key importance to foster social harmony benefiting all.

Mr. Chairman,

As we work towards a world free of the racial prejudices of the past, we must especially guard against new manifestations of racial intolerance. We continue to witness instances of destruction of constitutional order to promote policies based on racial or ethnic discrimination. The battle against racism has to be fought within societies in each nation so as to change thought-processes and attitudes. In addition to international efforts, action by States for the promulgation of stringent national laws, their strict implementation, and the setting up of independent national institutions with
powers to address manifestations of racism, needs heightened attention. The Special Rapporteur’s call to promote the link between the struggle against racism and xenophobia and the recognition and promotion of multiculturalism needs to be explored further.

The commitment of India to the elimination of racism is well recognised. The contribution of our great leaders, such as Mahatma Gandhi, to the fight against racism is significant, historic and memorable. It was, therefore, natural that at independence, adequate safeguards were built into the Indian constitution and the Indian Penal Code against dissemination of ideas that promote disharmony in the country. The Constitution of India, in Article 15, expressly prohibits discrimination on the grounds of race and this constitutional guarantee is vigorously implemented. In addition, an energetic and committed non-governmental sector in India provides necessary support for eliminating all forms of discrimination.

Mr. Chairman,

India has played a leading role in the struggle for decolonisation, and was at the forefront of the movement to secure the right of peoples to self-determination so that those under alien subjugation, domination and exploitation could freely determine their own political status and pursue their economic, social and cultural development.

Today, Palestine remains the unfinished task in the realisation of the right of peoples to self-determination. India has maintained unwavering support and solidarity for the people of Palestine to attain their inalienable rights, including the right to self-determination. This has been a central feature of India’s foreign policy since even before it achieved independence. We believe that there can be no military solution to the Palestinian issue. India has joined the international community in voicing its concern over the endless cycle of violence and counter-violence that has characterised the current phase of this conflict. India has maintained consistently that violence was a serious impediment to the peace process, and that the solution did not lie in more violence but in pursuing the path of political dialogue.

At this juncture, it is critical for the international community, in particular the Middle East Quartet to work closely with the parties with a view to help realise the dream of the peoples of Palestine and Israel to live in peace, side by side, within recognised and secure borders, thus realising the right to self-determination of the Palestinian people. In this context, we would like to underline the need for the international community to exercise
due vigilance in ensuring that the legitimate freedom struggle of the Palestinian people is not undermined by equating terrorist activities with the struggle of the people of Palestine.

Self-determination has long been recognised as the right of peoples of non-self governing colonies and trust territories to independence and self-government. Attempts continue to be made at the United Nations and elsewhere to reinvent some of the basic principles of the Charter, such as self-determination, and to apply them selectively for narrow political ends. Those who do so would do well to realise that such a reinterpretation may sweep their own countries into its vortex.

No right, including the right to self-determination, may be used as an instrument to promote subversion and erode the political cohesion or territorial integrity of Member States of the UN. The right to self-determination cannot be abused to encourage secessionism and undermine pluralistic, democratic states. Moreover, there is no room for self-determination to be distorted and misinterpreted as a right of a group, on the basis of ethnicity, religion or racial criteria, or any other such categorization, and use it to attempt to undermine the sovereignty and territorial integrity of States. Ethnic or religious segregation and chauvinism cannot be legitimised on the ground that societies need to be constituted on homogenous lines before they can be tolerant towards diversity and accept multi-culturalism. Such a view will only aid forces of narrow chauvinism and ethnic, religious and racial exclusivity.

The reference to the Indian State of Jammu and Kashmir in the statement made by the delegate of Pakistan earlier today is irrelevant to the deliberations in this forum, which is meant to focus on the right of peoples to self-determination.

It would suffice to point out that the people of Jammu and Kashmir exercised their right of self determination at the time of India’s independence and have since then repeatedly participated in free, fair and open elections at all levels. In contrast, Pakistan continued to deny such opportunities to its own people and those in Pakistan Occupied Kashmir.

By its references earlier today the delegation of Pakistan is trying to divide the ranks of those who support the inalienable rights of the Palestinian people to self-determination. It will not succeed in its efforts.

On our part, we are convinced that bilateral issues should be resolved
bilaterally. India and Pakistan are discussing a whole range of issues in the framework of the bilateral composite dialogue. We look forward to improved relations between our two countries.

Thank you, Mr. Chairman.

587. Statement by Member of the Indian Delegation to the UN Shatrughan Sinha on Agenda Item 32: Report of the Special Committee to Investigate Israeli practices affecting Human Rights of the Palestinian People and other Arabs of the Occupied Territories at the 4th Committee of the 61st session of the UN General Assembly.

Mr. Chairman,

We appreciate the opportunity to discuss the report of the Special Committee to Investigate Israeli Practices Affecting Human Rights of the Palestinian People and other Arabs in the occupied territories, under Agenda Item 32. It is timely and meaningful, given the situation before us on an issue that the Secretary-General has eloquently described as "carrying a powerful symbolic and emotional charge for people throughout the world".

Mr. Chairman,

Since the last report of this Special Committee, there were moments that held out hope for a better day ahead in the painful saga of the Middle East. India welcomed the implementation by Israel of its disengagement plan from the Gaza Strip and parts of the West Bank. We saw this as a positive development; a significant first step that we hoped would culminate in a mutually acceptable, negotiated settlement in accordance with the Roadmap and relevant UN Security Council resolutions. Similarly, we had nurtured hopes that this year's elections in the Palestinian National Authority would enable the peace process to resume, just as we hoped that the formation of a new coalition in Israel in March this year could perhaps lead to a redefinition of entrenched positions.
However, these hopes have been belied by events this year. We have watched with dismay as the reluctance of the international community to deal with the newly-elected Palestinian government led to both an almost-complete suspension of international assistance and non-payment of taxes and revenues by Israel to the Palestinian authority. The result has been an almost total collapse of the Palestinian economy, contributing more frustration and anger to an already volatile situation. There has been a resumption of rocket attacks and suicide bombings by Palestinian militants in Israeli territory and massive, disproportionate Israeli violence that impacts grievously upon ordinary Palestinians. The abduction of an Israeli soldier, and the massive retaliation, including detention of elected representatives, has made it harder for either side to de-escalate the situation. Daily acts of violence continue to take place almost routinely.

Mr. Chairman,

India is deeply concerned at the ongoing conflict in the Middle East. Support for the Palestinian cause is a central feature of India’s foreign policy. Over sixty years of violence convince us that there can be no military solution to the Palestinian issue. We have joined the international community in voicing concern over the endless cycle of violence and counter-violence that characterizes the current phase of this conflict. Violence remains a serious impediment to the peace process, and a solution does not lie in more violence, but in pursuing the path of political dialogue.

India condemns all acts of terrorism, provocation and incitement to violence as well as harsh and disproportionate retaliatory measures. We believe that the world should collectively exhort all parties to exercise utmost restraint, abjure violence, and return to the negotiating table and thereby make progress towards a peaceful solution that will lead, within a reasonable time frame, to the creation of a sovereign, independent and viable Palestinian State within well-defined and secure borders, living side-by-side and at peace with Israel.

Mr. Chairman,

The focus of the Report of the Special Committee, as contained in document A/61/500, is on the human rights of the Palestinian people. Human rights are universal and indivisible in nature and we have strongly espoused the philosophy of “all human rights for all people”. Apart from the reprehensible extension of collective punishment of the entire Palestinian people, the report outlines various human rights that have been
violated in the occupied Palestinian Territories. It chronicles rights violated by restrictions on daily life; by the continued construction of the separation wall and the provision of segregated roads for settlers; and by the devastation of the Palestinian economy and civil infrastructure.

Mr. Chairman,

It is in this unhappy context that the thirty-eighth report of the Special Committee is set. We cannot but regret that this year, not only has the Committee been unable to visit the Occupied Palestinian Territories or the Syrian Golan, it has also been unable to carry out its annual site visit to the Middle East at all. While the report is a credible effort to collate information from the ground and to examine the impact of the ongoing tragedy in the occupied territories upon the human rights of the Palestinian and other Arab peoples in these lands, there is no gainsaying the fact that the report would have benefited from a site visit, at the very least, to the region itself.

This is all the more a matter of concern since, as the report observes, “not since the inception of its mandate in 1968 has the Committee ever confronted such anger and misery among the Palestinian people and other Arabs in occupied territories and disrespect for their basic human rights and fundamental freedoms.”

More disturbing is the fact that this sense of desolation and frustration is leading people in the region to increasingly call into question the very role of the United Nations in the current crisis, and to wonder if their plight has been neglected by the international community.

Such reports are a frightening augury for the future. It is in recognition of the terrible implications of continued misery, frustration and bitterness in the region that we have launched efforts on a modest scale, to contribute to the amelioration of the unfolding humanitarian crisis in Palestine. For instance, earlier, we had extended material and technical assistance, including in the infrastructure and pharmaceuticals sectors, to help consolidate progress towards self-government and nation-building. We have pledged US$3 million as donor assistance to the PNA, and projects have been completed in the field of higher education and training slots have been offered. A grant of US$15 million was announced during President Mahmoud Abbas’ visit to India last May. This May, in response to a request from the Palestinian authorities, we announced humanitarian assistance worth Rs.100 million, primarily in the form of medicines and medical supplies; its first tranche was delivered in August.
Mr. Chairman,

We are deeply concerned by the humanitarian crisis that the report outlines so starkly. We call on all parties to show restraint and avoid action that could worsen the humanitarian and economic plight of the Palestinian people. We urge adoption of urgent measures in accordance with the Roadmap, to improve security and the humanitarian and economic conditions of the Palestinian people. We also affirm our support for most recommendations and requests made to the General Assembly, the Israeli Government and the Palestinian Authority, by the report of the Special Committee. We support the suggestion that the Special Committee be provided a renewed mandate in line with current realities; one that takes into account the hopes, aspirations and also the deep-rooted sense of frustration of those living in the occupied territories.

Mr. Chairman,

India reaffirms its commitment to a negotiated two-State solution agreed between the parties that would result in a viable, contiguous, sovereign and independent Palestinian State existing side-by-side with Israel in peace and security.

We regard the Roadmap, as the framework for a resolution of the Israeli-Palestinian conflict. We support the call of the Secretary-General to consider innovative ways by all sides in order to take steps to fully implement the Roadmap which would lead to, without delay, a fair, stable and equitable solution to the conflict based on relevant UN resolutions, including Security Council resolutions. We also welcome the announcement by the Quartet principals in September this year, of the continuation and extension of the Temporary International Mechanism, to provide a channel for the donor community to extend need-based assistance directly to the Palestinian people. We hope that the process of reviving the peace process, symbolized by the Ministerial-level meeting at the Security Council on the margins of the General Debate this September, will eventually lead to a clearly-defined and comprehensive peace. We hope that in the months ahead, the Quartet and the regional parties, will help de-escalate the situation, end the cycle of violence and counter-violence, and remove restrictions on the normal functioning of the Palestinian economy and society. This will help create an atmosphere conducive to resuming direct negotiations with a time bound solution that brings peace to this sorely troubled land.

Thank you, Mr Chairman.
Statement by Member of the Indian Delegation to the UN A. Vijaya Raghavan on Agenda Item 18: Necessity of ending the Economic, Commercial and Financial Embargo imposed by the United States of America against Cuba at the 61st session of the UN General Assembly.

Madam President,

We associate ourselves with the statement made by South Africa on behalf of the Group of 77. The embargo and sanctions imposed by the United States against Cuba has been in place for over four decades and has been a subject of discussion in the General Assembly for the fifteenth time in succession.

The embargo has had an impact on the Cuban efforts towards the eradication of poverty, improving livelihoods and promoting socio-economic development. They also hinder the full enjoyment of human rights, such as the right to development, right to food, medical care and social services which, despite these constraints, are of a high order. The American Association for the World Health concluded that in the case of the impact on the Cuban health system, the embargo “caused a significant rise in suffering with patients going without essential drugs or doctors performing medical procedures without adequate equipment”. The embargo also continued to have an impact on food aid deliveries. The negative impact of the embargo in the educational sector is linked to trade restrictions that prevent the purchase of needed inputs at more competitive prices.

They have limited Cuba’s access to markets, capital, technology and investment and are not in conformity with multilateral trading regimes and cannot be justified even under the GATT exception clause of “essential security interests”. In a normal situation, Cuba and the United States would be natural economic partners, benefiting mutually from trade. It is our understanding that a considerable part of US businesses would like to take advantage of the Cuban market. The imports of “food and agriculture” from United States, which account for 13% of total Cuban imports of Cuban “food and agriculture”, reflected the impact of the US legislation enacted in 2000 that eased food and medicine sanctions against Cuba. According to some estimates, the potential loss to US business ranges between dollars one billion to fifteen billion.
This Assembly has pronounced its rejection of the imposition of the laws and regulations with extra territorial impact and all other forms of coercive economic measures. The Assembly had adopted resolutions urging all countries to comply with the Charter and principles enshrined in the legal instruments and to repeal or invalidate all laws and measures that carry “extraterritorial effect”, bearing on the sovereignty of other States, the legitimate rights and interest of peoples or entities under their jurisdiction, and the freedom of trade and navigation. Sanctions, irrespective of their purpose, have to comply with the customary international law principle of non-intervention and proportionality.

We share the views expressed by the countries which have reiterated their opposition to the extra-territorial aspect of the economic embargo that had been implemented in accordance with the 1992 Cuban Democracy Act (the so-called Torricelli Law), and the 1996 Helms Burton Act, through which the extra-territorial reach of the embargo encompasses foreign companies as well as foreign subsidiaries of US companies doing business with Cuba.

Madam President,

India has consistently opposed any unilateral measures by countries, which impinge on the sovereignty of another country. These include any attempt to extend the application of a country’s laws extraterritorially to other sovereign nations. India believes that efforts to consolidate endeavours toward the creation and strengthening of conducive economic environment capable of providing equal opportunities to all countries are required and that the international community also needs to redouble its efforts to have an environment free from sanctions and embargoes.

Thank you, Madam President.
Madam Chairperson,

We thank the Secretary-General for his reports on the agenda item under consideration today. We would also like to associate ourselves with the statement made by the distinguished representative of South Africa on behalf of the Group of 77.

Madam Chairperson,

The Almaty Programme of Action provides a framework for developing efficient transit transport systems in landlocked and transit developing countries. It recognises the fact that for meaningful and viable solutions to the transport problems of landlocked developing countries, it would be necessary to address the constraints and challenges faced by their transit developing countries in a holistic and integrated manner. Building of roads, railways and ports as well as maintaining physical infrastructure involves high costs. It is imperative that the international community and the donor countries commit additional financial resources and technical assistance for capacity building in physical infrastructure.

We trust that the General Assembly will keep the implementation of the Almaty Programme of Action under review. The proposed mid-term review in 2008 would no doubt provide an impetus to the implementation of goals and commitments contained in the Almaty Programme of Action.

While transit developing countries face many challenges, they take on additional costs of providing transit transport facilities to landlocked countries even when areas in their own countries remain as remote from the sea as those of landlocked countries. The transit developing countries
undertake this in a spirit of co-operation and friendship. India enjoys close and historical links with both its landlocked neighbours, Bhutan and Nepal. India accords the highest priority to enhancing its friendly and good neighbourly relations with them, including through the strengthening of trade relations and cooperation on transit transport issues.

The result is evident. The largest share of foreign investment in one of our land-locked neighbours is from India; and, as per a report of the UNCTAD Secretariat, the transport costs for one of the landlocked neighbours is about one third the average for landlocked countries and half of that for developing countries.

**Madam Chairperson,**

The Brussels Programme of Action provides the framework for addressing the multifarious challenges confronting Least Developed Countries [LDCs]. Reports considered in the preparatory process for the mid-term review of the Brussels Programme of Action, while recognizing that many LDCs have achieved relatively high rates of economic growth, stressed the need for developing productive capacities in the LDCs for sustained economic growth. UNCTAD’s Least Developed Countries Report 2006 underlines that the sustainability of the recent growth performance would depend in particular on the extent to which existing and additional ODA and FDI are channeled into productive investment, while noting that the recent increases in the ODA were largely directed towards debt relief and emergency assistance. It is no coincidence that the mid-term review recognised that the situation in the least developed countries required continued attention of their development partners in the implementation of the Brussels Programme of Action. The development partners thus need to move vigorously in supporting the efforts of LDCs and other developing countries in achieving higher growth rates, improving service delivery and reducing poverty with more and better aid, debt relief and improved market access.

ODA disbursements to LDCs are more than a third short of the agreed target. While private sector investment is important, in several LDCs the physical and social infrastructure is too weak to attract any. Therefore, sequencing is important and fulfilment of the commitment by the developed countries to meet the 0.15-0.20 percent target for ODA to LDCs remains crucial.

The issue of debt is critical for many LDCs. We welcome the Multilateral Debt Relief initiative and look forward to the G-8’s political
intentions being fully converted into unqualified commitment. India, on its part, has demonstrated its commitment to help LDCs, which are in a particularly difficult position, in reducing their external debt burden by writing off the debt owed by seven Highly Indebted Poor Countries [HIPC}s] who had reached their ‘decision points’.

Debt relief through HIPC initiative or MDRI alone is not sufficient unless accompanied with efforts to improve debt management capacity and a proactive approach to assist achieve higher growth, enhanced exports performance and revenue mobilization through better market access and enhanced trade related opportunities. We welcome the steps taken by some development partners to open up their markets to exports from LDCs. The expansion in trade between LDCs and other developing countries has been significant in recent years. The share of LDC exports to other developing countries reached 34 percent in 2002, an increase of 20 percent in less than 15 years. The share of other developing countries in LDC imports increased during the same period by almost 25 per cent and reached 56 percent. These figures are an eloquent testimony to the potential for enhanced South-South cooperation. The launching of the third round of negotiations for the Global System of Trade Preferences holds promise in terms of immensely benefiting both LDCs and other developing countries. India is also in the process of finalising a package for preferential market access for LDC products.

India has been a strong votary of South-South cooperation. We have constantly tried to increase mutually beneficial economic cooperation with all LDCs in general, and with those in our extended neighbourhood, in particular. We have had a programme of economic and technical cooperation for more than four decades, involving the training of many nationals from these countries in Indian institutions and the dispatch of Indian experts in identified areas to them.

Africa has always been a high priority for India and we are strengthening our cooperation through NEPAD and through other efforts such as TEAM-9 for Western Africa. Our commitment in terms of lines of credit and other concessional financial assistance add up to almost US$ 1 billion. We are also working on a Pan-African Network which would be a major satellite and fibre optic connectivity mission that would cover the entire continent of Africa, enabling a network linking learning centres, universities, hospitals in every country in Africa with counterpart institutions in India that have a proven expertise in these fields.

Thank you, Madam Chairperson.
590. Statement by Member of the Indian Delegation to the UN Mufti Mohammed Sayeed on Agenda Item 40: Report of the UN High Commissioner for Refugees, Questions Relating to Refugees, Returnees and Displaced Persons and Humanitarian Questions at the 3rd Committee of the 61st session of the UN General Assembly.

Mr. Chairman,

My delegation thanks the UN High Commissioner for Refugees, Mr. António Guterres, for his report and introductory statement which provide an account of activities undertaken by UNHCR as well as his vision for addressing the present and future challenges. We would also like to express our satisfaction on the adoption of the thematic conclusions by UNHCR’s Executive Committee in October on Statelessness and Women and Girls at Risk which will contribute towards strengthening of protection framework.

We note with satisfaction from the report that global refugee numbers are now the lowest in last 25 years. Mass outflows of new refugees in 2005 were also the lowest in 29 years. However, recent data indicate a drop in annual voluntary repatriation figures and this negative trend needs to be arrested. Also, there has been a significant increase in the total population of concern to UNHCR primarily on account of new situations of internal displacement.

Mr. Chairman,

We agree with the High Commissioner that protection must remain at the core of UNHCR’s work. New challenges arising out of situations of internal displacement should receive greater attention. However, this must not be at the expense of UNHCR’s core activities.

The High Commissioner has called for the UNHCR to play a more active role with regard to internally displaced persons. He has reported that UNHCR has assumed the global cluster lead for conflict-induced internal displacement situations in the areas of protection, camp management & coordination and emergency shelter and is undertaking activities in this framework. UNHCR’s enhanced focus on IDPs should not result in neglect of refugees, which have the first charge on its mandate and its limited resources. Further, UNHCR’s role in situations involving
IDPs should be on the basis of explicit requests by the States concerned. It should also take into account the complementarities of mandates and expertise of other relevant organizations. We welcome the commencement of discussion in the framework of the meeting of the Executive Committee on clarifying UNHCR’s role with regard to IDPs and look forward to its continuation. Another area where UNHCR’s role requires further discussion and elaboration pertains to mixed migratory flows. With Globalization, we witness more and more situations of mixed migratory flows. We must develop capacities to differentiate refugees from economic migrants so as to better address their protection needs.

Mr. Chairman,

The search for durable solutions to various refugee situations must be intensified. Here, our preference remains for voluntary repatriation. We have seen application of the 4Rs approach of Repatriation, Reintegration, Rehabilitation and Reconstruction in some countries, with positive results. We support extending its application to other programmes. It is also important to ensure timely implementation of rehabilitation and reconstruction initiatives to ensure the sustainability of the reintegration of those who have been repatriated. The protection of refugees must be seen in the larger socio-economic context in which it occurs and in the light of some of the basic causes that are responsible for generating mass displacement, particularly extreme poverty and lack of adequate resources for economic and social development.

The High Commissioner’s report outlines measures taken by UNHCR for strengthening implementation of the 1951 Convention and 1967 Protocol. These instruments are indeed the cornerstone of the international refugee protection regime. They were, however, adopted in the specific context of conditions in post World War II Europe. These instruments do not cover a number of issues that are of significance today, particularly the phenomenon of massive refugee flows and mixed migration.

Mr. Chairman,

India’s commitment to humanitarian issues is second to none. We host a large number of refugees. Our protection regime is based on the fundamental rights guaranteed by the Indian Constitution and is superior to that in many developed countries. Our efforts in this area have been widely recognised and appreciated, most recently by the Goodwill Ambassador of the UNHCR Ms. Angelina Jolie. We will continue to work in
concert with the international community to address the new and emerging challenges to the international protection agenda.

Finally, Mr. Chairman, we support the High Commissioner’s efforts for structural and management reforms, which are aimed at making the organization more flexible, effective and result-oriented. In particular, we welcome his efforts to reduce staff costs which will release much-needed funds to support operations. We also believe that the ongoing efforts to enhance the accountability and transparency in UNHCR’s working methods must be continued. The organisation must preserve its impartiality in operations as well as its non-political character and work in close cooperation with the concerned States in achieving its goals.

Thank you, Mr. Chairman.

591. Statement by Member of the Indian Delegation to the UN A. K. S. Vijayan on Agenda Item 119: Improving of the Financial Situation of the Organisation at the 5th Committee of the UN General Assembly.

New York, November 9, 2006.

Mr. Chairman,

We would like to thank the Controller, Mr. Warren Sach for his presentation of the financial situation of the United Nations. My delegation aligns itself with the statement made by South Africa on behalf of the G-77 and China.

Mr. Chairman,

My delegation firmly believes that unconditional, timely and full payment of legitimate dues is a fundamental obligation which the UN charter imposes on all Member States according to their capacity to pay. In our opinion, it is not just a legal obligation but a moral one as well. Provision of adequate financial resources to the Organization is mandatory, if we expect the implementing entities to deliver the tasks mandated to them. It is all the more distressing when those with more than adequate means are essentially responsible for not paying their dues in full, on time and without conditionality, thereby creating the financial crisis often faced by the Organization. We as Member States need to do some introspection before we simply blame the
managerial and institutional failures as being solely responsible for the alleged inefficiencies and ineffectiveness of the United Nations.

Mr. Chairman,

Our Organization represents the collective will of human civilization. As Member States, it is our solemn duty to provide the Organization with all possible resources for it to execute our will. Millions of lives throughout the globe are dependent on the good work being carried out by the United Nations. It is unfortunate that, time and again, we are confronted with a situation where the Organization's financial viability creates a question mark on its capacity to perform its expected role. We have to decide in our own wisdom whether the financial solvency of the United Nations is in our collective interest.

Mr. Chairman,

While acknowledging that due to payments in the last quarter of 2005, unpaid contributions to the regular budget were down by US Dollar 58 million and currently stood at US Dollar 661 million, we note with concern the uncertainty regarding the position of the regular budget for this year, as it would depend on the action of a few member states in the near future, particularly the largest contributor accounting for nearly 80% of the outstanding dues. It is noteworthy that if the largest contributor were to pay its 2006 assessment in full, the Organization could have cash balance at approximately the same level as at the end of 2005 or else it would have to borrow over US Dollar 200 million from the reserve account. Financial uncertainty is never good for any organization less so for ours. Its sustained presence would derail us from important agenda items that are before us and we would be found guilty before our people for failing to deliver what they expect of us. We, therefore, call for an expeditious correction of the current situation.

Mr. Chairman,

My delegation is also distressed by the fact that as on 31st October 2006 an amount of over US Dollar 2.5 billion is outstanding for peacekeeping operations. As with the regular budget, over half of the total was owed by two Member States. Consequently, the Organization’s outstanding obligations to Member States that contribute troops and equipment to peacekeeping operations has been projected to grow by over $ 300 million this year. Adequate funding of peacekeeping operations is not merely a question of financial book-keeping but it involves a larger issue of the United Nations’ credibility and its ability to fulfill the commitments made by the international
community while resolving conflicts in various parts of the world. At the same time, those Members States who have steadfastly contributed troops and equipment to UN peacekeeping operations should not be denied their legitimate dues and be penalized for their allegiance to the principles and purposes of the UN Charter.

Mr. Chairman,

The only way to resolve these issues is for Member States to meet their financial obligations to the United Nations in a fuller and timelier fashion, particularly those who have no legitimate reasons to withhold their obligations.

Thank you, Mr. Chairman.

592. Statement by Member of the Indian Delegation to the UN A. K. S. Vijaya on Agenda Item 148: Report of the Committee on Relations with Host Country at the 6th Committee of the 61st session of the UN General Assembly.

New York, November 9, 2006.

Thank You Mr. Chairman

The Committee on Relations with the Host Country is a useful forum for addressing the issues related to the functioning of Member States’ missions and for enabling their representatives to perform their functions without any hindrance.

This year the Committee had examined a number of problems related to transportation, privileges and immunities of diplomatic personnel, entry visas and the host country’s travel regulations. The open and transparent exchanges of views in this forum prove helpful in understanding and addressing the issues in question.

We appreciate the United States commitment as the host country to fulfill its obligations under the Convention on the Privileges and Immunities of the United Nations and the Host Country Agreement, to accord facilities
to the missions accredited to the United Nations to ensure their smooth functioning.

The issue relating to imposition of municipal taxes on diplomatic missions is one such issue to which the host country is giving due attention.

Mr. Chairman,

We recognize that the host country has a right to monitor and control entry into its territory and to adopt the requisite security measures it deems necessary. This has to be balanced, one the one hand with the right of the delegations to participate in the work of the United Nations and on the other to ensure that the delegations do not misuse their privileges and immunities.

We welcome the steps taken to address the parking problems of diplomatic missions through the efficient implementation of the Parking Program for Diplomatic vehicles and hope that the remaining issues in this respect, including the request for parking slots by our Mission, would also be addressed soon.

Thank You Mr. Chairman

593. Statement by Member of the Indian Delegation to the UN Shatrughan Sinha on Agenda Item 68: Human Rights Council Report at the 61st session of the UN General Assembly.

Madame Chairperson,

My delegation thanks the President of the Human Rights Council for forwarding the Report of the Human Rights Council. We convey our appreciation to him for steering the work of the Council in an effective and efficient manner.

My delegation also conveys through you, Madame Chairperson, to the President of the Council our full support in his endeavours.
At the outset, we would like to express our satisfaction over the decision adopted by the UNGA on consideration of the Report of the Human Rights Council. As the HRC is a subsidiary body of the UN General Assembly, it is natural that all reports and recommendations of the HRC be transmitted to the GA Plenary through the Third Committee, where the expertise on human rights issues resides. However, we are conscious of the delays that may occur in consideration of the Report if it were to be referred to the Third Committee in its totality, given the different schedules of the two bodies. We also recognise that the HRC began functioning since June 2006, and hence there is a need to adopt a flexible approach during the first year, and to formalize the reporting arrangements between the UNGA and the HRC based on our experience over the next year.

Madame Chairperson,

The creation of the new Human Rights Council by the UN General Assembly reflects the collective resolve and commitment of the Member States to constantly adjust and improve the framework for addressing human rights challenges. It remains our expectation that the new body in its work would be guided by the spirit of cooperation and mutual understanding. We hope the HRC would evolve an even-handed approach in its promotion and protection of all human rights and translate the Right to Development into a reality. It should promote human rights through international cooperation and genuine dialogue among Member States, including capacity-building and mutual assistance, and emerge as a forum for voluntary participation and sharing of national experiences and best practices in promotion and protection of all human rights and fundamental freedoms.

Madame Chairperson,

The UNGA resolution establishing the Council defined the broad parameters of the Council’s architecture. It also mandated the Council to develop the modalities of its new mechanisms within one year. The Council is also required to improve and rationalise all mandates, mechanisms and functions and responsibilities of the former Commission on Human Rights.

The HRC has so far held two regular and two special sessions. As we note from the Report, the Council has set up two inter-governmental Working Groups to devise Universal Periodic Review mechanism and to undertake the review and rationalisation of mandates and mechanisms of the former Commission on Human Rights. Meanwhile, the Council has taken interim decisions to facilitate uninterrupted functioning of the existing mandates during the transitional period.
The Council also took action on substantive human rights issues, most notably its recommendations to the UNGA on the adoption of the Declaration on the Rights of Indigenous Peoples and the International Convention for the Protection of All Persons from Enforced Disappearance. We note with satisfaction that the mandate of the Working Group on the Right to Development has been extended by one year. Further, by holding two special sessions, the HRC has demonstrated its ability to swiftly react to human rights emergencies.

We remain conscious of the enormous challenges ahead of the HRC in defining and operationalising its architecture. Some progress in this regard has already been made within the framework of informal meetings of the two Working Groups. However, a lot remains to be done and therefore the focus of the Council’s work during the remainder of the year should be on institution-building. The success of the Human Rights Council would, to a large extent, depend on the outcome of these processes.

Madame Chairperson,

India had actively and constructively participated in the multilateral negotiations that led to the establishment of the new Human Rights Council. We remain committed to continue to work to make the Human Rights Council a strong, effective and efficient body capable of promoting and protecting human rights and fundamental freedoms for all.

Thank you, Madame Chairperson.

594. Statement by Member of the Indian Delegation to the UN A. Vijaya Raghavan on Agenda Item 57: Eradication of Poverty and other Developing Issues: [A] Implementation of the First UN Decade for Eradication of Poverty 1997 – 2006 at the 2nd Committee of the 61st session of the UN General Assembly.

Madam Chairperson,

We thank the Secretary-General for his reports under this agenda item. The annual consideration of this item in the Second Committee affords
us an opportunity to take stock of the progress achieved so far, to identify the bottlenecks and to put in place appropriate responses to overcome these bottlenecks. Ten years after the launch of the first United Nations Decade for Eradication of Poverty, the international community is still devising effective mechanisms to eradicate poverty; the progress on meeting the Millennium Development Goal (MDG) target of halving extreme poverty and hunger by 2015 presents a stark and grim reminder that so much still remains to be done.

Madam Chairperson,

The challenge is formidable. We need a strategy for development which focuses on economic growth on a broad front with specific programmes designed to address human development issues. We shall confine ourselves to three issues: the factors (mainly economic) that seem responsible for continued poverty; an attempted answer to “What is to be done?” especially by the United Nations; and the lessons of the Indian experience and whether it is replicable.

Poverty and internal conflicts are often not simply the legacy of the colonial past or the result of current poor governance but are epiphenomena of liberalisation and the policies of international economic institutions. The imperative of liberalisation and attracting foreign capital is inevitably accompanied by risks; low tax-GDP ratios reinforced by IMF style structural adjustment reduces investment in the social infrastructure, especially health and education. Such policies in some regions have additionally had a negative impact on rural infrastructure and food security. The problems of sub-Saharan Africa amply demonstrate the systemic impact of such policies. There thus exists a justifiable role for the United Nations to provide direction in the reform of international financial and trade systems to enable them to constructively and effectively support national efforts in eradication of poverty.

Sub-Saharan Africa has suffered a setback since the 1990s and needs our cooperation and support in meeting the MDG goals. East Asia and the Pacific and South Asia are on track to achieve the target of halving extreme poverty at the national level by 2015; this provides a basis for South-South cooperation.

India’s 500 million dollars highly concessional credit lines to West Africa; more than 200 million dollars to NEPAD; grants of essential medicines; debt cancellation for the HIPC countries; scheme for duty free
access to our market for LDC exports; substantial programmes of technical cooperation and capacity building; and the dedicated satellite and fibre optic connectivity mission for Africa are some of the ways in which we seek to assist.

Madam Chairperson,

The role of the international community in making available financial resources, transferring technology and providing support for building human and institutional capacity to the developing countries is crucial. While private sector investment is important, in this region the physical and social infrastructure is sometimes too weak to attract any. Therefore, sequencing is important and a commitment to 0.7% target for ODA by developed countries, as also innovative sources of financing are crucial. So also in the case of debt cancellation by the developed world conditionalities on encouraging privatization would only recreate the conditions that led to debt in the first place. For defending livelihoods, sovereignty of the state is important and disciplines that erode policy space and autonomy need to be reformed. Minimizing the vulnerabilities of the poor farmers must be our collective priority. Proportionately lower overall tariff reduction commitments and operable and effective development instruments of Special Products and Special Safeguard Mechanism are the essential components of securing food security, livelihood security and rural development needs of developing countries. The overarching principle of special and differential treatment, therefore, remains a categorical imperative. It would also be important for developing countries to maintain flexibilities and policy space, in the context of non-agricultural market access, in order to avoid the danger of deindustrialisation for some developing countries, which would impact adversely and severely on their efforts towards eradication of poverty.

Madam Chairperson,

India has evolved a national strategy that complements acceleration of economic growth with focus on the provision on basic services for improving the quality of life of the poorer segments through specific and targeted poverty eradication programmes, including creation of opportunities for employment and income-generation. The “Sarva Shiksha Abhiyan” (Universal Education), the Public Distribution System which makes food available to every household at an affordable price; the Integrated Child Development Scheme; the Mid-day Meal Scheme for school children are some of the programmes launched in India in recent years. The National Rural Employment Guarantee programme, as envisaged in the Common
Minimum Programme, launched in 2006 makes the right to work a fundamental right. It provides 100 days assured employment annually to every rural household. Such rural regeneration measures coupled with innovative rural health missions and expansion of the Universal Elementary Education Scheme would help address poverty in a holistic manner. As part of our social integration policies, the “Right to Information Act” passed by the Indian Parliament would lend voice to the citizens for accessing Government policies. The success of the anti-poverty strategy is reflected in the decline in the poverty ratio from 38.9% in 1987 to 26.17% in 2000. New Programmes are expected to assist India in meeting its commitment to reduce poverty ratio by further 5% points by 2007 and 15% points by 2012.

The lessons of the Indian experience are in general replicable though sequencing is necessary. Liberalization of the economy has to follow a certain level of development of economic and scientific capacity. The Kuznets Curve is a myth: inequality and high growth do not automatically eventually lead to greater equality and social justice; therefore direct anti-poverty programmes are necessary. Adam Smith’s invisible hand is totally invisible because it does not exist: the State’s role is as important as the market’s. Education is an absolute must and, on this basis, a strong incentive for the rapid development of science and, technology and its application to most socio-economic areas.

Madam Chairperson,

We welcome the momentum generated by the International Year of Microcredit in 2005 towards creating an enabling environment to fully exploit the role of the microcredit and micro-finance as tools for poverty eradication. We share the view that microcredit is a useful tool in building the capacities of the poor in management of sustainable self-employment activities, besides providing them other financial services like savings, consumption credit, housing and insurance. It is important to address the issue of requirement of funds for capacity-building and other support systems for establishing microcredit and micro-finance institutions in those developing countries where they are not present now.

Thank you, Madam Chairperson.
595. Explanation of the Vote after the Vote by Deputy Permanent Representative at the UN Ambassador Ajai Malhotra on A/C. 3/61/L.17 titled: International Convention for the Protection of all persons from enforced disappearance.

Mr. Chairman,

India has consistently supported efforts to deal with the problem of enforced disappearance. We believe that the most effective instrument for prevention of enforced disappearance is the guarantee of a State that it respects civil and political rights and will fulfil its obligations to its people. We also consider that the existing body of international human rights law and international humanitarian law, if reinforced by adequate political will and resources, provides a comprehensive framework to tackle this unacceptable phenomenon. What is needed is the enforcement and implementation of the law by the State. The international community must, therefore, focus primarily on strengthening national capacities of States in this regard.

It is against this as a backdrop that India had approached the negotiations for a legally binding instrument on enforced disappearance. However, we were not convinced about the need for a separate Convention or the creation of a new monitoring body to deal with this issue. In our view, an Optional Protocol to the International Convention on Civil and Political Rights would have provided a preferred solution.

It also remains of concern to us that the text still retains certain drawbacks. Thus, the ‘constructive ambiguity’ in the definition of enforced disappearance creates two different standards of proof for the same crime, one here and another in Rome Statute. The missing element of ‘intent’ and ‘knowledge’ in the definition will not help in easing the burden of proof as mens rea is an essential element for criminalisation of any act. Accordingly, we would have preferred if ‘intent’ had been more clearly incorporated in the definition of ‘enforced disappearance’. Furthermore, the exclusion of non-state actors from the definition ignores contemporary threats, which require our collective and determined response.

Having said that, Mr. Chairman, given our commitment to deal with enforced disappearance and recognizing that States have different legal systems and national contexts that make it unrealistic to expect complete
agreement on all aspects of this issue, we have joined others in adopting
this international instrument. We have done so with the following
understanding:

First, it is our interpretation that this instrument allows national
jurisdictions to criminalize the offence of enforced is appearance in
accordance with their respective legal systems and constitutional procedures.

Second, as regards remedy and compensation, there is no statutory
right to compensation in a Common Law system such as India’s. However,
the Indian judiciary, at all levels, as well as the National Human Rights
Commission of India, regularly grant remedy and compensation to victims
of human rights abuse.

Thank you, Mr. Chairman.

596. Statement by Permanent Representative at the UN
Ambassador Nirupam Sen on Agenda Item 69 [A], [C] &
[D]; Strengthening of the Coordination of Humanitarian
and Disaster Relief Assistance of the UN including
Special Economic Assistance at the 61st session of the
UN General Assembly.

Mr. President,

We would like to thank the Secretary-General for the reports that
have been prepared for the discussions under this agenda item. We
appreciate the candid approach adopted in the report that identifies the
areas of improvement even as it describes the positive developments.

Mr. President,

The Central Emergency Response Fund was launched in March
this year to address the concern regarding allocation and availability of
resources for humanitarian assistance and to enable the UN to provide
timely humanitarian assistance evenly across emergencies. India strongly
supported this initiative out of our conviction that, through this reform
measure, the UN would be better positioned to assist developing countries
in their hour of need in the aftermath of a disaster. India demonstrated
solidarity with the international efforts aimed at addressing the needs of developing countries for emergency humanitarian assistance through pledging a contribution of US $2 million to the CERF at its launch in New York (half of which has already been disbursed).

As promised by the Secretary-General, detailed information on the use of CERF has been provided to Member States. The report indicates that CERF has made good progress towards its objectives of promoting early action and response to reduce loss of life and enhancing UN humanitarian assistance to time-critical needs in the aftermath of disasters and in under-funded emergencies. We note that the Emergency Relief Coordinator has focused on the need for timely allocation and disbursement of CERF funds. We also note with satisfaction that, despite the implementation being at an early stage, CERF has enabled humanitarian assistance to be made available within 72 hours. We encourage the Emergency Relief Coordinator to continue efforts to address administrative delays and streamline application processes. While appreciating the need for completing the requisite paper work prior to disbursement of funds, there is need for balance so that developing countries are not burdened by excessive paper work at a time when the capacities of their authorities are stretched in coping with the aftermath of a disaster.

We have perused with interest the note on the meeting of the Advisory Group of CERF, held in Geneva in October 2006. We note that the Advisory Group made some substantive recommendations for further improvements, such as through the consideration of an umbrella letter of understanding, delegation of authority and development of additional standardized templates. The Advisory Group also emphasized the importance of a field-driven approach. We would suggest that the recommendations of the Advisory Group, including those related to the decision to undertake field visits to implementation sites, be examined by the Emergency Relief Coordinator and his recommendations brought to Member States for their consideration.

**Mr. President,**

India is committed to the Guiding Principles for the provision of humanitarian assistance contained in the annex to GA resolution 46/182. We believe that humanitarian assistance must be provided in accordance with the principles of humanity, neutrality and impartiality. We recall that the Guiding Principles enjoin that sovereignty, territorial integrity and national unity of States must be fully respected and that humanitarian assistance should be provided with the consent of the affected country and in principle, on the basis of an appeal by the affected country.
In this context, we are concerned at the recommendations of the report on “humanitarian access”, which are not in line with the scope of the Guiding Principles of resolution 46/182. We have been encouraged by the achievements that the UN has made through the establishment of CERF. These gains can be consolidated and built upon by retaining the neutrality and non-political character of UN humanitarian assistance. The Fourth Geneva Convention Commentary defines humanitarian as “being concerned with the condition of man considered solely as a human being, regardless of his value as a military, political, professional or other unit” and “not affected by any political or military consideration”; country ownership is crucial and this should be genuine and not disingenuous. Humanitarian assistance is aimed at relieving immediate suffering only and therefore ensuring all this should be relatively easier. The report appears to project the Guiding Principles on Internal Displacement as standards for countries to follow. The Guiding Principles were developed on the basis of experience of massive displacement in war and conflict situations. The Secretary-General’s reports in the past have acknowledged that adequately assisting IDPs requires knowledge and understanding of the specific context in which the disaster occurred. India believes that well functioning and stable Governments with strong national and legal institution can and do take care of their IDPs. They are also best placed to understand their own national context and legislative requirements.

**Mr. President,**

The report recommends the strengthening of local, national and regional capacities for preparing and responding to humanitarian emergencies. India has strengthened its disaster preparedness and response capacity over the past several years. The aftermath of the Tsunami disaster further spurred these efforts. The Disaster Management Act 2005 envisages a holistic and comprehensive approach to disaster management with a greater focus on prevention, mitigation, preparedness and capacity building. The National Disaster Management Authority (NDMA), chaired by the Prime Minister, has been created with the provision for similar organizational arrangements at the state and District levels. Some states have already taken action in this regard. The NDMA has formed core groups to formulate strategy and guidelines to mitigate effects of disasters, such as earthquakes, cyclones, floods, and chemical and industrial disasters. The Disaster Risk Management Project is being implemented jointly with the UNDP in 169 districts with high vulnerability to natural disasters and includes the important elements of community preparedness and community capacity building. The process for the
creation of isaster Response Teams for providing a specialized response has started and is looking at equipment and training needs. The political economy of humanitarian assistance is broader – touching on ethics (the principle of negative action is that not doing enough and letting death and disaster happen is as bad as inflicting death and disaster); economic development (it is the poor that often bear the brunt of natural disasters); science and technology (in India satellite based early warning systems have greatly mitigated if not eliminated the consequences of cyclones and we hope would do the same for any future Tsunamis and we have always been prepared to share the technology with developing countries).

Mr. President,

We note that, as desired by Member States, the report recommends other areas of improving the delivery of UN’s humanitarian assistance, including through the improvement of UN coordination activities at the field level. The report cites the ‘cluster leadership approach’ as an effort in this direction and recommends that at the country level, ‘cluster lead agencies’ should collaborate closely with Government partners. We believe that there is need for further information and understanding of this approach, especially from the perspective of the receiving countries where this approach has been implemented so far. In keeping with the basic principles that guide the work of the UN at the country level, we recommend that this approach be implemented at country level with the consent of and under the leadership of the national government of the affected State. An evaluation of the effectiveness of the ‘cluster approach’ in enhancing coordination amongst UN agencies, taking into account the financial costs incurred in implementing the approach, and incorporating the inputs of the affected States, should be presented to Member States. We agree with the Secretary-General that the cluster approach can only be considered as a first step, and not as a solution.

We are happy that the report has devoted considerable attention to the issue of chronically under-funded emergencies. We note that the report recommends development of indicators for humanitarian assistance. We recommend that this issue be discussed carefully at the intergovernmental level, in the first instance.

Thank you, Mr. President.
597. Statement by Minister at the Permanent Mission at the UN Mrs. Ruchi Ghanashuyum at the 2006 United Nations pledging Conference for Development Activities at the 61st session of the UN General Assembly.

New York, November 15, 2006.

Mr. President,

Allow me to congratulate you, and other members of the Bureau, on your election as Chairman of the 2006 UN Pledging Conference.

India is strongly committed to the development agenda of the United Nations and is convinced of the need to accord to it the highest importance.

Along with other developing countries, India believes that the development agenda represents a shared global commitment to poverty alleviation transcending national borders. We are convinced that participation in this Pledging Conference is a demonstration of a Member State’s continued faith in the development agenda of the United Nations.

India’s voluntary contributions to the Funds and Programmes of the UN system are symbolic of our commitment to multilateralism and to international solidarity in the process of development and poverty eradication. Our contributions, though modest, have been the largest from the South and at times larger than those of some OECD countries.

Mr. President,

I have the honour to announce India’s pledges of contributions for operational activities for development of the UN system for the year 2007. These are as follows:

i) United Nations Development Programme (UNDP) $ 4.5 million

ii) World Food Programme (WFP) (for the biennium 2007-08) $ 1.92 million

iii) UN Children’s Fund (UNICEF) $ 900,000/-

iv) UN Population Fund (UNFPA) Indian Rs. 9 million (Approximately US $200,000/-)

v) UN Development Fund for Women (UNIFEM) $ 20,000/-
vi) UN International Research & Training Institute for the Advancement of Women (INSTRAW) $ 1,100/-

vii) United Nations Environment Programme (UNEP) $ 100,000/-

viii) UN Centre for Human Settlements (HABITAT) $ 80,000/-

ix) UN International Drug Control Programme (UNDCP) $ 300,000/-

x) UN Relief & Works Agency for Palestine Refugees in the Near East (UNRWA) $ 20,000/-

xi) UN Volunteers (UNV) $ 15,000/-

xii) UN Crime Prevention and Criminal Justice Fund (UNCP&CJF) $ 3,000/-

Thank you, Mr. President.

598. Statement by Permanent Representative at the UN
Ambassador Nirupam Sen at the 10th Emergency Session
of the United Nations General Assembly.

New York, November 17, 2006.

Your Excellency, Madame President,

I thank you for convening this resumed Emergency Session of the General Assembly on a matter of grave and abiding concern to the international community—the situation in the Middle East, in particular, the core reason for instability in this region: the question of Palestine.

Madame President,

We share the deep concern voiced by many delegations at the deteriorating situation in Gaza, and the recent tragic and terrible loss of life in the region. We also share the deep sense of sorrow at the tragic tale of death, destruction, injury and misery that has been visited upon so many families, as tragedy continues to unfold over the past few months. The loss of 19 lives on November 8 at Beit Hanoun is set in the depressing context of a wider tragedy in the Middle East.

Madame President,

While we join other delegations in conveying our heartfelt condolences to all bereaved families at the losses they have suffered, we
believe some form of action is essential to avoid further tragedies. We have noted the announcement by the Government of Israel of an inquiry into this incident. We hope that its results will be publicized, and that action will be taken swiftly against those responsible. We also note that the draft resolution that is before us calls for a fact-finding mission to the region. We hope that the mission returns not only with a reconstruction of the events of that tragic morning, but also with suggestions to avert the repetition of similar tragedies. These recent incidents only reinforce our conviction that moral courage of a very high order is needed to break the vicious circle of violence and counter-violence.

Madame President,

It was not long ago that the situation in the Middle East looked more promising. Just last year, we had welcomed the implementation by Israel of its disengagement plan from the Gaza Strip and parts of the West Bank. At that time, India described this as a significant first step that, we hoped, would culminate in a mutually acceptable, negotiated settlement in accordance with the Roadmap and relevant UN Security Council resolutions. We had also hoped that democratic elections in the Palestinian areas and the formation of a new governing coalition in Israel would stimulate a welcome resumption of the peace process, just as we hoped that all concerned would show flexibility to produce compromises that are essential to transcend rigid positions.

Tragically, the outcome is the opposite. We have watched with growing alarm as the reluctance of the international community to deal with the newly-elected Palestinian government has led to both an almost-complete suspension of international assistance, as well as the withholding of Palestine’s share of taxes and revenues. The resultant near-total collapse of the Palestinian economy fuels an already volatile situation, particularly among disaffected youth. Renewed rocket attacks and suicide bombings in Israel have led to civilian casualties. The abduction of an Israeli soldier led to a disproportionate and unjustifiable massive military retaliation, besides the detention of elected Palestinian representatives and Cabinet ministers. No dialogue is possible in such circumstances. The use of force and the evisceration of countervailing power can only deepen the crisis by deepening the sense of loss.

We all agree that violence will produce no durable solution—this can only come from meaningful, sincere and result-oriented dialogue; a dialogue aimed at finding a way forward. India has always advocated a
peaceful settlement from the very beginning. To give just one example, Jawaharlal Nehru in a note on Palestine, recorded as early as April 4, 1948, envisaged a federation in Palestine with fully autonomous Israeli and Palestinian units. It is in this context that we have consistently urged a resumption of direct dialogue, based on the Quartet Principles. Towards this end, we have joined the vast majority of countries who consistently affirm their commitment to a negotiated two-State solution, accepted by the two principals, that would result in a viable, contiguous, sovereign and independent Palestinian State, existing side-by-side with Israel in peace and security. We have regularly reaffirmed that the Roadmap, as endorsed by Security Council resolution 1515, remains the fundamental framework to resolve this bitter conflict. We support the call of Secretary-General to consider innovative ways by all sides in order to fully implement the Roadmap which would lead, without delay, to a solution to this conflict, based on relevant UN resolutions, including Security Council resolutions. A source of anxiety is that continuing to sow dragon teeth would make a viable state extremely difficult, besides creating bitterness for generations. Some simple and moving words of Edward Said, written in New York on January 10, 1992, remain pertinent: “If Israelis and Palestinians can have any decent future, it must be a common one, not based on the nullification of one by the other”.

Madame President,

We cannot but be deeply concerned by the humanitarian cost that is often overshadowed by the larger, more gruesome headlines that violence begets. The spiral of chaos and violence has long-term implications for stability of the entire region. We call for adoption of urgent measures, to improve the humanitarian and economic conditions of the Palestinian people. In this context, we welcome the announcement two months ago by Quartet Principals, of the continuation and extension of the Temporary International Mechanism, to provide a channel for the donor community to extend assistance directly to the Palestinian people.

We have launched our own modest efforts to help avert a larger humanitarian crisis in Palestine. Apart from earlier announcements of assistance, including a grant of US$15 million announced during President Abbas’ visit to India last May, we have recently delivered the first tranche of medicines and medical supplies that formed part of an announced humanitarian assistance package worth US $ 2 million.

In conclusion, Madame President, we hope that the Quartet and all
relevant regional players will work to de-escalate the situation, end the cycle of violence and counter-violence, and avert the humanitarian crisis which presently faces us.

I thank you.

F F F F F

599. Statement (expanded and adapted from extempore remarks) by Permanent Representative at the UN Ambassador Nirupam Sen on Agenda Items: 47: Integrated and coordinated implementation of and follow-up to the outcome of the major United Conferences and Summits in the economic, social and related fields; 112: Strengthening of the United Nations Systems; 113: Follow-up to the outcome of the Millennium Summit, and 149: United Nations Reform: measures and proposals; joint debate at the 61st session of the UN General Assembly.

Madam President,

We thank the Secretary-General for the reports prepared for this joint debate on the integrated and coordinated implementation of and follow up to the outcomes of major UN conferences and summits in the economic, social and related fields.

Madam President,

The need for an integrated and coordinated implementation of the outcomes of the major UN conferences and summits to address the inter-linkages in their outcomes, even while separately pursuing their respective individual outcomes, has been long acknowledged. GA resolution 57/270B recognized the need for such coordinated and integrated follow up. The issue of conference follow-up has been on the agenda of the Economic and Social Council and the General Assembly for several years.

The first and foremost issue in conference follow-up is the issue of implementation. Resolution 57/270B stresses the need for implementation.
Subsequent GA resolutions, including the 2005 World summit Outcome, have repeatedly reinforced this emphasis. Most recently, the development follow-up resolution (A/Res/60/265) emphasized the urgent need to fully implement the global partnership for development and enhanced the momentum generated by the 2005 World Summit Outcome. Without implementation, we would be caught in the cycle of following up the outcome of a Conference by having another conference.

Implementation should be understood broadly to include interpretation, resources, building further on what is unclear or incomplete and doing this in terms of the evolving reality outside. In the ECOSOC Resolution we adopted earlier this morning we looked at problems of resources and interpretation. We need to build in terms of real developments outside which we should closely examine, besides also taking up the unfinished agenda of comprehensive reform.

The two main characteristics of the global economy are multinational corporations where production truly takes place in many countries and financial transactions that have totally outstripped exchanges of goods and services and involve a search for speculative profits. The Bretton Woods Institutions and the WTO have totally modified the original Keynesian mandate and have become the underpinning and global institutional framework facilitating this search for profits.

Developing countries need a rule based multilateral order much more than the developed countries. But these rules, to enable them to succeed, have to be truly fair and not geared entirely, as they are at present, to achieving the economic objectives of the developed world. Therefore, a fundamental reform of international monetary, financial and trading institutions is essential to underpin new and truly fair rules.

The original third pillar of Bretton Woods, was the stillborn ITO. Its agenda put full employment first. It recognised that liberalising trade and getting prices right would not be enough to maximise global welfare. Separate action on employment was necessary. This corrective remains relevant. Even the MDGs cannot be achieved without the right framework. There are many developing countries, including in Africa, where the institutions or infrastructure for private investment simply does not exist. Therefore delivery on ODA target of 0.7% of GNI is critical. Even in more advanced developing countries that may not need ODA and that have institutions and infrastructure “we must recognise that even as private initiative is encouraged, public systems need to be reinvigorated”. This is true of physical infrastructure,
irrigation, education and public health. The impasse in the Doha Round of Trade Talks has shown that while national borders should not matter for trade and capital flows, we should not raise the issue of technology and labour flows; while subsidies are bad for industrial sectors we should not talk about agricultural subsidies; while the private interests of IPR holders are sacrosanct, we should not discuss the public interest or protecting the biogenetic resources of developing countries. As for the IMF, we have seen its self admitted mistakes, its bail out packages that not only did not work but made the crisis worse, its inability to prevent countries on the eve of civil conflict plunging deeper into it.

Therefore, it is critical for ECOSOC (a beginning has been made in the Resolution just adopted) to periodically evaluate international economic policies which includes the policies of these institutions under the guidance of the General Assembly which should address the mounting problems in the world outside.

The vitality of the UN system rests on the strong and effective role of the General Assembly as the chief deliberative, policy making and representative organ of the United Nations. India, like several other Member States, emphasized the need to reinvest the General Assembly with the powers that it should enjoy in accordance with the Charter. Efforts to revitalize the General Assembly by strengthening its role and enhancing its authority to perform its functions as laid out in the Charter call for both procedural and substantive measures. The marginalization of the General Assembly because of the encroachment by the Security Council into its jurisdiction has been a repeated concern of the wider membership of the UN. The functions and powers of the General Assembly and the Security Council are clearly defined in the Charter. There is need for respecting and maintaining the balance between the principal organs of the United Nations in accordance with their respective roles as laid down in the Charter.

The General Assembly adopted a detailed resolution very recently in the 60th session of the UNGA. Effective implementation and follow up on the recommendations contained in the resolution is a necessary part of the process of revitalizing the GA. It is also important to re-establish the Ad Hoc Working Group on the Revitalization of the General Assembly to consider measures that would enable it to play its mandated role in issues of peace and security, development, management (including human resource management), and the progressive development of the international law and its codification.
Some recent reports commissioned at great cost have revived discredited ideas like governance. Governance is the greatest encroachment of all because it seeks to recreate the General Assembly and its Fifth Committee in the image of the Security Council – the dominance of a few.

Madam President,

Any true reform of the United Nations without a comprehensive reform of the Security Council would be like Hamlet without the Prince of Denmark. It would leave untouched the present correlation of power which is a fetter on solutions and a part of the problem. There is effectively one veto in the IMF and five vetoes in the Security Council with no countervailing power of other countries to ensure a measure of optimality. Without a thorough going reform even the fundamental problems of the economy cannot be effectively tackled. Political will is required to transform thought into practical energy – this is the only law of thermodynamics that is needed here. On the present balance between the Security Council and the General Assembly I once adapted a saying of Robespierre in another forum: power without virtue is pernicious but virtue without power is helpless. However, this is not a question of power alone but of public reason and equity, not politics but ethics.

Madam President,

India believes that the reform of the United Nations that establishes a just, fair and equitable balance of power and responsibilities among the General Assembly, the Security Council and the ECOSOC must be pursued as an ongoing and transparent process. Many years ago, Ralphe Bunche, a citizen of USA and the first UN official to receive the Nobel Peace Prize, spoke of radical change, stating that “the UN has no vested interest in the status quo.” We believe that vested interests today should not be allowed to ensure the continuation of status quo at the UN. To use some moving phrases spoken in New Delhi recently we want a United Nations that would not be dominated by “power politics, military might and division” but would be “a global force for peace, progress and prosperity”. While these were spoken in the context of India’s outlook they are equally applicable to UN reform and encapsulate our approach.
Madame President,

Thank you for scheduling sufficient time for a discussion on an issue that warrants the attention of the international community to an extent that few others do: the Question of Palestine, set as it is, in the larger context of the Situation in the Middle East.

We have listened with attention to the many preceding speakers. The grim perspective that has informed most statements is particularly striking. The same pessimistic outlook is visible in the report of the Committee on the Exercise of the Inalienable Rights of the Palestinian People, and the Secretary General’s report of September this year on the Question of Palestine. Sadly, despite repeated and detailed consideration of this matter at this august forum and elsewhere within these premises, we remain no closer to a solution than we were at this time last year.

Madame President,

The events of the last few months have been deeply distressing for all concerned, set as they are in the tragic context of a growing humanitarian crisis, a collapsing Palestinian economy, the absence of dialogue, and an intensification of the vicious circle of attacks, reprisals and counter-attacks. All of this exerts an immediate and a long term impact on the lives and psyche of the people, as well as the infrastructure of daily life in the entire region. No justification makes any of these developments more palatable, irrespective of whether the victims are Israeli or Palestinian. The current context not only reduces the possibility of productive dialogue, it also lessens the prospect of any genuine efforts to move towards a solution in the near future.

Madame President,

Violence and the use of force will not only not produce a durable solution, it could well postpone moves towards any solution, quite apart from creating conditions for a further exacerbation of the situation. While this has been stated several times before, and in many eloquent ways, yet this central truth bears repetition: a just, fair, durable and credible solution
to this vexed problem can only come from 1 meaningful, sincere and result-oriented dialogue; not a session of recriminations based on apportioning blame, but a dialogue that is genuinely forward-looking.

It is in this context that India has consistently urged the resumption of a direct, face to face dialogue of principals, based on the Quartet Principles. We also remain convinced that the Roadmap, as endorsed by UN Security Council Resolution 1515, remains a valid framework of reference for an eventual settlement, even though its originally-envisioned target date for a settlement has already passed last year.

Towards this end, we are with the overwhelming majority of countries who consistently affirm their commitment to a negotiated two-State solution, accepted by the two principals, that would result in a viable, contiguous, sovereign and independent State of Palestine, existing side-by-side with Israel in peace and security. We support the call of the UN Secretary-General to consider innovative ways by all sides in order to fully implement the Roadmap and thus lead, without delay, to a just, fair, equitable and mutually-acceptable solution to this conflict, based on relevant UN resolutions, including Security Council resolutions.

Madame President,

We cannot but be deeply concerned by the heavy humanitarian cost that is sometimes overshadowed by the larger, more gruesome headlines that violence begets. The spiral of chaos has long-term implications for the stability of the entire region. We reiterate our call for the adoption of urgent measures to improve the living conditions of the Palestinian people. The impact of the collapsing economy, outlined in the Secretary General’s report, carries the portents of a dramatic humanitarian disaster in the making. It is our collective responsibility to ensure that it is averted at all costs.

Madame President,

In conclusion, we would like to reiterate our sincere hope that the Quartet and all regional states will resume efforts to de-escalate the situation, and take proactive steps to avert the humanitarian crisis that otherwise appears inevitable. We also believe that our overall objective must be to move the dialogue forward, if nothing else, by creating a favourable environment for its resumption by the principals. As the UN Special Coordinator for the Middle East Peace Process said last week, “only the Palestinians can convince Israel that they can be peaceful neighbours, and only Israel can persuade Palestinians that a two-State
solution is available and can be worked towards”. We must work to make this happen in the shortest possible time.

Thank you, Madam President

601. Statement by Permanent Representative at the UN Ambassador Nirupam Sen on Agenda Item 47: Integrated and Coordinated Implementation of and Follow-up to the outcome of the Major United Nations Conferences and Summits in the Economic, Social and Related Fields and 113: Follow-up to the outcome of the Millennium Summit – Specific meeting focused on Development at the 61st session of the UN GA.

Madam President,

We are happy to participate in the specific meeting focussed on development. We thank the Secretary-General for the reports on the integrated and coordinated implementation of and follow-up to the major UN conferences and summits in the economic, social and related fields. We associate ourselves with the statement made by South Africa on behalf of the Group of 77.

Madam President,

For developing countries, the centerpiece is development. Since the Millennium Summit in 2000, the progress towards achievement of Millennium Development goals has been uneven and the ongoing levels of human deprivation remain stagnant. The challenges remain most pressing in Africa, particularly sub-Saharan Africa, where the proportion of people living in extreme poverty is essentially unchanged since 1990 and the absolute number has increased dramatically. It is no coincidence that the 2005 World Summit reaffirmed that the realization of Millennium Development goals would require stronger international cooperation for development and stressed the need for the United Nations to play a fundamental role in the promotion of international cooperation for development. The United Nations played a creative and critical leadership
role in shaping the international economic agenda in the 1970s. It has to do so again. The agreement on the follow-up to development commitments and goals is a welcome step.

The development follow-up resolution 60/265 emphasised the urgent need to fully implement the global partnership for development and to enhance the momentum generated by the 2005 World Summit, in this sense it recognised the need for a shift in debates from principles to practicalities or, in other words, from normative debates to a phase of implementation. Implementation should be understood broadly to include resources as well as interpretation – building further on what is unclear or incomplete and doing this in terms of the evolving reality outside. We need to look at problems of resources and interpretation. The physical and social infrastructure in some countries is sometimes too weak to attract any private investment and, therefore, the fulfilment of commitment to 0.7% target for ODA by developed countries, as also innovative sources of financing are crucial. The inequities in the global monetary, financial and trading systems remain. The Bretton Woods institutions and the WTO have strayed far away from their original mandate - employment generating macro-economic policies. Developing countries need rule-based multi- lateral regimes – these rules have to be truly equitable and should not impact adversely on the scope for the implementation of their national development strategies. For defending livelihoods, the sovereign functions of the State cannot be undermined and regimes that erode the autonomy of policy space need to be reformed. Therefore, a fundamental reform of international monetary, financial and trading institutions is essential to underpin new and truly equitable rules. It is also crucial for the UN to undertake regular and periodic review and assessment of international economic policies and their impact on development. In the context of systemic issues, it is particularly important to implement the commitment towards enhancing the ability of developing countries to participate meaningfully in decision-making, an important component of which is to provide assistance to developing countries in enhancing their capacity to assess the impact on them of policy changes. Most of the developing countries do not have the resources to do so. The deliberative discussions of the WTO and other international economic organisations could be complemented if there were an independent body to evaluate alternative proposals and their impact on developing countries. The United Nations is best placed to do so. Assessments must be made of the disparity between predicted consequences and what actually happens. ECOSOC has the responsibility to review the policies of BWIs. Efforts should be made to ensure that this responsibility is carried out fully and to examine how other economic policies could be brought into this review. We welcome the agreement reached in this regard in the context of strengthening of the ECOSOC.
We are confident that the ECOSOC on the basis of the review and assessment of international economic policies – international financial, monetary and trade policies of relevant institutions – would make recommendations, where needed, so that necessary correctives make the international economic environment supportive of development. This will not only increase confidence in, and the legitimacy of, international economic governance but also may lead to better economic governance that may benefit both the developing and the developed world. It is logical that the General Assembly will have some views, primarily to build on the focussed consideration of these issues in the ECOSOC. Specific meetings focussed on development will go a long way not only in building complementarity between the ECOSOC and General Assembly, but also in enhancing the development agenda of the United Nations.

Madam President,

The suspension of the Doha round of trade negotiations is a cause of concern. The impasse, as also the recent discussions in the Second Committee, has shown that while national borders should not matter for trade and capital flows, we should not raise the issue of technology and labour flows; while subsidies are bad for industrial goods, we should not talk about agricultural subsidies; while the private interest of IPR holders are sacrosanct, we should not discuss the public interest or protecting the bio-genetic resources of developing countries. Resumption of trade negotiations is desirable, but adhering to the agreed mandates of the Doha Ministerial Declaration, the July Framework and the Hong Kong Ministerial Declaration is a categorical imperative. Demonstration of political will by the developed countries will be required, if negotiations are to be saved. A clear political direction to the WTO remains necessary.

Madam President,

India has consistently maintained that the process of UN reform should be driven by a vision of a strengthened role for the United Nations on development issues. We recognise that the delivery role of the UN will perforce be peripheral, given the modest funds available to the UN and the huge requirements of developing countries. Yet, there is an important catalytic role to be played by the UN. What is needed is to address the fundamental issue of the gap between mandates and financial resources for their fulfilment. We are confident that discussions in the context of promoting system-wide coherence will give utmost consideration to this fundamental issue of resource gap; preliminary consideration has highlighted the need for enhanced
allocation for developmental activities of the UN in the regular budget. In the context of role of UN in development, it is also important to strengthen the current accountability framework for executive management, at USG/ASG level, including formal and transparent performance evaluations and sanctions for not meeting performance targets. Voice and effective participation of developing countries is important not only in the context of international economic policy making, but also in the management and administration of this Organisation, so important for pursuing the development agenda which is the overriding priority of the majority of the membership of this Organization-the developing countries. It is particularly important that developing countries are represented at the executive management levels and there is a balance in representation between the developed and the developing countries. Therefore, the ongoing debate in the context of human resources management assumes significance. It might also be useful to further consider the establishment of an open and transparent appointment process, including through broad consultations and confirmation by the General Assembly for improving accountability. We look forward to discussions on the ACABQ report on governance.

Thank You, Madam President.

602. Statement by Permanent Representative at the UN Ambassador Nirupam Sen on Agenda Item 71[A] & [B] Oceans and the Law of the Sea at the 61st session of the UNGA.

Madam President,

At the outset my delegation wishes to thank the Secretary-General for his comprehensive Reports on Oceans and the Law of the Sea.

This year’s Report contained very useful information on issues and developments relating to ecosystem approaches and oceans that served as a basis for discussion at the seventh meeting of the United Nations Open-ended Informal Consultative Process on Oceans and the Law of the Sea. The text adopted at the seventh meeting recognized that, by its very nature the ecosystem approach does not easily lend itself to mandatory “one-size-
fits all” measures. It contains sections on the guiding principles for the application of the ecosystem approach, its possible constituent elements, and the implementation and improved application of the approach. In this context, capacity building, technology transfer and greater consideration of developing countries’ experiences in implementing ecosystem approaches in marine management also need to be given due consideration.

The topic “ecosystem approaches and oceans” confronts us with a range of issues that require multidisciplinary examination. The approach is science based and it is acknowledged that scientific understanding of ocean ecosystems is still very limited. Moreover, composition and functioning of individual ecosystems and the pressures on them are area specific, which makes the task more expensive and complex. In areas where ecosystems cross geographical boundaries it may be necessary, as pointed out in the Secretary-General’s Report, for States to pursue bilateral or regional cooperation. Further, it has been demonstrated that any such approach cannot be rigid. Given the changes which may occur in spatial and temporal scales, the requirement for flexibility and adaptability has to be built in. It would be essential in this context to develop approaches to reconcile multiple objectives, ensure participation of different stakeholders and accommodate diverse interests. The continued application of the precautionary approach therefore remains essential.

Madam President,

There is now undeniable evidence that certain scientific research, which is intrusive in character, could put the fragile ecosystem and the species of the deep sea at risk. Marine scientific research which aims at exploration of biodiversity for commercially valuable genetic and biochemical resources, the so-called bio-prospecting, could be one such activity. We believe that the general principles of marine scientific research, namely, those contained in Articles 140(1) and 241 of UNCLOS, should also apply to bio-prospecting. The symbiotic relationship between the biodiversity of the deep seabed and its ecosystem makes the entire resources of the sea-bed, living and non-living, to be a common heritage of mankind. The task before us today is to identify the risks to this common heritage of mankind and agree on a substantive legal basis for the conservation and management of biodiversity and the use of biological and biogenetic resources of the deep-sea bed and subsoil.

We are not averse to looking at new approaches within the confines of UNCLOS to promote international co-operation aimed at conservation
and sustainable use of living resources of the high seas and benefit sharing of seabed resources located in the areas beyond national jurisdiction. However, the participation of developing countries in devising these new approaches greatly depends on the scientific information available to them. Promotion of flow of scientific data and information and transfer of knowledge resulting from marine scientific research, especially to developing States, is therefore essential. We are pleased that this year the eighth meeting of the consultative process will focus its discussions on the topic of “Marine Genetic Resources”.

Madam President,

We welcome the preparations for the launch of the first phase of the Regular Global Marine Assessment and the holding of the first meeting of the ad hoc steering group chaired by Mexico and Australia. We see the GMA as an important instrument for better coordination and co-operation between the various United Nations bodies and related organizations towards integration of existing scientific and technical data and information and for identifying the gaps therein.

In the area of maritime navigation, we would like to express our serious concern over incidents of piracy and robbery at sea. In this respect we welcome the regional efforts in establishing cooperative mechanisms on safety of navigation and environmental protection and particularly welcome the coming into force of the Regional Agreement on Combating Piracy and Armed Robbery against Ships in Asia on September 4, 2006 and launch of its Information Sharing Centre.

Madam President,

We would also like to emphasise the importance of the principle of freedom of navigation including the right of innocent passage as well as transit passage through straits used for international navigation. The States bordering traits may adopt laws or regulations relating to transit passage through straits but such laws should be enforced in a manner that is non-discriminatory and fully consistent with Article 42 of the United Nations Convention on the Law of the Sea.

The subsidiary institutions established under the Convention have reported significant advances in their respective areas. The Commission on the Limits of the Continental Shelf is currently considering five submissions regarding the establishment of the outer limit of the continental
shelf beyond 200 nautical miles. However, keeping in view the anticipated heavy work load of the Commission, it is essential that the issues relating to the participation of members in its meetings and their funding should be addressed to take into account the concerns of the members from developing countries. In this regard, we also support the strengthening of the Division that serves as the Secretariat of the Commission, since with increase in submissions, the Commission would require enhanced technical support.

Madam President,

The International Sea-bed Authority is currently involved in developing a legal regime for prospecting and exploration of poly-metallic sulphides and cobalt rich ferromanganese crusts to ensure the effective protection of the marine environment, protection and conservation of the natural resources of the Area and the prevention of damage to its flora and fauna from harmful effects that may arise from activities in the Area.

Madam President,

The Review Conference on the Agreement for the Implementation of the Provisions of the United Nations Convention on the Law of the Sea of 10 December 1982 relating to the Conservation and Management of Straddling Fish Stocks and Highly Migratory Fish Stocks, that was held in New York earlier this year, provided a useful forum for assessing the effectiveness of the Agreement. The Conference noted with concern that Straddling Fish Stocks and Highly Migratory Fish Stocks were over exploited and depleted. Over fishing and over capacity are seen to undermine efforts to achieve the long term sustainability of these stocks. Therefore the Conference recommended urgent reduction of the world's fishing capacity to levels commensurate with the sustainability of fish stocks. In this context the legitimate right of developing States to develop their fisheries for Straddling Fish Stocks and Highly Migratory Fish Stocks in accordance with article 25 of the Agreement was recognized.

Madam President,

We note with concern the impact of destructive fishing practices on vulnerable marine ecosystems. There is sufficient data to suggest that marine habitats are being affected by bottom trawling and it has a potential to alter the functioning, state, and biodiversity of marine ecosystems, particularly vulnerable ecosystems. This was recognized in 2004 also and
the need for improved governance of deep-sea fisheries and marine ecosystems was noted.

The Secretary-General in his Report on “Impact of fishing on vulnerable marine ecosystems” has also emphasized the critical need for mapping in the deep sea and the necessity to follow a precautionary approach. Accordingly, we see the time bound measures proposed in this year’s Resolution to protect vulnerable marine ecosystems, including seamounts, hydrothermal vents and cold water corals from destructive bottom fishing practices, as a first important step in addressing this problem.

Thank you, Madam President.

603. Statement by Permanent Representative at the UN
Ambassador Nirupam Sen on Afghanistan at the Security Council.

New York, December 7, 2006

Mr. President,

Let me begin by congratulating you on assuming the Presidency of the Security Council for this month. This discussion is timely, coming as it does in the midst of heightened international focus on Afghanistan and the surrounding region.

Any discussion on Afghanistan must begin from the central premise that the international community retains an abiding responsibility to assist Afghanistan in consolidating democratic governance, peace and stability, long-term employment-led development, while in the interim delivering humanitarian assistance. Our views are set in this context.

Mr. President,

We have carefully read the report of the Security Council Mission, and the earlier report of the Secretary General on the situation in Afghanistan. We share the Mission’s positive assessment of the achievements of the Government of President Karzai, and the people of Afghanistan over the last five years. The establishment of genuinely democratically-elected representative institutions, sustained economic
growth as well as growing trade and economic cooperation, investment in core infrastructure projects and the implementation of education, health and rural development programmes are praiseworthy, particularly as these were achieved in the face of adversity. At the same time, the support of the international community has been substantial and fairly consistent. India is happy to continue playing a role in the reconstruction of Afghanistan, given our historic ties with the Afghan people.

Mr. President, there is no doubt that the most pressing task before us is to overcome the challenge of insecurity. We have heard several arguments suggesting that the lack of effective governance in Afghanistan, widespread corruption, the inefficiency of the police service, the growing narcotics trade, continued warlordism in the provinces—all of this contributes to the security problem. All of this may well be true, but to focus on these as the cause of security problems is to miss the point. These are factors which thrive on insecurity and serve to exacerbate it. They are not causes of insecurity: instead, it is the revival of the Taliban, Al-Qaeda and other extremist groups, and the existence of cross-border safe havens for such groups, that are the real cause of insecurity. While focusing on rebuilding and strengthening Afghan state institutions, the roots of insecurity should not be forgotten. The Report refers to Operation Medusa. Operation Medusa has not even contained, let alone eliminated, Medusa. The snakes are still swirling because of the cross border dimension. This reinforces the importance of this aspect. Historical experience shows that, without addressing this, attempts at stability and security would be unavailing. It is important to confront and not strike deals with the Taliban – which, to continue the Greek mythological metaphor, is tantamount to contenting oneself with looking at her image in the shield, without striking at Medusa.

Mr. President,

While the report of the Council Mission suggests that “insurgency” is largely confined to one-third of Afghanistan, the situation remains precarious. ISAF’s own statistics show that in recent months, security incidents have escalated by as much as 70% and 50% in Paktika and Khost provinces. Therefore, it is not clear that efforts to negotiate peace in the more troubled Afghan provinces are succeeding; indeed, terrorist violence spreading elsewhere may suggest the opposite. Moreover, the growing incidence of suicide bombings shows the increasing spread of an ideology and tactics typical of the Al-Qaeda, which are not part of the
Afghan cultural and religious tradition. Therefore, we believe that the cost of tolerating the spiraling violence is infinitely higher than any costs we might bear in quelling it through firm law enforcement action. The consequences of collective inaction may well be borne by the international community in general, but will certainly be borne by the states of the region in particular.

Mr. President,

It is in this context that India emphasizes the need to simultaneously implement firm and effective law enforcement measures, security sector reform programmes, capacity-building measures, and regional cooperation in all fields. Similarly, the growth of representative political parties and the broad-basing of the culture of democratic political activism are developments that should be fostered since these also help in checking terrorism. All of these contribute to the effort to create credible and sustained opportunities to build upon the growing constituency for peace in Afghanistan and across the region. Nevertheless, these must be accompanied by firm measures to enforce peace.

It was therefore fortuitous that the Security Council Mission visited our region a few days prior to the Second Regional Economic Cooperation Conference on Afghanistan, which India had the honour to host jointly with our Afghan brothers in New Delhi last month. The regional dimension is explicitly recognized in the report of the Mission, in context of finding ways to help Afghanistan overcome the challenges before it.

Indeed, the New Delhi Declaration of the Second Regional Economic Cooperation Conference on Afghanistan notes that a “strategy for development for Afghanistan which is based on cooperation with regional countries, creates significant possibilities for reducing poverty and for achieving the Afghanistan Compact benchmarks and Millennium Development Goals in the entire region”. Towards this end, it outlines a number of useful suggestions for the countries of the region to coordinate policies for exploiting shared resources like water, agriculture and energy; to develop capacity-building programmes; and to expand trade and transport linkages; to design and build appropriate regional projects.

Similarly, we believe that more work needs to be done to reverse the expansion of narcotics production. Not only is it necessary to implement policies to stop cultivation, it is also important to focus on simultaneously implementing crop substitution programmes and improving border management mechanisms. It will take a coordinated effort by the
Government and people of Afghanistan, as well as regional players, to effectively address this particular challenge.

Mr. President,

India’s support for a sovereign, stable, democratic and prosperous Afghanistan is consistent and well-known. We see a resurgent, stable, sovereign and peaceful Afghanistan as an essential element in the emerging mosaic of regional cooperation underpinning our world. It is also part of a process that reclaims for the people of Afghanistan their rightful place in our collective future. Afghanistan’s entry into the South Asian Association for Regional Cooperation at its last Summit in Dhaka was a manifestation of this. We believe that Afghanistan can and must be provided with the means to re-establish itself as the crossroads of Asia, and as one of the future transport hubs and energy bridges of our region.

In conclusion, let me also reiterate our firm commitment to our partnership with Afghanistan, which today covers a multidimensional cooperation programme that harmonizes with the priorities of the Afghan Government. Not only have we extended financial assistance in excess of US $ 650 million to fund infrastructure projects and to assist with the National Budget process, we are also expanding our involvement in the capacity building process, both through traditional training programmes and through innovative public-private partnerships that involve our apex Chambers of Commerce and Industry. Thus, our assistance spans the range of activity, from basic infrastructure such as roads, power, dams, and telecom to rapidly implemented, community-based small-scale projects, and training and capacity-building programmes. To summarize our approach, we seek to help Afghanistan create the infrastructure of a modern state while, at the same time, going beyond monetary assistance to provide the Afghan people the wherewithal to help themselves.

Thank you, Mr. President.
604. Statement by Deputy Permanent Representative at the UN Ambassador Ajai Malhotra at High Level Conference on the Central Emergency Response Fund at the UN.

Mr. Under-Secretary-General,

We thank the Secretary-General and OCHA for organizing this High Level Conference on the Central Emergency Response Fund.

India strongly supports the CERF. We were involved in the process of setting it up and are committed to the ideals that it represents. The launch of the CERF was a momentous event in the evolution of the international community’s response to natural disasters and humanitarian emergencies. It represented the effort of the international community to secure a more predictable response to the inevitable challenges that the world would continue to face from future disasters.

The speed with which the UN has moved to put in place an emergency response fund to deal with future challenges is commendable. It is equally satisfying that the international community has responded promptly to the need for adequate funds. The contribution of close to $300 million by over 50 countries, cutting across the traditional dividing line between donor and recipient countries, reflects the wide and enthusiastic support for CERF.

Reflecting its support and commitment to CERF, India had announced a pledge of US$ 2 million to the CERF in March 2006. We have already disbursed $1 million and will be disbursing the remaining $1 million in 2007.

In conclusion, we would like to thank you, Mr. Jan Egeland, for your commitment and dedication that has helped make CERF a reality, and wish you all the very best in your future endeavours.

Thank you.
Madam President,

I thank you for this Joint Debate in the General Assembly on Agenda Item 9 (The Annual Report of the Security Council) and Agenda Item 111 (The Question of Equitable Representation on and Increase in the Membership of the Security Council and related matters). I also thank the distinguished Permanent Representative of Qatar for introducing the Report of the Security Council.

My good friend, the distinguished Permanent Representative of Switzerland, compared the Report to a telephone directory. With his characteristic modesty, he was a little unfair to telephone directories: the Report is like a directory without the telephone numbers: do not call us: we shall call you. The Report is trite in language, non existent in terms of analysis, opaque in content (it provides little insight into why decisions took a certain shape and omits mention of any disagreements), infirm in law and questionable in the context of working methods. It shows that recommendations on new working methods can hardly be implemented without new permanent members who would be held accountable for transforming recommendation into reality.

The Report is a symbol and symptom of a deeper crisis. The exhaustion of member states after more than one and a half years of negotiating reforms is reinforced by disillusionment with their results. Do the developing countries, especially the small and vulnerable, feel a greater sense of justice and fair play? A greater sense of ownership? Is the organization more responsive to their needs? Or are the reforms vitiated by not addressing the central issue of UN Security Council reform? The old Cold War equilibrium is gone but no new equilibrium has taken its place. The old world is dead, the new powerless to be born. Instead of 'the sad, slow night’s departing and the rising of the morn', there is a twilight world...
with all its burdens and sorrows: the UN, in this context, ought to have been the midwife of history but is not able to play this role because it has not been able to reform itself effectively.

The failure to do so, because the UN is uniquely equipped to spearhead the reform of global governance’, has an impact on global economic governance also and therefore on the capacity of other international institutions to deliver even development, so critical for developing countries; this negative impact is sometimes not adequately appreciated. The tension between the political and economic order of 1945 and the totally changed world of today is at the heart of problems of global governance. The Articles of the IMF, for instance, were written in 1944. That is why it cannot lighten the burden of conditionalities on the poorest even in the latest Policy Support Instrument of 2005; its fiscal recommendations greatly worsened the Asian crisis of 1997-98; it has produced no idea worth the name on how to address the imbalance at the core of the financial and economic instability of our time.

The present structure of the UN Security Council was created at about the same time (in 1945) as the structure of the IMF. It is therefore no coincidence that the solutions are similar: addressing the question of the veto; transparency; accountability; reassignment of seats on the basis of a new formula; a change in the appointments process. This very commonality shows the cross cutting nature of the crisis of global governance. If the IMF were able to maintain world economic stability and the UN Security Council world peace and security, even their antiquated, imperfect and possibly unjust structures of governance might have been accepted. This is manifestly not the case. Hence the urgent need for real reform. It is unfortunate that some have not been able to think outside the text they have been repeating. I shall not speak on the G-4 text.

We are not dogmatic about exact solutions. But we are particular on identifying actual and not imaginary problems and fashioning a solution that addresses these. One may use an analogy from portrait painting. One can go on changing the canvas and even keep throwing away initial sketches in order to improve the final portrait but one will not paint any portrait if one keeps changing the subject of the portrait. It is therefore important to identify this subject –i.e. the real problems. Otherwise the divisions and disillusionment of today will become deeper and, without fundamental change, the UN will be coarsened through continued weakening of mutual trust.
The UN Security Council is reaching the end of its shelf life: structural cracks have begun to appear. We need a Capital Master Plan not just for the building but for what is inside it, around the corner. The UN Secretary General described its handing of some recent events as having “badly shaken the world’s faith in its authority and integrity”. No problem of peace and security has been fully resolved; many are arguably worse. It continually proves Newton’s Third Law of Motion – for every force, there is a force equal in magnitude but opposite in direction. It is said in the scriptures: “Let justice be done though the heavens fall.”

The UN Security Council’s justice, if done at all, is done after the heavens fall – that is why we have been so busy catching skylarks. The checks and balances of the Cold War, acting within the UN Security Council gave some space to the General Assembly. The absence of any new equilibrium has actually meant the progressive usurpation of the GA’s authority by the Security Council. The fundamental reason is not just the imbalance between the Assembly and the Council but the imbalance between the permanent members and the rest. Can therefore this imbalance be redressed through adding new non permanent members even if immediately eligible for reelection? Can they make coercion more difficult, enhance legitimacy and make decisions far more optimal, thereby reducing the need for force? Or do we need new elected and accountable permanent members to do so?

Our experience is clear: an individual state cannot easily defy, the UN Charter cannot effectively bind, the General Assembly cannot constrain and the International Court of Justice cannot automatically review UN Security Council decisions (and since Justice Marshall’s famous judgement in Madison Vs Marbury the right of judicial review is a fundamental democratic tenet). Can non permanent members reintroduce equivalent checks and balances in the post Cold War era or can this be done only by new permanent members?

The present colossal imbalance of power would continue to ensure that blood does not circulate through some UN organs, bringing them close to atrophy. We would have the opposite of the state described by Dr. Johnson in a little known play “Irene”: “A happy land where circulating power/Flows through each member of the embodied state”. Instead we have a concentration of power and the fact of oligarchy. Would non permanent members, even if their number is expanded and they are immediately re-electable make any difference whatever to the central problem of correlation
of power, of oligarchy? Or is it necessary to introduce appropriately in the midst of this oligarchy new permanent members with the principles of election and accountability? Otherwise instead of equal decision making the Security Council and, via it, the Organization will simply register the will of the few. The few will continue to set policy and the politics of the Security Council will not be the politics of policy but the politics of manoeuvre.

Instead of addressing the real problem would not an expanded number of renewable non permanent seats create a far more serious problem (as also pointed out by the distinguished Chair of the Federation of Small States, the Permanent Representative of Singapore)? A greater number of immediately re-electable non permanent seats would ensure that the eighty or so member states who have never served on the Council continue not to serve and the chances of Small States of serving on the Council are reduced from once in forty years (the present position) to once in eighty years.

Some have repeatedly made much of elections ensuring accountability. Elections sometimes take the shape of auctions and even when they do not, they hardly ensure accountability. Are the non permanent members accountable and if so to whom? Even in the case of clean slates, do the regional and other groups find them always accountable? Elections may be a necessary but are certainly not a sufficient condition of accountability. In fact the imperfection of the unreformed Security Council to which non permanent members are elected makes it more difficult for them to be accountable and may make them even less accountable. The problem of accountability would encompass both new permanent and all non permanent members. Let us therefore not confuse elections with accountability.

Just as, in the field of international economics, getting prices right and liberalization does not ensure maximizing welfare but separate action has to be taken on employment generating policies, so also here, to ensure real accountability one has to consider a permanent self sustaining review mechanism as well as possibly an addition in Chapter II of the UN Charter embodying the democratic principle, as old as Rousseau, of the right of recall – an idea proposed by a few developing countries (members of the African Union) at a largely attended informal meeting recently. Then alone would one have real accountability. In fact accountability should be ensured throughout the UN, including the Secretariat. United States constitutional practice has admirably combined the principles of flexibility and accountability. This should be implemented in the UN by giving the Secretary General the flexibility to appoint the DSG and USGs but having hearings
and confirmations by the General Assembly to ensure accountability (incidentally, this would ensure that policy implementation in the Secretariat is actually responsive to the vast majority).

A leading light of the school of expansion of only non permanent seats outlined serious problems in the Security Council which have grown but felt that these could be mitigated by increasing non permanent members and their role and being open to the idea of their immediate reelection. Why have existing non permanent members not mitigated the problems but allowed them to grow? He spoke of encroachment. Why have non permanent members not rolled it back? In fact this shows that even amending the Charter is not enough: there would have to be new permanent members held accountable for defending its balance. Similarly, would not an interim solution that does not address the real problem simply go through the motion of reform without reform? Would there be point in simply adding to numbers without addressing the issues? In short, should one have reform for the sake of reform? Would adding more non permanent renewable and rotational seats address the central problems of either the correlation of power or of accountability? Or would they, in the phrase of the poet Shelley be like “going to a gin shop for a leg of mutton”?

It is important to remember that immediate reelection was permitted in the League of Nations. It failed to either ensure accountability or save the League of Nations. Therefore, when I look at the supporters of the idea of renewable more non permanent seats in the Security Council, I am reminded of the question in the great contemporary US novelist Thomas Pynchon’s just published novel “Against the Day”: “What are they doing here, so late in history” with “the dismal metonymies of the dead behind them”? Would not electing more non permanent members only create for a moment the illusion of accountability with even less real accountability, the illusion of change with no real change and address imaginary problems while leaving the real problems of correlation of power and accountability to fester and become worse?

The most radical General Assembly Resolution on the veto and working methods is Resolution 267(III) of 14 April 1949. It was adopted. It is a melancholy commentary on the declining strength of the General Assembly that today it seems difficult even to table the S-5 Resolution, let alone adopt it. To save time I shall not quote the Resolution at length (I have done so on an earlier occasion) but the Resolution clearly and forthrightly proposes restrictions on the right of the veto; says that the General Assembly can advise on a matter being considered by the Council;
emphasizes that TCCs should take part in decisions (not just discussions) on deploying their troops etc. Was any of this ever implemented? Would new non permanent members be able to do what they have not for more than half a century – ensure these working methods? Would they ensure the access of small and vulnerable states to the Council and their participation in its subsidiary bodies? Would such a model empower Africa, that has been the object of history and, in some ways, continues to be so and without whose empowerment any reform is unavailing and worth little?

As the Resolution mentioned earlier shows, the problem of the veto is a real problem. Many delegations have addressed it in the course of this debate. But we have to examine the issue in detail. We would then see that the problem is not one of quantity (of extending it immediately to new permanent members) but of quality – of introducing restrictions to ensure that it is used to advance the principles of international law and the interests of the international community and not national interest. There are those who say that the veto cannot be amended. The short answer is that it has been amended, but the amendment has been informal and therefore legally infirm. The Charter clearly speaks of “the concurring votes” of permanent members. Therefore, Charter commentaries of 1946 make it amply clear that abstention was the equivalent of a veto. It is not treated as such any longer.

The Charter can only be amended by procedures set out in Articles 108 and 109. Therefore, this informal amendment is really law making by law breaking. What is more it is to the detriment of the General Assembly. The legal principle of estoppels prevents the GA from challenging a UNSC decision with an abstention by a permanent member as illegal or invalid because of acceptance over a fairly long period of time. But it cannot even demand further continuation of the practice. The permanent members can give it up any time and go back to the earlier interpretation, without legal problem. Thus it is they who are amending the Charter, not the General Assembly. One may cite similar informal amendments of Article 39 (redefining what is a threat to international peace and security) and Article 29 (on setting up subsidiary bodies): a legal tribunal may be a subsidiary body but the Security Council cannot give it legal powers that it does not possess under the Charter (which is why the case is different from all other subsidiary bodies); nor can implied powers be invoked because the Security Council, under the Charter, does firefighting to execute existing law which has been adequate and does not have the authority to make law (which belongs to the General Assembly).
On the one hand the Security Council is quick to bring on its agenda individual rights but on the other is reluctant to restrict the veto which has no place in a paradigm of individual rights. On many issues the US Constitution points the way for instance the US Congress can set aside a Presidential veto. But in the UN, a special majority of the Security Council or the General Assembly cannot override a Security Council veto even in the case of carefully defined categories of situations. Oppenheim, in his authoritative Treatise on International Law clearly says that if a permanent member used its right of veto to prevent an amendment of the Charter purely for reasons of national interest and not because of its implications for the international community as a whole, it would be an abuse of the right of veto. Thus any such exercise of the veto would be subject to legal challenge.

The problem of working methods is exemplified most visibly in the Rules of Procedure of the Council which are provisional to the point of not being there; they have been replaced by a new rule on how to make encroachment respectable and emasculation of the GA acceptable – a triumph of power over reason, rules or logic. Thus the UNSC is not a solution but a part of the problem; it has become a fetter holding back change; a fetter on addressing the problems of the 21st century; a fetter on the forces of peace and progress. We shall take counsel with our colleagues in the G-4, our cosponsors, the African Union, the S-5, even the UFC and the wider membership, especially listening to the developing countries, and soon bring forth proposals for negotiations which would address the real problems of the correlation of power; of accountability; of the veto and working methods and not imaginary ones which would make the real problems worse while providing the illusion of reform for the sake of reform. The choice is between real reform and retrogression and even paralysis, action or words, substance or shadow. Otherwise we shall move to a future where the GA feels even more than now “the mildew coming over it and its bones turn to paste”.

We do wish to end the exclusion of developing countries but through an inclusive process – this is the legacy of Gandhi and Mandela. To use some eloquent phrases of one of our leaders at a recent seminar in New Delhi, we seek a reform not for “power politics, military might, division and conflict” but for overcoming these and being, in and with the UN, a “global force for peace, progress and prosperity”.

I thank you, Madam President
Madam President,

We thank the Secretary-General for his report A/61/483, which provides a useful background for our consideration today of the issue of revitalization of the UN General Assembly. The position of the Non-aligned Movement on this topic has been expressed by Cuba and it has my delegation’s full support.

Madam President,

The report of the Secretary-General details the many steps implemented over the last few years to streamline the work and agenda of the General Assembly. There has been considerable focus on improving the working methods of the General Assembly and its main Committees. Efforts have also been made to rationalize and streamline the agenda of the General Assembly so as to give a sharper focus to its work. Additional staff has been provided to the office of the President of the General Assembly, as also during the period of transition between an outgoing and incoming President. The Secretariat has endeavoured to reduce the heavy burden of documentation submitted to the General Assembly for its consideration. Looking at all this one might even reach the erroneous conclusion that a great deal has been achieved.

A useful beginning has certainly been made through the revitalization exercise undertaken so far, via implementation of many of the provisions of resolutions already adopted on this subject. However, in a dynamic and changing world, we need to regularly review measures that can improve our work efficiency. At the same time, such measures by themselves do not automatically lead to empowerment of the General Assembly. The streamlining of procedures and working methods is only a means to an end – it is not the end itself. Having come this far in our quest to revitalize the General Assembly, we must now focus on the more substantive aspects of GA revitalization. Such reform must necessarily be an ongoing process that is part of a continuum; it cannot be limited to any current or just-completed process in a particular GA session; it has to be part of a larger, ongoing process of UN reform that will need to be furthered in the months and years ahead.
Madam President,

A revitalized General Assembly cannot be achieved via better coordination alone. It must focus on setting the global agenda, especially on development issues. Revitalization of the GA should ensure that the GA addresses itself to the development problems confronting the overwhelming majority of UN member states. The General Assembly must also restore the centrality of the UN in economic matters. Increase in the weight and voice of developing countries in the global economic architecture would exercise a positive influence on the Bretton Woods Institutions and enhance the acceptability of their decisions.

Madam President,

One substantive area that resolution 60/286 attempted to revitalize is the role of the GA in the selection of the UN Secretary-General. Efforts to put in place a more inclusive and transparent procedure for the appointment of the Secretary-General, consistent with Article 97 of the Charter, need not only be undertaken when a selection process is on the horizon or underway. There is a need to address this important issue on a continuing basis.

Another topic that has figured in resolutions on GA revitalization, and on which a number of countries have expressed concern during previous discussions, is that of balance between the principal organs of the UN. The encroachment by the Security Council on issues that traditionally fall within the GA’s competence (such as the process of standard-setting and codification of international law, conduct of thematic debates) are of particular concern. The consequent undermining of the role and authority of the General Assembly needs to be redressed, if it is to be revitalized. The resort to thematic debates in the Security Council on issues that very often fall within the purview of the General Assembly or the Economic and Social Council, remains an area of concern to many delegations. The balance between the principal organs of the United Nations as ordained by the Charter must be respected and maintained. The encroachment by the Security Council on issues that clearly fall within the functions and powers of the Assembly and its subsidiary bodies is also contrary to our collective decision to strengthen and revitalize the General Assembly.

Resolution 60/286 reiterated that in addition to the Security Council making its annual report more analytical, it should also submit special reports to the GA. The most recent annual report of the Security Council remained deficient in terms of analytical content, while no special report has been
submitted. In any case, the Security Council must continue to consider ways to further improve the quality of its reports to the General Assembly.

Operative Para 3(a) of resolution 59/313 requests the President of the GA to propose interactive debates on current issues on the agenda of the Assembly, in consultation with Member States. We appreciate the initiative taken by the President of the GA in recently organizing such an interactive debate. Views of the Member States in deciding the themes for such periodic thematic discussions are important in order to ensure that the issues taken up are indeed of current global relevance. It would also be useful to avoid duplication of discussions held recently in other UN fora, e.g., in the ECOSOC or in its functional Commissions. Prior consultation on themes for interactive debates can be expected to lead to wider, more effective and enthusiastic participation in them.

While attempting to revitalize the work of the General Assembly, there is also a need to bear in mind the core competence of the GA itself. The General Assembly occupies the central position as the chief deliberative, policy-making and representative organ of the United Nations. However, it is not expected to function as an executive or judicial arm. As its presiding officer the President must be able to enhance its performance in the interests of the broad membership of the General Assembly. In this era of cross-cutting concerns we must also guard against an over-zealous approach leading to the GA intruding into areas that are essentially the core competence of other bodies in the UN system even as we avoid a surrender of its remit to others.

Madam President,

Resolution 60/286 adopted by the GA on this subject at its last Session, invited the President of the 61st GA to convene consultations among Member States to decide on the establishment of an Ad hoc Working Group on this issue that would be open to all UN Member States. We would urge you, Madam President, that such consultations be undertaken without delay so as to enable continued consideration by Member States of the important issue of revitalization of the General Assembly with a view to identifying ways to enhance its role, authority, effectiveness and efficiency.

Thank you, Madam President.
607. Explanation of Vote after the vote by Deputy Permanent Representative at the UN Ambassador Ajai Malhotra on the question of Western Sahara.

Mr President,

India supports efforts aimed at a just, lasting and mutually acceptable political solution to the question of Western Sahara. We believe that such a solution can be reached through dialogue and a spirit of cooperation.

We share the sense of disappointment that it has not been possible to work out a consensus this year on the UN General Assembly resolution on the “Question of Western Sahara”. India’s abstention in the vote should not be interpreted as its being in favour of either side.

Thank you, Mr. President.

608. Statement by Permanent Representative at the UN Ambassador Nirupam Sen at the 10th Emergency session of the UNGA to discuss the Establishment of a Register of Damages Arising from Israeli’s Construction of a Separate Wall in the Occupied Palestinian Territory.

Your Excellency, Madame President,

I thank you for reconvening this resumed Emergency Session of the General Assembly, to discuss the establishment of a Register of Damages arising from Israel’s construction of a separation wall in the Occupied Palestinian Territory.

Madame President,

The legal issues that underpin this debate are clear, and have been so ever since the International Court of Justice ruled unambiguously in its Advisory Opinion of July 9, 2004, that “the construction of the wall......[is]
contrary to international law”. The steps that are to be taken to reverse this illegality are also stated in the same Advisory Opinion, as are our obligations as members of the international community not to recognize the illegal situation arising from this construction. The International Court of Justice then remitted the matter back to the United Nations, “and especially the General Assembly and the Security Council” to consider what further action is required to “bring to an end the illegal situation resulting from the construction of the wall”.

However, we lack the same level of precision and clarity regarding the further action that we as the United Nations are required to take to bring to an end this illegal situation. The establishment of a Register of Damages is only one part of the measures that we can consider. What we undertake today must therefore be set against a number of other appropriate legal and political measures, in consultation with all concerned, as part of a larger vision of establishing a just, comprehensive and lasting peace in the Middle East.

**Madame President,**

In this context, several opinions have been expressed here today, and we have before us both a report of the Secretary-General and a draft resolution. While the minutiae of the recommendations of the Secretary-General regarding the location of the Office of the Register of Damages, its composition and its privileges need not detain us here, it is the question of the nature of the body, its powers and its mandate that are crucial.

We understand the argument that the Register must be more than a receiving and processing office for complaints. It must be able to establish the credibility of such complaints and, in so doing, it must serve as a symbol for the redressal of grievances. There is merit in calling for the office of the Register of Damages to help raise awareness of the rights of those who have lost property or access to family or means of earning their livelihood, and to help them seek compensation. There is no doubt that Israel is required to compensate those who have lost property through the construction of this wall; indeed, the Advisory Opinion states as much, and the payment of compensation by Israel under its own laws suggests that this point is not contested.

However, there is also merit in carefully considering the complex questions posed as a result of the UN establishing a body, at a not-inconsiderable cost, that would have judicial powers and the power to award damages. Resolving these complex questions will require more than
discussions at this forum, it will require a reasoned, balanced and forthright
dialogue between those concerned, with the assistance of the international
community wherever necessary.

Madame President,

While we are in favour of the resolution that is before us today, as it is
a measure that could provide solace to those aggrieved by the loss of
property, I should underline that the establishment of the Register of Damages
is in itself not a complete solution to the complex problem posed by Israel’s
construction of the separation wall. These issues should be resolved in
tandem with other confidence-building measures as part of an overall effort
to achieve a just, lasting and comprehensive peace in the region.

The separation wall divides villages, families, students and patients
from schools and hospitals and farmers from fields. The International Court
of Justice recognised that the area between the Green Line and the
separation fence means that “the construction of the wall and its associated
regime create a fait accompli on the ground that could well become
permanent, in which case, ... [it] would be tantamount to de facto annexation”
of Palestinian land. The Israeli anthropologist Jeff Halper is concerned
that policies resulting in “reconfiguration of the country from two parallel
north-south units — Israel and the West Bank, the basis of the two-state
idea — into one country, integrated east-west” would make a two-state
solution enormously difficult. Therefore, while urging Israel to stop the
construction of this wall, which may prejudice the contours of the awaited
two-state solution, we urge both sides to the dispute, as well as all relevant
parties, to address this long-standing problem, and to redouble efforts to
enable a solution to emerge through political dialogue. The absence of
any meaningful political dialogue is not, of itself, enough reason to cease
persevering with the effort to find a peaceful solution. Since there is no
alternative to a meaningful dialogue, we support the call of the Secretary-
General upon all sides to consider innovative ways to fully implement the
Roadmap which would lead, without delay, to a just, fair, and equitable
solution to this conflict, based on relevant UN resolutions, including Security
Council resolutions. We also call upon the Quartet and all relevant regional
players to work to de-escalate the situation and end the cycle of violence
and counter-violence.

I thank you, Madame President.
